

CHAPTER IV

RESULT AND ANALYSIS

A pressure index can aggregate the attributes of each the two primary aspects of resilience, the ability with stand shocks and the provision of economic functions, into a single metric measurement. Thus, developing an index is necessary to monitor financial stability and summarize the economic function of the banks. For that purpose, this research will develop an index for measuring the resilience level, called the resilience of Islamic banking.

This chapter will be discussed the result for developing the resilience of Islamic banking in Indonesia by elaborating on the characteristic of the pressure index, the result steps for developing the resilience of Islamic banking and evaluating the quality of the resilience of Islamic banking.

A. THE RESULTS OF STEPS FOR DEVELOPING OF PRESSURE INDEX

According to the above steps for developing the resilience of Islamic banking, this subsection concerning to discussed the results of steps in the design, develop, and determine a measuring the resilience of Islamic banking in Indonesia.
