**ABSTRACT**

*This research is aimed to describe the changes in social structure of society, and analyzing the dynamics process of the society in the village of New Nglepen after the earthquake with the qualitative approach. Respondents in this research are community leaders in government, domes house managers, religiousnfigure, and community members. Data which is directly obtained from the respondents through interviews, observation, and documentation. The result shows that the earthquake that resulted in the physical changes and relocation of the people cause the changes of social structure. The most notable change lies in the increasing sosial group. The dynamics of the society can be observed by the inraction and cooperation between the community and social groups as well as outsiders. From the result, it is known that the dynamics of the society in the village of New Nglepen is increasing. . It can be seen from the increasing number of social groups, so that more and more people interact with each other. Besides the economics condition of the people is also increasing. It happens because the village of New Nglepen becomes a tourism village which has the potential to increase people's income.*
