International Conference on Public Organization VI (ICONPO VI)
On

*“Information, Open Government,
Democratic Governance,
and Public Administration”*

10-11 August, 2016 (Wednesday & Thursday)
Thammasat University, Tha Prachan Campus,
Bangkok, Thailand

Preface

It was seven years ago when University of Muhammadiyah Yogyakarta (UMY) and our Faculty of Political Science, Thammasat University first started a small collaboration, initiated by Associate Professor Dr. Achmad Nurmandi, who at that time was Dean of Faculty of Political Science, UMY. We first had an opportunity to welcome colleagues and students from UMY to present their research of interests at Thammasat University organized by Associate Professor Soparat Jarusombat in collaboration with Associate Professor Dr. Nurmandi in year 2010.

The following year, the First International Conference on Public Organization (ICONPO) was organized by UMY in Indonesia, then in Korea, and back to Bali, Indonesia, before moving to Malaysia in 2014. The fifth ICONPO was organized in Davao City, Philippines last year.

This year, it is my great pleasure and honor to host this event at Thammasat University where it all started. The theme is set on “Information, Open Government, Democratic Governance, and Public Administration” for two days during August 10-11, 2016. There are about 189 proposals submitted this year. The participants come from various countries, namely Philippines (84), Indonesia (80), Malaysia (3), United Kingdom (2), Russia (1), Nigeria (1), China (1) and Thailand (17). All papers were blindly reviewed and will be selected for publication in Journal of Government and Politics. Some would be selected for book chapters. We have about 34 panels in all with topics covering every aspects and issues in Public Administration from Social Media, Network Governance and Open Government to Politics, Conflict, and Corruption in Public Affairs.

As a host of this special academic event, I would like to thank the Executive Committee of Asia Pacific Society of Public Affairs (APSPA) for entrusting us with the honorable mission of organizing this international academic conference this year. My great appreciations also go to all partners and supporters, namely Faculty of Political Science and Law, Burapha University, Faculty of Political Science and Public Administration, Chiang Mai University, Faculty of Humanities and Social Science, Khon Kaen University, Human Resources Institute, Thammasat University, College of Politics and Governance, Mahasarakham University, Sripatum University, EPA Foundation and Alumni, Thammasat University, and Faculty of Political Science, Thammasat University. Special thanks go to all staff for their time, tireless efforts, and dedications in organizing this Conference.

Last, but not least, I wish everyone all the bests and fruitful discussions. Till we meet again next year in Jakarta, Indonesia. Thank you.

Amporn Tamronglak
Your Host,
Professor of Public Administration Faculty of Political Science,

APSPA's President Welcome Message

THE ASIA PACIFIC SOCIETY FOR PUBLIC AFFAIRS (APSPA) PRESIDENT FORWARD TO THE INTERNATIONAL CONFERENCE ON PUBLIC ORGANIZATION (ICONPO VI) PROCEEDING

Through this “casual” introduction I would like to express a little discussion that will attract our interest. Whereas, the meaning openness in governance is essential at this time. Therefore, it is not surprising that in the theory of democracy and its democratic transformation, the implementation of open and accountable government is one element among the four main elements of democratic government.

If we try to trace back in term of conceptual works by referring to David Beetham and Kevin Boyle, *Introducing Democracy: 80 Questions and Answers* (2002), open government has at least four characteristics as follows:

1. The Government provides a wide range of factual information about policies that will and already made. The actual information that covers all the basics that support these policies, the impact that would arising from its policy, the cost (economic, social, and political) to be borne as a result of these policies, what are the rules of implementation of the policy, where various the information can be obtained, and so on that are relevant to these things.
2. The existence of opportunities for the public and the press to obtain or access various government documents. Access can be done either directly or indirectly. For instance, through open hearings in parliament. Such access includes various private archives regarding individuals who hold various public positions or government positions.
3. The exposure of government meetings to the public and the press. It also includes meetings of parliament and its various commissions and other relevant supports, as well as the minutes of meetings of government agencies and local government meetings.
4. The presence of the public consultation conducted systematically by the government. A public consultation was mainly about the various interests related to the formulation and implementation of policies. Included in that regard, the publication of the information and advice received by the government.

Nevertheless, this principle of open government does not necessarily allow the public to access information on government administration indefinitely. In the open government there is also a principle of exclusion of freedom of information or the limits of openness. That is, there is a certain information about governance may be suppressed by the government, so it does not need to be published. The limits of such disclosure should be determined by the legislature in the form of legislation.

However, the interpretation of the openness that have not been or are not clear in the legislation is the right of the courts, not the right of the government itself. Therefore, to provide access to public information, the president or head of state with the approval of parliament, for example making the Law on public information as one example.

In this section by referring back to Beetham and Boyle (2002) above, there is information classified as exceptions to the freedom of information, there are five kinds confidential information as follows;

1. Considerations of the cabinet.
2. The strategic political advice given to ministers.
3. Certain information when posted openly to the detriment of national defense, the survival of the democratic system itself, or the safety of individual citizens.
4. Trade secrets of state owned companies and private company allied with the state in the country.
5. The private archives, except the private archives of individuals that are needed and related to an investigation related to the rights of the public.

The such fifth information above does not mean that in any democratic country should be established by legislation that is considered confidential information. There are times when some democratic states only assign three or four things any confidential information. The more mature democracy in a country, generally will be a few “exceptions” imposed on freedom of information.

Through this proceedings of the conference on the theme of “Open Government, Democratic Governance and Public Administrations”. I thought that the experience of each participant will color of each characteristic of openness from other countries. Therefore, academic discussion forum and will bridge that is not limited to the realm of academic conceptual but also to the actual practices of openness in governance in providing and implementing public administrations.

Finally, by reading this book let me wish all the best and hopefully this conference produces the real outcome and more beneficial for all involved participants and contribute to the state and nation of the all respective participants.

Professor Azhari A. Samudra, Ph.D.
President, Asia Pacific Society of Public Affairs (APSPA)
Universitas Krinadwipayana

Opening Speech

Professor Somkit Lertpaithoon, Ph.D.

The Rector, Thammasat University

Sri Burapha Auditorium, Thammasat University, Thaprachan Campus

August 10th-11th, 2016

Mr. Secretary General, Distinguished participants, distinguished guests, Ladies and Gentlemen,

It is a great honour for me to be here with you today on the occasion of the General Assembly of the Asia Pacific Society of Public Affairs or APSPA and the 6th International Conference on Public Organization or ICONPO. On behalf of Thammasat University, I would like to take this opportunity to extend a warm welcome for the participants to this prestigious conference to Thammasat University, and to the city of Bangkok.

I would also like to mention that the Conference has been convened the emerging trends of the present and future under the theme “Information, Open Government, Democratic Governance, and Public Administration”. It provides a discussion platform for both academics and practitioners in the area of political science and public administration. This platform is to build the body of knowledge and to share the best practices or lessons learned from public policy implementation, especially among the ASEAN member countries.

As we have seen, the decade of the new millennium brought a countless number of challenges, arising as a consequence of globalization, among other things. Our government has to cope with a new set of problems and restrictions, which are more complex and inherently difficult. The financial crisis from the economic downturn still continues to plague the public sector and the outcomes of public policy, which often are the product of bargaining and compromise

among many participants with diverse interest groups. Even at that, the force of information technology is transforming the world of public administration at an extraordinary speed.

Therefore, public sector today requires innovative ways of operation, which must not only encompass the management functions of state agencies and enterprises, but must also take into account the broader context of democratic governance.

This conference is an excellent forum for the international community of scholars and practitioners of development administration to strengthen relationships and stay up-to-date on new developments, in theoretical as well as practical approaches to government, so it will help us understand and find solutions to the key issues that our governments and societies we facing.

During these two intensive days, I truly expects that you will gain interesting information and have a fruitful outcome of the discussions on these important issues at this conference.

Again, I would like to extend my sincere gratitude and appreciation to all delegates, participants, guests, and involved organizations and individuals for the benevolent support to this conference. Thanks to APSPA as an organization for making this conference possible, meaningful, and significant.

Thank you very much.

Professor Somkit Lertpaithoon, Ph.D.

The Rector, Thammasat University

Opening Remark

Associate Professor Supasawad Chardchawarn, Ph.D.

Dean, Faculty of Political Science, Thammasat University

Sri Burapha Auditorium, Thammasat University, Thaprachan Campus

August 10th-11th, 2016

Respectfully Vice Rector for Academic Affairs Pipop Udorn, the Association President on Asia Pacific Society for Public Affairs and the great honors.

I'm associate Prof. Dr. Supasawad Chardchawarn on behalf of the faculty of Political Science of Thammasat University. I am gratefully and honor that the faculty of political science has an opportunity to held the 6th International conference on Public Organization.

Due to the new age of Globalization, I believe that the study of public administration and governance will be the driving force to various policies in many aspects. As public administration and governance is the science with dimensions such as knowledge of management and public organization, human resources management and budget management in public organization.

Nowadays, the study of public administration and governance has been challenged by different and complex issues. I do believe that this International conference is a good opportunity for public administration scholars to exchange their knowledge and present their academic works in which benefits to everyone in the field of public administration and governance.

Keynote Speech

“Celestial Axe: On the politics of Naming”

Professor Chaiwat Satha-Anand, Ph.D.

Professor, Faculty of Political Science, Thammasat University

ABSTRACT

Why do leaders change the names they want people to call them? What does it mean to change the name of a political operation or an “event”? Is the rose by any other name still a rose? Rather than discussing the impacts that have been brought about by changing names which has been widely examined elsewhere, this keynote address is an attempt to argue that the politics of naming is earthshaking precisely because of the power embodied within the name itself. It begins with a brief survey of the academic landscape on naming and a touch on the term “celestial axe” born from the womb of Thai law in history. Recent research on southern Thailand—presently plagued with violence—about a government labor project and a peace process operation will then be used to illustrate how changes in names engender political reality in terms of the state and its governability. The power of naming itself will then be analyzed using ancient wisdoms which include: Confucius’ teaching, the Bible’s narrative of exorcism, and the Qur’an’s creation story. This paper ends with a story of resistance as a critique of the seemingly omnipotence act of naming.

Abstract

6 The whole world is now fighting for open government. But the fight is now faced with a major dilemma.
7 On the one hand, the law has opened up wider access to improve transparency and citizen
8 participation in policy processes. On the other hand, the same government is also trying to reduce
9 access to the laws that restrict public access to information.

10 Efforts have been made in promoting transparency and accountability still face several challenges in
11 Gowa, Indonesia such as: a). Occurrence of elite capture, limited collaboration between local
12 governments, civil society and the private sector in efforts to achieve good governance; b). the
13 regency government is more dominant actors who dominate the government. c). implementation of
14 transparency and participation in the law marked a number of anomalies. d). formation of civil society
15 organizations fragments in the implementation of the law on participation and transparency.

16 Transparency and participation has opened up space for improved governance will be open, but the
17 local government has closed the access of all interested parties to participate.

18
19 Keywords : participation , transparency, local governance

20 **A. Introduction : Decentralization and
the Space of Local Governance
Democracy**

Decentralization and democracy is the power management arena that need each other. Decentralization and democratization are two mainstream political and social changes that occurred during the reform period since 1998. Theoretically, democratization and decentralization can not be separated from one another. Decentralization and regional autonomy does not only deal with the issue of the transfer of authority and financial resources of the central government to the regions of the governments, but also want to bring the country closer to the community to make local democracy work. indicators of the quality of local democracy - such as accountability, transparency,

responsiveness and community participation - will only continue to work on an ongoing basis after going through the process of institutionalization.

In an effort to institutionalize transparency and participation in local governance , the Government of Gowa regency , South Sulawesi Province has approved Regional Regulation (Perda) No. 3 of 2004 on the Implementation of the Transparency in Gowa Regency Government and Regional Regulation (Perda) No. 4 Year 2004 on Public Participation in the Implementation of Government of Gowa. The second birth of this regulation is inseparable from the initiative of the international donor agencies to institutionalize good local governance. Local legislation on transparency and participation in Gowa in South Sulawesi

Province was born in 2004 on the initiative of the World Bank through a Initiatives for Local Governance Reform Project (ILGRP) - which operates in 14 regencies/cities throughout Indonesia, during the years 2002-2012.

The existence of local regulations on transparency and participation is not much to bring significant changes to the quality of local governance. The only change is felt by the public is when the discussion of local budget regulation in parliament broadcast live on local public radio and got a room in the local print media publications. In general, local regulations not depart from purely public aspirations, but because of the command of the higher laws. Practice transparency and participation were largely procedural as the criteria required assistance providers. The formal procedures of transparency and participation was played by the local political elite, elite bureaucracy, NGOs and community leaders on a limited basis. Aspects of the implementation of the policy on transparency and participation in governance and regional development has been "hijacked" by the elite, who are increasingly shut substantial civil society's role of local governance space. These conditions have resulted in the creation of the character of local governance that is open, that is played by local government institutions were "closed" (closed government).

B. Complexity Issues in Transparency & Participation

The presence of the Regional Regulation (Perda) No. 3 of 2004 on the Implementation of the Transparency Gowa District Government and Regional Regulation (Perda) No. 4 Year 2004 on Public Participation in the Implementation of Gowa Regency Government can not be the answer to the problem of transparency and public participation in local governance.

Even when Act (UU) No. 14 of 2008 on Public Information Openness (KIP) came into effect in 2010, Gowa district government that has made regulation of transparency and participation should adjust and revise the regulation. In fact, adjusting the regulation is not as easy as turning the palm of the hand. Making regulation requires cost and time is not small, because of the need for political process in institutions Local Representatives Council (DPRD). With a variety of reasons, including the one of which is the budget, Gowa regency government "failed" to respond to the demands of the Law (UU) No. 14 of 2008 on Public Information Openness (KIP), which requires every public body has a Documentation and Information Management Officer (PPID) and as the direction of the Commission on Information (KI) South Sulawesi province. When the mandate of regulation transparency and participation and the Freedom of Information Law was implemented in ideal, then all of the information that are open will be easily accessible to stakeholders.

One form of transparency of public information is a presentation of information through the official website of the local government. Number of Internet users in Indonesia each year continues to increase. In the future, the era of media convergence into force cyberspace will become an integral part of everyday life residents. The results of the study by Wibowo et.al (2014) of Penabulu Alliance of all official government website districts / cities in Indonesia as many as 505 websites that consist of 412 districts and 93 cities monitored and examined in regard to budget information. This contestation activity lasts for a period of two months, and the result puts the position of the local government's official website Gowa regency is in the order of 476 of the 505 districts / cities in the survey. Gowa regency government official website in the category "problematic" in aspect of transparency in

the management of local budgets, data availability, and quality of information presentation.

The lawsuit by the NGO Monitoring Committee Transparency Development and Corruption (NGOs KAPAK) to the Commission of Information (KI) South Sulawesi, for refusing the data request accountability report for the use of school operational funds in 2013 at the two schools, namely SDN Center Mangalli and SDN Bonto - Bontoa in Gowa regency. The school refused on the grounds that the demand for these NGOs have not obtained permission from the Regent. Disputes over public information requests continue to roll until mediated by the Information Committee (KI), South Sulawesi and the results of the adjudication hearing later won a lawsuit Development Monitoring Committee Transparency and Corruption (NGOs KAPAK).

The lack of commitment in the implementation of transparency and participation are also born of civil society organizations such as the Alliance of Indigenous Peoples of the Archipelago (AMAN) urging the government to be more transparent in Gowa regency to the indigenous communities related to the management and utilization of indigenous territories. Gowa district government is expected to run the Information Law and the demands to include and prioritize Indigenous Peoples in the processes of climate change and REDD+, as indigenous peoples as owners of indigenous territories, heavily dependent on the forest (Razak, 2013). In such cases, reflected that the effort institutioanalisisasi transparency and public participation in local governance is still facing serious problems.

C. Donor-Driven Regulation in the Institutionalization of Transparency and Participation

In a decentralized system or the prevailing local democracy in Indonesia at this time, international actors that finance the birth of the various regional regulations (Perda) that the substance of the rules are clearly derived from pro clauses market interests. The influx of international actors is not a new phenomenon in Indonesia's political economic landscape. After the economic crisis, the role of the IMF and international financial institutions like the World Bank, the Asian Development Bank, or foreign government-owned institutions such as the United States Agency for International Development ((USAID) is actively involved in economic policy and structural reforms in Indonesia. This institution became aid accompanied by a variety of policy recommendations, supervision, and drafting laws and regulations which they sponsor from time to time, from sector to sector, and from one state agency to another state institution.

Local regulations are important legal means to guarantee the recognition of community involvement in government. Once the strategic position of local regulations in an effort to institutionalize the values and interests, so that the global forces provides a separate concern. Birth of Regional Regulation (Perda) No. 3 of 2004 on the Implementation of the Transparency Gowa District Government and Regional Regulation (Perda) No. 4 Year 2004 on Public Participation in the Implementation of Government of Gowa not be separated from the influence of global forces that continue arranging direction of reform of local governance in Indonesia after the reform. Through Initiatives for Local Governance Reform Project (ILGRP), then made products of local regulations that open space for transparency and participation. This program is intended to enhance the

practice of transparency, participation and accountability and encourage reforms in public financial management and procurement of goods and services at the local level and make reform planning and budgeting at the local level. Initiatives for Local Governance Reform Project (ILGRP) felt to be party to ensure the public has the same right to be involved in regulating the fate of local governance in the space more open. When the role of civil society runs ideal, then there should be no debate in determining the role of civil society participation and transparency in public policy.

D. Elite Capture In Implementation of Public Participation

In the context of governance, transparency and citizen participation is often associated with the management or governance models. Gottdiener (1987) linking participation to the governance system as opposed to people-centered governance oriented management principles (state managerialism). While Peters (1996), linking participation in the development of various governance models. Broad participation can be grown in participatory governance that emphasizes negotiation and involvement in the public policy making process rather than through the hierarchy and technocracy.

Concepts, ideas and policy transparency and public participation does not always work out perfectly. The presence of the Local Regulation (Perda) No. 3 of 2004 on the Implementation of the Transparency and Local Regulation (Perda) No. 4 Year 2004 on Public Participation in to ensure public involvement in the processes of the organization of local governance has undergone new complexities. Procedures and mechanisms that have been set in a very nuanced local regulations become formalistic, procedural, instrumental and "meaningless". Model implementation of transparency and

participation in governance in Gowa district has experienced a reduction of meaning, involving only an elite group selected. This phenomenon is also referred to as elite capture (Sobari, 2006), which defined as a situation where the local bureaucratic elite, local political elite, community leaders, NGOs and other actors are "selected", are directly involved with pursue practices that are far from the principles of transparency and participation. Barriers transformation of the practice of civic engagement and elitist pseudo participation which took place during the implementation of the Regional Regulation (Perda) No. 3 of 2004 on the Implementation of the Transparency Gowa District Government and Regional Regulation (Perda) No. 4 Year 2004 on Public Participation in the Implementation of Government of Gowa , gave an overview of how the real model of institutionalization of transparency and participation in local governance reform in Indonesia .

The change in direction of community participation in Indonesia has been researched and studied through Indonesia Rapid Decentralization Appraisal (IRDA) conducted by The Asia Foundation (TAF) and its partners have. This study makes participation as one of the studies in the implementation of decentralization, especially the impact of decentralization on changes in the direction of participation.

In the practice of local governance, Gowa district government with DPRD Gowa-year period 1999-2004, has actually managed to make Local Regulation No. 3 of 2004 on Transparency of Government and Local Regulation No. 4 of 2004 concerning Community participation in the administration of government, which is supposed to give assurance to the public can be a maximum participate in the development process. Only on the way, the law does not operate effectively. Public recipients direct impact in the development, in practice still having trouble accessing documents in government. Whether it be

the draft law included a meeting in Parliament resumes. However, procedurally existence of the regulation remains a positive impact, especially in the increasing number of public participation in development planning meeting through citizen forums.

Low capacity of local legislative bodies, instead of the executive (government regency) in reply to the "achievements" in organizing the participation model elitist and instrumental with apparent involvement of civil society organizations in the implementation of regional development .

Based on the achievement of local government programs in the areas of involvement of Civil Society in the Development Organization, the "fantastic achievement" looks at aspects of the realization of the plan of the last two years (2012 and 2013) who have reached the final target Medium Term Development Plan. This targets that should be achieved in after 2015 with the support performance of institutions that are stagnant or constant.

Regulation on the assessment of the implementation of transparency and participation could also be done to highlight areas of local government affairs that are strategic and can be a measure of the quality of local governance.

- **Implementation on Public Information**

Availability of access to public information is a measure of the level of democratization of the political system. The existence of the implementation of the Local Regulation No. 3 of 2004 on Transparency of Government and Law No. 14 Year 2008 on Public Information (KIP), local government commitment has not been able to accelerate the

implementation of the regulations and the law. Data on the Commission on Information (KI) South Sulawesi indicates that there are 5 of the 24 regencies/cities in South Sulawesi province have not established Information Management and Documentation Officer (PPID), including Gowa.

The absence of these institutions will certainly hamper the development of action plans public information services that have been designed by the Open Government Indonesia (OGI) in an integrated manner. In presenting information services, Gowa regency government has a tendency to be "defensive" or "passive" and not committed to the development of the public service model based websites. Management official website Gowa district government have not been taken seriously, particularly related to the provision of timely information, so the data and information submitted do not meet the standard of public information services based on the standards of Law Public Information (KIP).

Other records related to the implementation of public disclosure is the existing regulations have not been able to encourage behavioral change of government

to meet the demand for public information. For example, to date, the fund management information School Operational Assistance (BOS) can not be accessed by all stake-holders education. Each request public information in Gowa always requisite for the care of "Regent permission" before dealing with the unit / units of local government services.

▪ **Implementation of Public Services**

Public service is one of the essential functions of government. Implementation of the regulations on transparency and public participation in public services show results "interesting". It says "interesting" for public service innovation to the education, health and licensing services in Gowa regency an example of best service to other areas in South Sulawesi province in particular and Indonesia in general. Service innovation in the education sector, for example through free education program Elementary-High School, Establishment Police Unit (Satpol) Education, Sustainable Completed Class System, Punggawa D'Emba in Education Program (an innovative method of learning) and so has received appreciation from various circles. Although it has been "sprinkled with compliments" education services sector in Gowa district was not immune from problems. Case information dispute between the NGO Monitoring Committee Transparency Development and Corruption (NGOs KAPAK) to the Commission of Information (KI) South Sulawesi, for refusing the data request accountability report use of school operational funds in 2013 at the two schools, namely SDN Center Mangalli and SDN Bonto-Bontoa in Gowa district, is an example that public service innovation is not always linear to the quality of governance that is transparent and accountable. Apart from the service sector of education, health and licensing, general issues faced by public

service delivery in Gowa district under Law No. 25 of 2009 on Public Service, among others: (1) the unavailability of public service standards in eraser levels are arranged in a participatory manner; (2) lack of a public service information based website and integrated to the service of all levels; (3) the unavailability of means of complaint handling systems and public services; and (4) the unavailability of legal devices and systems that ensure the implementation mechanism of compensation of public service.

Some indicators of options, has drawn some condition problems faced in achieving the target indicators include: public services that have not been optimized by the low implementation of minimum service standards (SPM), the performance of government institutions is not optimal with a low capacity and competence of personnel, low the level of public awareness .

▪ **Implementation of Financial Management**

Different assessment also applies to the issue of transparency of financial management. Gowa district government is the only region in the province of South Sulawesi, the "hatrick" was awarded an unqualified opinion (WTP) of the Supreme Audit Agency (BPK), namely in 2012, 2013 and 2014. Achievement in the field of financial management can be considered an "anomaly" in the middle of the limitations of the instruments of regional financial information services in a transparent and accountable.

At the local government level institutions, there are some important information related to financial management area is not maximized publicized and easily accessible to the public, problems were found, such as (1), information on the budget planning is not yet available on the official website local government agency. Even if there were to ask local government agency financial management information tend to be general, not detailed about the sectors and regions, with the nature of the information that is difficult to understand, (2) the unavailability of information on the evaluation of Local Budget Plan, in the local legislative bodies and technical local government agency. Though this information is very trivial to be known, in order to ascertain on what basis the budget allocation in the local government agency larger than other officials. (3), Information accountability of financial performance, have not provided complete and clear that contain institution narrative performance. The financial statements of government agencies provided relative of a general nature and is not used as the main reference point in planning next year's budget. (4), information Inspection Report (LHP) per semester/ yearly to the Supreme Audit Agency (BPK) is predicated an unqualified opinion (WTP), once submitted to the Parliament no longer be published on the website, including BPK-RI website. Similarly, no further information regarding repairs that must be done local government agency on report on the results of Supreme Audit Agency (BPK).

E. Formation of Civil Society In institutionalizes Agenda Transparency and Public Participation

The concept of civil society is still a debate among various experts. That civil society is a complicated concept, CIVICUS realize that any definition chosen will always invite debate and potential controversy. Fakhri (1996) mentions paradigmatic, CSOs and NGOs are divided into three types; conformism; reform and transformation. All three forms of ideology NGOs produce differing views on issues, goals and programs. Type conformism, made up of NGO activists who do their work based on the paradigm of charitable assistance, project-oriented and adapt to structures / systems. Type reform based ideological influence of modernism-developmentalism. For this the wrong type of NGOs of developmental approach and methodology that tends top-down and non-participatory. While the type of transformative NGOs tend to question the mainstream paradigm that no draft ideology hidden in it as well in the form of finding an alternative paradigm that is changing the existing structure.

The birth of a local regulation on local governance namely Regulation No. 3 of 2004 on Transparency of Government Management and Regulation No. 4 of 2004 on Public Participation in the Implementation of Governance, has opened the scope and broad access for civil society organizations (CSOs) to be actively involved in the activities of local governance. In principle, the response among the civil society to the presence of regulation transparency and participation can be fragmented. In a proportion of civil society groups so optimistic and have great expectations to this regulation assumes that local governance has been walking on the right path. Some were others become pessimists and even indicated the birth regulation "foreign interests" will make the

polarization of the power of civil society in Gowa regency. Some were again others prefer to be apathetic and indifferent to these regulations and continue agendas existing institutions. Options for CSOs to be a group of optimistic, pessimistic, and apathy is largely determined by how much "resource" organizations and concerned issues in the fighting.

Group CSOs have adequate resources: financial, human resources, assets, work experience, and a network of political, networking bureaucracy and networking funding, into a group that is optimistic and has a focus on governance issues and regional development, to be among the most optimistic about the existence of Regulation transparency and participation. Optimists assume increasingly open their access to influence and play a role in every decision-making at local government institutions. Some CSOs who are in this category include : Institute of Earth Indonesia (LBI), The Gowa Center , Gowa Forum for Woman Observer (FPPG), SABO Community, Voice of Gowa , the Batara Gowa of Women Caucus, WAKIL Foundation and P3G Network.

CSO pessimistic group is a group that generally lack adequate organizational resources: limited financial, limited networks in politics, bureaucracy and international donors, and disciplined organization that has not been formed. Generally, this group also has a focus on issues related to public disclosure, democratization, and environmental protection. The group is actually very critical with the institutionalization of good governance at the local level and mengaggapnya as a form of new colonialism and tools of foreign to local control of local resources. Group of CSOs who are in this category include : Environmental Education Foundation (YPL), Women's Network for Small Business (JARPUK), Institute for Monitoring Public Services (LP3), Traders Association of Sungguminasa Traditional Market (AP2S),

and Monitoring Committee Transparency Development and Corruption (KAPAK).

Group CSOs apathetic actually has the resources and networking organization that relatively adequate. Selection apathetic attitude to be caused by the CSOs has no concern on issues that directly relate to political and local governance. This group has a specification issues and work networking or work structurally. CSOs in this group among other things ; Muhammadiyah , Nahdlatul Ulama, Association of Construction Entrepreneurs (GAPENSI), the Indonesian Doctors Association (IDI), the Association of Teachers Honor Indonesia (IGHI), the Indonesian Teachers Association (PGRI), Contact of Farmers and Fishermen (KTNA).

Fragmentation response and CSO movements make processes of institutionalization of transparency and participation experienced a dynamic situation. Dynamic due in part support the CSO on the one hand and the refusal in part kelompok else gives color to the situation of the implementation of the regulation. Finally it be this part CSO groups that support the implementation of pseudo participation, instrumental, and formalistic and "securing" the government's position to remain closed in local governance.

F. Conclusion

Based on the analysis of the situation of attempts to institutionalize civic engagement practices through the implementation of the Transparency Regulation and Regulation Participation in Gowa, who initiated the formulation comes from Initiatives for Local Governance Reform Project (ILGRP) which is financed by the World Bank.

Efforts have been made in encouraging transparency and accountability is still encountering some obstacles such as: a). Occurrence of elite capture, born

limited collaboration between local governments, civil society and private sector in efforts to achieve good governance, which in turn restrict the movement of other civil society groups; b). the district is more dominant actors who dominate the government and development. The strong position of local government (the executive) is also affected by systematic silencing critical power model of civil society. The local government has managed to take advantage of transparency and participation procedures for on-faced facing pro-government civil society vis-a-vis the critical mass in pemerintah.c). achievement of the implementation of transparency and participation of local regulations in the field of public disclosure, public services and financial management characterized a number of anomalies. On one hand, these three areas into sectors that service innovation got a lot of appreciation and respect, but on the other hand, a weak point of the criteria for good governance d). formation of civil society organizations (CSO) experiencing fragmentation in the implementation of the law on participation of transparency and regulation. Group CSOs polarized into those who are optimistic, pessimistic and apathetic to keberadaan peraturan this area.

In general, the values of governance understood as a positive effort in the framework of governance reform, specifically tetapat governance values also can be "hijacked" to support the interests of certain political elites, which was built on patronage-based political dynasty. Transparency and participation has opened ample room for improvement of local governance (open governance), but diimplentasikan regime mentup local authorities to access all the parties involved (government closed).

Ateneo de Davao University

Abstract

The United States Agency for International Development (USAID) funded the Computer Literacy and Internet Connectivity (CLIC) program in the conflict affected areas of Mindanao between 2003 and 2012. The CLIC Program provided computer units with high speed internet connection to high schools to improve the computer literacy among high school students in conflict affected areas and to demonstrate to the recipient communities that the Philippine and U.S. Governments are concerned with the relative lack of economic opportunity available to young people in those areas of Mindanao.

This paper examines the impact of the CLIC Program on students, teachers, and community. Primary data were gathered using survey questionnaires, FGDs, and key informant interviews. Study results show that high school students in conflict affected areas used computer facilities provided by the CLIC Program to conduct research for school assignments, read online news, and view digital images. They were able to perform basic computer operations and use computer software for word processing, mathematical computations, and visual presentations. They also used computer and internet for identifying better schools for college studies and for finding scholarship programs. Their access to computer and internet resources improved academic performance and quality of education.

Teachers in CLIC partner schools claimed that computers enhanced their teaching effectiveness and made teaching tasks easier especially in lesson plan and test paper preparations, multimedia presentations, computation of grades, and doing research online to update the content of their lessons. More than half of the key informants had a favorable view toward the Philippine and US governments. They considered access to information as vital for promoting peace because it broadens peoples' minds and creates positive outlooks

In conclusion, the CLIC Program contributed to the improvement of computer literacy among high school students, enhanced teaching effectiveness among high school teachers, and contributed to positive view of the community residents toward the Philippine government and the US government.

Key Words: internet; computer; literacy; Mindanao; USAID

¹ We would like to acknowledge with thanks the United States Agency for International Development (USAID) for granting us permission to use its data generated by the impact assessment of its CLIC Program. Thank you also to the research team from the Institute for Socio-Economic Development Initiatives of Ateneo de Davao University who collected and processed the data (Jocelyn E. Cabo, Roperto Deluna, Jessie Manuta, Elmer S. Mercado, Gina Montalan, Ma. Monica T. Villanueva, and Ma. Cristy Yuson).

INTRODUCTION

We are now living in a period of human history called Information Age (Bankes et al., 1992), characterized by the use of information technology, especially, among many other things, the globally interconnected computer systems called the internet. While the internet has become a necessity for those who can afford, many Filipinos living in conflict affected areas of Mindanao had no access to it.

The Growth with Equity in Mindanao (GEM)², claimed that before 2003, computers and internet simply did not exist in the conflict affected areas either in schools or in internet cafes. This phenomenon of “digital divide” (Dijk & Hacker, 2003), placed students in conflict affected areas “disadvantage academically, in job market, and in their understanding of and connection to the rest of the world – compared to students from other parts of the Philippines” (GEM, 2011).

To improve the situation, USAID funded and implemented through GEM the CLIC Project throughout the conflict-affected areas of Mindanao beginning in 2003 and ended in 2010. GEM indicated that 91 per cent of the recipients were Madrasah³ and high schools, and nine per cent of the schools were elementary schools. After eight years of project implementation and with enormous amount

of resources invested in the project, USAID/GEM commissioned a third party to conduct the impact assessment study, with members of the technical team included the authors of this paper.

Objective of the Impact Study

In what way the CLIC project has helped narrow the digital divide between the rich and the poor with regard to access to and use of digital information technology. To find answer to this question, the impact assessment study was conducted to determine if USAID-GEM had accomplished the stated objectives of the CLIC project, namely:

1. To help assure that students in high schools in conflict affected areas of Mindanao developed computer literacy that is often a prerequisite in competing effectively for employment and/or admission to post-high school education or training opportunities; and
2. To demonstrate to communities in the conflict affected areas of Mindanao that the Philippine and American Governments were concerned about the relative lack of economic opportunity to young people in those areas and were prepared to commit resources that could help assure that greater opportunities were available to them.

METHODOLOGY

The study used quantitative and qualitative research methods to generate the needed data. The study team used survey questionnaire as primary data capturing tool, especially data about students’ computer literacy, career aspirations, and computer use for social networking and research.

To enrich and validate the quantitative data, the research team employed qualitative data gathering

² GEM is a multi-faceted program of USAID designed to support the peace process and stimulate equitable economic growth in conflict-affected areas of Mindanao (Berger, n.d.),

³ Madrasah (pl. madaris) generally refers to Muslim private schools with core emphasis on Islamic studies and Arabic literacy. It is a privately-operated school which relies on the support of the local community or foreign donors, particularly from Islamic or Muslim countries (Boransing, N.D.).

techniques such Focus Group Discussions (FGDs) and Key Informant Interviews (KII).

FGD is a process of collecting textually rich data with a moderator introducing topics of interest to a group of people who have similar backgrounds or experiences to hear from them a range of opinions and ideas about the topic (Mack, Woodson, MacQueen, Guest, & Namey, 2005). KII is a one-on-one semi-structured in-depth interview of an individual who is considered the most knowledgeable member of the community that can provide quality information about the topic under investigation (Gilchrist, 1992).

Sampling Design and Procedure

The study sample covered CLIC and non-CLIC high schools in conflict affected areas of Mindanao. Using purposive sampling technique, the study team selected 225 out of the 921 CLIC partner high schools and 75 non-CLIC high schools. The research team identified the CLIC partner high schools using inclusion-exclusion criteria such as dates when schools became CLIC partner, geographic area, size of student population, location of schools, security considerations, and whether or not the school received the standard CLIC package.

Non-CLIC high schools were chosen on the basis of their location in conflict affected areas in Mindanao and were also recipients of computer literacy programs from other sources such as the Local Government Units, the private sector, and national government agencies such as the Department of Trade and Industry and Department of Science and Technology. The respondents of the study were drawn from the population of students, teachers, school administrators, and community stakeholders from these schools using the same purposive sampling technique.

The total sample of the study was 4800, disaggregated into 2239 survey respondents, 2148 FGD participants, and 549 key informants.

The student survey instrument was administered in 225 CLIC schools to a group of 8 to 12 students per school. The total number of student survey respondents was 2,191. While students were answering the survey instruments, two members of the research team conducted FGD in a separate room, far enough not to disturb those who were answering the survey instrument. The FGDs were conducted in all 225 CLIC partner schools. The total number of FGD participants from 225 CLIC schools was 2,148.

The Key Informant Interviews (KIIs) were conducted both in 225 CLIC and 75 non-CLIC high schools. Administrative Officers, Principals or Assistant Principals, Information Technology Coordinators or personnel in-charge of the Computer Laboratory, Computer Teachers, Guidance Counselors, Head Teachers and PTA officers were some of the key informants. Overall, the total number of key informants was 549.

Distribution of Respondents

The distribution of respondents follows the distribution of the CLIC partner schools in two dimensions, namely: time and space. In terms of time, **Error! Reference source not found.** shows the distribution of CLIC-partner schools by year and region starting in 2003 and up to 2010. CLIC started in 2003, covering only Region 9 with one school and ARMM with four schools. By 2004, the project expanded to two more regions, adding Region 10 and Region 12. That year, the total schools that benefited from the program reached 78. In 2005, the CLIC Project covered the entire Mindanao, with the addition of three schools in Caraga Region and two schools in Region 11. The year 2006 saw an increase of 56% over 2005 in terms of total CLIC-partner schools, with Region 12 registering the most number of CLIC-partner schools while no new schools were added in Region 11.

Table 1: Distribution of CLIC-partner Schools, by Year and by Region

REGION	2003	2004	2005	2006	2007	2008	2009	2010	Total
9	1	13	15	37	86	13	57	13	235
10	0	19	10	16	14	0	5	0	64
11	0	0	2	0	2	2	11	6	23
12	0	9	67	88	83	16	71	5	339
13	0	0	3	2	31	0	0	0	36
ARMM	4	37	22	39	70	12	38	2	224
TOTAL	5	78	119	182	286	43	182	26	921

The peak of CLIC project implementation was in 2007, a total of 286 schools received computer resources from USAID, with Region 9 and Region 12 having the most at 86 and 83 respectively. After a year, distribution of computer resources dropped by 85% (253 less schools than the previous year).

The year 2009 saw another sharp increase (323%) from previous year in terms of the number of schools participating in the CLIC program, reaching 182 (139 more schools). The project ended its run in 2010, extending computer resources to 26 schools, the majority of which were in Region 9.

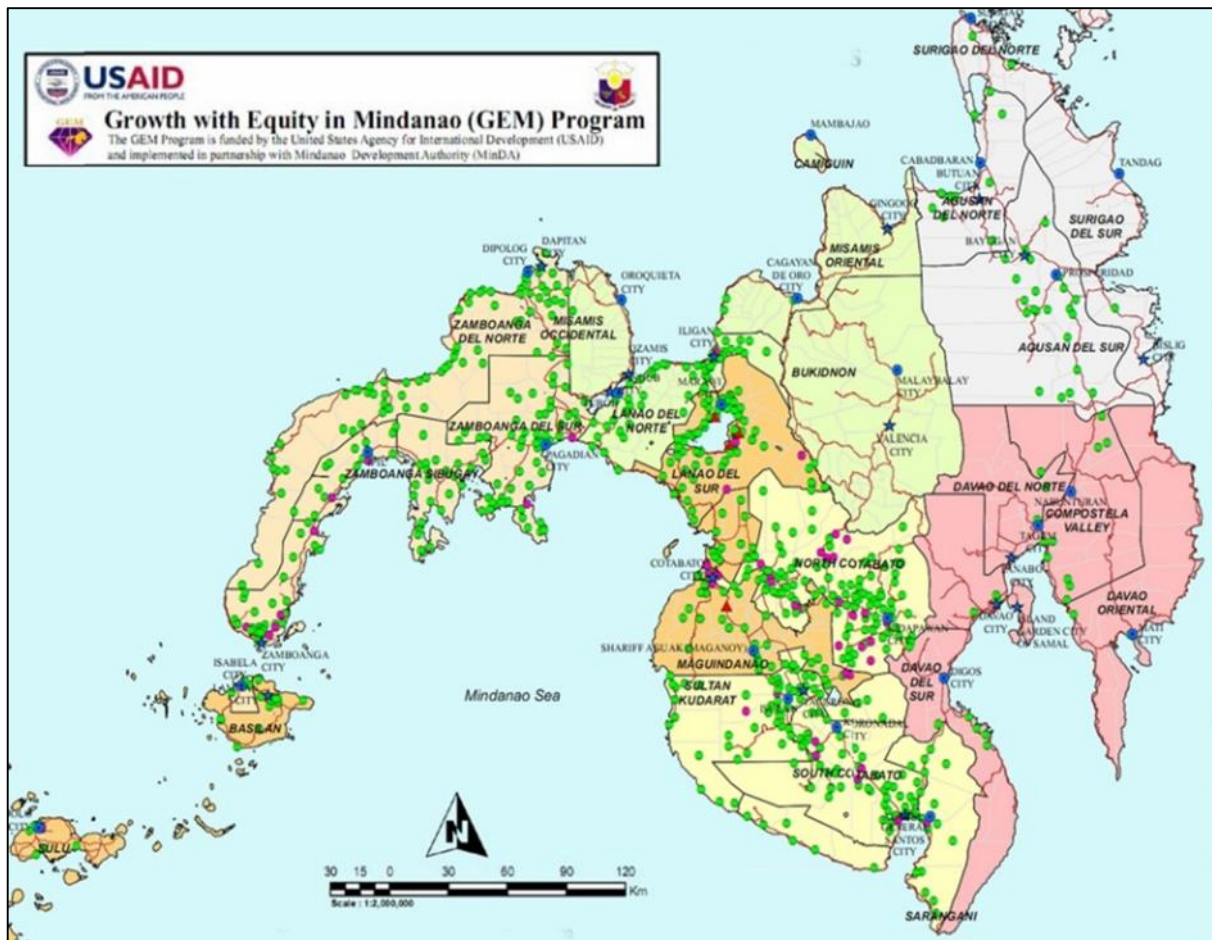

Figure 1: Mindanao map showing the distribution of CLIC recipient high schools

In terms of space, **Error! Reference source not found.** above shows a GIS-based distribution of CLIC-partner schools all throughout Mindanao. The green dots represent the CLIC partner schools. For its eight-year duration, CLIC distributed computer resources and provided internet access to 921 schools all over Mindanao. According to GEM, this number represents almost all of the public high schools in conflict-affected areas or 62% of the total public secondary schools (1,491) throughout Mindanao.

Error! Reference source not found. compares CLIC-partner schools to the total secondary schools in Mindanao during the School Year 2009-2010, the terminal year of the CLIC Project implementation. It shows that Region 12 benefitted the most with 93% of its schools receiving CLIC assistance. This is followed by ARMM (83%) and Region 9 (67%). That these three regions received more CLIC assistance is consistent with GEM third goal of giving special focus in areas with high concentration of Muslim population.

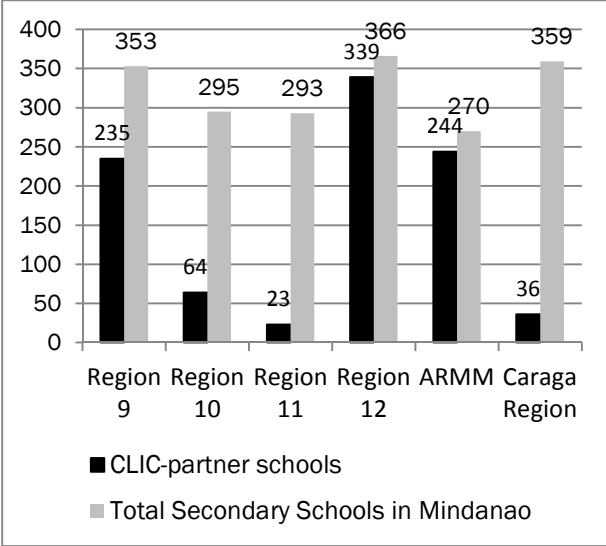

Figure 2: Comparison of CLIC-partner schools to Total Secondary Schools (SY 2009-2010), by Region

THE IMPACT OF CLIC PROJECT

A. Impact on Students

1. Computer and internet utilization in school

Table 2 shows the distribution of students accessing internet in schools in areas with moderate level of conflict and high level of conflict. The data reveal that there are more information technology users in areas with moderate level of conflict compared to areas with high level of conflict. This is because entering in areas

To participate in Social Networking groups	41.04	To listen to music	64.35
To do research for school assignments	100.00	To play online games	35.45
To search for courses to study in college	48.55	To upload images, video, music	46.69
To search for scholarship programs	41.49	To buy goods/services/items	5.07
To download eBooks	10.66		

, for accessing the Internet in school were for conducting research for their school assignments (100%), reading online news or information (80%), and viewing video and images (80%). Interestingly, slightly over 5% of the respondents used

Table 2: Distribution of Student-respondents Accessing Internet in School

Region	Level of Conflict							
	Moderate				High			
	Female		Male		Female		Male	
	Freq	%	Freq	%	Freq	%	Freq	%

10	84	9.87	55	8.11	0	0.00	0	0.00
11	33	3.88	18	2.65	0	0.00	0	0.00
12	261	30.67	325	47.94	0	0.00	0	0.00
13	47	5.52	25	3.69	0	0.00	0	0.00
ARMM	144	16.92	100	14.75	4	22.22	3	33.33
TOTAL	851	100.00	678	100.00	18	100.00	9	100.00

with high level of conflict would expose CLIC project staff to high risk of being abducted by lawless elements. Thus, there were more computer resources invested in areas with relatively low level of conflict than in areas with high level of conflict.

Students who frequently accessed the internet in schools were located in Region 9, 12, and ARMM, the regions into which USAID-GEM poured substantial CLIC resources. The top three reasons they cited, as shown in

Purpose for Accessing Internet	%	Purpose for Accessing Internet	%
To send and receive emails	54.34	To read online news/ information	79.51
To chat with friends and relatives	57.10	To view video and images	79.51

Table 3: Percentage Distribution of Students' Purpose in Accessing Internet in School

Purpose for Accessing Internet	%	Purpose for Accessing Internet	%
To send and receive emails	54.34	To read online news/ information	79.51
To chat with friends and relatives	57.10	To view video and images	79.51
To participate in Social Networking groups	41.04	To listen to music	64.35
To do research for school assignments	100.00	To play online games	35.45
To search for courses to study in college	48.55	To upload images, video, music	46.69
To search for scholarship programs	41.49	To buy goods/services/items	5.07
To download eBooks	10.66		

the internet to buy goods online.

FGD results support the survey findings on computer and Internet use in school. The FGD participants named several tasks and activities that the students performed in school with the use of their computers and internet connection. In terms of new knowledge and skills acquired from working with their computer and internet resources, students are now able to use Microsoft Office (80% of FGDs) for their schoolwork, particularly Microsoft Word, Excel and PowerPoint. They are also able to perform Basic Computer Operations (72% of FGDs) such as switching the unit on and off, cutting and pasting text, creating and renaming files, saving a file to a flash drive, which they all call a “USB”.

The students attributed several improvements in their academic performance and quality of education to their access to computer and internet resources in school. Students reported that they used computers to prepare their assignments and presentations (a step up

2. Computer and internet utilization outside school

Table 4 and 5 reveal that students who accessed internet in schools also found ways of accessing it outside of school. Although nearly 41% - 43% of them have accessed to computers at home, or from relatives or friends, all of them made use of the internet café (100%) during weekends (100%) and less frequently after school hours (52%) because it is more fun to use these facilities while being with friends. Most of the out of school internet services are located outside their own Barangay or village. Students made use of outside internet services for an average of one hour and thirty minutes a day, with an average cost of P26.01 per week.

FGD results supported the survey results. Outside of their school work, students also used the computer and internet for other purposes. Social networking (e.g., Facebook, Friendster), email, and instant messaging (e.g., YM chatting) are the most commonly used.

Table 4: Distribution of Student-respondents Accessing Internet Outside School

Region	Level of Conflict							
	Moderate				High			
	Female		Male		Female		Male	
	Freq	%	Freq	%	Freq	%	Freq	%
9	282	33.14	155	22.86	14	77.78	6	66.67
10	84	9.87	55	8.11	0	0.00	0	0.00
11	33	3.88	18	2.65	0	0.00	0	0.00
12	261	30.67	325	47.94	0	0.00	0	0.00
13	47	5.52	25	3.69	0	0.00	0	0.00
ARMM	144	16.92	100	14.75	4	22.22	3	33.33
TOTAL	851	100.00	678	100.00	18	100.00	9	100.00

from Manila paper, as expressed in the Caraga Region). The students felt had better quality schoolwork (40.4% of FGDs). Some other noteworthy enhancements expressed in the FGDs were higher grades and improved grammar and vocabulary.

Table 5: Percentage Distribution of Students' Internet Access Outside School

Access Place		Access Time		Location	
Home	40.78	Before school time	8.41	Near school	23.83
Relative or Friend's computer	42.51	In-between school time	5.14	Far from school but within barangay	19.08
Internet cafe	100.00	After school time	51.51	Near home	30.76
		Weekends	100.00	Far from home but within barangay	15.48
				Outside barangay	43.03

Some students have used the internet creatively for future prospects, such as finding a scholarship grants in Region 9, or searching for on-line employment in Region 10. Some students used their computer knowledge to become entrepreneurs. In Minsulao National High School in Zamboanga Sibugay of Region 9, a student offered computer services for a fee, while another student in Tboli National High School in South Cotabato in Region 12 set up a modest internet café. The more dramatic responses came from students who were geographically separated from their parents and other family members. With the use of the computer and internet, two students (one from Zamboanga City High School, another from Zamboanga Sibugay National High School, both in Region 9) embarked on a search for their mothers, and eventually found them. In Region 12, some students designed and printed customized greeting cards for their parents.

3. Skills on Computer Applications

Table 6 shows that students perceived that they have the necessary skills for the basic use of computer. They perceived that they still lack skills on the advanced use of a computer, specifically for designing a website, burning files into a compact disc (CD), installing software programs, as well as scanning disks for viruses. They also believed that they still have to improve their skills in finding and launching specific software programs as well as navigating between programs.

Students believed that their skills in using computers developed through their computer resources in schools with the help of their schoolteachers starting in their first year.

Table 6: Descriptive Summary of Students' Skills on Computer

Basic Skill (3.99)	\bar{X}	sd
Switching computer on and off	4.32	1.47
Using computer mouse/touchpad	4.34	1.44
Deleting and renaming files	4.08	1.52
Creating files and saving them	4.12	1.53
Using printer	3.07	1.67
Intermediate Skill (3.37)		
Finding and launching specific software programs and navigating between programs	2.8	1.59
Transferring files from hard drive to USB drive	3.14	1.76
Using basic functions of Microsoft Word	3.87	1.60
Browsing the Internet for information	3.58	1.72
Advance Skill (2.51)		
Scanning disks for viruses	2.21	1.60
Installing software programs	2.18	1.49
Writing files onto a cd	2.09	1.47
Using Microsoft Excel application	3.08	1.67
Using Microsoft PowerPoint application	3.18	1.71
Uploading and downloading music, images and videos	2.99	1.72
Designing a website	1.85	1.33

Legend: 1.00 – 2.32 = poor level of skill; 2.33 – 3.65 = average level of skill; 3.66 – 4.98 = high level of skill

Generally, **Error! Reference source not found.** 6 and Table 7 reveal that students perceived that they just have an average level of skill on the use of computer, which they attributed to the inputs of their teachers (85.80%) in classes in first year through fourth year in aide of their learning.

However, Table 7 shows that among those students surveyed who revealed their perceived skills in the use of computer applications, those from Region 10, under moderate level of conflict area, perceived themselves to have higher level of computer skills than others across all regions. This differentiated level of perceived skills in use of computer applications is significantly attributed to the interaction of the location of students by region relative to the level of conflict in their area.

Table 7: Comparison of Students' Perceived Level of Computer Skills by Region by Conflict Area

\bar{X}		Source	Type III Sum of Squares	df	Mean Square	F	Sig.
Region	Level of Conflict						
		Corrected Model	17.01	5	3.40	3.49	0.004
9	3.48	Intercept	818.40	1	818.40	838.37	0.000
10	3.67	Level of Conflict	1.96	1	1.96	2.00	0.157
11		Region	16.95	4	4.24	4.34	0.002
12	3.59	Error	743.85	762	0.98		
13	3.21	Total	10172.43	768			
ARMM		Corrected Total	760.86	767			

Legend: 1.00 – 2.32 = poor level of skill; 2.33 – 3.65 = average level of skill; 3.66 – 4.98 = high level of skill

and General Santos City High School of

“Happy and thankful” (149 FGDs) and “excited” (94 FGDs) are the widely-held sentiments expressed by students about their use of computers and internet connections in schools. Ease in doing schoolwork, access to information, improved quality of assignments and projects are some of the reasons given for feeling this way. One of the most candid responses given was that they no longer had to spend personal money for computer and internet use in an internet café. Several expressed Eureka moments, wherein their eyes were opened to how these resources have made research work much easier (20 FGDs) and how powerful a tool the computer is for finding and using these resources (6 FGDs). Over all, positive student feedback on having computers and internet connectivity (eager, privileged, enjoyment) far outweigh the negative (nervousness, hesitation). In the Zamboanga State College of Marine Science and Technology in Region 9, the students expressed that computers are no longer a “want” but a “need”.

Some students have also expressed a better level of preparedness for college. In Zamboanga City High School of Region 9

Table 8: Percentage Distribution of Students By Computer Skill First Acquisition

First Acquisition of Computer Skill		Attended Computer Class Year	
School teacher using school's computer	85.80	First Year	58.51
Attending computer classes outside school	12.55	Second Year	50.60
Self taught through computer at home	25.86	Third Year	53.06
Self taught through internet cafe	38.63	Fourth Year	40.15

Region 12I, students reported that the computers allow them to prepare for college through advanced learning, while in Tomas Cabili National High School in Iligan City, students anticipate that they will be needing computer knowledge and skills in college, which they now already have.

Parents have also noticed that their children use the computer and internet for exploring options for their future. In

particular, the students are now researching for schools (97 FGDs) and scholarship programs (87 FGDs) for college.

Students saw marked improvements in their school performance as a result of their computer literacy and internet connectivity. The better quality schoolwork (91 FGDs) was evident in computer-encoded assignments and reports; and school projects in PowerPoint format. This was in comparison to handwritten statements on Manila paper hung on a wall, or what some students in Region X, XI and Caraga call “Bitay” (*Hung*) Tech. The internet increased their knowledge (75 FGDs) and made it easy to do research for schoolwork (50 FGDs). Some even reported an improvement in their grades (26 FGDs).

Parents were also asked to describe any changes they observed among their children who are schooling after learning to work with computers and the internet.

In terms of knowledge and skills, parents confirmed that their children have indeed learned about: Basic Computer Functions (186 FGDs), Researching with the Internet (38 FGDs) and Social Networking (7 FGDs). They also noticed a boost in self-confidence, as they observed the students to have become more resourceful and idealistic (23 FGDs), more competitive with other schools (20 FGDs), and able to talk about computers (13 FGDs).

In Region 9, some parents felt that their children are more prepared for college. As members of the family, the parents noticed that their computer literate children are now **able to teach their siblings** (24 FGDs), a response that actually ranks third among parents’ observations.

Key informants (340 KIIs) rely on the computer resources as a **source of information**. Connected to the Internet,

students are able to research additional and updated information for their assignments. Some students turn to Internet to expound their Science Investigatory Project reports and other research projects. For schools that do not have continuous access to Internet, the students make use of the Encarta for their research, a CD-based multimedia encyclopedia. Students are now more connected “electronically” to their friends and family members through their emails and social networking accounts. With the CLIC Project and other projects, the students now know the basic operation of computers, making them “**computer literates**” (105 KIIs).

B. Impact on Teachers

Teachers had dual roles of: 1) learning how to use the computer and the internet, and 2) teaching computer classes for their students.

While more than half of the FGDs (134) admitted that these tasks were challenging due to their limited knowledge of computers, this initial apprehension eventually led to many positive realizations. Computers enhanced their teaching effectiveness as shown by their students’ interest in their lessons (32 FGDs); many of their teaching tasks were made easier (25 FGDs); they need to upgrade their teaching skills to keep up with technology (4 FGDs) and prospects for learning are made limitless with the internet (2 FGDs).

Many teachers performed their tasks with the aide of computers and the internet. The most common tasks were computation of grades using Microsoft Excel (186 FGDs); Encoding major documents such as Lesson Plans and Test Papers (137 FGDs); Researching their Subjects and Topics (118 FGDs) over the internet; Preparing their Instructional Materials (48 FGDs). Very

popular among the teachers is the use of PowerPoint presentations for teaching their classes, a more creative and easy alternative to hung Manila paper which they call "Bitaymax" (coined from the brand of video cassette recorder called "Betamax").

In some schools in three regions (9, 10 and Caraga), the computer is now used to publish the school paper (5 FGDs). In several schools in Region IX, the computers are used to enhance their Basic Education Seminars. The computer is also used to look for dance steps and costumes in Don Pablo Lorenzo Memorial High School in Zamanga City, Region IX. In Lake Sebu National High School in South Cotabato in Region XII, their buzzer and school bell are now computer-generated. In the Daniel Cruz National High School in Kidapawan City, also in Region XII, the teachers and school administrator credit the email for helping them save time and resources in sending and receiving correspondences to and from the regional office of the Department of Education (DepEd). In Ponot National High School in Zamboanga del Norte in Region IX, they use social networking for accessing the DepEd Facebook fan page.

From the KII results of 549 informants, the computer resources of CLIC are valued primarily for helping the teachers in preparing and improving their teaching materials (454 KIIs). Teachers are able to enhance their lesson plans, compute grades, improve presentation of their lessons through use of PowerPoint, fill-out necessary forms prescribed by the DepEd and reports required by the school, research additional reference materials, and encode tests and lessons.

There were 372 informants who said that the computer resources were used in teaching purely ICT classes and other integration subjects. Integration classes refer to "regular" subjects such as English,

Pilipino, Math, Science and TLE (technical livelihood education) where the use of computers is part of the teaching/learning methodology. Teachers do research to enhance their lesson plans and make class activities more creative and interesting for the students.

Another use of the computer resources is for **communications** (121 KIIs). Teachers and school managers take advantage of email to send their forms and reports to the DepEd regional offices.

Both teachers and students benefit from the use of computers and the internet to perform several teaching tasks. Teachers expressed that tedious process of grades computation is now made easier and faster with Microsoft Excel (186 FGDs). The same is true for typing test papers, reports, lesson plans and other documents, which are now computer encoded instead of handwritten. And with internet access, teachers are able to **research on their topics** (51 FGDs), on **instructional materials** (128 FGDs) and **teaching strategies** (16 FGDs). The research allows them to make better lesson plans, instructional materials and **visual aids** (128 FGDs) for their classes. In Region IX, some teachers appreciate the fact that, despite being in a rural area, they now feel part of "civilization" or the "modern world" through their computer and internet. In the same region as well as in Region X and ARMM, however, some of the senior or "retireable" teachers were not too receptive to the new technology, because they felt they were too old to learn it or the image from the monitor hurt their eyes or made them dizzy.

C. Effects on Peace and Security in the Community

More than half of the informants (284 KIIs) have expressed appreciation of

the partnership between Philippine and US Governments in bringing the computer resources to their communities. The two governments are working together to bring quality education, particularly in poor and conflict-affected communities in Mindanao. Seeing that a country like America is concerned about the children's education has prompted the parents to enroll their children to school, as a way of showing that they (parents) value this particular support. A different perspective is offered by a PTA President of a school in Zamboanga Sibugay, where he is saddened that our own government cannot satisfactorily address the needs of the Filipino students, while other countries such as the USA is exerting too much effort to help.

With the computer resources provided to the schools, the informants believe that the US and the Philippine governments are concerned about community's access to technology (243 KIIs) so that students can compete globally. The principal in Sapad, Lanao del Norte states that his daughter who is a Nurse was able to take the qualifying exam in Saudi Arabia through the use of computer. If she did not have an early experience in using computers, she would have difficulty in passing the exam. The guidance counselor of Tomas Cabili National High School in Iligan City says that their community now has internet Cafés being established near schools. For almost half of the informants (244 KIIs), the computer resources provided by the US governments have educating and empowering effects.

SUMMARY OF RESULTS

Results show that computers provided by CLIC project were basically utilized by students for their school requirements and for them to connect to the world through Facebook or Yahoo web-

based email. However, such computer and internet facilities in the schools were most often taken advantage of by female students as compared to male students. This was true in areas across regions in Mindanao with a moderate level of conflict. These services provided by computers and internet connections in schools to students have probably prompted them to access the same outside the school campus during free-time or after class hours mostly from nearby computer and internet cafes. Their constant use of computers and internet, initiated by the CLIC project, made them perceive that they now have an average skill level in the basic use of computers but that they still need to enhance their skills advanced uses like designing websites, writing files on CDs, installing software programs, as well as scanning disks for viruses. But, when students are grouped by region and by level of conflict in their area, results show that those from Region 10, under moderate level of conflict, perceived themselves to have a higher level of skills in the basic use of computer and internet than those from other regions. Similarly, students revealed to have a good attitude toward the use of computers and the internet, when grouped by region and by level of conflict, results show a slight variation. Such has prompted the analysis to identify a possible causal relationship between attitude and skills of students in the use of computers and the internet, which revealed that only 2.89% of the total variation of students' skills can be explained by their attitude toward computer and internet. Thus, much can be attributed to other factors. However, even with the low degree of relationship between skills and attitude, students' computer skill level can likely still be determined through their attitude toward computers and the internet as such have been found to be statistically true in all cases.

CONCLUSIONS

In view of the findings of the survey conducted among students from CLIC-recipient high schools and reinforced by KII and FGD results, it can be concluded that students:

- Basically used the computers and internet provided by CLIC project for their school requirements and for them to connect to the world through Facebook or Yahoo web-based email. Such exposure to computer and internet prompted them to access same services mostly from nearby internet café during class break or after class hours.
- Generally, students perceived themselves to have acquired an average level of skills and attitude toward computer and internet use.
- Referring to the objectives of this study, CLIC has kindled the interest of students to maximize computers and internet use for their academic and personal life. It has, in most barangays, demonstrated that the Philippine and US Governments are committing resources to improve young people's access to economic opportunities. CLIC has allowed students and teachers to establish virtual presence through their personal email and social networking accounts.

Recommendations

- Sustain assistance provided by CLIC project to students in accessing computer and internet use.
- Provide assistance to CLIC-recipient schools in helping school personnel develop students' advanced skills on computer and internet use.
- Identify other possible factors contributory to students' skills in using computer and internet.
- Establish a common portal that will contain lessons, lesson plans, and multimedia educational materials that

teachers and students can access to enhance learning.

- Support development of culturally relevant learning materials.

ANALYSIS OF CHANGES IN GOVERNMENT MANAGEMENT PARADIGM THROUGH IMPLEMENTATION OF INFORMATION TECHNOLOGY WITH LAPOR APPLICATIONS (ASPIRATIONS AND COMPLAINTS SERVICE ONLINE PEOPLE) IN INDONESIA

Sub-theme: Organization and ICT

By:

DR. NENG SURYANTI NENGSIH¹, RENDRA SETYADIHARJA², SHAHRIL BUDIMAN³, SUHERRY⁴, RAJA DACHRONI⁵

*Government Science Department of STISIPOL Raja Haji Tanjungpinang
Raja Haji Fisabilillah Road No.48 Tanjungpinang-Kepulauan Riau*

ABSTRACT

With the development of globalization in the world, would also require a recent innovation that should be implemented by the government. Included in the serve and respond to the interests of the community. In Indonesia has made an innovation in responding to public complaints online through the utilization of information technology with an application called LAPOR (Service and Complaints Online People's Aspiration). With the implementation of the LAPOR applications, of course, there's been a change of management paradigm of government in Indonesia, particularly in the context of public service. The purpose of this study was to analyze the paradigm shift that occurred in the management of government in Indonesia with the application of information technology with the application LAPOR. The data collection methods used in this research is using secondary data and literature review that will produce the results in the form of a concept analysis of changes in the management paradigm of government in Indonesia, especially in the public service in the context of serving the public complaint.

I. BACKGROUND

The government elected in a democracy it is meant to run the government. By running the government, the government considered to carry out the mandate of the people who had elected them. Both the poor government running a government is seen of how governments run government functions. Government functions according to Rashid (Labolo, 2011) consists of four things: service, setting, development and empowerment.

One of the essential functions of government are to provide optimal service to the public. It is not a government that is served by the community, but the communities to be served by the government. But the reality of what happened is not the case. This is because the bureaucratic paradigm which is far from service orientation.

We are often faced with a public service which should have served our needs well, but sometimes we are disappointed with it. Public services are often just become a routine work of the officials who are supposed to serve well the interests of all the elements, groups or communities.

For example, one of the smallest government public services the village. There we can see how bad a performance service that is far from expectations. They looked at an office or working parts is a routine, serving the needs of people without their professionalism or service is good, even far from the expectations of society as their customer.

We can see it from how they start working not on time, even every day there is always an absent official who does not available in office for nothing and the working procedures as if the absence of targets and administrative that are not good to make all the problems have to be borne

by the people who would not want had to surrender to them. We can see how relaxed and poor administrative employees in service, for example in the manufacture of identity card (KTP).

How disappointed we are when going to take care of an identity card (KTP) must make every effort to get it. Various reasons came out when we will get it, ranging from the queue, blank form, the village officials were not present, and others without a clear explanation. And we've taken the time and meet all requirements. But what happened was disappointment as though we have to bear as the price is expensive to make ID cards.

It is ironic when we have to get right as a citizen but no good service for us, when we already fulfill their obligations as citizens. Starting from paying taxes, obeying government regulations to any shop already charged fees or taxes. It is clear from the lack of balance between rights and obligations.

These things always become problematic in public service in Indonesia, especially if we look from the complaints service. There are few people can contact or make a complaint to the government of their needs directly. The government seemed to create distance between people and government

All this also caused a paradigm that is still oriented towards paternalistic paradigm, impersonal, rigid, hierarchical and just satisfaction oriented boss is not public. In this case the Government of the Republic of Indonesia creates a website that aims to facilitate public complaints to the problems facing society. It is intended to facilitate the service to the community and also to raise the values of responsiveness in serving the community. Then the government created the Online Complaint Service application that can be accessed on the People website address <https://www.lapor.go.id>

Figure 1. LAPOR Website

By using this online service the public can make a complaint to the government in any case, will then wait for a response from the service admin. The application of this website means a breakthrough made by the government, namely the use of information technology called e-government, with the application of information technology is expected of public complaints to the government services will increase and facilitate the government understand the preferences of the community at large. This study wanted to see how a paradigm shift in public management at the Indonesian government with the use of information technology in serving the public complaints. With this application, the hope is the existence of an enlightenment in the public service the creation of a new breakthrough in governance.

II. THEORITICAL FRAMEWORK

1. Concept of Public Management Information System

According to Murdick and Ross (Sutabri, 2005) Public management information system (SIM) is a process of communication in which the input information is recorded, stored, and processed to produce an output in the form of a decision on the planning, operation and

supervision. Besides Kelly (Sutabri, 2005) says that the SIM is a combination of human resources and resource-based computer that generates a set of storage, communications, and the use of data for purposes of efficient operations management and business planning.

In a public organization, one of the important resources is a resource of information, even information, according to Murdick, as analogous to the blood of the organization. This means that the blood flow is congested, then the organization will be dropped at the unhealthy (Sutabri, 2005). Therefore, the development of computer technology is one of the instruments for data processing required by a public organization (Sutabri, 2005).

SIM urgency on public organizations based on the traits and characteristics of public organizations themselves, as the opinion of Sutabri (2005), namely :

- a. Public organizations are identical with the administration that has certain monopolize activities in the public service
- b. The public organization is established by State regulations, financed by the State and run by the State apparatus, so it must have a high degree of accountability under political control,
- c. Public organizations have a distinctive nature-oriented public is closely associated with social issues and social values that should have the responsibility to fairness, openness, humanity, and the response to the public
- d. Public organizations have focused on publicness that is focused on the democratization of social relations

So with such characteristics, then the SIM is needed in public organizations in the present, as the opinion of Sutabri (2005) that either public or private organization can never be separated from the service of the

organization itself, which the public service was a service provided to the public in scale central, regional or local.

2. Concept of E-Government

Nowadays, SIM usage on the body of a public organization called the e-government. The World Bank (Indrajit, 2006) defines e-government that e-government refers to the use by government agencies of information technologies (such as Wide Area Networks, the Internet, and mobile computing) that have the ability to transform relations with citizens, business and other arms of government.

While the UNDP (United Nations Development Programme) in an opportunity to define e-government as the application of information and communication technology (ICT) by government agencies (Indrajit, 2006).

The Benefits of e-government implementation as described by Indrajit (2006) are :

1. Improving the quality of government services to its stakeholders, especially in terms of performance effectiveness and efficiency in various fields of national life
2. Improving the transparency, control, and accountability, governance in order to implement the concept of good corporate governance
3. Reduce significantly the total cost of administration, relationships, and interactions issued by the government and stakeholders for the purposes of everyday activities.
4. Provide an opportunity for the government to obtain new sources of revenue through its interaction with the parties concerned
5. Creating a new community environment that can quickly and accurately answer the various problems faced in line with

various global changes and trends that exist

6. Empowering communities and other parties as the government's partner in the process of making public policies equitably and democratically.

Implementation of e-government also has specific transformation challenges, including paradigm transformation in government organizing. Information technology is built with e-government systems not just as supporting the existing government management, but it is a driver of change or as something that actually offers the fundamental changes with respect to the governance process in the modern era (Indrajit, 2006).

The transformation is expected as described by Indrajit (2006), namely:

1. Service to citizens into service by citizens, it is intended that prior to the implementation of e-government, government's duty to serve the public, then after the implementation of e-government, the community serve himself.
2. Citizen in line become a citizen on line, this is how at the time of e-government has not been implemented, people have to queue and wait a long time to get service, then after e-government applied then people do not have to wait long to get service because everything is done online via the internet
3. Trying to overcome the digital divide and ensure the creation of a digital democracy.
4. In order to improve the efficiency and effectiveness of government processes that replace paper based to fully implement the concept of government online
5. Try to use digital knowledge in lieu of physical knowledge which has been

used as a resource for improving the quality of life of the state and society.

The pattern of change in the paradigm of e-government implementation consists of four types of classification as described by Indrajit (2006), namely:

1. Government to Citizens

It is intended that the purpose of the system of e-government is to bring government closer to the people through the canals of diverse access so that people can easily reach the government to fulfill the various needs of everyday services

2. Government to Business

One of the main tasks of a government is to form a conducive business environment, to the economy of a country can function properly. In addition, the private sector also requires a lot of data and information held by the government. Hence the need for a good relationship between the government and business establishments which does not only aims to facilitate business practitioners in running the company, but furthermore a lot of things that can benefit the government in case of a good relationship and effective interaction with private industry

3. Government to Government

This need is for interaction between the government and the government every day, not only the range of matters relating to diplomacy, but further to facilitate cooperation among States and cooperation between the entities of the State in doing things related to the administration of trade, processes of political, social and cultural relations mechanism and so forth

4. Government to Employees

E-government application is also intended to improve the performance and welfare of employees or employees who work in a number of institutions as public servants.

In the implementation of e-government is also influenced by how the paradigm shift in the management of public organizations. The paradigm shift where the groove is described by Denhardt and Denhardt (Setyadiharja, 2015) as shown in the following table :

Table. 1 Paradigm Shift of Public Organization Management

ASPECT	Old Public Administration	New Public Management	New Public Service
Government Role	Rowing	Steering	Serving
To whom Responding Bureaucracy	Client	Customer	Citizen
Accountability	Hierarchical	Market demand as result of customer's demand	Multi Aspect, Law, Value, Community , Politics Norma, Standard, Professional, Citizen Interests

III. RESEARCH METHODOLOGY

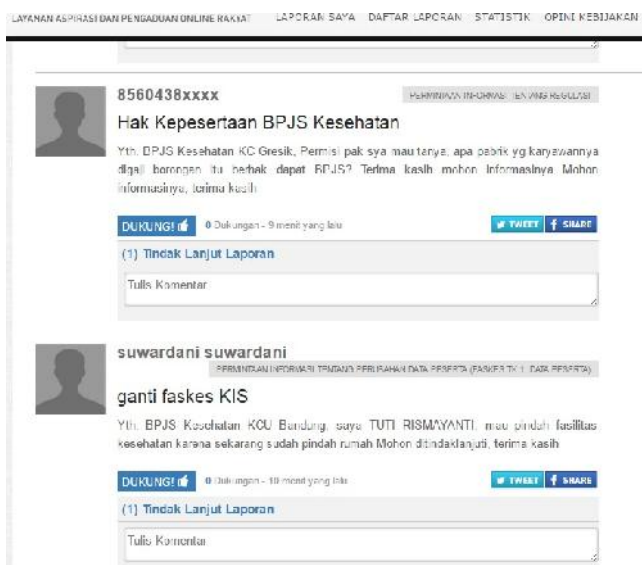

This research is a descriptive study with a qualitative approach. With the data collection method is performed by in-depth theoretical analysis of secondary data obtained. It also includes a comprehensive analysis of the technology in-depth information on the website of the People Online Complaints Service (LAPOR) and then analyzed using a theoretical approach

IV. FINDINGS AND DISCUSSION

1. Public Organization Management Paradigm Shift in the Role of Government

In the context of the role of government, the public organization management paradigms Government of Indonesia and utilization of information technology by using REPORT applications has led to what is described by Denhardt and Denhardt (Setyadiharja, 2015) that is serving. It can be seen from how a complaints mechanism that directly can be done by people in the government, as we can see in the picture below :

Figure 2. Public complaints in the LAPOR Applications

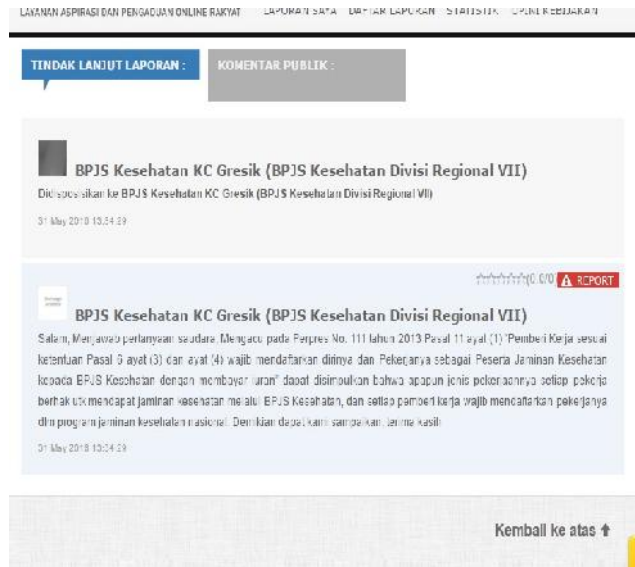

Source: <https://www.lapor.go.id>, 2016

LAPOR website pages in Figure 2, the public can report to the government related issues or problems they face. With this, the public and the government does not has any great distance again. Society can immediately make a complaint directly without worry not to be addressed or considered as a party against the government. Because in this case the public complaints is directly addressed and acted upon by the government using LAPOR

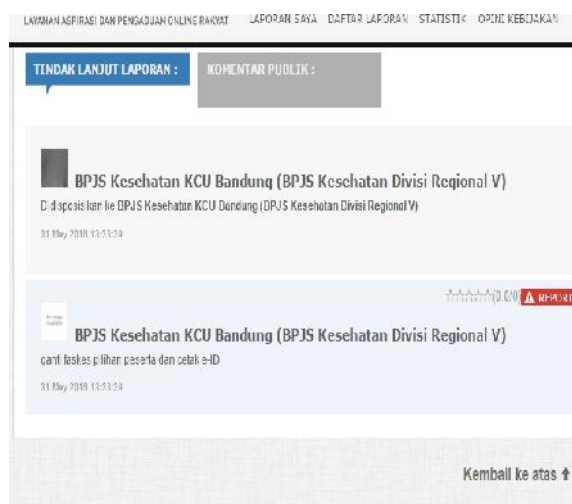

applications, as illustrated in Figure 3 and Figure 4 below.:

Figure 3. Follow-up Report "Rights of BPJS Participation"

Source: <https://www.lapor.go.id>, 2016

Figure 4 : Follow-up Report “Change the KIS Health Facility”

Source: <https://www.lapor.go.id>, 2016

As shown in Figure 3 and 4, it can be seen that the two forms of the complaints lodged by the public have been addressed directly by the manager of LAPOR Website. On the first report (Figure 3), manager of

LAPOR Applications is doing disposition to BPJS KC Gresik and then responded by answering the complaints made by the public in Gresik related to the right to get health insurance provided BPJS particular branch of Gresik. The second report (Figure 4) is also directly addressed by the manager of LAPOR application by answering complaints communities of Bandung associated with displacement health card facilities.

