Keterangan

A = Pupuk kandang 20 ton/hektar

B = Kompos baglog jamur 15 ton/hektar

C = Kompos baglog jamur 20 ton/hektar

D = Kompos baglog jamur 25 ton/hektar

E = Tanpa pupuk organik

Lampiran 2. Perhitungan bahan kompos

Pengomposan yang dilakukan oleh Imam (2016) menggunakan 20 kg limbah baglog, air 6 liter/karung, EM4 20ml/liter.

$$1. \text{ Air} = \frac{50 \text{ kg}}{20 \text{ kg}} \times 6 \text{ liter} = 15 \text{ liter}$$

$$2. \text{ EM4} = \frac{50 \text{ kg}}{20 \text{ kg}} \times 0,02 \text{ liter} = 0,05 \text{ liter} \\ = 50 \text{ ml}$$

Lampiran 3. Tomat Varietas Tymoti

Nomor SK Kementan : 4276/ Kpts/SR.120/10/2011

Rekomendasi Dataran : Rendah - Menengah

Ketahanan Penyakit : Layu Bakteri, Gemini Virus

Umur Panen : 55 – 60 (hst)

Bobot per Buah : 40 – 50 (g)

Potensi Hasil : 50 – 60 (ton/ha)

Lampiran 4. Perhitungan Bahan dan Pupuk

1. Perhitungan berat tanah

$$\text{Kedalaman efektif} = 25 - 30 \text{ cm}$$

$$\frac{25}{30} = 27,5 \text{ cm}$$

$$\frac{2}{3} \times 27,5 = 18,3 \text{ cm}$$

$$r = 12,5 \text{ cm} \quad \pi = 3,14$$

$$\pi r^2 \cdot t = 3,14 \times (\text{panjang luas prakaran efektif}) \times (\text{kedalaman akar})$$

$$\pi r^2 \cdot t = 3,14 \times 12,5^2 \times 18,3 = 9 \text{ kg/polibag}$$

2. Perhitungan Dosis Pupuk

$$\text{Jarak tanam tanaman tomat} = 60 \text{ cm} \times 50 \text{ cm} = 3.000 \text{ cm}^2$$

$$\text{Luas 1 ha} = 100.000.000 \text{ cm}^2$$

$$\text{Jumlah tanaman} = \frac{\text{luas 1 ha}}{\text{jarak tanam}} = \frac{100.000.000 \text{ cm}^2}{3.000 \text{ cm}^2} = 33.333 \text{ tanaman}$$

a. Pupuk Urea (46% N)

Kebutuhan Urea tanaman tomat 125 kg/ha

$$\text{Takaran Urea/tanaman} = \frac{\text{Takaran Urea}}{\text{jumlah total tanaman}} = \frac{125.000}{33.333} = 3,7 \text{ g}$$

b. Pupuk SP-36

Kebutuhan TSP tanaman tomat 250 kg/ha

$$\text{Takaran SP-36/tanaman} = \frac{\text{Takaran SP-36}}{\text{jumlah total tanaman}} = \frac{250.000}{33.333} = 7,5 \text{ g}$$

c. Pupuk KCl

Kebutuhan pupuk KCl tanaman tomat 200 kg/ha

$$\text{Takaran KCl/tanaman} = \frac{\text{Takaran KCl}}{\text{jumlah total tanaman}} = \frac{200.000}{33.333} = 6 \text{ g}$$

d. Pupuk Kandang

Kebutuhan pupuk kandang tanaman tomat 20 ton/ha

$$\text{Takaran pupuk kandang/tanaman} = \frac{\text{Takaran pupuk kandang}}{\text{jumlah total tanaman}} = \frac{20.000.000}{33.333} = 600 \text{ g}$$

e. Pupuk Kompos Baglog Jamur

Takaran kompos baglog jamur 15 ton/ha

$$\text{Takaran kompos baglog/tanaman} = \frac{\text{Takaran kompos baglog}}{\text{jumlah total tanaman}} = \frac{15.000.000}{33.333} = 450 \text{ g}$$

f. Takaran kompos baglog jamur 20 ton/ha

$$\text{Takaran kompos baglog/tanaman} = \frac{\text{Takaran kompos baglog}}{\text{jumlah total tanaman}} = \frac{20.000.000}{33.333} = 600 \text{ g}$$

g. Takaran kompos baglog jamur 25 ton/ha

$$\text{Takaran kompos baglog/tanaman} = \frac{\text{Takaran kompos baglog}}{\text{jumlah total tanaman}} = \frac{25.000.000}{33.333} = 750 \text{ g}$$
