

INTISARI

Latar Belakang: Bencana adalah gangguan serius terhadap fungsi masyarakat yang dapat menyebabkan kerugian ekonomi, material, korban manusia dan lingkungan luas yang melebihi kemampuan masyarakat yang terkena dampak untuk mengatasinya sendiri. Keadaan ini membutuhkan manajemen bencana, salah satunya adalah tanggap darurat, tanggap darurat untuk mengurangi dampak buruk yang dapat ditimbulkan oleh bencana, dengan upaya penyelamatan dan evakuasi korban, evakuasi harta benda, pemenuhan kebutuhan dasar korban, membuat posko bencana dan pengurusan pengungsian, serta pemulihan sarana/prasarana sehingga dibutuhkan sumber daya manusia yang berkompeten untuk merespon suatu bencana, dalam organisasi terdapat sumber daya manusia yang baik sangat diperlukan sebagai bekal untuk menerapkan strategi dan mengantisipasi ancaman bencana

Tujuan Penelitian: Mengetahui gambaran tingkat pengetahuan tanggap darurat bencana pada mahasiswa organisasi kegawatdaruratan.

Metode Penelitian: Kuantitatif *non eksperimental* deskriptif dengan subjek penelitian 81 mahasiswa organisasi kegawatdaruratan. Teknik pengumpulan data dilakukan dengan kuesioner skala ordinal. Teknik analisis yang digunakan adalah univariat

Hasil Penelitian: Hasil penelitian menunjukkan bahwa responden terbanyak dari organisasi NCC Emergency, responden didominasi oleh responden perempuan dengan usia 22 tahun, hasil penelitian ini menunjukkan tingkat pengetahuan tanggap darurat bencana pada organisasi kegawatdaruratan dalam kategori baik.

Kesimpulan: Tingkat pengetahuan tanggap darurat bencana termasuk dalam kategori baik.

Kata Kunci: Tingkat pengetahuan, bencana, tanggap darurat, organisasi kegawatdaruratan

ABSTRACT

Background: Disasters is a serious disruption to the functioning of the community that can cause economic, material, human, human and environmental harm that exceeds the capacity of the affected community to deal with it themselves. An earthquake is one of the disasters that can cause damage. Many impacts that occur due to the earthquake include economic, social, and physical damage so that it can cause loss of life. This situation requires disaster management which is a collection of planning to deal with disasters that can occur at any time, one of them is emergency response, this emergency response is to reduce the adverse effects that can be caused by disasters, with efforts to rescue and evacuate victims, evacuate property, fulfill basic needs of victims, make disaster relief posts and arrange for evacuation, as well as restore facilities / infrastructure so that competent human resources are needed to respond to a disaster well, in organizations there are good human resources very necessary as a provision to implement the strategy and anticipate the threat of disaster

Research Objective: Determine the level of knowledge of disaster emergency response to students of emergency organization.

Research Method: Quantitative non-experimental, the subjects of this study were 81 student organizations emergency. Data collection technique was done by ordinal scale questionnaire. The analysis technique used univariate.

Results: The results showed that the majority of respondents from the NCC Emergency organization, respondents were dominated by female respondents age 22 years old, the results of this study showed the level of disaster emergency response to students of organizations in good categories

Conclusions: The level of knowledge of disaster emergency response is included in the good category.

Keywords: Level of knowledge, disaster, emergency response, organization emergency