From both the public complaints, it can be seen the government's first directly responsive in serving the community. It is considered that the paradigm of service in the management of public organizations already be responsive, as described by Dwiyanto (2008), that one indicator of good service is the responsiveness of service providers to the expectations, desires, aspirations and demands of service users, in this case the provider ie government services with the use of information technology has attempted to directly respond to the expectations, desires, aspirations or demands of the public as users of the service or entity that must be served through a variety of complaints given in the LAPOR application. Second, the attitude of the government has led to the paradigm of New Public Service (NPS) for the government's role is no longer to be an actor who impersonality, rigid and hierarchically but it is about service.

This is consistent with what is described by Rewansyah (Setyadiharja, 2015) that the serving was seen from some of the following traits. First, pay attention to the public service as a citizen, not as a customer, in this case the community is treated as citizens with all the rights including being able to make a complaint regarding the rights and waiters with whom they had, moreover, the complaint in the LAPOR Application it receives complaints from various public any location and at any time, evidenced by the two reports

displayed are from two different cities, namely Gresik and Bandung. This reinforces that the government has been able to change the paradigm of the paradigm is no longer serving paradigm Rowing or steering, with this paradigm, the functions of government that the ministry has executed work. Second, Focusing on the public interest, in this case the community is always overlooked, this is evidenced by following up of two complaints as shown in Figures 3 and 4, where the public complaints is a description of a desire and aspirations of the community which is a representation of some other society, State other than that in the realm of democracy then actualized in the interests of the society demands, complaints or feedback is an interest which take precedence over the interests of a particular group or interest group. By that responded, a wide range of complaints from the public directly, where people can access these LAPOR apps on gadget or mobile phone even in the attitude of the government has tried to promote the interests of the public, especially in the public service. Third, Involving communities (communities not made the audience), with the use of this technology, since that society is no longer considered to be an actor marginalized and separated by governments, communities be included in the development of this country, with the opening of the government's stance receive feedback and complaints from community. Society is no longer considered a client on the paradigm of Old public administration community simply as a case (Denhardt and Denhardt in Setyadiharja, 2015) but is regarded as an entity that also has an influence and involvement in providing input to the government as an actor who has a service function and the construction of a country.

Furthermore, the pattern of a close relationship between the government and the public in the use of information

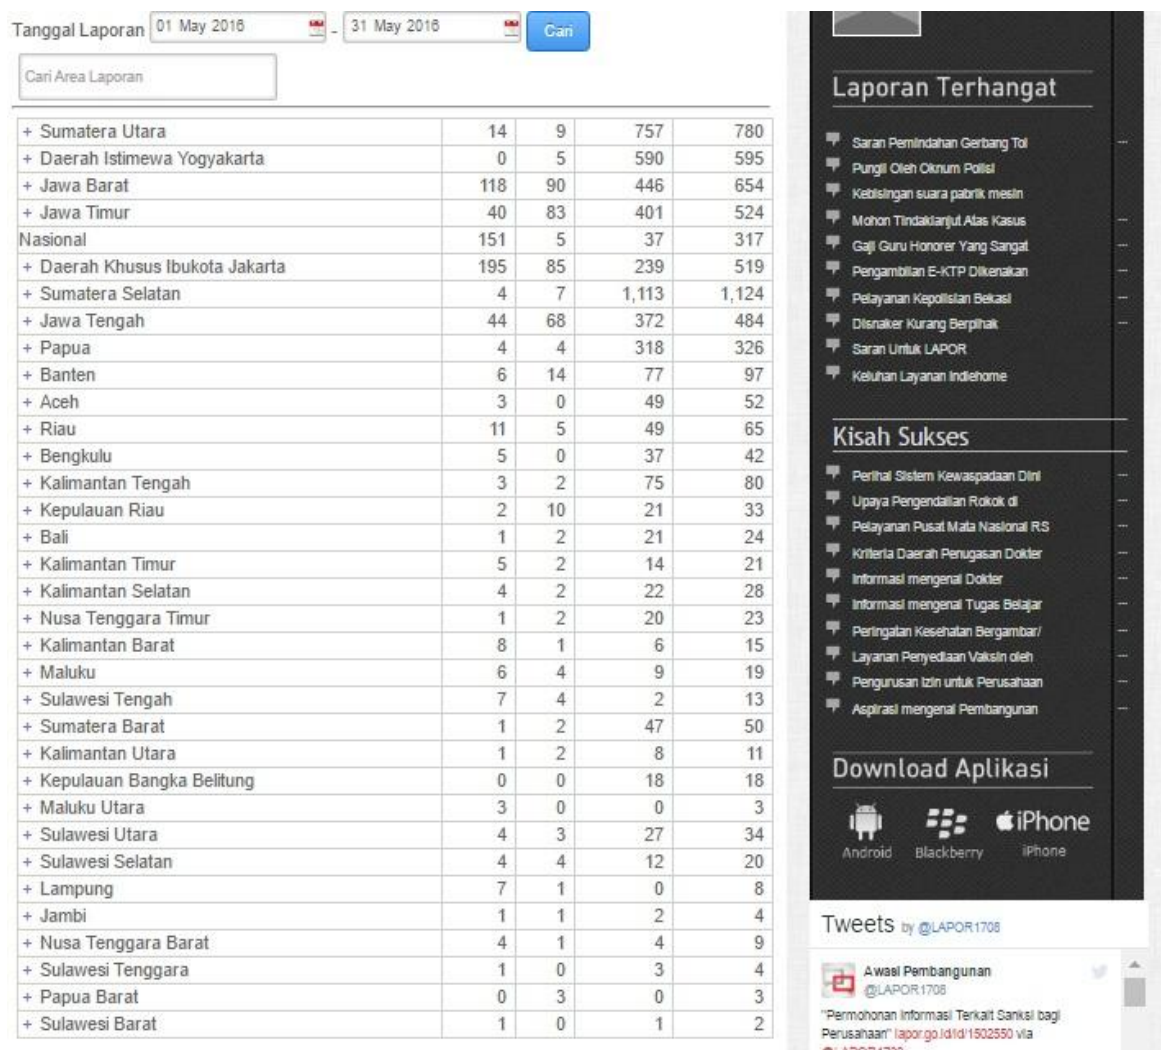

technology is characterized by an attitude, responsiveness, and the government's response is more directed at serving this at the level of the concept of e-government has led to the government to citizens. Where information technology was created aiming to bring government closer to the people through the canals of diverse access so that people can easily reach the government to fulfill the various needs of daily services (Indrajit, 2006).

2. Paradigm Change of Public Organizations Management in Responding Bureaucracy

The second dimension to see a paradigm shift, then it must be analyzed as a concept Denhardt and Denhardt (Setyadiharja, 2015) is to whom the bureaucracy responds. Bureaucracy response in public organizations to see how public organizations treat and respond to community.

With the utilization of information technology in this application, the Indonesian government to put forward the community with all the rights, proved that all the people entitled to make a complaint. People who make a complaint can come from any area, and the theme of the complaint can be anything. When viewed from the statistical data LAPOR Applications as indicated in Figure 5, it can be seen that the reporting that goes to the Applications report is that people from various regions and uneven across regions in Indonesia.

Figure 5. The Complaint Data Based on Region

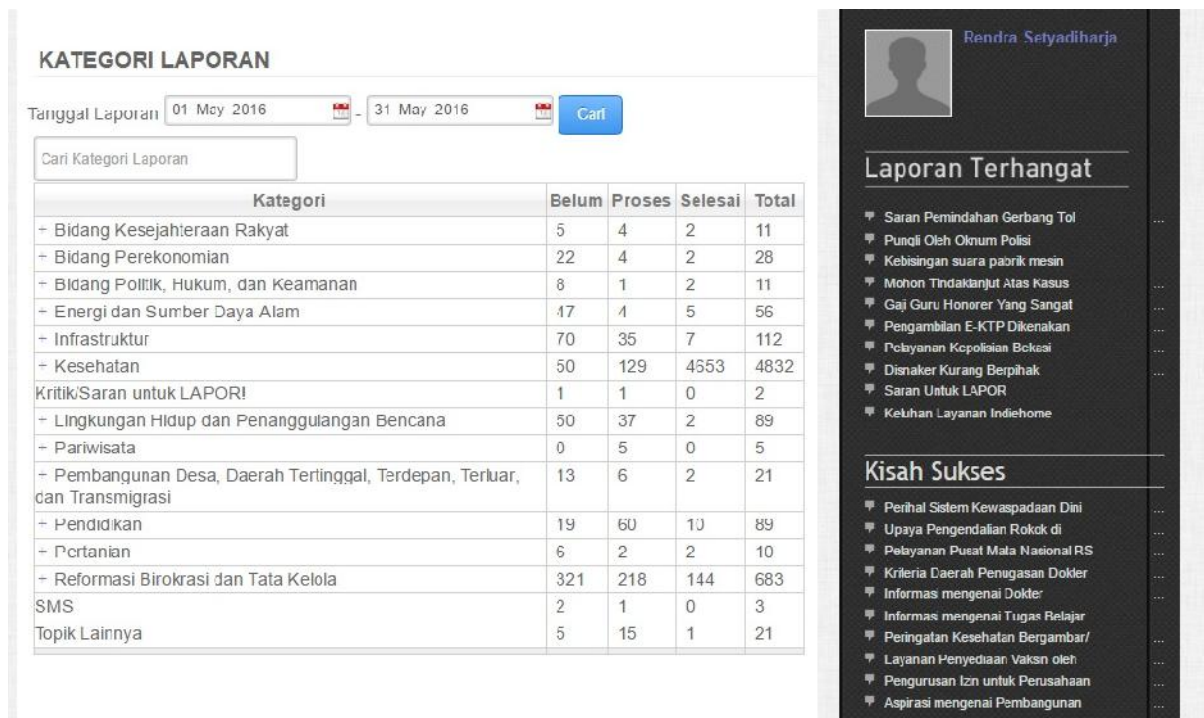

Source: <https://www.lapor.go.id>, per 31 Mei 2016

Statistical data can be seen in Figure 5 above, that all these areas throughout Indonesia can make a complaint. Complaints submitted to the Government of the Republic of Indonesia is not only for the central region, but also the region and all the people in any given right to make a complaint.

In addition, people with rights can make a complaint online on various themes complaints or problems encountered. It can be seen in Figure 6 which shows the areas of public complaints.

Figure 6. Fields and Types of People Complaint

Source: <https://www.lapor.go.id>, 2016

From Figure 6, it can be seen that the various fields can be lodged by the public. Types and fields of this complaint depends on the type of problems faced by the community. the most common problems faced by the community of Figure 6 can be seen that the health problems are the most common problems faced by the community with the number of 4832 complaints (as of May 31, 2016).

Thus the bureaucratic response to public organizations to the community has led to a new paradigm of public service in which people are considered as citizens whose rights more broadly. Community hereby involved in providing feedback and complaints can also improve governance and also capable of being a constructive input for decision making and also for government policy (Muluk in Setyadiharja, 2015). Communities in different areas have been given the opportunity to participate in

decision making in order to uphold the principles of democracy in which people are considered necessary in policy discussions and decision-making (Box in Setyadiharja, 2015).

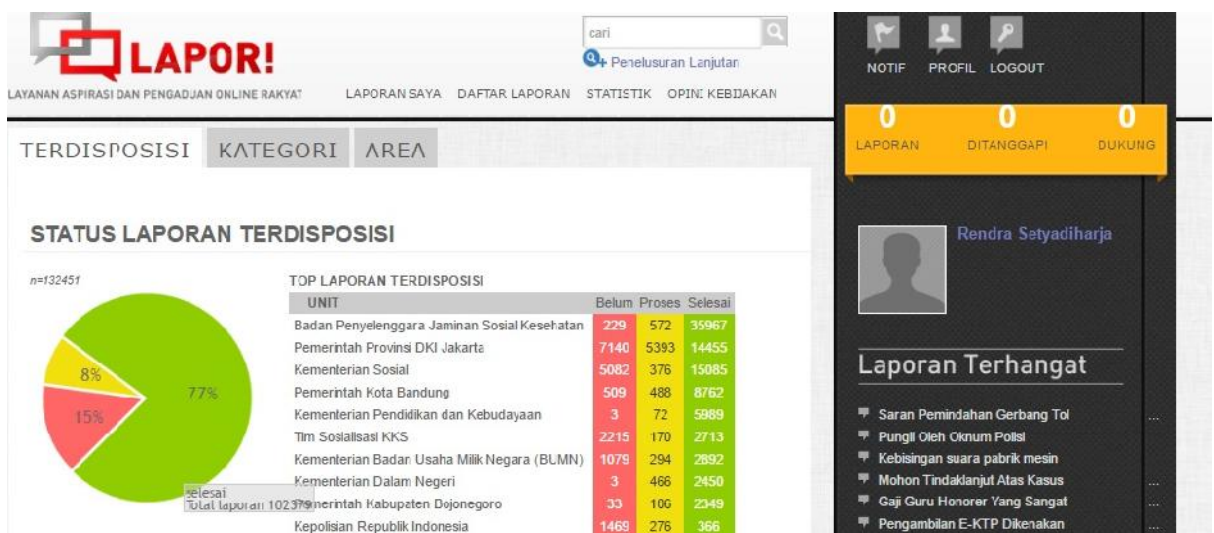

With the use of e-government applications REPORT this then the government will be able to improve the quality of service to its stakeholders, especially in terms of performance effectiveness and efficiency of various national life (Indrajit, 2006), characterized by a variety of categories, types and field complaints, the government is trying provide a way out and a solution to respond to all kinds of public complaints.

3. Paradigm Change of Public Organizations Management in Government Accountability

In terms of accountability, then things need to be analyzed to whom the government is accountable for its performance, whether the government itself, the government to the private sector, the government to the people that surrounded him. In the use of information technology in this application, the government's

accountability to anyone in general is to the community with all the complaints that have to be accounted for. Accountability of public complaints is to follow up and resolve the public complaint. Based on the statistical data on the number of applications REPORT public complaints received and resolved can be seen from the data, as shown in Figure 7 following.

Figure 7. Statistical Data Number of Complaints Resolved

Source: <https://www.lapor.go.id>, per 31st May 2016

Based on statistical data in Figure 7, then 77% of complaints have been resolved by the application REPORT, 8% are still in process, and 15% have not finished or not acted upon. Of the percentage, we can know that cases are settled more than was the case is still under process and has not been resolved. Accountability application is also directed to multi-aspect depends on who sent the complaint to this application. It can be seen that kind of complaint is so much variety and art as shown in Figure 6. In addition, accountability for complaint made by this application is to the entire community with complaints from a number

of regions in Indonesia as described in Figure 6.

From this phenomenon, it can be concluded that the paradigm that occurs at this level is a new paradigm of public service in which the accountability of the government directed or addressed to multiple aspects, or to the interests of society (in Setyadiharja Denhardt and Denhardt, 2015). Appropriate also that the actions and the use of e-government applications REPORT has led to the government to citizens. This shows that the government has established an accountability principle, which the government basically belongs to the people

therefore accountability of the government with the implementation of application REPORT as an instrument of e-government it must involve the public in the policy process together (Box in Setyadiharja, 2015), and things this has been proven by the application penerepan REPORT accommodate all this with public complaints, but not only accommodated, but all complaints must be accounted for by way of follow-up, the manager of Applications REPORT as representatives of the central government is already doing some form of accountability to the public good service.

In this case too the government has implemented a form of rationality which the principle of public participation in governance processes have been addressed by rational. This rational according to Box (Setyadiharja, 2015) is more to the awareness and recognition that the participation process requires adequate time, careful thought, allowing the public to express their opinions, the need to hear various opinions raised and awards dissent. In the realm of democratic country like Indonesia, an instrument to listen to public opinion is not able also to be done directly in the form down to the field, especially the present development of the technology is already highly sophisticated and cutting-edge, so it is natural LAPOR application usage very easy for people to become more can participate by providing a wide range of inputs to the community. in addition, the LAPOR application is an appropriate step for the Indonesian government to provide an opportunity, space and media so that the public is able to close to the government shelter, and the community is considered as an entity whose voice is necessary, and their needs is also very fast and responsive capable addressed and served by the Government.

LAPOR app usage is in accordance with what is described by Indrajit (2006) that

the use of e-government is able to increase the transparency, accountability, control in governance

V. CONCLUSION

Utilization of information technology with applications REPORT imposed by the Government of the Republic of Indonesia as an instrument of public service complaints has been proved that the government has been able to change work patterns to a pattern of work with the use of e-government. With the use of e-government is expected to also happen a paradigm shift in the management of public organizations in carrying out its functions, namely, services, construction, arrangement and empowerment. In this context the government more to change the paradigm in service delivery, especially in the form of complaints from the public service that must be addressed by the government.

With this application, government has changed the paradigm as a new paradigm of public service and government to citizens, this can be evidenced by the changing role of government to the people into roles that are serving to receive complaints directly addressed later. Further changes occurred also in response to the bureaucracy, in this context, the government responds to society as citizens with all the rights including the right to vote in the form of complaints related to the problems that people have or other types of complaints, and the last paradigm shift also occurs views of government accountability. In this context, accountability is no longer just at the level of the body of government organizations in a hierarchical manner, but the multi-faceted, multi stakeholders where public complaints that go to the LAPOR application must be accountable on continuity and completion it, and in this case the government has been able accountable in terms of service complaints the. Thus, the function of government that is capable of

improved service to make a paradigm shift which is then followed by the appropriate steps.

Government Communications in Indonesia During the Reformation Era

Megandaru W Kawuryan¹
Sukatmi Susantina²
Bintang Rizki Sakinah³

Abstract:

This paper will discuss the communication of government in Indonesia during reformation period. Indonesia in its history has experienced authoritarian regime, which is at the time of Sukarno and Suharto regime. In the Suharto regime there was no freedom of communication and mass media (Triputra: 2000), all arranged by the government through the Ministry of Information who have the power to close media outlets and arrest people who bet against the Suharto regime (Sudiby: 2004).

At that time government communications running in one direction (top down) from Jakarta to all regions in Indonesia, with communications centralized it can be seen that the development in Indonesia is growing rapidly, there is no opposition that dared to stand up against Suharto's regime, but the one-way communication (top down) turned out to create a big problem in the future.

Because the government closed themselves with public, there is no transparency, then corruption, collusion and nepotism thrives and it made people angry, then the people created people power to bring down the Suharto regime.

The question how the post-Soeharto government communications was? After experiencing communication centralization of government in 32 years, where all the people and the media should not be voting against the Suharto regime and all controlled from Jakarta.

At least at this time there are three major problems in government communications in Indonesia that should be quickly answered, namely: 1. At this time in Indonesia appears conglomeration of media, the media became a tool of media owners for their own interests. 2. On the other hand the growth of social media as a means of controlling the government. 3. The quality of government communicators, particularly public relations agencies in the region still have a low quality (Subagio: 2005) (Kawuryan: 2012).

This paper will discuss three issues above, so it can be mapped the government communications in Indonesian during the reformation era and how the Indonesian government, must work to communicate its programs so that it can be acceptable to all communities in Indonesia.

Key Words : Communication, Government, Media Privatization, Reformation, Social Media

A. Introduction

The reform era in Indonesia is characterized by democratization and region autonomy or decentralization, and the increasing role of the government as an agency that provides civil services. In an earlier era, the New Order era that was characterized by authoritarian, almost any problem can be dealt with the approach of power and security, but at the moment it is seen that the power and security approach is increasingly losing context. This phenomenon evidently indicates a positive thing for the Indonesian nation to a democratic state.

One of the characteristics of an ideal democratic state is giving freedom to its people to express themselves and speak freely. In this view Jurgen Habermas, one of the *mazhab frankfurt* bearers, reminds that one of the prerequisites of democracy in a country is the existence of a "public sphere" or a public space, where people can express themselves without fear of pressure from the powerful regime. From this perspective, the public sphere can be understood as a space where ideas, thoughts, and logic could clash from "a *thesis*" that produces *synthesis*.

One of the real public spaces is the mass media. In the mass media, messages flow daily from people to the government. These messages could contain support or rejection of the policies issued by the government. In a democratic government, the support and the rejection of a policy issued by the government must be addressed and managed properly. A support, if not addressed and managed well will be a disappointment that is not impossible to result in the rejection of a government policy. The rejection of a policy on a democratic government should not necessarily be interpreted as a civil disobedience. Rejection of a policy sometimes occurs because a program or a policy that will be run by the government is not communicated to the people.

Some cases indicating the poor communication run by the government can be seen in cases that often arise in areas such as land eviction problem, the problem of ethnic tribal, local government policy matters, and others.

From some descriptions above it can be seen how important the government communication is. It is because it involves a reciprocal process of delivering information and messages between the government and the governed, one side is using a frame of reference (for) the other side, in a certain position and role, so that the behavior and attitudes of the other party is formed, changed or maintained, based on the mutual understanding and mutual trust between the two sides, in other words government

communication is ongoing communication only between the government and the governed, and what the effect or result of that communication is.

The reform era in Indonesia was characterized by the rise of two flows of media, namely: 1. Traditional mass media (TV, newspapers, radio) are increasingly moving towards conglomeration and 2. Social media via the internet are more easily accessible by Indonesian people, and those make a new challenge for those who strive in government communications matters.

B. Media Conglomerate in Indonesia

When the Suharto regime fell, the mapping of political and economic power in Indonesia changed, formerly the mapping of political and economic power was concentrated around Suharto family, then in this reform era it is seen that the mapping of political and economic power is spread, including the economic mapping of the mass media ownership.

It is seen that Harry Tanoesodibjo quickly masters the shares in mass media industry that was once the property of the Suharto family, such as: RCTI, TPI, Global TV, even Bhakti Investama also infiltrated into the print media by publishing daily newspaper of Seputar Indonesia (Agus Sudibyo. 2004: 21-23). In addition to group Bhakti Investama, PARA group belongs to Chairul which owns a majority stake in Trans TV and Trans 7 and the group of Mugi Rekso Abadi (MRA) of Adiguna Soetowo that has 5 magazines and 9 radio stations (AJI Report, 2004: 21) also emerged. The mapping on the ownership of television, Newspapers and Radio in Indonesia will be presented as follows:

Tabel I: Television

Free Broadcast Television	National	ANTV, Global TV, Indosiar, Metro TV, MNC TV, RCTI, SCTV, Trans TV, Trans 7, TVOne dan TVRI
	Local	Bali TV, JTV, JakTV, Riau TV dan sebagainya
	Content Provider	Kompas TV, Tempo TV, SINDOTV, Spacetown, JPMC, City TV Network, B-Channel, Top TV Network
Pay Television	Cable	First Media, IM2Pay TV, TelkomVision
	Satellite	Aora TV, Centrin TV, Indovision, Okevision, Skynindo, Telkomvision, Top TV, Yes TV
	Terrestrial	M2V Mobile TV, Nexmedia
	Internet Protocol	Groovia TV

(Eriyanto:2011)

Of the four categories according to the Broadcasting Law stated above, at this time according Eriyanto (2011) share of the market for television in Indonesia is owned by 10 commercial television stations, namely: Global TV, IVM, ANTV, MNC TV, Metro TV, RCTI, SCTV, Trans TV, TVOne and Trans 7. Of the 10 existing television controlled by four major media groups, only Metro TV that does not join to four television holdings.

Tabel II : Television Ownership

Television Group	Television Networking
Media Nusantara Cipta (MNC)	3 (RCTI, TPI, Global TV)
Kelompok Bakrie (Visi Media Asia)	2 (ANTV-TV One)
Kelompok PARA	2 (Trans TV-TV7)
Emtek	2 (SCTV, Indosiar Visual Mandiri)

(Eriyanto:2011)

In Indonesia after the fall of the Suharto regime, many print media are emerging, the data in the Indonesian Newspaper Publisher's Association until 2010 shows that the print media in Indonesia reached 1,076 pieces, consisting of: 1. 349 daily newspapers, 2. 240 weekly newspapers, 3. 188 tabloids, 4. 294 magazines and 5. 5 bulletins. The number of copies printed according to the SPS (2010) was 21.5 million copies; more details can be seen in the following table:

Tabel III: Newspaper 2006-2010

Year	Daily Newspaper	Weekly Newspaper	Tabloid	Magazine	Bulletin	Total	Growth
2006	251	235	142	258	3	889	-
2007	269	247	167	297	3	983	10,6
2008	290	224	173	318	3	1008	2,5
2009	302	232	177	322	3	1036	2,8
2010	349	240	188	294	5	1076	3,9

(Eriyanto:2011)

It is seen that the print media in Indonesia is quite large, but the fact that there is not all print media in Indonesia are financially strong, so it cannot print on a regular basis. Conglomerate in the print media has appeared since the time of Suharto, for example the Kompas Gramedia Group, Jawa Post Group, Bisnis Indonesia, and so on; more details can be seen in the following table:

Tabel IV : Newspaper Owner

Newspaper Group	Total
Kompas Gramedia (KKG)	81
Jawa Pos	122
Femina	11
Bali Post	7
Mugi Rekso Abadi (MRA)	8
PinPoint	14
Pikiran Rakyat	8
Sari	4
Bisnis Indonesia	7
Suara Merdeka	5
Pos Kota	3
Media Indonesia	2
Subentra Cipta Media	4
Info Kelapa Gading	3
Gatra	3
Tempo Inti Media	3
Kedaulatan Rakyat	4
Mahaka Media	4
Media Nusantara Cipta (MNC)	3
Total	296

(Eriyanto:2011)

According to sources from the Association of Private Radio Broadcasting National Indonesia until the year 2010, there were 1,368 radio stations in Indonesia, as many as 1,305 radio stations are private radios. As well as newspapers and television, radio also has the tendency for the existence of conglomerate; it can be seen at the following table:

Tabel V: Radio Ownership

Group Radio Network	Ownership Radio Network
Mugi Rekso Abadi (MRA)	10
Rajawali Media Group-Surabaya	3
Gajahmada Group	3
Rajawali Group-Lampung	4
Pentas Group	4
Mersi Group	4
Kartika Group	3
Masima Media Investama	14
Cipta Pariwara Prima (CPP) Radionet	40
Suzana Radionet	12
Arbes Network	9
Smart FM Network	6

Mayangkara Radionet	5
Ramako Group	5
Rajawali Citra Mandiri (RCM) Radio Network	9
Volare Group (Kalimantan Barat)	14
Bens Group	9
Nirwana Group	9
El Victor Group	2
Group Trijaya / Media Nusantara Citra (MNC)	6
Lita Sari Group	3
Bonsita Group	24
Kidung Indah Selaras Suara (KISS) Group	6
Kardopa Group	8
Alnaro Group	4
Smart FM Group	6
Total	222

(Eriyanto:2011)

From the mapping of ownership of mass media it can be seen how the media conglomerates have ownership of media nationally, with an area of broadcast media throughout Indonesia, this fact shows the present state of mass media in Indonesia that have not changed much, if at first the broadcast industry media is designed to support the new order regime , then post the new order the phenomenon of the concentration of ownership of media industry emerges, it is true that media industry is inevitable in the media business, the current media business in Indonesia looks increasingly focus on consolidation and the convergence of media, the phenomenon of media industry that is concentrated is the final stage of an evolutionary cycle in modern industrial institutions.

This is not only happening in the mass media business, all today businesses face the same thing which are the severity of the competition, and the narrowing of the market, so the company is required to have a competitive advantage. Besides, the company also addresses this by uniting themselves (*synergy*); in the case of media in Indonesia it can be seen from the merger between Trans TV with TV7 to become Trans7 TV.

This consolidation process eventually leads to the concentration of business, which is a control of the units of production by a major company. Concentration is the result of three separate processes but mutually supportive: integration, diversification and internationalization (Golding and Murdock, 1997: 4). Furthermore Golding and Murdock (1997: 4) describe that *first*, the process of integration can run vertically and horizontally, horizontal integration occurs when a group of businesses acquire additional units of the

same level of production, while the vertical integration occurs when a business group expands to the different production stage. Both integrations should normally run through a common mechanism of *mergers* and *take-over*.

Second, diversification occurs when a company expands to other fields, such as media companies ventures into other business areas, in Jakarta, the Kompas Gramedia Group is a media company that is most expansive in doing diversification process, besides engaged in media expansion it also expands in the field of hospitality with the presence of Hotel Santika, in East Java Jawa Post Group is a media company that conduct most diversification process outside the media business, for example PT Prima Electric Power is building a power plant to supply electricity in East Java (AJI, 2004: 24).

Third, internationalization occurs when the domestic enterprises open up to foreign investment flows. In today global economy, in which capital flows can be in and out with ease, resulting in many companies that make use of these funds to increase the capital, it is due to the very limited domestic capital for expansion for a media industry. According Sudiby (2004: 55) to establish Global TV, it requires a capital of Rp 500 billion; Lativi which was renamed to TV One was founded with initial capital of Rp 300 billion, while TV7 and Metro TV require an initial capital of Rp 200 billion to start their business. With such capital, then the question arises to whom is the role of the mass media ?

C. Internet in Indonesia

The growth of internet users in Indonesia is experiencing a surge that is strong enough, data from the media scene (2012: 151) on 9 major cities in Indonesia, namely Jakarta, Bandung, Semarang, Surabaya, Medan, Makassar, Yogyakarta, Denpasar, Palembang show a surge of internet users as follows:

**Tabel VI : Internet Penetrasion
All Adult
Jakarta, Bandung, Semarang, Surabaya,
Medan, Makassar, Yogyakarta, Denpasar, Palembang
2007-2011**

City	Year				
	2007 ,000	2008 ,000	2009 ,000	2010 ,000	2011 ,000
Population 15+	36.335	37.543	38.844	43.517	44.941
Jakarta	2286	2695	3093	4221	5806
Bandung	250	338	283	366	623
Surabaya	221	238	305	588	709

Semarang	696	1043	1056	1461	1506
Medan	217	286	245	425	468

From the table above the surge in Internet users in 9 major cities in Indonesia, in 5 years the average number of internet users in 9 major cities in Indonesia from 2007 to 2011 jumped between 200% -3 0 0% in each region, this indicates that more and more people in Indonesia, especially in 9 big cities above 9, use the internet in their daily lives. Meanwhile, the facilities that are accessed in the internet are as follows:

The data above shows that the most-used internet facility by the Indonesian people in 2007-2010 is a general surfing, while in 2011 the data show the surge of social media enthusiasts, in which it was not shown in previous years; from the above data it can be shown that the use of social media becomes a trend for the Indonesian people.

The above data is correlated with the longer internet usage time; the data below shows the amount of time used by the Indonesian people in accessing the internet.

Sumber : media scene (2012)

According Eriyanto (2011) the internet boom changed the way people access the media. According Eriyanto (2011) citing the research by AGB Nielsen Media Research and Roy Morgan (2010) the majority of users use the Internet to check email. But the proportion for internet use to access local and international news is big enough --- respectively by 28% and 18%. Surveys were conducted to show more clearly the influence of the Internet on the media. The number of those who read newspapers fell from 8.4% to 6.2% only after accessing the internet. Of course this people's behavior change should be anticipated by the government.

The characteristic of Indonesian people in accessing the Internet is done more using cellular phones. The survey conducted by Nielsen in Eriyanto (2011) in Southeast Asian countries clearly shows the difference of internet users in Indonesia with those in other countries. In Indonesia, only 31% are accessing the internet via desktop computers and 29% are accessing via the netbook / notebook / laptop. While accessing the Internet via mobile phones reaches 78%. This is different from other countries, in which the use of a home computer or notebook in access internet is quite high. From the various data and the description above, it appears that the internet will become the pillar for distributing information and news in Indonesia, the community will increasingly access the internet easily and cheaply and this certainly a challenge for the government to communicate with its people.

D. Government Communication

According to Alwi Dahlan in Ngurah Putra (2004), almost every government agency in 1970 put public relations in its organizational structure, but the main duties and functions are still diverse, so the role of public relations is not optimal, it is not uncommon in an agency's public relations that public relation is only a section under the other tasks with a very limited access and it does not have access to the direct leadership.

The tasks are executed more clerical and very limited as to the matters of protocol, documentation of agency activities, information activities, information dissemination, which in some cases have not been implemented optimally.

With this inadequate formal position and authority, the role and function run by the public relations staff in the public sector are not optimal. As stated by Grunig in Ngurah Putra (1999) this is usually because of the practice of public relations in an organization is influenced by the authority holders in the institution, professionalism of the officers of public relations, management style or organization culture and the situation faced by organizations.

Furthermore Ngurah Putra (2004) states that with the authoritarian management style, leaders tend to regard what is done will never be wrong. They feel as they are destined to be the source of truth, so it is not important for them to dig input or suggestions from the public.

The public relations officers in the management of the common bureaucratic authoritarian are not innovative; they just do and work if there is a policy from the leader, there is fear of performing the task if there are no instructions or policies of the leadership.

This makes public relations officers merely a spokesperson for the institution, so that ideally a two-way communication to reach an understanding cannot be conducted. Ngurah Putra (2004) provides some very precise illustrations to demonstrate the reality of public relations in the public sector of the New Order era.

The public relations in government agencies often run publicity models or propaganda. The explanations given by the public relations department often do not correspond to reality, or at least an institution has often been determined or framed an issue in such a way that these agencies never look guilty. This is very visible in the practice of public relations executed in a variety of Indonesian Army information service. Dili incident of 1991, the incident of July 27, 1996 incident and other bloody incidents are very good examples for that. Information on the actual number of victims and the cause of

death was always away from the fact and was commonly revealed later through independent investigation in the investigation report of the mass media. Eventually, it makes people not to trust government information. In the long term people become apathetic and government is increasingly difficult to obtain support from the people.

Public relations agencies tend to become the shield for policies that lack of support from the community. The formulation of policies and programs that are not in accordance with the public interest cause a public relations officer into trouble when they have to explain the policy or program to the public. This certainly could cause a problematic problem for the public relations officer in the public sector. In many ways, public relations officers are often in a difficult position when information that they spread is later denied by their own superiors. In this case, public relations officials in the public sector often have to cover the mistakes of officials, become the victims, and become the ones who justify what was done by the leader of the agencies.

Public relations become a disposal spot. Since there is an assumption that everyone can be a public relations officer, then it is normal that anyone can be placed in the public relations department. It often happens that an employee who is not suitable for the many departments, either because of the inadequate ability or qualifications or because of disciplinary problems, the employee is then placed in the public relations department. This of course can worsen the performance of the public relations department, because people who are placed in this section do not necessarily have the technical ability to execute communications programs, which are the main responsibility of public relation officers.

It has been described above about how the reality of government communications in the New Order is, at that time the communication of government is mostly addressed by public relation and public relations department at that time is not a prestigious and even the disposal spot, it means they who do not perform well are placed in the public relations department. Indeed, this phenomenon is not surprising because in the era of the authoritarian new order government all the people and also the media do not have the opportunity to critique to the government, if they dare to critique then they will deal with soldiers and weapons (Triputra : 2001), because at that time all the criticism on the government and the president Suharto is regarded as a threat to the security and stability of the State.

How is the government communication in Indonesia after the New Order? It has been described above that the current government communication has 2 big challenges,

which are: 1. Media conglomerates and 2. The easy and economical access of internet/social media

After Suharto fell and the New Order regime collapsed, media and media owners, especially owners of large media (media conglomerates) that were restricted and regulated by the government with weapons and troops in Suharto era, become free from the restraint, the current media in Indonesia can almost inform everything from the attack of the government's policy to the attack of the head of the government both at central and regional levels.

The more striking phenomenon is the owners of the mass media, especially television in Indonesia, who are using media television for the purposes of political campaigns and or individuals who are supported by the owners of the media, for example, to the presidential election in 2014, it is clearly seen how the television media in Indonesia becomes the battle arena for the supporters and opponents of the parties of presidential candidates, in this case is Metro TV media owned by Surya Paloh who is also the chairman of the Democratic National Political Party that supports Joko Widodo against Abu Rizal Bakri, the television owner of ANTV and TVOne, who is also the chairman of Golongan Karya Party that supports General Prabowo Subijanto.

The government surely can no longer use the power of the army and weapons in regulating the fighting between big media owners, government can also no longer use the instrument of the information department as it used to be in the Suharto regime that has revoked the licenses of mass media. The biggest problem in Indonesia from the fighting among the media owners in politics is the fighting during the presidential election that is not necessarily completed when the president is elected, they are the owners of the media, and in this case Abu Rizal Bakri still use the television to hit the government's policies.

On the community side it cannot be denied that currently internet has become the pillar of communication in Indonesia, based on Eriyanto (2011) Deloitte Access Economics estimates that there are 260 thousand internet cafes in Indonesia. Furthermore Eriyanto (2011) estimates that in 2010 there were 220 million mobile phone used or 92 mobile phones per 100 inhabitants. Given the phone owners who have more than one phone, this suggests that as many as 85% of the adult or 65% of the total population has access to mobile phones. Currently most mobile phones can now be used for internet access. Taking into account that the internet access through public facilities (internet

cafes) and cellular phones, internet access is higher than what it is expected by ITU, APJII or Gartner.

Deloitte Access Economics (2011) estimates that there are 45 million internet users in mid-2011 that is equivalent to about 18% of Indonesia's population. Deloitte Access Economics even cited a report from Business Monitor International that estimates higher internet access, which was 26% in 2010. The survey conducted by Nielsen (quoted from Indonesia Media Guide, 2010) strengthens the estimation that internet access in Indonesia is in the range of 20%. From the description above it shows how the magnitude of the Indonesian people use the internet to their communication, at this time the society of Indonesia especially in urban areas use the internet to provide feedback or criticism of public services by the government.

With those two phenomena, so how should the government prepare the strategy to communicate with people? In this paper, the author uses the communication theory of governance proposed by Ndraha (2013), according to Ndraha (2003: 51) government communications is *"It is a reciprocal process of information and messages delivery between the government and the governed, the one is using frame of reference of the other, at the particular position and the role, so that the behavior and attitudes of the other party is formed, changed or maintained, based on the mutual understanding and trust between both sides."* Based on Ndraha's description above it can be concluded that government communication is communication that runs only between the government and the governed, and what is the effect or result of such communication? Furthermore Ndraha (2003: 52) creates diagram of government communication as follows:

GOVERNMENT COMMUNICATION DIAGRAM
(TALIZIDUHU NDRAHA, 2003)

Note :

CT : Communicant
 FOR CT : Frame of Reference of Communicant
 CE : Communicate

E	: Encoder
M	: Message
N	: Noise
D	: Decoder
FOR CE	: Frame of Reference of Communicate
R	: Response

In the diagram above it is seen the importance of frame of reference (for) between the government and the governed, with equal frame of reference then the noise (barriers) can be minimized, with the minimized barriers then it is expected that the response or feedback from the people will be equal to the ones desired by the government. Isn't the essence of communication is the common word that means the same? The word same here means the same meaning.

The problem is that the language of the government is not the same with the language of the governed (people), as if they are from a different world, the frame of reference and the government language is commonly normative and formal, and even tends to be a rhetorical language. While the frame of reference and people's language is egalitarian, rumors, and tend to be gossips (Ndaha, 2003:52), so that the messages sent by the government are not the same as messages of people, it is necessary to note the barriers that commonly happen in government communications, so that the message sent by the government to the governed can be received and understood by the minimum *noise*.

By using the theory above then strategy of government communication in Indonesia should be changed, it can no longer merely be run by the armed forces, weapons and bureaucracy. Communicators in government, particularly public relations should start to straighten and reform themselves, because the challenge is greater and must be addressed intelligently.

The research result by Subagio and Kawuryan (2004), Kawuryan (2014) shows that the public relations especially in local government have several weaknesses as follows:

1. Authority/Institutional Aspect, 2. Information Processing/Public Relation Strategy Aspect, 3. Administrative Aspect

1. In authority aspect, the research result above found out that the public relations are still not considered as significant part. The problem of authority influences the duties, responsibilities, and functions of public relations, in which public relations

cannot do their duties optimally due to the existing bureaucracy. Due to the lack of authority of public relations, information services to the press is not running as it should, in fact the public relations is required to develop and establish a good relationship between the local government stakeholders such as the mass media and the *public*.

2. Aspects of Information Processing / Public Relation Strategy. Information processing and public relations strategy aspects, which is the heart of a public relations agency in carrying out its duties and functions. Strategy and campaign in government still use the old strategy (business as usual), for example to get information about problems and issues that occur in the community, public relations of the government still rely on the mass media and get down to the people directly, either through opinion leaders who are community leaders, and the public by means of direct dialogue. But times have changed and now internet has become the pillar of modern communication, government should do campaigns and communicate to people through social media more.
3. Administrative aspects, according to mapping of the authors at least there are 3 (three) kinds of internal obstacles, namely: 1. The human resources, 2. The lack of facilities and infrastructure support, 3. The inadequate financial aspects. Three obstacles above quite disrupt the task of public relations in conducting their duties.

The human resources in public relations show are not optimall because the public relations are ideally be filled by people who have knowledge and skills in the field of media and journalism, or a background in communication scholars, but it turns otherwise. In addition to the scarcity of scholars who have communication backgrounds, public relations of the government are also poorly supported by training in the field of public relations and IT.

In addition to the above aspects there is financial problem too; it cannot be denied that the funds are the main problem of each organization, basically the public relations has not got sufficient funds to execute public relations programs.

E. Conclusion and Suggestion

Indonesia has changed, in the Suharto era mass media were easier to control, and the way to control the mass media in authoritarian governments such as New Order is by

using the power of the State, both through regulation of information department as well as through soldiers and weapons.

In the reform era of it is no longer possibly conducted by the government, because Indonesia is now no longer an authoritarian state but the state of democracy, so the setting mass media can no longer be done by means of force by security approach.

At this time in Indonesia there are two media main flows, namely: 1. The media conglomerate which is getting stronger and the owners of these media are using the media for political interest and 2. The easy and cheap internet access in Indonesia which makes the flow of information can no longer be controlled by old mean of authoritarian state.

Therefore, the government needs a new strategy to communicate with citizens, but the problem is the public relations department has not been considered as important, thus the public relations needs to be empowered by means of: 1. Authority/institutional aspect of public relation, basically there are 2 strategies of short-term and long term, (a) in short-term strategy there should be a restructuring program for public relations, in which the functions and authorities should be improved, and (b) in long-term strategy the structure of public relation should be improved so that they will have greater and wider scope of authority, since it cannot be denied that in this reform era the flow of information is inevitable anymore by using the security and power approach.

2. Aspect of Information Processing/Public Relation Strategy, there are three types which are, (a) Information Filtering and Processing, (b) Strategy in dealing with negative news, and (c) Relation between public relation and conventional mass media and internet-based social media. 3. Administrative Aspect, there are 3 types, which are, (a) Human resources, (b) The lack of facilities and infrastructure, (c) Inadequate financial. For human resources issue, the employee placement of public relation should be taken into account, ideally the employees of public relations are those who have background of communication or publishing and they should also understand about social media (internet), besides there should be improvement of knowledge of public relations' staff about public relation, by conducting training and workshop dealing with the duties of public relation, for example journalism training, in which they will be taught how to create great press release so that it will be understood well and it will be published by the media.

For the issues in facilities and infrastructure, the information to the community needs to be improved gradually. By using good facilities and infrastructures, it is expected that the public relation will do better and more professional. The last, for funding issue,

the public relation perceives that there is a lack of funding, in globalized world, the limit of the areas are blur, so that the role of public relation should be improved.

It was once enough to urge people by using advertisement in the radio, now there is a need to advertise using television media to make it better. However surely it will be more expensive, so it is necessary to think more about adding the funds in public relations.

PRE-ELECTION SURVEYS AND ITS INFLUENCE IN THE VOTING PREFERENCES: FOCUS ON THE 2016 PRESIDENTIAL ELECTIONS IN THE PHILIPPINES

Jefferson B. Payusan, John Henedee Quitara and Hilton J. Aguja PhD
Templezion.77@gmail.com
jeffersonpayusan@rocketmail.com
hiltonaguja@yahoo.com

Mindanao State University-Iligan Institute of Technology

Abstract

Pre-election surveys reflect the opinions of the electorate about the coming elections (Bartels, 2008). It is a tool to evaluate campaign strategies and probable outcomes. Taken alternatively, how will voters perceive the pre-election survey results? Consequently, how does it influence the preferences of voters, if any? These are the main issues that this paper would like to provide answers to.

Blais (2002) noted that something exists between voter's who want their vote to matter (strategic effect)? Or will they be sympathetic by preferring the trailing candidates in the pre-election survey results (underdog effect)?

Employing a descriptive research methodology, the findings are based on the responses of 250 fourth year college students who would be first time voters in the coming May 9, 2016 elections. Data are gathered using Likert Type questions. The research is anchored on the pre-election surveys conducted by two public opinion polling bodies in the Philippines: Pulse Asia Inc. and the Social Weather Station. Majority of the respondents consider them as trustworthy.

In the main, the findings rejected the assumptions of the strategic voting theory which posits 'winnability' as a factor of getting the votes of the undecided voters. Likewise, the findings reject the 'underdog effect' which is premised on the vote swing in sympathy for the survey underdog. While "something exists between voting decision and election polls", it is not as straightforward as the theory would like us to believe. Nonetheless, the bandwagon on the strategic effect have come out from direct group discussions and Facebook status posts of the respondents but not in their responses in the questionnaire when the respondent is doing it alone free from peer pressure.

Key Words: elections, surveys, strategic effect, underdog effect, bandwagon

INTRODUCTION

Pre-election surveys reflect the concurrent opinions of the electorate about the coming election (Bartels, 2008). Through the use of statistics, surveys are made as an evaluative tool to find out whether the campaign strategy is doing well or not. It becomes a scientific instrument for candidates to determine the fate of their election. However,

taken alternatively, how will voters perceive the election survey results? Blais, Gidengil and Nevitte (2002) have already noted that there something exists between voter's voting decision and survey predictions.

This study asks whether leading pre-election surveys, in the context of Philippine Presidential Election, make candidates a practical voting choice for voters who want

their vote to matter. Alternatively, can trailing in pre-election surveys possibly arouse sympathy among voters for them to choose those lagging candidates in the pre-election survey statistics? The following are the problem statements of this study:

1. What is the level of trust voters have on the public opinion polling bodies?
2. Will the voters be “strategic” in their voting preference by choosing the survey leader based on the pre-election survey results?
3. Or will they be “sympathetic” by choosing the survey underdog?
4. Whether or not pre-election survey results are reflective of the official election outcome?
5. Whether or not there is noticeable variation in the responses along gender lines?

Following the lead of Blais, Gidengil and Nevitte (2002) in their “*Do Polls Influence Votes?*” The authors’ notion was that something exists between voting decision and election polls. They defined it as the “*strategic (sophisticated or tactical) vote*” and the “*contagion effect*”. Strategic voting is when a vote cast for a party that shows a positive standing in the election race (through poll), even if it’s not personally preferred because the voter is motivated by the intention to affect the election outcome. The rationale is when voters evaluate the election survey leaders more positively than those lagging behind because these candidates perform better than others based on the survey results (Blais and Nadeua 1996; Cox 1997; Blais et al., 2001).

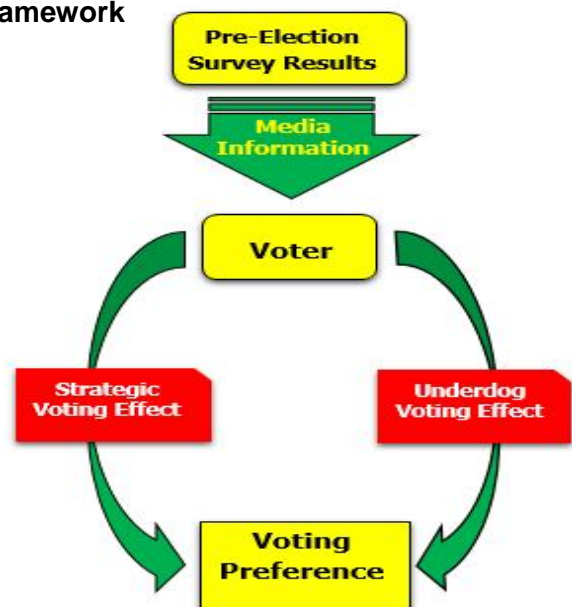

Another element of this study is the “*underdog voting effect*”; a loser or predicted loser in a struggle or contest (Merriam-Webster, 2015). It refers to the tendency for other potential voters to be attracted to the trailing candidate (Lavrakas, 2008). According to Traugott and Lavrakas (1996),

“It is a ‘sympathy’ effect that apparently causes some voters who otherwise might be expected to vote for one candidate to support another candidate whom pre-election polls predict will lose the election (p. 200) (as cited in Diaz-Castillo, 2005).”

THE CONCEPTUAL FRAMEWORK

The conceptual framework displays relationship between the pre-election survey predictions and the voter’s voting decision as posited by Blais, Gidengil and Nevitte (2002), which in the case of this study is the voter’s “voting preference”. The electoral process comprises the registration, campaign and the voting period (ACE Electoral Knowledge Network, 2013). Throughout this process, the voter is exposed to election related information channelled through the media. From here, the researchers conceptually set forth the rationale that voters may act strategically and contagiously in deciding his/her preferred candidate. Through the same channels, voters may also choose to vote for the underdog candidate in the presidential pre-election survey-ranking list).

Fig. 1. Schematic Diagram of the Conceptual Framework

RELATED STUDIES

Polling History

Public opinion polls' becoming a worldwide trend in elections should not be a surprise. In fact Hillygus observed that "public opinion polls are now conducted on every topic under the sun everything from presidential approval to celebrity outfits and sports predictions but they remain especially fundamental to the conduct and study of elections. Elections and polling are so intertwined that it is hard to imagine one without the other" (Hillygus, 2011).

Interestingly, public opinion polls are not all about politics; its advent however is born out of political interest. Polling history can be traced back to the "first political poll, called a "straw poll", during the election of 1824 in Pennsylvania" (Kimball, 2013). The straw poll accurately predicted Andrew Jackson's victory over John Quincy Adams. However, the methods used in straw polling are very much different from that of the modern opinion polling. "A straw poll refers to an unofficial ballot conducted locally as a test of opinion.

Unlike most modern opinion polling which uses random sampling, straw votes use non probability sampling and remain popular in some states in the US." (Macreadie, 2011). The advent of modern opinion polling involves presidential survey. The magazine, Literary Digest predicted presidential election outcomes from 1916 to 1932 through mails sent out to millions of potential voters. However, on the 1932 election, the Literary Digest decided to focus on telephone directory and the registration of car owners which predicted that Alf Landon would win the coming election. Instead, Franklin D. Roosevelt won the election, a mistake that would cost the Literary Digest its existence.

The Literary Digest's failure to predict the election outcome brought the spotlight to George Gallup and Elmo Roper who accurately predicted Roosevelt's 56-44 wins

against Landon. Modern scientific approach such as probability sampling and margin of error are induced by Gallup and Roper in their methods to come up with such an accurate prediction. Macreadie pointed out that "Gallup's success challenged the then current methodologies used in opinion polling and was particularly significant in the development of survey research techniques, not only in the US, but world-wide" (Macreadie, 2011).

Considering another momentous event in the history of polling the 1948 presidential election was a nightmare for Gallup and his fellow pollsters who predicted that Thomas Dewey would be the next president, a thing that happened to Truman. This failure according to Kimball was "explained by embarrassed pollsters as "late deciders" breaking for the president" (Kimball, 2013).

The Hardliner and Opposition Theories

Berelson, Lazarsfeld and McPhee (1954) wrote that "sociological affiliation determines a voter's leader choice." It is the family that served as the core group having the shaping effect in the interests and preferences of the individual in politics. If the various sociological groups a person belongs contrastingly agree with one another, so you have a weak platform of basis for voting decision. Consequently, one decide to vote later when it close to the election day or one is more likely to decide not to attend the election (Berelson, et al., 1954).

Zeller and Feldman in their "A simple theory of the survey response" of the American Political Science Journal (1992)," details three factors constituting survey sample responses in opinion polling that serve as considerations in analyzing survey response . Accordingly, these are: The "ambivalence" factor which takes its shape when respondent's give immediate responses or opinions on a particular issue to which respondents has already taken a side. Secondly, "accessibility" undermines

the stochastic sampling virtue by prompting the researcher to choose alternatively accessible samples than the random far from hand ones; lastly, individual's "responses" in answering the survey varies depending on the saliency of the survey question at the time the survey was conducted (Zeller and Fredman, 1992; pp. 585-586).

Similarly in "*Lies, Damn Lies, and Pre-Election Polling*" Dinardo, Dolfin and Walsh (2009) notes "vote uncertainty "and the "sample selection" biases. While Irving Crespi (1988) (as cited in DiNardo et al., 2009, p. 3), reinforces that "even if a poll were conducted immediately before an election, one cannot hope to measure voter preferences accurately enough and that to approximate election results closely is to challenge the meaningfulness of all polls.

Downs's famous "*An Economic Theory of Democracy*" (1957) puts it by his model of computing a voters net benefit from a given party in power and what could have happen if another party was there, that in competing parties (especially in two-party systems) an individual votes for a party he believes are also the preference of others. Downs wrote the following axioms of voter's decision: a voter only votes if it seems to have a legitimate chance of winning but if his favorite party has a least chance of winning he chooses his alternative from the range of parties who also have reasonable chances of winning this is to keep his least favored party from winning; while in cases where he is a future-oriented voter he may insist on voting for his favorite party even given the least chance of winning to improve alternatives offered to him in the future elections, whilst vote abstention only happens when parties faced a deadlocked situation in policy progress (that could be caused by almost similar policy platform) (Downs, 1957).

Polling and Beyond

Technology, economics and other factors affect polling (McLaughlin, 2012). Social media, in particular, becomes a significant instrument for politics and this utilitarian tool becomes widespread (Bermudez, 2012). Donsbach critically defines the internet as giving the biggest slice of the interpretative assistance the media pie has in disseminating election related information particularly the media release of election surveys.

Despite this assumed motivation, however, the effects were classified as having minimal and completely harmless effect on the voting decision (Donsbach, 2001). These judgmental sources can come in the form of "journalists' speculation, politicians' showy claims to victory, or selective choice of photos, quotes, etc." and as it turns out, poll results prior to the election tend to get drowned out amidst the many other statements on the outcome of the election. Citing Kirchgassner in his work "*Who's afraid of opinion poll?*" Donsbach maintains that the successive conduct and publication of opinion data before elections tends to make voters wish to have voted than what he or she really did otherwise, he calls this the "equilibrium" effect, and is defined as "being when no voter wishes later to have voted otherwise than he or she really did" (Donsbach, 2001).

METHODOLOGY

This study was conducted in the College of Arts and Social Sciences (CASS) of the Mindanao State University – Iligan Institute of Technology. This study used the responses from the list of 278 graduating fourth year students of the College of Arts and Social Sciences (CASS) as they possessed most of the eligibility requirements for voter's registration particularly their age level.

Procedures in Treating Data

Using simple statistical tools such as a Frequency Distribution Table (FDT) and Percentage distribution (%) the frequency of the responses calibrated to reach the average rate of their answers. In testing the trustworthiness of the two public opinion polling bodies, with the 1 to 10 measurement rating scale, the researchers' designated the value unit of 5.1 as the value acceptable in treating a positive response or the passing rate for those who consider the subject as "trustworthy". All values below 5.1 will be treated as negative and therefore mean that the respondent finds the subject as "not trustworthy". The table above shows the "Trustworthiness Likert-type rating scale".

Very Unreliable		Unreliable			Trustworthy			Very Trustworthy	
1	2	3	4	5	6	7	8	9	10

Furthermore, responses belonging to "Strongly Disagree" and "Disagree" will be considered negative and responses for "Strongly Agree" and "Agree" are thus considered as positive. The table below shows the corresponding point value of the rating scale.

"Respondents' reaction Likert Scale".

Strongly Disagree	Disagree	Agree	Strongly Agree
%	%	%	%

For determining whether there is a significant variation of responses in along gender lines- MALE and FEMALE or whether or not gender and responses are related, this study used chi-square equation in testing for independence to determine whether there is a significant relationship between two categorical variables. The chi-square is shown below with each corresponding values used in the equation:

df= 1
P-value= 0.05
Critical Value= 3.84

$$\chi^2 = \sum \frac{(\text{Observed frequencies} - \text{Expected frequencies})^2}{\text{Expected frequencies}}$$

$$= \sum \frac{(F_o - F_e)^2}{F_e}$$

RESULTS

1) **What is the level of trust voters have on the public opinion polling bodies?**

Pulse Asia trustworthiness rating scale (What is the level of voters trust on Pulse Asia as trustworthy public opinion polling body?)

The modal response for the Pulse Asia trustworthiness scale is *trustworthy* it is tight with the *unreliable* scale point having only a percentage difference. Meanwhile, the majority or 52% responded positively confirming the trustworthiness of Pulse Asia with 10% saying that the polling organization is *very trustworthy*.

On the respondents' reaction to the statement: "Pre-election Surveys by Pulse Asia are reflective of actual public opinion." (see next page)

The findings from the trustworthiness-rating table confirmed the results of the Likert scale data in the respondents' reaction. As to the statement: "Pre-election Surveys by Pulse Asia are reflective of actual public opinion." The modal response is *agree* followed by *disagree* while the majority 54% responded positively saying that Pulse Asia Pre-election Surveys are reflective of actual public opinion.

SWS trustworthiness rating scale ("What is the level of voters' trust on Social Weather Station as trustworthy public opinion polling body?")

The modal response for the SWS trustworthiness scale is *trustworthy* followed by the *unreliable* scale point having 35% of the responses. Meanwhile, the majority or 54% responded positively confirming the trustworthiness of SWS.

On the respondents' reaction to the statement: "Pre-election Surveys by SWS are reflective of actual public opinion."

Unlike the positive response from Pulse Asia, the Likert scale data didn't confirm the initial findings from the trustworthiness table of SWS. posted above, the modal response 41% of "Pre-election Surveys by SWS are reflective of actual public opinion" people said that they disagree with the statement

Survey reliance of undecided voters (As for their reaction to the statement: "Pre-election surveys help voters to whom to cast their votes when they are undecided.")

60% of the respondents positively showed that pre-election surveys do help choose to whom to cast their votes.

When asked their reaction to the statement: "Pre-election surveys are important for the electoral process."

58% of the respondents confirmed that presidential surveys are important for the electoral process. Moreover, the majority or 60% of the respondents positively viewed presidential surveys as an important aspect of the electoral process.

2) Whether or not the pre-election survey results have an influence in the voting preferences of the respondents?

Survey influence in strategic voting preference (On their reaction to the statement: "You are more likely to vote for survey leaders when you are still undecided of your voting choice.")

The findings rejected the assumptions of the strategic voting theory with over ¾ of the sample size or 72%.

On their reaction to the statement: "Winnability of the candidate is a factor to get the vote of the undecided voters."

Moreover, the modal response on whether winnability is a factor to get the votes of the undecided voters confirmed the initial findings on the pre-election survey influence in strategic voting preference. However, the 41% of the respondents who said that they *disagree* on the statement above is considerably also statistically tied with those who 40% *agreed* with the statement. However, the decisive point is over those 14% who said that they *strongly disagree* with the statement making a 55% majority of negative responses rejecting the winnability as a factor of getting the votes of the undecided voters.

Pre-election survey influence in sympathetic voting preference (On their reaction to the statement: "You are more likely to vote for a survey underdog when you are still undecided of your voting choice.")

The responses were found to have similar disposition with the findings on strategic voting theory. Still over half, nearly 80% of the respondents rejected the assumption of voting according to sympathy. While a small percentage of 24% respondents said, they would give their vote to the underdog in candidate presidential pre-election surveys.

3) Whether or not pre-election survey results are reflective of the official election outcome?

The basis of our analysis for the question focuses on the latest pre-presidential pre-election survey results released prior to the May 9, 2016 election and how it reflected actual election results. As indicated in the survey result Davao City Mayor Rodrigo Duterte is the leading candidate.

The projected results of the Presidential surveys are reflected in the official election outcome. Davao City Mayor Rodrigo Duterte is the leading and the upcoming Philippine President after winning via landslide vote having almost 15,969, 237 or almost 36

percent of votes counted as of May 16, 2015 with 96.14 percent of the precincts counted.

This means that the leading survey institutions in the country, Pulse Asia and SWS accurately predicted Duterte's landslide victory. This means that there as an enormously important development in the field of survey institutions in this country. Davao City Mayor Rodrigo Duterte has the landslide of votes with an overwhelming 78% of votes. This survey is conducted at the time when Duterte ranks 2nd and 3rd in the Presidential Pre-election surveys of Pulse Asia and SWS respectively.

4) Whether or not there is noticeable variation in the responses along gender lines?

On Pulse Asia trustworthiness and reflective capacity for actual public opinion

	Positive	Negative	Total	Proportion
Male	21	15	36	21.56%
Female	69	62	131	78.44%
			167	100%

H₁= Gender and response are not related.
H₀= Gender and response related.

df= 1
P-value= 0.05
Chi-square= 0.36
Critical Value= 3.84 x² < critical value

Both genders showed in majority an optimistic position toward the trustworthiness and reflective capacity for actual public opinion of Pulse Asia. In addition, the chi-square table rejected that gender and response of the respondents are related.

On Social Weather Station trustworthiness and reflective capacity for actual public opinion

From the table, only he male respondents showed an acceptable positive view toward the trustworthiness and

reflective capacity for actual public opinion of Social Weather Station.

	Positive	Negative	Total	Proportion
Male	22	14	36	21.56%
Female	60	71	131	78.44%
			167	100%

H₁= Gender and response are not related.
H₀= Gender and response related.

df= 1
P-value= 0.05
Chi-square= 2.61
Critical Value= 3.84 x² < critical value

Nevertheless, the male respondents show greater degree of trust toward the Social Weather Station relative to how female respondents viewed Pulse Asia. However, the difference between positive and negative responses this time is also greater as it is marked by a 12% more number of male respondents who showed a positive outlook toward SWS compared to how they rate Pulse Asia. Furthermore, in testing the response relation using the chi-square test, it was found that there is no relationship between the gender and response of the respondents.

Survey reliance of undecided voters and the importance of presidential surveys for the electoral process

	Positive	Negative	Total	Proportion
Male	16	20	36	21.56%
Female	62	69	131	78.44%
			167	100%

H₁= Gender and response are not related.
H₀= Gender and response related.

df= 1
P value= 0.05
Chi-square= 0.09
Critical Value= 3.84 x² < critical value

From the table, majority of the male and female responses responded negatively toward the questions on whether or not undecided voters would rely on the presidential pre-election surveys for them to decide whom to give their vote and whether or not they find pre-election surveys as

important to the electoral process. The likenesses of both genders' responses are also marked by only a slight difference in the degree of their favor in the negative position. But the chi-square test result showed that there is no relationship between gender and response of respondents.

Voting propensity for survey leaders and winnability as a factor in choosing a presidential candidate

	Positive	Negative	Total	Proportion
Male	19	17	36	21.56%
Female	43	88	131	78.44%
			167	100%

H₁= Gender and response are not related.
H₀= Gender and response related.

df= 1
P-value= 0.05
Chi-square= 5.78
Critical Value= 3.84 $\chi^2 > \text{critical value}$

On whether or not there is likelihood for voters to vote for leading candidates in the pre-election surveys, the female respondents overwhelming disagreed that leading a survey or winnability as a winning factor will help a candidate win by the logic of strategic and contagion voting effect theory. Moreover, the chi-square table also confirmed that respondents' gender and response are related.

Voting propensity for survey underdogs and sympathy as a factor for voting a least ranking candidate in the presidential surveys

	Positive	Negative	Total	Proportion
Male	10	26	36	21.56%
Female	43	88	131	78.44%
			167	100%

H₁= Gender and response are not related.
H₀= Gender and response related.

df= 1
P-value= 0.05
Chi square= 5.78
Critical Value= 3.84 $\chi^2 > \text{critical value}$

On whether or not there is likelihood for voters to express their sympathy by giving

their votes to those candidates lagging in the pre-election surveys, both genders showed a sweeping negative response. The question yielded interesting results as the table show the gap between the negative and positive responses. This would only mean that compared to both genders' responses in the previous table, there is higher tendency for them to opt for survey leaders more likely than voting for survey underdogs given the least voting alternative. However, the chi-square test did not conclude that gender and response are related.

5) Philippine Presidential Pre-Election Survey Coverage of Pulse Asia and Social Weather Station

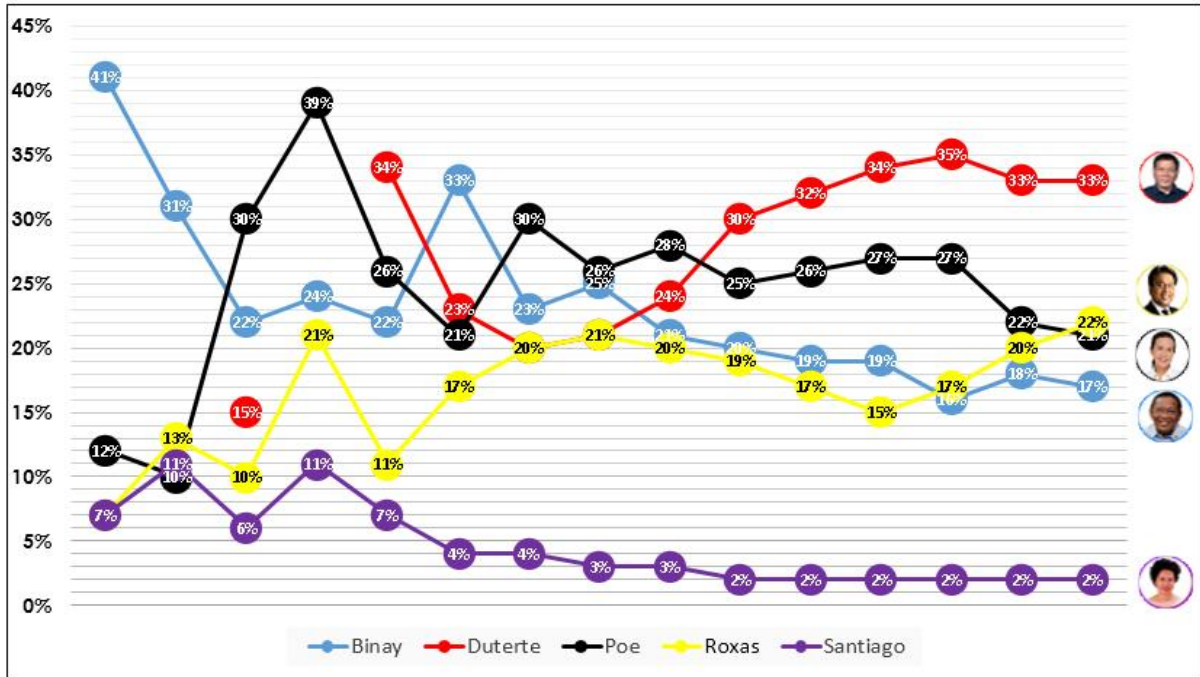

A significant part of this study is the inclusion and evaluation of the presidential pre-election surveys conducted by the largest public opinion polling organizations in the Philippines; Pulse Asia and Social Weather Station. Below is the survey coverage of both polling organizations gathered and arranged through line graphs.

Duterte's win reflected in every way the perspective of strategic voting theory. He remained consistently in the top rank of presidential surveys throughout the last set of the Pulse Asia Presidential Pre-Election Surveys. The last set of surveys already gave Duterte a landslide winning capability as his margin even grew almost a quarter of the candidate following him.

Moreover, in the flipped side of this analysis bears the notion that Duterte's start, as a lagging candidate to constantly climbing and later becoming number one could be a sign of underdog voting perspective in the position of those who participated the nationwide presidential survey done by Pulse Asia.

Pulse Asia as the survey displayed a commendable survey analytics or polling company's survey statistics accurately

Pulse Asia Presidential Election Survey Trend

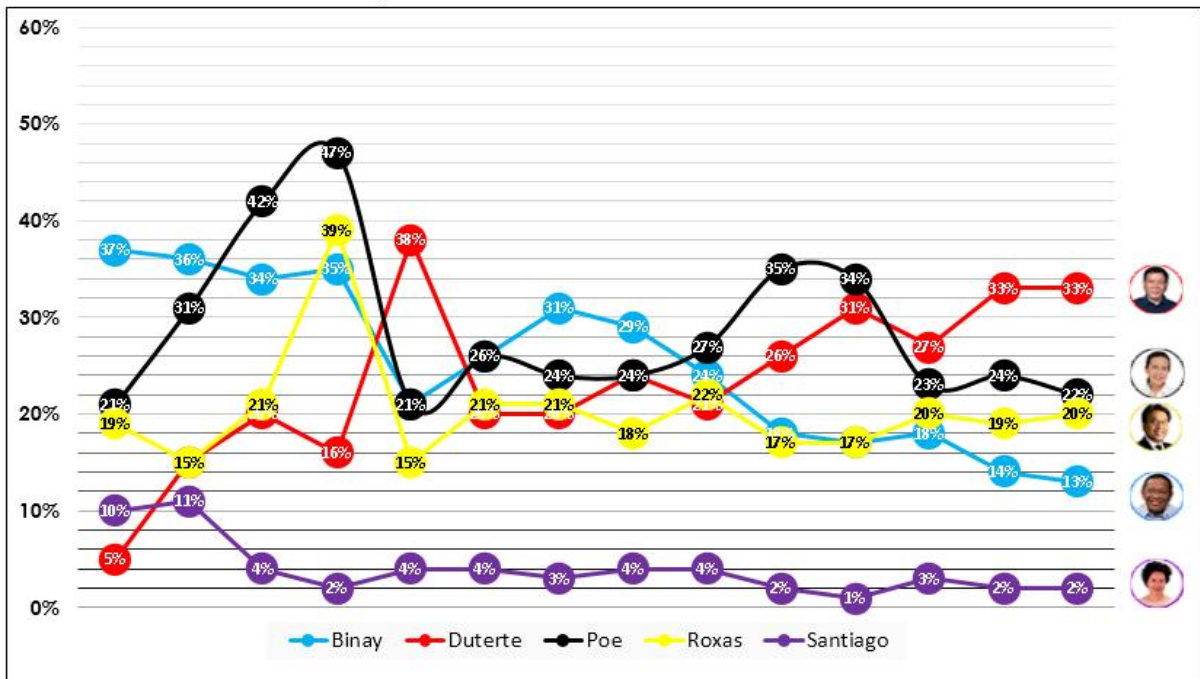

Pulse Asia Inc. Presidential Pre-Election Surveys (2014, 2015, 2016)

predicted the order and gaps of presidential candidates with regard to the votes or election results proportion manifested in the official tally of voters turn out.

COMELEC tally of votes. However, the gaps of the figures used in the predictive instrument were only statistically tied to an extent that the number are of considerable reliability. Duterte maintaining the top rank

Social Weather Station Election Survey Trend

Social Weather Station Presidential Pre-Election Surveys (2014, 2015, 2016)

However, an only slightly different case, Social Weather Station did not accurately predict the order of candidates in the official

throughout the rest of the SWS presidential survey followed by Poe and Roxas with only a 2% rating margin. Employing the

minus/plus five degree of error, the election prediction ratings of Poe and Roxas were orderly achieved as showed by their values in the line chart (see next page). Far enough, Binay consequently held the third post the trailing extreme of Santiago reflected right proportions of the official COMELEC votes counted.

