ABSTRACT

Hospital is the integral part on whole of health service system and hospital constitute activity, which is full with compact finance capital and fully of compact creation. the nurse in which one of the biggest human resources on the hospital system. The job of nurse is more important be getting good server of healthy safe in the hospital activity, from the base of “biopsychosocialspiritual”. It refer from the burden consequence of nurse job, the nurse its need it some guarantee of secure, more guarantee from any consequence from the job of nurse. If the nurse is getting guarantee from any consequence its can make the nurse to be good commitment with the hospital where are the nurse work in this concerning is hospital. Which one of guarantee the nurse can get its on linear of distributive and procedural justice perceptions make more employed commitment and also make the hospital to be getting of major role on the whole of healthy service system.

Methodology this study is quantitative research linear though of statistics analysis it's come from questioner method, the other method it's regressi linear. On this method study we get respondent from the overnight nurse on Magelang central hospital and Muntilan central hospital, totally the respondent from the Magelang central hospital is 199 nurse's and from the Muntilan central hospital is 124 nurse's.

The result of this study is if the equitable of distributive and procedural justice perceptions it's work it have a signifigan effect to the compensation satisfied and commitment affective on the our hospital.

Keyword : distributive compensation justice, procedural compensation justice, compensation satisfied, commitment affective

INTRODUCTION

The hospital means a supply and delivery of health services covering a wide range of health problems. Based on the minister of health decree no. 986/menkes/perm/II/1992 public hospital services in government health departments and local government, is classified into class type A, B, C, D and E. The nurse is one of the largest human resources in producing quality service health in hospital, for service rendered based approach to the bio-psychosocial-spiritual is a unique service and held for 24 hours and on an ongoing basis is its own advantages of a nurse than other service. Compensation is a reward or remuneration or service provided by the company on labor because labor has contributed their energy and thoughts for the betterment of the company in order to achieve the goals set. Fairness in awarding compensation greatly affect the performance of nurse. For the employee gets serious attention can cause a sense of satisfaction for themselves. With the high satisfaction of employees, it will cause an increase in employee performance.

Talking about the fairness of the compensation received by nurse at the moment developing a national hot issue of the nursing profession, namely the issue of nursing service. If these issues are not addressees properly by a professional party feared would efforts focused on patient care and the people who need health service, hindered the development of the hospital and to inhibit the development of nursing as a profession. Employee dissatisfaction against the compensation will decrease the attractiveness of work nursing as a profession. Employees dissatisfaction against the compensation will decrease the attractiveness of work. Satisfaction of compensation that can be realized with the implementation of the system of justice in compensation, will have an effect on the attitude and responsibility of the nurse. The nurse commitment have more meaning than loyalty due to their nurse or employees who have a strong commitment to the hospital will show their desire to leave power, responsibility and performance satisfactory to support the welfare and success of the organization or the hospital.

According to Meyer, Ellen and Smith (1993) suggest that there are three components of organizational commitment that is affective, continuance and normative commitment. According to Tjahjono (2010), affective commitment is a form of emotional attraction between employees and the organization as employee feel a commonality of values, emotional attachment and meaning to the organization, then the statement is reinforced by the notion that affective commitment is something desirable organization compared to the commitments of others, because the organization prefers forms of engagement with the organization because of the similarity of meaning with employees, in contrast to continuance commitment that is based on the rational for the consideration of gains and losses earned by the employee while normative commitment based solely on feeling of employees to remain in the organization.

RSUD Muntilan is a state hospital grade/type C. The hospital is able to provide medical services hospital for limited specialist doctor. The hospital also accommodate referral service of "puskesmas". The hospital includes a large hospital, RSUD Muntilan provided 208 inpatients bed, more than the hospital in central java provided on average of 56 places. RSUD Tidar Magelang, state hospital is class/type B. The hospital is able to provide

services of medical for limited doctor spesialist and subspesialist . the hospital also accomodates referral from the district hospital. This hospital is so big, there are 234 inpatients bed, more than any hospital in central java, which provided on average of 56 patients bed

MATERIAL AND METHODS

Methodology this study is quantitative research linear though of statistics analysis it's come from questioner method, the other method it's regresi linear. On this method study we get respondent from the overnight nurse on Magelang central hospital and Muntilan central hospital, totally the respondent from the Magelang central hospital is 199 nurse's and from the Muntilan central hospital is 124 nurse's.

CONCLUSION AND RECOMENDATION

a. Conclusion

1. There is a significant relationship between distributive compensation justice to the satisfaction compensation
2. There is a significant relationship between procedural compensation justice to the satisfaction compensation
3. There is a significant relationship between compensation distributive justice and procedural compensation justice againts affective commitment
4. There is a significant relationship between satisfaction compensation with affective commitment

b. recommendation

1. it is expected that there will be more research on the issue of compensation to the compensation satisfaction and affective commitment
2. it is expected that there is a similar study that examines the compensation of distributive justice, procedural justice compensation againts compensation satisfaction and affective commitment in private hospital.
