

**EVALUASI PELAKSANAAN KREDENSIALING DAN  
REKREDENTIALING DOKTER UMUM DI RUMAH SAKIT  
YOGYAKARTA**

Dyah Ayuning Tyas, Elsyeh Maria Rosa

Magister Manajemen Rumah Sakit –Universitas Muhammadiyah Yogyakarta

**ABSTRAK**

**Latar Belakang:**Kredensialing adalah proses untuk memenuhi standar sebagai upaya mengedepankan keselamatan pasien, memiliki kompetensi dan akuntabilitas yang baik sehingga dapat memberikan pelayanan yang professional dan bermutu..

**Tujuan Penelitian:**Menganalisa pelaksanaan kredensialing dokter umum dan pelaksanaan kredensialing di Rumah Sakit Yogyakarta

**Metode Penelitian:**Peneliti menggunakan desain case study dengan pendekatan deskriptif. Peneliti menggunakan penelitian kualitatif untuk mendapatkan data deskriptif berupa lisan maupun tulisan dari sumber yang didapat. Penelitian ini dilakukan di Rumah Sakit Yogyakarta pada bulan Juni 2018.

**Hasil:**Proses kredensial dokter umum di Rumah Sakit Yogyakarta sering dicampuradukkan dengan proses penerimaan karyawan. Adanya proses kredensial, pemberian kewenangan klinis tertulis, pengembangan profesi, sistem audit, disiplin profesi dan pemberian sanksi mencerminkan kinerja komite medis yang lebih baik.

**Kesimpulan:** Sistem kredensial dokter di rumah sakit dengan menggunakan model “delineation of clinical privilege” sangat memungkinkan untuk diterapkan karena berbagai elemen yang diperlukan telah terdapat dalam profesi.medis di Indonesia saat ini.

**Abstrak**

*Credentialing is a process to achieve the standard as an effort to promote patient safety. The doctor must have a good competency and accountability so they can provide professional and high quality services. There was no clear study and evaluation at hospital in yogyakarta regarding the sustainability of the credentialing process from the beginning, especially for general practitioners. Analyze the implementation of credentialing of general practitioners and the outcomes resulting from the implementation of credentialing at hospital in yogyakarta. Researcher used a case study design with descriptive qualitative approach. Researchers used qualitative research to obtain descriptive data in oral and written form. This research was conducted at hospital in yogyakarta in June 2018. The credentialing process at the Hospital were often confused with the employee recruitment process. Implementation of credential process, written clinical authority, professional development, audit system, professional discipline and sanctioning reflect a better performance of the medical committee. Evaluation for the future is in line with the credential model "delineation of clinical privilege". This model is based on the credential triangle process consisting of clinical privileges, white papers, and peer groups, with the output is clinical appointments. The system of credentials in hospitals used "delineation of clinical privilege" model was very possible to be implemented because various elements that were needed have been found in the medical profession in Indonesia.*