Conclusion

Pulse Asia have relatively received an approval from the respondents in the trustworthiness test over the responses for Social Weather Station. But both polling organizations have received a modal positive response rating in the trustworthiness and reflective capacity for public opinion. The result is consistent with the findings that rejected both claims of strategic voting and underdog voting theory, the respondents affirmed that they are neither to be strategic nor sympathetic in their voting rationale when they still have an undecided voting preference for an election candidate. Both theories came short in validating their assumptions in the objective response of the respondents.

An interesting undertaking of this research is its featured underdog voting hypothesis. As it turned out, the underdog effect does not just only happen through the projection of trailing candidates in the pre-election survey results but it happens mostly outside. The researchers found that the underdog effect is an alternative marketing strategy used by politicians. Such as Davao City Mayor Rodrigo Duterte when he appealed to the Filipino people that he had no political machinery compared to his counter parts and that he humbly ask the Filipino people to be his political machinery. While this can also be called as a strand of populism, candidates appeal to sympathy of voters on the basis that they are the champion of the masses because like majority of the voters thought they have this

humble beginnings. Voters believe that underdog featured candidates are the once who can perfectly sympathize with them. In this, the researchers found that a candidate can be either leading or trailing in the survey results but still employ an underdog effect as an important marketing strategy for campaign. Furthermore, only the responses for the strategic voting and underdog voting survey questions yielded a relationship between gender and response.

On the other hand, the survey institutions had proven their capacity of reflecting public opinion shown in their success in accurately predicting Davao City Mayor Rodrigo Duterte's landslide victory during the May 9, 2016 election. This is based on the latest survey conducted by SWS and Pulse Asia released days prior to the national elections.

Recommendation

For the survey institutions, Social Weather Station and Pulse Asia need to be more transparent as to what and how their survey methodologies are, it should publicly spread and disclosed. To be more accurate in their survey results the methodological rigor should be matched with comprehensive relevance in matters like the increase in the number of respondents, the improvement of household-based class category of respondents (respondents are only group according to "household" but the type of household is not specified or identified) and the wider distribution of samples and the labels of the place of distribution should be likely identified. For the methodological question is not intended to discredit the similar models that is used internationally, particularly in the U.S., but how to make Filipinos appreciate more the survey or polling industry.

For the voters, though this study might unintentionally suggest unprincipled and irrational voting perspectives but the only goal of the researchers is to illustrate

how chance-based voting can similarly be like gambling your future. Voting for the leading electoral survey candidate does not guarantee a leader that best match the ethics, values, and virtues of a deserving leader. On the other hand, though “teleseryes” or “kalyeseryes” teaches us the kindness channeling our inner mode of sympathy, this also does not ensure us a leader that would in the same way express sympathy towards the people when they are already in hold of position.

The researchers strongly advocate smart and discerning voter, and their choices are best when it’s already made up already before the Election Day to help ease their to eliminate possibilities of voting misguidedly. Being able to decide before the Election Day saves an enormous amount of time both for the voters and the election process. It is necessary to bear in mind that nothing beats an informed individual.

For future theses on the subject, a dozen of gaps are wanting to be filled. The scope and area of the same type of research should have respondents that are broadly distributed but also specifically outlined. This research only used an exclusively limited type and rank of people regardless as to what social class and where are they coming. The respondents that best represents classes people from different sectors in the social stratification of the Philippines such as class A, B, C, D, and E. Such a wide spectrum of respondents will improve this study as it will be more representative of the voting population. This research can also be applied to specific context within the local elections.

Moreover, students can also dwell on remodeling conventionally employed survey method, and renovate survey instructions in order to yield more convenient and acceptable survey results like the use of real time statistical analyzer applications like “SPSS” of IBM and “MaxStat” that can be reconfigure and organize to every response

input of a particular respondent. Though programs like this cost much than the traditional ball pen/pencil and paper solving approach but the idea is to make and have the most accurate and fast research tools to come in handy, this is also where the academe or the institute plays its role in acquiring this kind of research program.

Abstract

The social dimension of coastal resources management (CRM) is highly critical for its success. Community-based CRM has become a common approach but a deeper understanding on the dynamics of community participation in various localized settings is important. Hence, this study described and assessed the existing local management initiatives on coastal resources in Bucas Grande Island, Socorro, Surigao del Norte. It is descriptive and exploratory utilizing both quantitative and qualitative methods of data collection. It employed survey among 341 respondents and 20 Key Informant Interviews (KKIs). The municipality had an opportunity to avail of a World Bank-funded project on CRM with natural resources management, livelihood and community organizing components. The LGU initiated the project and POs participated in its implementation. However, there is a relatively low level of community participation in these activities particularly in the conceptualization and monitoring and evaluation stages. Socioeconomic, political and cultural dimensions are affecting such participation and consequently, the sustainability of CRM initiatives.

Key words: *coastal resources management, community participation, local government unit*

Introduction

It has been a major contention that social dimension of coastal resources management (CRM) is very crucial. Thus, despite the rich experiences in the establishment of Marine Protected Areas (MPAs) and Community-based resources management (CBRM) programs, there is still a profound need to expand research efforts at understanding the human dimensions of coastal management (White et al., 2002). Weinstein et al. (2007) believed that societal values drive the successful implementation of MPA and CBRM initiatives. Understanding of social influences of environmental change and the mechanism of synchronizing human behavior with environmental and social priorities is therefore necessary. Studies have shown that while political, economic and social systems comprise the human dimensions of coastal management, natural resource values originate only in the social system (Weinstein et al. 2007).

Thus, it is interesting to examine the dynamics of the various local players on CRM. For one, a local government is expected to initiate the protection, conservation and/or development of the resources within its jurisdiction. LGUs opt to mobilize its constituents towards an effective and sustainable resource management. Likewise, the local constituents have to engage and participate in different CRM programs. It is anchored on the idea that the locality (both local leaders and constituents) is more knowledgeable (than any external entities) on the value of these resources.

In the Philippines, various efforts to mobilize communities for coastal resources management have been initiated. In fact, community-based resources management (CBRM) approach had already been popularized in the country in 1970s (Alcala, 1998). While there are CBRM areas that were successful, a number of these also failed. For those that succeeded, certain features of CBRM were identified namely: a) “viable organization(s) in the community”; b) “a working marine reserve protected by

the community”; c) “sources of livelihood based on coastal resources”; d) “networking arrangements” with other agencies; and e) capacity building program” (Alcala, 1998: 184). In the absence of these essential features, the probability of success and sustainability of CBRM areas is very limited if not, nil. Among the reasons for non-sustainability of CBRM are limitations in research capacity and budget, and certain political issues e.g. “parochial interest of local politics” (Alcala, 1998: 184).

It is evident that the above issues on CRM's sustainability involve the major players of CRM – local leaders and their constituents. Both have their respective stake in CRM and the corresponding privileges. Most importantly, coordination and synergy of their efforts has to be emphasized. Their partnership or co-management of the coastal resources plays a vital role. Berkes (2009) presented the various aspects (or faces) of co-management of resources (between the government and local resource users) that have evolved through time (as a concept). These ‘faces’ include co-management as “power sharing, institution building, trust and social capital, process, problem solving, and governance” (Berkes, 2009: 1693-1694). Hence, co-management of resources is relatively complex thus, the need to further explore particularly in various local settings. This attempt may offer an opportunity to address the issue on sustainability of any CRM initiative.

Thus, as this paper presents a local experience of CRM, it attempts to interrogate the implications of LGU-initiated CBRM on the mobilization of communities, and on sustainability of these projects. It a) describes the local CRM initiatives in a municipality; b) explores the roles and needs of the local government and People's Organizations as the local players on CRM; and c) assess the extent of community participation in CRM, which along with other socio-political issues, have bearing on CRM's sustainability.

Methodology

This is descriptive and exploratory study. It was conducted in Bucas Grande Island, Surigao del Norte in April 2014 to May 2015. The island is contiguous with the municipality of Socorro, Surigao del Norte, southern part of the Philippines. Bucas Grande is an island with pristine waters and idyllic topography. Its distance from the main island of Mindanao and circumstances akin to travel via seas added to the seemingly secluded reputation of the island. It houses abundant coastal resources. Presently, it has attracted a number of tourists visiting the island. According to the 2010 census, Socorro has a population of 20,304 from its fourteen (14) barangays.

This study employed quantitative (survey of 341 respondents) and qualitative methods (20 Key Informant Interviews) of data collection. Respondents from Local Government Unit (LGU) and People's Organizations (POs) were purposely selected on the basis of their involvement in coastal resources management.

A univariate analysis using basic descriptive statistical tools (e.g. frequency, percentage, range, and mean) were used for

quantitative data. Qualitative data were then transcribed and subjected to thematic analysis where patterns and themes of the responses were determined and analyzed to form part of the discussion.

Results and Discussion

1. Initiatives on Coastal Resources Management

1.1. Socorro Island Resources Development Sub-project (SIRDS)

A major initiative on coastal resources management in Bucas Grande island is the *Socorro Island Resources Development Sub-project (SIRDS)* under the *Community-Based Resources Management Project* which was implemented in 2001-2004. **SIRDS** is a World Bank-funded project implemented by the local government unit (LGU) of Socorro, Surigao del Norte, Philippines at the said municipality. It has three major components namely: natural resource management (NRM), community organizing/development, and livelihood (refer to table 1).

Table 1. Components of SIRDS

NRM Component	Community Organizing/ Development Component	Livelihood Component
<ul style="list-style-type: none"> ● Municipal Coastal Water Management ● Fish Sanctuary and Coral Reef Management ● Sea Grass Sanctuary ● Mangrove Resource Management ● Mangrove Rehabilitation ● Upland Resource Management ● Tree Plantation ● Micro-watershed Development ● Fruit Plantation ● Sloping Agricultural Land Technology (SALT) 1 ● Sloping Agricultural Land Technology (SALT) 2 ● Bamboo Plantation ● Community-based Eco-tourism 	<ul style="list-style-type: none"> ● Covered 14 barangays ● Organized 33 POs with: <ul style="list-style-type: none"> ○ Bank accounts ○ Official receipts ○ Book accounts ○ Trained bookkeeper ○ Established procurement committee ● Simple trainings on Bookkeeping 	<ul style="list-style-type: none"> ● Salago Plantation and Utilization ● Romblon Plantation and Utilization ● Payao Fishing ● Lobster Culture ● Lapu-lapu culture ● Mudcrab Culture ● Bobo Fishing

SIRDS illustrates partnership and collaboration of international and local

institutions for CRM. While the LGU initiated it, the World Bank provided funds for the project. SIRDS appears to be holistic given its natural, economic, and social components namely: natural resources management, capability building, and livelihood. These components are evidently significant for any CRM. Integrating livelihood in particular, signals sustainability of the program since subsistence needs of the communities are addressed. However, what seems unclear in the program is the integration of these components.

1.2. Other Activities on CRM

Aside from SIRDS, there were other projects that were conducted in the island. The Department of Agriculture (DA) and the Department of Environment and Natural Resources (DENR) for instance, have regular programs such as dispersal of fishing paraphernalia e.g. fish nets, fingerlings, and livelihood for the fisher folks. There was also another World Bank-funded project through the DENR and was implemented by an NGO, the Surigao Environmental Developmental Foundation (SEDF). SEDF partnered with a cooperative in the community, the Pamosaingan Fisherfolks Cooperative (PAFECO). The said project also established MPAs and provided livelihood such as fish culture and pump boat for hire.

In terms of legislation, the LGU of Socorro also formulated and implemented ordinances on environmental conservation and protection. They also have efforts on implementation of the coastal code.

The above initiatives are commendable and relevant to the preservation and conservation of natural resources, particularly coastal resources. These efforts demonstrate the participation of various sectors and agencies on CRM activities. While international agencies provided funds, national agencies and local government take charge on the implementation. The local constituents often serve as the 'frontline' in the implementation of CRM. They are often required by the

government to form People's Organizations. Presumably, having the community organized formally may facilitate implementation of CRM projects. However, there is always the challenge of sustainability and effectiveness of such efforts. While international agencies are providing funding support and the national government agencies are providing enabling mechanisms, the local government and communities are likewise expected to demonstrate commitment in their role for CRM.

2. Local Players of CRM

2.1 Local Government Unit (LGU)

Literatures support the contention that LGUs play a role in CRM particularly through allocation of funds for implementation of various CRM activities and the passing of legislation for marine sanctuaries and gear regulations. Pomeroy et. al. (1996) reported that government support through legislation, funding and enforcement, is crucial to sustaining the project interventions. Russ and Alcala (1998) also noted that government support is essential for the sustainability of marine protected areas, which is a key element of local CBCRM initiatives.

Provinces, along with municipalities and cities, are mandated by the Local Government Code to carry out program planning and implementation, legislation and enforcement, taxation and revenue generation, monitoring and evaluation, capability-building, and interagency and inter-LGU collaboration for the protection of coastal and marine resources (Yambao et al. 2001). The Code, which established jurisdictional entitlements to provinces, municipalities and cities, and barangays, assigned the settling of disputes over the boundaries of municipal waters to provinces and provided oversight functions of the governor and provincial council (Abregana et al. 1996).

In the case of Bucas Grande, SIRDS in particular, the LGU initiated the

conceptualization of the project. In one occasion, certain LGU officials of Inabanga, Bohol, Philippines shared their experience on a World Bank(WB)-funded project to few LGU officials of Socorro, Surigao del Norte. Thus, representatives from the Municipal Development Fund Office of Socorro inquired of the requirements from WB.

Consequently, a Technical Working Group (TWG) was created to prepare and submit proposal and feasibility study. The Municipal Development Officer served as the chair of the TWG and the Municipal Agriculture Officer, Municipal Accountant, Municipal Manager and Municipal treasurer, as members. The group finally came up with the proposal and feasibility study and submitted to the WB through the Department of Finance. The said proposal was approved thus the LGU Socorro implemented the project.

The LGU, in conceptualizing SIRDS, recognized the importance of community organizing. In fact, part of their initial activities is the formation of People's Organizations. They organized 33 People's Organizations (POs) from among 13 communities, both coastal and upland. They hired community organizers who were responsible for groundwork activities. They also initiated the establishment of 12 Marine Protected Areas (MPAs). They conducted seminars among communities in these areas to make the latter aware of the importance of MPAs and their respective responsibilities. They also identified fish wardens who were primarily responsible for the security of MPAs against illegal intruders.

Based on above experience, the local government does its role of taking the lead in conceptualizing a CRM project. It shows that LGU officials are keen in looking for opportunities and capable of developing a project proposal, which was eventually funded by World Bank. However, it is a question of whether or not such a skill of designing a project could be sustained up to the implementation or even institutionalization of the project. Pomeroy (1995) pointed out that leadership at the

local level plays a vital role in the success of CBRM. Effective CBRM is highly dependent on the capacity local leaders to "command respect from members and enforce institutional arrangement" (Pomeroy, 1995:149).

The LGU respondents recognize their need for enhancing their capacities as shown in Table 2. It could be noted that the LGU of Socorro has a number of capacity needs for CRM in terms of knowledge, skills, and practice, especially on trainings and seminars on CRM, management of funds and monitoring of CRM projects. It implies that currently, LGU efforts are still on the stage of raising the level of awareness on CRM.

2.2. People's Organizations (POs)

While LGUs play a role in mobilizing its constituents and establishing organizations in communities, the latter are viewed essential partners for CRM. In Republic Act 7160 of 1991 or the Local Government Code of the Philippines, Section 35, the local government units may enter into joint ventures and other cooperative arrangements with People's Organizations and Non-Government Organizations. This is to engage into delivery of basic services, and promote ecological balance, among others (Local Government Code, 1991). Thus, the state recognizes the role of POs in any CRM initiatives.

As mentioned above, CBRM had been employed as CRM approach in the Philippines since 1970s. Alacala (1998) considered a viable People's Organization in the community as a major component of a successful CBRM. When POs have strong leadership, supported by committed members, and clear institutional, technical, and funding support, any CBRM effort would more likely succeed.

Table 2. Capacity Needs of LGU for CRM

NEEDS (LGU)	Knowledge, Skills, and Practice	Skills and Practice	Practice
Conduct of trainings and seminars on CRM	2.34	2.32	2.22
Management of Funds	2.03	1.76	1.84
Monitoring of CRM projects	2.02	2.16	1.97
Development of IEC materials	1.92	2.08	1.67
Evaluation or impact assessment of CRM projects	1.90	2.07	1.59

1-1.50= low; 1.51-2.5 = medium; 2.51-3.0 = high

Anchored on the development approach that emphasizes community

participation, mobilization and empowerment of POs in the Philippines has been initiated mostly by NGOs. These NGOs that have mostly availed of funding support from various donors, acted as “doer, mobilizer, catalyst, and activist” in many local communities (Duthy and Bolo-Duthy, 2003:19).

The POs organized by the LGUs in Bucas Grande had the direct role in implementing CRM activities under SIRDS. The LGU allocated certain amount to each of the different POs to engage in certain livelihood projects. With the assistance of community organizers, the POs had the autonomy to manage these projects.

The community organizing personnel hired by LGU was responsible for organizing the target beneficiaries. They assisted the POs in implementing the projects particularly its livelihood component. Unfortunately, there were issues reflecting an unethical conduct of CO personnel e.g. involvement in mismanagement of funds.

Aside from issues, the respondents also identified needs of POs as shown in Table 3. Like the LGU, they especially mentioned of the needs for trainings and seminars on CRM and monitoring of CRM projects. It thus validates the above data on their experience relative to CRM. The POs also emphasized on the need for developing IEC materials on CRM.

These data reflect the limited experience of LGU in terms of community organizing which is the foundation of CBRM. Community organizing is hardly a simple process. An effective community organizing involves “building individual and institutional power” ((Duthy and Bolo-Duthy, 2003:15).

In conceptualizing and implementing SIRDS, the basic elements of community organizing are less likely visible namely: “community social analysis, identification of issues; consensus building on key issues; strategizing; role playing in anticipation of confrontations with the powerful; mobilization, evaluations and reflections;

identification of grassroots leaders; and building of organizations” (Duthy and Bolo-Duthy, 2003:15). Hence, it requires concrete skill in such processes of building not only individuals but also institutions and communities.

In effect, a manifestation of a viable PO is its empowered participation in planning and decision making of the use and development of community resources. In the case of Bucas Grande particularly SIRDS, the participation of community at its various levels may also reflect the potential of LGU in implementing CBRM.

3. Extent of Participation

Results of case studies revealed that involvement of the local community in resources management and their high level of participation in decision making, are crucial (Alcala, 1998). Active community participation has to be encouraged from inception through the implementation phase. Local participation in monitoring and evaluation also contributes to the sustainability of initiatives (White and Vogt, 2000).

The study of Pollnac, et.al. (2001) revealed that community participation is positively correlated with the continuity of CRM activities. Community participation is measured in terms of nature (formal or informal), number and frequency of community consultations, voting in village assembly, and giving contribution (money, material, labor) to any CRM activity.

While LGU Socorro initiated the project, only few were involved in the conceptualization of SIRDS. More so, the communities, the POs in particular, were only informed during its implementation. Thus, even if there is a relatively high level of awareness on CRM activities (except for upland Resource management) as shown in table 4, participation in these activities particularly in conceptualization is critical in its sustainability.

Table 4. Awareness on CRM Activities (multiple response: N=341)

Activities/Initiatives	Frequency	%
Ordinances on CRM	321	94.13
Coastal Code	309	90.62
Legal Fishing Tech.: Payao & Bobo fishing, fish nets	278	81.52
Fish Sanctuary	276	80.94
Community-based Ecotourism	276	80.94
Sea grass Sanctuary	264	77.42
Micro-watershed development	259	75.95
Municipal Coastal Water Resource Management	255	74.78
Mangrove Resource Management	242	70.97
Fruit Plantation	241	70.67
Lobster, Lapu-lapu. And mud crab culture	232	68.03
Mangrove Rehabilitation	226	66.28
Tree/Bamboo Plantation	211	61.88
SIRDS under CBRMP (2001-2004)	197	57.77
Romblon Plantation and Utilization	154	45.16
Salago Plantation and Utilization	58	17.01
Upland Resource Management	49	14.37

It can be gleaned in table 5 that among the respondents who are aware of the CRM projects/activities, there is relatively greater participation in the implementation of the listed activities. Almost all of these activities are participated by more than half of the respondents (who are aware) in their implementation phase. On the other hand, less than half of the respondents participated in the conceptualization and evaluation of all the identified CRM projects/activities.

Thus, such experience of Bucas Grande clearly demonstrates the significant role of communities, in this case, the POs, in the conceptualization of any project. The POs' relatively high level of participation in its implementation could be attributed to the LGU's enforcement especially so that they have obligations to meet as set by the funding institution. Involving the communities and local constituents in the SIRDS may reflect the LGU's recognition of a participatory CRM. In fact, the POs have become the LGU's partners in its implementation. However, their limited participation in the conceptualization of the project constrained the integration of the

communities' interest and their assessment of their situation, their issues and capacities.

The communities' role in the conceptualization of the project is crucial as mentioned by White and Vogt (2000). Their participation in this stage provides them with an opportunity to have a sense of ownership thus, motivates them to sustain the project. Hence, while only few LGU officials were involved in the conceptualization of the project, consultations and deliberations among POs have less likely been considered as an option.

4. Implications to sustainability

The LGU Socorro's dynamic effort to initiate SIRDS is truly commendable. There may just be some gaps in the process of initiating the project. As mentioned above, wide consultation and a more quality participation of POs who were directly involved in the implementation could have been conducted. In such case, the latter are more akin to support and sustain the project for in the process, they have reached the level of self-mobilization.

Table 5. Extent of Participation in CRM Activities (Multiple Response) N*

Project/Activity	# of resps. who are aware	Participation					
		Conceptualization		Implementation		Evaluation	
	N	Frequency	%	Frequency	%	Frequency	%

Mangrove Rehabilitation	226	47	20.80	111	49.11	30	13.27
Tree/Bamboo Plantation	211	42	19.90	136	64.45	34	16.11
SIRDS under CBRMP (2001-2004)	197	14	7.11	131	66.50	8	4.06
Romblon Plantation and Utilization	154	24	15.58	88	57.14	24	15.58
Salago Plantation and Utilization	58	17	29.31	24	41.38	9	15.52
Upland Resource Management (specify)	49	11	22.45	32	65.31	10	20.41

*N=the number of respondents who are aware of each project/activity. Please refer to column 2 of table 3.

It has been contended that the highest level of participation is self-mobilization, where people take initiatives independent of external institutions to effect change. They develop linkages with external institutions for resources and technical advice but retain control over how resources are used. Efforts of some people's organizations to access funding sources on their own to replicate or expand initiatives for MPAs and mangrove

reforestation projects are indicative of self-mobilization. However, this type of participation was not common in CBCRM in part because the process of empowerment is long-term and because many initiatives are not sustained beyond the lifetime of the project (Pretty et al.1995).

Aside from the POs' limited participation in the conceptualization of the project, there are also other factors that may have affected the low level of sustainability

of CRM activities. Key informants mentioned that they, the fish wardens in particular, could hardly comply with their duties because of lack of economic support, which are needed by their family. Hence, in terms of participation in project initiatives, active project local partners bear a greater cost. The greatest cost to project cooperators, are time and effort spent for various activities (e.g. training's, meetings, conducting research, monitoring, etc.) which would have otherwise been spent making a living (i.e. opportunity costs) (Graham, 1998).

While local communities and project partners appreciate the importance of managing the resource based on which they depend on for food and income, and the liberating experience of empowerment, the primary motivation for participation is personal socio-economic gain. This is true even for the most ardent local CRM advocates and leaders of people's organizations. The inherent expectations for personal economic gains can lead to conflicts within organization in terms of prioritization of economic activities. Projects provide various incentives to individuals and groups to address some personal needs and

enjoy participation in CRM activities (Graham 1998).

Thus, because participation is crucial and there are considerable costs to participation in resources management, projects allot considerable time, effort and financial resources to enable and enjoy active participation of local communities (Crawford et al. 2000).

Moreover, certain political issues are affecting the low level of sustainability of the project (refer to Table 4). Some (40.47%) of the respondents identified corruption/mismanagement of funds. For instance, the treasurer did not have a clear accounting and financial report. The pump boat operator did not also declare the exact income. There was also an instance when the Community Organizer him/herself incurred debt from the PO's money and was not able to pay it. Partisan politics was also considered to have a bearing in the implementation of SIRDS and other CRM projects. There are POs who were identified as "against" the administration thus, they got limited support from the latter. Change in the administration likewise affects the sustainability of a CRM project in the island.

**Table 6. Political Problems and Issues on CRM Projects
(Multiple Response: N=341)**

Political Problems and Issues on CRM Projects	Frequency	Percentage
Corruption/mismanagement of funds (LGUs & POs)	138	40.47
Partisan politics	136	39.88
Illegal fishers connivance with police or other implementing personnel	129	37.83
Fish wardens are controlled by politics	106	31.08
Lack of LGU assistance	104	30.50
Lack of support of concerned agencies (e.g DENR)	99	29.03
Lack of political will	87	25.51
Lack of good governance	81	23.75
Less ascendancy of LGUs	68	19.94

There are those who revealed that the

illegal fishers had even connivance with

police personnel or were controlled by politicians. Lack of political will, of good governance and ascendancy of the LGU

had also contributed to the SIRDS non-sustainability.

**Table 7. Social Problems and Issues on CRM Projects
(Multiple Response: N=341)**

Social Problems and Issues on CRM Projects	Frequency	Percentage
Less monitoring of projects	191	56.01
Differences in beliefs	139	40.76
Influence of "in-group" and "out-group"	116	34.02
Lack of good leadership among POs	64	18.77
Lack of technical skills on management of POs	67	19.65
Lack of participation of PO members	43	12.61
Lack of good relations among PO members/officials	31	9.09

Conclusion

Furthermore, there are socio-cultural factors that have bearing on sustainability of CRM activities (refer to Table 7). The limited monitoring of the project has been identified as factor for its non-sustainability. At present, the island is less likely homogeneous thus differences in beliefs also affect the sustainability of any project. They are likewise relatively polarized in terms of their organizational affiliation thus the influence of “in-group” and “out-group” is evident in the implementation of SIRDS. If constituents belong to the group where the leaders belong, they are included in the project otherwise, they could hardly be part of any project.

Issues relative to POs’ internal condition are also evident. The KIs revealed that their organizations lack good leadership, technical skills, and active participation of, and good relationship among, the members.

The local government officials of Bucasgrande Island in the municipality of Socorro had the potential of conceptualizing a comprehensive CRM project. In fact, the said project had availed of a fund from the World Bank. The project was integrated because it did not only focus on natural resources management but it also involved livelihood and community organizing components.

As the LGU officials conceptualized and initiated the project, the communities particularly the POs, participated in its implementation. However, there is a relatively low level of community participation in these activities particularly in their conceptualization. LGU’s lack of knowledge, skills, and experience on community organizing limits the opportunities for empowering and tapping the potentials of the POs for active participation. Hence, together with some economic, political and socio-cultural factors, such limited community participation contributed to low level of sustainability of

CRM activities.

Musuan, Bukidnon, PHILIPPINES

ABSTRACT

This study was conducted to explore the cultural resistance and adaptation of the Manobo Pulanguinon of Quezon, Bukidnon as articulated in the Binanog dance. This study aimed to describe: the socio-economic and demographic profile of the respondents; perceived changes in the natural environment; cultural practices, economic activities, patterns of cultural adaptation and resistance; and the perceived changed and unchanged aspects of the Binanog dance in terms of its content and form, attire, accessories and props, purpose or functions, and symbolic rendition. This study is qualitative in nature and had utilized thematic analysis to extract themes from the data gathered. The data were collected through ethnographic approaches like participant-observation and structured and unstructured interviews. The results of the study showed that change brought by global economic activities is affecting the Manobo Pulanguinon in terms of their ways of making a living and some of their cultural practices like rituals, songs, and dances. The Manobo Pulanguinon people were able to devise ways of adapting and resisting to change. Some of these ways are reflected in the Binanog dance. Accordingly, the Binanog is undergoing minor changes in terms of its content and form and purpose or functions. Nowadays, the Binanog can be both ritualistic and entertaining at the same time and the cultural performance of Binanog is shown during the Sunggod Ta Kamanga festival. Despite the changes that are brought by globalization and modernization, the Manobo Pulanguinon performers and choreographers continue to strive to protect and promote their culture and identity through their participation in festivals supported by the Local Government Unit of Quezon, Bukidnon, Philippines. Consequently, the respondents stressed that they can be adaptive and resistant to change.

Key words: *Adaptation, Cultural Resistance, Manobo Pulanguinon, Binanog Dance*

INTRODUCTION

In the Philippines, the development and promotion of folk and traditional dances are facing great dilemma in recent years as today's globalization becomes widespread and has created an enormous impact in changing the nature and functions of dances as one ethnic group tries to adapt to social, cultural, economic, and other significant issues confronting their cultural identity (Jardin, 2001). Globalization is a powerful force of the new world system that represents a dominant force that shapes the course of the world. Some

scholars, policy makers, and activists see globalization as a driving force for the advancement of the new world economy while others view it as a very serious threat to the world's economic, political, security, environmental, health, social, and cultural systems (Intriligator, 2003). Similarly, it is as an unrivaled entity because it has brought a sweeping and comprehensive change across the world and humanity (Ota, 2011). As supported by Niezen (2003), globalization displaces indigenous cultural entities and subdues their creative endeavors.

Bauman and Stoelje (1992) in their studies of festivals showed the participation of people may vary in their religious commitment, display of prestige or special skills, participation in cultural events and social interaction allows for the discovery of many kinds of kinships. But because of economic pressures that globalization has brought, they are forced to use their dance as a commodity. On the contrary, Speer (2008) argues that there are still communities which are resilient to the onslaught of globalization. Indeed, there are some choreographers who have sustained a high level of cultural awareness and sensitivity in presenting the images across cultural milieu in order to preserve the integrity of their artwork. Villaruz (1992) describes that one of the major challenges that dance scholars and choreographers alike can do to successfully analyze and contextualize the study of Philippine dances is to faithfully document them.

One of the several ethnolinguistic groups inhabiting the province of Bukidnon, Philippines is the Manobo Pulanguinon people of Sitio Quemtras, Barangay Butong in the Municipality of Quezon. By tradition, these people celebrate the "Sunggod ta Kamanga Festival" allowing them to unite among themselves and to live harmoniously with their environment. During the celebration, they would chant, sing, and dance some of their traditional dances to worship their **Magbabaya**, a Manobo God. But this ethnic group is not secluded to the rumbling impact of globalization. This would entail that their traditional dances are extremely affected by globalization leading their Manobo Pulanguinon people to change or sustain some aspects of their traditional dances which are meaningful and a noteworthy piece of knowledge.

One of their traditional dances is the *Binanog*, which refers to a dance mimicking the movement of a bird called *Banog* (Hawk). This is usually performed during important occasions and merry-making activities. But because of the influx of tourism and other economic activities within the municipality of Quezon, the very nature of the *Binanog* dance might have changed. Likewise, there might have been

modifications to the movements, traditional attire, accessories and props, purpose or function, and symbolic rendition of the dance just to correspond to the needs of economic and entertainment spectacle. Thus, it is about globalization's impact on culture and dance that this article intends to focus on and how the cultural adaptation and resistance of the Manobo Pulanguinon to change depicted in their Binanog dance.

Dance as part of culture

Dance is one of the artistic elements of culture and is one of the most influential art forms that unite people. It enables them to celebrate, worship their gods, and live peacefully with their environment. Homer (1999), considered a medium of expressing emotions and ideas that are essential in the portrayal of customs and events representing an important part of a people's history as well an important aspect of people's cultural past.

Ferraro (2012), revealed that some traditional dances incorporate certain social, religious, political, psychological, and educational roles that play a part in the integration of people within their communities. Obusan (1992), also noted that most of the dances and festivals depict the cultural life of the tribe or community that perform or celebrate them. Speer (2008), explains how dance can represent varied and rich ideas about social life and specifically the cultural behavior of the people where it originates. On the other hand, Harris (2003), stressed that certain characteristics of dances are closely associated with cultural subsistence strategies of their performances.

Hence, each group of people possesses diverse history, customs, traditions, and character traits that are reflected in their dances. Such diversity contributes to the uniqueness of each group. Yamut (2008), stated that characteristic body movements are based on the ways of the natives. Showing their dances reflects their identity as an individual and a group as a whole. In

addition, one must reinforce characteristic body movements to reflect custom, tradition, and character.

By far, the discourse on the cultural value and representation of dances seem to point- out that in people's attempts to make sense and survive in their world they have developed ideas, practices, and technologies that define their culture. Thus, these cultural elements, in turn, find their expressions in the performances and renditions of their dances.

Cultural change and its implications on traditional dances

Around the world, almost every nation, country, region and tribe has created a singular style of dance that expresses its people's cultural and social identity. Over time, and through colonization and globalization, some of those dance forms have died out or have been fused with other styles, resulting in new hybrid dances (LeFevre, 2012). Kaepler (2000), noted how dance reflects human's adaptive capability. He explained how dance movements include a certain degree of bodily conformity to cultural conventions and social goals. According to Ensor and Berger (2009), the need to adapt to change may pressure individuals and communities into changing livelihoods, lifestyles, or patterns of behavior, potentially challenging existing notions of culture. The prevailing problem on globalization resulted in changing context of indigenous culture. In order to provide other means apart from their identity, they reinvent their identity (Meethan, 2001). Similarly, according to LeFevre (2012, p. 14), "dance is performed in social and cultural events to reinforce cultural identity".

In a study conducted on the Sinulog dance of Cebu City, Ness (1995) was able to explore that ritualistic practice of the Sinulog dance changed from a purely religious into a secular or "cultural" performance. This she concluded came about partly because of Cebu City's integration in the global economy. Abaya (2006), similarly observed that because of the influx of foreign tourists in our country,

indigenous people have correspondingly changed the very nature of their dances. Villaruz (1992), highlighted in his paper that the changes that took place in the Philippine dances become apparent on their intention of their performances which means that whether dance is done for ritual or performed for tourism.

The preceding discussions present an affirmation of the fact that culture is indeed malleable. Dance, being an integral part of some indigenous groups' culture is susceptible to certain forms of modifications caused mainly by changes in technology and in the local economy where these people live. But an important question may be asked at this point in the discussion: Are our traditional dances totally susceptible to the transformative character of technology and economic changes in our society?

Change resistance as reflected in dance

Henslin (2003), explained that not all parts of a certain culture can change at the same pace. This, he elaborated, means that when some aspects of a culture change, other aspects lag behind. Heider (2004), observed how some features of culture may seem the main stable for a long time. Nanda and Warms (1998), noted that despite the trend in stylistic transformations of art, some cultures have sustained and stabilized their aesthetic principles because of the widespread integration of art and religion. This integration limits the potential of change and modification. Harris (2003), also comes in agreement with the above-mentioned explanations by pointing out that despite the emphasis on creative innovation, most cultures have art traditions or styles that sustain traditional themes through time and space. LeFevre (2012), emphasized that despite the existence of colonization and globalization, many people continue to practice the dances of their ancestors, in order to keep the spirit of their forerunners alive and bring their traditions, lifestyles, and ethnicities into the present. In addition, the native peoples around the world perform their traditional dances to

reinforce their identity and cultural traditions. Similarly, the Native American still continues to perform their traditional dances up until today because it remains a very important cultural identity and traditions. Most of their dances are traditionally performed by men and occur in circles; the music is still created through drumming, chanting, and flutes; and the dances celebrate family events and seasonal activities; unite communities, and reenact religious ceremonies. Coronel (2003), in the observations made among the Bugkalot people in the Caraballoo mountain ranges, revealed that the Bugkalot people have been selective in identifying occasions of their dance performances. They have been noted to only perform their dances and festivals only if they are asked to.

THEORETICAL CONSIDERATIONS

To understand deeply the art of dance, a look into the functions it gives to the members of a Manobo community comes vital. In the structural functionalist's view, dances are functional because they generate psychological, political, religious, social and educational impact. Psychologically, dance has neural processes helping people to cope with their tensions and intense feelings. Politically, it expresses political values, attitudes, and social control. Religiously, this serves as the mode of communication to the supernatural beings, to their gods and goddesses as well. Socially, it creates a harmonious relationship within the members of the group. Educationally, *traditions* like songs and dances are transmitted from one generation to the next (Ferraro, 2012).

Meanwhile, dance has also been assigned the power of generating solidarity. The notion of generating solidarity has been applied to a variety of communal activities including singing, prayer, and feast, drinking or joint participation in some sacred act. The traditional dances like the Binanog of the Manobo Pulanguinon serve as an instrument in creating solidarity among them.

Goldstein, King, and Wright (2002) define the process of acculturation as the systematic cultural change of a particular society carried out by an alien or a dominant society. Through this process, individuals of a foreign or minority culture could learn the language, habits, and values of a standard or dominant culture. This explains that acculturation basically involves diffusion in certain aspects or elements of culture. Moreover, *diffusionism* aims to recognize the characteristics and origin of culture and how one of its traits spread from one society to another.

Harris (2003), explains that people view modern technology as a way to improve their quality of life at the same time, helps them thrive from the rapid changes that are affecting them. While Kottak (2003) looks at the obliteration of cultural variations as modern technology spreads product to more people worldwide. While he noted that others view modern technology as a way of expressing local cultures. He also laments that some cultures spread or advance themselves at the cost of others through modification, replacement, or destruction forcing other cultures to learn the dominant ideologies and absorb their knowledge for continued existence.

This process would best explain how and why the Manobo Pulanguinon people use their dances as a way to adapt or resist to some of the changes that are brought about by the different processes of change to the rapid socio-cultural changes and economic stresses confronting them. In contrast, processes resulting in resistance to change are through the prevalence of society's habits and integration of existing culture traits. In the case of the Manobo Pulanguinon, the widespread integration of art and religion may have sustained the very core of this indigenous people's culture. Moreover, indigenous people like the Manobo Pulanguinon hold a strong belief on the quintessential meanings and symbols as amalgamated in their arts, religion, and in their cultural identity. Despite some underlying changes that confront them, they remained to be a solid unit as they altogether combat these changes brought

by globalization and modernization. In so doing, they are able to create their own mechanisms to maintain their culture and identity. They are still performing their dances because they believed that these serve many functions within their community. Furthermore, performing their dances in different audiences reinforces their cultural identity and traditions.

In symbolic-interactionism, dance can be viewed as a symbolic expression of the Manobo Pulanguinon people. It represents their ways of thinking, acting, and identities expressed through social representations. This theory strongly emphasizes that every individual or society defines objects and events symbolically and relatively. Max Weber (1960) used the term *verstehen*, a German word for understanding or subjective meaning. This elaborates on the idea that meanings and symbols are subjectively interpreted based on cultural activities or practices of the people within their community. Blumer (1965,) on the other hand, stressed that human beings interpret their social realities as the product of their social interaction. He also explained that things are modified by individuals through an interpretative process. This also outlines how an individual's thought process modifies his or her interpretation of symbols.

Furthermore, the traditional dances of the Manobo people are viewed as both ritualistic and festive which are performed in social gatherings to communicate and worship the spirits. The objective is for a bountiful harvest and good life. Today, *Sunggod Ta Kamanga* festival is a great avenue, wherein the Manobo Pulanguinon performers show their cultural symbolisms by offering chickens, coins, fruits, knives, wine, and rice to their *Magbabaya* and other spiritual entities. This ritual is known as the *pamuhat*. This ritual also performed in different events of the Manobo people. This ritual can also be shown during harvest season where the Manobo Pulanguinon also performs their Binanog dance.

Figure 1 explains how the two types of external forces: socio-cultural and economic pressures as brought about by globalization may affect the very nature of

the *Binanog* dance. Thus, their ways of adapting and resisting may be reflected in the following elements: a) content or form, b) attire, accessories, and props, c) purpose or functions, and d) symbolic rendition.

Figure 1. Conceptual Framework

The *Binanog's* content and form, on the one hand, may be intact though it may also flourish through the incorporation of choreographies and formations for aesthetic purposes. Their traditional attire and accessories may have also remained unchanged but as to the usage, it may have also changed due to the fact that the Manobo Pulanguinon people may wear their traditional costume for special occasions. The rise of festival galore permeates the very nature of its purpose or function of the Binanog dance. As a result, the Binanog dance might become ambivalent to the recurring patterns of culture change.

RESEARCH METHODS

This study was also carried out using the participant observation approach, key informant in-depth interviews, and digital video-photo documentation with the aim of describing cultural traits that belong to an ethnic group. The theoretical foundations of this research derive its construction and theory from social anthropology that mainly focuses on the study of culture and people in a holistic manner through in-depth analysis of study (Sarantakos, 2003). Themes were extracted for the interpretation and analysis.

I have described the variables in the study through an ethnographic fieldwork that entails data collection by using standardized methods like participant observation and interviews. Participant observation refers to the observation of the naturally unfolding worlds of a population under study (Berg, 2004). Through participant-observation, I have observed the Manobo Pulanguinon people in order to understand and analyze their cultural resistance and adaptation as they are reflected in the Binanog dance. Data gathering was also done through both structured and semi-structured interviews with the key informants and respondents who were identified through purposive sampling.

The study population comprised of 30 respondents classified into the old and the young generation of performers and choreographers. To determine the composition of the respondents and key informants, convenient sampling was utilized. The key informants and respondents were identified by the tribal council of the Manobo Pulanguinon to share their knowledge and expertise about the *Binanog* dance.

As with the age distribution of the key informants and respondents, they were classified into the following: the performers and choreographers who belong to the age bracket of *41 years old and above* and whose ages fall within the age bracket of *12 to 40 years old*.

In order to collect the data, I wrote a letter of intent to the National Commission on Indigenous People Regional Office in Cagayan de Oro City with the research proposal as the attachment. This was to secure Free and Prior Informed Consent (FPIC) from the subject indigenous community. This is a requirement stipulated in NCIP Administrative Order No. 1, Series of 2012. The NCIP Region X reviewed and evaluated the proposal in order to ensure that the proposed research will not be detrimental to the well-being of the subject indigenous people. After the review and evaluation, the Regional Office issued a "Work Order" for the Provincial NCIP of Malaybalay City, Bukidnon to form a Field-based Validation Team (FVT) that will

monitor the conduct of community. The FVT and the research proponent met in Malaybalay City to discuss and agree on Work and Financial Plan (WFP).

A representative from NCIP went to Quezon informing the community leaders to attend the first consultation meeting called Conference and Disclosure. The NCIP invited 16 community representatives, 13 of whom were elders, attended the consultative meeting held at the Pilmarc, Kiokong Quezon, Bukidnon, last November 14, 2014. During the consultation meeting, the NCIP explained to the community members some provisions of IPRA law concerning FPIC. After which, I was asked to disclose the purpose of the research and the kind of information that needed to be collected from the key informants and respondents.

On December 4, 2014, a ritual, generally known as *pamuhat*, was performed at the Manobo Tulogan Hall in Quezon to seek the approval and blessings of *Magbabaya*, their Supreme God and other divine beings who dwell in. The highlight of this ritual was the butchering of a 40-kilo pig and several native chickens. A female shaman, who officiated the ritual slashed the throat of the chickens with a sharp knife and set them free to let them die on the open ground. The chickens, while bleeding, ran in the eastern direction until their last breath. Dying in the eastern direction was a good omen, signifying the approval of the spirit world to a human activity. This ritual event was followed by negotiation and drafting of the provisions of the Memorandum of Agreement (MOA).

On December 15, 2015, a validation of information was conducted. I had presented the data to the members of the tribal council and they had validated the results of the study.

RESULTS AND DISCUSSION

A. Socio-economic and Demographic Profile of the Respondents

The majority (80%) of the Binanog performers were females and only 20%

were males. This is because the composition of performers in the Binanog dance requires more females than males.

The highest level of educational attainment of the old performers is basic elementary education. While most of them have studied elementary, none of them, however, were able to graduate college. This supports some of the old respondents' claim that during their time they did not bother going to school because what was important for them then was to earn a living. They were already trained for menial jobs like gardening and farming. They also said that they are used to live in a simple way. The luxury of life was not instilled in their minds because according to them Manobo people should live in accordance with the will of **Magbabaya**: the will to live a simple life.

The majority of the old respondents married at a young age. These marriages were arranged by their parents for protection and alliances. On the other hand, most of the young respondents were single and were given now the freedom to choose their own partners.

Most of the performers are members of the **Manobo Pulanguinon Teredsayawan** – the official performing group of the Manobo Pulanguinon. These are the young performers who had been only performing the Binanog in the past 3-5 years while the old performers have been performing the Binanog for 15 years and above.

Figure 2. Manobo Pulanguinon young performers during the 14th Andew Te Quemtras

Farming is the main source of income for both the old and young

performers. Only a few engaged in business and other menial jobs like gardening and cleaning of the yards. This is supported by Masendo (2015) that the most common lifestyle of the Manobo is that of rural agriculture.

B. Physical, Economic and Socio-cultural Changes within the Community

It has been noted that the following themes emerged when the respondents and key informants were asked about their perception regarding the changes present in the community.

Table 1: Observed Changes in the Natural Environment

THEMES
<i>introduction of public service facilities</i>
<i>immigration of other ethnolinguistic groups</i>
<i>change in the physical landscape</i>
<i>the establishment of small stores, hardware and other supply stores in the area</i>
<i>the construction of roads</i>

Most of their responses stressed on the introduction of public service facilities and change in the physical landscape. Furthermore, there has been changes and development relating to socio-cultural and economic activities of the Manobo Pulanguinon. These changes are present but not limited to their marriage practices, language, mode of dressing, ways of making a living, lifestyles, rituals, music, and dances.

Figure 3. Change in the Natural Environment of Quemtras, Bukidnon

Change is particularly evident in cultures (Sullivan, 2001). Shepard and

Greene (2001) explained that changes experienced in culture happen because of discovery, invention, and diffusion. Hunt, et al. (1998), considered culture change as true for the most isolated and simple society as it is for highly complex one.

C. Patterns of Adaptation to Culture Change in the Community

The respondents revealed that some of the patterns of adaptation emphasized on the *pursuit of education, an adaption of modern ways in agricultural works, the participation of women livelihood project, the use of technological gadgets* and the *display their cultural performances in public*. Harris (2003) observed that technological change can influence art thereby affecting the elements of such things like music and dances.

Table 2: Perceived Patterns of Cultural Adaptation

THEMES
<i>pursuit of education</i>
<i>using technological gadgets</i>
<i>adapting modern ways in agriculture</i>
<i>displaying their cultural performances in public</i>
<i>participation of women livelihood projects</i>

Nowadays, education is seen as an important *cultural capital* as this helps them gain confidence in interacting with other ethnolinguistic groups. Some of the old respondents have been sending their children to school. While these young performers are in their respective schools, they have adapted the use of technological gadgets like mobile phones as a new form of communication. Adding to this, these young performers have learned new ideas in performing arts which they had incorporated in the very nature of their traditional dances like the Binanog.

Most of the old respondents have adapted to the modern ways of farm production and have become small-scale entrepreneurs. It has also been noted that Manobo Pulanguinon women have accommodated livelihood projects

supported by the Local Government Unit and other private sectors.

Figure 4. A tractor owned by one of the members of the Manobo Pulanguinon

Furthermore, the display of the *Binanog's* cultural performances gave them a sense of pride and identity. The promotion of their culture allowed them to devise mechanisms by way of using of technological gadgets like cellphones and cameras to take photos of their cultural performances of the Binanog.

Figure 5. The Binanog dance shown in the annual Sunggod Ta Kamanga Festival

Moreover, their Binanog dance had been shown in both national and international audiences. One of the key informants and a choreographer herself had been showcasing the Binanog dance in the different parts of the world like America and Japan. Nowadays, their traditional dances are shown during social gatherings and other invitational performances.

Although the old and young performers and choreographers have adapted to these socio-cultural and economic changes, they lamented that these changes have been affecting their ways and stressed that nothing can be

done from the outskirts of change through time. This was because change according to them was inevitable and everywhere. In order to survive, the Manobo Pulanguinon performers and choreographers had to adapt some of these changes but in a selective manner. Overall, the data shows that the both old and young Manobo Pulanguinon performers emphasized on accepting changes which are only beneficial to them.

The observations above find its strong affirmation in the statement of Boyd and Richerson (1988) that stressed that human capacity to live in a wider range of environments than other primates because culture allows the humans to accumulate better strategies rapidly and relatively for exploiting the local environment. Likewise, this mechanism generates more adaptive behavior in that environment.

D. Patterns of Resistance to Culture Change in the Community

On the contrary, some of the respondents also showed patterns of resistance to culture change. The data also revealed that the Manobo Pulanguinon performers and choreographers are also very resistant to some of the socio-cultural and economic changes present in their community. The patterns of resistance are reflected in the *continuity of their habits and practices*, the *use of traditional attire*, a *strong sense of commitment to identity*, and *selective processing*.

Table 3: Perceived Patterns of Cultural Resistance

THEMES
<i>selective-processing</i>
<i>the continuity of their habits and practices</i>
<i>strong sense of commitment to identity</i>
<i>the use of traditional attire</i>

The majority of the old performers are found to be selective in accommodating a change in their community. A tribal council is essential in the selective process for this is

responsible for filtering some cultural changes which are beneficial to the Manobo Pulanguinon in general. Through this council, a consensus decision-making shall be done to adapt or resist to culture change. It has been found out that this council is very helpful in assessing fundamental programs or livelihood projects given by the Local Government Unit and other private sectors. In addition, the young performers can also be selective in accepting change but most of the time they just follow what their elders and tribal council members subscribe to. This selective processing helps the Manobo Pulanguinon performers and choreographers to retain the basic elements of the Binanog dance.

Another pattern of cultural resistance is through the continuity of their habits and cultural ways. Most of them have been accustomed to their traditional ways which pose a difficulty in accepting change. Usually, the old performers are the one's highly resistant and skeptical about change. Despite the alarming issues and concerns on their practices, there are those young performers who believe that their culture is still intact. The Manobo Pulanguinon performers and choreographers can be adaptive and resistant on the basis of a selective process.

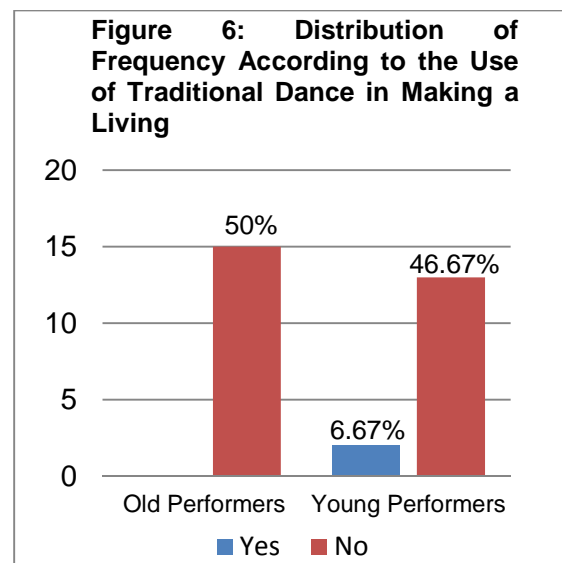

Figure 6 shows that majority (93.33%) of the respondents do **not** perform their traditional dances especially

the *Binanog* to make a living. According to them, it is against the law of the spirits and the will of **Magbabaya**. They strongly emphasize on engaging themselves in other economic activities to make a living. However, it is very interesting to note that 2 or 6.67% of the young performers said that they sometimes use their dances like the *Binanog* to earn money by joining competitions.

While it is true that their traditional dances like the *Binanog* are shown to the general public, all of the respondents strongly emphasized that they make the dance as a unifying system for each other in the community and other tribal groups living in Bukidnon. Their traditional dances were perceived to be reflections of their day-to-day life as well as their true identity. They also believed that their dances are sacred and ritualistic in nature and performing them to earn money would be sacrilegious and would, therefore, cause them harm.

E. Perspectives on the Nature and Performance of the Binanog Dance

The majority of the performers perceived Binanog as the imitation of the “**Banog**” or Hawk bird. This dance is based on the historical account on which a *datu* or a chieftain long time ago transformed himself into a “Banog” in search for his partner. It was a success story for the Binanog (Datu) was able to capture the love of his life. That is why, the Binanog dance was also interpreted, most especially by the young performers and choreographers, as a courtship dance. In addition, the Binanog dance is performed as a ritual during harvest. A ritualistic performance of the Binanog dance means seeking approval from their Magbabaya to grant them a good harvest.

Figure 7. The *Binanog* dance performed by the young dancers

Figure 8. The *Binanog* dance performed by the old performers of the Manobo Pulanganon

The *Binanog*, according to some of the performers, is considered to be one of the symbolic representations of the Manobo people as it signifies them beyond history; defines them beyond soul, and it gives meaning beyond life.

F. Perceived Unchanged and Changed Aspect of the Binanog Dance

Most of the respondents emphasized that there have been no major changes on the Binanog in terms of its content and form, attire, props and accessories, purpose or function and symbolic rendition. Of the fundamental features of the Binanog dance, the respondents revealed that the basic elements of the danced that have retained its content and form, attire, accessories, and symbolic rendition. The basic steps like tapping and mincing of the feet and bending of the knees still characterized the nature of the Binanog dance even up to the present. The aspects of the traditional attire and accessories were strongly believed to remain intact despite some of the recurring socio-cultural changes affecting them. Symbolically, the Binanog dance is perceived to be a vital social representation of the Manobo Pulanganon because this represents their culture, identity, and history.

Table 4 on the next page illustrates how the old and young performers perceived their Binanog dance in terms of their aspects that have and have not changed as reflected in the elements through time and space.

Table 4. Perceived Unchanged and Changed Aspects in the Binanog Dance

Elements	Aspects that have changed	Aspects that have not changed
Content and form	Choreographies and formations were added in the dance	Basic movements like <i>mincing, tapping of the feet, and bending of the body</i>
Attire, accessories, and props	the use of African-inspired drums to give more lively performances	traditional attire and accessories are still believed to be intact
Purpose or function	can now be shown to the general public for entertainment	interpreted as a ritualistic
Symbolic rendition	interpreted now as a courtship dance	signifying the Manobo Pulanguinon people; ritualistic meaning; sacred

On the other hand, the respondents revealed that change in the **purpose or function** of the Binanog is observable. This dance, according to one of the key informants, is believed to be sacred and symbolic. This means that it can only be performed during the *Panalabugta* ritual for a good harvest. To perform the Binanog, a performer must know and internalize the historical roots of the dance. One cannot perform the Binanog without knowing its real history. But today, the Binanog dance becomes more of an entertainment performance rather than a ritualistic one which can be shown during social gatherings and other merry-making activities for entertainment.

Originally, according to the respondents, the Binanog should not be choreographed. This dance requires the candidness and gracefulness of the performers during their *Panalabugta* ritual.

Because of the rise of festival galore, it can be observed that another aspect of the Binanog that has changed is the incorporation of choreography and planned formations for aesthetic purposes and this depends on the creativity of the choreographer. Furthermore, some of these choreographers learned some steps, formations, and choreographies from the festivals and other invitational performances they have participated in.

CONCLUSION

From a structural-functionalists' standpoint, the **Binanog** dance helps generate *solidarity and harmony* among the members of their community which can be observed during their social gatherings or merry-making activities shown in Sunggod Ta Kamanga and Kaamulan festivals. Cultural activities like festivals serve as an avenue in the promotion and proliferation of their traditional dances like the Binanog. Similarly, this also aided them to transfer their indigenous knowledge to the Manobo young performers or members who have become influenced by the socio-cultural and economic changes prevalent in their community. Likewise, this dance has a *religious* function because this serves as a mode of communication to the supernatural world. Despite the recurring changes, the Binanog dance remains to be unreceptive to some of these changes by way of performing it during ritualistic events like *Panalabugta* in order to worship their *Magbabaya* to grant them good harvest for the whole year. This pattern of resistance reflects the continuity of their traditions, habits, and practices.

In addition, to preserve the structural elements of the Binanog dance, the Manobo Pulanguinon performers and choreographers have retained the basic movements like mincing, tapping of the feet, and bending of the knees which can still be found in its content and form through the years. Likewise, the Binanog is mimetic in nature which does not require any modernized styles or self-movements to be performed.

Meanwhile, the rise of festival galore through the process of *difussionism*

continues to spread affecting some of the elements of the Binanog dance. This festival phenomenon encourages the Manobo Pulanguinon choreographers to develop their creativity and imagination. It is not surprising then that these choreographers have adapted some of the stylized movements shown during festivals. Putting *aesthetics* in their dance by way of injecting choreographies and planned formations becomes observable in the performance of the Binanog. The reason for this is to *add* beauty as well as artistic expression of their performances. In addition, the use of African-inspired drums creates a more lively sound that compliments the beauty of the Binanog dance nowadays. Surprisingly, aesthetics do not include changing of their traditional attire and accessories. In fact, the Manobo Pulanguinon still managed to preserve the authentic geometrical and intricate designs of their traditional attire and accessories. This is because they have not incorporated modernized styles or designs, which can be found in other types of dance like ballet, ballroom, hip-hop, and modern contemporary.

The incorporation of choreographies and formations must go through a selective process in a consultative meeting with the members and representatives of the tribal council who are then responsible for deciding matters relating the traditional performance of the Binanog dance. The presence of this council is an indication that the Manobo Pulanguinon performers and choreographers must, therefore, be cautious in changing the basic elements of the Binanog dance.

The change in the nature of the Binanog dance's *purpose* or *function* is also noticeable as it can now be shown during festivals as a form entertainment. In fact, some of the Manobo Pulanguinon performers had already been invited to perform their Binanog in other special performances like school-based programs and local government's activities. In their performances, compensation is present in the form of tokens or gifts. However, because of their strong sense of pride and commitment to their identity, the Manobo Pulanguinon performers do not sell the

cultural performance of the Binanog. This is to say that they do not earn money or profit from their performances. Similarly, the commodification of their culture displeases their *Magbabaya* and other spiritual beings. This means that their strong ties to their religious belief reinforce them to perform their duty to protect their culture and in doing so, restrained them from damaging their identity as an indigenous group.

Symbolically, Binanog dance encapsulates the *identity* and *unity* of the Manobo Pulanguinon as an indigenous group. In the context of the Binanog dance, the Manobo Pulanguinon women are the symbolic representation of fertility as well as their deep connection to the ground which is believed to give them a bountiful harvest for the entire season. In addition, the Binanog emblemizes the Manobo Pulanguinon's character and individuality as free-spirited individuals who continue to spread their wings and soar high like the *Banog* (Hawk) bird.

Consequently, many of the Manobo Pulanguinon performers and choreographers stressed that change is inevitable and present everywhere. This natural occurrence of change affects the very nature of the Binanog dance performances as it becomes resilient to the spectrum of change. Therefore, this is to say that some of these socio-cultural and economic changes necessitate adaptive and resistant mechanisms in order to sustain the most important elements of the Binanog dance.

ABSTRACT

Empowerment is a complex issue. According to Zimmerman , empowerment may be viewed on different levels: individual, organizational or community. Community empowerment is understood either as a process or as an outcome . Through the process of empowerment, communities are able to assume power to act effectively to change their lives and environment . The community empowerment process promotes the participation of people, organizations and communities for increased individual and community control, political efficacy, improved quality of life and social justice Community empowerment approaches have been being implemented in Indonesia during the last ten years for empowering community. However, the impact or result of community empowerment programs should be evaluated more deeply and intensively ensuring the policy and strategies of community empowerment targets have been achieved successfully.This research aims to describe :1) the policy and strategies of community empowerment ; 2) the program implementations process ; 3) the impacts to the community empowered;4) and the obstacles or challenges of the empowerment. The research method is qualitative, using primary and secondary data which will obtained from 6 Provinces in Indonesia, The study concludes by putting forward some recommendations, include aspects; the policies and strategies should be adapted to local values and social condition of the community, that the program implementation be accomplished well and all the obstacles and challenges can be minimized, thereby the target empowered community will be realized.

Keywords: empowerment community, policy, strategies, implementation, impact, obstacles

1. Introduction

There are many different ways in which communities can become more empowered. There is no one model which would fit every circumstance. For some communities empowerment will involve owning assets, and controlling budgets, or generating their own income to re-invest. In some cases, communities will want to take action around an injustice or to protect a valued resource. Others will want to have an enhanced role in shaping the services delivered on their behalf by others. All of these approaches can be empowering depending on the circumstances.

Whatever models work for different communities, they must provide an explicit and real increase in the level of power and influence that local people have. The key thing is that empowerment cannot be given to communities by others. Communities must decide the level of empowerment they want and how to get there themselves. Most often a critical characteristic of communities which are empowered is the existence of locally owned, community led organisations which often act as 'anchors' for the process of empowerment.

These organisations, which may be the local housing association, church group, community association, development trust, community council or any combination of these, often have a range of characteristics that enable them to provide a local leadership role and a focal point for other local services and groups. Some of these characteristics include: that they are multi-purpose, usually operate from a physical hub, and will often own or manage other community assets. The confidence and ability of these groups is closely linked to the confidence and ability of the people who are involved in them. Individuals who feel empowered can bring a dynamic and enterprising approach to the work of their groups.

In recent years, many government officials, civic leaders, and academics have embraced the notion of community empowerment as a component of a strategy for revitalizing and strengthening communities. To do so makes sense from both a moral and an administrative perspective. In a democracy, self-government rests on two foundations: citizen participation and reciprocal responsibility.

Community empowerment in local governance and service delivery has become a key component of

government policy in Indonesia. However, there are critical challenges to achieving this in practice. This study examined a community-based programme in Indonesia that aims to increase opportunities for community empowerment and potential influence over service providers.

In 1998, Indonesia faced political upheaval and financial crisis. The country was marred by its graft-ridden political and administrative systems and poverty had increased tremendously. The devaluation of the domestic currency, the Indonesian Rupiah, by more than 50 percent and the shutdown of many manufacturing shops had a tremendous impact on people's incomes. Programs that would bypass the graft-prone top layers of government were sought by the new Government to increase the people's trust.

With 17,000 islands and millions of villages across the archipelago, Indonesia had to reach out to its poorest areas to ensure that these populations enjoy an equal opportunity to grow and develop. Non-income poverty is a serious problem in terms of high malnutrition and maternal mortality rates, inadequate access to safe water and sanitation, and education outcomes. Furthermore, inequality is increasing and disparities between regions

remain high. Poverty alleviation has become a priority for Indonesia.

Since the New Orde, the government has launched various programs poverty alleviation and community empowerment that were run by various ministries and agencies. The famous one was IDT, which aimed to improve the quality the poor through development of human resources, capital, and business productive and institutional development. IDT concerns the scope of the program socio-economic activities of people living in poor villages. Acceleration socio-economic activities carried out through the development of economic resources in rural areas, the supply of basic needs, services, and creating the environment support for the process of poverty alleviation. The other Programs of poverty alleviation and community empowerment: KDP , P2KP (Urban Poverty Programme), P4K (Project Increasing Revenue Small Farmers and Fishermen) PEMP (Coastal Community Economic Empowerment) , KUBE (Joint Business Group), and others. Such programs run individually according to the policy of the Department concerned, not integrated, partially and sectoral.

Various studies evaluated the implementation of programs poverty alleviation and community empowerment, reported the successes and also the lack of success of these programs. According Muktasam (2001), citing Chambers (1983), Harrison (1995), Burkey (1993), Esman and Uphoff (1984), on the basis of the experience of experts in the process of rural development and poverty alleviation programs in countries Asia and Africa, it was concluded that the factors causing the failure of the program poverty reduction are: (1) Due to a 'target' and 'top-down'; (2) Abandonment of local values and bias 'outsiders'; (3) Lack of participation; (4) The approach is not holistic; and (5) Illusion investment. In terms of approach 'target' and 'top-down', poverty alleviation programs often set goals without involving the poor people themselves.

2. Literature Review

2.1 Empowerment as a process of reversing the unbalance of power

Empowering communities is the only sustainable way of reversing the dominance of government and oil companies that created the current situation of entrenched poverty. Disempowered and oppressed communities frequently internalize powerlessness. The process of

empowerment has the potential to transform communities from powerless victims to powerful partners and thus to change the dynamics of power between themselves and government and oil companies.

Power cannot be bestowed upon individuals, it has to be self-generated. This process of empowerment starts when individuals acquire self – respect, confidence and realize

their inner strength ('awakening'). The next stage is realizing the strength that comes from associating together and networking ('mobilisation') and act to realise individual and collective goals ('action'). The phase of 'awakening', when individuals gain self-respect, confidence and awareness of their inner strength is the beginning of 'agency' - capacity to act on behalf of one's aspirations and to achieve them. This phases, when taking control over their lives by individuals is crucial, individuals take control over their lives, is crucial to the success of empowerment process and poverty reduction efforts.

Disempowerment : lack of assets and capabilities voicelessness lack of political representation exclusion unresponsive government social fragmentation victim mentality lack of access to education pollution

mortality rate underdevelopment
unemployment vulnerability to conflict
poor governance dependency
powerlessness material poverty poor
health abuses of power by the state
conflict unbalance

2.2 Empowerment Definition and Meaning

Empowerment is related to the word power. In English, the concept leans on its original meaning of investment with legal power—permission to act for some specific goal or purpose (Rappaport, 1987). The new meaning of the concept includes mainly references to power that develops and is acquired. People are managing to gain more control over their lives, either by themselves or with the help of others. The form to be empowered relates to what is both a process and an outcome—to the effort to obtain a relative degree of ability to influence the world (Staples, 1990).

Initial Meanings of Empowerment . Barbara Solomon (1976, 1985) emphasized empowerment as a method of social work. Peter Berger and Richard Neuhaus (1977) proposed empowerment as a way of improving the welfare services by means of mediating social institutions. Julian Rappaport (1981) developed the concept theoretically and presented it

as a world-view that includes a social policy and an approach to the solution of social problems stemming from powerlessness.

There are four ideological approaches have provided the framework of ideas for the discussion of empowerment. **The first** is an ethnocentric approach, which seeks a solution for difficult social problems of ethnic and other minorities (Solomon, 1976; Gutierrez & Ortega, 1991). **The second** is a conservative liberal approach that seeks to revive the community as a social unit which among other things has to care for its weak citizens as well (Berger & Neuhaus, 1977). **The third** is a socialist approach which demands of equity and social responsibility in the treatment of social problems (Boyte, 1984). **The fourth** approach wants to see empowerment as a profound and professional implementation of democracy—one that will contain every legitimate social ideological current in the democratic society

Individual Empowerment

The personality structure is significantly influenced by environmental conditions. A person is not formed only by heredity and conditions of growth and care, but also by opportunities and experiences in the world around him. Among these, especially important to us is the ability

to make decisions and to act in order to attain goals. This ability (or its absence) shapes the person's character and influences the degree to which she will be the effective actor in her life (Pinderhughes, 1983).

Empowerment is an interactive process which occurs between the individual and his environment, in the course of which the sense of the self as worthless changes into an acceptance of the self as an assertive citizen with sociopolitical ability. The outcome of the process is skills, based on insights and abilities, the essential features of which are a critical political consciousness, an ability to participate with others, a capacity to cope with frustrations and to struggle for influence over the environment (Kieffer, 1984). The sense of personal ability connects with civic commitment. Individual empowerment is an expression on the individual level of a multi-leveled process which may be applied to organizations, communities, and social policy (Zimmerman & Rappaport, 1988).

Group Empowerment

Anyone who has gone through the experience of joining a self-help group in order to get help, and has discovered that she can also help others, knows how someone who begins the journey towards empowerment feels (Rappaport,

1985) When the empowerment process is undergone by the individual in a group, it also includes the enabling influence of a peer group within a collective-organizational structure, and also relations with a mentor that enrich the experience (Kieffer, 1983). Participation in a self-help group is considered an ideal (though not exclusive) means of encouraging individual empowerment, for such a group produces empowerment beyond the individual as well: people receive emotional and social support in the course of a change process in which they provide concrete help to others and acquire new skills, including development of ability for future public action (Dodd & Gutierrez, 1990; Chesler & Chesney, 1995)

The empowered community responds to threats to its quality of life, or initiates efforts for the improvement of the quality of life, by means of a network of community organizations. In addition, in an empowered community the following conditions exist: 1. Political openness, which is manifested in serious consideration of the residents' criticism and claims. 2. A strong leadership which seeks the residents' advice, and knows when to confront external forces and when to receive help from the outside. 3. Strong connections between the community's formal and informal

leadership. 4. Access to the mass media, such as radio, television, the press, which reflect all sectors of the community (Zimmerman,)

Some writers believe that community empowerment is expressed in the community's ability to create new human, existential, economic, social and political values for its residents, as an alternative to dysfunctional values that penetrate into the community from the capitalist economy, such as intensive consumption separated from daily life isolated individualism. Community empowerment therefore depends on a de-linking from the system at large, and on greater local self-reliance based on resources that the community households can produce (Friedmann, 1987). The outcome may be an making change: *the recovery of the political community*

John Friedmann (1992) claims that community empowerment is the creation of access to social and economic resources. Poverty, then, results from lack of access to essential resources, not only economic but also political and social resources.

This being so, some writers claim that politics, not planning, is the major process by means of which needs should be identified and responses for them should be located (Marris, 1987; Hajer, 1989).

“Community empowerment is a process where people work together to make change happen in their communities by having more power and influence over what matters to them.” There may be debates about the specific wording of this definition. But if we put these to one side, on one level, communities who feel a sense of control over what happens at a local level know exactly what empowerment is. Fundamentally, it is about people taking collective action to make change happen on their own terms. Community empowerment is a highly complex process to achieve and requires the active understanding and commitment from a wide number of stakeholders to achieve it. Community empowerment can be a slow, gradual process which involves continual learning and the constant building of a community's capacity to take on more – there is no finite end point in the process of community empowerment.

2.2 Stages of Community Empowerment

a. Capacity and Knowledge

Impart community members various skills and knowledge, such as conflict resolution and transformation skills, leadership skills, advocacy and negotiation skills, public finance management and various livelihood skills

b. Confidence and Attitude

Impart life skills to community members build their awareness of socio economic and political rights and obligation of government support their aspiration, show them how they can have their needs fulfilled and build their confidence that their lives can be improved through non violence

c. Community Inclusiveness and cohesion

Support peace building activities ,inclusive leadership and decision making process

d. Community Cooperation and Organisation

Promote solidarity , self - help initiative , collaboration of different community groups and inter - community networking

e. Community Participation and Influence

Mobilised community leaders, including women and marginalised group to develop a common vision and action plan and support them to engage the government and influence its decisions (Community Empowerment Model)

3. Research Method

This study is qualitative research and purposive sampling . This is include aspects and prospective respondents that will be focus of the study based on the situation and current ongoing condition of the research. It is use

technique of documentation, interview, questioner and observation.

The data regarding research question categorized in sequence, organized into a basic description, separated based on the meaning, provided with significant meaning of analysis and explained into pattern of data description

4. Finding and Analysis

4.1. PNPM , The National Community Empowerment

Program

On 2006, Indonesian Government has formulated an integrated poverty alleviation programme based on community empowerment . The programme inaugurated by President Susilo Bambang Yudhoyono was named The National Community Empowerment Programme (PNPM) .The Programme aimed for increasing the empowerment and independence of the community , poverty alleviation and the expansion of employment opportunities .PNPM program is not entirely new , but it is the comprehensive program integration of poverty alleviation programs based on community empowerment that expanded widely as a national program. Moreover PNPM Mandiri is an instrument for the achievement of the Millennium program Development Goals or MDGs . Therefore , the

period of PNPM Mandiri carried out until 2015 on target to achieve the MDGs . The program Funding from The Central Government (APBN), Local Government (APBD) and Society contribution

4.1.1 PNPM Program was being done in four clusters, namely:

Cluster 1, which is a group of integrated social assistance program family-based, aimed at fulfilling the basic rights and improved the quality life of the poor.

Cluster 2 is a group reduction poverty program and community empowerment, aimed to develop potentials and strengthen the capacity of poverty community groups to participate in development based on the principles community empowerment.

Cluster 3 is a group poverty alleviation program based on economic empowerment of micro and small enterprises, aimed to provide access to and strengthening the economy for Micro and small enterprises scale

Cluster 4 is other good programs directly or indirectly increase economic activity and the welfare of the poor.4.1.2. The road map PNPM Mandiri covers 5 stages namely :

Pillar 1 is the integration of the Community Empowerment .

PNPM Mandiri enhance participation, transparency and accountability in development planning processes , strengthening the sustainability of the ultimately determined by the integration of the principles , mechanisms and governance. PNPM promoted into the principles , mechanisms and governance regional development planning and Community development plans .

Pillar 2 Sustainability Mentoring (Fasliitator)

One element of the success of PNPM related closely with the facilitation and assisting the national meeting declared efforts to strengthen the capacity and competence companion community as the spearhead of community empowerment, and recognition profession and performance embody the entrepreneurial professional

Pillar 3 is the Institutional Strengthening Communities.

Public institutions were established by programs community development has absorbed a lot of resources and funding sources requires strengthening the capacity and the regulation of the the policy, the achievements that have been gained over many years may be reduced or even disappear altogether. strengthening needed in order to avoid the risk of collapse of social

capital investment that has been implemented by the Government .

Pillar 4 is the Role of Local Governments which include increased integration and coordination and partnership Center area . Encouraging increased role of local government not only will decrease the burden on the central government, but also strengthening the capacity and the quality of local government. in the implementation of development and community empowerment programs in particular

Pillar 5 is the Improved Governance, Transparency and Accountability . Good governance (good governance) has been established as one of one marker (legacy) that are important from the implementation of the empowerment program community in Indonesia.

4.2. Analysis

4.2.1 Determination of districts based on the number of poor.

It was very susceptible to counting the number of poor people, given that database of poor people was always questionable accuracy. Database PPLS used , which should be updated by the district / city based on local poverty conditions some have not updated accurately . Therefore updating the database should always be done in order to achieve the target

of PNPM program ,but it should be realized that the program was a national program of community empowerment , community development and not local development. So if there is an underdeveloped area then the mistake was not on PNPM , for the program is concerned with empowering the communities , instead of developing the area .In the General Guidelines for all PNPM there are four components , namely : human development , grant / Direct Community Assistance for ascertain how the community that has been built to prepare the various things like the meetings , an increase of local government capacity , other supporters .

4.2.2 . Community Independence

The community self reliance can not be achieved instantly , but must go through a series of activities planned community empowerment ,implemented and utilized by the communities themselves . Through the activities which made of , for , and by the public were expected to alleviate poverty more effectively . Therefore, the capacity of communities in the planning , implementation , utilization and supervision of construction should be increased through the activities they carry on.

Some efforts have been being done in order to build community independence ie : development community to build critical awareness and independence society , giving BLM (supporting fund) as a stimulant fund given to the community groups in supporting economic activities, planned communities to improve the well-being especially the welfare of the poor , increasing the governance and capacity building of local officials , and supporting the development management of government programs and other concerned groups in the management activity

4.2.3 The Contributions of PNPM in Poverty Alleviation

PNPM Mandiri has positive impact on poverty alleviation improving the welfare of society and increasing the availability of public services.

4.3 The successful achieved of PNPM Program as follows :

- 1 The existence of a significant reduction of poverty (Institute, 2010);
- 2 The participation of villagers in every stage of the PNPM in general high (Institute, 2010);
3. There is an increased consumption per capita 5 persen higher at home ladder compared to the control area (Bappenas , 2010)
4. Consumption increased at the poor family receiver PNPM 3% so that the

possibility of reducing poverty is greater 2,3 persen compared to the poor family in the control region (Bappenas 2007-2010);

5 Household treatment group had a higher chance of get a job and access to health care (Bappenas 2007-2009);

6 The Impact program 20 % higher in the poorest districts (The results of the study John Voss, 2012);

7 Regions treatment also had greater opportunity to 1-2 % reducing unemployment (study John Voss, 2012);

8 Since 1998 there is an increasing business assets productive economy of 14 billion to 41 billion and assets of savings and loan women's groups from 70 billion to 101 billion (Enrichment Seminar PNPM Mandiri, 2013);

9.The Officials have good information about the program and active in rural development programs (AKATIGA, 2010);

10 Indigenous People has information (notified) about programs village development, and actively involved in the meeting in the village (AKATIGA, 2010);

11. A significant increase in the management of community capabilities PNPM (Study findings P2E-LIPI 2010-2012);

12. The strengthening of democracy, interaction, and communication

between groups society (Study findings P2E-LIPI 2010-2012);

4.4 The weaknesses found in the PNPM as follows ;

- 1 The dominance of infrastructure projects in the PNPM activities resulting among others by the lack of infrastructure in the village (Institute, 2010) ;
- 2 The facilitator does not fully implement empowerment (Institute, 2010) ;
- 3 The disbursement of new BLM 70persen constrained by DDUB (the local government supporting fund) Disbursement of state budget can not be implemented if the budget is not yet available . In Bandung District was finally set up three sub-districts of 11 districts (PNPM Mandiri Enrichment Seminar, 2013);
- 4 there were deviations administrative procedures, processes, and PNPM funds at the community level (UPK) (PNPM Mandiri Enrichment Seminar, 2013);
- 5 The data differencies in some areas with the centre data,so the effect on the location and allocation (Seminar Enrichment PNPM Mandiri, 2013);
- 6 The overlapping poverty reduction programs (PPIP, Pamsimas, PNPM) (PNPM Mandiri Enrichment Seminar, 2013);

- 7 The allocation and determining the location specified by the Centre government sometimes less precise (PNPM Mandiri Enrichment Seminar, 2013);

5. Conclusion

1. The Coordination among the PNPM program very limited, only being done on determining the location and budget allocations each program as well as the formulation of the Road Map PNPM;
2. The Planning PNPM has a strategic role because it is an aspiration communities of bottom-up;
3. Nationally influence PNPM as one effort acceleration of poverty alleviation is still not measurable effect in poverty reduction. However, By region, based on the location of the recipient, there are successes, namely:
 - Integration of the participatory planning process has done fairly good;
 - Citizen participation is quite high in the processes;
 - Increased per capita consumption of the beneficiaries;
 - Increased opportunities for jobs and access to services basic;
 - Improved infrastructure development to open up access to centers of economic activity.

Abstract

Daniel Casasanto, in his Body-Specificity Hypothesis argues that people with different body types, i.e. hand dominance, interact with the environment differently, they then make different judgments. The hypothesis further argues that a left handed person form different judgments compared to a right handed person. The act of casting a vote is a judgment. Consequently, a left-handed voter could form different voting decisions as compared to a right handed voter.

This study explores the differences in voting decisions of left handers and right handers through a simulated election. The ballot was designed intentionally by the researchers to prevent the political knowledge and political biases from affecting their decisions.

The objectives of this paper are to identify the susceptibility of left-handed voter and right handed voter to the spatial positioning of the names of candidates in the ballot. This study identified if the spatial positioning and vertical positioning (Name-order) affect the variance in the voting decisions between left and right handed voters. Also, a gender slant is provided into the voting decisions of left-handed women and men, and between right-handed men and women.

The researchers of this study conducted a simulated election from 100 right-handed respondents, consisted of 50 male right-handed and 50 female right-handed. It also conducted the same simulated elections to 50 left-handed consisted of 25 male left-handed and 25 female right-handed.

The results of the research revealed that: (1) majority of the right-handed respondents and left-handed respondents are susceptible to the Spatial Position effect (2) majority of the right-handed and left-handed respondents are susceptible to the Primacy effect of Name-order (3) majority of the right-handed respondents and left-handed respondents remains susceptible to both effects of Spatial Position and the Name Order in a ballot where both effects can take result concurrently, through a double column array ballot design 4) Both left-handed and right-handed males are more susceptible to both Primacy effect of name-order and Spatial position effect than left-handed and right-handed females.

This research concludes that spatial position effect and name-order effect are clearly manifested in the votes cast by the left and right handed respondents and that handedness does have an influence in the voting decisions as its influence is facilitated by the ballot design. Majority of the research's respondents voted for the names on their side equivalent and names on top of the ballot manifesting the Spatial Position effect and Primacy effect of Name-order. Thus Casasanto's Body Specificity Hypothesis is ascertained; Left-handed and Right-handed respondents do think and make judgments differently.

Key Words: Handedness, Hand Dominance, Spatial Position, Name-Order

Background of the Study:

What if the way the body is designed play part in the decisions people make? What if the handedness of individuals affects the voting decisions they cast? According to Daniel Casasanto, the way people interact with the physical world affects their judgments and since people with different body types, i.e. hand dominance, interact with the environment differently, they then make different judgments. This is what Daniel Casasanto calls in his various studies as the Body-Specificity Hypothesis. Body Specificity Hypothesis states that (Casasanto, 2009, 2011):

...the content of the mind depends on our interactions with our environment; people with different kinds of bodies – who interact with the environment in systematically different ways – should tend to form correspondingly different neural and cognitive representations.

From this, it is a consequent knowledge that handedness, as an inherent physical trait, may influence voting decisions of the electorate, in general. And that whether or not one is right-handed or left-handed differences ensue accordingly, as human being's physicality has a direct influence in shaping his mentality.

Handedness is defined by Zoran Minderovic (1998) as the term which refers to a characteristic form of specialization whereby a person by biological circumstance uses one hand for clearly identified activities, such as writing. Handedness is a common and noticeable physical trait that people differ from each other. Others are left handed since they

prefer to use their left hand in performing essential actions, while others are right handed since they feel more favorable in using their right hand. Handedness therefore is not a choice deliberately made by an individual but an inherent trait that people have no other choice but to submit.

Voting, on the other hand, is a process for a group or an electorate to make a decision or express opinion—the vote. For many, it is known that factors such as social media, mass media, and other campaign strategies are those that affect most the forming of the voting decisions of voters so it may be unknown to most that handedness which is an intrinsic quality of an individual, greatly influences voters in their voting decisions, even at the actual process of making them (Casasanto, 2011).

Handedness:

Handedness, as an intrinsic and indispensable human trait, has become an important part of human's biological system which imposes subtle effects on brain and behavior (Casasanto, 2012). Hence, handedness may affect mental processes like decision making, especially on making judgment on whom to vote—making handedness as an essential factor that influences voters in the actual course of elections.

Various studies pointed out the clear difference in the way the minds work of left-handed as opposed to the right-handed and on how this difference become prevalent in actions. A study of Casasanto and Jasmin (2010) have analyzed speech and gesture (3012 spoken clauses, 1747 gestures) from the final debates of the 2004 and 2008 US presidential elections, which involved two right-handers (Kerry, Bush) and two left-handers (Obama, McCain). In this study, the researchers, Casasanto and Jasmin,

found out that the speakers, who were observed, associate positive messages more strongly with dominant hand gestures and negative messages with non-dominant hand gestures, revealing a hidden link between action and emotion. This pattern cannot be explained by conventions in language or culture, which associate 'good' with 'right' but not with 'left'; rather, the results support and extend the body-specificity hypothesis (Casasanto and Jasmin, 2010). The results of the study also argues said Casasanto and Jasmin (2010), that the hand speakers use to gesture may have unexpected (and probably unintended) communicative value, providing the listener with a subtle index of how the speaker feels about the content of the co-occurring speech. In the simple words of Jasmin and Casasanto,

In both of the left-handed candidates, left-hand gestures were more strongly associated with positive-valence clauses, and right-hand gestures with negative-valence clauses; in both right-handed candidates, right-hand gestures were more strongly associated with positive-valence clauses, and left-hand gestures with negative valence clauses.

The relation to the study of Casasanto and Jasmin (2010) then is very clear for this study will support strongly the claim that when brain dominance between left and right handed is existing then it affects the way people act the same way that this study tries to prove that it affects the votes that they cast.

Handedness & Name-Order:

Name-Order Effect indicates the phenomenon when candidates often received more votes when their names were listed first than when their names were listed after the names of one or more candidates with whom they competed (Casasanto, Kim, & Krosnick, 2014). Bringing together the effects of handedness in the person's susceptibility to name-order effects (Ballot-Order effects as referred to in other studies), Nuri Kim, John Krosnick & Daniel Casasanto (2014) have offered a theory of the psychology underlying name-order effects in their research, *Moderators of Candidate Name-Order Effects in Elections: An Experiment*. The research have found out that handedness has a particular influence on why voters are prone or susceptible to name-order effects. Accordingly, left-handers showed a greater tendency toward a primacy effect than did right-handers (Casasanto, Kim, & Crosnick, 2014). It was furthered that left-handers favored the candidate who appeared on the left in part because his name appeared on their dominant side—their "good" side of space (Casasanto, Kim, & Krosnick, 2014). Also, that the effect of handedness is informative about the cognitive underpinnings of the name-order effect (Casasanto, Kim, & Krosnick, 2014).

However, it was also pointed out by Casasanto, Kim, and Krosnick that aside from handedness, people with little information, high ambivalence, lower cognitive skills, and less cognitive effort in the time of the decision-making process are when name-order effect is the strongest.

Handedness & Spatial Position:

Spatial position refers to the left and/or right space or area where the names of the candidates are being positioned or placed. Handedness is theorized to have an influence in a person's preference of the candidates basing on the candidate's name position in the ballot (left or right). This is delved deeper in Casasanto's Body-Specificity of Emotion. Body-Specificity of Emotion argues people are "experts" at using their dominant hands to the extent that, perhaps over a lifetime of lopsided perceptuomotor experience, people come to implicitly associate good things with the side of space they can interact with more fluently and bad things with the side of space they interact with less fluently (Casasanto, 2009). Thus, people choose or prefer sides they most interact fluently.

To account such claim, Casasanto conducted an experiment where the participants performed a pencil-and-paper diagram task in which they drew one animal in each of two boxes, located either to the left and right of a cartoon figure or above and below a cartoon figure. Instructions indicated that the cartoon figure likes certain animals and thinks they are good but dislikes other animals and thinks they are bad. Participants were instructed to draw a good animal in the box they thought best represented good things and a bad animal in the box that best represented bad things. The results were that, more or less 75% of both left- and right-handers chose to draw good animals on the box located similar to their handedness. However, that is on the left and right side of space, in the upper and the lower side of space when the spatial orientation of the boxes were placed up and down the cartoon figure, both handedness favored the upper box

and drawn animals which they deemed to be as "good".

Another experiment was conducted by Casasanto for the identification of the effects of spatial positions to the judgments of people. In the experiment, participants had been asked to make judgments about figures referred as "Fribbles". Members of each "Fribble" pair were visually similar but clearly distinguishable by several salient features. Fribbles were arranged in two columns, one on each side of a list of questions printed in a center column. This arrangement placed the members of each Fribble pair on opposite sides of the page without calling attention to their spatial arrangement. Participants were asked to circle one member of each Fribble pair, located on either the left or right side of the question, to indicate a judgment about one of four personal characteristics (i.e. intelligence, attractiveness, honesty, happiness), for a total of 12 judgments per participant. Of the participants who showed a directional preference, a majority of left-handers (65%) attributed positive characteristics more often to Fribbles on the left of the page, whereas a small majority of right-handers (54%) attributed positive characteristics more often to Fribbles on the right of the page. Results of such experiments validated that spatial positions affects the judgment people make and the effects differ from left- and right-handers.

Bodily Relativity Theory:

Bodily Relativity of Daniel Casasanto is the bedrock theory of this research. The Bodily Relativity posits that, the human physicality, the body, including handedness, is a particularly stable and omnipresent aspect of the context in which we do our thinking, which act as a crucial point of interface between the mind and the world, and shapes the way we

think—thus, as Casasanto would put it, “People with different kinds of bodies think differently, and they think in predictable ways.” This theory has provided the link on how the body would shape the mind on various timescales. While it may be true, said Casasanto, that “many other contextual factors influence the representations people form and the judgments they make, as well, and other factors may override body-specific influences at times but the body is an ever-present part of the context in which we use our minds, and therefore has pervasive influences on the neurocognitive activity that constitutes our thoughts.”

Bodily Relativity Theory, as the general theory that explains how the body significantly shape the mind—cognition and perception—originated from Casasanto’s body-specificity hypothesis which has introduced the idea that people with different physicality/body interact with their environment differently. Focused on how handedness, genetic or induced, influences brain and mind, body-specificity theory have forked into different hypotheses that employ different focus, these are the body-specificity of language action and motor imagery, and body-specificity of emotion.

The body-specificity of action language and motor imagery hypothesis asserts that hand actions—holding a cup, throwing a ball, etc.—even performed in mere imagination corresponded to different patterns of activity in right- and left-handers’ motor systems. This highlights the idea that when a left-hander is being asked to imagine any manual action—thus, there was no performance of action, the right hemisphere of his/her brain is being activated as right brain specializes left-handedness in humans (Brain Lateralization). Hence, proving that

the biological neurocognitive processes of both left- and right-handed voters entails differences.

On the other hand, the body-specificity of emotion hypothesis argues that people’s implicit associations between space and valence are body specific: that these implicit associations influence people’s memory and their motor responses, as well as their judgments. According to this hypothesis, people conceptualize good and bad in terms of right-left space (Spatial Positions). Thus, meaning that when choosing sides or spaces left- and right-handers diverges for the former prefers the left space/side while the latter prefer the otherwise. More so, since a left-hander is fluent with the left side, as he interacts with the things around him using more of his left hand, s/he ingrains unconscious bias in him/her towards this particular space/side, which is also the case for right-handers. Hence, this establishes the idea that left- and right-handed voters are indeed prone to choose space/side equivalent to their dominant hand side, as they think of such space/side as the ‘good’ space/side, and as they also have accrued a veritable fluency with such space/side.

Evidently, Body-Specificity Theory asserts that right- and left-handers tend to form systematically different mental images, create different word meanings, and both left and right handers, arrive at opposite judgments about the same objects in the world, and have a radically different cortical organization of affective motivation. According to Casasanto,

“Our hands are particularly important for interfacing with the physical and social environment, but there may be nothing special about the mechanisms by which using our hands shapes our brains

and minds (e.g. associative learning), and body-specific effects should extend beyond the initial test bed of handedness”.

This theory best applies to this study because it supports the claim that there is a difference in the way left handed and right handed people think, and because vote is affected with thinking and as a consequence how both left and right handed differ in their voting decisions. This theory also supported the notion that left handed voters has more positive regard to those that are in their left side or in the side equivalent of their dominant hand. In contrast to that, Right handed voters is also seen to have positive regard to that of the right side of them.

Serial Position Effect of Ebbinghaus:

The Name-order effect as facilitated by handedness is supported by the Theory of Serial Position Effect. The Theory of Serial Position Effect states that when given a list of information and later asked to recall that information the items at the beginning (the phenomenon termed as, the Primacy Effect—a cognitive bias that allows items at the beginning of the list to be called at greater ease than items in the middle and the last (Feigenbaum, E., & Simon, H., n.d.) and the items at the end (on the other hand, termed as the Recency Effect—a cognitive bias that allows items at the end of the list to be called at greater ease than items in the middle and the first (Feigenbaum, E., & Simon, H., n.d.)) are more likely to be recalled than the items in the middle. Hence, when a voter is given a list, which in actuality comes as a list of candidates in a ballot, s/he would easily recall the first or the last entries. Thus in making a judgment on who to vote s/he is susceptible to choose candidates listed first or last, as his/her brain have easily

processed, and at the time when s/he directs the final judgment, still is processing such entries. Consequently, this theory established that voters are primarily biased towards candidates listed on the first or on the last in an order. Moreover, this theory explained why voters choose items listed on either the beginning or the end of an order—the primary and the recent.

Jantz’ Gray And White Matter Brain Difference:

In this research, the result shall be given a gender slant where the effects of Spatial position and Name-order to male and female respondents shall be compared. This is under the hypothesis that the effect of name-order and spatial position as facilitated by handedness vary in terms of sex. This hypothesis is hinged upon Jantz’ theory which argues that there is a difference in the brain structure between male and female and such difference may affect their difference in the susceptibility to the said effects. Such theory of structural difference between male and female brains highlights the idea that the brain is divided into two matters the gray and the white matter. The gray matter is the action- and information-processing unit of the brain while the white matter is the networking grid of the brain that connects the gray matter to other action-and information processing unit. Accordingly, the males utilize more the gray matter while the females utilize more the white matter. Thus, males and females tend to make different judgments as their brain is structured different from one another—males are more focused on and processes efficiently single information, while females are good on shifting focus on, or processing different set of information, at a given time. Next is the theory of the Nuerochemical Differences in men and women. According to Jantz

(2014), males and females process differently the neurochemicals inside the brains which is a factor on why males and females respond differently to specific situations. Again, as the biological structure of men and women are different, when put in a similar situation, male and female brains may produce different neurochemicals in response to such circumstance, or given that they produce the same, their bodies processes such neurochemical differently—which means a difference in the effects it ensue to the mind and body of men and women. Therefore, such theories directed that as men and women are biologically structured differently male and female voters tend to process information and respond to situations differently, thus arriving to dissimilar judgments.

Statement of the Problem:

This study looks into whether handedness, as an intrinsic human trait, affects voting decisions of a voter on the actual conduct of elections. Hence, in general, this study tests the effects of handedness to voting decisions of the voters. And specifically, this study tries to:

1. Find out whether or not voters prefer candidates placed on the area or space (left or right spatial position) in the ballot that is parallel to their dominant hand side.
2. Ascertain the Name-Order effect (preference of either the first or last) of ballot design among left- and right-handed voters.
3. Find out whether left- and right-handers remain consistent with their preference when the ballot is organized in a manner where the effects of name-order and spatial position can be elicited.
4. Determine whether there is a significant variation between the

males and females on both left- and right-handers' category.

Methodology:

This research is an experimental study of the influence of handedness in the voting decisions of the selected College of Arts and Social Sciences (CASS) and College of Engineering (COE) students of Mindanao State University-Iligan Institute of Technology. The survey method through simulated election exercise was used in the gathering of data. The simulated election exercise used the designed ballot of the researchers which contained names that the voters were not familiar of to avoid political biases among the listed names of candidates. Quantitative and qualitative analysis was done on all gathered data. Descriptive statistics in terms of frequency and percentage distribution was employed to present the data in a clearer manner. Chi Square method, on the other hand, determined and tested the significance in the variation of the recorded responses between males and females left-handed and between males and females right-handed.

The study was conducted inside the College of Arts and Social Sciences (CASS) and the College of Engineering (COE) of the Mindanao State University-Iligan Institute of Technology. The said university is located at A. Bonifacio Avenue, Tibanga, Iligan City, 9200, Lanao del Norte. The University is composed of six colleges and two schools and two of those are the chosen research settings, the College of Arts and Social Sciences (CASS) and the College of Engineering (COE).

The respondents of this study were third year and fourth year students from the College of Arts and Social Sciences and third year to fifth year students of

College of Engineering in MSU-IIT enrolled for the second semester. The respondents were: from CASS—Department of English, Department of Political Science, Department of Filipino and other Languages, Department of Sociology, Department of Psychology, and Department of History; and from COE—Department of Ceramic, Mining, and Metallurgical Engineering, Department of Electrical, Electronics & Communications and Computer Engineering, Department of Civil Engineering, Department of Engineering Science and Mechanical Engineering, and the Department of Chemical Engineering and Technology. Third year, fourth year, and fifth year students of CASS and COE were chosen as respondents of this study since they already are eligible voters.

Out of the 200 sample population of this study, 50 are left-handed male, and 50 are left-handed females. The other half was consisted of 50 female right-handed voters and 50 male left-handed voters.

The instrument that was employed in conducting this research was a simulation ballot. The simulation ballot was the same ballot used for both left- and right-handed voters. The ballot was designed in a way that it is incorporated with the parts to measure the effects of handedness (i.e. spatial position effect and name-order effect). The designed ballot that was used as research instrument was designed in a way that the respondents were not familiar of the names that were printed in the ballots to avoid political biases. To avoid the said political biases among the respondents during the simulated election process, the names of the candidates used in the simulation ballot were taken from the sample ballots of the state of Mississippi and the state of North Carolina released on November 3, 2015.

Results and Findings:

Spatial Position Effect

This part tries to ascertain whether right-handed respondents would favor more those names in the right side and the left-handed respondents in the left side, thus are left- and right-handed voters prone to the spatial position effect—the preference of candidates listed in the left or right side/space.

The susceptibility of the right-handed respondents to the Spatial Position Effect shown in Figure 1, below, indicates that right-handed respondents majorly voted for candidates placed in the right side of the ballot as compared to the left side. Right-handed respondents dominantly voted for the right side of the ballot, with 71 right-handed respondents, comprising 71% of the total number of right-handed respondents voted dominantly to the right side while the remaining 29 right-handed respondents (29%) opted for the opposite side. From this data, it can be inferred that right-handed respondents are susceptible to the effects of spatial position, since they voted majorly for the candidates listed on the space/side that is equivalent to their dominant hand (the right).

On the other hand, with regards to the side of the ballot the left-handed respondents favored most, is shown in Figure 2, below. Apparently left-handed respondents preferred candidates listed in the left side of the ballot, as majority of them, 42 out of the 50 left handed respondents (at 84%) voted dominantly for the left side of the ballot while the other (at 18%) composed of only 8 left handed respondents voted dominantly in the right side. Thus, in contrast to the right-handed respondents, the left handed respondents are susceptible to the spatial position effect in favor of the left side for majority of

these left-handed respondents have voted candidates listed in such side of the ballot.

Hence it can be clearly drawn that both Left- and Right-handers are susceptible to Spatial Position Effect facilitated by handedness—as 84% of the left-handed respondents dominantly favor the left side of the ballot, in the same manner as 60% of the right-handed respondents dominantly favored the right side of the ballot. These results are in congruence to Casasanto and Jasmin’s study which showed that people choose items on the sides parallel to their dominant hand because they tend to associate such sides or space with positive valence clauses, while perceiving the opposite side to it, negatively. In addition, this result as well validated by Casasanto’s argument that in choosing items people tend to prefer those which are placed on the side equivalent to their dominant hand, because of their motor fluency on such side.

Figure 1 Spatial Position Effect in Left Handed Respondents (per respondent)

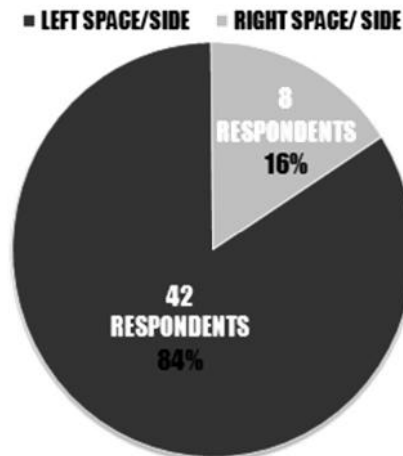

Figure 2 Spatial Position Effect in Left Handed Respondents (per respondent)

Name-Order Effect

This part looks into whether respondents would tend to favor the first or the top part of the array (Primacy effect) or on how they would favor instead the last or the bottom part of the array (Recency effect).

Figure 3 below shows the susceptibility of the right-handed Respondents to Name-order Effect (Primacy or Recency). The figure exhibits that the candidates listed in the top part (first items of the order) of the array were dominantly favored by the right handed respondents. With the number of respondent who dominantly favored the specific orders to where the candidates can be identified with, it was provided that 46.5 respondents which is 46.5% of the total number of right-handed respondents chose to vote candidates on the top or the first part of the list while only 23.5 respondents and 30 respondents voted in favor of the candidates placed in the middle part and the bottom or last part of the array, respectively. Therefore, it can be inferred from these figures that right-handed voters favor candidates listed in

the top or the first part of the ballot order and thus are susceptible to the Primacy effect of Name-order.

Evidently, as Figure 4 below suggests, Left-handed respondents also finds candidates listed in the top or first part of the array more vote deserving than the other candidates listed in the remaining orders—middle and bottom or last. As presented in the graph, 56% or 28 left-handed respondents majorly voted for candidates who are listed in the first part, 20 % of the left-handers or 10 of them dominantly casted their votes to candidates of the middle part and the remaining 26% or 12 respondents dominantly voted for candidates placed in the last. This means that, like the right handed respondents, left-handed respondents are also susceptible to the primacy effect of the name order.

However, in terms of the degree of susceptibility of the left-handers and right-handers to the name-order effect, it can be made sense from the results that, left-handers has a greater tendency towards the primacy effect as it is illustrated in the figure, that 56% of the left-handers are under the condition of primacy effect compared to the right-handers' 46.5%, which is in congruence with the study of Casasanto, Kim and Krosnick, which forwarded that left-handers shows greater tendency toward, and thus prone to, the primacy effect of name order than the right-handers.

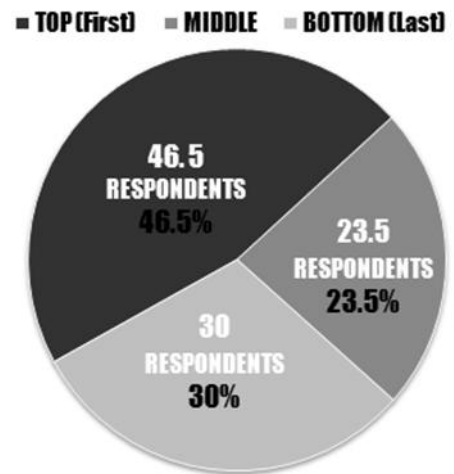

Figure 3 Name Order Effect in Right Handed Respondents (per respondent)

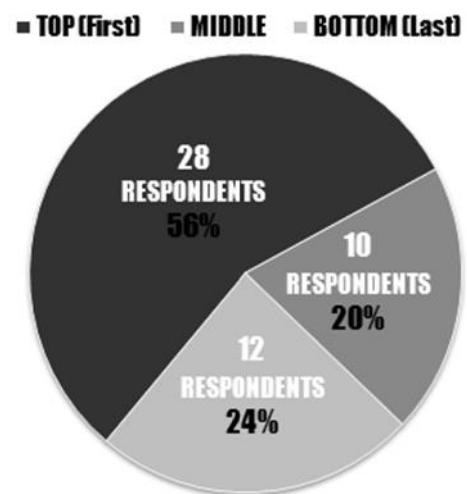

Figure 4 Name Order Effect in Left Handed Respondents (per respondent)

Spatial Position and Name-Order Effect in a Double Column Array

This part of the study tries to measure through a double column array type of ballot design, a ballot organization in which there are two columns in parallel—one on the left, and the other on the right—while each of the columns is an array of items that forms an order, whether or not the susceptibility of spatial

position effect habit with the susceptibility of name-order effect effectively. In simpler words: *will it be possible for a left-handed person to still prefer the left side of the ballot at the same time preferring the top or bottom part of the array (Top left or bottom left)?; or will it also be observed that right handed persons still prefer the right side of the ballot regardless of whether it's on the top, middle or bottom part of the array?*

Figure 5, below, which shows the consistency of the preferences of the right-handed respondents in their susceptibility to the effect of spatial positions, holds that the majority of the right handed respondents, that is 68 in number, have dominantly casted their votes for the candidates listed in the right side. Meaning 68% of the total number of right-handed respondents shows veritable susceptibility to the Spatial Position effect while the remaining 32% of the right-handed respondents favored the left side of the ballot. From here, it can be made sense that even if the right-handed respondents are able to choose from a number of candidates, listed top-down in a column which comes into two, one on the left and the other on the right side of the ballot—instead of a two-candidate-one-for-each-side arrangement—right-handed respondents will still vote for the candidates placed on the side equivalent of their dominant hand—right. Hence, Right-handed voters are still susceptible in voting candidates placed in the right side or space of the ballot—Spatial Position Effect, even when the ballot is organized in such an organization of a double column array. Furthermore, for the consistency of the susceptibility of right-handed respondents to the other effect, name order effect, Figure 6, below, shows the percentage distribution of the right-handed respondents that generally remains consistent with their choice from

the one-columned ballot organization. As the graph would put in detail, the top or first order attracted a mass of 54 right-handed respondents, 54% of the total right-handed respondents, the middle with 22.5 respondents or 22%, while the last or bottom part of the order gathered the remaining 24% or the 23.5 respondents. Hence, it can be extracted that with the concurrent effect of spatial positions, which comes with the double column array ballot organization, the respondents still favorably vote the top part of the ballot making them susceptible still to Primacy effect of Name-order.

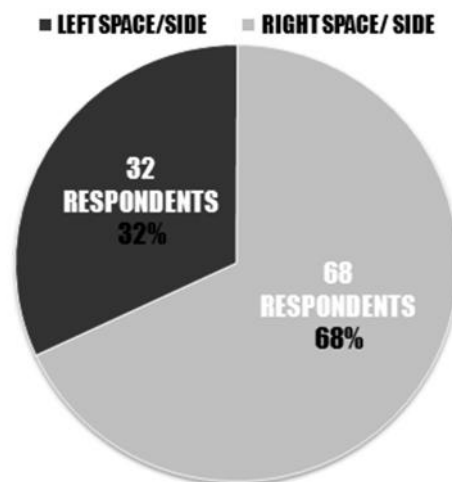

Figure 5 Spatial Position Effect among Right Handed Respondents in a Double Column Array Ballot Organization (per respondent)

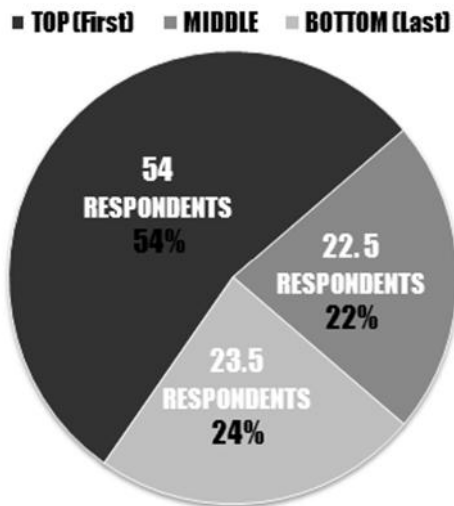

Figure 6 Name-Order Effect among Right Handed Respondents in a Double Column Array Ballot Organization (per respondent)

In another vantage, in the category of left-handers, Figure 7, below, presents the gathered data of how many of the votes casted by the left-handed respondents went to the left side and on the right side of the ballot when the ballot design shifted into a Double Column array. As can be observed in the graph, the candidates of the left side received the majority of votes of the 75% of the left-handed respondents, comprising 37.5 left-handed respondents, while right side received the majority of votes the remaining 25% or 12.5. From these counts, generally, left-handed respondents tend to vote for the candidates listed in the left side, even if they find more choices on the right. Thus, even the ballot is in a complex organization, as long as there can be an identifiable left and right sides, left-handed respondents will still vote for the candidates placed in the left side of the ballots. Moreover, Figure 8 shows the distribution of left-handed respondents in

terms of candidates' name order in the ballot. The graph provides that 54% of the left-handed respondents, comprising 27.667 respondents are favoring their votes on the top part of the array, 16% containing 8.1667 number of respondents favored the middle part, while the remaining 28% containing 14.667 number of respondents favored the bottom part. In analyzing these results presented by the graph, it can be dug out that regardless of the spatial position aspect in a double column array, the respondents still favorably vote the candidates on the top part of the ballot making them susceptible still to Primacy effect of Name-order even if the ballot design is not in a single vertical column but in a double column array.

Significant Variation between Male and Female within Left and Right-handed Categories

In the aim of providing a more critical analysis in the results of this research, the researchers present the gender slant of this study where the influence of both Spatial position effect and the Name-Order effect, will be analyzed in the lens of sex. This will answer the questions; *will a left-handed male have a different level of susceptibility in spatial position effect and name-order effect from a left-handed female? Will a right-handed male have a different level of susceptibility in spatial position effect and name-order effect from a right-handed female?*

Table 1 Significant Variation between Right-handed Male and Female Voters in terms of the Degree of their Susceptibility to the Effect of Spatial Position

Right Handed Voter's Sex	Spatial Position		Mean	Total	Proportion
	Left Side (per vote)	Right Side (per vote)			
Female Observed	158.0	192.0	175.0	350.0	50.0
Female Expected	136.0	214.0			
Male Observed	114.0	236.0	175.0	350.0	50.0
Male Expected	136.0	214.0			
Sum	272.0	428.0	350.0	700.0	100.0
χ^2 Female	3.56	2.26	12.12	SIGNIFICANT	
χ^2 Male	4.25	2.05			
DF	1				
CRIT	3.841				

Legend:
DF – Degrees of Freedom
CRIT – Critical Value

Table 1 shows that female right-handed respondents are less susceptible in voting candidates listed in the right side of the ballot than the male right-handed respondents. In other words, female right-handed respondents are less susceptible to the spatial position effect as compared to the male right-handed respondents. At value of 12.12, it can be inferred that there is a significant variation between male and female in their degree of susceptibility to spatial position effect.

Table 2 Significant Variation between Left-handed Male and Female Respondents in terms of the Degree of their Susceptibility to the Effect of Spatial Position

Female Observed	109.0	66.0	87.5	175.0	50.0
Female Expected	58.5	29.0			
Male Observed	125.0	50.0	87.5	175.0	50.0
Male Expected	58.5	29.0			
Sum	117.0	58.0	175.0	350.0	100.0
χ^2 Female	43.59	47.21	135.0	SIGNIFICANT	
χ^2 Male	35.38	8.82			
df	1				
CRIT	3.841				

Legend:
DF – Degrees of Freedom
CRIT – Critical Value

Table 2 shows that female left-handed respondents are less susceptible in voting candidates listed in the left side than the male left-handed respondents. This means that, female left handed respondents are less susceptible to the spatial position effect as compared to the male left-handed respondents. At a value of 135.0, it can be deduced that undoubtedly there is a significant variation between male and female left-handed respondents in their degree of susceptibility to spatial position effect.

Table 3 Significant Variation between Right-handed Male and Female Respondents in terms of the Degree of their Susceptibility to the Effect of Name Order

Right Handed Voter's Sex		Name Order			Mean	Total	Proportion
		Top or First (per vote)	Middle (per vote)	Bottom or Last (per vote)			
Female	Observed	85.0	85.0	80.0	85.0	250.0	50.0
	Expected	104.5	67.5	78.0			
Male	Observed	124.0	50.0	76.0	87.0	250.0	50.0
	Expected	104.5	67.5	78.0			
Sum		209.0	135.0	156.0	172.0	500.0	100.0
χ ² Female		3.64	4.54	0.051282	17.47	SIGNIFICANT	
χ ² Male		3.07	6.13	0.1			
df		1

CRIT – Critical Value

Table 3, on the other hand, shows that female right-handed respondents prefer at equal frequency candidates listed first and middle in the ballot unlike the male right-handed respondents who are in majority prefers candidates listed on top or first. More so, it is evidenced in the table that the votes of female right-handed respondents are in fair distribution, in terms of the pattern of preference, to every parts of the order, in small gaps between numbers, which is in a contradiction to a generally top-focused vote of the male right-handed respondents. From this, it can be made sense that female right-handed respondents are less susceptible to the

primacy effect of the name order, as compared to male right-handed respondents. Hence, as evidenced with the 17.7 value, there is a significant variation between male and female right-handed respondents in terms of their susceptibility to such effect. Aside from that, as what can also be observed, the votes of the male right-handed respondents are top-focused, in a general sense, as compared to the relatively evenly distributed vote of the female right-handed respondents.

Table 4 Significant Variation between Left-handed Male and Female Respondents in terms of the Degree of their Susceptibility to the Effect of Name Order

Left-Handed Voter's Sex		Name Order			Mean	Total	Prop
		Top or First (per vote)	Middle (per vote)	Bottom or Last (per vote)			
Female	Observed	53.0	40.0	32.0	46.5	125.0	50.0
	Expected	56.5	33.0	35.5			
Male	Observed	60.0	26.0	39.0	43.0	125.0	50.0
	Expected	56.5	33.0	35.5			
Sum		113.0	66.0	71.0	89.5	250.0	100.0
χ ² Female		0.22	1.48	0.34507	4.45	SIGNIFICANT	
χ ² Male		0.20	1.88	0.3			
df		1					
CRIT		3.841

CRIT – Critical Value

Table 4 illustrates that, generally, female left-handed respondents prefer candidates listed first or top of the ballot in a lesser manner as compared to the male left-handed voters who are in majority prefers candidates listed on top or first. More so, similar to the case in the right-handed category, it can also be observed in the table that the votes of female left-handed respondents are in a relatively fair distribution among the parts of the order, in comparison to the male left-handed respondents' votes. Hence, it can be contended that female right handed respondents are less susceptible to the primacy effect of the name order, as

compared to male right-handed respondents.

The aforementioned results showing the variation between males and females within the categories of the lefties and the righties, especially in name-order, is in tune with the theory of the difference in utilization of gray and white matter between male and female, which contends that female generally utilizes more the white matter of the brain, or the 'networking' matter of the brain, which is responsible to multi-processing of different information at the same time, which explains why women tend to be able to see the entire picture of choices and is able to process the different entries in the order. In line with that, this theory explains that men tend to have focused processing of information because they are not efficient in looking and then processing all of the parts at the same time, which explains such focused choice.

Conclusions:

The way people interact with the world affects their judgments (Casasanto, 2009). Since we interact with the world through our body, we perceive and interpret things in such a way that the body can relate naturally (Body Specificity Hypothesis). Hence, our thinking is constantly being shaped according to the body we have. Handedness, as physicality, and as an intrinsic and indispensable human trait, indeed, has a pervasive influence on people's thinking and decision-making (i.e. casting a vote in elections) (Bodily Relativity Theory). And as people have different bodies, different handedness, the electorate tends to make dissimilar judgments—left-handers forms different judgment from the right-handers, as well as males from the females.

Evidently, as both are susceptible to the spatial position effect, left-handed

voters are prone to choosing candidates who are listed in the left side of the ballot while right-handed voters, on the other hand, finds candidates listed on the right side more favorable. Thus, when voting, using a ballot from which left and right spaces can be identified clearly; left-handers would be attracted with and thus would vote for the candidates in the left, whilst right-handers would prefer candidates listed in the right. Such dissimilarity between the preferences of the voters of different physicalities, is actually due to each conceptualization of what is good and what is bad in terms of the left-right space (Casasanto, 2009). According to Bodily Relativity Theory, people tend to associate positive valence clauses on the side or space equivalent or parallel to their dominant hand, which means, left-handers tend to put positive regards with the left, as well as right-handers with the right. More so, as both left- and right-handers interact with their environment using more of their dominant hands they have had already acquired a veritable fluency and facility with the side or space equivalent to it, which explains the psychological bias they have on such spaces.

On the other note, in choosing whom to vote from a single-columned list of candidates, both left- and right-handed voters are susceptible to the name order effect due to the psychological bias people have on the first orders and the last orders, as items listed, mentioned, or seen in such orders can be easily recalled (Serial Position Effect). But, it is the primacy effect of the name order that is greatly affective to the voters, as both left- and right-handed voters finds the candidates listed in the beginning or first (the top part, in this case) as more vote-deserving than the other candidates listed in the other orders. This is resounded in Miller and Krosnick's study which

concluded that indeed primacy effect of ballot-order (or name-order) is more pervasive than the recency effect for such effect influences greatly people even from across different cultures. However, differences still ensues in terms of the degree of susceptibility to the effect for left-handed voters are more prone than the right-handers to the primacy effect of the name order—voting at a higher frequency for candidates listed first.

Strikingly, however, even when both effects of spatial position and name-order can be elicited in a single ballot organization, all at the same time, both left- and right-handed voters remains consistent with their preferences—left handed voters remained to vote for the candidates placed in the left and the top, and right-handed voters remained to vote candidates at the right side and the top. Hence, even if the voters can perceive the spatial positions and temporal orders to which the candidates are listed, and thus have more number of candidates to choose from who are not situated in the left and the top for the case of left-handed voters or in the right and the top for right-handed voters, they are still prone to both effects and so remains constant with their choices.

Furthermore, in terms of sex, which is also a physicality, males' and females' votes within the categories of left- and right-handed voters shows a significant variation with regards to the frequency of casted vote as well as in the frequency of the number of voters who favored a specific side or order. Evidently, in both light of the spatial positions and name order, males posited a focused distribution of votes, while female posited a relatively distributed votes, especially in name-order effect. Such apparent variation is echoed on the theory on the biological structure differences between

male and female—the Structural Difference of the Brain or the Gray-White Matter Difference—which averred that males are more focused than the females who can process multiple information due to female's effective utilization of the white matter, that is the networking grid of the brain which connects a processing unit to another units, which is less utilized by the males. Therefore, males cannot efficiently process every part of the entirety at a given time—thus the reason for their top-focused votes, and females, in contrast, can efficiently process every single bit of information in a given set at a given time—thus explains the relatively fairly-distributed votes.

Abstract

This study was conducted to determine the cause and effect of migration of the *dumagats* to Barangay Dologon. Specifically, it aims to identify the early migrants of Barangay Dologon; determine the factors that led them to migrate to the barangay; identify the challenges that they had encountered; determine how they adapted to the new environment and co-existed with the early settlers; and know their contributions in the political and socio-economic development of Barangay Dologon.

The researcher utilized both primary and secondary sources to suffice the study together with twenty (20) key informants who were capable of telling the stories of the arrival and experiences of the migrants. The documents gathered were analyzed and had been checked for authenticity and accuracy. Furthermore, the study catered a background of Maramag and of Barangay Dologon, the locale.

The *lumads* had been included as they are the original inhabitants of the barangay, and established a permanent settlement in Dologon before the migrants arrived. It weighed the experiences of the *lumads* towards the migrants and the experiences of the migrants towards the *lumads*. The penetration had led to evolve the place into a more productive community. The influx of these people was to be considered as an economic venture of their own interests. The migrants in Dologon were classified into two (2): the pioneering migrants who happened to settle in the place in the earlier years of the barangay; and the migrants who were considered educators and laborers.

The study is a historical research that determined the migration process that occurred in Dologon, and synthesized the impact they had created in the development of Barangay Dologon.

Key Words: *dumagat*, migrants, migration, settlement

INTRODUCTION

Migration is the process of moving of people or group of entities from one place in the world to another for the purpose of taking residence; usually across borders of their originated place

(www.nationalgeo.com). People migrate for a variety of reasons. They consider the advantages and disadvantages of staying versus moving, as well as factors such as distance, travel commodities, travel time, geographical features of the place, and

cultural barriers. Thus, migration greatly affects population patterns and characteristics, social and cultural patterns and processes, economies, and physical environment. As people migrate or move, their cultural traits and ideas of their origin diffuse along with them, creating and modifying the cultural landscape and the place.

In the Philippines there had been a substantial period of land settlements. Since the pacification of the Muslim south, streams of migration have been observed heading southward. This process proceeded with government toleration and at times explicit encouragement even during the earliest American colonial period. Paderanga Jr. (1987) discussed two types of resettlement; the first is the official, government sponsored, formal public settlement programs, and second is the spontaneous movements in response to various government policy changes including the government own resettlement programs.

Lao (1981) pointed out how migration had contributed to the population growth in Bukidnon. From 1920's to the outbreak of World War II, it had significantly attracted migrants throughout the country to resettle in the province. Though, the effect of migration in the province was quite late, due to the problems like the total lack of good roads and bridges in Bukidnon, this problem had slowed down the migration process and even were not recommended for active resettlement by migrants. Although several families from Batanes and Iloilo who came and settled in Bukidnon in the middle part of 1918, no other groups of people were reported to have migrated to the province between 1914 to 1920. There were land seekers from the island of Luzon and Visayas who came settled in Mindanao during the same period but most lived along the coastal

provinces for practical reasons. An increase of number of Christian settlers started penetrating Bukidnon in 1920's as the road between Cagayan de Oro and Malaybalay became regularly used by vehicular traffic. This improvement led to the increase of the province population and rate of migration.

Barangay Dologon had been one of the earliest barrios in the Municipality of Maramag. It had been established as a barrion through Executive Order No. 5, dated February 22, 1917. Dologon as one of the largest barangays in Maramag paved way to series of migration, wherein, the migrants had contributed to the political, economic, and socio-cultural development of the barangay until its establishment as a barangay during the Marcos regime in 1970. Thus, this paper documents the migrant's hardship, challenges, survival and adaptation to the new environment. This paper will also highlight the events that triggered the importance of these migrants to the development of Barangay Dologon.

RESEARCH OBJECTIVES

This paper provides a descriptive narration of the experiences of the migrants in Barangay Dologon. Specifically, he paper seeks:

1. To identify the early migrants of Barangay Dologon.
2. To determine the factors that led them migrate to Barangay Dologon.
3. To identify the problems and/or challenges they encountered.
4. To determine how the migrants adapted to the new environment and co-existed with the early settlers ; and
5. To determine their contributions in the political and socio-economic development of Barangay Dologon.

SIGNIFICANCE OF THE STUDY

The various stories of the migrants from Dologon are essential in documenting the history and development of the barangay. This study is valuable for the present inhabitants of Barangay Dologon for this paper aspires to: (a) help them better understand their environment (b) educate them the differences in terms of their cultural background and to alleviate a mutual understanding between the migrants and the *lumad* (c) add to the literature of our local history which would be beneficial to suffice the blank space to our national history, and (d) provide the local government units a better background and ideas that will correspond to the needs of the settlers in the locality.

This study may not be sufficient enough to give a better understanding of migration process in the province of Bukidnon, but, it serves as take-off point for future researchers that would like to expand the study about migration in the province.

METHODOLOGY

The research locale is situated in Barangay Dologon, ten (10) kilometers away from Poblacion, Maramag, Bukidnon. It is around forty-one (41) kilometers from Malaybalay City. The barangay is situated along the corridors development of the municipality. The interior part of the barangay can be reached through the provincial and barangay roads. Barangay Dologon is comprised of twenty one (21) puroks.

The gathered data, the source of information had come from primary and secondary sources. The primary sources are official certificates, approved resolutions of the barangay, and interviews. The secondary sources had come from books, journal, undergraduate theses, special projects, and dissertations. The information gathered had undergone internal and external criticism. External criticism is used to identify the authenticity

of the documents to be used by the researcher, and also internal criticism is then applied to assure the accuracy and the correctness of the documents. Since, the subject of this paper had focused on the history of the migration in Barangay Dologon and its development; the researcher had utilized some of the barangay and municipal records such as Barangay Development Plan (2010-2014), (BDP), Community Based Monitoring System (CBMS) 2011, Municipal Development Plan, and Comprehensive Land Use Plan, certificate of land transfer from the migrants for the documentation that they acquired the land in the barangay.

The conduct of interview was needed to supplement the primary documents gathered by the researchers. The researchers interviewed five (5) *lumads* who were able to witness the arrival of this known migrants, and fifteen (15) personalities consisted of two (2) barangay officials, three (3) offsprings of the migrants, and ten (10) individuals who are the actual migrants in the locale.

Dologon

Dologon is one of the barangays of the Municipality of Maramag in the southern part of Bukidnon. When traveling by land, Maramag is ideally three (3) hours from Cagayan de Oro City (north reference), three (3) hours from Davao City (south-east), two (2) hours from Wao, Lanao del Sur (west), and five (5) hours from General Santos City.

Barangay Dologon is situated north by Barangay Lumbo of Valencia City, in the South by Barangay Tubigon; in the west by Barangay Kisanday; and in the east by Barangay Butong of Quezon. Its geographical coordinates is approximately 7°48'00" to 7°54'00" north latitude and 125° 02'00" to 125°03'00" east longitude.

It is approximately ten (10) kilometers away from Poblacion, Maramag, and Bukidnon. It is around forty (41) kilometers from Malaybalay City, the provincial capital of Bukidnon. The barangay is situated along the corridor development of the barangay roads (BDP, 2012).

Dologon has a total land area of 4,494.54 hectares. 92.13% of this (4,140.65 has.) is considered as an alienable and disposable land. Only 7.87% is considered as timberland areas covering about 353.94 hectares.

The Municipal Comprehensive Land Use Plan (CLUP) reveals that Barangay Dologon is composed of upland and low land areas. The upland area is composed of forest/timberland and low land areas consist of the agricultural area, build up area, special land uses, and water bodies.

Early Political History

The province of Bukidnon was first composed of twelve (12) municipal districts of Impasug-ong, Talakag, Baungon, Claveria, Guimbaloran, Libona, Lourdes, Malitbog, Maramag, Napaliran and Sumilao, under Executive Order No. 13, series of 1915. By virtue of Executive Order No. 5, dated February 22, 1917, the Municipal District of Maramag was then composed of twelve (12) barrios of Maramag, Dologon, Kiokong, Miuban, Pangantucan, Nungnungan, Damulog, Dagumbaan, Salawagan, Kibawe, Omonai, and Kalilangan, forming almost one-third of the entire area of Bukidnon Province (MPDO, 2015).

Before 1960, Dologon was composed of the new barangays of Bayabason, Kisanday and Tubigon all within the Municipality of Maramag. Republic Act 3590 had created the *barrio* charter in which barangay such as Tubigon had separated on December 11, 1966, the

separation led to their own political independence from their mother barangay. The separation of the said barangays had deteriorated the Dologons total population and land size (Barangay Profile, 2009).

The term *barrio* was then converted into "*Barangay*" during the Marcos regime through Presidential Decree No. 55, series of 1974. Barrio Captain was then converted into Barangay Captain of which Pedro Pacomios assumed to be the first to be called as such.

The *lumads'* political unit of chieftaincy had been the early political unit in the place. As early as 1900's this political unit had existed in the place. The history of the moving of the *lumads* in the area was first led by "*Datu Ernesto*" who served as the tribal chieftain of the lumads in the place. His descendants such as "*Apo Manlatum-Santiago Salana Bungcas*", latter led the *lumad* in the place. The existence of Chieftaincy in the barangay can still is observed today, but not that much power it had onced in Dologon. (Barangay Profile, 2009) During the declaration of Dologon as one of the *barrios* of the Municipal District of Maramag, Paulino Cuwaw a lumad had been the first to hold the highest position in the barangay. By 1946, Apo Anecito Nayawan also a lumad had been able to hold the office and then replaced by his brother Roque Nayawan.

Lumad

Bukidnon is blessed with its natural resources, a landlocked province with various and independent cultural entities. It is inhabited with seven (7) different tribes, they are the; *Bukidnons*, *Higaunon*, *Manobo*, *Matigsalug*, *Tigwahanun*, and the *Umayamnun*. These tribal entities derived their names on the watershed they occupy. Each of these tribal entities is being led by a Datu or a Chieftain that

performs political and spiritual rites (www.maramag.gov.ph).

The early government officials of Bukidnon like Lewis and Fortich Sr. felt the responsibility of resettling the natives through persuasion or even with the use of force. The use of force may be excusable if juxtaposed with the good intention and purpose of said government officials, i.e., to effect a fast and immediate resettlement of the natives so that agricultural development could be easily carried out (Lao, M. 1981, pp. 176). The early officials of the government of Bukidnon had aimed several purposes for the natives, as such as the resettlement of this people from the highlands to that of the low lands of which the governmental programs can be easily carried out. Another countermeasure used by the officials for the native was the “*Asin Politics*”, which aimed to attract the native through giving them *asin* or salt of which were new to the natives. This had been a successful tactic that had greatly attracted natives to resettle in the low lands area in Bukidnon.

Dologon is inhabited mostly by the Talaandigs and that of Manobos. These tribal entities are of one family clan and are headed by “Apo Manlatum-Santiago Salana Bungcas”, a descendant of “Datu Ernesto” and “Carlito Bungcas-Nayawan-Saloay-ay Mal-ing Linbana Clan”. Together with him living in Dologon were “Apo Man-Hugna-Seledonio Buntan” also known as “*Diwata*”, “Apo Man-Disal-Paulino Cuwaw” and “Apo Man-uhay-Jose Sayante”. They are the people who stand as the founding leaders of the *lumads* in Dologon (Barangay Profile, 2015).

The importance of roads and bridges as keys for the development is something that cannot be overemphasized. To the already settled communities, roads and

bridges can facilitate a more efficient movement of people and provide for an easy flow of trade and commerce (Lao, M. 1981, pp. 201). The construction of these roads had paved way to an influx of great number of people of which the *lumads* referred as “*dumagats*”. The immigration of these people had greatly populace the province and even changed the course of the province from its earlier state.

Dumagat

As early as 1900 when Mindanao had been pacified and had been advised for settlement, a minimal movement of people had been recorded. This settlement may be of governmental endorsement and that of sporadic private movement in response to various governmental policies. The penetration of these migrants to the province had been recorded late, due to the province’s geographical location and the poor road condition had affected their traverse to the province. The road condition of Bukidnon during 1900 had been described as third class roads, meaning the roads are not concreted, animal couriers such as cows, horses and carabaos can traverse the road, the road improvement was observed during the 1920’s when the government in Bukidnon had allocated budget for road conditioning. Thus, this poor road condition had burdened the migrants (Lao, 1981).

From the 1920’s to the outbreak of World War II, migration was another factor that contributed to the population growth in Bukidnon. It is noted that the effect of the influx of migration in the province was quite late considering that as early as 1914 the governor of the Department of Mindanao and Sulu published a considerable amount of propaganda aimed at attracting settlers from Luzon and the Visayas to come and own homestead lands in the Mindanao and

Sulu area (Lao, M. 1981, pp. 228). Such action by the Department of Mindanao and Sulu had not attracted much of migrants for it was only during the outbreak of World War II that a great number of people had move in the area, for the road condition had been uplifted, there was already vehicular availability in the form of buses and other transportation commodities, although not as much, and also a more expounded resettlement programs catered by the government for the migrants.

The researchers classified the waves of migration in Barangay Dologon into two (2) phases. The first phase is the migration of the earliest known migrants in Dologon; and the second, is the phase, wherein barangay Dologon had already achieved a state of governance and of economic activities. The first groups of migrants are being classified as land seekers who established a community together with the *lumads* in the barangay; while the second type of migrants are being classified as educators and skilled workers who settled in the place and had acquired land and married an earlier migrant or that of a *lumad*.

The earliest groups of migrants to have settled in Dologon were the "*Bol-anons*" from Bohol. These groups of people are either land seekers or skilled workers who had worked in the province and had been assigned in Maramag and acquired land in the area.

When the *Bol-anons* were able to penetrate the place, the second phase of migrants were able to arrive in Dologon. After the Second World War, there was an influx of migrants towards the place. People from Visayas and Luzon were able to move in. This people were considered as land seekers, educators, and skilled workers, students who studied in Central

Mindanao University (CMU) and married a descendant of an earlier migrant or that of a *lumad*.

Land Acquisition

The government had issued several resettlement programs to inhabit the island of Mindanao. The government had endorsed people from Luzon and that of the Visayas for the purpose of resettlement and to cultivate the agricultural lands in Mindanao which were not developed. The government also aims to populace the island and to solve the population problem occurring in Luzon (Paderanga, 1987).

Many migrants had been attracted to the program for the government had offered to pay and finance the migration process of these people. Land seekers, the jobless people had been attracted by this program for the government had issued to assist them. Although; the entrance to Central Mindanao had been recorded late, some migrants from Luzon and of Visayas had choose settle near the shores of Misamis and other parts of the islands to secure a livelihood and to enable their basic necessities (Lao, 1981).

Homesteading

The primary reason of the migrants to reach Bukidnon was to gain a piece of land for the purpose of both settlement and farming. Most farmers or settlers in Barangay Dologon had acquired their piece of land through the Commonwealth Act No. 141 or the Public Land Act. The Public Land Act or Homesteading by the government had catered the process of the papers for free accordingly to the *dumagats* interviewed (Simbahon, 2015).

The Homesteading's purpose was to populate the place and to create an agricultural opportunities in the lands of Bukidnon. The Public Land Act had

secured per families five (5) to six (6) hectares of land for settlement or agricultural purpose; some exceed the expected amount of lands to be acquired. Many migrants in Dologon were able to gain land either given by the *lumads* or of by their relatives. To secure the titles of their acquired land they registered them through Homesteading project of the government. There were many who tried their luck in acquiring lands here.

Lands from the Lumads

The *lumads* happen to give their lands through a barter of goods or because the migrants had befriended them. The goods usually bartered to them were *Maluerca* (wine), sardines, dried fish, salt, and tobacco. The *lumads* were said to be friendly in nature; and this characteristic had been used or taken advantaged of by the migrants to acquire lands. As they settled in the place some *lumads* moved to the mountains with only a few who stayed in the settlement made by the migrants.

This acquisition of lands by the migrants had been very rampant making the *lumads* a minority force in the place. The once vast lands of the *lumads* were now cultivated by the migrants who acquired lands through barter, friendship and even trickery. With this the barangay had been able to evolve from a forested area into an agricultural area dominated by migrants.

Inter-relationship: Dumagat and Lumad

The migrants and the *lumad* happened to have a good and working relationship. The migrants easily befriended the *lumads*, for they were by nature hospitable, friendly, and soft hearted people. The *lumads* described the migrants as hard working and friendly people. Animosity has not developed between them. The *lumads* shared their vast lands to the land less migrants for the purpose of settlement as

well as for agricultural farming. In exchange, the migrants gave the *lumad* any items or goods such as *tinapa* (sardines), *asin* (salt), tobacco, and even *bino* (liquor). These goods which are scarce to the place led to the friendship of these two entities.

The two parties lived in accordance to what will sustain them for a living. The *lumads* and the migrants had performed farming and routines that would both benefit them. Both maintain a mutually beneficial relationship by sharing what one group possesses. During the occupation of the Japanese in Bukidnon, Barangay Dologon had been inhabited and terrorized by foreign forces. Though, some migrants returned to their aboriginal place, others evacuated and escaped together with the *lumads* to the mountains of Dologon for safer place to hide against the terrorizing forces.

After the Japanese occupation the migrants and the *lumads* had resettled and returned. They helped each other in rebuilding their community burned and destroyed by the Japanese. Thus they have unified for the purpose of rebuilding and rehabilitating the place.

It can be observed that the creation of settlements by the migrants made some of the *lumads* to move to the highlands. A few choose to/or decided to coexist together with the migrants in the community the latter had established. A study by Umehara (2009), discussed how the resettlement in Koronadal valley had affected the *B'laan* in the place, it led the *B'laan* to leave their place and resettle in the highlands, leaving their land to the migrants in the place. It also covers the outcome of the resettlement issued by the government over the Christian migrants in the province. This can be related to the *lumads* in Dologon, for the experiences by

the *B'laan* had been experienced also by the *lumads* in Bukidnon.

Land Opportunities

Many people consider migrating for land opportunities, in which in the Philippines migration is an important livelihood strategy used by different families in order to alleviate their economic status. Reasons such as agricultural condition of the lands in their place but some others were simply land seekers who happen to own no lands

and had ventured to seek lands in Mindanao. The government had issued several resettlement programs as early as 1900's to 1975. The first known resettlement in Bukidnon was endorsed by the Department of Mindanao and Sulu for the purpose of populating the place, to cultivate the virgin lands in the region (Lao, 1982). Table 1 presents a sample list of migrants who applied for Public Land Act.

Table 1. Sample List of Applicants for Public Land Act in Dologon

Area	Applicant and or/Claimant	Place of Origin	Date of Investigation	Date Reported / Forwarded

The Philippine resettlement program is a combination of the response to the different types of population distribution problem in the region. The agricultural unrest happening in the north led to transfer of landless farmers throughout the country to the large unfarmed areas of the southern Mindanao (Paderanga, 1987). Some migrants heard of land opportunities that led them to move out from their place to find luck and to seek a haven for themselves.

The vast untouched lands of Bukidnon particularly that of Dologon had attracted many people to grab a chance of obtaining a piece of land. Some people had also heard stories of success in obtaining lands in the area; others were

also relatives who were brought by the earliest migrants who had been able to own lands given to them by the *lumads*.

Grievances of every small farmer in the country are caused by several factors, one of which is the agricultural unrest in their place. It is because of the quality of land they are cultivating, the hazardous condition of the terrain, the not ideal climatic condition of their place, and or there is no land to farm with. The government had issued a settlement program for all regions of the country to solve this problem. These established settlements were the Koronadal valleys region, Nueva Ecija, and Bukidnon.

War

Conflicts such as wars can be a factor that contributed to the movement of the people from one place to another. Securing a peaceful living and avoid conflict are primary reasons of a people to move out and resettle to a new place to a start anew. Canuday (2009) in his book talked about the reasons why and how people disperse from their original place. It cited that military conflicts affect is one of the major reasons for the migration of people.

The Japanese during the 1940's had reached Bukidnon and other parts in Mindanao. People were leaving their homes to avoid the tyranny of the Japanese. Military conflicts therefore contributed to the factor that led people to move from one place to another.

Job Opportunity

Another factor of the moving of people from one place to another is the job opportunity that an area can offer (Quisumbing, 2006). As a community is starting to develop and many established businesses are growing, a need for manpower is needed in order to suffice the manufacturing of the product or to sustain and maintain the facility. Many migrants consider this factor as livelihood opportunity and also a chance to experience a new endeavor in life. Sustainability of his current job is another factor why people tend to travel for another job and or of the better income awaited in the new place. Thus, we can say that this factor has indicated a reason for a person to move from a place to another.

As early as 1920's, production of pineapple plantation was introduced by the Americans with the Philippine Packing Corporation, a subsidiary of Del Monte Corporation, as its farming company (Lao, 1982; pp. 189-190). Cash crops such as the pineapples were first pioneered by

Jesuits the missionaries and had been continued and had been managed by the Americans in the province. Other agricultural crops had been also cultivated by the Americans in the province in order to use the vast lands in the area, crops such as *cinchona*, an essential crop in making a medicine to fight *malaria* of which is epidemic before and after World War II. The crop was being planted in Impalutao (Lao, M. 1982; pp. 192).

Cattle ranching had been also introduced in Bukidnon, for the Americans saw the potential of establishing ranches in the province. By the year 1913, the first cattle business of the ranch type emerged in the province with Diklum ranch as the first big ranch established by the Agusan Coconut Authority, a subsidiary of the American-Philippine company were Dean C. Worcester served as its vice-president and general manager. With the establishment of large ranches and accumulation of private owned ranches which were owned by rich migrants from Luzon and that of Visayas, a need of man power was needed in order to run the business (Lao,M., 1982 ; pp. 197-206).

The favorable climatic condition made the Americans establish cattle ranching in the province. Beginning in 1913, thousands of hectares were lease to the Americans together with their Filipinos partners. As the Americans established these large ranches in Bukidnon it became a lead premier cattle-raising province before war. Later, when the Americans had exited from the province, this led to premier Filipino businessmen to own these large ranches.

Education

The agricultural boom that happened in Bukidnon paved the way for to the creation of schools that specializes in agriculture. The first agricultural school in

Bukidnon was established in Mailag, Valencia, for the government officials saw that the area was ideal for the practice of agricultural activities and its land is sustainable in agricultural farming. The establishment of the schools aimed to develop and teach the people in the modern and advance way of farming. The once agricultural school was later transferred in Dologon, Maramag and then known as Central Mindanao University. The establishment of schools also paved way to more sets of migrants from all over the country. Central Mindanao University was in need of educators from all over the country to teach in the institution. The need of personnel led to migration of people to this place. It is observed that its early instructors or workers were experts in their field who choose here for they were offered a long tenure of job status. Many of them adapted to the environment that led them to decide to stay for good.

The opening of schools and universities in a place tends to welcome students from all over the country to educate themselves. Thus, an influx of migration can be observed in a place if a well-established or known institution can be found. Central Mindanao University had been known to be an agricultural college since, with this specialization of the university, it tend to attract students to enroll in it. Students or parents have reasons for moving, such as the travel cost, the distance, the matriculation fee, the quality of education, and the place itself. Many students from all over the country had enrolled in the institution. Today, Central Mindanao University stands as a land mark for the realization of the Americans; missions of establishing public schools for the people of the province.

This enrollment to Central Mindanao University had paved the way to the set of

students who to studied, graduated, and worked in the place and even married a local person which made them stay in and established a home for themselves in the place.

Contributions

As the migrants coexisted with the *lumads* in spearheading the community of Barangay Dologon, they had contributed many developments in many aspects that had benefited the community. They were able to transform the place from a forested area into a more organized and developed community.

They were able to bring their practices in their previous settlement to the barangay. They had contributed to the development of the barangay's political aspects; socio-cultural activities had also been brought to the place; and also economic activities such as agricultural practices and businesses had also been established in the place.

CONCLUSION

Dologon is a mixture of different cultural entities of which are grouped into two, namely; (1) the migrants and the (2) *lumads*. The *lumads* are considered as the original settlers and owners of the land in the barangay, while the migrants are group of people either from Luzon, Visayas and coastal areas of Mindano who migrated to the place. Their influxes were categorized into two phases; first is the influx of the early migrants who had settled and established themselves in the barangay. The second phases were job seekers, students, military personnel and educators who arrive in Dologon for an uplifting of their economic status.

The government had issued several resettlement programs that invited migrants from all over the country to resettle and inhibit the untouched and

underdevelop Mindanao. The migrants in Dologon are to be categorized under the private movement in response to governmental programs by the government. Migrants in Dologon were not a recipient of the government resettlement programs, but instead the government had helped them in obtaining land titles under free patenting that led to several land acquisition in the place.

The arrival of the migrants to Barangay Dologon had its positive and negative outcomes. The migrants were able to establish themselves in the barangay and had made themselves to be prominent and successful in their own fields. But the effect of which were the *lumads* were made to be in a minority state and some of them had transferred to other areas, wherein, they established themselves.

RECOMMENDATIONS

Though, we can say that migration had its positive effects to the place; the upheaval of political participation and economic prosperity of which were spearheaded by the people of the place; we should reconsider the condition of the aboriginal settlers of which became the minority group in the barangay, being the least empowered in the barangays. A discontentment among these people had risen and the researchers had tallied the following recommendations and also to urge other students to make a thorough research about the condition of the natives in the place. These are the following:

- 1 The native/*lumads* condition in the barangay, of which these group of people are becoming the minority group in the place. The following needs to be attended to:
 - 1.1 The issues of land ownership of which some natives had been fighting ever since.

- 1.2 Further study of migration and its impact to the place.
- 1.3 The environmental issues regarding to the reshaping of the once shady forested area into a semi-industrial Dologon of today.
- 1.4 Impacts of psychological and sociological conditions to the *lumads* by which the migrants had imprinted to them.
- 1.5 Issues regarding harassment and other social problems and differences that may arouse or had aroused during after the settlement.

ABSTRACT

This is a study of the decommissioning process of the Moro Islamic Liberation Front (MILF) in Camp Busra, Butig, Lanao del Sur. It looked into their preparations; the challenges they face; their perception on the non-passage of the Bangsamoro Basic Law (BBL); the preconditions of their compliance with the decommissioning; and their expectations and apprehensions. The Comprehensive Agreement on Bangsamoro (CAB) was used as the study framework.

Data gathering was conducted through interviews of MILF commanders in Camp Busra, one of the major MILF camps located in Lanao del Sur. Results show that decommissioning process had already started in Camp Busra. Commanders are cascading basic information on decommissioning to their men in the field. Peace advocacy seminars were made to increase appreciation of the process among members. The MILF of Camp Busra also started an inventory of Private Armed Groups (PAGs) in their area of operations and they are now preparing the list of members to be decommissioned.

The MILF identified the following challenges of the decommissioning process: the non-passage of the BBL; the presence of PAGs in the area; clan conflicts (rido); prevailing attitude among men that decommissioning means surrendering; and political uncertainty after the May 2016 national election.

For preconditions, study participants wanted that the BBL should be passed with its original provisions and the government must assure protection to decommissioned elements. Moreover, the assistance stipulated in the CAB must be honored.

The MILF believe that the decommissioning process will lead to peace in Mindanao. But they want the BBL to be passed and the government should assure their protection from PAGs after decommissioning and assistance for their livelihood. Their greatest fear is the possible betrayal by the government.

It is recommended that the government should pass the BBL; all PAGs should be dismantled; and local governments be empowered to deal with cases of rido in their jurisdictions.

Keywords: decommissioning, rido, private armed groups, challenges, apprehensions

INTRODUCTION

The Muslim community's struggle for self-determination in Southern Philippines can be traced back from the time of the Spanish conquistadores. "Since becoming Philippine citizens, the Bangsamoro people continue to suffer from severe economic conditions and problematic relations with the other inhabitants in Mindanao" (Sakili, 2012). UP Professor Abraham Sakili (2012) further argued that "unlike other Muslim groups in Southeast Asia who have regained freedom from colonizers and have been living progressively, Muslims in the Philippines continue to suffer. Sixty-three percent (63%) of the population of ARMM is living below poverty line. Four of its provinces are among the 10 poorest provinces nationwide: Sulu ranking first, Tawi-Tawi third, Maguindanao sixth and including Lanao del Sur which on the seventh rank" thus leading to unemployment and inadequate economic opportunities that aggravate poverty in the area.

The struggles of the Bangsamoro people goes beyond political and historical injustices to economic self-determination. To address these problems, the Government of the Philippines and the Moro Islamic Liberation Front signed the Comprehensive Agreement on the Bangsamoro (CAB) on March 27, 2014. The CAB consists of twelve documents including the Framework Agreement on the Bangsamoro and its Annexes.

One of the annexes is the Annex on Normalization. Normalization is the process whereby "communities affected by the decades-long armed conflict in Mindanao can return to a peaceful life and pursue sustainable livelihoods free from violence and crime" (Mercado & Omi, 2014).

The process of normalization has three main components. One of which is the security aspect which includes the decommissioning of MILF forces and weapons. The decommissioning of the Moro Islamic Liberation Front (MILF) goes together with the implementation of the Comprehensive Agreement on the Bangsamoro (CAB) under the peace deal with the government, part of which is the ratification of the Bangsamoro Basic Law (Philippines News Agency, 2014).

Although the Normalization Process as one of its annexes is still going on, the decommissioning as part of the security aspect of normalization was delayed since the decommissioning process is inexorably tied to the progress of the BBL in Congress (Clapano, 2016).

The Moro Islamic Liberation Front or MILF is the vanguard of the Islamic movement in the Bangsamoro homeland in Mindanao and its neighboring islands. It is the biggest Muslim rebel group in the Philippines who signed a historic pact with the government to end one of Asia's longest and deadliest conflicts (Moro Islamic Liberation Front, 2015). The MILF with its territorial extents of war encompasses 151 municipalities including Butig, Lanao del Sur. Butig is one of the municipalities experiencing armed conflict for decades with the presence of armed groups: the private armed groups, paramilitary and military groups. Like most municipalities within Lanao del Sur, the municipality of Butig severely suffered from the atrocities of these armed groups. Butig also hosts a number of training camps, one of which is Camp Busra in Barangay Sandab (Hadji Amer, 2012).

This study focuses on the challenges of decommissioning to the MILF members at Camp Busra, Butig, Lanao del Sur. It also looked into the reactions of the MILF members to the non-passage of Bangsamoro Basic Law.

OBJECTIVES OF THE STUDY

The growing concern of peace and security in Mindanao due to the uncertainty of the enactment of the Bangsamoro Basic Law prompted this study, which aims to identify the specific concerns faced by the MILF in relation to the decommissioning process. Hence, this study aims to answer the following specific questions:

1. What are the preparations of MILF towards the decommissioning?
2. What are the challenges and concerns of the MILF in the implementation of the decommissioning process?

3. How does MILF perceive the non-passage of the BBL?
4. Are the MILF members aware of the amendments to the BBL?
5. What are the preconditions of the MILF's compliance to the decommissioning process?
6. What are the expectations and apprehensions of the MILF towards the decommissioning process?

SIGNIFICANCE OF THE STUDY

The Philippine Government as the main partner of the MILF in the decommissioning process can use the findings of this study as an input in understanding the challenges of the MILF. It can lead to the generation of some options on how to deal with the problems that may be encountered in the peace process.

This study provides another perspective in dealing with the Moro rebellion by considering their concerns in relation to the decommissioning process and their reaction to the non-passage of the BBL.

SCOPE AND LIMITATION OF THE STUDY

This study focuses on the challenges of the MILF in Camp Busra, Butig, Lanao Del Sur in the decommissioning process. It looks into the members' preparations, expectations and concerns toward decommissioning. It also looked into their reaction to the non-passage of BBL.

The data gathering was conducted in March 2016 on venues chosen by participants, thus there were separate venues for each of the interviews, including interviews inside Camp Busra. Security and confidentiality were main considerations in selecting the venues.

LEGAL FRAMEWORK OF THE STUDY

The legal framework of the study is the decommissioning process which is part of the security aspect of the Normalization Annex as provided in the Comprehensive Agreement on the Bangsamoro signed on March 27, 2014 by the Philippine government and the MILF.

One of the annexes that the researchers have seen as most relevant is the

Annex on Normalization. "Normalization is the process whereby communities affected by the decades-long armed conflict in Mindanao can return to a peaceful life and pursue sustainable livelihoods free from violence and crime" (Office of the Presidential Adviser on the Peace Process, n. d.).

The Normalization Process has three main components: security aspect; socio-economic development; and transitional justice. The security aspect of the normalization process includes policing, decommissioning of MILF forces and weapons, redeployment of the Armed Forces of the Philippines (AFP) from or within the conflict-affected areas, and the disbandment of private armed groups (PAGs) (Office of the Presidential Adviser on the Peace Process, n. d.).

Decommissioning is the gradual and phased process through which MILF forces and their weapons are put beyond use. It includes the transition of the MILF's BIAF to peaceful civilian life. The first phase involves only a small number of weapons and forces, but the second phase, which ends with the ratification of the BBL, involves the decommissioning of thousands of weapons and combatants (Office of the Presidential Adviser on the Peace Process, n. d.). Full decommissioning of the weapons and combatants of the MILF will happen after the creation of the Bangsamoro and the creation of the police force in the region (Office of the Presidential Adviser on the Peace Process, n. d.).

The decommissioning process will be supervised by an Independent Decommissioning Body that will be created for the purpose. This body will validate the inventory of weapons and combatants that the MILF will submit and institute the needed procedures for turning in the weapons (Philippines News Agency, 2014).

METHODOLOGY:

This is a qualitative and exploratory research. As such, it looks into the underlying reasons, opinions, and motivations of the MILF members. Data collection was conducted through interviews with ranking MILF members.

The locale of the the study is in Dama, Barangay Sandab, Butig, Lanao del Sur which hosts the MILF Camp Busra.

MILF Camp Busra is located at Barangay Sandab, Butig, north of the municipality and close to the Sumpitan River. It is also near Mount Makaturing. The camp is a typical village of ordinary farmers since even the MILF members occupying the place are farmer residents of the village. As a camp, it is one of the most affected areas by armed conflicts in Mindanao, and one of the six active camps of the MILF recognized by the Government of the Philippines (GPH). The said setting was selected by the researchers for accessibility of needed data as one of the researchers is from Butig, Lanao Del Sur.

There were a total of thirteen (13) participants of this study. These are the willing participants who met the criteria as follows:

- a. Must be a MILF member and is partaking in the decommissioning process;
- b. Had at least 10 years of service in the MILF;
- c. Willing and is allowed by the group to participate in the research;

FINDINGS:

All participants confirmed that MILF is cascading awareness to the members about the decommissioning process; persuading its members to have appreciation of the decommissioning through peace advocacy seminars; prepared an inventory of the private-armed groups (PAGs); have an enlistment of members that will be decommissioned as part of their preparation towards decommissioning.

Awareness That There Are Amendments of the BBL

The MILF hoped that the BBL will be passed by the Philippine Congress with minimal amendments from the original draft. However, it was scrutinized thoroughly by many lawmakers that led to series of amendments. The data show that there were only few (46.15%) of the participants who are aware of the amendments made to the BBL.

The findings show that the MILF is doing its part in the decommissioning. On the part of the government however, the 2016 presidential elections made it a lame-duck for being unable to focus on the process. Due to said election, the Aquino Administration failed to force its way in passing the BBL.

The Challenges of the MILF in the Implementation of the Decommissioning Process

The non-passage of the Bangsamoro Basic Law; the presence of Private-Armed Groups in the area; Rido; and the uncertainty of the passage of BBL in the next administration are the challenges experienced by the MILF regarding the decommissioning.

The members asserted that because of the non-passage of BBL it is difficult to convince the members to decommission. They believe that the presence of the private-armed groups makes them worried if the decommissioning process continues. The private armed groups like bandits, private armies and armed families are external units to the MILF and therefore not included in process. If they remain with their arms, they pose threats to unarmed MILF members. The presence of armed groups in the area is inspired by many active rido cases. This is the reason why the MILF is supporting peace initiatives to resolve rido in the area. Moreover, as response to Rido, they declared neutrality to prevent any effort to side any with any party to the conflict. In addition, there is the difficulty of convincing the members to disarm because of the belief that decommissioning means surrendering. For some members who had been carrying firearms for many years, their weapons became part of their attire, the absence of which make them feel naked.

Expectation that BBL Will Lead to Peace in Mindanao

Most of the participants perceived that BBL will lead to peace in Mindanao although one pointed out that it must be the original version of BBL. Thus, an amended BBL may not be acceptable to the MILF.

The participants have positive attitude about the BBL because they believe that it will address the historical injustices committed

against the Moro people in Mindanao; fiscal autonomy of the Bangsamoro will uplift the quality of lives of the Moro people; through the establishment of self-rule, there can be machineries that will disarm private-armed groups; and through BBL, peace and development can prevail in Butig, Lanao Del Sur.

The MILF Members' Perception of the Non-Passage of BBL

This study found out that the participants were all frustrated of the non-passage of the BBL. Some expressed their disappointment with President Aquino and have lost trust to the Congress. Nonetheless, none have lost hope with the peace process even with the non-passage of BBL. They have affirmed that they remain hopeful that the BBL will be passed in the next administration.

The MILF Members' View on the Inseparable Relationship of BBL and the Decommissioning Process

All of the participants affirmed that the decommissioning process cannot proceed without the passage of the BBL. This study also confirmed that the participants are well aware of the dependence of the decommissioning process to the passage of the BBL. This implies that the decommissioning process has to be postponed awaiting the final passage of said law.

The Preconditions of MILF Members in Compliance to the Decommissioning Process

It was found out that all of the participants will comply only with the decommissioning if the BBL will be passed. Though they agreed to some adjustment to the original BBL, they indicated that adjustments must still be acceptable to the Bangsamoro. This implies the need for more consultations among with MILF representatives regarding final amendments to be introduced by the incoming Congress.

The Expectations of MILF Members Upon Decommissioning

Most of the participants guaranteed that the decommissioning will bring peace in Butig

and the entire Moroland. Some stated that the decommissioning in Camp Busra will lessen armed conflicts in Butig, Lanao del Sur. Majority of them believed that their lives will improve through the livelihood programs stipulated in the CAB as options provided to benefit the decommissioned members.

The Apprehensions of MILF Members Upon Decommissioning

Most of the participants have expressed that there are no apprehensions on their side. However, one of the participants stated that the decommissioning might be a strategy of the Philippine government to weaken the MILF. Another is that the next administration might not give support to the CAB. The effort to pass the BBL came at a critical time in the political history of the Philippines. Its passage after the Aquino Administration largely depends on the commitment of the next President and his command over a majority in Congress.

CONCLUSION:

This study was conducted during a transition period in the Philippine political history. Data gathering was taken during the campaign period for the 2016 presidential elections. By that time, there is no clear mandate of the people on who will win for the presidency and who will command the majority in Congress.

The researchers found out that the MILF has a very positive perception of the decommissioning process, as stipulated in the CAB where "Normalization is the process whereby communities affected by the decades-long armed conflict in Mindanao can return to a peaceful life and pursue sustainable livelihoods free from violence and crime" (Office of the Presidential Adviser on the Peace Process, n. d.). Results tell that MILF has a strong belief that decommissioning will bring peace to their lives.

As to the main components of the Normalization Process, part of security aspect is the decommissioning of MILF forces and their weapons. The MILF in Camp Busra has not yet undergone decommissioning however, results show their willingness and preparedness to comply.

As to the disbandment of the Private-Armed Groups (PAGs), which is part of the security aspect, there has been no move towards this process but the MILF has prepared the list of PAGs. In the socio-economic aspect which takes effect only after decommissioning, although not the focus of this study, it is observed that the MILF remained positive and expectant to the socio-economic development that they will obtain from the Normalization process. In the case of the transitional justice aspect, MILF believed that the injustices they have experienced will be addressed through the Normalization process.

It can be inferred through the results of the study that no decommissioning occurred in Camp Busra. However, it showed the willingness and preparedness of the MILF even if they are experiencing challenges as they move towards decommissioning. The first phase of decommissioning has not yet occurred which involves only a small number of weapons and forces because of the non-passage of the BBL which is considered by the MILF as its greatest concern. Since the following phases of the decommissioning will only take place if the BBL will be passed by the Congress, it is concluded that the situation is too fragile that it all depends now for the next administration to address the deeply rooted concerns of the Bangsamoro people. With the CAB, the foundations of the peace process is entrenched, thus the prospect for the final resolution of the rebellion in Mindanao is encouraging. It appears however as observed and from the interviews that the initiative must start from the government since the MILF are only waiting for the implementation of the provisions of the CAB and its annexes.

Furthermore, all of the respondents asserted that they have no apprehensions if ever they will be decommissioned since they believed that if the BBL will be passed by Congress, the necessary machineries of governance will be in place. The only fear entertained now by MILF is what they call the betrayal by the government of not implementing agreements entered by the government with them.

The MILF in Camp Busra clearly expressed their commitment to the peace

process. Apparently some of them have grown old with the conflict and they themselves are now weary with it. However, for most of them, armed confrontation is the only alternative to peace. And peace has to address not only the outstanding political issues of self-determination but also the socio-political issues that has fueled their struggle for generations.

RECOMMENDATIONS:

For the Government of the Philippines

1. There should be comprehensive psychosocial intervention programs for the MILF combatants.

2. There should be coordination between national line agencies in dispensing benefits and other interventions designed not only for the MILF former combatants but to all inhabitants of the poverty stricken Moro areas in Mindanao, Basilan, Sulu and Tawi-tawi.

3. The new government after the Aquino Administration should strive harder in passing the BBL. Moreover, the MILF who is now representing the Moro people should be consulted in all attempts to amend it.

4. The government should strengthen the peace process to prevent future armed conflicts between the Philippine Army and the MILF combatants by addressing the root causes of discontents in Southern Philippines.

5. The barangay officials should participate in the peace process,

For MILF

1. MILF leaders should take measures to prevent its members from joining private-armed groups.

2. MILF leaders should put more effort in informing their members about the importance of decommissioning to the peace process by conducting information dissemination activities.

3. MILF should strictly observe the ceasefire agreement.

4. The MILF should respect the presence of the Philippine Army by preventing

their members from roaming around public areas with an arm.

5. The MILF should prevent its members from getting involved in Ridos.

For Future Researchers

1. Future studies about Normalization process should include and highlight the role of the Independent Decommissioning Body (IDB).

2. They should include in their studies the children and women combatants of MILF; a trace study should be made to find out their development under the peace process in order to prevent the possibility that they may be left out.

3. The role of the Municipal government should be included in the study as a partner in helping in sustaining the process like in mediating rido and insuring that local policies shall be inclusive of all local residents .

Mindanao State University-Iligan Institute of Technology

ABSTRACT

The growing use of social media in social interaction has changed the mode of political campaign in the Philippines. It allowed a more aggressive citizen's participation in politics in a more efficient and asynchronous mode.

This research sought to determine the influences of social media in the presidential preferences of netizens during the campaign period for 2016 presidential election in the Philippines. It also looked into the pattern of the preferences of respondents among the five presidential candidates for the 2016 presidential election.

This research used Media Ecology Theory by Marshall McLuhan and Uses and Gratification Theory by Herbert Blumer as discursive approaches to understand the behaviour of social media users during the 2016 presidential campaign. Descriptive and qualitative analyses were used. Data gathering was through online questionnaire by using snowball sampling. A total of 289 respondents participated out of 1210 visitors of the link used by the researchers. The data gathering started on February 9, 2016, the start of the presidential campaign period and ended on March 27, 2016 or a total of 47 days. The timeline for data gathering was constrained by the time limit that was set for this study.

The results show that social media has no strong influence in the preferences of respondents with only 44% of the respondents saying that their presidential preferences were influenced by social media. However, 75.6% of the respondents indicated that social media is a determining factor in the process of presidential campaign because it is an efficient media in communicating vital campaign information. The pattern of the preferences of respondents shows strong resemblance to some mock polls conducted by other groups in the Philippines.

It is recommended to continue exploring the relevance of social media as a political tool for effective communication in politics and governance.

Key words: social media, political campaign, communication, preference, political participation, transformation

INTRODUCTION

People nowadays are aware of the usage of social media specifically the Facebook because it can be easily accessed. Unlike any other form of social media, Facebook is used by about 60.4% of the Filipino people (Dimacali, 2015). Facebook is a system where people can stay connected with the people they want to (Zuckerberg, 2010). For Zuckerberg, the fast growth of Facebook is because of the fact that what is most interesting to people is other people. For some Filipinos, Facebook is a major channel of communication that is versatile enough for their needs.

Facebook is a social media platform that helps people to share information that most of them in the past did not have the power to do (Zuckerberg, 2010). The people usually put so much data on Facebook because of its advance privacy controls that ever existed on the Internet (Kirkpatrick, 2010). Facebook's various privacy controls are available through different categories. The user can adjust the privacy settings and limit profile access. The built-in audience selector allows users to specifically choose who can view their posts. Kirkpatrick (2010) also added that this system created by Zuckerberg is effectively designed for information to flow efficiently.

Social media is currently believed to play significant role in politics (Rahmawati, 2014). According to Rahmawati (2014), many studies have been conducted to

determine the impact of social media on political fields but the impact of social media has yet to be studied in the Philippine political environment. Hence, this research focused on the use of social media in the political campaign during the 2016 presidential election in the Philippines.

Smith (2011) argued that social media have bloomed over the past few years. According to Zuckerberg (2010), Facebook is an engine and its users share a lot of information on a day-to-day basis. He indicated further that social media is something very useful; users are sharing more things than they were at the beginning. This means that social media users can have the option to go look at and research and understand what is going on with other users.

Social media is a new channel of communication among politicians for them to reach and communicate with the voting public. However, it is inevitable that problems with social media have emerged for politicians as well. According to Rothman (2011), the issue of social media providing damaging material for opponents is one factor that shall not be overlooked. However, Rahmawati (2014) indicated that the social media use for political activities could be an implication of the possibility to utilize social media as a bridge between voting public and politicians. This was demonstrated during the 2016 presidential election in the Philippines where the supporters of Mayor Duterte engaged Facebook as their main campaign tool in

lieu of the traditional and more expensive print, radio and television. As a campaign tool, it flourished as a consequence of the lack of campaign fund which beset the camp of Mayor Duterte who made as a campaign policy the refusal to accept campaign donations from big businesses.

STATEMENT OF THE PROBLEM

This research aims to make qualitative and quantitative analyses on the uses of social media in the 2016 Presidential Campaign through the following inquiries:

1. What is the socio-economic profile of the respondents?
2. What is the action taken by the respondents on the images posted on Facebook?
3. Did the campaign materials posted in Facebook influence the Presidential preference of the respondents?
4. Is there a significant association between the socio – economic profile of the respondents and their Presidential preference?
5. What is the frequency of Facebook usage among respondents?

CONCEPTUAL FRAMEWORK

The Analytical Model of this research is adapted from the book of Ott, Brian and Robert Mack *Critical Media Studies* cited by I, Cristal at her blog *Ecology Analysis and Media* and from the

Student's Uses and Gratification Expectancy' Conceptual Framework in relation to E-Learning Resources of Mondri et al (2007).

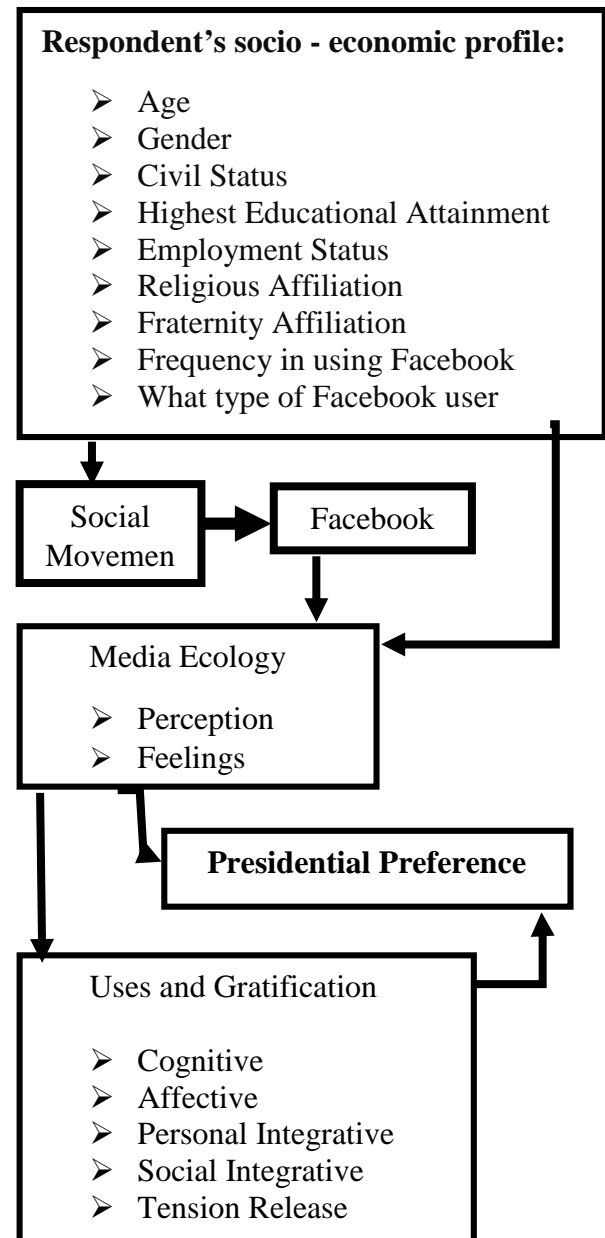

Figure 1. The Analytical Model showing the interrelationships of the Concepts Used in this Research

The conceptual framework presents the relationship of the variables used in this study. The Social Movement represents the Facebook pages/accounts that posts images

and/or campaign materials of the Presidential candidates. The box Facebook represents the medium of communication used by the respondents to post the campaign material. The moderating variables of this research will be the respondent's socio - economic profile which is categorized by age, gender, civil status, highest educational attainment, employment status, religious affiliation, and fraternity affiliation.

The independent variables of this research will be the 5 elements from the uses and gratification theory and 2 elements from media ecology theory. The elements are the cognitive, affective, personal integrative, social integrative, tension release, perception, and feeling respectively. The dependent variable will be the Presidential preference of the respondents.

METHODOLOGY

This descriptive research looked into the use of social media in the 2016 presidential campaign in the Philippines. The data gathering was made through Facebook being the most popular free social networking website that allows users to send private messages and upload images and videos (Tech Target, 2015). Respondents were Facebook friends who were requested to answer an online questionnaire and were asked to request their Facebook friends to participate as

well. A questionnaire was constructed for this purpose using an online polling survey service called Facebook Poll. The link of the poll was posted on the Facebook Timeline of the researchers and was sent to the respondents through Facebook Messenger. After the 47 days of data gathering, the Facebook poll has recorded 1210 visitors and 289 of them participated on the poll. The data gathering started February 9, 2016 and ended March 27, 2016. The poll consists of 56 questions and an average duration of 13 minutes and 03 seconds was spent per respondent in answering. Feedbacks from some participants and from friends who did not participate in the poll suggested that the length of the instrument was a constraint. Aside from those who refrained from answering, some opted not to complete the poll. Incomplete answers were not included.

SIGNIFICANCE OF THE STUDY

The social media could be an important element in marketing a presidential candidate. The effectiveness of social media as a tool for political campaign may lead to the development of a strategy in the use of computer-based technology in political campaign. This could guide political leaders in determining the effects of images posted on Facebook to the voting behaviour of the voters.

Second, this research could motivate future researchers to conduct deeper

researches to understand the uses of social media in political campaign. The massive use of social media during the 2016 presidential election will certainly redefine the new contours of political campaigns, at least in the Philippines. Facebook, as a campaign tool is affordable and it conveys not only written information but also visual forms of information.

FINDINGS

Table I shows that if election were held on the day the respondents participated in this survey, 243 or about 84.08% will vote for Presidential candidate Rodrigo “Rody” Duterte. This result reflects what Rappler News has disseminated that Davao City Mayor Rodrigo Duterte gained the solo lead in an ABS-CBN Broadcasting Network survey on presidential aspirants which was released on Tuesday, April 12, (Rappler.com, 2016) barely three days from the start of the data gathering for this study. On April 11, 2016 GMA presented the result of a survey conducted by the Social Weather Stations (SWS) showing that Mayor Duterte topped the first quarter of 2016 presidential preference poll with a score of 27%, while Senator Poe was only second with 23% (Macas & Legaspi, 2016). The big lead by Duterte shown in Table 1 which is disproportionate to his score in the SWS survey indicates the growing domination of his supporters in resorting to the use of the social media in their political

campaign which started to gain momentum as early as December 2015.

Table 1: Answers to the question: “Who among the 2016 Presidential Candidates will you vote for if the election were held today?”

	Total	
	Frequency	Percentage
Binay	10	3.46%
Defensor-Santiago	19	6.57%
Duterte	243	84.08%
Poe	9	3.11%
Roxas	8	2.77%
Total	289	100%

Grouping by gender, Davao Mayor and presidential aspirant Rodrigo was preferred by 60.49% and 36.21% of the female and male respondents respectively and 72.72% of the gay respondents. By civil status, 72.66% are single and 25.26% are married, this also follows that most of the supporters of almost of the presidential aspirants were single except for Vice President and presidential aspirant Jejomar Binay whom supporters were 50% married and 40% single. For those who have fraternity affiliation, 89.36% of those who belong in a certain fraternity preferred Davao Mayor Duterte. Despite of being a known member of the fraternity Alpha Phi Omega (APO) which has a motto of “APO first”, Vice President Jejomar Binay only got 33.33% of the total votes gathered from Alpha Phi Omega member while the other 66.67% was for Mayor Duterte.

Table 2: Who among the 2016 Presidential Candidates will you vote if the election were held today?

	Gender		Total
	Female	Male	
Binay	8	2	10
Defensor-Santiago	10	9	19
Duterte	152	91	243
Poe	8	1	19
Roxas	3	5	10
Total	181	108	289

Table 2 shows that despite the feared image of Duterte, he is preferred more by participants. Duterte got the highest number of 243. Among these were a gay and 2 respondents for each lesbian, bisexual woman and man, and 1 transgender respondent. Roxas meanwhile got 1 gay respondent and Defensor-Santiago also got 1 respondent from both gay and bisexual (man).

Table 3: Answers to the question: "Who among the 2016 Presidential Candidates will you vote if the election were held today?"

	Civil Status						Total
	Single	Married	Separated	Widow	Widower	Single	
Binay	4	5	0	0	1	0	10
Defensor	17	2	0	0	0	0	19
Duterte	176	62	2	1	0	2	243
Poe	7	2	0	0	0	0	9
Roxas	6	2	0	0	0	0	8
Total	39	73	2	1	1	2	289

Table 3 represents the tabulated data of respondent's presidential preference according to their civil status. It is very visible that Davao Mayor is preferred by the majority of the respondents but not by the widower respondents who preferred Vice President Jejomar Binay.

Table 4. Highest Educational Attainment of Respondents

	Binay	Defensor	Duterte	Poe	Roxas	Total
Elementary	0	0	1	0	0	1
Vocational	0	0	2	0	0	2
HS	0	0	2	0	0	2
HS Grad	0	0	9	1	1	11
College	3	4	66	2	1	76
Coll Grad	6	9	125	4	4	148
MA Deg	1	6	24	1	2	37
Doc Deg	0	0	1	1	0	2
Total	10	19	243	9	8	289

Despite some questions on the human rights record of Mayor Duterte. It is very visible at Table 4 that he was still preferred by many as he got 24 out of 37 respondents who holds Master's Degree and 11 out of 12 Doctorate Degree holder respondents.

Table 5. Employment Status of Respondents

	Binay	Defensor	Duterte	Poe	Roxas	Total
Gov't Emp	5	3	52	2	3	65
OFW	0	1	18	0	1	20
Priv Emp	0	3	54	2	0	59
Self Emp	1	5	23	0	2	31
Stud	2	4	65	3	1	75
Uemp	2	3	31	2	1	39
Total	10	19	243	9	8	289

Table 6. Geographic Location of Respondents

	Abroad	Philippines	Total
Binay	1	9	10
Defensor	1	18	19
Duterte	24	219	243
Poe	0	9	9
Roxas	1	7	8
Total	27	262	289

Table 5 above shows that Duterte also dominates the Filipino currently located at a foreign country. This supports the result of the May 09, 2016 Presidential Election where Duterte dominates the Overseas Absentee Voting (OAV) by gaining 121, 128 votes, next was Roxas who got 17, 360 votes, Defensor-Santiago

with 17, 278, Poe with 9,333, and Binay with 3,159.

Table 7. Answers to the question: "Who among the 2016 Presidential Candidates will you vote if the election were held today?"

	Geographic Location				Total
	NCR	Luzon	Visayas	Mindanao	
Binay	1	0	0	9	10
Defensor-Santiago	2	2	0	16	20
Duterte	19	4	14	206	243
Poe	1	0	0	8	9
Roxas	0	0	0	7	7
Total	23	6	14	246	289

Table 7 above represents the number of respondents the Presidentiable got per region. Although Mayor Duterte is from Mindanao, it is very visible that he is also preferred by the majority of respondents from the National Capital Region, Luzon, and Visayas.

According to TIME magazine published April 26, 2016 by Charlie Campbell, Davao Mayor Duterte got the verge of the Philippines Presidency through his loudmouth; which is far different from the approach of the other candidates.

Table 8: Cross tabulation of Religious Affiliation of respondents and their responses on the question: “Who among the 2016 Presidential Candidates will you vote if the election were held today?”

	Binay	Defensor	Duterte	Poe	Roxas	Total
Islam	8	7	147	2	1	165
Roman Catholic	0	3	33	3	3	42
Christian	0	3	31	2	3	39
Baptist	0	2	5	0		7
7 th DA	1	1	5	1		8
Aglipayan		0	3			3
JLC		0	1			1
UM		0	1			1
Protestant		0	2			2
Born Again	1	1	5		1	8
Evangelical		0	4	1		5
Latter Day Saint		0	1			1
Atheist		0	1			1
Others	10	2	4			6
Total	10	19	243	9		289

Even to the religious sector, Mayor Duterte dominated despite of one of the heads of the dominated religious sector to not to vote for Davao Mayor Duterte.

Table 9. Cross tabulation of Fraternity Affiliation of Respondents and their answers on the question: : “Who among the 2016 Presidential Candidates will you vote if the election were held today?”

	W/O Frat	W/ Frat	Total
Binay	8	2	10
Defensor-Santiago	17	2	19
Duterte	201	42	243
Poe	9	0	9
Roxas	7	1	8
Total	242	47	289

Members of Tau Gamma Phi who participated at this research had a number of 21, 19 of which preferred Duterte, 1 for Roxas, and 1 for Defensor. Four out of 6 respondents from Alpha Phi Omega preferred Duterte while the other 2 were for Binay. Defensor Santiago got one respondent from Beta Sigma Lambda. However, Duterte got 2 from Beta Sigma, 5 and 6 from Beta Sigma Lambda and Mu Kappa Phi respectively, and 1 respondent from Megalith Nu Sigma Phi, Upsilon Sigma, Sigma Upsilon - Upsilon Lambda, Beta Upsilon, Knights of Columbus, and Epsilon Sigma Phi each.

Yes	No	Total
129	160	289
44.64%	55.36%	100%

Asked if their presidential preference was influenced by the images posted on Facebook, 160 respondents or

55.36% said no and 129 respondents or 44.64% said images posted on Facebook influenced their presidential preference.

Despite of being ranked as one of the most visited sites in the Philippines alongside with Google and YouTube, the images posted of Facebook influenced only 44.64% of the respondents and the other 55.36% said their presidential preference was not influenced by the images posted on Facebook concerning the presidential aspirants. However, 59.46% and 41.67% of the respondents who have master's degree and doctoral degree were influenced by the images posted on Facebook respectively.

Furthermore, 51.85% respondents from abroad declared that images posted on Facebook influenced their presidential preference and 43.89% from the Philippines were not influenced as well.

Total	289	100

Table 27 shows that 78.89% of the respondents thought that Davao Mayor Duterte benefited more among other presidential candidates in the use of social media during the pre-election campaign. The figures at Table 27 was validated by the report published at Inquirer.net by Yuji Vincent Gonzales stating that Duterte and Cayetano are the most talked-about bets on Facebook. According to the report, Mayor Duterte accounted for more than half or 64% conversations about presidential candidate on Facebook from November 20, 2015 to April 05, 2016. Administration bet Mar Roxas got 47% followed by Senator Grace Poe with 40%, Vice President Jejomar Binay and Senator Miriam Defensor-Santiago got 27% and 19% respectively. On the same report, it was stated that 15.2 million people have engaged in election-related conversation within the given period, Facebook

generated 124 million interactions on the same period (Gonzales, 2016).

Also, 158 of the 228 respondents who said Mayor Duterte benefited more in the use of social media in pre-election campaign are either college graduate, with a master degree units, or doctorate degree holders. Ten of these 158 respondents are either law graduates or law students.

Table 42: Cross tabulation of those who will vote for their candidates and those will vote and who will do further actions ca

	Campaign against	Campaign for	Take no action	
Binay	0	8	2	10
Defensor	0	12	7	19
Duterte	2	161	80	243
Poe	0	2	7	9
Roxas	0	2	6	8
Total	2	185	102	289

Table 42 shows that those supporters of each presidential aspirants are likely to campaign for their respective presidential candidate on social media. Supporters of Vice President Binay who participated in this research showed that 80% of them will campaign for him while Senator Defensor-Santiago got 63.15%, and 66.25% of Davao Mayor Duterte supporters also said that they campaign for the mayor.

However, the case of Senator Poe and Secretary Roxas is different from the other three presidential aspirants. 77.78% of the respondents who prefer Senator Poe and 75% of the supporters of Secretary Roxas are likely to take no action as a support to their respective presidential candidate.

CONCLUSION

As a result, 64% of the respondents said that they are campaigning for their respective presidential candidate – this is through posting relevant photo and text images and sharing posts on social media. With the 76.47% respondents who think that social media is a determining factor in the process of presidential campaign it is undeniable that social media now is becoming more widely used as a new medium for political advertisement. This development are mostly welcomed by the younger generations while older generations are also optimistic to this more efficient way of communication. While only 44.63% of the total respondents were influenced by Facebook, this is still an affirmative feedback to the claim of the 76.47% respondents because of the many factors and interventions found in the social media to gain ones support. Aside from photo and text images, influential individuals are also voicing out their preferences through social media, and this can sway the beliefs of their respective followers.

However, there are advantages and disadvantages to this social media influence. Social media allows anyone to connect other social media users to spread both real and hoax information to either destroy other presidential aspirants and/or to make their presidential preference better than the other aspirants. This is alarming because some users believe whatever they see and read on the social media without verifying the information or the source of the information.

As a result, this research recommends for further studies that includes social media regulation and how social media is being used by some people with strong supporters who can create a cyber army to intimidate others.

ABSTRACT

This study was conducted to determine the simulation of political history of wars in ancient Sparta during the rule of King Leonidas by using the game Clash of Clans and to maximize the potential and significance of video games as a tool for political education. The study is aimed to know the mundane political patterns of Spartan society under the rule of King Leonidas which is evident particularly in war that are simulated in Clash of Clans. This research also sought to differentiate Clash of Clans virtual politics and Spartan wars under King Leonidas and determine if the game Clash of Clans an exaggeration of historical wars. Moreover, this study also sought to determine if the game Clash of Clans facilitates the reintroduction of the political history of Spartan wars under King Leonidas.

The research gathered and generated results that show the simulation of ancient Spartan wars in the game, though not in its entirety because of the limitation of the game's framework and the limited amount of literature. Notwithstanding, the merits of the findings can help provide substance on the study of politics by means of simulation and video games which help simulation become a stable political space or trend in research. Finally, Clash of Clans as a tool to simulate ancient history of wars and political history shows that video games will help students and other persons interested to put theories into practice in the easiest way and learn various concepts with ease in a fun and interactive way, thus making it an alternative tool for political education.

Keywords: Political History, Political Education, Simulation

INTRODUCTION

The proliferation of video games in the contemporary society is evident as it penetrates almost all the members of the society. Video games are now incorporated in a society's culture and becomes a part of one's everyday life. There are varieties of video games available in the market today such as action, adventure, simulation, strategic games etc. But the type of game that gained utmost popularity is the Massively Multiplayer Online Game (MMOG) which is capable of supporting large numbers of players simultaneously. These games can be found for most network- capable platforms, including the personal computer, video game console, or smartphones and other mobile devices. MMOGs enable players to cooperate and compete with each other on a large scale, and to interact meaningfully with people around the world.

Video games may be used as a tool for the simulation of war. Clash of Clans (CoC) is a MMOG wherein each player starts with a small medieval settlement in a forest and manifests the creation of the city-state or state and its activities specially the creation and advancement of the military to wage war and preserve itself from outside threats.

The preservation of the city-state or state was possible because of a strong standing army. One of the most popular stands against invasion was best exemplified by King Leonidas and his standing army wherein they were able to defeat the belligerents, with the help of neighboring city-states, for the preservation of all Greek city-states.

The research conducted asserted that the game Clash of Clans can be used as a means to reintroduce the political history of wars and to help us comprehend politics and history in an unconventional way.

STATEMENT OF THE PROBLEM

This study aims to know whether the

game Clash of Clans is a simulation of the political history of wars in ancient Sparta during the rule of King Leonidas.

Specifically, the following questions are to be answered:

1. What are the mundane political patterns of Spartan society under the rule of King Leonidas which is evident particularly in war that are simulated in Clash of Clans?
2. What are the differences of Clash of Clans virtual politics and Spartan wars under King Leonidas?
 - a. Is the game Clash of Clans an exaggeration of the historical wars?
3. Does the game Clash of Clans facilitate the reintroduction of the political history of Spartan wars under King Leonidas?

SIGNIFICANCE OF THE STUDY

The findings of the research contribute to the expanding scope in the study of political science. This study generated valuable information in maximizing the potential of video games as an instructional tool.

The core of the study uses the game Clash of Clans as a lens in simulating ancient Spartan wars under the rule of King Leonidas. The version or update of the game used is the July 2015 update version 7.156.

The immanent use of the game Clash of Clans is another limitation for this study as the study is not absolutely dependent upon the player. The study is limited because the use of a video game as an instrument for studying politics is still new, video games are still considered as an instrument for entertainment rather than a space for political analysis and knowledge.

BACKGROUND OF THE STUDY

Sparta was one of the most important Greek city-states throughout the Archaic and Classical periods and was famous for its military prowess. As written by Cartwright (2015) The professional and well-trained

Spartan hoplites were probably the best and most feared fighters in Greece, fighting with distinction at such key battles as Thermopylae and Plataea in the early 5th century BCE. Warfare is integral in the existence of a state during classical and archaic times in Greece. This is exemplified when Spartan citizens were prohibited from pursuing any profession other than that of arms.

The bravery and skills of the Spartan army was showcased during the second Persian war (480 BCE) that was led by Xerxes king of Persia and his soldiers estimated to be perhaps 100,000 men. The only thing that stood between the pass was the 300 hoplites of king Leonidas and 6,000 other soldiers from various Greek cities. The outnumbered Greeks were able to hold the pass for seven days and inflict great casualties to the Persian army (Miller, 2015). The Spartans may have lost the battle but no one can disregard that the Greeks were greatly outnumbered. This is a manifestation of the strength of the Greek army particularly the Spartans which are only 300 in number.

The recruitment of the 300 Spartans that fought alongside King Leonidas is also noteworthy. The success of any organization most of the times, relies on the members of organization. A modern time example of how essential or important recruitment is to the success of a particular organization is the General Electric. At General Electric, Jack Welch delivered decades of double-digit growth by developing a system for attracting, training, and retaining "A" players. Every year, all GE employees were separated into three categories: top 20 percent, middle 70 percent, and bottom 10 percent. The top 20 percent were showered with bonuses, stock options, and other rewards. The middle 70 percent were given training, positive feedback, and goals for moving up. The bottom 10 percent were asked to let go. This system developed a core group of highly-motivated superstars. In turn, they attracted more good people to join GE. The implication of the rules imposed by Jack Welch is that it prevents members of the group from

being an impediment to the company and it keeps their employees highly motivated and competitive.

The Spartan city-state was not only limited to the development and advancement of its armed forces but also practicing and exercising diplomatic relations and foreign policy with their neighbouring city-states.

Despite the undoubted effectiveness of Sparta's professional army, its foreign policy relied on diplomacy as much as force of arms to solve its differences with neighbouring city-states. In fact, the Spartans demonstrated an acute appreciation of the limits of their power and of their vulnerability, which in turn gave rise to a cautious foreign policy that relied heavily on effective diplomacy. Sparta produced the first known permanent alliance system in history, comparable to NATO: the Peloponnesian League (Schrader, 2012). Peloponnesian League, also called Spartan Alliance, is a military coalition of Greek city-states led by Sparta, formed in the 6th century BC. League policy, usually decides on questions of war, peace, or alliance, was determined by federal congresses, summoned by the Spartans when they thought fit; each member state had one vote (*Encyclopædia Britannica*, 2015).

Notwithstanding the old age of the study on political history of wars during archaic Greece, we shall now merge the obsolete and contemporary to ignite interest in the study of history and politics.

The U.S. Department of Defense defines a war game as a simulation, by whatever means, of a military operation involving two or more opposing forces, using rules, data, and procedures designed to depict an actual or assumed real life situation.

This notion of the war game as a simulation, as an imitation of combat by other means, preceded the use of computer-based models for encoding rules, data, and procedures. War games have taken many forms ranging from large-scale field exercises to

abstract strategy games played with maps, counters or miniatures. Because they can be set in reconstructed historical events or imagined scenarios, strategists and military planners use them to rehearse or test strategy, operations and tactics. They accomplish this goal by staging a performance involving people, systems, and technology (Lenoir, T. and Lowood,)

Technology, specifically video games, can be an effective tool for more strategic lessons. One established way of using technology as a tool for learning is through the concept called simulation. The concept of simulation or simulation game has started way back in the latter half of the 1960's which it had become a highly popularized teaching strategy. As Cousins (1976). puts it, "simulation is an attempt to recreate, for instructional purposes, some dimensions of reality. The simulation, or model of reality, usually involves a setting or scenario roles to be assumed and carried out, a problem or problems to be confronted, constraints or rules, and an outcome or set of outcomes." He claimed that simulation games are good motivators due to the active, personal involvements of the students in the activities.

As for the field of history, Pagnotti and Russel (2012), used the game Civilization IV to engage students in world history.

The study of political science is not only limited to conventional and stable theories formulated in the past. Nigel Thrift (2006) first emphasizes the continuing importance of political invention. According to Nigel Thrift:

There is no reason to believe that the political sphere is any more devoid of innovation than any other sphere of human life, all the way from the invention of democracy through the invention of the nation state, to the invention of the network of network institutions and standards of governance that characterize a good part of the world today. Then, second,

that politics cannot therefore be assumed to have a stable content. Though this has become something of a truism, still it is important to state again that the study of politics cannot be reduced to what constitutes political discourse at any particular time. Politics escapes stable categorizations. Third, I will want to argue that contextual political analysis is the only meaningful form of political analysis and that this principle should be engrained in the practices of political theory. One reason is a simple operational point. The conduct of contemporary politics takes place at many sites, not all of which are labeled 'political' but many of which have political intent nonetheless.

Video games can be used as instrument for theorizing politics evident in a game. This approach to non-traditional approach may be deemed unguided but according to Rutsky and Macdonald (2003):

The study of theory, culture and politics cannot be confined within disciplinary boundaries nor reduced to a set of fixed, taken for granted perspectives of categories... It is precisely this movement across boundaries, this refusal to take for granted predefined categories, to be confined to a particular theoretical or political approach, that 'defines theory' itself. Theory, in this sense, becomes a matter of moving, not simply from one theoretical, historical or political locus to another, but in multiple, interdisciplinary, and often unforeseen directions.

This research is focused on pairing politics and history to come up with a theory in reinventing political past by means of the game Clash of Clans. There are ample amount of studies that focused on games and history.

Historians now freely use such words as invent, imagine, create (not recreate), and construct (not reconstruct) to describe the process of historical interpretation, and then proceed to support some novel interpretation by a series of possibilities, might have beens, and could have beens. The development that Gertrude Himmelfarb describes relates to the poststructural historical turn that is roughly coincident with the emergence of hypertext and games. I invoke her words here because they so clearly characterize the historical endeavor as play. Think of them as imperatives: invent! imagine! create! Consider them as modes of engagement: the subjunctive, the speculative, the what if. This notion of play, if I may so characterize Himmelfarb's (1980) descriptors before defining the term, also seems to share something very basic with historical computer games, something more than the destabilized hierarchies and subverted master narratives that are held in common between games and poststructuralist history.

Although Himmelfarb along with many other respected historians lament this ludic turn in the writing of history, she has articulated the problem in ways that point to the conjuncture of the new history with games.

According to Haglund (2011), the agenda of games may differ but their informative nature should not be underestimated. Not every

game is just entertaining – some might also communicate political opinions or imply the intention to leave an impact on the gamer. Whether it is for entertaining purposes or by sending a political message: Games communicate and they do it in an interactive way.

Research by using videogames to expand the horizon of social science particularly, history and political science will ignite profound interest in conducting future research that pertains to simulation and videogames. The image of videogames will incrementally change because of researches that would help improve the utilization of videogames as a tool for political education.

RESULTS AND DISCUSSION

This chapter is discussing the mundane political patterns of Spartan society under the rule of King Leonidas which is evident in war that are simulated in Clash of Clans (CoC). The succeeding political patterns are chosen by the researcher because the following are considered the most consistent and evident aspects of politics that can be observed within the framework of the game. A table is presented to serve as an aid and guide for the succeeding discussions pertaining to the mundane political patterns of Spartan society that are simulated in CoC. (See table 1.0)

SPARTAN SOCIETY	CLASH OF CLANS (CoC)
<p style="text-align: center;"><u>Leadership Traits</u></p> <p>Leadership traits such as positivity, leadership profile, recruiting, and group size are at best manifested and exemplified primarily by the king of Sparta. The king of Sparta is the primary source of leadership traits.</p>	<p style="text-align: center;"><u>Leadership Traits</u></p> <p>Sources of leadership traits such as positivity, leadership profile, recruiting, and group size comes from the leader, co-leader, and elder of the clan. Leadership traits can be located among the three types of leaders in CoC.</p>

<p style="text-align: center;"><u>Alliance</u></p> <p>Alliances, during the peak of Spartan society under king Leonidas, were primarily intended for peace and for defensive purposes unless offensive measures are necessary.</p>	<p style="text-align: center;"><u>Alliance</u></p> <p>Alliances in CoC are solely intended for offensive purposes only and it is best observed during clan wars.</p>

Strategies used in warfare are organized and fixed 3. Military State 	<p style="text-align: center;"><u>War</u></p> <ol style="list-style-type: none"> 1. The spoils of war in CoC are as follows: <ol style="list-style-type: none"> a) Gold b) Elixir c) Dark Elixir 2. Strategies used in CoC are either unorganized or organized and it varies from player to player. The gameplay of CoC allows players to end the war especially in the event that the aim or goal of such player is achieved. 3. Military centric as provided by the framework of the game.

Skills Approach leadership development suggests that individuals can develop the skills, abilities, and behaviors needed to lead. Such attributes of being a leader can be found in the game Clash of Clans (CoC). These attributes are the following: positivity, leadership profile, recruiting, and group size.

Gray, T., & Callahan, J. (2008) said that movies provide a storytelling platform enabling learners to link theory to practice. The article published by Gray and Callahan uses 300 to explore skills-based leadership theories. 300 (2007) is an adaptation of Frank Miller's novel depicting the Battle of Thermopylae (400 B.C.) between Greece and Persia. The movie tells the story of how King Leonidas led 300 Spartan warriors in battle against King Xerxes' army in defense of Spartan land, values, and freedom.

Leadership attributes such as positivity, leadership profile, recruiting, and group size are simulated in the game CoC and are discussed respectively. The aforementioned traits can be found in King Leonidas because

of his team player attribute. These attributes are exercised by the clan leaders in CoC namely the leader, co-leader, and elder of the clan.

Leadership Traits: Positivity

First, let us consider the example of King Leonidas of Sparta in understanding more about positivity. In 480 BC, he led 300 Spartans against the massive invading army of Xerxes I of Persia. The Spartans chose to make their last stand at Thermopylae. Morale was high despite the overwhelming odds. When told that Persian arrows would blot out the sun, a Spartan soldier named Dienekes scoffed, "So much the better; we shall fight in the shade" (Lem, P. 2009). "Leonidas, the Spartan leader, chose to fight to the end, knowing that his men could never win this battle. He told the remaining Greek soldiers to flee whilst they could, but the Spartans would show their courage and fight on." Bos, C. D. (2013) narrated that the Spartans were cut down to the last man.

Positivity is simulated in the game CoC,

particularly during clan wars which is the highlight of the game. Clans cannot choose on their own what certain clan they would engage in war because the game itself fixes which clan engages war with other clans. This would usually result in engaging with enemies who are better than one's own clan. Despite the fact that there are huge disparities between clans engaged in war, they try their best to crush the opposing clan.

Leadership Traits:

Leadership Profile

What separates foot soldiers from leaders like Leonidas? It is difficult to generalize because different styles are effective in different situations. In CoC, there are four types of member in a clan, the leader, co-leader, elder, and the member. Among the four types, the first three are the types of members that manifest and exemplify the traits of a leader and the last one has no additional status, in the clan. According to Chemers (2000), 80 years of leadership research have identified three consistent themes: Image, Relationships, and Decisions. Leadership themes are demonstrated during the preparation for the upcoming war and during the war. Although Leonidas' stand at Thermopylae is widely viewed as the epitome of "Spartan" behavior, it was in fact unique in Spartan history. No king had ever died in battle before Thermopylae. Because his older brother was rebellious and convinced of his superiority and destiny to lead, Leonidas might have become obsessively loyal, the quintessential "team player" (Schrader, H., 2012).

Image

Image means that leaders must be perceived as leaders. They must be seen as honest, trustworthy, and loyal to the team's beliefs and values. Leaders often take great risks or make large personal sacrifices to demonstrate loyalty to the cause. By demonstrating superior skills and competence, leaders inspire confidence that they will guide the team in the right direction.

Relationship

In relationships with the team, leaders strike a balance between support and structure. For tedious or unpleasant tasks, leaders motivate the team by providing psychological and emotional support. Decision-making may be centralized or decentralized.

Decisions

Decisions such as exercising administrative authority to invite players to join their clan, accept or decline requests to join, start wars, and promote/demote members to and from eldership and/or co-leader, and expelling co-leaders, elders, and members are centralized when the clan leader solely decides on particular matter and it is decentralized when the clan leader solicits opinions or views from the members of the clan on decisions regarding the actions that are to be taken by the clan leader.

The aforementioned leadership themes are simulated in CoC especially during clan wars. Without the leadership of the following: leader, co-leader, and elder there would be disorder and disorganization in the clan. The game CoC teaches teamwork and lacking which, there would be no efficiency during wars. The same is true during the time of ancient Greece where the primary role of the King of Sparta is to lead the Spartan Hoplites into battle. The most conspicuous function of the Spartan King was their role as military commanders.

Leadership Traits: Recruitment

Recruitment is vital to the success and interest of a particular organization or a group because the members are intrinsically the most significant element to determine the capabilities and potential of an organization.

Similar to GE, Leonidas in particular made a point of using a shrewd eye to select soldiers. His selection of an all-fathers unit of Spartans might similarly have served a

psychological purpose, in this case, unit motivation. The Greeks believed that men with sons were especially mature and reliable and equipped with experience; hence they would make highly motivated soldiers (Strauss, 2004). King Leonidas hand-picked the 300 Spartans who stood with him at Thermopylae. The same is true when recruiting members for a clan.

This is manifested and simulated in CoC. A member must not be an impediment to the growth and success of the clan or otherwise such member would be booted out of the clan. The game CoC manifests the idea of survival of the fittest. Because of the possibility of being booted out or being expelled, it is often seen in the game that during clan wars each member performs best because failing to do so would create a scintilla of doubt on the part of the leader, co-leader, and elder in retaining such member who performs poorly.

Leadership Traits: Group Size

In addition to rewards and discipline, group size has a big influence on teamwork. In Robin Dunbar's work in 1993 (Chap 4), he said that the size of the human brain limits us to a maximum of 150 stable relationships. If we were to mention simulation of group size in CoC, there would be two aspects that should be considered and that would be the group size of the clan and the standing army of the members or players. A clan in CoC can have a maximum of 50 members with a capacity of storing a maximum of 275 troops when a player reaches the apex level in the game.

This limit is found in many organizations throughout history. Roman legions were organized around units of 100 soldiers. In the U.S. Army, a fighting company is comprised of 62–190 soldiers, and divided into 3–5 platoons. Each platoon contains 2–4 squads, and each squad contains 9–10 soldiers.

The actual size and composition of the Spartan army varied from period to period, but the same organization can be discerned. The smallest unit was the *enomotia* which varied in

size but probably averaged about 30 men. This was the basic tactical unit, and could assume various frontages and depths as might be required. The next sized unit was the *pentekostys* which could contain 2 or 3 *enomotiae*. The next size was the *lochos* containing 4 *pentekostyes* under the command of a *lochagos* (Nelson, R. 1975). Though no kind of organization or formation exists in the game of CoC, it would be evident that there is only a small group size whether in Spartan army organization or in troops that can be stored in the game.

Though there is a great disparity of the numbers aforementioned it is clear that the group size of Spartan army and in CoC is small which is better for it can be easily administered and organized.

Alliances

Ever since, alliances between countries existed especially in the military field. Alliances are simulated in CoC and it is commonly called as Clans. The Peloponnesian League was an alliance of states in the Peloponnesian region, first organized and masterminded by ancient Sparta. The goal of the Peloponnesian League was to form strategic and beneficial alliances, allowing the involved states to build strength, security and power. The same is true in the gameplay that can be seen in the game CoC. Clans serve as a tool or vehicle to further a player's interests and agenda such as receiving what is often known as clan perks. Clans are groups of players that join together in order to compete with other Clans in two ways: the first is to pool their trophies and battle to collect the most trophies and the second is to win Clan Wars for loot and prestige. Apart from the Clan members themselves, the Clan as a whole has an experience level ranging from 1 to 10

The Spartans at the height of their power were keen to not only be at war and keep their state safe, but to also be at peace. The Peloponnesian League was created to allow this to happen, the strength of the aligned states

would act as a natural deterrent in a volatile ancient world. The Peloponnese peninsula was home in Ancient times to the most feared fighters in all of the Ancient Greece, the Spartans of ancient Sparta. As enemies of Athens and the Delian league, Sparta looked toward their own league to offer power, protection and the survival of the Spartans. Sparta was also at odds with one of the other big players in the Peloponnese, the Argos. To this end, Sparta's primary goal in the league was self-preservation and prosperity.

Preservation and prosperity can be observed in the game when clan members ask for troop donations to have the upper hand during a war making the chances of winning higher thereby increasing the amount of resources and rewards when the clan wins the war. In the article of Lendering in 2015, he said that the Peloponnesian League can best be seen as a network of probably bilateral perpetual alliances. Except for Argos, all towns on the Peloponnese were member of the Spartan alliance.

War: Spoils

In the ancient Greek world, warfare was seen as a necessary evil of the human condition. The war itself was often justified by economic mobiles - the acquisition of richness - and led to a redistribution of these richness. The spoils of war were generally composed of transportable and negotiable goods (weapons, coins, jewels, furniture, animals and human beings). It is to the military chiefs that returned the responsibility for the management of the spoils of war. (Meyniac, JP, and Borgo, P. et al. 2007). The same is true in CoC except that there are no prisoners captured after winning the war. Wars are waged to accumulate wealth thereby producing advanced structures, defense towers, and troops.

War: Strategy

In CoC, strategy is evident only in dropping troops in the enemy camp because once the troops are dropped in the village of the

enemy; a player's soldier randomly attacks the structures of enemy village. It varies from the Spartan way of approaching warfare. Spartans uphold tactics, strategy, and order, but we cannot assert that no strategy is used in CoC. One of the most effective and enduring military formations in ancient warfare was that of the Greek Phalanx. The phalanx formation was a close-rank, dense grouping of warriors armed with long spears and interlocking shields. (Mark, J. , 2012).

Spartans are the best of warriors when they do not fight singly but by group or number, regardless of size, because of the phalanx that they use as a strategy. Spartans will never retreat and surrender from a war because of Spartan Law unless the king would insist such measure which is unlikely to happen. Such event also occurs in CoC. Attacks are mostly successful, when troops are not deployed one by one, troops in CoC are deployed by group or by heap because it brings more casualty and firepower. Troops deployed in CoC are like Spartan Hoplitae because once they are deployed, they never retreat or surrender. A manifestation of retreat or surrender in CoC can only be seen when the player clicks the surrender button located on the lower left side of the screen.

Wars are won when teamwork and efficient organization is observed and everyone is involved. Size of the army does not lead to absolute winning in war. Though in perspective, the Spartans lost the battle at the Thermopylae, in fact the Spartans won because of the damage they have inflicted in Xerxes army. Same is true in CoC because if an attack is executed with strategy and proper organization, a player would not necessarily have to deploy his entire army to crush the opponent. Though the Spartans are forbidden to retreat or surrender in a war, there is a sign of taking the measure of conceding because a king has the authority to order retreat. The same is true in CoC, a player may concede.

War: Military Centred

As grueling as Sparta's martial education system could be, the soldier's life was the only option for young men who wished to become equal citizens, or "Homoioi." According to the edicts of the Spartan lawmaker and reformer Lycurgus, male citizens were legally prevented from choosing any occupation other than the military. Because of their preoccupation with the study of warfare, Sparta's manufacturing and agriculture were left entirely to the lower classes. Skilled laborers, traders and craftsmen were part of the "Perioeci," a class of free non-citizens who lived in the surrounding region of Laconia (Evan, A. 2013). In the game, these kinds of citizens were called non-combatants. Builders are the workers that live inside the Builder's Hut where they can upgrade, build, and rebuild structures, as well as

upgrade your Heroes. Another type of non-combatants is known as villagers.

Sparta is mainly a military state and it is easily discerned because of their practices. If we were to simplify the kind of profession in Sparta we can simplify it into two: combatants and non-combatants. Combatants are those Spartan Hoplites armed with swords, shields, and spears with the purpose of defending the city-state. Non-combatants are those whose professions that concern with the arts, creating weapons, and performs labor.

The following table presented in the next page (see table 2.0) serves as an aid and guide to the distinctions of politics during a war in Sparta and in CoC.

Table 2.0 Differences between Clash of Clans Virtual Politics and Spartan Wars under King Leonidas.

SPARTAN WARS	CLASH OF CLANS (CoC)
<p><u>Primary Interest</u> During the reign of King Leonidas and in the Persian Wars, the main motive is to preserve the existence of the Spartan state.</p>	<p><u>Primary Interest</u> Accumulating wealth, power, and prestige is the primary motive and goal in CoC.</p>
<p><u>Wars</u> War engaged by Sparta during the reign of King Leonidas is mainly defensive.</p>	<p><u>Wars</u> Wars waged in CoC are primarily aggressive. It may be defensive in some sense that a player must attack a village to obtain wealth and have the capacity to defend ones village..</p>
<p><u>Decision-making</u> Participation in a war requires the consent of the Assembly and the Council of Elders before the Spartan hoplites can be deployed in the battlefield.</p>	<p><u>Decision-making</u> Waging or participating in a war no longer requires consent from clan members.</p>

**P

I**

**n
t
e
r
e
s
t**

The battle of Thermopylae was simply a defensive measure to prevent the Persians from

penetrating Central and Southern Greece. Preservation of the existence of Greek states is the main motive in defending the pass. However in CoC, aggressive war has preponderance over a defensive war. Suffice to say that in order to defend a player's village, the player must obtain resources to create structures capable of defending the village and these resources are to be obtained thru waging war and engaging in clan wars.

Wars: Defense

During the time of King Leonidas, defense solely rely on manpower which is their trained soldiers or the Spartan Hoplites than on walls or fortifications and towers. Defense in CoC does not need armed men on the battlefield because it is not allowed within the framework of the game. It is clearly an exaggeration of historical wars since no defensive war solely rely on walls or fortifications and in towers.

Decision-making

We now proceed to decision making in times of war in Sparta and in CoC. Prior to engaging in a war, an assembly has the sole authority in the deployment of military forces in the battlefield. The assembly included all Spartiates with full political rights. Their main responsibilities were decisions on foreign policy, particularly about war and peace. Kings in Sparta are only powerful in the field during a war because their primary role is to be a military commander (Pretzler, M. 2014). Decision making with regards to waging war in CoC is quietly different than those with Sparta. Waging war does not require consent from clan members and this implies that wars are instantaneously waged in CoC even without giving due notice to its members.

Decision making regarding the engagement of war in CoC is clearly an exaggeration of historical wars. It is exaggerated in a way that waging wars are easily made in CoC without formal deliberations unlike in Sparta where an assembly is made to discuss the measure of engaging in a war.

Engaging in a war equates for material and life expenses and these expenses are not easily replenished which is why a deliberative assembly is an indispensable element when waging war in ancient Sparta. For such reasons, it would be clear that decision making in CoC, particularly in war, are exaggerated. Waging wars in CoC are in a click of a button since there would be no extreme consequences in waging wars in CoC.

COC as a Reintroduction of the Political History of Spartan Wars

The last question which is to be answered by this paper is, whether the game Clash of Clans facilitates the reintroduction of the political history of Spartan wars under King Leonidas?

Yes, it certainly does but not in its entirety although it is worth taking into consideration the substantiality of the findings of the research. Nigel Thrift asserted that "the conduct of contemporary politics takes place at many sites, not all of which are labelled political but many of which have political intent nonetheless." There is little literature about the heroics and life of King Leonidas, thus, the game helps make it easier to introduce Leonidas and the Spartan society. Leadership traits which are exercised and practiced during the times of ancient Spartan society under the reign of King Leonidas are simulated in the game CoC. The player puts his self into the shoes of a leader and simulation helps leadership traits to be practiced and be learned. Leadership traits, alliances, national interest, wars, strategy, and decision-making are terms oftentimes attached and linked to politics. The aforementioned concepts are made easier to introduce since there is involvement between and among the players and the game itself. As Cousins pointed out "simulation games are good motivators due to active, personal involvement of the students in the activities."

It would suffice to say that the game Clash of Clans can be used as means to

reintroduce the political history of wars to help us comprehend politics and history in an unconventional way. After the conduct of the study, it proved that simulation can be used as a tool to understand wars and the existence of political history within the framework of the game, this simply means that politics cannot be confined to a particular space.

The foregoing statement is attested by the following results. First, the study saw mundane political patterns that existed in ancient Spartan society under the rule of King Leonidas which is evident in war that are simulated in Clash of Clans. Second, it provided distinctions between Clash of Clans virtual politics and Spartan wars under King Leonidas and it determined whether the game is an exaggeration of historical wars. Lastly, the game facilitated the reintroduction of the political history of Spartan wars under King Leonidas.

CONCLUSION

Based on the findings of the study, the game Clash of Clans simulates the reintroduction of political history of wars in ancient Sparta during the rule of King Leonidas. The research identifies three consistent mundane political patterns in the game CoC which are the following: leadership traits, alliances, and war. Thus, there are mundane political patterns during the Spartan society under the rule of King Leonidas that are evident particularly in war that are simulated in Clash of Clans.

The research purports the distinction between Clash of Clans virtual politics and Spartan wars under King Leonidas. There are three main distinctions between Spartan society and Clash of Clans and these are the following: primary interest, wars, and decision-making. Because of the grave disparities between Clash of Clans virtual politics and Spartan wars under King Leonidas, it simply asserts that the game Clash of Clans is an exaggeration of the historical wars.

Since the game Clash of Clans made it easier to introduce the concepts and theories that were fervently elaborated by the researcher, therefore, the game Clash of Clans facilitates the reintroduction of the political history of Spartan wars under King Leonidas.

Recommendations

Though the game CoC has a historical and political complexion, such complexion is not in entirety or absolute because of the limitations of the game itself. However the video game industry is replete with games concerning history, politics, and war which would better help students to understand further complicated concepts and apply theory into practice even more. An example of which is the game Sparta: War of Empires. The game is set in the 5th century BC, the ancient world of Greece is in turmoil, under threat from Xerxes and his giant Persian Empire. In the game Sparta: War of Empires, the player will be put in the shoes of the king and will be able to learn and master politics, strategy, and diplomacy. The game is more accurate in illustrating the Spartan society and more realistic than the game CoC which would even help students learn more from games.

In addition, it is highly recommended that the players, stakeholders, and game developers are to be surveyed by interested researchers, seeking to enrich this study, to generate consensus and substantial data concerning the improvement or development of a game that would better serve as a tool for political education and incrementally making video games as an instrument for education and not just for entertainment.

Abstract

Elections operate in such manner that voters must have researched well the political backgrounds and platforms of the candidates they are voting. However, in absence of other information, voters tend to resort to cues such as their perception on facial appearances. This study is a pioneering study to adopt facial morphometric in testing the influence of candidates' facial appearance on their electoral outcomes while omitting other variables such as incumbency, partisanship, and popularity. It also investigates the facial preferences of voters with low political knowledge. This study is divided two-fold. The first phase is a facial morphometric analysis of 33 senatorial candidates from the 2013 Philippine national elections. Adopting the geometric morphometric method from natural sciences, the facial characteristics of the generated consensus image of the senatorial candidates were analyzed and identified. The second phase was conducted to verify the findings of the first phase of the study through survey questionnaires with sets of morphed faces of presumptive candidates. The researchers morphed faces from masculinity-femininity continuum and asked the facial preferences of chosen respondents. The result of the first phase was found to corroborate with the second phase. It showed that the consensus image of the 33 senatorial candidates is characterized by a hyper masculine and hyper feminine facial morphometry. Interestingly on the second phase, respondents have significantly higher votes on presumptive candidates with hyper masculine and hyper feminine facial characteristics. It can be gleaned from the voting behavior of the electorate in a politically low informed society that facial cues may have a bearing on moulding electoral decisions. Hence, It is highly important to consider the dynamics of electing leaders in the government by studying the behavior of the voters. This study also signifies that facial morphometric is a useful tool in determining the winning chances of the presumptive candidates as well as the actual candidates in an election.

Keywords: Geometric Morphometric, Elections, Voter's Facial Preferences

INTRODUCTION

Elections operate in such manner that voters must have researched well the political backgrounds and platforms of the candidates they are voting. However, in absence of other information, voters tend to resort to cues such as their perception on facial appearances. Several recent studies on elections suggest that the politician's facial appearance may have a bearing on their political outcomes. In a study by Todorov et al. (2005), subjects completely unfamiliar with American senatorial or gubernatorial candidates were shown photo pairs of competing

candidates. Based entirely on perceptions from the photos, subjects were then asked to indicate which candidate from each pair they perceived as the more competent. This yielded the fascinating (or frustrating) result that subject's choices of competent-looking candidates actually predicted real-world electoral outcomes significantly better than chance (Laustsen, 2014). Similarly, this endeavour tests the influence of candidates' facial appearance on their electoral outcomes while omitting other variables such as incumbency, partisanship, and popularity. It also

investigates the perception of voters with facial appearance as a lone basis. This study is divided two-fold. The first part is a facial morphometric analysis of 33 senatorial candidates from the 2013 national elections. The second part is a mock election conducted to determine the facial preferences of the voters. It has been identified that the findings on the facial morphometric procedure of the 2013 senatorial candidates agreed with the findings of the mock elections of presumptive candidates. Geometric Morphometric is utilized in this study as a method adopted from the field of biology to analyze the facial morphometry of the senatorial candidates who ran last 2013 national elections. Lastly, this study serves as a pioneering research on the predictive value of facial appearances in explaining the electoral outcomes in the Philippines.

THEORETICAL FRAMEWORK

This study employs the Theory of Biological Determinism and the Theory of Good Genes Hypothesis.

The “theory of biological determinism” according to Garland Edward Allen (2015) refers to the idea that all human behavior such as the tendency to choose candidates without credible basis is innate and determined by genes, brain size, or other biological attributes. This theory stands in contrast to the notion that the human behavior of making decisions based on gut-feeling and not based on facts is determined by culture or other social forces such as the set of beliefs of a person. Thus, this theory served as a guide to determine whether people has an innate human behavior of making decisions specifically in choosing candidates in an election based on gut-feeling.

Good Genes Hypothesis on the other hand is anchored on the

exaggeration of the faces among running politicians as the critical determinant of preference by voters. From an evolutionary view, extremes of secondary sexual characteristics (more feminine for women, more masculine for men) are proposed to be attractive because they advertise the quality of an individual in terms of heritable benefits; they indicate that the owners of such characteristics possess good genes. In other words, such traits advertise the possession of genes that are related to survival. This theory contends that the exaggerated faces among the candidates may cue attractiveness in the perception of the voters because of the quality it advertises.

RELATED STUDIES

Generally, electoral outcomes are determined by voters’ preferences based on the candidate’s background, party affiliation, ideologies, and charisma. However, in new democracies, candidate appearance and electoral outcomes have had significant relationships too.

Institutions, ideology, and issues dominate research on voting behavior in comparative politics. The conventional wisdom holds that vote choices are the result of the incentives provided by electoral rules, the identities forged by parties, the positions on the most controversial policies of the day, and the evaluations of incumbent performance on issues such as the economy (Lawson C. , Lenz, Baker, & Myers, 2010). This study is based on a psychological research by Todorov, et al (2015) indicating that people often judge unfamiliar individuals based in their appearance, inferring personality traits such as competence, intelligence, honesty, and trustworthiness from facial features as basis. In some instances, this happens because some voters do not have much political

information and their only mode of awareness is based on posters and campaign materials that they see in public and media sources; and the voters' first impression is also based on the faces they see in campaign materials. Thus, this study aims to look into determining the attitudes of voters towards different facial features.

While in a study conducted by Mutz, Brody, and Sniderman (1996), they focused on candidates' policy positions, performance records, and party affiliation that are deemed as the fundamental determinants of voter preferences. However, the scarcity of resources and the luxury of time to gather resources impede the voters from researching on these matters.

Thus, in order to validate the claim, the usage of the photos of the candidates was highly incorporated in this research since it is considered to be the first hand information if not the only information that the voters would acquire. Moreover, the amount of political knowledge of the voter respondents was also taken into account in the research to reduce other intervening variables like partisanship and incumbency. The goal of this study is to determine the correlation of the facial appearance to electoral success using Geometric Morphometric and would apply quantitative treatment to data.

Facial Features of Masculine, Feminine and Hyper Faces

Dr. Marquardt (2014) defines a prototype face of a male by describing as 1) prominent-supra orbital (brow) ridges (frontal bossing) resulting in deep set appearing eyes, 2) flatter and narrower eyebrows, 3) slightly narrower eyes, 4) eyes less wide open, 5) slightly longer and/or wider nose 6) slightly thinner lips

(especially upper lip) 7) square/ angled and or larger jaws (Bashour, 2005).

Feminine facial feature is described as 1) rounder face curves, 2) eyebrows are curved and corners are sharper, 3) long lashes that curl outwards that gives the impression of a brighter eyes and the eye shape is rounder or oval in shape 4) nose is smaller and narrower 5) cheeks are longer and rounded, 6) thicker upper lip, and the mouth is smaller 6) jaws are with rounded edges (Peters, 2013).

Hyper faces are described as the exaggerated features of the average masculine and feminine face. For women that means larger eyes, plumper lips, narrower lower jaw and smaller chin; for men, bushier eyebrows, sunken eyes and a wider, longer lower jaw, according to Victor Johnston, a professor of biopsychology at New Mexico State University in Las Cruces (Smith, 2000).

Male and Female Facial Preference

In the study conducted by Berggren et.al (2006), their study have found that female respondents tend to favour female candidates, while male respondents tend to vote equally often for men and women. They have confirmed that female respondents tend to vote for women to a larger extent than men tend to vote for men. They found a similar pattern in general evaluations: female respondents tend to evaluate women in photos clearly more positively than male respondents do, while the sex differences in evaluating photos of men are small.

Little et al. (2001) also suggested that on average, male respondents perceive male candidates to be more intelligent and competent than female candidates, and female candidates to be more beautiful, likable and trustworthy. Female respondents give more positive

evaluations of female candidates in all respects (Berggren et.al, 2006).

Preference on Hyperness

Perrett et al. (1994) found that exaggerating the physical differences between attractive faces and average faces (i.e. creating caricatures of attractive faces) increased their attractiveness. In other words, Perrett et al. demonstrated that attractive faces are not 'only average' (as some researchers who proposed the Averageness Hypothesis of attractiveness had suggested) but that some exaggerated facial characteristics are also found to be attractive. Although Perrett et al. presented evidence that attractive faces deviate systematically from an average shape, there is still no clear definition on how exaggerated a facial appearance could be. This literature can be further subject into inquiry but nonetheless, it claims that what is deemed to be attractive is not average.

Traits Attribution to Facial Preferences

Recent studies by Ambady and Rosenthal (1992; 1993; 2008) have linked candidate appearance to the increase in psychological literature on the automatic processing of images of human faces. This research indicates that people often draw inferences about the character and abilities of others from their facial features, despite the fact that such inferences are of dubious accuracy (Mueller and Mazur 1996; Zebrowitz 1997; Ambady, Bernieri, and Richeson 2000; Hassin and Trope 2000; Zebrowitz et al. 2002; Rule and Ambady 2008). Laboratory studies, in which subjects cast hypothetical ballots after seeing pictures of politicians' faces, suggest that voters employ this same heuristic when evaluating candidates (Keating, Randall, and Kendrick 1999; Todorov et al. 2005; Johns and Shephard 2008).

While shortcuts enable citizens to make snap choices, on the flip side, it also demonstrates that these shortcuts can sometimes bias electoral outcomes and voter choice. In the absence of other information, voters may resort to cues that lead to stereotyped perceptions of candidates that hinder the electoral success of candidates. Sex and race can both lead to the attribution of stereotypical traits. Male candidates are perceived as tough, aggressive, self-confident and assertive, while their female counterparts are described as warm, compassionate, people-oriented, gentle, kind, passive, caring and sensitive (Huddy and Terkildsen 1993a, 1993b; Leeper 1991; Rosenwasser and Dean 1989). Sex and race are also used as a cue not only to infer issue positions and ideology as well with women and black candidates being seen as more liberal (McDermott 1998).

Social stereotypes create their own reality through a multistep causal mechanism: (a) Facial appearance elicits social stereotypes or expectations for the behavior and traits of attractive and unattractive targets, (b) these expectations are acted on by the perceiver in the form of differential judgments and treatment of attractive and unattractive targets, (c) differential judgment and treatment cause the development of differential behavior and traits in attractive and unattractive targets, and (d) attractive and unattractive targets internalize differential judgment and treatment and eventually develop differential behavior and self-views (for detailed discussions, see Darley & Fazio, 1980; and Zebrowitz, 1997).

METHODOLOGY

Research Design

This research employed qualitative and quantitative methods. Qualitative method was used to describe the facial

attributes of the consensus image of the winning and losing candidates of the 2013 national elections. In the acquisition of data, the official campaign materials that are available online were downloaded. The faces of the candidates from these graphics and posters were profiled from losing and winning faces.

The first part of the study is a facial morphometric analysis on the faces of the 33 senatorial candidates. The researchers determined facial landmarks on the faces of the candidates. These facial landmarkings characterized the morphometric differences in the facial structures of the losing and winning candidates. The manual input of landmarks was done through TPSDig program.

The TPSutil program assisted the classification of the landmarked faces by group that are set by the researchers. There are a total of 17 losing male candidates and 8 winning male candidates and a total of 4 winning female candidates and 4 losing female candidates. The program classified this group from one another.

After the landmarkings and classification, a consensus image of male and female candidates for both winning and losing were produced through TPSrelw program. In treating the consensus images, it is qualitatively compared to the standard description of the average masculine and feminine face.

Quantitative method was used in the second part of the study which determined the facial preferences of the male and female voter respondents among a set of morphed faces of presumptive candidates. It is also used to determine the correlation of sex and facial preferences.

The researchers used survey questions for a mock election containing six sets of images. Each sets contain a masculine, hyper masculine, feminine and hyper feminine face. The images were produced through Face Morpher software. The voter respondents were asked to vote for the face they preferred the most and justify those choices by describing the image.

Moreover, qualitative method was also used again to evaluate the voter respondents' judgments on morphed faces.

Locale of the Study

The locale of the study is within the coastal area, rural area, and urban area of Tubod, Lanao Del Norte and Iligan City. Specifically, this study was conducted in the farmlands and coastal areas of Tubod-Lala, Lanao Del Norte and employees within the Silver Lights Bakery of the same place and Barangay Tibanga, Iligan City.

Lanao Del Norte including Iligan City has a total registered voters of 498, 814 in the year 2013. Its voter turn-out is only 365, 815 (Moneypolitics, 2013).

Research Participants

The total number of respondents is 160 with 40 participants per chosen sector. The researchers divided the total participants fairly according to sexes, which means that 80 of it are men and the other 80 are women. The primary respondents are fishfolks and farmers from Tubod, Lanao Del Norte; factory workers from Silver Lights Bakery in Tubod; and trisikad drivers from Barangay Tibanga, Iligan City.

Research Instruments

For the facial morphometric analysis, the photos of the 33 senatorial candidates were obtained from secondary resources. The researchers used geometric morphometric softwares such as TPSDig, TPSUtil, TPSRelw in order to plot the facial landmarks on the candidates's facial photos and to acquire a consensus image of the winning and losing candidates.

For the mock elections, this study also used a survey questionnaire containing the morphed faces of presumptive candidates in order to determine the facial preferences of the voter respondents. The questionnaire is comprised of morphed faces from masculine, hyper masculine, feminine and hyper feminine faces acquired through face morphing software. Moreover, the survey questionnaire also determined the demographic backgrounds of the respondents such as age, sex and as well as the amount of political knowledge they have. The voter respondents were asked how often their exposures are to news and media in order to extract those who are low informed.

The questionnaire also determined the traits that are attributed to the facial features of the winning morphed faces of presumptive candidates. The voter respondents were asked to provide an explanation for their preferences to identify the traits that they are looking for in a candidate.

Treatment of Data

To treat the data, the researchers analyzed the facial morphometry of the 33 political candidates of the 2013 senatorial election. In order to acquire the consensus image of the winning and losing candidates, standard procedures of geometric morphometrics were applied to

the photos of the candidates assisted by softwares such as TPSDig, TPSUtil and TPSRelw.

TPSDig assisted the researchers to identify the 43 facial landmarks from the faces of the electoral candidates. The landmarks were manually inputted in the program.

Figure 1. Location of anatomical landmarks of the face plotted through TPSDig.

Table 1. Anatomical Landmarks of the Face

Landmark	Description of Landmark	Type
1	Midpoint of the nasofrontal suture	II
2	Highest point on the upper margin of the midline portion of the eyebrow (left)	II
3	Highest point on the upper margin of the midline portion of the eyebrow (right)	II

32	Most lateral point at the angle of the mandible (right)	II
33	Most protruded point of the nasal tip	II
34	Medial point of the nasa ala outer margin (left)	II
35	Medial point of the nasa ala outer margin (right)	II
36	Most lateral point on the nasal ala (left)	II
37	Most lateral point on the nasal ala (right)	II
38	Lowest lateral point of the nasal ala inner margin (left)	II
39	Lowest lateral point of the nasal ala inner margin (right)	II
40	Highest point of the nasal ala margin (left)	II
41	Highest point of the nasal ala margin (right)	II
42	Medial point of the nasal ala margin (left)	II
43	Medial point of the nasal ala margin (right)	II

TPSutil program separated the landmarked faces according to groups and categories set by the researchers. Out of the 25 male candidates, the program separated the 8 winning candidates from the 17 losing candidates. On the other hand, from the 8 running female candidates, the TPSutil program separated the 4 winning female candidates from the 4 losing female candidates.

TPSrelw was used to generate the consensus configuration of the faces of the male and female winning and losing candidates. This helped in the visualization of variation of the winning and losing candidates relative to the entire population.

In determining the preferred facial features among morphed faces of presumptive candidates, and its relationships between the sexes of the voter respondents, chi-square test is used. The Chi Square statistic compared the tallies or counts of categorical responses between two (or more) independent groups such as the male respondents and the female respondents.

In treating the qualitative data for the traits attributed to the winning facial characteristics of the morphed faces of presumptive candidates, the gathered answers were analyzed and coded into themes. The frequency of the answer was also recorded to determine the most recurring description.

RESULTS AND DISCUSSION

Facial Morphometric Analysis of the Consensus Image of the Winning and Losing Candidates of the 2013 Senatorial Elections

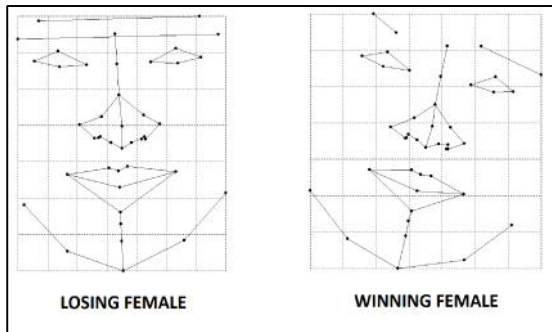

Figure 2. Consensus Face of the Winning and Losing Male Candidates of the 2013 Senatorial Elections

Figure 2 shows the consensus face of the losing and winning male politicians in the senatorial race last 2013 national elections (see appendices for names). The faces of the candidates were profiled through facial landmarking. Through TPSrelw, it created a consensus image of the losing and winning male candidates of 2013 senatorial elections.

Apparently, the brow ridges and the deepness of the eyes are not in the fullest capability of the bitmap produced from TPSrelw to show. Furthermore, the narrowness of the eyes is both evident between the consensus face of the winning and losing male candidates. The width of their noses is relatively the same with no clear distinction of measurement. However, consensus face of the winning male candidates has longer nose compared to the consensus face of the losing male candidates. The lips of both the consensus face of the winning and losing male candidates are of relatively the same size. Lastly, the jaw size however is the most noticeable between the two. The consensus face of the winning male candidates has larger and wider jaw

compared to the consensus face of the winning male candidates. This qualitative comparison and assessment signifies that the consensus face of the winning male candidates fits more the description of masculinity than the consensus face of the losing male candidates. This shows that most of the winning male candidates might have the more masculine trait as compared to the losing male candidates.

Little et al. (2007) found out that facial appearance potentially associated with leadership is facial dominance. Facial dominance is better seen in more masculine features. Dominant appearance is related to occupational status in certain settings. Facial masculinity, linked to facial dominance (Perrett et al., 1998) and it also positively relates to testosterone level (Penton-Voak & Chen, 2004), suggesting a link to actual dominant behavior (Mazur & Booth, 1998) in dominant-faced individuals.

These studies explain why the findings of the study showed that the consensus face of the winning male candidates possessed a more masculine feature.

Figure 3. Consensus Face of the Winning and Losing Female Candidates of the 2013 Senatorial Elections

Figure 3 shows the consensus face of the losing and winning female candidates in the 2013 senatorial election. It shows that the consensus face of the winning female candidates has a more elongated face than the consensus face of the winning female candidates which is rounder. The consensus face of the winning female candidates also has a smaller face than the consensus face of the losing female candidate. The lip sizes also differ. The consensus face of the losing female candidate has thicker lips as compared to the consensus face of the winning female candidates. The consensus face of the winning female candidates has a rounder face compare to the consensus face of the losing female candidates which has obvious edges. The eyelashes and the impression of brighter eyes is cannot be determined by the bitmap produced, however, it is noticeable that both the consensus face of the winning and losing female candidates have an oval-shaped eyes. The nose of the consensus face of the winning female candidates is smaller and narrower than the consensus face of the losing female candidates which happens to be relatively wider than the former. Moreover, both images show the thickness of upper lip but the consensus face of the winning female candidates has a smaller mouth in terms of width as compare to the consensus face of the losing female candidates. Lastly, the consensus face of the winning female candidates is rounder than the consensus face of the losing female candidates. This comparison shows that the consensus face of the winning female candidates fits more the description of a more feminine face. Thus, this further shows that the consensus face of the winning female candidates is more feminine than the consensus face of the losing female candidates.

Huddy and Terkildsen (1993) explains that more feminine facial characteristics are described as warm, compassionate, people-oriented, gentle, kind, passive, caring and sensitive.

Perrett et al. (1994) found out in his study that voters regardless of sex prefer a more femininised versions of the faces. For voters, exaggerated feminine characteristics are attractive. This study by Perrett et al. (1994) support the findings of this study with more feminine features as the winning face in the consensus image of the 2013 female senatorial candidates.

Preference by Sexes

Table 2. Facial Preference of the Male Voters among the Morphed Faces of Presumptive Candidates

Facial Dominance		Candidate		Total	Interpretation
		Masculine	Feminine		
Hyper	Observed	131.0	157.0	288.0	
	Expected	120.0	120.0		
Non-Hyper	Observed	100.0	92.0	192.0	
	Expected	120.0	120.0		
Sum		231.0	249.0	480.0	
X ² Hyper		1.01	11.41	24.94	SIGNIFICANT
X ² Non-Hyper		4.00	8.52		
Degree of Freedom		1			
Critical Value		3.841			

Table 2 shows that hyper feminine and feminine faces are significantly preferred by male voters than the masculine and hyper masculine candidates. Specifically, hyper feminine candidates are significantly preferred by male voters, followed by hyper masculine, masculine then feminine.

The yielded high results for hyper feminine face among male voter respondents supports the findings of Perrett et al. (1998) which contend that males also demonstrate very strong preferences for the more femininised version of the faces. In both male and

female faces, exaggerated characteristics were found attractive by the respondents.

Table 3. Facial Preference of the Female Voters among the Morphed Faces of Presumptive Candidates

Facial Dominance		Candidate		Total	Interpretation
		Masculine	Feminine		
Hyper	Observed	100.0	177.0	285.0	
	Expected	120.0	120.0		
Non-Hyper	Observed	80.0	115.0	195.0	
	Expected	120.0	120.0		
Sum		188.0	292.0	480.0	
X ² Hyper		1.20	27.00	48.49	SIGNIFICANT

Table 3 shows that female voters prefer hyper feminine and hyper feminine candidates over hyper masculine and masculine candidates. Specifically, the female voters preferred hyper feminine face followed by feminine, hyper masculine then masculine face.

The high number of votes for hyper feminine face in female voter respondents supports the findings that females tend to show strong preference for more femininised version of faces (Perret, et. al, 1998). Accordingly, exaggerated feminine characteristics are the most attractive compared to other facial characteristics.

Berggren et al. (2006) have confirmed in his study that female respondents tend to vote for women to a larger extent than men tend to vote for men. They found a similar pattern in general evaluations that female respondents tend to evaluate women in photos clearly more positively than male respondents do. Berggren et.al, (2006) also found out that female respondents give more positive evaluations on female candidates in all respects. This explains why feminine face comes after their choice on hyper feminine face and the hyper masculine and masculine face comes afterwards. The female voter respondents yielded higher results on hyper feminine

and feminine faces over hyper masculine and masculine faces because of their sex biases on being women.

Preference by Facial Characteristics

Table 4. Facial Preference of Male and Female Voters among the Masculine and Hyper Masculine Morphed Faces of Presumptive Candidates

Voter's Gender		Candidates		Total	Interpretation
		Masculine	Hyper Masculine		
Female	Observed	80.0	108.0	188.0	
	Expected	00.0	107.2

X ² Male		0.01	0.00		
Degree of Freedom		1			
Critical Value		3.841			

Table 4 shows that both the male and female voter respondents do not significantly prefer hyper masculine over masculine faces.

There is no significant difference between masculine and hyper masculine face because it is perceived that hypermasculine faces (Gangestad & Simpson, 2000) are supported by evidence that men's masculine traits signal both positive and negative attributes. Hyper masculine male faces are ascribed antisocial traits such as low warmth, low emotionality, dishonesty, low cooperativeness, and poor quality as a parent (Perrett et al., 1998). Hyper masculine faced men are also perceived to have more interest in short-term than long-term relationships (Kruger, 2006), and hypermasculine faces have more short-term, but not long-term, partners than average masculine men (Rhodes, Simmons, & Peters, 2005). Because human masculinity is associated with both benefits and costs, voters may vary in the extent to which they prefer hypermasculinity versus average masculinity in male faces (Little et al.,

2001). This explains why hyper masculine face is not significantly preferred against masculine face.

Furthermore, this finding is consistent with those of studies demonstrating that factors that are known to influence women's preferences for masculinity (e.g., menstrual cycle phase, for reviews see Jones et al., 2008a and Thornhill and Gangestad, 2008) may have a bearing on women's preferences for different markers of men's masculinity, similarly. For example, women show stronger preferences for masculinity during the fertile phase of the menstrual cycle than at other times when judging the attractiveness of men's faces (Jones et al., 2005; Penton-Voak et al., 1999; Welling et al., 2007). However, the researchers did not administer the cognizance of women's menstrual cycle. But the effect of this factor might have affected the results of insignificance.

Table 5. Facial Preference of Male and Female Voters among the Feminine and Hyper Feminine Morphed Faces of Presumptive Candidates

Voter's Gender		Candidate		Total	Interpretation
		Feminine	Hyper Feminine

Table 5 shows that both the male and female voter respondents significantly prefer hyper feminine face over feminine faces.

This result supports the findings of Perret et al. (1994) in his study that both male and female participants demonstrated very strong preferences for the femininised versions of the faces.

Intriguingly, both male and female participants also preferred the femininised male faces to the masculinised ones. Specifically, both male and female faces, exaggerated feminine characteristics are attractive. Moreover, another study by Rennels et al. (2008) also observed general preferences for femininity when judging the attractiveness of the faces manipulated in sexual dimorphism of 2D face shape. Further studies also found out that men typically demonstrate strong preferences for feminine characteristics in women's faces (Jones et al., 2007; Perrett et al., 1998; Welling et al., 2008)

Table 6. Facial Preference of Male and Female Voters on the Hyper and Non-Hyper Morphed Faces of Presumptive Candidates

Voter's Gender		Candidates		Total	Interpretation
		Non-Hyper Masculine/ Feminine	Hyper Masculine/ Hyper Feminine

Degree of Freedom		1			
Critical Value		3.841			

Table 6 shows that both male and female voter respondents significantly prefer hyper feminine face and hyper masculine face over the feminine and masculine faces.

The preference on the hyper masculine and hyper feminine face agrees with the findings of Perret, et.al (1994). Perrett, et al. demonstrated that attractive faces are not 'only average' as some researchers who proposed the Averageness Hypothesis of attractiveness had suggested but that some exaggerated facial characteristics are attractive.

This further supports the study of Johnston (1999) that respondents universally preferred the faces at the more

extreme ends of the spectrum. Accordingly, the characteristics found in hyper faces are the "hormone markers" that appear in puberty and distinguish the sexes. Testosterone causes boys' lower jaws to grow long and broad; estrogen makes girls' lips swell with fat deposits. The markers provide unconscious cues to good mating material--health and fertility.

Traits Attributed to the Facial Characteristics of the Winning Morphed Faces of Presumptive Candidates

The respondents were asked why they preferred the hyper masculine face. The voter respondents described the face in single word or by phrase. From the survey with the voter respondents, the following themes or category are drawn: Physical Facial Qualities, Leadership Approach, People Oriented Qualities, Qualities Relating to Credibility, Moral Traits, Dominant or Aggressive Qualities, Religious/Cultural Reasons, Qualities Related to Work, Qualities Referring to Self-Conduct, Qualities Attributed to People, and Qualities Pertaining to People's Expectation.

	Approachable	3
	Reliable (<i>Masaligan</i>)	1
	Patient	1
	Soft hearted	1
Qualities Relating to Credibility	Good (<i>Maayo</i>)	11
	Leader-like	6
	Smart	4
	Dubious	1
	Decisive	1
	Matured	1
	Administrative	1
	Moral Traits	Kind
Innocent		3
Good Boy		2
Not corrupt		2
Nourishing		2
Nice Personality		3
Fearful		1
Dominant/Aggressive Qualities	Brave	21
	Fierce	4
	Bold	3
	'Astig'	1
	Firm	1
	Ferocious	1
Religious/Cultural Reasons	Male	8
	God-Fearing	1
Qualities Related Work	Serious	21
	Responsible	4
	Hardworking	3
	Goal Oriented	2
	Positive	2
	Principle-oriented	2
	Professional	1
Qualities Referring to Self-Conduct	Simple	4
	Confident	3
	Formal	2
	Pleasant	2
	Respectable	2
	Proud	1
Qualities Attributed to People	Duterte-like	3
	Soldier-like	1
	Trillanes-like	1
Qualities Pertaining to People's Expectation	Will reduce the price of electricity and water	1
	Will fight against criminality	1
	Will fight for the people	1

Table 7. Thematic Diagram of the Voters Respondents' Traits Attribution on Hyper Masculine Face.

Selected Category/ Theme	Responses of the Voter Respondents	Frequency
Physical Facial Qualities	Appealing (<i>Gwapo/Arangan</i>)	12
	Neat (<i>Limpyo</i>)	5
	Smiling	2
	Recognizable	1
	Nice Face	1
Leadership Approach	Strict	6
	Authoritative	4
	Not Strict	1
People Oriented Qualities	Trustworthy (<i>Kasaligan</i>)	28
	Helpful	4
	Merciful	4

The concurrent answers that were taken described the hyper masculine face as:

- trustworthy (*kasaligan*),
- serious (*seryoso*),
- brave (*isog*),
- and kind (*buotan*)

These traits are what the voter respondents have associated to the hyper masculine face. Presumably, these traits

are also the descriptions that they look for in a political candidate.

The respondents were also asked about their descriptions on the hyper feminine face. Most respondents who chose the hyper feminine face described the image that are listed on the following table:

Table 8. Thematic Diagram of the Voters Respondents' Traits Attribution on Hyper Feminine Face.

Selected Category / Theme	Responses from the Voter Respondents	Frequency
Physical Facial Qualities	Attractive	17
	Smiling/ Happy (<i>Pahiyom</i>)	14
	Young/ Baby Faced	6
	Native-like face (Bisaya ug Nawong)	1
	Not frowning	1
	Not personalistic	1
	Neat	2
	Healthy	1
	Normal ug Nawong	1
Leadership Approach	Not strict	1
People Oriented Qualities	Trustworthy	38
	Approachable	29
	Helpful	4
	Mindful of People	2

	Good (<i>Maayo</i>)	1
	Eloquent	1
	In standards	1
	Potential	1

Moral Traits	Smart/ Bright/ Intelligent	1
	Talented	1
	Kind (<i>Buotan</i>)	56
	Innocent	8
	Honest	5
	Humble	3
	Okay	3
	True (<i>Tinud-anay</i>)	3
	Truthful	3
	Positive	2
	Not sinful	1
	Not selfish	1
	Good Testimony	1
	Not a hoodlum	1
	Nice personality	1
Peaceful	1	
Soft hearted	1	
Dominant/Aggressive Qualities	Courageous	1
Religious/Cultural Reasons	Religious	4
	Woman Empowered enough to control men	2
Qualities Related Work	Serious	5
	Visionary (<i>Naay paglantaw</i>)	2
	Action Driven	1
Qualities Referring to Self-Conduct	Determined	1
	Calm (<i>Dili isog</i>)	9
	Pleasing	2
	Charismatic	1
	Charming	1
	Confidence	1
	Formal (<i>Ligdong</i>)	1
	Presentable	1
	Relax	1
	Shy	1
Simple	1	
Qualities Attributed to People	Duterte-like	1
	Binay-like	1
Qualities Pertaining to People's Expectation	We will have lesser Problems	1
	Will help early moms	1
	Will change the nation	1
	Drug addicts will be gone	1

The concurrent answers among the descriptions on the hyper feminine face are:

- *buotan* (kind),
- *masaligan* (trustworthy)
- *maduolan* (approachable),
- *maayo* (good),
- and *gwapa* (attractive)

These traits are what the voter respondents have associated to the hyper

feminine face. This facial attribution further reveals the characteristics that the people look for in a political candidate.

This finding supports the study of Zebrowitz. Accordingly, social stereotypes create their own reality through a multistep causal mechanism: (a) Facial appearance elicits social stereotypes or expectations for the behavior and traits of attractive and unattractive targets, (b) these expectations are acted on by the perceiver in the form of differential judgments and treatment of attractive and unattractive targets, (c) differential judgment and treatment cause the development of differential behavior and traits in attractive and unattractive targets, and (d) attractive and unattractive targets internalize differential judgment and treatment and eventually develop differential behavior and self-views (Darley & Fazio, 1980; and Zebrowitz, 1997). This means that the voters' judgments and facial stereotypes influences their behaviors thus, affects their decisions on their votes.

The results of the trait attributions on the faces further proved Galton's findings on morphing methods and face averaging. Galton were able to identify multiple cues that covary with social attributions, more trustworthy when more feminine, and more dominant when more masculine. This inquiry was able to yield the same results for the face judgments on the hyper feminine and hyper masculine faces.

Moreover, some studies also found the same results such as sex and race can both lead to the attribution of stereotypical traits. Male candidates are perceived as tough, aggressive, self-confident and assertive, while their female counterparts are described as warm, compassionate, people-oriented, gentle, kind, passive, caring and sensitive (Huddy and Terkildsen 1993a, 1993b; Leeper

1991; Rosenwasser and Dean 1989). Similarly, this study also yielded the same result on the facial attributions. Hyper masculine face was also similarly described as tough and assertive. On the same breadth, this study also gained the same result that hyper feminine face shows more sensitivity and caring perception.

CONCLUSIONS

The facial morphometric analysis of the 33 senatorial candidates determined the facial characteristics of the winning and losing faces in election. The study shows that the 2013 elected senators possess facial features of a more masculine face for male candidates and more feminine face for female candidates as compared to the losing candidates. This also shows that the voters are likely to prefer facial appearances that are more hyper in features. Both the male and female respondents shared preference on hyper faces, specifically on hyper feminine face. The respondents have further associated positive traits to their facial preferences.

These findings support the theory of Biological Determinism explained by Allen (2015) which states that voters are likely to vote based on gut-feeling in the absence of credible basis. The theory on Good Genes Hypothesis further proved that exaggerated faces are more preferred by the voters when facial cues are the most available information. Moreover, this study challenged the theory of Galton on the Averageness Hypothesis of Attractiveness which claimed that attractive faces are the ones that are average. In contrary, this research showed that hyper faces, instead of average are more preferred by the voters. This is supported by the study of Perret et al (1994) that attractive faces are not

average but exaggerated faces or hyper faces.

The inquiry on facial preferences of the electorate also tells a lot about the society and the level of political knowledge the electorate has. This study contributes in explaining the political behavior of the electorate in times when the political knowledge is low. This signifies the need to advance the dissemination of political information and to re-strategize the methods of campaigns to make the information more accessible to the electorate.

From the findings and analysis of this study, it can be inferred that facial appearance of the candidates serves as a cue in molding the electoral decisions of the voters that have low political information. It further shows that the theories and methods on natural sciences such as Biology can be adopted in social sciences to explain certain social, political and psychological phenomena. While the marriage of these two very different fields can be further developed, this study effectively employed Geometric Morphometric as a useful tool in determining the chances of winning of the presumptive candidates and even actual candidates in the elections.

Abstract

Substantive participation of citizens and the Community Social Organization (NGOs) in the Upper Watershed Conservation (DAS) is a very important variable. The Indonesian government has made the Brantas River in East Java - Indonesia, became a national strategic river based on Government Regulation 42/2008 on water management. However, based on secondary data research shows that that critical area in the Brantas river basin reached 332.189 ha and average erosion rate of 66.24 tonnes / ha / year (BPDAS, 2014). Outside the forest area also suffered significant damage the land area of 207 641 hectares. Until now there are 1.113 community and 740 Farmers Greening and Public Agencies Forests, as well as 3 Social Institutions communities involved in the conservation of forest lands upstream watershed Brantas, but not enough to stem the damage DAS Brantas. The research question is how to model the involvement of citizens and institutions in the Brantas watershed conservation. Whether the involvement of citizens and NGOs have been able to reduce the degradation of watershed Brantas? This study focused on four local government in East Java, Indonesia, Batu, Malang, Malang city and Kediri. The method used is qualitative research methods to answer questions in-depth research. The findings of this study concluded that the pragmatic model of citizen engagement. NGOs promotion agency that significant for the growth of participation of citizens. Citizens and NGOs involvement is quite a positive impact on the sustainability of the Brantas River Basin.

Keywords: Participation, Citizens, NGOs, Watershed Conservation.

Introduction

Upstream of Brantas watershed (DAS) has potential and are well placed for the majority of East Java. Damage upstream can have an impact broadly on lowering springs, drought in the dry season and floods in the rainy season. Indications Brantas watershed damage among which the shrinking number of springs in the upstream areas in Lima mountain region is the source Brantas namely G. Arjuno-Welirang, G Kelud, Mount Kawi, G. Willis and G. The source of water contained in the City stone has dried. 11 springs dry up the springs while 46 decreased flow of 10 m³ / s to less than 5 m³ / sec. If there is no improvement Brantas good management in East Java in 2020 is a deficit of water (Berita Jatim, 2012).

Conditions catchment upstream of Brantas watershed deteriorated due to encroachment and land use, disregarding the rules of the conservation of soil and water conservation. This leads to increased soil erosion which could ultimately lead to sedimentation in rivers and river infrastructure such as reservoirs and dams, decrease in base - flow, and droughts and floods. Another problem is the declining discharge or even the loss of many springs in the Brantas river basin, riverbeds and

degradation of water quality degradation. According to the Environment Agency (BLH, 2011), The Government of East Java Province, there are about 111 springs that flow into the Brantas River. The activities of logging and forest conversion causes dryness of 54 springs. Now, just 57 springs are still flowing.

However, in the implementation of conservation in the upstream watershed Brantas still encountered many obstacles such as: 1) The role of stakeholders in watershed management is not in accordance with the action plan has been drawn up; 2) Lack of synchronization between sectors in watershed management activities; 3) Budget watershed management is still limited to financial resources Centres; 4) understanding of the stakeholders in the implementation of RPDAST still low due to frequent change of officials in the region; 5) Not all districts / cities formed the Forum DAS, while the DAS Forum has been formed yet function optimally; 6) Lack of socialization.

Citizens and NGOs are stakeholders who determine the success upstream conservation, in addition to other stakeholders. It is necessary for the development of the model substantive participation in watershed conservation

Brantas. Thus, in turn, will materialize Brantas watershed sustainable and growing prosperity of society. Referring to the problem, it is very interesting to do research Substantive and Citizens Participation of NGOs In the upstream Watershed Conservation In Indonesia. Based on the background of this study, the researchers formulate the problem as follows: How to model and NGO Citizen participation in the conservation of the river upstream of Regions (DAS) ?. Is Citizen and NGO participation in the conservation of the river upstream of Regions (DAS) has lead to a substantive participating?

A theoretical overview: factors affecting the substantial participation

Attention and government support for the importance of participation or real participation started in early 1960s resistant especially for developed countries like the United States (Smith, 1985). In developing countries, since the late 20th century, citizen engagement in policy making in government began to be taken into account. Previous development of democracy has lost its meaning which leads to autocratic dictatorship (Yunus, 2005). Caiden (1982), suggests that public participation is important in the study of public policy.

Public participation in public policy is defined as activities that do citizens, influence government decision-making (Thoha, 2005; Burn and Peltason, 1966; Suhirman, 2004; and Tikson, 2009). The importance of participation in public administration diantaranya proposed by Graham and Phillips (1998) in the book Citizen Engagement: Lessons in Participation from Local Government, King and Stivers (1998) in his article titled Government is Us: Public Administration's Anti-Government Era and Box (1998) with his work entitled Citizen Governance. The concept of participation of Peter analogous concept of participation in the perspective of good governance (Cornwall and Gaventa 2001), as table 1.

Tabel 1 the participation toward

Source: Cornwall and Gaventa, (2001)

Arnstein publish his writings under the title "A Ladder of Citizen Participation" in the Journal of the American Institute of

Planners. Arnstein participation ladder consists of eight steps, which reflect the degree of participation. Of the eight (8) steps are divided into three (3) major categories. The first category is non participation, consisting of manipulation and therapy; second, that the degree of participation marks, include the provision of information, consultation, penentraman, and partnerships; and third, the degree of citizen power consists of the delegation of power, and control of citizens. Another expert who have some viewpoint with Arnstein Burn, Hambleton, and Hogget (1994), Biggs (1989), Cornwall and Jewkes (1995), (1669) and Parkes and Panelli (2001),

Participation of citizens and NGOs in watershed conservation is expected to encourage the development of the region in order to improve the quality of life (city as an engine of economic growth) social justice (social justice) in environmental sustainable (environmentaly sound) and sustainable (sustainability sound) through spatial planning (Rico, 2006). Normatively community involvement in the arrangement of space, have been arranged in a variety of products such policies: UUPR No. 24 of 1992, which was then replaced with UUPR No. 26 of 2007 and Government Regulation 69 of 1996 on the Implementation of Rights

and Responsibilities, as well as Forms and Procedures for Public Participation in Spatial Planning.

Model Participation: from the pragmatic to the substantive

Participation, as well as civil society and democracy, a term that has been quite old. But as the concept and operational practices, new participation discussed since the 1970s when some international organizations promoting the practice of participation in planning, implementation, and evaluation of development. Since then the concept of participation becomes more developed and has a diverse understanding though in some respects convergent (Suhirman, 2004). Public participation in policy-making role in either implicitly or explicitly been raised in the Rio Declaration on Environment and Development in 1992. According Negel (1987), the participation of community members associated with the actions of citizens who influence decision-making.

Citizens participation is often defined as a citizen action that influences or seeks to influence policy decisions. Citizen participation is also related to the need of citizens to services and public administration, as indicated by Zimmerman

(1986) as follows. Citizens participation as an action that incorporates the demands and values of citizens into public administration services. Participation is also a process of growing awareness of the interrelationships between the different stakeholders in the community, between social groups and communities with policy makers and other service institutions. Such participation can be defined as "the act of taking part or sharing in something" (Syahyuti, 2008). The concept of public participation in the sense of actually not only invite the community to be involved in the process of implementation of the program or project, but also provides an opportunity to identify problems, solve, make decisions, plan, implement, monitor, and evaluate, so that the program or project will belong to those who then be maintained on an ongoing basis (Tikson, 2009). In the context of development, participation by Syahyuti (2008), is a tool, goals, and processes. As a tool, participation is an essential device. Participation as a destination is "supporting people in articulating and negotiating Reviews their interest at the social, institutional, and policy-making levels in the partner country". Meanwhile, participation as a process, or as a principle in management, is the observation that

involves more intensive actors involved in the project goal setting, measurement, and process.

In this level, Gaventa (2001) asserts that the participation of citizens in relation to participatory democracy and deliberative democracy or direct democracy. This has shifted the concept of participation than just concern for the 'recipient' charity 'or' the marginalized 'toward a concern. While Peters (1996), linking participation in the development of various governance models. In this perspective, the participation is not seen as a means but as an end in itself. Peters concept of participation is in line with the concept of participation in the perspective of good governance (Cornwall and Gaventa 2001). In this context, participation is directed into a form that is more directly how the public can influence the government and force them to be more accountable.

Participation is also related to citizenship and accountability, as stated by Gaventa (2002) in his article titled Introduction: Exploring Citizenship, Participation and Accountability. He said further that in the past, there are two tendencies in the face of the gap between citizens and government institutions. On the one hand, these gaps be addressed by

strengthening the participatory process to influence larger institutions in the policy making process. On the other hand, the gap is overcome by increasing attention to accountability. At this time, participation and accountability, are two very important things to be done simultaneously. The participatory approach continues to evolve from project level to the policy level. To be meaningful, the arguments for participation and institutional accountability should be based on the conception of rights, which in the context of development, meaning there is a strengthening of the status of citizens.

Cornwall and Gaventa (2001), then a closer look at how it should shape and space of participation that occurs. However, they admit that there is no form or participation of neutral space. Participation is always associated with power relations are entering or who are around them. Therefore, what is needed is more attention must be given to who gets what and why, who fills them, how to create a space that contains traces of social relationships, resources and knowledge that already exists. How to prevent patterns of power the old established order from being reproduced.

The description illustrates that there is a dilemma on participation. On the one hand participation is part of the

democratic process and participation is a necessity. On the other hand, is not easy to develop the participation of a neutral and free from the influence of power. Long before that, namely in 1968, Burke has felt the turmoil about it. In his article titled Citizen Participation Strategic, he pointed out that the participation of citizens for democracy (participatory democracy) can not be separated from the existence of a conflict of values, namely the conflict between freedom represented the residents on the one hand and the powers that represented the government on the other side. Nelson and Wright (1995) suggested similar things with a view Burke.

In this context, Burke (1968) have previously been analyzed that citizen participation is not a value, but rather as a strategy. In general, citizen participation is used to indicate the assumptions, conditions, and requirements of the organization. One concept that is very popular participation since forty years ago is the participation of Arnstein stairs. In July 1969, Arnstein published the article titled "A Ladder of Citizen Participation" in the Journal of the American Institute of Planners. The idea is more "provocative" and focused on the redistribution of power as an important element in the elucidation of citizen

participation. As shown in Figure 1, the ladder Arnshtein participation consists of eight (8) steps, which reflect the degree of participation. The eight steps are divided into three (3) major categories: 1) non-participation (non-participation) consisting of manipulation and therapy; 2) the degree of participation mark (tokenism) which includes the provision of information, consultation, penentraman, and partnerships; and 3) kekuasaan resident (citizen power) which consists of the delegation of power, and control of citizens. A brief description of the eight stairs are as follows.

1) Manipulation. This stage has the lowest levels of participation for participation is merely a game by the government, so at this stage it can be said almost no public participation.

2) therapy. This stage is done only intended to make residents are not angry or just to treat the disappointment of the citizens.

3) The notification or provision of information. At this stage, with the notification of participation is unidirectional or dissemination of government authorities or to the public.

4) The public consultation. At this stage there is two-way communication between citizens and government. He advised the

public to be heard, though not necessarily implemented.

5) Penentraman. At this stage, the advice received by the community, but not always implemented.

6) Partnership. At this stage, people involved in more depth, going on a reciprocal relationship and the relationship going negotiations.

7) Delegation. At this stage, people (some or all) given the power.

8) Control. This stage has the highest degree of involvement that gives citizens more strongly or fully controlled by the community.

Source: Arnstein, (1971: 70)

Figure 1 Domestic Participation Sherry Arnstein

Arnstein opinion, to date, has been followed by many other experts, especially if associated with citizen participation in development. However, criticism of the opinion of Arnstein also emerged, especially criticism attributed to confusion between participation and control power. For Arnstein, if citizens have been able to fully carry out control, it can be interpreted as the participation of citizens has reached the highest degree that is in control / power of citizens. In contrast to Arnstein, according to Burn, Hambleton, and Hogget (1994), stairs participation could be more than eight steps with unequal spacing. They then put forward the concept of empowerment staircase consisting of twelve (12) stairs. In addition, in all three categories, namely the control of citizens for Burn, Hambleton, and Hogget (1994), actually is not anymore as participation. According merka in the third degree, over the control than participation. Nonetheless, the concept they still includes a third category as the highest degree of participation.

Similarly, the opinion of Arnstein, who occupied the position degree is the

lowest non-participation of citizens, but the first rung consists of four (4) steps which include: fraud citizen (civic hype), consulting cynical (cynical consultation), bad information (poor information), and the maintenance of customer (customer care). The second is the degree of participation of citizen participation (citizen participation) that has six (6) steps, the number of steps is more than a concept Arnstein.

Experts such as Biggs (1989), Cornwall and Jewkes (1995), (1669) and Parkes and Panelli (2001), have thought the same way about their Arnstein degrees or tingkatan in participation. They create a category of participation into six (6) categories respectively as shown in Table 2. The larger the type, the smaller the control of outsiders, even at 6-type control is zero or no control at all. Instead the potential for sustainability of action and a sense of local ownership is increasing. In type 1 to 3 potential sustainability is zero, and the type 6 is the highest potential.

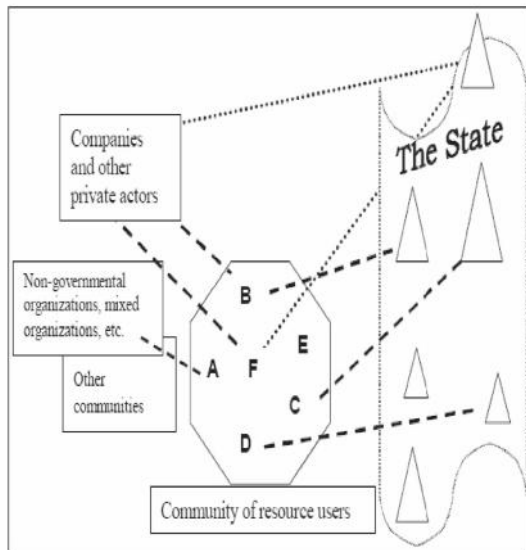

Figure 2 Multi-Stakeholder Partnership of Carlsson and Berkes

Source: Carlsson and Berkes (2003)

Key participation in this model is the realization that to achieve the objective in decision-making can not be done alone. Thus the partnership between stakeholders are basically aiming to reach a decision that is competent, must involve many stakeholders, and bringing together the skills and resources of others. To do this required collective thinking about the vision and goals, and work together toward a common goal. Therefore, multi-stakeholder partnership is a necessity to achieve a common goal (Fung, 2006). It is important to note the multistakeholder partnership process is that this partnership is not just

transform into management collaboration. Citizens should learn more on the experience so far that you can not resolve an important issue directly. Gaps and domination of the government, the gap of communication, hidden agenda of a particular party, often do not make the realization of a balanced partnership model. At the end of the partnership, the residents are often the partners are marginalized or silent partners. They may be able to share in the profits and losses in a business or activity, but was not involved in the management or little involved in the decision making process.

Practically, according to Carlsson and Berkes (2003), the relationship between citizens and stakeholders, both government as policy maker and private institutions or NGOs, in some cases it is merely a formality. In terms of availability or the transmission of information to citizens, for example, frequently occurs injustice. On the one hand get enough information, while the other party obtain minimal information. Residents often invited to give their views. But it is only as part of a "consultation" of the government to its citizens. In this relation that happened was a formality, where the government institution has an agenda and has been providing a wide range

of background information and citizens were invited only to meet formal submission. Likewise with other communities only able to act as an advocate to the very minimal.

Research methods

This study was included in the category of contextual research, which is one of the categories in qualitative research for policy study. Presented by Ritchie and Spencer (1994) that the contextual study aimed to identify the format / shape and nature of the characteristics of an ongoing policy (Islamy. 2005). By using qualitative research, this study describes holistically with the natural setting, explore in depth, and the disclosure of the hidden phenomenon substantive participation in the implementation of DAS.

Referring to the research problems that Substantive And Citizen Participation of NGOs In The Upstream Watershed Conservation In Indonesia, the focus of this study are: citizen participation form and NGOs in watershed conservation Brantas. Participation in the planning, implementation, and evaluation of the Brantas river basin management. The shift from the pragmatic to the substantive participation in the management of upstream watershed Brantas.

This study used two (2) types of data. First, the type of primary data, obtained through local government officials from several agencies. Besides, from the community of researchers get the data community, a group of farmers concerned DAS Brantas environmental activists. As for the secondary data obtained by searching the archives and documents related to the Brantas Watershed Conservation. Thus, in principle, in this research there are three (3) data sources, namely: informants, events and documents.

The data collection techniques done in 3 ways: interviews, observation, and documentation. Researchers chose the interview that will be open (open ended) or unstructured (depth interviewing) and informal. Additional data collection that is, by observation. Observation is essentially the observation of behavior and phenomena that exist. As for the documentation researchers collect data from direct contact and ask from the staff of the relevant agencies, such as Bappeko, the Environment Agency and the Public Company Jasa Tirta.

Data analysis techniques used model of interaction of Miles and Huberman (1989: 9) Data has been basically dinalisis since the data is collected, even at the time of data collection. This interaction method

basically include: (1) the collection of data (data collection), (2) reduction (data reduction) is the selection process, focusing, simplification and abstraction from existing in the field note; (3) display the data (data display), which is an assembly of information organization that allowed the conclusion of research to do and; (4) Conclusion Conclusion: Drawing / verifying namely depiction conclusion (Miles and Huberman, 1984).

Discussion

NGOs that have kepedualian in the field of conservation of watersheds include the Heritage Foundation and Chairman of the Law Student Forum Peduli Justice (Formah PK) and religious institutions such as poor wallet. The problems are most severe in the management of upstream namely in Batu

(Parianom, 2013). He also noted that According to Article 87 of Law No. 7 of 2004 on Water Resources, the process of implementation of water resources management which involves the interests of many sectors and regions, streaming, cut across administrative boundaries as well as a basic requirement for the survival of society will be shaped in a coordination management of water resources. Its membership of representatives of stakeholders, both government and non-governmental organizations. Coordination can be formed at the national and provincial levels.

In the midst of many difficulties in watershed management , farmer groups are institutions that also play a role in the Brantas river basin management (Table 3)

Table 3 Institutions Farmers on DAS Brantas					
No.	Regency/City	Institutions Farmers			
		Institutions Farmers		LMDH	
		Number of institution	Number of member	Number of institution	Number of member

<i>Sumber data : BP DAS Brantas '09</i>					

Various agencies are concerned DAS Brantas lately begun to appear, but in reality in the field each institution working partially. The absence of good cooperation among existing institutions will in turn give birth to mismanagement. As noted Harini that mismanagement of the upstream Brantas has resulted in a variety of forest destruction. The forests in the area around the watershed and sub-watershed Brantas Upstream lot of bare undergo conversion to agricultural land, housing and others. In principle, there are some fundamental changes over the functions of forests are: start the decline of forests, dwindling water sources, erosion layer of fertile soil, the incidence of landslides, silting rivers and ultimately bring the impact of changes in the direction of degraded land. Criticality of land in DAS Brantas this subzone occurs mostly in areas with steep slopes with a slope of 40-60% and > 60% in the mountains Anjasmoro, Arjuno, Panderman and a small portion of Mount Wukir (Harini, 2012).

There are several aspects of institutional suspected as the cause of the failure of critical land management program Brantas River Basin, among others: (1) The sectoral agencies in the area are less involved in the planning; (2) weak

performance management functions critical land rehabilitation: (3) the lack of coordination in the functioning of critical land management; (4) no / no strategic program but does not support the planning, execution, and monitoring of critical watershed-based land management; and (5) the priority activities / less effective in supporting critical land management program DAS Brantas.

To increase participation from administration of the institution in crisis management and watershed Brantas must begin with the similarities of ideology and commitment. Both of these will then be reflected in the regulation in favor of the preservation of the watershed Brantas. But in fact the moment pragmatic interests often beat long-term interests of environmental safety. As Parianom Bmbang statement as follows. "The government should be in control in the management of major green open space, especially in the area of forest watershed Brantas. But the government is not committed to it. social behavior policies that conservation in the upper very unnoticed.

Therefore, naturally why Brantas was born in Batu. Brantas was the starting point in the Stone, because of her position.

Why, because the upland areas for lowland if not impossible. Therefore Stones has Gunug, forests, and water. Mountains covered with forests, and water lahirla addition there is also a water-water from geological factors. While the attitude of people do not care that it was included with the upstream. Well as if its political stance, including stone used as an autonomous region. Properly Batu Malang satellites, so it can not be considered as an expansion area of Malang, Hulu itukan should be conserved "(Interview, Parianom, 22/9)

Further delivered by Bambang, considering Stone is the upstream part, he has to be maintained its presence will affect the city below. Management of protected areas is specifically regulated by Presidential Decree No. 32 of 1990. The policy was designed to guide the management of protected areas in the development of spatial patterns. Act No. 26 of 2007 on Spatial Planning also mentioned the establishment of protected areas besides having cultivated area. There are also other related regulations are used as the basis for analysis.

During Different ways to address the critical area has been done by the government, including through reforestation and afforestation programs. Physical success

of reforestation during the Fourth Development Plan only around 68%, whereas only 21% greening. This may be due to the lack of precise technology used, or the condition of the land has not been studied carefully, or because the technology is not implemented fully. In terms of environmental conservation and efficient use of funds in the program extending the utilization of degraded land with improvements in productivity might be better than open forest. Productivity of some types of degraded land, for example grasslands with relatively easily fixed for the cultivation of food crops (Manwan, 1993).

Brantas SubDAS conservation issues and management of forests in Bumiaji based on urgency and vital functions of forests and water supply to people's lives, not only in Bumiaji, but also affect the lives of people in East Java. Heritage Foundation and Concerned Farmers Group has started doing Brantas watershed conservation with perennials. The selected plants are plant species guava, coffee arabica and persimmon with reason:

1. It is a valuable fruit crop conservation and economy according to the height (located 1,500 meters above sea level) and soil conditions.

2. On the guava and coffee crops have easy maintenance, low cost and relatively short growing period. Punctuated also by persimmon crop as a long-term strengthening plants.

3. Can be initiated into a tourist village picking cashew and coffee centers menginggat the tourism potential in the area of Batu while the nut is not developed yet.

Efforts are being made the foundation heritage is inseparable from the cooperation over the mountain side. Between the parties involved are Dhuafa Wallet Foundation, Group of Concerned Farmers DAS Brantas, Interfaith group, and the Universities. Planting trees stand by the Heritage Foundation begins by providing insight and understanding to the farmers of vegetables to be willing to plant a tree stand to preserve the upstream watershed. Rejection of the citizens to grow big enough stand. Chairman of the Heritage Foundation, Bambang Parianom said that: "it takes patience and persistent struggle to provide insight on the people to be willing to plant this tree stands. Due to the fact that citizens have felt the joy of the farmers grow vegetables results. So it is not easy to change pemahanan them immediately. For

that we need to embrace the farming community and prove that conservation and productive plant stands can supply those, it was a challenge he said "(Interview, June 8, 2015).

Chairman of the Group of Concerned Farmers Brantas River Basin (KPPDAS) Brantas:

"Farmers here in part (although still relatively few in number, namely 41 heads of families), has a commitment to make the land slopes in the village Sumber Bumiaji Bratas as Cashew plantation areas, coffee, and persimmon. It has production plants we take into account that the fruit stands. We have been working on the planting of fruit trees such cooperation with the Heritage Foundation and other agencies concerned with the conservation and improvement of public welfare. And that is now seen to work "(Interview, June 7, 2015).

Bumiaji is the only district that is still very strong with farming culture where most of the residents in this district everyday activities involved with the agricultural sector both in the open , in the yard as well as in homes . The Farmers Group in the area of Earth aji is as follows .

Table 5 The Farmer Group Bumiaji Batu

1. SUMBER URIP	Ds. Giripurno	(335 member , 14 FG)
2. TULUNGREJO BERSATU	Ds. Tulungrejo	(282 member, 9 FG)
3. MITRA SEJATI	Ds. Pandanrejo	(303 member, 10 FG)
4. MERTA JAYA SARI	Ds. Sumbergondo	(285 member, 7 FG)
5. BUMIJAYA ABADI	Ds. Bumiaji	(380 member, 10 FG)
6. BUMIASIH	Ds. Bulukerto	(439 member, 15 FG)
7. SUMBER JAYA	Ds. Sbr.Brantas	(224 member, 5 FG)
8. PUNTEN MAKMUR	Ds. Punten	(271 member, 11 FG)
9. GUNUNGSARI MAKMUR	Ds. Gunungsari	(464 member, 17 FG)

Farmers in Bumiaji mostly grow vegetables. It is quite rational given the benefit of vegetable crops are promising and armpits take a long time to produce. Yet another condition it threatens kelstarian slope / upper watershed Brantas be Rwan landslides. Efforts to change the mindset of people to

switch from growing vegetables to plant stand is not an easy task. Given the very pragmatic thinking citizens who need rapid income. So as to switch to cultivation of stands is very difficult. For the middle road taken is to do intercropping, it also has not been fully accepted by the citizens.

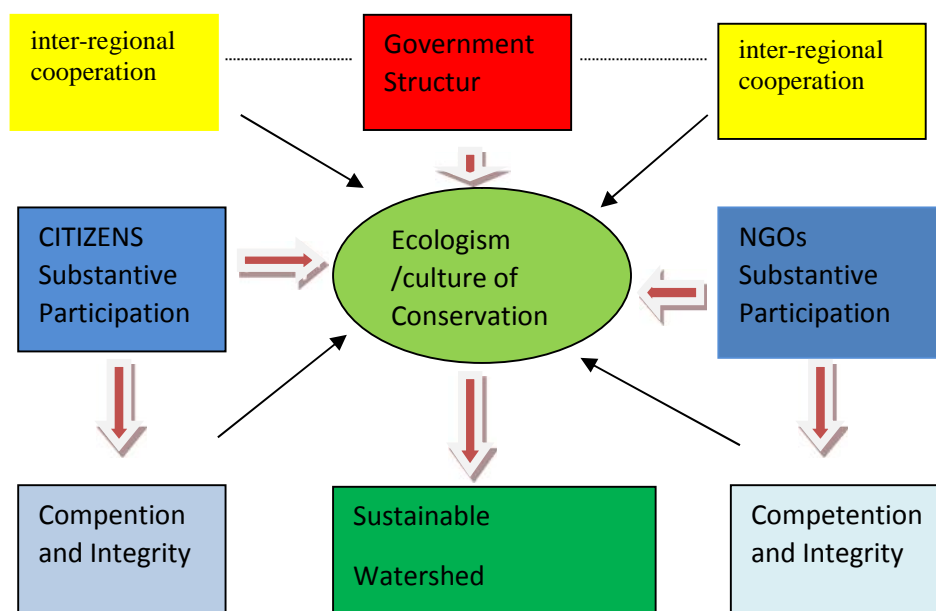

Figure 4: Model of Substantive Participation.

The Model of Substantive Participation describe that there are two component for Citizen and NGOs substantive participation, firs competition and second integrity. The other factor who influnce Substantive Participation is structur og governmen and regional government.

The efforts made by various government stakeholders, community care for the environment, and the academic community should pay attention to three (variable) yaiti struktue, culture, and agricultural technical. Very promising agricultural production such as in Table ... agricultural commodities these vegetables can not make farmers to switch to pernaian

plantations and tree planting stands. Sand mining activities in the district of Kediri, East Java, are still rife, which occurred at a number of points. "Mining is still there, just manually approximately 4-5 points and down the path of lava," said Head of Civil Service Police Unit (Satpol PP) General Djoko Retmono Kediri in Kediri, Friday (04/01/2016), Agung said the region recorded still sand mining in Kediri is in District Plosoklaten, Puncu, as well as a number of existing local lava path. At that location, he said, residents are still mine freely.

Also in the District Ngancar, Kediri, mining had also occurred, even using

heavy equipment. Every day, dozens of trucks in and out of the location of the lava path. In fact, as a result of mining, occurred very deep ravine, up to nearly 20 meters. Currently, the mining was stopped temporarily. Agung added that it is already prohibits mining was conducted. Moreover, in the path of the lava of Mount Kelud (1,731 meters above sea level), without permission because there is a potential danger. "We urge the public to be vigilant, because the cold lava can come at any time, especially during heavy rains," he said. Agung added in the border village of Siman, District Kepung, Kasembon, Kediri, Malang, also found. The Supreme mention more sand excavation activities carried out in the district of Malang, Kediri that municipal police had no authority to conduct raids.

According to Law No. 23 of 1997 on Environmental Management, the definition of environmental destruction are actions that give rise to a direct or indirect change in the physical and or the environment which causes the environment no longer work to support sustainable development. One form of environmental destruction are illegal sand mining activities in the Brantas River Village Semampir Kediri. According to the Environment

Office Kediri, that in principle the mining excavation C (sand mining) along the Brantas River, are not allowed either mechanical or conventional, and in this case because the condition of the Brantas River and its environment has suffered massive damage and harm to infrastructure rivers and set forth in the collective agreement in 2009 between the Ministry of Environment, municipal police and Disperindagtamben Kediri. Illegal mining in the Brantas River Village Semampir, consists of two types of mining.

Among them mining, mining mechanical / use of machinery and mining of traditional / boat. Mining mechanically / use the machine in question is the process of mining / removal of sand using a machine. The machine is used to suck up the sand on a large scale where large rocks at the base sungaipun can be transported. Mining is traditionally / using the boat meant that the miners use a boat to help them toward the middle of the river to bring up the sand. The parties involved in illegal sand mining activities in the village Semampir mine operators including sand, sand miners, porters sand, sand truck driver and thugs guarding the mine area. The trucks of sand that often crosses the village road due to

illegal sand mining in the Village Semampir cause impacts on surrounding communities.

Not only affect physical damage in the short term but long term will lead to destruction of ecosystems DAS Brantas. Degradation of riverbeds to reach 6 meters lead to the emergence of riverbeds very deep. Erosion of the cliffs of the river so that the river becomes cloudy conditions with a level 1 dissolved solids is quite high. It is, very influential in the Brantas River water quality, so it is necessary because of the Brantas River water is used as raw material for drinking water. Total benefits from illegal sand mining activities in the Village Semampir include any benefits received by the parties involved in mining activities amounting to Rp 61,703,085 000.33. Consists of income / profit employers sands mine Rp 17,198,085 000.33, labor income sands mine amounting to Rp 17.82 billion, revenue porters sand Rp 10.674 billion, revenue trucker Rp 7.116 billion, and income thugs / security amounting to Rp 8.895 million 000. Total loss experienced due to illegal sand mining in the Village Semampir Rp 84,488,162 200. It consists of a layer of sand loss due to lost Rp 81,877,464,000, repair of damaged roads USD 1.14957 million 000, lost government revenue 1.2453 billion USD, repair

riverbanks USD 215 828 200, Installation groundsil bridge Rp 1.5 billion (Madiun Pos, 2014)

Conclusion

Model substantive partisipaf in the management of conservation DA S Brantas representatives from the government and non-government. Among the Brantas river basin management institutions is a Coordination Team of Water Resources Management Brantas River Region (TKPSDA-WS Brantas), Institutional TKPSDA as Public Works minister's decision. This TKPSA has a membership of some instutusi. From the government of which consists of: the Central River Region Brantas, Perum Jasa Tirta I Malang, East Java, Provincial Agriculture East Java, Irrigation Department of Malang Regency, the Infrastructure Department of Blitar, Irrigation Department Kab Kediri, Department of Water Resources and Energy City stone, Public Works Department of the Environment Agency Mojokerto and Surabaya, and so on. Especially for water resources management in the Brantas River in East Java province, the Ministry of Public Works has made the Decree of the Minister of Public Works 248 / KPTS / M / 2009 on Establishment of the Coordination Team of

Water Resources Management Brantas River Region (TKPSDA-WS Brantas) ,

Membership of TKPSA of elements of non-government including the Joint Association of Water User Farmers (GHPPA) Source Barokah Jombang, Parent Himpitan water user (IHIPPA) Tirta Agung Mojokerto, GHIPPA the Mutual Cooperation Blitar, GHIPPA Malang, Association of Indonesian Farmers DPK Nganjuk, the Association of Geotechnical Indonesia (IAGI) East Java and so on. Other institutions of the elements such as NGOs Heritage Institute and Chairman of the Law Student Forum Peduli Justice (Formah PK) and religious institutions such as poor wallet.

There is some disharmonious relations among government agencies, citizens, and environmental activists will have an impact on the inability of these institutions to maintain Brantas watershed forest. In management operations in the field, many of the disturbance to the forest area. Of course a variety of disorders will affect the function of forests as a regulator of water. In general, other forms of harassment against forest area can be grouped into encroachment of forest areas to be arable land, the illegal harvesting of

timber and non timber, illegal grazing and forest fires.

Community involvement in efforts manage DAS Brantas of damage, encroachment or theft, upstream in Kota Batu also a group of farmers who are concerned about the sustainability of the watershed Brantas. They are members of the Community Rescue Farmers Watershed (KPPDAS) Brantas. The number of farmers who are members of as many as 41 farmers KPPDAS institutions. They are very mengakhawatirkan forests in the upstream watershed Brantas. According to them the government is not serious in managing the watershed Brantas.

Management of critical community-based land management is a new approach for environmental researchers. In a community-based land management, the public are invited directly from the planning, policy formulation, implementation and collection of benefits. This approach allows the public can directly calculate the economic impact and environmental (conservation SDA). The two aspects can not be separated in the review of natural resource management in support of environmental sustainability based on community empowerment.

In the end it is recommended to perform the rearrangement or reconstruction

of the model of substantive participation in watershed conservation . The substantive participatory models can be implemented with the first step of commitment and ownership focusing on soft skills of citizens and NGOs in watershed conservation Brantas . Substantive participation tidakmhanya rely on short-term economic interests , but he was thinking more strategically to maintain the sustainability of the watershed Brantas . Substantive participatory bottom-up are expected to be more effective . Given the Brantas river basin management has been top-down and bureaucratic no results. Therefore , the most important thing is to prepare citizens and NGOs intelligent (the smart citizen) and care for the Brantas watershed conservation.

Implication

The result of this study has practical implications to improve government in the Brantas watershed conservation. Substantive Participation Model can be used to conserve the watershed in other areas. Studies still need to be Carried out strategic policies concerning some items, namely to speed up the law Deliberation on public participation; to the make the substantive participation of more powerful in terms of its power of citizens and NGOs to execute Brantas

watershed conservation and to speed up implementation at substantive participative watershed Brantas. One urgent step of the government is to create the substantive participation more effective. Participation so that there is not only pragmatic to meet the short-term economy.

Acknowledgments

This work is supported by Grant's Master Plan for the Acceleration of Indonesian Economic Development (MP3EI), the Ministry of Research and Technology and Higher Education Year 2015. The study also funded Doctoral Thesis Program (PKID) from the University of Muhammadiyah Malang. The authors wish to thank colleagues Also reviewers are for Reviews their insightful comments and suggestions. The last version of this paper was presented in the International Conference on Public Organization VI (ICONPO VI), 10-11 August, 2016, Thammasat University, Tha Prachan Campus Bangkok Thailand.

Abstract

Write your abstracts of no more than 350 words and please indicate of 3 to 5 keywords. Please use Arial 10 with 1.15 space Fishing communities in Indonesia still requires serious attention to empower them, not only determined by the behavior of nature alone but also influenced by humans who have access to and interests are closely associated with the area so that the ideals of expediency coast aimed at prosperity of the people precisely for the surrounding communities are often the difficult to materialize. As in the coastal areas in the district Sedati, fishing communities are economically not been able to increase revenue, while the sea is a natural source of potential to be developed. By photographing the social, ecological, and technological potential that can be developed for the welfare and overcome the problem of coastal communities, sprang solutif prototype models (socio-techno-ecologically) as a form of integration between disciplines and between institutions in the governance of coastal areas.

Keywords: Fishermen Community Development, Integrated Governance.

Key Words: Three to Five keywords

INTRODUCTION

The development of coastal areas and marine, as one sector strategis in economic development today, is a sector that still need to be optimized in view of the potential of the existing marine has not integrated

and continuous to improve the welfare of fishermen. Need on their fishing community empowerment program / This coastal considering that to date most coastal communities in Indonesia is still low income. This empowerment program as well as aimed at poverty alleviation through

sustainable development programs. Departing from all that, it is necessary to have a comprehensive approach to community empowerment program.

Results showed that the condition of coastal areas of Indonesia is populated with the level of prosperity, both economically, socially and culturally still low. However, if viewed in terms of the resource potential of the coastal area, the actual saving potential is quite high. Only "participation" in the form of government and corporate supply and infrastructure facilities felt relatively weakly. Besides, some research also shows a lack of public knowledge about modern technology and environmentally friendly and creative efforts to increase revenue, especially in times of scarcity, where the fishing is very limited results. In the dry season, based on the growing phenomenon, mostly wives of fishermen / coastal communities by being forced to sell all the household goods that are considered valuable or pawn to pawn institutions to meet the needs of everyday life. At such times, they expect the attention of governments and corporations to participate ease the burden of life's stressful.

Mean while, the authorities in the area often to blame for fishing / coastal communities such as it is considered wasteful to spend money when the fishing season and uneconomical so the quality of life they are difficult welfare increases. They also say that the responsibility for such difficult life entirely a matter for fishermen. Thus attitude will never be able to decimate the

issue of hardship nelayan yang still buffeted by poverty (Kusnadi, 2003).

During this time, the facts in Indonesia, has not managed marine potential with more optimal because of the tendency of political will of governments and some public perception that prioritizes the cultivation of the results of agrarian and land area. Less strong political will of governments to the maritime field, especially the beach to be one of the factors have not powerless maritime potential for the national economy in general and the marine area local beach. Though the sea has a strategic role, that is, besides promising economic value at the same time has the potential to unite separate islands in Indonesia. ("Managing Potential Sea" on <http://bp2ip-surabaya.ac.id/?P=archivecat&I=en&newsaction=shownews&nid=471> downloadable pkl Monday, July 9, 2012, 15:56 pm). Regions in facing the challenges of poverty reduction when inimasih based policy frameworks oriented to approach top-down. In the future the necessary policies built upon basis of mutual agreement between the regional government and the local community wisdom Corporate based in the autonomous region wide area (Muhammad, et al, 2009). Empowerment of the poor need to be directed to amend the coping strategies of the poor that is getting better by the needs of the poor and expectations of the population itself at the local level. Planning and implementation empowerment should contain business for strengthening

their productive economic activities based on the "views and their needs", so that the poor have access at source social-economic and political independently.

Access coastal communities on economic resources until now, especially in the coastal village of poor people is still alarming (WordBank, 2002). Thus, efforts to empower communities beach village (coastal) and efforts to tackle poverty and inequality in the countryside beaches should still be an important agenda in construction activity. In other words, community development poor coastal rural beach is still very relevant to be placed as a priority development, including implementation of the program increase empowerment community (community development. Empowerment of coastal communities poor in the coastal village is a series of efforts by the range of activities that touch the fulfillment of a wide range of access and basic needs of food , education, housing and health, including the fulfillment of the need to participate in their poverty reduction, so that all members of the rural poor beach can be independent, confident, independent and able to escape from the shackles struktursosial cultural and economic factors that make them poor (Wahyono, at al ., 2001).

The responsibility of community development more are on the shoulders of local governments, and not dominated by the central government. This is because local governments are more familiar with the community, understand the problems

facing them. With the decentralization of development activities, should more local governments to give priority to the development of community-based. The responsibility of the community empowerment not only in the hands of the government but also non-governmental parties, namely, the people themselves, private entrepreneurs, state-owned enterprises and non-governmental organizations. The responsibility of building community is basically the primary responsibility of the community itself. In order for community development took place with the right government just prepare and facilitate a healthy environment for the improvement, expansion and deepening of the activities that have been owned by the communities themselves. This is the meaning of empowerment, that is developing what already exists in society menjadu larger scale, more economical and more efficient and effective.

THEORETICAL FRAMEWORK

Poverty theory

Poverty occurs as an integral part of the implementation of the strategy of development policies, especially rural development false, discrediting the villagers of possibilities to partake of the benefits of development. Gunawan, S assesses 4 (four) forms of poverty, namely: (1) poverty absolute, ie if the income is below the poverty line or some revenues were not sufficient to meet the minimum needs (clothing, health, education) are required to

be able to live and work ; (2) The relative poverty, is a condition in which incomes are at a position above the poverty line, but relatively low compared to the surrounding community income; (3) structural poverty, is a condition or situation of the poor because of various development policies that have not reached all of society, causing gaps in income; (4) cultural poverty, is referring to the question of the attitude of a person or society caused by cultural factors such as do not want to try to improve the level of life, lazy, spendthrift, not creative, despite efforts of outsiders to help him. Oscar Lewis considers that the characteristics of community groups that have sub-culture of poverty are: (1) anomalous effective participation and the integration of the poor into the major institutions of society, is one of the most important characteristics of the culture of poverty; (2). Low levels of the organization beyond the family nucleus and spacious family; (3). At the family level, the main characteristics of the culture of poverty is characterized by childhood were shorter and less care by parents, grow up, live together or marry conditional; (4). At the individual level, its main features is the strong feeling entitled, helplessness, dependency and low self-esteem.

The causes of poverty are: (1). differences in access-owned economy; (2). disadvantage is owned by the poor; (3). inequality of distribution; (4) development of analog as idologi; (5). development and industrialization; and (6) .intervensi government. According to Todaro (1997)

mentions factors causing poverty are: (1). differences in geography, population and income levels; (2). differences in history, partly colonized by different countries; (3). differences in the wealth of natural resources and the quality of human resources; (4). differences in the role of the private sector and the State; e). differences in industrial structure; (5). differences in the degree of dependence on political and economic power of other countries; and (6). differences in the division of powers, political and institutional structure of the economy in the country.

According to Chambers core poverty problem actually lies in the so-called deprivation trap or poverty trap that consists of five non misfortune that poor families wrapped around itself, include: (1). poverty itself, (2). physical weakness; (3) isolation; (4). vulnerability, and (5) helplessness. Vulnerability is meant is, the inability of poor families to provide something to deal with emergencies such as the advent of natural disasters, crop failure, or disease that suddenly befall poor families. Vulnerabilities that cause poverty rackets (the driving patterns of poverty) that led to a poor family had to sell property and production assets so that they become more vulnerable and powerless. They may not be able to take the fight (to bargain) when they are treated or cornered in a position favorable tidk by other parties, for example, a) assistance that is made for them, but in the end they do not receive; b). they mocked by those who have political power, economic etc. They

are able to survive even rise if they have a network or social institutions that protect and rescue. But generally they are difficult to get out of the vicious circle of poverty or trap. They are not enjoying the fruits of development but instead became victims of development, fragile, do not or difficult to increase the quality of life and even often experienced reduction quality of life.

In relation to the issue of poverty, Heru Nugroho (1995) mentions that during this time a lot of poverty alleviation efforts fail. The failure of poverty alleviation is considered to be derived from the way of understanding and poverty reduction is always interpreted as a purely economic conditions. On the other hand culturalist group considers that poverty is considered related to culture conditions that are considered be required fatalist and lazy. As a result of these two views, poverty alleviation projects or community empowerment backward confined to purely economic improvement efforts and cultural changes through vocational training projects for the poor in order to be able to do the production process in order to improve productivity. Considered the problem of poverty is not only caused by two things but also because due to unequal political order. Without the political empowerment of the poor, trickle down mechanism that had been expected to accompany economic growth strategy will not become a reality without their empowerment.

Poverty Reduction Policies

If grouped program poverty alleviation by the government as long as there are two models, the first is direct ie poor people directly receive program grants as cheap rice for the poor, HIP, Cash transfers, operational costs of schools and programs direct its kind conducted by the District /City. The second is the program-poverty undertaken by indirect means such as P2KP program, KDP, Gerdu Taskin, APP be required where poor communities are actively involved to participate in the program to combat poverty there is in him. The government is facilitating the constraints that cause people experiencing poverty, which is usually through a model of human bina Tri Daya namely, economic development and environmental development. By using these two models is expected to accelerate the elimination of poverty. Poverty alleviation goals linked to development targets listed in the agenda of poverty reduction is the decrease of the poor men and women and the fulfillment of the rights of the poor in stages, some of these objectives include the following: (1) decrease in the percentage of population the poverty line, (2) the fulfillment of sufficiency in quality and affordable, (3) the fulfillment of health care and health insurance of poor families free of charge and quality, (4) the availability of basic education services for free, quality and evenly, (5) the fulfillment of the needs of housing and sanitation and healthy, as well as the fulfillment of clean water for the poor, (6) the opening of job opportunities and

businesses, (7) the opening of access to capital in creating and developing businesses, (8) the establishment of the development center cluster area economy of rural and community learning poor in the development of rural economic potential, (9) the fulfillment of objectives and increasing the quality of program management integrated movement poverty through approaches Tridaya (human development, business and the environment), (10) an increase in the capacity of village institutions and the capacity of community groups in managing the business either independently or collectively, (11) the opening of access for the poor in the utilization of natural resources and preserving the quality of the environment, (12) the increased participation of the poor in decision-making, and (13) ensuring the integration program sectoral explicitly oriented towards job creation and poverty reduction , (Www.bappenas.com)

Various poverty alleviation programs that have been undertaken by the government to achieve these objectives, there are still obstacles to its implementation, among other things: (a) less focused the various programs of poverty at the root of the problem; (B) not touching the potential development of the village, so it has not been able to move the real sector in the country, various financial sector policies have not been able to be accessed by the poor; and (c) have not been integrated program between the central, provincial and district / town in one integrated scheme, the

wrong location, misconceptions, leaks in the implementation and rapid labor force growth. Of these issues yet optimal supposed to influence the perceived benefits directly to poor families.

Associated with government policy on poverty alleviation programs, khususnya watershed area (DAS) should pay attention to local knowledge in order to succeed in reducing poverty significantly. Because by taking into account local knowledge will lead to unity and participation in implementing policies that ultimately the values interpreneur will appear in poor communities. To empower people who live in the watershed of government policy should consider the following matters: (a) how the activities that have been carried out by the Department / Institution which directly address poverty alleviation programs, (b) benefit directly what can be enjoyed by poor families in the short term, medium term and long term, and (c) whether the poverty alleviation programs undertaken by the Government have been implemented in accordance with the basic needs of the poor. The concept of Fishermen Beach / Coastal. Coastal Beach area or are all areas where blend between land and ocean that generally people livehool with fishing or fishing. This area is generally restricted by topography, which means determined by surface water. This limit is not established by an underground water because the water table is always changing with the seasons and the level of user activity (Sri Harto, 1993). Sedati coast

is part of the coast in the district of Sidoarjo and the border between the Sidoarjo region with Madura Strait where the people in the coastal areas each economically very concerned. The coastal area is defined as an area of transition between terrestrial and marine ecosystems interacting, where the direction of the sea 12 miles of shoreline and a third of the area sea for Regency / City landward to the administrative borders of the Regency / City (DKP Decree No.10 / Men / 2003) the potential-potential that exists in coastal areas and the sea is quite diverse, and there's more opportunity for development, but should consider the development of environmentally sound or sustainable development. Exploration and exploitation on a large scale without considering the carrying capacity or the capacity of sustainability (sustainable potential) of coastal and marine ecosystems in coastal and ocean management resulted in degradation of the resource capacity of coastal and ocean, good utilization of the economic, security against natural disasters and preservation environment. Damage to coastal resources and the seas quite evident, which are: (1) The occurrence of marine pollution due to industrial activities, activities of households and farms it would threaten the life or abiota (fish, benthos, etc.) in the sea so that its productivity manurun; (2) reduced extensive mangrove up 50% from 1982 to 1990, the main cause is the conversion of mangrove forest into embankment land, residential, industrial uncontrollably; (3) the destruction of coral

reef ecosystems by categorizing as follows: 14% is worrisome , 46% damage, 33% good and only 7% is in good condition (MOE, 1993) with the main causes is the rock mining and fishing with explosives and toxic substances; (4) Loss or a further decline in stocks of certain fish, including shrimp, demersal, pelagic small reef fishes, it means there has been a condition of catching more (over fishing) in certain areas, in addition to the declining fish populations of certain types of the is the main cause is due to the economic activities in marine areas, for example shipping, transportation and refining of oil in the coastal / marine.

With the view that the management of coastal and marine areas in the region is an integrated part of the national coastal areas and oceans, then the provincial / district / city also has a role in the management of coastal and marine areas in order to use it optimally and continuously. Authority owned by the county, as in Act 32 of 2004, and then renewed by Law no. 23 of 2014 that the province is 12 miles of shoreline, while the Regency / City-third of the province or equal to 4 miles of shoreline.

RESEARCH METHOD

In this study the selected type of research is the Research and Development (R & D) or often referred to as research and development, as a kind of research that the right to produce a model. Research and development of longitudinal (gradual and can multy years). According Sugiyono

(2007, 298) R & D methods have been widely used in the fields of Natural Science and Engineering, but can be used in the social sciences (psychology, sociology, education, management etc.).

Focus Research. In line with the primary objective of this study to obtain a solution that is effective in alleviating poverty Sedati District of integrated coastal residents, the focus is on the residents in the coastal areas following conditions and characteristics of the region as a region of coastal areas. Then according to the type of engineering that you will implement the social engineering, environmental engineering, and engineering technology, data / information is gathered and analyzed, and then created a model solution. Locus Research. The coastal area in the district of Sidoarjo regency Sedati Unit is part of the beach in the district administrative Sidoarjo. Secara located in the district of Sidoarjo. Data collection techniques are set as follows .: (i) the documentary studies, which examine the documents in the form of statistical data, the draft regulation / legislation / decree, reports, photographs, drawings, maps and spatial or urban planning (land use), (2) a structured interview to officials of the relevant institutions, coastal residents as a sample object, and the stakeholders (stakeholders) related to prevention urban problems in Sidoarjo, and (3) direct observation in the field with the object of prevention activities.

RESULTS AND DISCUSSION

Indonesia is known as an archipelago so many beach / coastal and simultaneously fishermen Beach/ coast was not only determined by the condition of natural behavior alone but also influenced by humans who have access to and interests are closely associated with the area. There are various communities with various forms of activity along the coast such as manufacturing / industrial, residential, agricultural fields, forests etc. Idealism expediency beach profusely for the prosperity of the people precisely for the surrounding community often becomes difficult. Even the state into 180 different degree when natural behavior unrestrained and even more due to the behavior of the access of the beach that is not wise even tend greedy. Until now handling serious in tackling the problem in those areas is often more rhetorical than concrete cohesion in the field. The synergy is necessary because there is a dependency solution between one institution to another institution. For example, Law No. 41/1999 on Forestry states that use the concept of forest management based on the administrative area. It tersbut reaffirmed through the Minister of Forestry No. 26 / Menhut-II / 2006 dated May 11, 2006 Guideline of the Regional Management Plan.

Seem ironic if communities around the coast to be poor (live hard) while maximizing the potential of the beach is very big chances for the benefit for the people around them. As occurred in the

coastal areas in the district of Sidoarjo regency Sedati.

On the other hand, communities around the coast is still alarming. Good raw materials to support drinking water, agriculture, aquaculture and industrial water purposes. Such conditions often become a proverb society, if the dry season difficult to get water and when the rainy season sitting alone could not because of the flood.

Hardjosoewito (2009) states that any remedies would not be effective without the synergy among the institutions in the form / form of Social Responsibility atau synergy social responsibility of all institutions related to the Central Government, Local Government, Institute of Scientific & Professional, Private Institutions, and NGOs. Research strategies and data analysis process carried out in line with the creation of the model, as is typically done in the kind of research and development studies, which follow the following steps :. Potential and Problems, Data Collection and Analysis Product Design (Model) Product Design, Revision Test Products, Product Revision Revision, Trials Usage, Products Products Mass (Sugiyono, 2007: 298). Furthermore, when the model (design, development, or finalisasi) applied Matching is always done to get information about the progression of target achievement Sedati precisely whether coastal residents already have characterized as a prosperous coastal residents (ideal). Coherence in tackling poverty precisely for the citizens of fishermen in Sidoarjo Sedati can be built

with a minimum of three engineering namely: (1) social engineering, (2) environmental engineering, and (3) engineering technology. Social Engineering is an effective solution with the motor of the government (central and local) can be either (i) regulations, (ii) the policy, (iii) program with the right strategy and solution-based, and (iv) strengthening of institutions in society, both formal and informal , Environmental engineering is the application or solution-based applications to the Environmental Balance is still closely linked to social engineering. Pointed out that the poverty associated with environmental problems can be defined as the potential loss of resilience and ecological sustainability and the potential for social security and sustainability. As for the security and sustainability of ecological carrying capacity to the availability of land, water, air, and to a variety of diversity of life and the natural riches contained therein. Meanwhile, social resilience refers to the carrying capacity of social institutions, both in the political, economic, and cultural. Related to the above engineering ecology or the environment should refer to efforts to strengthen the resilience and sustainability of ecological and social. While engineering technology is an effort by means of technology without ignoring the ecological factors and social factors. The realization of the three engineering might be the implementation of watershed management planning integrated Pasaribu system refer to

it as to apply the principle of "Integrated Watershed Management Plan"

CONCLUSION

With the decentralization of development activities, righteously more local governments to give priority to the development of community-based. The responsibility of the community empowerment not only in the hands of the government but also the parties of non-governmental namely, their own communities, private businesses, State-owned and non-governmental organizations, so that the community development took place with the right government to prepare and facilitate a healthy environment for the improvement, expansion as well as the deepening of the activities that have been owned by the communities themselves.

To get a comprehensive solution can be traced to a variety of disciplines integrated - intersect. Various institutions including government, private, scientific institutes / education, as well as non-governmental organizations can be pursued through a mix and matching contributions to their respective social responsibility.

Measurement partner with Study Area Residents with Citizens Ideal Reference Criteria (Model), resulting in the integration / synergy Social Responsibility in poverty alleviation citizens Sedati beach in Sidoarjo can be illustrated in the form of Social Responsibility can be either central government regulation and or distributive

policy. The form of the settings and policies for the people's interests can be channeled through state-owned so it is 'BUMD Social Responsibility'. Local government has a tangible social responsibility policies and regulations that are distributive in the provision of services to the public (public service). Professional organizations or scientific institutions embody social responsibility as the application of science and technology and professionalism (scientific and professional) in the form of applied research and community service. While private institutions have a Corporate Social Responsibility (CSR) in the form of business that had a big hand in make peace society or form of aid to facilitate or support the aspirations of the people. Then Governmental Organization (NGO) more in a social responsibility in the form of moral activity to help facilitate the public.

CONCURRENT ELECTION IN INDONESIAN POLITICS: OPPORTUNITIES AND CHALLENGES OF POLITICAL PERSPECTIVE

Dr. Titin Purwaningsih, S.IP., M.Si

titin.p.widodo@gmail.com

*Lecturer of Government Studies Department, Faculty of Social and Political Science,
Universitas Muhammadiyah Yogyakarta, Indonesia. E-mail:*

Concurrent elections in Indonesia will be held in 2019, but there has been no policy to regulate them yet. The purpose of this research is to map out the opportunities and challenges of concurrent elections and also to identify some problems of the implementation of concurrent election in Indonesia from political perspective, especially from the 4 actors, namely the government, political parties, electoral administrators and the society. This is a qualitative research using primary and secondary data from documentary and interview with some political experts. The results of this research indicate that concurrent election will strengthen the presidential system, increase the efficiency of the party organization and electoral administration, and also increase the participation of voters. But there are some problems in the implementation concurrent elections in Indonesia, namely: 1). Preparedness of the electoral governance, 2) arrangement and synchronization of election laws, 3) simplification of the electoral system and 4) simplification of the political party system, and 5) political awareness of political actors and society.

Key words: concurrent elections, presidential system, political parties, electoral governance

Background

Concurrent election in Indonesia is held based on Constitutional Court No. 14/PUU-XI/2013 about the reviewing of several articles of Act No. 42 /2008 about Presidential election. One of the decision is that general election and presidential election are held simultaneously or implemented in National concurrent election which will be commenced in 2019 election.

The argument of concurrent election is that it can be supportive of Presidential system effectively and can increasing political participation. But it could be achieving by well preparation of electoral law, electoral management body and also the voters. There are several electoral laws of 2014 election, namely Act No 42/2008 about Presidential election, Act No. 12/2012 about general election, Act no. 8/2015 about Local Head's election, so we need to synchronize and codification them.

The problem is how concurrent election could be result the stable and effective governance. It was related to the legislative-executive relationship and strong coalition administration, not only based on how to gain power but also based on policy. So this research aims at identification of opportunities and challenges in holding concurrent election, especially from the 4 actors, namely electoral management body, the government, political parties and voters.

Research Methods

The purposes of the research are 1) to identify the potential problem triggered by the implementation of concurrent election, 2) to map out the opportunities and challenges of concurrent election especially from 4 main actors: government, electoral management body, political parties and voter.

This is a descriptive qualitative research, which is use primary data consisted of the background of concurrent election, opportunities and challenges in hold concurrent election, identification of the problems of concurrent election; and also use secondary data. The Data was gathered by documentation, in-depth interview, and focus group discussion with some political experts, electoral commissioners, legislators, political party's officers and bureaucrats. The data was analysed using an inductive approach.

Theoretical Framework

The research employed several theoretical frameworks such as theory of concurrent election and effectiveness of governance, concurrent election and political participation and concurrent election and efficiency of electoral management.

1). Concurrent election and effectiveness of governance

It is believed that concurrent election enables to result an effective governance because of the coattails

effects. Concurrent election with a strong president candidate will be followed by vote to legislator's candidates whose came from the supporting party of the president. Coattails effects are defined as "*the ability of a candidate at the top of the ticket to carry into office...his party's candidates on the same ticket,*" and the concept typically is operationalized as a correlation between the presidential and legislative vote in a given constituency" (Samuels, 2003:83).

It can be said that if the executive and legislative power come from the same party leads to the durable government. Concurrent election can minimize political fragmentation at legislative institutions as stated by Samuels (2000):

This conceptualization assumes that coattail effects emanate from higher to lower offices, because voters tend to pay greater attention to executive races. First, candidates for congress assess the likelihood that a candidate for executive office can help them win election. Second, based on this assessment they act to improve their chances of winning by associating or not associating their campaign with the executive office candidate's. Third, if the executive office candidate is popular and congressional candidates are relatively adept campaigners, voters will respond to congressional candidates' efforts.

Concurrent election is expected to

result more effective government in Indonesia. The Presidential system based on "the winner takes all" principle, and usually implemented in two parties' system. There is no coalition in the presidential system (Linz, 1994). So concurrent election is also expected to minimise the number of political party in Indonesian political party system.

The problem is that presidential system in Indonesia leads to proportional representation system. Duverger stated that proportional representation system tends to result multi parties' system. There were more than 10 parties in Indonesia, so there was no majority political party in the legislative institutions. In 2004, Golkar as the winner just obtained 21.58 %, in 2009 election Democrat Party as the winner only gained 20.85 % and in 2014 election PDIP gained 18.95 % of the seats in representatives. There was no majoritarian party in legislative institutions in Indonesia, so President have to build a strong coalition from them. Unfortunately, strong fragmentation in the legislative institutions could make democratic instability (Mainwaring, 1997: 198-228)). Linz stated that multi party system and presidential system is the fragile, complex, and complicated combination (Linz, 1994).

Based on their study, Scott Mainwaring and Shugart (1997) stated that presidential and multi party system is a problematic combination. This combination

resulted unstable coalition, presidential system contaminated by political parties and also the parliament tends to weakening the president. In presidential system, not only the biggest party but also a small party has an opportunity to win the presidential election (Cheibub, 2007: 7-8). For example, Democrat Party was the runner up in general election 2004, however the presidential candidate SBY-JK which supported by this party be the winner in the presidential election. But, no supported by majoritarian party in the House of Representative brings difficult consequences to president. The coalition of his cabinet was based the purpose of forming cabinet instead of based on the same vision and mission, so the coalition was unstable.

Separation of power, fragile coalition and minority governance has a potential problem that would be "deadlock" in the relationship between legislative and executive. Presidential system without majoritarian parties in the House of Representative can also trigger to "divided government", which the president and parliament are controlled by two different parties. Divided government has happened in the United States in budget decision making between them that caused the government was shut down for two weeks. Obama is supported by Democratic Party but the congress is dominated by Republican Party

It is noted that concurrent election does not always result stable governance because coattails effect does not always happen. Previous studies show that the presidential election will affect to the party system through the coattails effects as stated by Cox (1997), Jones (1994), Mainwaring and Shugart (1997), and Shugart and Carey (1992) (Golder, 2006:34-48). Other studies reveal that presidential election causes fragmentation of party system (Filippov, Ordeshook dan Shvetsova, 1997). Meanwhile, other studies provide evidences that there is no relation between presidential election to party system as stated by Coppedge (2002) and Samuels (2000) (Cheibub, 2007:7-8). Coattails effect will happen depend on the number of presidential candidate that influenced by heterogeneity of the society.

2). Concurrent election and political participation

General election is the reflection of democracy. According to Schumpeter, general election is a political method and a mechanism to elect a leader (Sorensen, 2003:14). Dahl and Held also support the argument about the relation between general election and democracy. They stated that there are three dimensions of political democracies: competition, participation and political and civil freedom (Sorensen, 2003), which with political and civil freedom give voters to participate in the election. Thus, it is reasonable

that general election is the important dimension of democracy.

General election is a mechanism in electing the political leaders. Recently there are several general elections such as legislative election, presidential election, and also local head election. These could make political boredom for people because they have to spare their time and energy more to the ballot. Concurrent election spent less time from people to go to the ballot, so it is assumed that concurrent election will increasing voter's participation through interesting national issues of presidential election.

3). Concurrent election and efficiency of electoral management

There are 3 election held in Indonesian politics: general election, presidential election and local leader election. In 2004, 2009 and 2014 general elections, voters elect the member of House of Representatives (DPR RI), member of Regional Representatives Council (DPD RI), member of provincial parliament (DPRD Provinsi) and also member of district parliament (DPRD Kabupaten/Kota). Three (3) months after those series of election, presidential election was done. Local Head election was done in local area and it was based on the length of the local head period of each district.

These elections not only caused inefficient electoral management, but also inefficient political parties and voters. In 2009 general election for example, the legislative election

required IDR 19 trillion and 2014 election spent IDR 24.1 trillion. The president election budget was IDR 7.9 trillion. The budget did not include head district election which was charged to the local government. It is reasonable to state that the various election is considered money consuming and it is influence to budget for development programme in the society. Concurrent election will make more efficient electoral management and make more efficient political parties.

Analysis and Research Finding

Concurrent Election does not only have an impact on constitutional law or politics but also it has significant implication to the study of political science. In political perspective, concurrent election has advantages in politics and consolidation of democracy in Indonesia as follows.

1. Concurrent election aimed at creating congruent result

Academically, concurrent election is only feasible in presidential system. Concurrent election is implementation of legislative and executive election on the same day to create a congruent government, which is the president was supported by majoritarian in parliament and it could make a stable and effective government. Therefore, there is an assumption that concurrent election has positive correlation to strengthen the president. The concept and design are based on the Latin

American countries which applied presidential election and cause unstable government and conflict between the president and the parliament. To overcome this problem, Brazil conducted concurrent election in 1994 and 15 years later, Brazil had stable government. Shugart stated that the congruent has been created from the effect of coattail effect in which the elected president influences the election of legislative candidates. It means that every voter will vote legislative members coming from the elected president's party.

2. Concurrent election to encourage policies based coalition

Concurrent election can encourage policies based coalition, because they have the same mission and vision. The coalition not only to gain power (office-oriented approach) but also to create the policy according to their ideologies (policy-oriented approach) and minimized pragmatism. Applying the presidential election for two times in Indonesia shows that it does not result a long term coalition. By concurrent election, the coalition is expected to naturally simplify political parties.

3. Concurrent election to encourage more democratic political parties

The present of political parties is significance in the modern democracy. The existence of independent, autonomy and competitive political parties is *conditio sine quo non* in

implementing democracy. It is believed that democratic system facilitates the independent, autonomy and competitive political parties.

4. Concurrent election to minimize conflicts among supporting political parties

Holding concurrent election is efficient as it saves time and budget. The budget can be allocated to fulfil constitutional rights of the citizens in Indonesia. The fact that 65% of the electoral budget is allocated to organizers' honorarium provides evidence of inefficiency in election practice. Concurrent election is expected to minimize electoral budget as political budget, campaign budget and candidates' budget are in one scheme. This model also can reduce money politics and corruption. Therefore, concurrent election is a model that can lead to drastic changes in *presidential threshold* as all of the qualified political parties are allowed to propose the presidential candidates.

The opportunities and challenges of concurrent election

Concurrent election can reduce flaws in politic practice. Here are the opportunities and challenges of concurrent election:

1. Opportunities and challenges for voters

Opportunities. It is believed that concurrent election increases the participation of voters. According to Norris, voters' participation in

legislative election are lower than presidential election in serial election because of voters consider that presidential election is more important than legislative election (Stockemer and Calca, 2012: 1-23). Down stated that the decreasing participation among voters as the effect of budget consuming for several times to go to the ballots. The policies about election remain vague so that it is difficult to interpret the suggested policies into real policies (Stockemer and Calca, 2012: 1-23). The spreading issues in the legislative election and presidential election can be different because they proposed different candidates although the candidates are come from the same party.

There is a tendency of decreasing number of participation in Indonesia in the serial election. The participation percentage of Indonesian citizen in 2009 general election was 71% and in presidential election was 60%. Meanwhile, in 2014 election the participation in general election was 75.11% and in president election was 70%. The decreasing number of participation can be avoided in concurrent election.

Experts argue that concurrent election increases the participation of voters, spent budget and time more efficient. Riker and Ordenshook stated that concurrent election can give psychological support as the voters consider that they choose two officers at once (Stockemer and Calca, 2012: 1-23).

In the United States concurrent presidential and gubernatorial election, it has been proven that this election model increases participation of voters.

Challenges. Although concurrent election leads to several efficiencies, it takes longer time for the voters to elect candidates in the ballots. They at least have to choose from 5 ballots, consist of president and vice president, House of Representatives, Regional Representatives Council, Provincial Parliament and District parliament. In addition, the size of election paper is bigger so it is time consuming to open and re-fold the paper.

Anderson (2011) stated that concurrent election leads to difficulties for the voters as it gives much issues at once, and they tend to elect national candidates and issues. Thus, it requires well socialization to the voters to increase the willingness to vote.

Table: The Opportunities and Challenges of Concurrent Election in the Political Perspective

Actors	Opportunities	Challenges
The government (the House of Representatives and the Executive)	<ul style="list-style-type: none"> - Stronger Presidential System - President will keep pace with Parliament; the President will be supported by majoritarian power in Parliament - The coalition will be more solid - Minimizing the political horse-trading between the legislative and executive 	<ul style="list-style-type: none"> - Need simplification of the party system - Need simplification of the electoral system - Policy-based coalition
People	<ul style="list-style-type: none"> - The participation of people will be increased because psychologically people votes for political officials - Time, effort and expense of the voters are more efficient because they only came once to the polls 	<ul style="list-style-type: none"> - People is difficult to vote because there are too many candidates - The time used in the polls becomes longer because the ballots becomes more complicated - Need to increase voters' awareness - The people are very heterogeneous
Political parties	<ul style="list-style-type: none"> - Time, effort and expense of political parties are more efficient - The formation of Coalition to support the President could be done earlier - Either big or small party has an equal chance of winning the presidential election 	<ul style="list-style-type: none"> - There is Coattail effect - Parties are required to offer a candidate for President who can be accepted by other parties and popular
Election organizers	<ul style="list-style-type: none"> - The efficiency of time, effort and cost needed 	<ul style="list-style-type: none"> - Need more careful management of election - Need a simpler ballot design - Need a simplification of electoral system - Time required in the counting of the vote is longer - The Election Law is not synchronized with each other - Need additional polls - Socialization to the voters

2. Opportunities and challenges for the government (President and House of Representatives)

Opportunities. The concurrent election is feasible to create strong and stable presidential system. The coalition is formed early based on the same vision and mission. According to Karen Cox (2004:124), concurrent election gives advantages to the supporting parties of presidential candidate and it can reduce fragmentation between legislative and executive. Thus, it results a more solid coalition. If he majority coalition in the parliament wins the presidential election, it will struggle to win the local head election. The same party at the local and national level makes the government easier to coordinate the governance.

Challenges. To create a solid and vision-mission based coalition, the government should simplify the parties' system. Simplification of the party system will be achieved if the electoral system is improved. Synchronization of electoral laws regarding to concurrent election is required such as in political parties Act, general election Act and presidential election Act.

3. Opportunities and Challenges for Political Parties

Opportunities. By performing concurrent election, political parties can perform efficiently. Political parties can save the budget and time to conduct the campaign. The

coalition to propose the president and vice president can be done early and majority or minority political parties have the same rights to propose their candidates. Proposing popular candidates can be one of the ways to increase the vote and win the election.

Challenges. Political parties should be able to propose popular presidential candidates to gain more support from the coalition. Concurrent election demands political party to implement different strategies in winning the election. As stated by Sartori, the change in election systems will bring consequences to the ways and character of competition of each political parties (Diamond and Gunther, 2000: 101) as concurrent election has a coattail effect. If a party is the part of the presidential candidates which has majority supporters, it will gain benefit in legislative election.

4. Opportunities and Challenges for Electoral Management Body

Opportunity. Electoral Management Body is the institution responsible for the success of the general election. In the context of Indonesia, Electoral Management Body include the KPU (The General Election Commission) and Bawaslu (the Election Supervisory Commission) that in the execution of their duties ethically controlled by *Dewan Kehormatan Penyelenggara Pemilu* (The Election Organizers Ethics Council/DKPP). KPU is responsible for organizing

the election from voter data collection, receive and validate the election nomination contestants both political parties and candidates, holding the election, and the vote count recapitulation. While Bawaslu is assigned to monitor the election to comply with the principle of direct, public, free, confidential, honest and fair election. The implementation of the role and function are of course related to technical aspects of election and management of election that should be done. Different electoral system requires different procedure, preparation and management of election. Concurrent election brings a big opportunity for Electoral Management Body to held the election efficiently.

Challenge. The change in the electoral system from serial election into concurrent election brings substantial technical consequences election management. The implementation of Concurrent election requires the good capability and professionalism of the electoral management. Although the simultaneous election only needs shorter election time span and more efficient use of the budget, but the preparation of the election requires a fairly longer time. The technical aspects of election administration become more complicated. The election supplies became more various, so it must be carefully set to lessen the problems in election. The problem of election organizer capability is very important to the success of the Concurrent election. As stated by Cox (2004:124), if there are capability problems in handling

the logistics, serial election is an option.

Concurrent election also requires more ballots, as well as the longer time required by voter in the voting booth. Therefore, the electoral management is required to design simpler ballots. In addition, socialization to voters should be implemented more widely in order to create a qualified election.

Several other challenges in the concurrent election management are change electoral system from open list to closed list proportional system, simplification of the party system, as well as the realignment of electoral district. The synchronization aspects of the act, especially on the Act of Presidential Election, the Election Law and the Act on Political Parties, are also very important for the electoral management. All policies for the implementation of Concurrent election will be realized if the electoral management body established good cooperation with the Parliament and the Government.

Table: Strategic Design for Concurrent election

	Strengths	Weaknesses
	<ul style="list-style-type: none"> - To have democratic experience - There are independent institutions for election (KPU and Bawaslu) - There is a conflict management institution (DKPP, MK) - A commitment to hold better election - Commitment to create a stronger Government 	<ul style="list-style-type: none"> - The existence of elite conflict - The existence of conflict between the political parties/candidates - Multi-party system/the tendency for many parties to rise - Complicated open list proportional electoral system - The Election Law that is not synchronized with each other
<p>Opportunities</p> <ul style="list-style-type: none"> - Stronger Presidential System - President will keep pace with Parliament; the President will be supported by the majoritarian power in Parliament - The formed coalition will be more solid - Minimizing the political horse-trading between the legislative and executive - The participation of the people will be increased - Time, effort and expense of the voters are more efficient - The implementation of election is more efficient 	<ul style="list-style-type: none"> - The preparation for electoral management body - The increasing of the vertical and horizontal coordination in the electoral management - The increasing of people's participation - The increasing of socialization on Concurrent Election to the people - The preparation and synchronization of Electoral Law 	<ul style="list-style-type: none"> - The simplification of the party system - The simplification of electoral system - The preparation and synchronization of Electoral Law
<p>Challenges</p> <ul style="list-style-type: none"> - People is difficult to vote because there are too many candidates - The time used in the polls becomes longer because the ballots becomes more complicated - Time required in the counting of the vote is longer - The existence of elite conflict - The existence of a conflict between the political parties/candidates - The existence of conflicts in society 	<ul style="list-style-type: none"> - The preparation of tools to minimize and resolve conflicts - The simplification of the ballot - The simplification of electoral system - The increasing of political awareness of political actors and society 	<ul style="list-style-type: none"> - The simplification of the party system - The simplification of the ballot - The preparation and synchronization of Electoral Law

From the table, there are several things that must be prepared in the administration of Concurrent Election, namely:

1. The preparation for electoral institutions

The management of 2019 concurrent election requires comprehensive preparation, starting from the electoral law, electoral process to the electoral dispute resolution. The Electoral Laws usually already provides for election scheduling, the scale of electoral districts, method of voting, electoral threshold, the counting of the seat, to the appointment of the elected candidates.

According to JPPR, there are five electoral quality indicators, those are the neutrality of electoral management body, the neutrality of bureaucracy, high degree of participation as well as awareness, honesty and responsibility, and elected legitimate and qualified legislator and president. In my opinion, to achieve a quality general election it is not only by assuring the neutrality of electoral management body (EMB) but also by maintaining the professionalism of the EMB to conduct this election.

This preparation of this election organizer is not just KPU and staff to the lowest level, but it also involves Bawaslu, DKPP, police, the judiciary, and the Constitutional Court which is the electoral management bodies and institutions which are in charge of settling disputes and arbitrate the electoral conflicts.

The general election is a five-year routine agenda, but the dynamics are very diverse in every election that requires anticipation of the election organizer. Moreover, Indonesia is a country that is very heterogeneous in

terms of culture, language, and demographic and geographic conditions that must be considered in any execution of the election. As noted by the chairman of KPU Husni Kamil Malik: "In managing the stages of the election, we do not only consider the technical aspects, but the political aspect also cannot be ruled out." Therefore, as stated by the chairman of KPU, election organizers need to apply entrepreneurial government so that it can make innovations in the organization of the election conducted in honest and fair, and accountable election EMB.

The preparation in the implementation of concurrent election should also be made by the Parliament and the Government as a law-making body. In making the Act governing election must simultaneously be based on the spirit of statesmanship so that the legislation products aimed at interests of the nation, not the particular interests of a political party or group. Because if the legislation products are then being brought into judicial review in the Constitutional Court it will interfere and slow the preparation for the Concurrent election.

2. The Preparation and Synchronization of the Electoral Law

The rules regarding the implementation of the election in Indonesia changed every five years, both the rules on political parties and election in general. With the concurrent election which will be held in 2019 in accordance with the Decree of the Constitutional Court, the rules of the game in the form of a set of legislation to support the implementation of it should be made, especially in relation to the Law on Election and the Law on Political Parties. With the simultaneous election

between the legislative and presidential election, the Law No. 42 of 2008 on the Election of the President and the Law No. 8 of 2012 on the legislative election must be replaced or codified.

Based on experiences in several general elections, the readiness of the Laws is very important because it will affect the readiness of election management bodies and actors involved in the concurrent election. Ideally, the Simultaneous Election Law is enacted 2.5 years or 30 months before the election, or at least 2 years prior to the election. If the simultaneous election is carried out in the mid-2019, then ideally the Laws concerning the execution of Concurrent election was passed in early 2017. Therefore, the Law on Concurrent election should be included in the national legislation in 2016 and maximum it should be passed in the early of 2017.

Therefore, according to Didik Supriyanto, there are three important steps that must be done: *first*, the government should immediately prepare an academic documents related to the concurrent election laws, *second*; the drafters of academic and draft of Election Law should evaluate the implementation of the previous election in a comprehensive manner; and *a third*; the need for logical and systematic system about election bill (Kompas, October 28, 2015).

The preparation and synchronization of the Act concerning the simultaneous election were done to maintain the quality of the election. Academic documents must be drafted based on the efforts to achieve better election, by evaluating the implementation of the previous election, because in principle, the Constitutional Court's decision on concurrent election is to create a more powerful government, has a strong

legitimacy and through more efficient democratic processes.

From the results of the study contained in the academic documents, the draft of bill on concurrent election should be prepared, including the one that regulate the election participants, the election process, the election results and the efforts to prevent the lack of legitimacy of the election results. Problems that arose during previous election, such as the very large election funding issue, electoral fraud or conflicts that arise because of electoral disputes should be anticipated in the Act on the simultaneous election.

3. The simplification of electoral system

The evaluation of the election administration is absolutely necessary to establish the electoral system and better organization of election. From experience in the 2014 election, for example, open-list proportional electoral system resulted the thickness of the ballot and technically difficult in the voting process. Thus, each person needs more time in the polling stations. If the election is held simultaneously, then it will obviously become more complicated in its execution. This needs to be anticipated, such as *the first*; still use an open-list proportional system and to anticipate it, it should be done by creating smaller constituencies. This effort to reduce this constituency brings consequences on the increasing number of election management personnel to be prepared. Extra personnel also mean additional costs.

Second; using closed-list proportional electoral system. This will facilitate the election mechanism at the polling stations; so political parties must have a good and transparent mechanism in the process of political recruitment, and

voters will not experience a buying something sight unseen. This second option would also strengthen the cadre of political parties, and to minimize the instant politicians who simply have a big funding. However, attention should be given to the strengthening of the party oligarchy.

Third; concurrent election is conducted through *e-voting*. According to the study of BPPT, *e-voting* will cut the election costs up to 50% (Buletin Bawaslu No. 11, November 2014). This is certainly in line with one of the purposes of concurrent election which is for the efficiency in the administration of election. If this option is chosen, of course, the electoral law governing the technical implementation of *e-voting* should be prepared. As a new voting mechanism, then the *e-voting* would require a different preparation, both for voters and election organizers.

Principally, it is necessary to create a representative electoral system and minimize the issues in the political process. From the experience of the election in the United States for example, the length of the election ballots affected the reluctance of the voters to participate in the election (Richard S Katz and William Crotty, 2014: 534).

By seeing from the system of presidential election, there are three types of the presidential election: *first*; plurality system which is electoral system based on majority voting so that there is no second round of voting. *Second*, the majoritarian system, which is the president, is elected when a majority is of 50%+1, so that when the number is not yet meet, the second round will be held. *Third*, the runoff with a reduced threshold system, which is

the president, is elected if they fulfil certain percentage, for example 45% or 40% with a margin of at least 10% with the second candidate (J. Mark Payne, et al, 2002: 67 -81).

Up until now, we use the majoritarian system, so the president has strong legitimation. But in reality, the acquisition of a majoritarian vote of the president is not in accordance with the acquisition of the party vote which support the legislature. For example, at the time of SBY, he gained 60.62% while the parties that support SBY which are the Democratic Party, PKPI (Indonesian Justice and Unity Party) and PBB (The Crescent Star Party) gaining just 11.33% in the Parliament. Although the support to the President from the people is quite large, but if it does not gain substantial support of the representative bodies it will complicate the governance.

4. The simplification of the party system

Another aspect related to the electoral system is the party system. Until now there are no restrictions on the number of political parties. In a proportional electoral system, there is a tendency of the emergence of new parties in case of conflict within the party. Presidential government system that is based on a proportional electoral system is quite problematic because it can result a fragile government for not obtaining majority support in parliament. The more the political parties are, the smaller chance for the parties to gain a majority.

In the concurrent election, the possibility for the creation of political support to the president and at the same time the support of the representative to the president will be

strengthened. Simultaneous election forces political parties to form a coalition before the election. Theoretically, the votes of presidential candidates are usually followed by the vote of party, this is what usually called as the *coattails effect*. Voters of president's supporters tend to choose the legislative candidates from the same party as the presidential candidate.

If concurrent election is carried out, then from 3 presidential election systems it would be better not to use two rounds, so that the election really simultaneously in a single election day. The selection is done by selecting the plurality or *runoff with a reduced threshold* system, by determining the *electoral threshold* in the presidential election. The choice of the presidential election system is theoretically would affect the simplification of the political parties.

From a study conducted by Mark Payne et al (2002) in several countries in Latin America, it shows that plurality electoral system produces 2.67 or 3 parties' system of political parties. The majority system generates 4 parties' system and threshold system produces 3.19 or 3 parties. The existence of Coattails effect and selection system of presidential election will be able to simplify the party system. With Concurrent election, the coalition built by political parties is also more mature. In previous election, the coalition built after the legislative election by taking into account the number of seats. The built coalition will also change in the second round of the presidential election, so that the coalition that was built more fragile, while in the simultaneous election, the coalition's built is more powerful.

5. The preparation of tools electoral disputes resolution

A democratic election requires a maturity of both political actors and society. Election also require honest and fair implementation so that it can be accepted by all parties. Nevertheless, the potential for electoral disputes is big. From the data of the Constitutional Court, for example, in the 2009 election there were 628 cases filed by 38 political parties, and in the 2014 election there is an increase of cases which is 702 filed by 15 political parties. With the concurrent election, it is likely that the case submitted to the Court will be greater. Surely this must be anticipated from now. Moreover, the Court has been based on the provisions of the Act which only has a maximum of 14 days in the case of election disputes resolution.

The potential for election disputes could occur related to the election management policy, the Voter List, the process or stages of election and the disputed election results. Currently there are several institutions that deal with the problems and violations in the election dispute which are *Dewan Kehormatan Penyelenggara Pemilu* (The Election Organizers Ethics Council/DKPP) which deals with the violation of the code of ethics; *Komisi Pemilihan Umum* (The General Election Commission/KPU) which deals with violations of the electoral administration; *Badan Pengawas Pemilu* (The Election Supervisory Committee/Bawaslu) which handles the election disputes; Police, The Judiciary and decided in the criminal trial linked to the election; PTUN (State of Administrative Court) which handles state administration electoral disputes; and *Mahkamah Agung* (the Supreme

Court) which handles the results disputes of the regional election and the Constitutional Court (MK), which handles the disputed election results.

In the implementation of the duties, these institutions must be supported by clear regulations. The regulations governing the concurrent election should also provide explicit provision so that making it easier to resolve the disputes arise.

6. The increased of political awareness of political actors and society

One requirement of the realization of consolidated democracy is the existence of clear rules, and political actors who obey the rules of the game. The problems that emerged in the 2014 election, among others, are the extensive practices of money politics, the electoral fraud, the vote-buying and violations of administrative and electoral rules. To improve the quality of democracy in the simultaneous election, it would require the commitment of the political actors to adhere to the rules and conduct of honest election. To this thing comes true, comprehensive and decisive legal tools are certainly necessary so that political actors do not look for space to use the weaknesses in the rules and regulations.

On the other hand, the simultaneous electoral system will also bring technical changes in the election so these changes should be socialized to the public. This socialization is not only done by KPU/KPUD, but also by the political parties, and also levels of government.

In Indonesia, the participation rate is still high. Even based on the results of research conducted by LIPI, there was no difference in the level of

participation among the low/high education and village/town. There is also no difference between the high/low socioeconomic statuses. However, the level of political participation that occurs still tends to be in the category of mobilized participation. But in the city and educated society, there is a tendency of increasingly high number of abstentions. Theoretically and based on the experience of some countries, concurrent election is able to increase the level of community participation as the figure in the presidential election is quite interesting.

Participation needs to be accompanied by the efforts to increase political awareness in the community, so the community is not easy to be tempted by the politics of money and being able to choose qualified candidates. Election are expected not only to produce a popular candidate, but also a leader who has sufficient capacity and capability.

Conclusion

Theoretically, concurrent national election will produce a more stable presidential government because it will awaken a strong coalition based on policies, minimizing the possibility of divided government, because of the coattails effect of the presidential election to the legislative election. However, the effect on the coattails effect of political fragmentation was also influenced by the heterogeneity of the community and the number of presidential candidates. Therefore, in achieving the objectives of concurrent election, Indonesia faces a number of challenges, both challenge for the government, society, political parties and the electoral management. The challenge for the government is the need for simplification of the party system and the electoral system; for the community is

related to the voting mechanism and voter awareness level. The challenge for political parties is the institutional preparedness of political parties, especially in the anticipation of a coattails effect and the candidacy process, and the challenge for electoral management is how to achieve better management of election, and to achieve a much simpler election mechanism.

Therefore, there are a number of agendas to be prepared to face a concurrent national election in 2019 which are the preparation of electoral institutions, the preparation/synchronization of electoral laws, the simplification of the party system and the electoral system, the preparation of electoral dispute resolution and increased the political awareness of the society.

Hanz L. Paderanga
hanzypaderanga@gmail.com
Mindanao State University- Iligaan Institute of Technology

Abstract

Tourism is one of the major sources of income, employment and other developments which gradually boost the economy of a community. It can only promote positive results through the practice of sustainable tourism. Its rules and regulation policy on tourism should be properly governed by the community starting at the local level, in this case the municipality of Plaridel, Misamis Occidental.

The RA No. 9593: Tourism Act of the Philippines 2009, RA 7160: Local Government Code of 1991, Greening the Economy Theory and Role Theory were used as tools of analysis and guide in its attempt to describe the policies and programs on the implications of tourism in Plaridel, Misamis Occidental.

The tourist spots in the area were categorized into: natural-made like the Bao-baowon island and man-made like the Nazareno dam. The compliance and contributions of the residents of the community in relation to the policies, programs and practices were measured in this study. Moreover, the policy initiatives, programs and practices of the LGU Plaridel in maintaining the aspects of equity, ecological sustainability and economic sustainability of the tourist spots for sustainable tourism development were also looked into.

The respondents were aware of the existing natural and man-made tourist spots. The Local Government of Plaridel put into practice the Tourism Act of 2009 and promoted sustainable tourism development in the vicinity with the support from the local community. Yearly events and activities were made to promote sustainable tourism. Accessibility, safety precautions, services, transportation and fees was never an issue in the tourism of Plaridel. However, there were challenges encountered in sustaining tourism like insufficiency of funds, the allocation of budgets to selected tourist spots, pollution and depletion of natural resources.

Tourism development should be dynamically participated by the collective, both residents and policymakers in carrying out the promotion of tourism while not compromising the quality of their environment through sustainable tourism development.

Key Words: Sustainable Development, Tourism, Equity, Ecological Sustainability, Economic Sustainability

Background of the Study

Tourism is one of the major sources of income and development for all countries across the globe. It provides employment and gradually boosts the economy. According to the National Statistics Coordination Board (NSCB) of 2012, 6% of the Philippines' gross domestic product (GDP) of said GDP came from the tourism industry and this has generated 4.2 million jobs. The tourism industry has registered an annual average growth rate of 10.5% on tourist arrivals and 34.9% on receipts from 2004 to 2007 (Gutierrez, 2008).

However, tourism, given its positive outcomes, does not promote all out goodness for a country if it is not properly governed through policies, rules and regulations. It is an industry built upon the most fragile of natural and cultural environments, where the most inconsequential and innocent of human activities can easily destroy the site's resources (Javier and Elazigue, 2015). With this, tourism can cause pollution, diseases, ecological degradation, social dislocation, loss of cultural heritage and spur illegal activities such as the commission of crimes like smuggling, trafficking, etc. Thus, instead of promoting progress, tourism undermines the peace, security and prosperity of the country.

A country can steer away from the negative effects of tourism and can retain its positive outputs through the practice of sustainable tourism.

According to the World Trade Organization (WTO), sustainable tourism can be defined as tourism that takes full account of its current and future economic, social and environmental impacts, addressing the needs of the tourists, the industry, and the

environment and host communities (UN WTO, 2005).

Learning about the impacts of tourism may lead many people to seek more responsible sustainable tourism development. This includes various forms of alternative or sustainable tourism such as 'nature-based tourism', 'ecotourism' and 'cultural tourism'.

The local governments and non-government organizations (NGOs) play a major role in the communities' tourism development since it is their primary responsibility to manage the natural, cultural and built resources, tourist behavior, as well as the promotion of destination area attractions and activities (e.g. funding for "regional tourism promotional org., festival events) to maximize the potential outcome of a sustainable tourism (Javier and Elazigue, 2015).

Since, tourism is sought to bring economic opportunities in Plaridel, Misamis Occidental as an avenue for the development of the municipality, it is then necessary to describe the Tourism of Plaridel and its implications to sustainable tourism development. It is in this vein that this paper aims to (a) identify the different types of tourist spots in Plaridel, Misamis Occidental, (b) identify the policies, programs and practices of Plaridel, Misamis to attain sustainable tourism development in consideration to the three pillars of sustainability- socio-cultural, environment, and economic, (c) measure the involvements of the local government, community in attaining sustainable tourism industry, (d) examine the challenges encountered in Plaridel, Misamis Occidental in sustaining their tourism industry, (e) determine the ways and means to improve the currents efforts in attaining a more sustainable tourism development in Plaridel, Misamis Occidental.

Statement of the Problem

This study is an attempt to describe the Tourism of Plaridel and its Implications to sustainable tourism development. Specifically, it aims to answer the following questions:

1.2.1 What are the socioeconomic characteristics of the respondents and key informants in terms of age, sex, religion, occupation, civil status and educational attainment?

1.2.2 What are the types of tourist spots in Plaridel, Misamis Occidental?

1.2.3 What are the policies, programs and practices of Plaridel, Misamis Occidental to attain sustainable tourism development in terms of equity, ecological sustainability and economic sustainability?

1.2.4 What are the involvements of the local government, community and NGO in attaining sustainable tourism industry?

1.2.5 What challenges encountered in Plaridel Misamis Occidental in sustaining their tourism industry?

1.2.6 What are the ways and means of improving current efforts in order to attain a more sustainable tourism development in the municipality of Plaridel, Misamis Occidental?

Significance of the Study

The findings of this study is useful to the LGU of Plaridel, the community, private sectors and other political actors in terms of the innovative ways to improve the policies and program implementation, the services provided and the involvements they play in tourism development.

Furthermore, the LGU of Plaridel can generate more opportunities in response to

sustainable tourism development and foster stronger partnership to help solve the challenges of tourism development in the community especially in the Municipality of Plaridel, Misamis Occidental.

The results and findings of this paper can serve as a guide in enhancing and evaluating the effectivity of the existing programs of the LGU of Plaridel. Furthermore, they can use the results of this study to come up with other sustainable programs and trainings that will help in the maintenance preservation of the LGUs.

Finally, the findings of this study will provide data and information that can be used for further researches and encourage the conduct of a similar research study.

Scope and Limitations of the Study

This study focuses only on the involvement of the municipal and barangay LGUs and the local communities in the promotion and protection of tourist spots in Plaridel, Misamis Occidental. Initially, there are no NGOs involved in sustainable tourism in the municipality, thus, this study is limited only to the LGU involvements.

The data obtained from this research came from an interview of the key informants who are: the Municipal Mayor, Tourism Officer, Sangguniang Bayan Member (Chairman for Tourism Committee), the Municipal Planning and Development Officer and selected respondent of the five (5) barangays Panalsalan, Unidos, Sta. Cruz, Tipolo and Bato.

The said interview was conducted from March 9-10, 2016 with the duration of 35 minutes for each key informant.

Theoretical Framework of the Study

This section of the paper presents the theory and legal framework that is utilized in this research and these are: RA No. 9593: Tourism Act of the Philippines 2009, RA 7160: Local Government Code of 1991 and Greening the Economy Theory. These are used as tools of analysis to illustrate the implications of sustainable development in tourism in Plaridel, Misamis Occidental.

RA No. 9593: Tourism Act of the Philippines 2009

In the general provision (stated in section 1) of the Tourism Act of 2009 (RA 9593 or the Omnibus Tourism Code), tourism is encouraged to develop its full capabilities to foster socio-economic growth and cultural affirmation, as well as to generate revenue through investments, foreign exchange and the generation of jobs. Tourism becomes an instrument of the enhancement of national pride for all Filipinos. In addition, section 3 of the said code provides for the regulation of tourism development, which states that:

(e) Ensure that tourism development protects and promotes the general well-being of the Filipino people, particularly in the area of investment, to include the monitoring and prevention of any act of profiteering or speculation to the detriment of local residents, as well as the exploitation of women and children in tourism (Section 3 of the Tourism Act of the Philippines, 2009)

In the case of Plaridel, utilizing the definition provided by Tourism Act of 2010, sustainable tourism development refers to the management of all resources, natural and man-made to meet the needs of tourists and host regions while ensuring that the opportunities in the future are protected. The said act also mentioned that economic, social and aesthetic needs can be fulfilled

while maintaining cultural integrity, essential ecological processes, biological diversity and life support systems (Tourism Act, 2010). Tourism development in the rural areas and peripheral areas like the municipality of Plaridel is usually a result of top-down government strategies like the establishment of protected areas and funding tourism infrastructure (Saarinen, 2003; Wanhill ,2000).

RA 7160: Local Government Code of 1991

According to the Local Government Code of 1991 RA 7160 otherwise known as the Local Government Code of 1991, local governments are vested with local autonomy and are mandated to help promote political democracy and enhance administrative efficiency in the delivery of public services. Section 2 of this Code reiterates that "the political subdivision of a state, like the Municipality of Plaridel, shall enjoy genuine and meaningful autonomy to enable them to attain their fullest development as self-reliant communities and make them more effective partners in the attainment of national goals".

Furthermore, the Local Government Code provides for much greater powers and responsibilities by which local government may come up with different programs and activities fashioned to uphold the general welfare of the people (Lazo, 2010). The local government represents the vital constituent parts of the nation's politico-administrative system and plays an important part in administration of public services. Therefore, it seeks to achieve sustainable development and growth in nationwide towards its different localities.

In view of this provision, the Local government of Plaridel, Misamis Occidental

are the facilitators and gatekeepers of community's interest. As such the LGU provides the links between the people and the government addressing the community's problems and concerns and in the enforcement of policies most specifically in the preservation of the resources to achieve sustainable tourism.

Greening the Economy Theory

The scholars of the greening the economy theory places an economic background (Dasgupta, 1993; Pearce, 1989) on tourism by attempting to price the environment through a framework of fiscals controls and incentives (Dresner, 2002).

By this, the natural environment can be protected by assigning an economic value to it based on the people's willingness to pay. The said value takes in the external costs such as pollution, resource depletion and human health (Dresner, 2002).

Another defining feature of sustainable development as provide in this theory is the environmental policy integration (EPI). EPI is integrated into non-environmental policy sectors, with three goals: to achieve sustainable development and prevent environmental degradation; to remove contradictions between policies as well as contradictions within environmental policy, to realize the natural benefits and make policies mutually beneficial (Lafferty &Hovden, 2003:2).

In order for a policy to be integrated, it must possess horizontal and vertical dimensions wherein the priorities are decided and aggregated democratically. For Vertical Environmental Policy Integration (VEPI), a particular government adopts a cultural portfolio that seeks to implement environmental objectives. In addition

Horizontal Environmental Policy Integration (HEPI) is where a central authority has developed a comprehensive cross-sectional strategy for EPI.

Using this theory to the tourism development of the LGU of Plaridel, the researchers look into the environmental objectives of the municipality's tourist spots as well as the involvement of the LGU to the community for equity, ecological, and economic sustainability.

Conceptual Framework

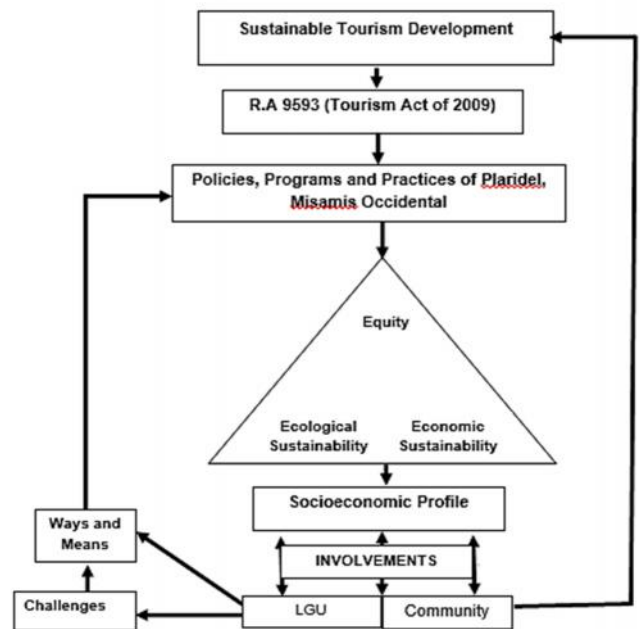

Figure 1. A Schematic Diagram Showing the variables of Sustainable Tourism Development

Figure 1 shows the variables of Sustainable Tourism Development in the Municipality of Plaridel, Misamis Occidental.

The socioeconomic profile of the respondents are examined in terms of age, educational level and occupation as an

influencing factor on how they carry out their involvement and participation in attaining sustainable tourism development and how these variables contribute to planning and decision making to attain sustainable tourism development.

The LGU, following the Tourism Act of 2009 which serves as the legal framework for tourism development, implements and enforces policies, programs and practices to improve sustainable tourism development in Plaridel, Misamis Occidental. This is in terms of equity, ecological sustainability and economic sustainability.

In addition, the involvement and participation of the community by supporting and abiding the policies, programs and practices of the LGU is also looked into. This is because the community part of the collective decision and are also the ones who will benefit from a sustainable tourism development.

It is only through the collective and cooperative involvement of both the LGU and community will the challenges of sustainable tourism development be overcome.

Operational Definitions

To have an understanding of the terms used in this study, the following definitions are presented.

Ecological Sustainability

As used in this study, ecological sustainability refers to the policies, programs and activities of the local government to preserve the ecological balance of the five tourist spots in the Municipality of Plaridel, Misamis Occidental to bring about sustainable development (Brender, 2000).

Economic Sustainability

As used in this study, economic sustainability refers to how the tourism in the municipality of Plaridel generated income and employment in order to sustain the municipality's tourism industry for long term use and for future generation.

Equity

As used in this study, equity refers to the equal access to the natural resources such as sea, rivers, mangroves, beach and falls in the municipality of Plaridel, Misamis Occidental

Involvement

As used in this study, involvement refers to the level of participation (including its various forms) by the LGU and the community in order to sustain the tourism industry in Plaridel, Misamis Occidental.

Local Government

As used in this study, local government refers to the administrative body such as the local government unit (LGU) of Plaridel, Misamis Occidental who are involved in the policy making to encourage tourism activities and programs.

Policies

As used in this study, policies refer to the local ordinances of the LGU Plaridel which promotes and meets the LGU's objective of a sustainable tourism development.

Practices

As used in this study, practices refers to the activities and program employed by the LGU of Plaridel that refers to sustainable tourism development of the municipality.

Programs

As used in this study, programs refer to the promotional activities made by the LGU of Plaridel to promote the five (5) tourist spots in Plaridel, Misamis Occidental.

Promotion

As used in this study, promotion refers to the initiatives that are carried out by the LGU of Plaridel such as advertisements of any form to promotion of attract the patronage of the locals and foreign tourists on the tourist spots in Plaridel, Misamis Occidental.

Protection

As used in this study, protection refers to the initiatives, strategies and policies that are carried out by the LGU of Plaridel, Misamis Occidental to safeguard the resources in the municipality and ensure ecological sustainability.

Ways and Means

As used in this study, ways and means refers to the methods, processes and resource implemented by the LGU of Plaridel to overcome the challenges of sustainable tourism. Examples of which such as funding for regional tourism promotional organization and festival events.

Sustainable Tourism Development

As used in this study, sustainable tourism development refers to a development that meets the needs of the present without compromising the ability of future generations to meet their own needs (UN WTO, 2005).

Research Design

To achieve the main goal and purpose of this study the researchers made use of descriptive method in determining the implications of tourism in Plaridel to sustainable tourism development. Qualitative and quantitative analysis were done on gathered data.

The data that were gathered from the key informants through an interview guide was treated qualitatively. On the other hand, the data gathered from the community through a survey were treated quantitatively.

Moreover, secondary data were drawn from was determined and other forms of data available that were obtained from the concerned political actors such as government agencies including the Local Government Unit and Non-Governmental organizations (if there's any) in the Municipality of Plaridel, Misamis Occidental.

Locale of the Study

This study was conducted in the municipality of Plaridel, Misamis Occidental. Plaridel is a 3rd class municipality in the 1st district of the province of Misamis Occidental, Philippines it is composed of 33 barangays with a total area of 8,000 hectares. As of 2010, Plaridel has 35,251 residents according to Census of Population and Housing as of May 1, 2010. It is bounded by three municipalities: Baliangao to the

north, Lopez Jaena to the south and Calamba to the west. The Mindanao Sea cradles Plaridel to the east. It is located between the major cities of Ozamis and Dipolog of Zamboanga Del Norte as provided by the Plaridel's Municipal Planning and Development- Local Government Unit {MPDC} (2014).

Coconut and rice are the town's main agricultural products and abundant municipal fisheries that supply the other neighboring towns as well. As an agro-fishery industrial town, it also offers a historical, cultural, and other sceneries like the "Bao- Baon (Seven Islands of the Rising Sun)" which is blessed with natural beauty, greeneries and fine white beaches, Tipolo hidden waterfalls, Shang's Beach Resort, Bird and Mangrove Sanctuary of Bato and the "Nazareno Dam" a century old dam, it is an irrigation canal which is considered as one of the best in the country without the aid of sophisticated machineries that was built by the settlers from Langaran River along a hill of solid rock.

Plaridel is chosen purposively by the researchers because of its rising tourism potential and that one of the researchers is a resident of Plaridel. Through this study, the researchers hope to suggest development and improvement in the management of tourism of the area which are sustainable.

Respondents of the Study

The study is comprised of 105 respondents the key informants and 100 survey respondents the local authorities including the incumbent Municipal Mayor, Head of the Municipal Tourism Office, Municipal Planning and Development Head Officer and two residents randomly selected from the five barangays chosen by the researchers and for the survey the residents was taken from the 5 (five) barangays

where the tourist spots are situated specifically in Brgy. Panalsalan, Brgy. Bato, Brgy. Tipolo, Brgy. Lao Sta. Cruz, and Brgy. Unidos.

Instruments Used

The data of this study was obtained from primary and secondary sources. Primary data were obtained through structured questionnaire and interview guide. A cover letter for the respondents was attached to the questionnaire, The secondary data on the other hand, gathered from books, dissertations and reliable online sources like portable document format files, books and articles.

Digital camera and recording devices was utilized in the data gathering in order to facilitate proper data collection.

Sampling Procedure

The study used non-probability sampling in the form of purposive sampling in selecting the Key Informants of the study. Since tourism is a multi-faceted industry, official with the direct involvement in tourism of the Municipality of Plaridel, Misamis Occidental was interviewed. Therefore, four (4) local authority officials specifically the incumbent Municipal Mayor as the executive head of the Municipality, the Chairman for Tourism Committee of the Sangguniang Bayan as the chairman of the committee who constitute the policies and programmes about tourism in the municipality, Municipal Planning and Development Head Officer was selected as key informants who are involve the tourism development at the Municipality of Plaridel.

In addition, in identifying the community's feedback regarding the tourism development and their role in terms of promoting tourism and protecting the areas

resources, a survey was conducted. The researchers utilized random quota sampling for the residents of the five (5) barangays where the tourist spots are specifically located; with the assumption of even distribution of the needed data for the study to minimize time consumption, financial costs and effort. The quota of 100 residents are set by the researchers wherein it will be divided into (5) five barangays with 20 residents from each barangays specifically in Brgy. Panalsalan, Brgy. Bato, Brgy. Tipolo, Brgy. Lao Sta. Cruz, and Brgy. Unidos where the tourist spots are located as stated in the local of the study.

Data Gathering Procedure

In gathering the data for this research, the researcher:

1. Conducted a pretest on February 26, 2016 in Iligan City in order to test the validity of the questionnaires
2. Sent a request letter asking for permission to the Local Government Unit of Plaridel specifically to the Municipal Mayor, Office of the Sangguniang Bayan, Municipal Tourism Officer, and Municipal Planning and Development Officer as a basic protocol in asking permission and assistance to conduct a research.
3. Sent a letter of request for an appointment for the key informants to be interviewed and when the request is granted the researchers will set an appointment for the interview with the Key Informants and respondents on the Municipality.
4. Went personally to the field or the local of the study for to make an ocular visit, interview, data gathering and other preliminary research activities, and to ask the permission of respondents on conducting the research.

5. Explained the purpose and objectives of the study to the Key informants and the interview will follow and request for the documents and papers from their respective offices.
6. Explained the purpose and objectives of the study to the selected respondents by the researchers
7. Conducted a house to house to the communities selected by the researchers for until the set quota will be meet for the survey;
8. Took photos and videos, if necessary, with the permission and consent of the respondents and participants.
9. Interpreted and analyzed the data gathered

Treatment of Data

The qualitative data obtained from the responses of the interviewed key informants was presented thematically in accordance of the statement of the problem.

The quantitative data gathered from the survey of the 5 (five) selected communities where the tourists spots are located was tabulated and analyzed using frequency counts and percentage distributions. The percentage distribution is computed with the following formula:

$$\text{Percentage (\%)} \text{ of response} = \frac{n}{N} \times 100$$

Where:

n= frequency who were systematically chosen to answer the questionnaire

N= total number of respondents

100= constant

Summary of Findings

Socio-economic Profile of the Respondents

In the conduct of the study, the most accessed by the researchers were middle-aged Roman Catholic women who are married. The majority of the respondents were also college graduates and are employed in the government.

The types of tourist spots in Plaridel, Misamis Occidental

All of the respondents were aware of the existence of the tourist spots in their municipality. These because of the respondents are natives in the municipality or that they have lived in Plaridel, Misamis Occidental since they were born. In some cases, respondents lived near there tourists spots too. Based on the data retrieved, the researchers have listed 5 popular tourist spots in Plaridel. These are the (i) Baobawon Islands, (ii) Shang's Resort, (iii) Bato's Bird and Mangrove Sanctuary, (iv) Nazareno Dam and (v) Tipolo's Falls.

The policies, programs, and practices of Plaridel, Misamis Occidental to attain sustainable tourism development in terms of equity, ecologically sustainable and economic sustainability

The respondents are aware of the Municipal ordinance that pertains the tourism development in the municipality. However, the respondents who said no pointed out that even if they are aware of the said ordinances still they are unsure if these ordinances still exist or implemented.

The local residents are made aware of environmental projects initiated in their barangays through tarpaulins; radio and TV ads and through social media which play a significant role in the dissemination of information. The respondents were sensitive in terms of the preservation of the ecological balance since most of their livelihood are dependent on this.

In terms of equity, the majority said that the local government promotes their tourist spots through tarpaulins. In terms of accessibility, the local community of Plaridel and tourists can access the tourist spots as often as they can since there is always an available tricycle or “habal-habal” that will only cost them Php 10-20 per ride. Among the 5 tourist spots, only Shang’s Beach Resort have an entrance fee of Php 75 pesos which is not that expensive and safety precautions are also available for everyone.

In the 5 tourist spots lifeguards are present as well as first aid kits are provided to ensure the safety of the local and foreign patrons. Appropriate equipments are also made available for the person with disabilities such as wheelchairs.

In terms of ecological sustainability, there are activities initiated by the LGU in promoting/preserving the natural resources in the tourist spots in Plaridel. These activities are ban period for fishing and tree growing and mangrove planting and the use of information drive on the tourism of Plaridel, Misamis Occidental.

Moreover, the challenges encountered in tourism development are pollution and natural resources depletion. Despite the challenges through the awareness of activities facilitated by the LGU helps in preserving the ecological balance of the tourist spots in the area.

In terms of economic sustainability, tourism generates jobs and creates more business opportunities for the local respondents. The respondents are also aware of the activities imposed by the LGU in generating jobs for them. These are through livelihood programs that encourage the residents to venture into another work venture other than fishing or farming. However, data also showed that inadequate compensation is a challenge the municipality’s tourism industry is currently facing.

The involvement of the local government, and the community in attaining sustainable tourism industry

Most of the respondents’ involvement was in the activities imposed by the LGU in developing the tourism industry. This through mangrove planting and clean up- drive activities. Respondents are also involved in the planning process through the use of social media and by attending barangay meetings where they can directly express their thoughts and ideas for tourism development. The LGU of Plaridel is also very supportive of the tourism industry especially in facilitating activities that help preserve ecological balance in these tourist spots.

Challenges encountered by Plaridel, Misamis Occidental in sustaining their tourism industry

There were different challenges encountered in developing the tourism industry in Plaridel, Misamis Occidental such these are the lack of the financial resources, community acceptance and cooperation, and political division in the LGU of Plaridel.

The ways and means of improving current efforts in order to attain a more sustainable tourism development in the municipality of Plaridel, Misamis Occidental

The LGU of Plaridel plays a very active role in improving its efforts for a more sustainable tourism development. Every year, the LGU of Plaridel hosts events and creates different activities to help tourists. This ultimately helps sustain and develop the tourist spots in Plaridel because of the influx of tourists. More local residents motivated and encouraged to establish new businesses to accommodate these tourists. And to ensure an efficient way of accommodating the tourists. Log books, waivers, and tickets are the means used to monitor these activities.

On a positive note, a local official (KI1), cited the prospective projects and actions that the LGU has undertaken such as the creation of the Organic Demonstration Farm in Plaridel that will be situated at Brgy. Panalsalan. Unlike other municipalities, Plaridel is a member of the League of Organic Agriculture Municipalities (LOAM) in the Philippines. With this, the municipality is known to grow organic vegetables, and rice is farmed using rice-duck farming technology with balanced fertilization and the use of vermin fertilizers. This will launch the “Organikong Kainan ng Plaridel” that will kick in the first quarter of 2017.

A local official (KI5) also pointed out that there will be kiosks and stores to cater the needs of the tourists. A photo booth dubbed as “Facebook area” is also provided for photo documentation of the event. With these linkages, project and programs, LGU of

Plaridel aims to sustain the development of tourism in the municipality.

Conclusions

In the previous discussions, the results of this research provided a clearer view of the opportunities and challenges encountered by Plaridel, Misamis Occidental in attaining sustainable tourism development in the municipality. Sustainable tourism development in Plaridel, Misamis Occidental is guided by Tourism Act of 2009. The said Act was put into praxis because of policies in the form of municipal ordinances that had been created and enforced in the municipality. The LGU of Plaridel has created policies that pertain to the sustainable development of tourism such as Municipal Ordinance No. 47-2014, an Ordinance creating the Baobaowon Agri-ecotourism Development Council adopting the provision of the Executive Order No.18-A-214 for the effective supervision of the Baobaowon Agri-Fishery and Eco-Tourism Development Projects.

Additionally, for governing the accreditations of hotels, tourist inns, motels, apartels, resorts, pension houses, and other accommodation facilities and tourism-related transport services and establishments in the municipality, Municipal Ordinance no-3 2012 was enforced. Municipal Ordinance No.18-2008, or otherwise known as the Ecological Solid Waste Management Code of Plaridel was also implemented, adopting a systematic, comprehensive and ecological waste management to ensure the protection of public health and environment, preservation, and conservation of the ecosystem. This policy seeks to preserve the ecological balance of the environment and raises awareness of the people in preserving the natural resources of the municipality.

Another policy is Ordinance no.14-2010 where graduating high school students are required to participate in the tree growing and mangrove planting activities of the municipality to ensure continuity of its endeavors to protect the natural resources.

Moreover, Plaridel's Environmental Code provides for the 'ban period of fishing' to safeguard the fishes during their breeding seasons to sustain the growing population of the municipality. Aside from policies, the LGU of Plaridel has initiated programs such as livelihood programs which open the opportunity of jobs for the residents. There are activities initiated by the LGU in promoting/preserving the natural resources in the tourist spots in Plaridel. These activities are ban period for fishing and tree growing and mangrove planting, coastal clean-up drives and the use of information drive on the tourism of Plaridel, Misamis Occidental. Every year the LGU takes part in hosting cultural events and tourism activities in the municipality to generate revenues for the municipality by attracting visitors and help improve and develop the tourist spots in Plaridel. By developing the tourism industry in Plaridel, more people will venture into businesses related to tourism. Safety and security, however, is strictly observed whereas as the monitoring mechanism such as Log books, waivers, and tickets upon entering the tourist spots in Plaridel, Misamis Occidental are being implemented and strictly complied with to ensure that everything and everyone are well accounted for.

Through the LGU's policies, programs, and practices, equity, economic and ecological sustainability is attained. The regulation of services is satisfactory in the sense that the respondents are willing to spend the amount needed in order to enjoy the tourist spots and that there are sufficient

methods of transportation in each and every destination. Moreover, every tourist spots are accessible anytime by anyone, both by local residents and tourists. Safety is not an issue in the tourist spots because safety measures and tools are already secured by the owners as imposed necessarily by the local government as a requirement in venturing for tourism businesses. In economic sustainability, there are job opportunities and business opportunities available for the local residents. Preservation and protection of natural resources are being done with the activities such as tree growing, mangrove planting, and coastal clean-up drives to ensure ecological sustainability.

Moreover, the Greening the Environment Theory helped in explaining the mutual involvement of the LGU and the community wherein the natural environment can be protected by assigning it an economic value, (Dresner, 2002). It is because the LGU enforce policies as provided in the Local Government Code in 1991 wherein the LGU, as the administering body, provides for the general welfare of its people. The community cooperates with them because their livelihoods are benefitted and their action or inaction will gravely affect their means of living. By putting an economic value on the environment the community shows a high level of sensitivity when it comes to the environment and becomes an active participant in the activities in the implementation and maintenance of a clean and organic town because most of the residents are dependent on the town's agriculture. This is why the community is also encouraged to be part of the planning process since both of these stakeholders are affected. Through these linkages between the community and LGU, better programs and policies are made and the challenges encountered are met head-on.

Recommendations

The tourism development should dynamically participate in collective efforts both residents and policymakers of Plaridel, Misamis Occidental. To efficiently and effectively carry out the promotion of tourism without necessarily compromising the quality of their environment a collective action of the community is important for the endeavors to be successful.

As the results of the study, it highlighted that the welfare of the local community should be given priority and economic benefits are welcome as long as there is ethical business practice, adherence to highest labor standards and development and maintenance of local community infrastructure.

On the side of the residents, it should not be enough that they know the different tourist spots in Plaridel and know that there is a law which provides for the protection, development, and promotion of the said tourist spots and the field of tourism, but they should also put their knowledge into actions to support the Tourism Act of 2009 permanently. The success of sustainable tourism development in Plaridel, Misamis Occidental strongly lies on the positive individual subjectivity and participation of the people in their continuing engagements in the community and abidance compliance to the provisions stated in the Tourism Act of 2009.

On the other hand, the policymakers should also maintain the implementation of ordinances and create innovative ways to improve sustainable tourism development to support of the Tourism Act of 2009.

The LGU must further oblige their people to participate in each and every activity which is directed towards the sustainable tourism development in their Municipality and

continue the imposition of stricter sanctions for non-compliance. In doing so, there is also a great need for proper fund allocation, transparency and good governance by the LGU. That there is a need to create, implement and promote more intensive programs, policies, and projects that would cater to the development of Plaridel's tourism industry. Policies, programs and activities to maintain and further the preservation of natural and man-made sites need to be reinforced. Lastly, sustainable tourism should be given utmost focus as the municipality's revenue is dependent on this.

The business owners must follow proper price limit. This is to maintain the patronage of customers. To further invite more tourists, they must more improve the quality of their services, upgrade their facilities and maintain the cleanliness of their place.

The tourists must also be held responsible for their actions that are violative of the municipality's laws. The tourists should obey local laws and regulations in the area. The tourists must respect and must not offend the local religious and cultural norms of behavior. Also, the tourists must not take part in activities that are illegal or unlawful or widely condemned by the society. Lastly, the tourist must not harm the physical environment of the tourist spots.

Abstract

With new challenges for economies and societies, there is a growing interest in hybrid organizational forms that combine enterprise with social purpose, namely social enterprises. Growing inequality in Thailand (e.g. declining Human Development Index ranking to 103 position- see World Bank Statistics 2014) has stimulated national interest in social enterprises as a way of delivering social welfare. In 2010 the Thai government set-up the Thai Social Enterprise Office (TSEO) and in 2016 the Thai government is passing through parliament a *Social Enterprise Promotion Act* which will include a social investment market place. Social enterprises bridge the public, private and non-profit sectors and are found in range of industries and locations. Social enterprises prioritize the achievement of social and environmental objectives above commercial goals but do trade for a social purpose (Doherty, Haugh and Lyon, 2014; Pache and Santos, 2013).

However research concerning how social enterprises are managed particularly in the Thai context is still in its infancy. In fact, internationally there is a general acknowledgement of a need for more practice based empirical evidence to frame our understanding of social enterprise management. This paper explores the strategic management challenges and tensions encountered and mechanisms

used when seeking to balance commercial, social and environmental objectives in Thai social enterprises. The study uses a qualitative methodology including; a qualitative questionnaire, focus group and semi-structured interviews involving social enterprise organisations, policy makers and academics from Thailand.

We propose an early conceptual framework to advance our understanding of the management of social enterprise in Thailand. This framework identifies a range of key challenges and tensions and the mechanisms centred on the social enterprise organisational mission and resource mobilisation. The framework provides a useful guide to the strategic options available to social enterprises in Thailand and makes explicit the tensions inherent in the mobilisation of internal and external resources.

Keywords: Social Enterprise, Social Entrepreneurship, Tensions, Strategic Management.

5,000-7,000 words

Introduction

The phenomenon of social enterprise (SE) has attracted the attention of policy makers and practitioners around the world (Wilson and Post 2013) and the associated rise in scholarly interest is reflected in the growing tally of publications in the academic press about SE as a distinct category of organizations and the activity of social entrepreneurship (Cukier *et al.* 2011; Lepoutre *et al.* 2013; Lumpkin *et al.* 2013). However, there has been a limited number of academic publications on SE in Thailand.

A SE is an organization that trades, not for private gain, but to generate positive social and environmental value (Santos 2012). Definitions of SE are abundant and reflect distinct regional differences (Kerlin 2010). For example, in the United States (US) SE discourse is dominated by market-based approaches to income generation and social change (Austin *et al.* 2006; Dees 1998; Defourny and Nyssens 2010), whereas in Europe SE is located in the cooperative tradition of collective social action (Borzaga and Defourny 2001; Nyssens 2006; Defourny and Nyssens 2010). The UK borrows from both traditions and the UK government proposed definition states that an SE is “a business with primarily social objectives whose surpluses are principally reinvested for that purpose in the business or in the community, rather than being driven by the need to maximize profit for shareholders and owners” (DTI 2002 p.13). In Hong Kong, SE is viewed as an innovative tool to reduce citizen’s dependency on social welfare assistance (Chandra and Wong, 2016).

All these definitions draw out the two defining characteristics of SE: the adoption of some form of commercial activity to generate revenue and the pursuit of social goals (Laville and

Nyssens 2001; Mair and Martì 2006; Peattie and Morley 2008; Peredo and McLean 2006). Thus SEs differ from organizations in the private sector that seek to maximise profit for personal gain by prioritising social change above private wealth creation: typical social objectives include reducing poverty, inequality, homelessness, carbon emissions, unemployment etc. (Dart 2004; Murphy and Coombes 2009). Hence SEs are associated with pro-social motivations of wealth giving, cooperation and community development (Lumpkin et al. 2013). Lien Centre for Social Innovation (2014) argue that Thailand and other South Eastern countries display large scale persistent and emerging social problems (growing wealth gap) requiring solutions from SEs.

SE strategies to generate revenue from commercial activity e.g., trading goods and services and contracting for services, share some overlap with organizations in the private and public sectors (Wallace 1999) yet are distinct from non-profit organizations that rely on grants, donations and bequests. SEs pursue economic, social and environmental goals (Peattie and Morley 2008) and consequently do not fit neatly into the conventional categories of private, public or nonprofit organizations. Although it is legitimate for SEs to generate profits they are not profit maximising (Pache and Santos, 2012). A number of authors have demonstrated that SEs are a prime example of a hybrid organisational form (Battilana et al; 2016, Doherty et al, 2014, Pache and Santos 2012) in that, by spanning across the boundaries of private, public and non-profit sectors, they have the potential to bridge institutional fields (Tracey *et al.* 2011) and competing institutional logics (Pache and Santos 2012).

By definition, hybrids are the off-spring of two different species (OED 2010) and in the organization and management literature the term has been employed to describe organizations that span institutional boundaries (Brandsen and Karré 2011; Pache and Santos 2012; Smith 2010) and operate in multiple functional domains (Ruef 2000). Drawing on the previous conceptualisations of hybridity, we define hybrid organisational forms as structures and practices that allow the co-existence of values and artefacts from two or more categories.

Despite the growth of SE, research concerning how SE hybrids are managed is still in its infancy and in the Thai context very limited. This paper explores the strategic management tensions encountered when seeking to balance commercial, social and environmental objectives and presents a conceptual framework to advance our understanding of the strategic management of SEs in Thailand. Secondly, the paper provides a current overview

of the SE context in Thailand and finally the paper concludes by suggesting both recommendations to develop the Thailand SE sector and areas for future research.

Strategic Management Challenges and Tensions in Social Enterprise

The aim of strategic management is to create a shared plan for action for the organization as this is believed to confer benefits in that everyone is clear about their roles and how they fit into the organization, resources are used more effectively, knowledge builds commitment and motivation and diverse stakeholders act cooperatively (Brown and Iverson, 2004; Moore, 2000). In social entrepreneurship the challenge is to craft a strategy that is both sensitive to the environmental context (Battilana and Lee, 2014), responsive to conflicting demands (Pache and Santos, 2013) and the foundation of a sustainable business model. SE strategic management therefore is likely to be characterised by input from multiple stakeholders informed by a range of underlying social values.

The strategic management tensions faced by SE leaders arise from the conflicting demands to pursue viable commercial markets at the same time as generating social and environmental value (Austin et al., 2006; Pache and Santos, 2013; Smith, Gonin and Besharov, 2013; Wilson and Post, 2013). For example in a study of SEs established to serve the needs of the homeless it was found that the implementation of strategies to achieve commercial sustainability was at the expense of social mission achievement (Teasdale, 2012). Although the commercial focus of the strategy increased the productivity of the SE, it was associated with neglecting individuals who were perceived to be the most difficult to place in employment. In the next two sections we discuss four strategic management tensions documented in the emerging literature in this area.

Mobilising financial resources

The acquisition of financial resources is fundamental to opportunity exploitation and for SE hybrids, the tension between dual mission achievement is manifest in two ways. First, the dual mission has the potential to impact negatively on the acquisition of financial resources (Austin et al., 2006; Dacin et al., 2010). Research has noted that SE hybrids have access to fewer sources of finance than commercial ventures, particularly where those controlling resources (such as investors) are uncertain about how the organisation will combine the social objectives with a financial return (Austin et al., 2006; Hansmann, 1980; Seelos and Mair, 2005). Further, revenue generation from commercial trading may crowd out

philanthropy and donations because donors perceive that the funds are no longer needed (Kingman, 1995). To respond to the negative impact of social mission on access to finance, SE strategies draw on novel resource acquisition strategies such as bricolage (Desa and Basu, 2013; Di Domenico, Haugh and Tracey, 2010), where SEs make do by combining a range of existing but undervalued resources.

Second, the impact of dual mission on strategic management tensions is played out in the allocation of resources to commercial and social mission achievement (Battilana and Lee, 2014; Doherty et al., 2014). Although social and environmental goals are prioritized above commercial mission (Mair and Martí, 2006), the relationship between the competing goals varies on a continuum from complementary to oppositional (Stevens, Moray and Bruneel, 2014). In business models where the dual missions are complementary e.g. fair trade companies the allocation of resources is likely to be less controversial than when the dual missions are in competition with each other (Moizer and Tracey, 2010).

There are a number of strategies identified in this literature for accessing financial resources to achieve commercial and social mission. First, leveraging social mission to achieve commercial goals e.g., fair trade product certification in which the product brand and commercial market development activities rely on certification of the social value created for producers of raw materials in the supply chain (Doherty, Smith and Parker, 2015). Second, accessing sources of social investment funds designated for advancing social innovation e.g., the National Endowment for Science and Technology (NESTA) in the UK. Third, accessing repayable finance to support social entrepreneurship e.g., loans from ethical investors such as Oikocredit in the Netherlands. Finally, the internal movement of resources between different functions e.g., transfer of the surplus from commercial activity to the achievement of social mission (Alter, 2007).

Mobilising human resources

Strategic tensions are also present in how SE leaders manage human resources and influence employee recruitment, remuneration and volunteer management. First, employee recruitment is shaped by the skills requirements of the SE (Smith, Cronley and Barr, 2012). For example, in work integration SEs different groups of people are employed to generate income when compared to those employed to deliver services to beneficiaries (Pache and Santos, 2013). Battilana and Dorado (2010) found that SE hybrids are recruiting people with the values and culture needed to meet both social and commercial objectives.

Second, hybridity also affects strategic decisions to determine salaries and wages. Previous research has noted how remuneration in the SE sector is lower than comparable employment in the private sector (for a review see Bell and Haugh, 2014). In a study of employment and motivation in community finance organizations in the UK it was found that employees who had previously worked in private sector finance accepted reduced remuneration in exchange for a personal desire to work for an organisation that provides benefits for society (Bell and Haugh, 2014).

The third influence on mobilising human resources concerns the role of volunteers in SE hybrids (Borzaga and Solari, 2001). The unpaid supply of labour provided by volunteers is a valuable resource and means that full labour costs are not included in the cost structure of the SE. The reliance on volunteers for service delivery however means that full economic cost of running the SE is not accounted for. The long term implication is that SE sustainability is reliant on a risky strategy of subsidizing labour costs by volunteers.

Organisations making a transition from a purely voluntary organisation to one with a trading element need to find ways of coping with specific tensions related to cultural change and more commercial orientations. However, with the shift to a more social enterprising orientation, the relationship with volunteers can change. Volunteers may be motivated by the intrinsic rewards of job satisfaction and community impact while a more commercial orientation can lead to greater managerial direction, with volunteers withdrawing labour if they disapprove of such strategic directions.

Mobilising social alliances

Turning now to the strategic management of external relationships in SE, the development of social alliances with partners is an important strategy for acquiring resources, gaining access to markets and serving the needs of beneficiaries more easily than fulfilling these tasks in-house (Austin, 2010). Social alliances range from formal cooperative structures such as joint ventures, partnerships, licencing (Austin, 2010) and social franchising (Tracey and Jarvis, 2007), to less formal mechanisms such as sharing ideas freely and allowing others to scale up an innovative approach (Lyon and Fernandez, 2012). The outcomes of effective social alliances include asset accumulation, market expansion and wider social impact which in turn foster greater mission fulfilment. The choice of partner in a social alliance however is extremely important as legitimacy with stakeholders is influenced by the reputation of the partner (Austin et al., 2006; Moizer and Tracey, 2010).

Previous research has noted the benefits of social alliances between partners within and across sectoral boundaries (Austin, 2010; Gillett et al., 2016). Hybrids are well placed to collaborate with non-profits and with the private sector corporates (Di Domenico et al., 2010). Amin et al (2002) found SEs using alliances with smaller private sector businesses who are willing to absorb trainees that had been supported on SE employment programmes. Alliances are also important when bidding for public service delivery contracts (Lyon, 2012). When the resource requirements of large service delivery contracts are beyond those of individual SE hybrids, alliances provide a structure for pooling complementary skills and resources.

Mobilising stakeholders

Finally, mobilising stakeholders has emerged as an important strategy to enable SEs to achieve commercial and social mission (Doherty et al., 2014). A stakeholder is defined as any individual or group who is affected by or who can affect an organization's ability to achieve its objectives (Freeman, 1984). SE hybrids are responsible to a wider array of external stakeholders than commercial ventures (Low, 2006; Lumpkin et al., 2013) since they cater to interests in both commercial and social performance. Responding appropriately to the demands of different stakeholders groups (Battilana and Dorado, 2010; Low, 2006) has been associated with strategic effectiveness (Brown and Iverson, 2004). The demands of stakeholder groups are also likely to vary in terms of expectations and clarity. For example, cooperative models allow stakeholders to own the enterprise and have a right to a share of any surplus. Strategic management of cooperatives can be challenging as it requires attention to the democratic processes, while also allowing for swift decision making. The expectations of stakeholders with financial interests in the SE, such as formal lenders and investors, will be specified in contractual terms and conditions. These investors can play a considerable role in shaping strategic management, which in turn can create greater tensions between the social and commercial objectives.

The expectations of community members and philanthropic funders may be more focused on social impacts. These stakeholders may be expecting accountability through forms of social accounting and reporting. However, despite advances in measuring social performance (Darby and Jenkins, 2006), social impact and outcomes continue to be more difficult to specify. There are a wide range of approaches resulting in inconsistent measurement and difficulties in comparing one organisation with another (Arvidson and Lyon, 2013), and even when similar approaches are used, there is a degree of discretion

allowing evaluators to make different assumptions or interpretations of impacts (Arvidson et al., 2013).

In summary, this review of literature regarding strategic management in SE hybrids has shown they have to address a range of challenges related to their strategic management. In addition to delivering their services and maximising their social impacts, their hybrid nature creates specific challenges within the organisation related to how they mobilise both their financial and human resources. There are also specific challenges related to external relationships. We group these into challenges related to social alliances and challenges related to mobilising stakeholders.

This paper will now explore through empirical research how the emerging literature on this topic primarily from Europe and the US compares with the challenges and tensions faced by SEs in a newly industrialized nation such as Thailand and how they respond through strategic management.

Methods

Rationale

This study emerged from the on-going professional and academic interest of both co-authors in social enterprise, who have a combined 32-years of experience of both working and researching social enterprise. It became clear from previous research and training projects working in partnership with both the British Council and the School of Global Studies at Thammasat University that a social enterprise ecosystem is emerging in Thailand. However we did not understand the management challenges/tensions faced by hybrid SE organizations in the Thai context. Hence, the methods of enquiry are predominantly qualitative in which inductive logic is used to obtain insights (Garud et al., 2002; Lincoln and Guba, 1985). Use of qualitative procedures is appropriate as our aim is to obtain rich contextual understanding and promote exploratory insight of a complex emerging setting (Gephardt, 2004). Furthermore, a primary motivation for this study was “theory elaboration” (Lee, Mitchell and Sabylnski, 1999).

Sources of Data

We followed Reuf and Scott (1998) in defining our field geographically, collecting our data within the Thailand SE sector i.e. a newly industrialized country. The qualitative methodology included a pre-focus group qualitative questionnaire, a one day focus group involving 31

participants including 17 social enterprise founders and CEOs, 4 intermediary organisations, 4 private sector organizations working with SE, 2 charities and 4 academics plus 5 follow-up semi-structured interviews with SE founders and CEOs.

In addition, we also utilised secondary data including both current and historical reports on SE emergence from a range of sources including; The British Council, The Thai Government Social Enterprise Office (TSEO), social entrepreneurship agency Change Fusion and the Lien Social Innovation Centre in Singapore.

Data collection and Analysis

Data collection occurred in three phases. Firstly, focus-group participants completed a pre-focus group questionnaire providing details of their SEs (founding year, size, sector etc.) and their main management challenges/tensions. Secondly, an all day workshop took place with 31 participants from the SE sector in Thailand. The SEs represented a range of sectors including; organic agriculture, social care (e.g. disability support), media, e-commerce, publishing, textiles and fashion. In addition, there was a good representation of both start-up and established SEs. The focus group involved two-sets of group discussions, firstly around the key challenges/tensions facing social enterprises in Thailand and secondly the mechanisms used to manage these tensions. Furthermore, the participants were also asked to identify recommendations for the future. During this phase we analysed the collected data from phases 1 and 2 using content analysis of both the pre-workshop questionnaires and the focus group. The authors then collaborated and through a process of constant comparison grouped similar labelled extracts and created 9 first order codes to describe the data (Strauss and Corbin, 1990).

The third phase involved 5 in-depth semi-structured interviews with SE founders/CEOs to test the first order themes and provide more in-depth organisational context re the strategic management of SEs in Thailand. Running through all these 3 phases was the collection of secondary documentation. Our aim here was to triangulate key emerging themes.

Research Setting -Social Enterprise in Thailand

The model of using business activities to generate social impact existed in Thailand before the term “social enterprise” was popularized. The self-sufficiency economic philosophy of the King has led to the set-up of community ventures that create jobs and economic opportunities for local communities nationwide. The forerunners of SEs in Thailand date

back 20 years, e.g. Mae Fah Luang Foundation, a royal project founded in 1972 creates jobs for hill-tribe communities in Doi Tung as well as generating income to finance community development activities. The Population and Community Development Association (PDA), one of the leading SEs in Thailand was founded in 1974 (Chhina et al., 2014). However, until recently the concept of SE remained unknown to development practitioners and the general public. First, there has been a growing demand in Thailand for innovative developmental solutions due to rising inequality, ongoing political instability and increasingly complex social and environmental problems. Secondly, foundations, multinational companies and international NGOs have reduced significantly their financial and technical support to local development agencies in the past decade. This has forced the existing social sector organizations and emerging new players to look for more self-sustainable enterprise models to support their work i.e. SE.

Encouraged by the international success of SE, the Thai government set up the National Social Enterprise Committee in 2009 to increase awareness of SE to the general public and develop supporting infrastructures that would enable the SE movement to grow in Thailand. The five-year National Social Enterprise Master plan (2010 – 2014) was developed by the Committee in 2010 which led to the establishment of the Thai Social Enterprise Office (TSEO) as a government agency to support SEs. TSEO has played a central role to encourage policy support and buy-in from relevant government agencies and politicians leading to the development of the *Social Enterprise Promotion Act*. The Act was expected to pass through the Thai parliament in late 2015, but the process has been delayed due to the cabinet reshuffle. The *SE Promotion Act* is now on track for approval, expected in Q2 of 2016. The draft of the SE Promotions Act includes, tax incentives for investors (investment and procurement), social taxation for SEs, a SE start-up grant program, soft loans for SEs, social procurement and SE certification. TSEO categorized SEs into five main groups based on their origins, consisting of (1) Community (2) Corporation (3) Entrepreneur (4) Public sector and (5) Non-governmental organization. The number of SEs nationwide was estimated to be over 100,000, inclusive of community ventures and some types of co-operatives (see table 1).

Table 1 Thailand Social Enterprise Categories (Social Enterprise Master Plan, 2010)

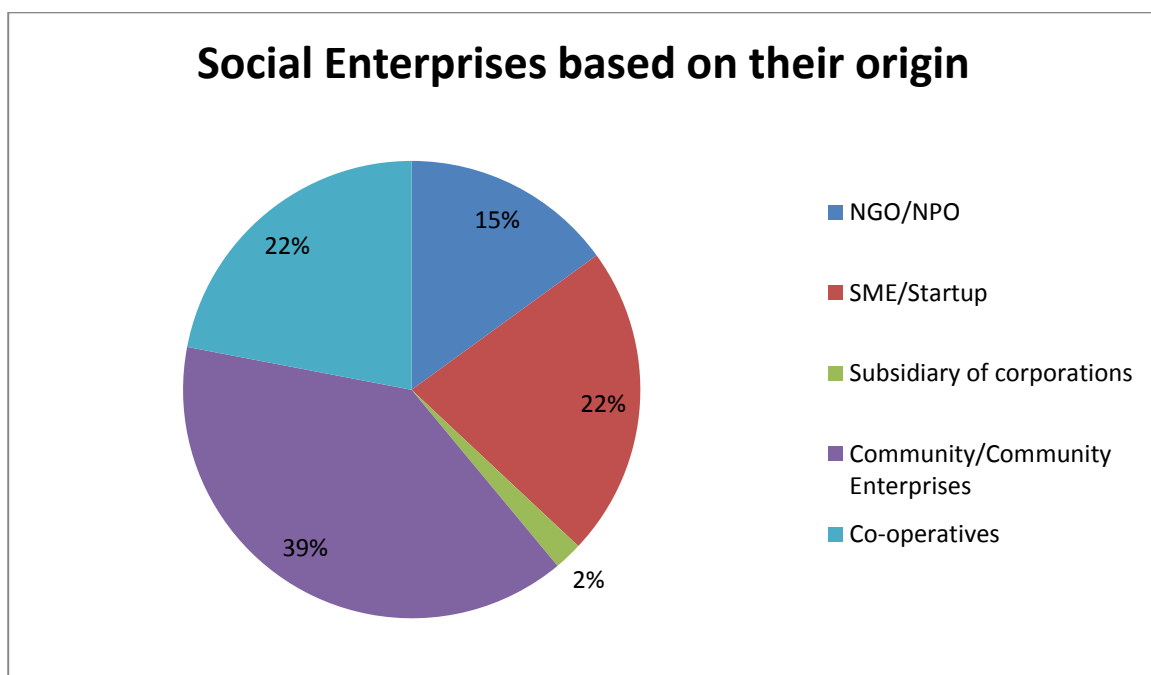

Types of Social Enterprises	Estimated number (2010)	Description	Examples of social enterprises in Thailand
Community	> 100,000	Community enterprise, local tourism, cooperatives and local financial institutions	Mae Teeta (Thai Indigo-ded cotton) and Namkien Community Enterprise
Corporation	< 10	Founded by or spin-off from established private companies	Sena Development and SCG Skill Development
Entrepreneurship	> 200	Newly founded by social entrepreneurs	LocalAlike and Plantoyo
Public sector	< 10	Founded and/or owned by government agencies or state enterprises	Ban Paew Hospital and Chao Phya Abhaibhubejhr Hospital Foundation
Non-for-profit organization	> 100	Founded and/or owned by NGO	Mae Fah Luang Foundation (Doi Tung), PDA and Fisherfolk Sustainable Seafood
Others	< 100	Founded or owned by religious institutions, academic institutions and others	Rung Arun School and Thai Tribal Crafts Fair Trade (TTC)

Since 2013, the TSEO has set up an online self-registration system for SEs. Both TSEO and the National Social Enterprise Committee established specific criteria in 2014 to endorse registered organizations as SEs. The five criteria consist of (1) clear social objective, (2) financial sustainability, (3) fairness to society and the environment, (4) reinvest to achieve social goal, and (5) good governance. Regarding the first criteria, the registered SE needs to have one of the following social objectives – (1) employing the disadvantaged, (2) promoting better society or environment through their core business activities, (3) owned or governed by the disadvantaged, or (4) allocate most of their profit to their social cause or reinvest in their SE. Regarding financial sustainability, the SE has to have over half of their revenue

from trading activities and cannot allocate more than 30% on dividend. Finally, the SE has to maintain good governance with a minimum requirement to; register as an organization (could be in the form of foundation, association, company, etc), submit an annual report to their respective regulatory body and make their information publicly available.

It is important to note that not all established SEs and new start-ups have registered with TSEO at this point. As of December 2015, 1,007 organizations had registered, however, the number is anticipated to grow significantly in 2016 with the passing of the *Social Enterprise Promotion Act*. Based on the categorization above, the Community-based SEs are the largest category of SEs in Thailand (see figure 1). SEs founded by NGOs have been growing as a way of NGOs becoming more self-reliant. SEs founded by corporations are often set up with the primary objective to address social and environmental challenges caused by their operations. Although there are still only a few SEs in this group, the number is expected to grow due to the Stock Exchange of Thailand launching incentives for companies to shift their CSR approach towards SE. Furthermore, the public-private partnership (Pracharath) initiated by the current government encourages corporations to co-create SEs, for example in April 2016, Thai Beverage Group CEO announced the establishment of Pracharath Raksamakkee, an umbrella organization to set-up SEs nationwide in both the tourism and agricultural sectors.

Figure 1 Categories of Social Enterprises in Thailand (Thai Social Enterprise Office, 2015)

The Financing the Long-tail report (Change Fusion, 2015) stated that most SEs in Thailand are currently in an early stage of development with 50% having less than 20 employees with annual revenues under THB 1 million. This is visually captured with the long-tail curve in Figure 2, where a few established large size SEs exist at the head of the curve, followed by some more medium size enterprises, then a large number of smaller enterprises in the long-tail consisting of highly-diversified small SEs. In term of operating models, TSEO identified five business models of SEs in Thailand, including (1) cross-subsidy, (2) plough-back-profit, (3) social need, (4) beneficiaries-owned and (5) work integration.

To support this emerging SE sector, the social investment landscape in Thailand is growing rapidly. For the SE idea stage, there are a number of funding sources for prototyping. Taejai.com, the first and largest crowdfunding for development provides a platform for SEs with innovative ideas for social change to raise funds from citizen philanthropists to finance their projects. Some incubation programs, Ashoka Thailand for example, offer opportunities for social entrepreneurs to obtain seed funding and technical support to set-up their SE.

Figure 2 Financing the Long-tail: Catalysing ASEAN debt-based social investment (Change Fusion, 2015)

In the start-up phase, there are a number of seed funding options for SE including; various incubation programs (i.e. UnLtd Thailand) and business plan competitions (i.e. Banpu

Champions for Change). This funding can often be to short-term as SEs in this phase require medium-term patient capital lasting several years (Change Fusion, 2015). There are also some organizations providing pre-growth and growth-stage funding, for example, Change Ventures, a subsidiary of Change Fusion, and the LGT Venture Philanthropy Accelerator Program; but the funding amount is still limited. There has been a slower development on debt financing, in 2015 TSEO collaborated with two state-owned banks, the Government Saving Bank (GSB) and the Bank of Agriculture and Agricultural Cooperatives (BAAC), to set up a SE loan program of 2,000 million Baht. However, the detail on policy and lending procedures currently remains unclear. Currently, it appears there is a lack of funding options in Thailand to take SEs from establishment to growth.

Currently on equity financing, most of the available funding is concentrated at the head of the long-tail curve. Investors still have a cautious risk appetite; and only want appear to invest in the long established and large size SEs. In 2014, a collaboration between Khonchai Foundation, Change Fusion and BuaLuang Asset Management Company has led to the establishment of Thailand's first socially responsible investment mutual fund, B-KIND. With regard to social impact investment, 0.8% of the fund is allocated for venture philanthropy and up to 15% can be invested in SEs (ChangeFusion, 2015). Additionally, a group of young philanthropists have formed a giving circle, RD Capital, to pilot the impact investment model in 2016. Although in its infancy, this initiative could pioneer more angel investors and philanthropists to channel additional resources to support the scale-up of SEs.

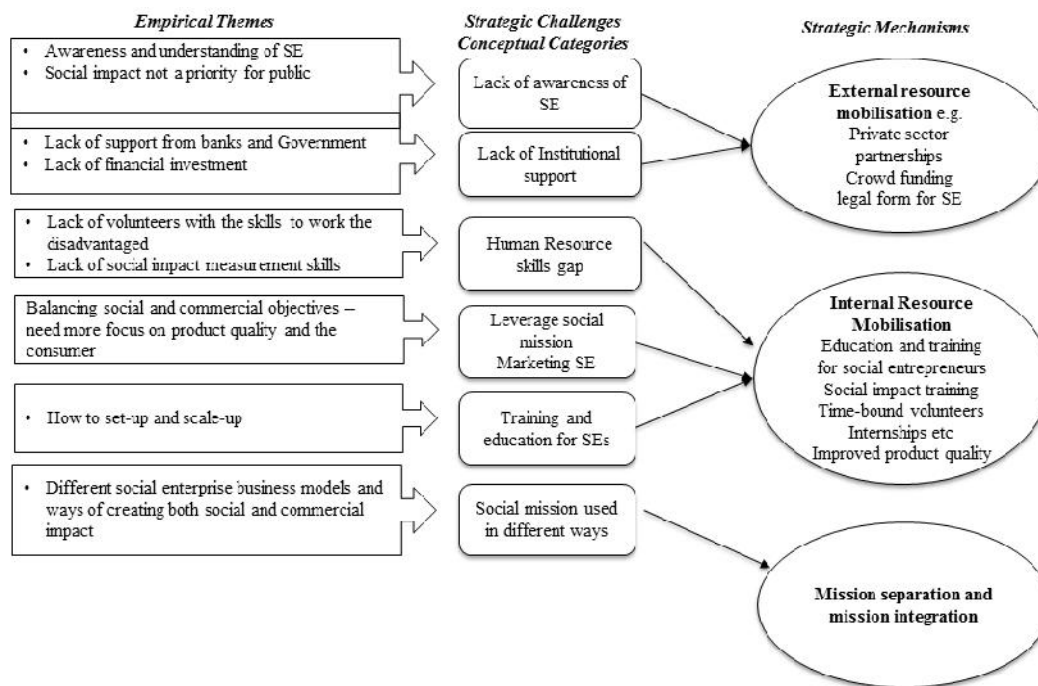

In addition, the Stock Exchange of Thailand (SET) has been actively promoting SE by hosting events, seminars and discussions to educate business leaders and CSR professionals on the potential of SE to drive social change. SET are encouraging listed companies to integrate social investment with their business operations and activities. In 2015, SET established the "Social Enterprise Investment Awards" for listed companies who strategically contribute their financial and in-kind support to SEs. In April 2016, SET has launched the "SET for Future" portal as an online database for companies who are looking for an SE partner. Furthermore, the G-Lab, Social Innovation Lab at the School of Global Studies at Thammasat University, supported by the Rockefeller Foundation, has developed a corporate pro-bono initiative to support SE capacity building. Secondly, Thai Health Promotion Foundation has granted Ashoka Thailand to manage a capacity building program for their grantees. Intermediaries such as Ashoka Thailand and Change Ventures integrate capacity building support as part of their venture investment. Additionally, Thai Young Philanthropist Network (TYPN) has been instrumental to help SEs connect with the right partners.

To support the development of the Thai SE sector ten universities in Thailand participate in the knowledge development and incubation program networking activities supported by TSEO and the British Council. This has led to a growing interest from academic institutions to play a more active role in the sector, leading universities include (1) Srinakharinwirot University, focusing on social entrepreneurship education, (2) King Mongkut's University of Technology Thonburi emphasizes turning faculty-student project and research into impact enterprises, and (3) Thammasat University, running a Bachelor's degree in social entrepreneurship and co-creating the social innovation and SE ecosystem with multi-sector partners through their social innovation lab (G-Lab). The British Council Thailand has also been a key player through launching initiatives such as *Skills for Social Entrepreneurs* (SfSE) programme in October 2009 to promote the development of new relationships and partnerships across the public, private and non-governmental sectors between Thailand and the UK. This has facilitated SE study tours to the UK.

Results and Discussion

The initial content analysis of our data revealed a composite summary of empirical extracts and 9 first order codes (Strauss & Corbin, 1990), see figure 3. The authors then returned to the empirical data and examined the strategic management challenges and tensions faced by SEs in Thailand and the mechanisms used to manage these challenges. This led to the development of 6 second order conceptual codes for tensions associated with external and internal resource mobilization and 3 aggregate dimensions for strategic mechanisms for SEs in Thailand including external and internal resource mobilization plus different approaches to organizing the SE organizational model.

Figure 3 Data Structure of Strategic Management Challenges and Tensions in Thai Social Enterprises

From the data we identify two principal business model strategies that SEs use to for responding to conflicting demands (see figure 3). This is related to the social mission, firstly, mission separation, in which dual missions are mutually exclusive and achieved by the internal structuring of work into responsibility for the achievement of either social or commercial goals. Second, mission integration, in which dual mission is achieved through combining the pursuit of both social and commercial goals. An example of mission separation is the restaurant *Cabbages & Condoms* in Bangkok, which provides high quality Thai food for both locals and tourists but a percent of its profits go to the NGO Population and Community Development Association (PDA) to promote family planning plus sexual health and education. The sustainability of the commercial restaurant arm generates surpluses which are then gifted to the NGO. The strategic management tension lies in the extent of resources directed to the different functional units which may in practice compete with each other for resources. *Cabbages & Condoms* has a mission “our food is guaranteed not to cause pregnancy”.

In a mission separation strategy, the commercial venture is either aligned to the social mission and is called strategic coupling, or distinct (strategic decoupling) such as *Cabbages & Condoms* i.e. a food restaurant involved in promoting safe sexual health.

The second strategy of mission integration is based on striving to generate income and social value through an integrated business model in which all business functions support the achievement of dual mission. This strategy is found in mission driven organizations e.g., *Akha Ama* Organic coffee or work integration SEs such as *1479 Call Centre* in Bangkok who employ disabled workers. The focus of strategic management is to balance the tensions between the achievement of commercial and social objectives. Previous research has identified two strategies for integrating dual mission. First, temporal management by switching focus from social mission to commercial mission at different times for example on a project by project basis and partial integration through alignment on a subset of functions

The research also identified a number of challenges and tensions both external and internal to social enterprises which impact on resource mobilisation in both mission separation and integration models. These include; the external resource challenges regarding a lack of understanding of SE and a lack of institutional support from banks and Government and internal challenges in terms of mobilising human resource skills, marketing resources and knowledge regarding social enterprise set-up and scale-up. The conceptual framework for strategic challenges and tensions in Thailand SEs is presented in table 2 below and is anchored in 4 strategic management tensions.

Table 2 Strategic Management Tensions and Mechanisms in Thailand Social Enterprises

Strategic Management Functions	Challenges	Tensions	Trade offs	Examples of Management Processes
Social Mission mobilisation (external)	<p>Lack of understanding of SE in Thailand by public and institutions</p> <p>Lack of understanding of importance of social impact by Thai public</p>	<p>Disagreements on priorities held by different groups</p> <p>Ensuring mission does not drift away from multiple goal achievement</p>	<p>Sacrificing social value creation for economic value capture</p> <p>Purposefully not seeking profit maximisation</p>	<p>Use social mission as a force for strategic direction</p> <p>Find optimum conditions where social value creation leads to profitability and competitive advantage. Use data from social impact measurement in communications with stakeholders</p> <p>Use social mission and impact to access resources from private sector partners plus institutions such as banks and Government.</p>
Financial Resource Mobilisation (External)	SEs may not be perceived as viable clients by mainstream financial	Conflicting expectations and demands between different	Dual pricing strategies for different client groups	Cross subsidisation by targeting income sources that generate a surplus for reinvesting in social mission

	institutions Lack of understanding of SE and social value by those controlling access to financial resources	stakeholders Operating under financial constraints due to inadequate financial resources	Investors persuaded to accept a lower and slower rate of return in exchange for social value creation	Leveraging a mix of financial capital from both commercial and philanthropic sources Access to lower than market rate capital from social investors e.g. crowd funding New legal forms to encourage investment
Human Resource Mobilisation (internal)	Skill shortages and lack of competences in combining social and commercial objectives i.e. lack of social impact measurement skills Lack of volunteers in Thai context with appropriate skills	Managing motivation and rewards of employees and volunteers Volunteers not perceived to have skills and experience in some areas of service delivery	Balancing payment of higher SE salaries and investing in achieving social mission Recruiting volunteers versus high turnover of volunteers	Balance of staff and board members with social and commercial and skills Use of non-pecuniary measures to motivate and reward employees, volunteers and trustees Social impact measurement training for all staff and board members Also training in how to set-up and scale-up SE Time bound volunteers and internships
Marketing Resource mobilisation (internal)	Perception by public that social enterprise product quality is inferior	Refusing lower quality product from beneficiary groups	Work closely with beneficiary groups to ensure attention to product quality	Pay a premium for quality. Training of suppliers Demonstrating to public via tasting/trialling etc that product is of high quality

A key theme identified in this research is the lack of understanding in Thailand of the SE business model.

“Most of people believe “Social Enterprise” is a “Non-Profit Organization” (informant A)

Hence there needs to be an educational campaign to raise the awareness of SE and its social impact. SEs in Thailand need to communicate their distinctiveness i.e. their social mission and their value creating approach via trading. Forming partnerships with other sectors such as private sector organisations and key institutions will also provide access to external resources for SE. It is clear from the research there is a deficiency in social impact measurement skills in Thai SEs. A specific legal form for SE could also help raise awareness such as the Community Interest Company in the UK and could support the development of a SE identity.

Secondly, the financial landscape for social investment is just emerging in Thailand and currently access to financial resources is a tension. Informant C explains;

“There are developments in new crowd sourcing platforms but there is also potential in Thailand for the development of social investment from philanthropic sources. We need to show the potential for social impact and get investors to look more long term”

Again awareness raising of the SE dual impact with potential social investors will be key to stimulating this alternative form of finance. There is clearly a strong emergence of social investment and it will be important for intermediaries to bring partners together. A third tension is associated with human resource mobilisation, particularly of volunteers with the required skills in specialist areas such as working with the disabled. Informant E explains;

“There is not a strong volunteering culture in Thailand as yet and this needs stimulating”.

Mechanisms such as time-bound volunteers and internships are being utilised effectively by some SEs but this requires further capacity building. The final tension is related to marketing and product/service quality. SEs in Thailand believe there is a negative public perception of product quality from SE. A focus on product quality in branding e.g. Doi Tung and Akha Ama coffee illustrate that social mission and product quality can be combined effectively.

Conclusions and Recommendations

This paper has identified two different approaches to organizing SE business models in the Thai context, namely mission integration and mission separation. Some SEs aim to maximise their social impact through separating their social mission from trading activity, whilst others aim to integrate their social and commercial mission by generating trading revenue in activities that also meet their social objectives. Furthermore the research has identified four strategic management tensions arising from the conflicting demands inherent to the management of SE hybrids in Thailand. These relate to mobilising the social mission, financial resources, human resources, and marketing resources. This distinguishes the challenges in managing internal and external resources. This initial framework will help the Thailand SE sector develop their own strategies to managing the challenges and tensions.

To date SE strategic management has been less formal and emergent in SE (Doherty et al., 2014). However in the light of the constrained resource context in which SE hybrids work, the need for careful and considered attention to the best use of resources suggests that SE strategic management is too complex to be left to emergence. The framework we present provides a useful guide to the alternative strategic options available to SE hybrids. The framework makes explicit the tensions inherent in the mobilisation of internal financial and human resources and the development of relationships with partners and stakeholders external to the organization.

Moreover, the same framework enables the authors to provide a number of recommendations for those involved in shaping the development of the SE sector in Thailand including; training in social impact measurement, development of a social finance landscape, a need to stimulate a volunteer culture in Thailand, set-up of social alliances and networks, the need to improve the awareness of SE particularly with consumers and a Thailand social enterprise awards initiative. Those universities who have launched SE initiatives should also develop programmes of SE research.

This paper shows initial exploratory research on SE in Thailand. Further research is required on the management of SE, particularly how the strategic management tensions play out specifically in the different types of social enterprise business models such as mission integration and separation types. Therefore further in-depth case study research on how some of the more successful SEs are established and managed would prove beneficial.

Abstract

This article presents the results of research that explains the perception (a priori or a posteriori and positive or negative) of the civitas academic (lecturers or professors, staff/employee, students, and alumni) about “Blissful Service” or “Delightful Service” image at the PostGraduate Program State University of Makassar (PPS-UNM). This type of research is qualitative with phenomenological approach. This study uses a sequence of 5-D process. The primary data obtained from direct observation and interviews with informants, such as students and alumni, professors, including the chairman of the study program (Master Program / Doctoral Program S2 and / S3), as well as employees, while secondary data obtained from the documents and the results of previous research. The results of this research is the civitas academic, including alumni of PPS UNM shows a posteriori positive perception on academic and student services received, which felt "fairly satisfied or fairly happy". The tendency of the positive perceptions of the positive impact of the implementation of the strategy to enhance service quality at PPS UNM (Akib and Rifdan, 2015), as follows: 1) Standards of Public Service (SPP) and Standard Operating Procedure (SOP) used; 2) Human Resource Development (HRD) through education and his training in the workplace, or study visits to other places; 3) administrative services that are effective, efficient, and fun through the implementation of the function (acronym) MITRA - managerial, interpersonal, technical, routines, and analytical; 4) services and management information systems (MIS) based on information technology (IT); and 5) Provision of facilities (equipment) and supporting infrastructure for the smooth running of academic and student services. Based on the results of the analysis suggested that strategies to improve the quality of service can be perceived a posteriori-positive by the civitas academic PPS UNM as a way of realizing blissful or delightful service for recipients (service beneficiaries) image, because of trust, commitment, and integrity shown, as well as competency and performance of the service providers. Thus, the proposition of “blissful service” for recipients can be formulated as a function of the equation satisfying, delightful and enjoyable service for recipients are repeated in relative a long time.

Keywords: Civitas academic, recipient or service beneficiaries, blissful or delightful service.

INTRODUCTION

Discussion about the organization's efforts to build the image of public service that is to make "happy" and not merely "satisfactory" and "fun" recipients of services, an important and interesting theme discussed. The appeal was based on the fact that, on the one hand, the image of the public service will be awakened when based on competency and performance of the apparatus is reliable (Akib, 2004), but on the other

hand, Dwiyanto (2009) indicated that the competence and performance of the organization (bureaucracy) public the districts / cities in Indonesia is still low, due to a number of official public bureaucracies tend to be more power-oriented rather than service, treating service users as objects of service who need help, as well as bureaucratic officials are directly related to service users or citizens are less capable of responding to

the dynamics growing in the public service.

Conditions reveal on a variety of public service organizations in the region also shows that good results of the dissertation research, and the results of the assessment community satisfaction index (CSI) for the performance of public services are generally low or not good (Suaib, 2015: 27), not maximum (Van Gobel, 2015: 34; Rizal, 2015: 27), is not optimal (Tui, 2014: 30; Ohoiwutun, 2015: 35), of lesser quality, or less effective (Datu, 2014: 56), or less satisfactory, except for some research dissertation that explains been accomplished (Ridha, 2015: 5), there is an increase (Nilwana, 2014: 30), or satisfactory (Radja, 2013: 18). Therefore, individuals and institutions as public service providers are expected to constantly improve the competencies (knowledge, skills and expertise) and capabilities owned, particularly in the fields of public administration, as the competence or capability base to show the best performance in the organization where she worked.

Based signaled Dwiyanto, the results of the dissertation and the prescription offered in this article, the required seriousness of bureaucratic apparatus as an innovator in applying the concepts and theories of administration, in order to create order and arrangement in the public service, so it can be "happy", is more than just satisfying and satisfy the public it serves. Assumptions and prescriptions are consistent with the understanding that the formal object of administrative sciences that characterizes and simultaneously differentiate it from other sciences is order, arrangement, and stewardship. These keywords characterize reinforce administrative science as an artistic science (the science that there is an art) and or scientific art (art of existing knowledge) with the multi-disciplinary nature and eclectic (Akib, 2011: 226). Therefore, the word order, arrangement, and stewardship is at the same alpha omega of cooperation activity two people or more based on the specific competencies possessed to achieve organizational goals.

Observing the importance of the efforts of public organizations, including the PostGraduate Program (PPS) State University of Makassar (UNM) in image building services joyous public (academics) were served, then posts the results of this study aims to analyze and explain the perception (a priori or a posteriori and positively or negatively) the academic community about the service image to be happy in PPS UNM.

LITERATURE REVIEW

Service quality

Quality of service has long been used as a focus of conversation experts, among others, August William Smith who understand service systems as elements of a systematic method and administrative functions of management (Sutherland, 1978: 84), Christian Grönroos introduce the concept of quality in the locus of service through his writings titled "Quality Comes to Service"; A. Blanton Godfrey and Edward G. Kammerer wrote about "The Five Myths About Service Quality"; D. Wotis Wolkins wrote of "Service Quality Principles"; Paul Kahn developed the "Service Quality as Strategy" (Scheuing and Christopher, 1993: 4, 17, 55, 69). Later Bensimon (1995: 593) investigated the suitability of the adaptation of Total Quality Management (TQM) in college. Another expert who also provides an idea of the quality of service with the focus and locus different is Dickinson (1999: 8) writing services in the public sector (eg postal service) services and the private sector as the organization's activities as an effort "Creating Customer Focused Organizations. "Similarly, Stenberg and Austin (2007: 1), which discusses Managing Local Government service and Amirullah (2015) which examines Soft and Hard Side Side TQM in health care. The views of the experts basically reinforce understanding of the need for strategic planning and public service system that is efficient, effective, and quality.

Competence Apparatus

Shermon (2005: 11, 14) to understand the competencies of individual characteristics that enables them to show

the best performance in the job, role, situation, site, or a particular locus. Characteristics of people often referred to as "the collection of attributes" which includes a domain of knowledge, skills, talents, social roles, self image and motif, or understood as the competence of the individual level. Meanwhile, the competence of the organization according to Weinstein and Azoulay (1999: 3, 6, 19) is the organization's ability to learn and do certain things that are useful for organizations and individual members. Organizational competence refers to the efficiency of the troubleshooting procedures, the ability to apply knowledge and master the technology in production and management methods, intelligence organizations, customer demand, and so on.

Organizational competence is the terminology that characterizes the existence and capabilities of the organization to achieve the goals set out in an efficient, effective, economical, and accountable. The range of ability is an indication that in every organization there are core competencies that should be developed as a source of strength and a sustainable competitive advantage. Organizational competencies proved its capacity to adapt to environmental change (Berman et al., 2006: 6) internal and external, as well as the transformation of the organization (Akib, 2011).

According to Ulrich and Smallwood cited by Hesselbein and Goldsmith (2009: 14), the future organization present today when leaders change their focus, from organization to organization structure is understood as a series of competency or capability necessary to implement the strategy. The expert view of inspiring the reader to a competence development can serve as the locus and focus the attention of leaders in organizations and people involved in it. Said capability in this paper are considered the same meaning to the word competence, so it is used interchangeably.

Experts, such as Hesselbein and Goldsmith (2009: 14), Weinstein and Azoulay (1999: 19), Johnson and Scholes (2002: 540), French et al, (2000: 3), and Garratt (2000: x), agree that competence

represents what is understood about the organization, what is good to do, and how the pattern of beneficial activities. Judging from its destination, the competence of the organization directed towards a future strategy perspective (Siagian, 2002). Organizational competence based on knowledge, attitudes, and skills need to be developed in a planned and sustainable, because it is a prerequisite for the performance of the organization in general. According to some experts, among others, Groves in Leemans (1976: 99), Dror in Leemans (1976: 127), Weinstein and Azoulay (1999: 6), Garratt (2000: 119), Rainey (2003: 9, 19), Rindova and Taylor (2003: 2) that the dimensions of competence or capability of a performance measurement criteria within the organization. Thus, competence is a prerequisite for measurable performance or results achieved in the organization. This theoretical proposition in accordance with the opinion of Shermom (2005: 362) that, competency-based performance management system can change the orientation of the assessment results achieved to the behavior of the organization and competence shown.

Apparatus performance

The concept of performance is understood as outcomes of work (Rogers, in Mahmudi, 2004: 6) because the work provides a strong link to the strategic objectives of the organization, the satisfaction of service, customer or citizen satisfaction, according to the perspective of the New Public Service (Denhardt and Denhardt, 2007: 42-43). Performance can also be understood as the level of achievement of objectives on an ongoing basis (Bernardin and Russel, in Keban, 2004: 191-192).

Donald and Lawton (in Keban, 1995: 11; 2005) said that performance appraisal can be used as a measure of success of an organization within a certain time and that assessment can be used as input for the improvement and enhancement of organizational performance. Furthermore, Donald and Lawton (in Ratminto and Winarsih, 2005: 174) says that the performance of the organization is an orientation that includes a comprehensive

output efficiency and effectiveness. Meanwhile, according to Selim and Woodward (in Ratminto and Winarsih, 2005: 174) that, the performance can be measured by several indicators, among others, economy, efficiency, effectiveness, and fairness. Meanwhile, Lenvinne (in Ratminto and Winarsih, 2005: 175) proposes three concepts that can be used to measure the performance of public bureaucracy, the responsiveness, responsibility, and accountability.

According to Zeithaml, Parasuraman and Berry (in Ratminto and Winarsih, 2005: 175) that, for measuring specific performance can be used five indicators, namely: physical evidence, reliability, responsiveness, assurance, and empathy. While Gibson, Ivancevich and Donnelly suggests that the performance can be measured by several indicators, among others: satisfaction, efficiency, production levels, the level of development, the level of adaptation and survival. These indicators can be grouped into two-dimensional orientation, which is a process-oriented performance indicators and results-oriented performance indicators (Ratminto and Winarsih (2006: 178-179).

RESEARCH METHODS

This type of research is qualitative (Gravetter and Forzano, 2012: 158) with a phenomenological approach (Suyanto, 2011: 166-167). The study was conducted using methods and techniques of collecting data through observation in the study site and interviews with informants to determine, explain, interpret, and report the results of the attitudes and behaviors, or knowing what is thought, said and done by professionals of academic and student affairs at Post-Graduate Program State University of Makassar (PPS UNM). In the course of this research also use the sequence of the 5-D (cited in Buerkler, 2013) which includes the following phases: 1) Defining the objectives and the research questions, 2) Designing the research, 3) data collection, 4) data analysis, and 5) Documentation. The location of research in the Office of PPS UNM. Primary data is sourced from direct observation and the results interview with

a number of informants consisting of representatives of the faculty, including the chairman of the study program Master Program (S-2) and the Doctoral Program (S-3), the employee service providers and students PPS UNM. While secondary data sourced from documents and factual information pertaining to the object of research. Data were analyzed descriptively qualitative.

DISCUSSION AND ANALYSIS

Article results of this study to analyze and explain the perception (a priori or a posteriori and positive or negative) civitas academic about the service image of academic and student affairs, which is not just satisfying and enjoyable moment, but also "happy" service recipient in PostGraduate Program State University of Makassar (PPS UNM). PPS UNM is an organization of public bureaucracy that seeks to develop creativity and innovation services by implementing a strategy to enhance service quality, especially academic and student services (Akib, et al., 2015), as part of the process of public administration activities. In this case, the human resources organized and coordinated apparatus, as stated by Chandler and Plano cited by Keban (2004: 3) that, in order to formulate, implement, and manage decisions in the areas of administration and public policy. As the arts and sciences, public administration intended to regulate affairs and public services, as well as carry out various tasks specified.

Recent developments of a paradigm or perspective of public administration, in the context of public service is the actualization of the main idea of the New Public Service (Denhardt and Denhardt, 2006). The idea of public service is reflected in the academic and student affairs at PPS UNM. Thus, it appears that the services provided by PPS UNM perceived by the informants are not so much different quality to the services organized by sector or private organizations. Therefore, the following description provides an overview of the quality of service in question.

The views of experts, the study of literature (theory), is a reference in explaining the strategy implementation of quality improvement of academic services and student affairs at PPS UNM (Akib et al., 2015). In fact, systems and procedures or mechanisms of action implemented in PPS UNM is not only a reference for service providers, but also an indicator of the strengths and weaknesses in management, as well as happiness or absence of academic and student services during this time. Thus, the fact that in accordance with the views D. Otis Wolking (Scheuing and Christopher, 1993: 72) on the role of organizers or service providers in implementing the "quality strategy" through education as one of the six principles of quality. Then, also in accordance with the prescriptions concept offered by Akib (2014), quality of service that can be "happy" or blissful is more than just satisfying or enjoyable, the service recipient.

Post-Graduate Program State University of Makassar (PPS UNM) has a performance management that are reliable, in which one of the advantages the management and service providers is the ability to recruit new students in large numbers from various circles to compete and be accepted as a student, as well as on the same time have human resources (HR) (lecturers and employee) are capable in their respective fields. Capability SDM is supported by the implementation of human resource development strategy, as the core writing Rothwell et al (2000: xx) that human resource development is a systematic process to find and analyze the significance gap HR performance (Zeithaml et al, 1990: 89), planning a performance improvement of HR in the future, the design and development activities in an efficient, effective, economical, ethical, and aesthetic in the implementation and evaluation of the results. This is similar to the view of Werner and DeSimone (2009: 10) regarding his training and development as one of the HRD function.

Besides advantages, PPS UNM also still have weaknesses in managing and serving the civitas academic, as well as a

relatively large number of students. Weakness as PPS UNM challenges faced by the number of students that a lot is the provision of academic and student services quality. The views or perceptions of informants and students or recipients of the services is a part of PPS UNM internal customers who need to be served quality, which is efficient, effective, ethical, aesthetic, professional, and sustainable. The quality of these services will have an impact on the level of satisfaction or "blissful service for recipients", namely PPS UNM civitas academic and others who served. The views informants in accordance with the understanding of marketing management guru, Philip Kotler and Eduardo L. Roberto (1989: 248) that teaches the necessity of watching the target adopters' satisfaction - satisfying customers. The same thing by Dickinson (1999: vii) teaches the principle of "growth through customer satisfaction." According to Dickinson that by focusing on the satisfaction of customer needs, the organization will automatically be more productive in the strive for human resources and technologies are applied in accordance with the needs of the service user (customer). Similarly, administrative science expert, Herbert Alexander Simon (1997: 119) in his book, Administrative Behavior, has introduced a keyword satisficing - satisfactory, as the orientation of individual behavior and administrator in the airport or make rational decisions. Simon further stated that when a person is involved in decision-making with purely economic motives, then that person will always try to maximize its business, means choosing the best alternative of all the available options. Meanwhile, an administrator will always strive to make the best decision satisfactory or good enough.

Based on the views of these experts and look at the results of research Akib, et al (2015) found that in an effort to follow up on any weaknesses faced by the management of PPS UNM, has developed a strategy to increase the quality of services that provide satisfaction, pleasure or "blissful" service for recipient is students, educators (Professor and doctoral degrees of lecturer), employees

and society. Strategic effort applied are: 1) providing Public Service Standards, abbreviated as PSS and Standard Operating Procedures, abbreviated SOP refers to the Minister of Administrative Reform and Bureaucratic Reform (PERMENPAN and RB) No. 7 of 2010 on Guidelines for Assessment of Performance Unit Public Service and PERMENPAN and RB No. 35 Year 2012 on Guidelines SOP Governmental Administration; 2) develop the competence of the human resources, based on the views of Werner and DeSimone, 2009: 10); 3) provide effective administration according to the function (acronym) MITRA - managerial, interpersonal, technical, routines, and analysis (Quible, 2004) provides service management and information systems (MIS) quality, effective, efficient, economical, ethical, aesthetic, sustainable (based on the views O'Brien, 2013: 339, and 5) providing learning facilities and infrastructure were adequate. The selected strategy is expected to have an impact on improving service quality of academic and student affairs at PPS UNM, as shown in the following figure (Akib and Rifdan, 2015; Akib et al., 2015).

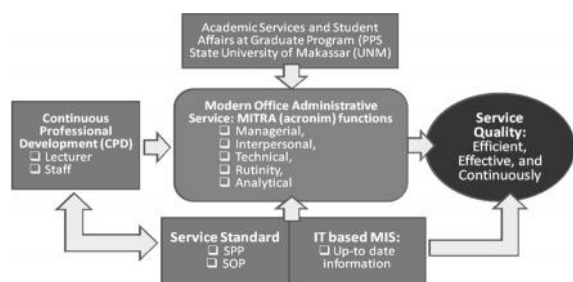

Figure 1. Prototype Based Service Quality Improvement Strategy Competency and Performance Officers (cited in Akib et al., 2015)

Public Service Standard (PSS) and Standard Operating Procedure (SOP). Public services are implemented in each government agency is actually based on a standard reference for the public service, abbreviated as PSS. It is important to remember normatively regulated in the laws and regulations of the government at various levels (Regulation of the Minister

of Administrative Reform and Bureaucratic Reform / PERMENPAN and RB, No. 7 of 2010 on Guidelines for Assessment of Performance Unit Public Service and PERMENPAN and RB No. 35 2012 Guideline of Governmental Administration SOP). Similarly, to start a required activity plan that is able to give direction to the service provider in order to provide services in an efficient, effective, economical, ethical, aesthetic, sustainable. Under the rules of the government, one of a series of efforts to improve the quality of service that is "happy" because it ensures the certainty and direction of the main tasks and functions of employees has been conducted by PPS UNM through the provision of SOP, but until the research is done is not yet complete for all units existing work, so that the implementation has not been effective, sometimes time-consuming, and there are procedures cumbersome, especially since there is still the honorary staff who do not understand the working standard.

Human Resources (HR) Competent. Supply and human resources development strategy is conceptually based on the view of Robert J. Sternberg (Elliot and Dweck, 2005: 17) regarding the increased capacity into the competence and competencies of expertise. In fact, human resources owned PPS UNM, as is the case in a higher education institution to another, include two categories of teachers (lecturers degree Professor and Doctoral) and educators (employee background education and his training-owned), with various types of academic and administrative services are performed. The provision of appropriate strategies educators taught field is still very necessary, in order to provide the best learning to students in the learning process. Moreover, that the lecturers in delivering course material is able to relate the course material with the research that has been done. Strategy Another important undertaken by the management of PPS UNM for the professors who are empowered are directly and indirectly support professional development (lecturer) on an ongoing basis, either through the provision of financial

resources to research and scientific activities, as well as financial support to assist the doctoral students who follow courses Sandwich Program at colleges of repute abroad or in various states, such as Ohio state University (OSU), United States, Northern Illinois University (NIU) United States, Keio University, Sonan Fujisawa Campus (SPC) of Japan, University of Canberra (UC) Australia, the University of Queensland (QU) Brisbane-Australia, and others. Shows that although the provision of competent human resources in PPS UNM is not optimal, but it is already in line with the pattern or idea introduced by Stenberg. Strategic human resource development efforts conducted by PPS UNM is a form of strengthening of administrative and student services functions, which in turn will give a positive impact not just satisfying or enjoyable, but blissful service for recipient.

There are various approaches appropriate strategies applied in developing the HR organization (Rothwell, 2000; Elliot and Dweck, 2005; Werner and DeSimone, 2009), including in universities and postgraduate programs, which is the locus of this research, including through education, his training, mentoring, coaching, upgrading, and so forth. Human Resources Development Strategy conducted at PPS UNM has been implemented, but not optimally. Therefore, there is a serious effort of PPS UNM leaders to maximize their implementation (Akib and Rifdan, 2015; Observations and interviews Researcher, 2016).

To give meaning to the lecture and the research conducted by professors at the PPS UNM applied strategy of engagement (participation) students in research professors, minimal as data collectors (enumerators), in order to provide experience and learning for students, so it is not difficult to make scientific work in the form of a thesis or dissertation to complete his studies. Meanwhile, for education personnel at PPS UNM, has been implemented human resource development strategy to be more competent in serving the academic community to follow his training and study visits in accordance with the field work, so the staff are motivated to do (perform)

better. Human resource development strategy have been, because according to the informants considered appropriate to raise morale and airport employees or to the students. Strategy benchmarking, on the one hand, in line with the view Bensimon (1995: 594) and Werner and DeSimone, 2009: 4), on the other hand is different, because the PPS UNM promotes in the form of a comparative study, while Werner and DeSimone were more focused on workplace learning and performance. The experts stated that human resource development seeks to develop the knowledge, skills, productivity, and satisfaction for individuals (people), groups and organizations, even the community, the nation, and ultimately all humanity.

Effective Administrative Services Based (Acronyms) MITRA. Provision of effective administration and student affairs at PPS UNM done by changing systematically the various components of administrative tasks and units of academic and student services available. Change the system and procedures performed in the improvement of the system at the service counters which have been considered not able to provide excellent service to students. Efforts were made according to the needs and complaints submitted by students and some informants from the faculty and staff. According to the management PPS UNM to anticipate complaints that students needed a modern office administrative service system that is effective and efficient. Modern office administrative service system is meant by Quible (2004) is a model system that includes the functions of managerial, interpersonal, technical, routines, and analysis of, or abbreviated MITRA.

All MITRA functions have been implemented in PPS UNM, but has not run optimally. One of the systems that support the effectiveness of the implementation of the functions MITRA is providing staff to provide services to students in any program of study, so that more employees focus on running their duties and functions. Provision of employees is the realization of managerial functions by the management PPS UNM, in the form of

distribution of employees in various work units, so that routine tasks are done with the support infrastructure and existing technology enables technical functions implemented. Similarly, human relationships horizontally and vertically fellow academicians PPS UNM created as a form of interpersonal function implementation, and ultimately became the subject of analysis PPS UNM management, as a responsible implementation of the functions MITRA. In other words, the provision of employee-based study programs in PPS UNM in addition to supporting the implementation of the functions MITRA, also facilitate the coordination of inter-led (horizontal coordination) and between managers and staff (vertical coordination), an academic community (coordination diagonal) in handling and solve problems and administrative services and student affairs at hand.

During this time the management, especially the assistant director of administration and finance PPS UNM constantly working on the provision of facilities and infrastructure in the implementation of academic and student services. Providing facilities for students shows the development and progress over time. In the view of the informant, is an option on the right strategy and maintained, but the problem is these facilities were less able to be maintained (Observation researcher). In other words, the strategy of maintenance of facilities and infrastructure of academic and student affairs at PPS UNM is low or not maximized. As a result, a lot of infrastructure that is "broken prematurely" or abandoned because of less intensive treatment, there is even a type of facility that delayed repairs by the management of PPS UNM. So, conceptually strategy effective administrative services in accordance with the views Zeithaml et al (1990: 91), but the difference is in the maintenance and control functions in PPS UNM still less than the maximum.

Support Management Information Systems (MIS). Akib and Rifdan (2015) research results found that services and MIS in the PPS UNM has not been implemented to the fullest. This can be

seen in such things as: a) access to the internet is sometimes problematic, b) the information presented there is less up to date, c) service management and information systems integrated academic (SIMPADU) which is sometimes out of sync with data is inputted manually at each booth, d) the availability of data online is still minimal (less). Based on that reality still required a systematic coordination, so that the information services and management can work well or maximum. Conceptually, in line with the view of Maracas and O'Brien (2013: 6-7) on the main areas of information systems knowledge required by professionals or service providers, as well as the role and function of major management information systems, the information systems that support the process and operationalization of the activities of the organization, decision-making, and the organization's competitive advantage. See the three functions, it is done in PPS UNM only the first function and the second.

CONCLUSIONS AND RECOMMENDATIONS

Analysis of the results of research on the perception of the civitas academic at the PostGraduate Program, State University of Makassar-based competence and performance of the apparatus reliable a positive impact on the growth of the image of "blissful service for recipient", more than satisfying or enjoyable moment the service recipient. In addition, the impact could be the trigger and spur change in the index value the satisfaction of the civitas academic and alumni regarding the performance of public services (administrative and student affairs) in PPS UNM to a better direction or quality, which is more efficient, effective, economical, ethical, aesthetic, professional, and sustainable. The strategy for improving the quality of service can be perceived a posteriori-positive as a way to realize the image of the blissful service, because of the trust, commitment and integrity shown by the service provider, as well as competency-based and reliable performance of the apparatus. Thus, to affirm the meaning of the keyword or the proposition that **the**

blissful service is a function equation of satisfying, delightful, and enjoyable recipients repeated in a relative long time.

Efforts to build the image of public service as the blissful service for recipient or stakeholders in PPS UNM is a source of inspiration and motivation for any service provider in the works. This optimism is important because marketing management expert Philip Kotler and Eduardo L. Roberto (1989: 248) teaches the need to pay attention to the target adopters' satisfaction – customer satisfaction. Furthermore, Dickinson (1999: vii) teaches the principle of "growth through customer satisfaction". Similarly, an expert in the science of administration, Herbert Alexander Simon (1997: 119) in his book, *Administrative Behavior*, has introduced a keyword satisficing as the orientation of individual behavior and administrator in provide services or make rational decisions.

For the author, though the "guru" administration and management does not state explicitly the word "blissful service for recipient, but simply uses the word satisfy customers or users, as the purpose of the services provided or decisions made, but the author is optimistic that a positive image of public service will be awakened when customers or the public as a recipient of the service are happy, once satisfied with the services received. Happiness recipient of the service more so when the service provider works with the motto "serve wholeheartedly" and committed to "solve the problem without a problem" (as the slogan of the Pegadaian Office, Republic of Indonesia). To meet the expectations of both the course should be based on competence and performance of the apparatus reliable.

In order for this scientific paper can be meaningful as a reference in managing the organization or institution where we work, then made the following recommendations:

- Head of the organization, especially in PPS UNM is the locus of research, need to develop competence and performance apparatus optimal and sustainable in order to build the image of public service institutions to be

blissful service for recipients internal stakeholders, and governments area and all parties as users of its services.

- Leaders together SDM apparatus in any organization need to rearrange the system of competence development which is a prerequisite HR performance through organizational learning on an ongoing basis. In addition, do reinspiring organizations by instilling commitment and new energy to any service provider to realize the vision, mission, motto, edicts, and the principles of service based on the ethical / moral, aesthetic, kinesthetic to deliver the work ethic of quality, which is efficient, effective, economical, professional, and sustainable.

PUBLIC PRIVATE PARTNERSHIP IN MANAGEMENT OF PUBLIC FACILITIES IN MAKASSAR – INDONESIA (20)

Abdul Mahsyar

Email: abdul_mahsyar@yahoo.co.id

Department of Public Administration, Post Graduate Program
Muhammadiyah University of Makassar – Indonesia

Abstract

This study aims to describe a model of cooperation between the Government of Makassar with the private sector within the framework of public private partnership, and see the effectiveness of such cooperation for the benefit of the public.

The study used a qualitative approach, locus of the two institutions namely Makassar City Government and PT Tosan Permai Lesatri as the developer who had collaborated. The focus of research on aspects of the management of public facilities such as Karebosi Field. Sources of data obtained from the cooperating agencies and also from other stakeholders are of the Land Board, Member of Parliament, and the public in Makassar. The collection of data through in-depth interviews, observation, and documentation. Data were analyzed by descriptive qualitative perform data reduction, presentation, interpretation and subsequent inference.

The results showed Makassar City Government handed over the management of public assets to the private sector due to limited resources in the form of development funds management and maintenance, facilities and personnel. By partnering, the construction of public facilities can be done quickly and minimize the use of local government budgets. Cooperation between the Government of Makassar with the private sector using model contracting outdeng an build operate transfer pattern in the form of a cooperation system utilization through Bangun Guna Serah models. This cooperation model each party's rights and obligations under the contract, the private sector is given the right to manage a period of 30 years and after the expiration of the contract all the assets are returned to the government of Makassar as a whole. Results kemitraan memberikan positive impact for both sides belonged to the city government earn revenues and unencumbered land management and maintenance costs, availability of comfortable public space area and the green area in the city center. For the private sector earn profits through the utilization of part of the land as a public bisnis. Bagi region to benefit from both the availability of a representative public space, as a means of recreation, sports, shopping, and other activities for various purposes.

Key word: Partnerships, governance, government, collaboration

INTRODUCTION

The development paradigm of public administration has until the *new public service* perspective. In this perspective has changed the outlook in governance that previously oriented government into governance. In governance, there are three main actors of the state, private sectors, and society (UNDP, 1997).

The dynamics of development of a society that increasingly advanced, and increase the amount of the burden of

government as government administration, especially in the public service to make the government has limited ability to meet all the needs of the public, in connection with that then some of the government's role should be assigned or transferred to the private sector as a manager.

One model that is implemented in partnership between government and the private sector in the management of public facilities is through privatization. This model of privatization has become a major

issue in public policy in Indonesia. Since the reign of President Soeharto era until the Government of Susilo Bambang Yudhoyono. Privatization is a policy that is multifaceted. In ideologist, significantly minimizing the role of the state. In management significantly improve the efficiency of business management and enhance shareholder value. In the budget, privatization can mean filling state coffers or area being reduced (Savas, 2008; Bastian, 2002).

Model of cooperation between government and the private sector is an alternative that can be selected by the government, especially in providing infrastructure. When the government lacks the resources to build infrastructure or to manage assets belonging to the concept of public-private partnership can be used, which led to the relationship between the public and private to cooperate in development. The advantage to be gained in this connection is the innovation, ease of financial, technological capabilities, and setting efficiency.

Improved management of public facilities in several countries has been widely practiced with various models of cooperation that do. The City of Makassar South Sulawesi Indonesia, the local government since decentralization has been trying to implement urban development in all aspects of community life. Specifically on the physical development such as the construction of public facilities requires substantial funds while the government's ability is very limited. Based on the phenomenon, Makassar Mayor seeks to accelerate existing physical development by adopting a model of cooperation with the private sector in the management of public facilities. One public facilities management is delegated to private parties is Region (Field) Karebosi. This area is one of the icons in the city of Makassar, besides

other icons such as Losari Beach, Fort Fort Rotterdam, and the culinary icon for visitors to the city.

Karebosi is the name of a land that is a marker of the city because it is at the point 0 (zero) kilometer is an area of vacant land (field) that spans an area of 11.29 hectares. This field can be equated as *the square* is in the concept of the towns on the island of Java, Indonesia. Some what different from the *main square* in the island of Java in general that is located around the palace (King palace). The field previously more widely used as a *public space* for the citizens of Makassar, for example as a means of exercising (soccer), where prayers Eid al-Fitr and Eid al-Adha, a place to hold various events of companies, the location of hawkers, stall tents, and various activities of citizens of this city that can be used at any time for free (unpaid).

Karebosi as a public area can be said to be very functional as a region and already has a long history that began in the Kingdom of Gowa The 13th century this area serves as a royal rice fields before switching function in the form of royal courts as a public area at the time (Yasen, 2008). In the Dutch colonial period, this area called the *Koning-splein* which function as public space and the Dutch forces training, at the time Karebosi fortress flanked by two Dutch military base. After Indonesian independence, the name changed to Field Karebosi derived from the syllables *Karaeng Bosi* (rain master). The name refers to the events of the epic droughts and rainy ([www. Ayomee.com](http://www.Ayomee.com), accessed 05/01/15).

The long history of use as a *public space* field Karebosi new spotlight when the citizens of Makassar, Makassar Mayor Ilham Arif Sirajuddin held by (Period 2004-2014) intends to build and develop the function Karebosi Field with the concept of

revitalization that will work with the private sector. Reasons for the need to revitalize is because during this time the field was not neglected and not utilized optimally.

Revitalization program undertaken by the Government of Makassar done in cooperation with private parties who wish to participate in the construction of public facilities through tender mechanism as the provisions of existing law. But in the bidding process object of this project to the private sector, there is only one company that is interested to cooperate PT Tosan Permai Lestari, the company offers a field development concept Karebosi with the principle of land uses in part for business purposes and partly for public facilities.

Fields revitalization process to implement this Karebosi was not as easy as imagined that all will go smoothly because the project is intended for the benefit of society. Turns desire Mayor of Makassar to revitalize by involving the private sector have a lot of scrutiny, criticism, and resistance of all elements of society, both from ordinary citizens, observers of culture, artists, sports community, academics and students with various rejection of each argument. Even pressure from the politicians, political parties and factions in Makassar City Council who disagree also enliven this rejection action. The refusal sometimes cause a wave of protests and boycotts Karebosi field development, even last long enough since the process of building up this area was completed, not only the government are criticized and condemned, but also the private sector as the developer does little in terror from groups of people who refused revitalization. In essence protests made by some citizens of Makassar, have different shades but which appear to be prominent is the feel of politicization.

The purpose of revitalization according to the Mayor of Makassar is to

restore the function of the field, especially as green areas, recreation areas, sports facilities, activities of various events (show business), as well as a place of prayer of Eid / Eid al-Adha. Due to field conditions that are not conducive when the field conditions were muddy and muddy in the rainy season and dusty during the dry season. Field maintenance is the responsibility of the Government of Makassar entail huge costs while revenue fund of this field is absolutely no so overburdened city government because they are also required to perform maintenance cost is not small.

Through the partnership model of government with the private sector are expected this public asset can be built more quickly, there is a utilization management and better maintenance, and the public can be more comfortable and secure in use, and the most important is not encumbered in city government bear the costs of management and maintenance. Not with standing the developer or manager can take advantage of the region as a business area to cover the cost of the construction, management and maintenance of which it is responsible.

The scope of this study covers aspects of the model of cooperation between the Government of Makassar as the bureaucracy with the private sector within the framework of *public private partnership*, and the benefits of such cooperation, especially for the residents of Makassar.

RESEARCH METHODS

The study used a qualitative approach to the type of case study research. Research focuses on public and private collaboration models, constraints, and the benefits for the citizens of field management Karebosi by private parties. The results of this study to describe and locate the public asset

management model. Data were obtained from primary sources, namely a field research by conducting interviews with several informants that government officials of Makassar concerned, the politicians in Parliament Makassar, officials of the National Land Agency, leaders and citizens of Makassar, and the developer and manager of the management of PT Tosan Permai Lestari. In addition to interviews with several informants, the data were also obtained through field observations mainly to see the use Karebosi field. Secondary data were obtained from the documentation by studying various relevant regulations, and document collaboration.

Data were analyzed by descriptive qualitative analysis of the context by way of literature review and analysis of statements based on interviews of informants. Analysis of the data through the stages of data reduction, confirmability test, and inference. The results of the study are presented in descriptive narrative.

RESULT AND DISCUSSION

Cooperation between the City of Makassar Government and the private sector PT Tosan Permai Lestari which is a national private company based in Makassar. This is possible by using a system of cooperation with the land use pattern *BangunGunaSerah (BGS)* in accordance with regulations Kepmendagri No. 17 of 2007 on Regional Property Management on technical guidelines on management of regional. the Government of Makassar invites entrepreneurs interested in participating in the tender Karebosi Field revitalization project. In accordance with the existing legal mechanisms, one of the requirements for the implementation of the tender is the lack of legal certainty or the status of objects or goods area that will be tendered to investors.

In line with this aim, the Government of Makassar in this case the Mayor must first apply for the issuance of land management rights (HPL) on Field Karebosi (Blogger, Padepokan Hukum, October 26, 2012). This situation is actually a constraint, due to the lack of legal certainty for the management Karebosi Field so that none of the interested investors to build and manage large areas of this because it is seen not to have economic value as a return, except PT Tosan Permai Lestari who did happen to this company already builds and manage Makassar Mall Trade center, a large shopping center in the heart of Makassar City adjacent to the northern part of the Field Karebosi which are only separated by a highway.

After seeing design mockups Karebosi field development master plan is the result of a contest conducted by the Government of Makassar, the company agreed to cooperate with the Government of Makassar to develop an area of approximately 9 ha revitalized area of 11 ha Karebosi overall. About 3 ha or 30 percent of the land is used for building, including underground. Because it was about 70 percent remains a public space without being bothered aesthetics and general facilities (Yahsen, 2008).

Makassar Mayor in accordance with the determination to revitalize this Karebosi Field that knows no surrender to the various obstacles in the form of rejection, protest, and even the threat of terror from various parties. In addition to the challenge of some of the residents, as well as the most formidable challenge is the misperception legally on land where this Karebosi field.

As the information obtained from interviews said that "although not yet have HPL but de facto indicate that this land in the possession of the Government of Makassar that have been used and exploited by citizens and maintenance

also been carried out by the Government of Makassar. Therefore it is the duty of the Government of Makassar to improve through rebuilding or revitalizing that extend the functionality of the field by developing and adding infrastructure more powerful field to function. Limited funding which is owned by the government can be resolved by inviting investors to implement pembangunan. Upaya conducted by the government of Makassar in addressing to the lack of development funds, which seeks to encourage and hold investors who are willing to invest in the development of this region (Karebosi) were estimated at that time will cost hundreds of billions. If waiting for the availability of funds from the budget of the city of Makassar, the revitalization that would not be accomplished in a short time can even just be a project to fail, especially when it comes to tenure of Mayor ends before the revitalization plan is realized or when the temporary development goes.

Foresight and good relations Mayor of Makassar (Ir. Ilham Arief Sirajuddin, M.M.) with some business leaders, so as to encourage employers are a little daring in realizing the ambitions of local leaders can be said as a big capital to realize this collaboration so that the project can be implemented. Cooperation between the Government of Makassar with PT Tosan Permai Lestari corporate to build a field Karebosi performed by Guna Bangun Serah mechanism model is the best alternative to revitalize Karebosi.

In accordance with the MoU signed by the two sides noted that cooperation has a term of 30 years and then after that all the rights and liabilities held by the PT Tosan Permai Lestari is no longer valid and entirely returned to the Government of Makassar as the asset owner. Based on the existing MoU Karebosi field

revitalization project began working in October 2007.

A cooperation agreement between the Government of Makassar with PT Tosan Permai Lestari confirmed by Decree No. 426.23/026/S.PERJA/Ekbang and No. 074/TPL/X/2007, on the Build To Deliver in order Revitalization Karebosi Fields dated October 11, 2007. Model cooperation agreement which subsequently has received approval from the Makassar City Council in a letter No. 293/172 / DPRD / 2007 dated May 11, 2007. Under a cooperation agreement, then as compensation to the developer or investor is given the space to utilize the land under the land area of 2.9 ha on the north side Karebosi Field, hectarage of previous agreements covering 85% is used as a parking lot and 15% of economic activity, but after review by the developer it is considered less profitable because the economic activity is very narrow space, but after negotiations re a compromise so that the land area that is used approximately 60% as a parking lot and 40% as a place of economic activity. So that the public area is not reduced by business interests, the Mayor of Makassar consideration so that the region is more profitable to give an investor the underground land use as a business area. This area is a designation meant that private parties can obtain the funds in lieu of the cost incurred for the construction and maintenance costs Karebosi field.

Land use underground as an economic activity by the investor is the only alternative that can be done because given Karebosi Field as a public space can be maintained function after revitalization. It is not possible if the economic activity carried out on the surface of the terrain which is a public area that had been used by the residents of Makassar.

As often happens in the transfer of public land to be managed by private

parties is always a conflict between the public interest-oriented social dealing with the interests of investors are chasing profits. Therefore, the strategy is done so that the interests of each party can be accommodated. Before executed field development Karebosi initial steps undertaken are doing design competition revitalization field Karebosi, as explained by the Head of Economy and Development Secretariat of the Government of Makassar, that the results of the contest were chosen is a design that provides a basement for various economic activities.

Utilization of the basement meant that the courts function as a public area retained after the field development is completed. Utilization of the basement is the only way that can be done by the developer because it is impossible to do the physical construction of the building for example build stores or commercial buildings on the land. Meanwhile, the developers need a commercial area which will be used as a commercial enterprise as compensation to restore the value of the investments made, in addition to the obligation of the developer to carry out the maintenance of the area under his responsibility and hire employees too costly.

Karebosi as a public sphere that is legendary in the city of Makassar and its existence in the past and is still full of myths, so that when management is delegated to private parties by the city authorities got a lot of attention and criticism of the various elements of society, therefore, the asset management of this public need transparency and clarity of form management because there are a lot of interest from different parties so that the potential social implications that are confrontational and contradictory. Thus in order to be more accountable management of this area, the cooperation between the city government and the private sector should also involve members of the

community, especially relating to land use that there needs to be some sort of an agreement (charter) between the residents and the manager (which is facilitated by the government).

Noting model of collaboration between the Government of Makassar with the PT Tosan Permai Lestari, visible form of cooperation that is done is through a model of *contracting out* or *outsourcing*. This model is one of the few forms of privatization that *outsourcing (contracting out to private vendors)* the form of privatization, where the release occurred entirely conventional public sector functions contracted out to a private vendor (Bastian, 2002).

In line with this, in the context of *public private partnership* undertaken by the Government of Makassar in the management field Karebosi were handed over to the private sector, the cooperation model does is shaped *build operate transfer (BOT)* which is a contract between the Government of Makassar with private enterprises (*special purpose company*), PT Tosan Permai Lestari.

Outsourcing and BOT undertaken by the Government of Makassar in this case the Mayor handed over the development / construction and management Karebosi to a private party (PT Tosan Permai Lestari) with a maturity of 30 years, called "Bangun Guna Serah". Even in the management of Karebosi handed over to the private sector in the form of *outsourcing* but government involvement in land use on the ground remains the Government of Makassar in this case the relevant agencies have the authority to manage such a set and give recommendation for permit for land use by a group or organization that will use this field mainly for social purposes. As for commercial purposes such as events implemented by the manufacturer of the private companies is handled and managed by the developers to use other parts of the field. Yet for the use of public

or private community can still be done without the permission of use. While the PT Tosan Permai Lestari has the right to manage and conduct periodic maintenance of facilities and infrastructure and maintain security, order and environmental hygiene in public areas. If the note of the cooperation is visible on both sides each have rights and obligations as stipulated in the contract agreement.

After the construction area Karebosi completed, reflecting the change

drastically in these areas which were previously unknown field conditions neglected, now Regional field is well defined and contribute to the government in the economy, and functioned socially as well as the use by private parties commercially in certain parts of the region.

Description of Field Karebosi before and after their cooperation in the development and management:

Conditions prior to development	Condition after construction
<ul style="list-style-type: none"> • Lower field position located at an elevation of minus 50-80cm from the surrounding road surface • In the rainy, season waterloggedpitch conditions, muddy. • In the dry season, dusty field conditions, not overgrown with grass. • Field neglected, no management, • On the evening of the field utilized homeless, prostitute, and common crime • Fields only an expanse of empty land deemed unattractive (less aesthetic) 	<ul style="list-style-type: none"> • The field development through the elevated position i hoarding land two meters • Area greening the lungs of the city • There are 3 units of Olympic standard football field, 2 units of mini soccer field, playground area skateboard, softball field, an area for the Eid prayer, prayer room, a tennis court 4 units and a basketball court 2 units. • The existence of the tract jogging around the field throughout the 1700m is shaded by plants treeson its side • Available field and the stage ofthe ceremony, and the use of multi-function • Area parking cars and motorcycles above ground and below ground • Public lavatory, gymnastics area, and offices in various sports • Business areas that are under the ground (supermarket, restaurants, and others, and vehicle parking area)

The interesting thing about this field is that there are "Tomb" (believed by some people as sacred places) is located right in the middle region, where the tomb had become an obstacle to revitalizing the region. So that revitalization can be accomplished then the existence of the tomb of 7 pieces is retained and labeled. The tomb is believed some ethnic

Makassar as the emergence *Tomanurung* (a kind of god in the mythology of the Bugis-Makassar) sent by God to save the country (Yasen, 2008), where it is maintained and to this day is still visited by the pilgrims to pray and hope blessing, especially on certain religious holidays.

Regions that become the talk of the residents and most frequently under the

spotlight of parties opposed to the revitalization Karebosi both from the politicians, the bureaucracy outside the Government of Makassar, NGOs, students and community groups is the presence of shopping malls (Mall) in underground known as *Karebosi Link*, this is actually the neighborhood live Karebosi because in this area a source of income investors and potential sources of revenue for the Government of Makassar, which further source of income from this area used to finance the development and maintenance of regional Karebosi.

Area occupied Karebosi link located below ground to this day is still controversy as legally, because the National Land Agency considers its use violates the laws and regulations that exist because it has not obtained the legality of HPL. In the absence of HPL is a matter of controversy for the manager because they do not have the right base to lease spaces to third parties such as the present, there are more than 500 tenants who rent space that this land as a commercial area. From the statements of officials of the National Land Agency of South Sulawesi Province stated that it is impossible to publish HPL to Karebosi for in the legislation of the Republic of Indonesia today, there is no set HPL to the basement (*under ground*), while for land use thereon is also deemed not to have the right base for HPL also had not risen so there should be no activity in this area because it is still in the status quo, he explained (Kompasiana, September 1, 2012, accessed October 27, 2014).

The existence Karebosi after revitalized including building basement (under ground) which is used as commercial areas, in spite of the controversy turned out to be a positive benefit for the citizens of Makassar and its surroundings, namely the existence of this area in addition to a public space as well as the business district with space for

society to open various types of business and it definitely gives enough jobs for the communities. Business persons who opened the business in under ground Karebosi are 80 percent of middle and lower class of local entrepreneurs and 20 percent are national businesses. As for other communities this region can be utilized in a variety of activities on the field, even if the field is surrounded by an iron fence transparent for the purpose of regional security but does not make it impossible for people to move inside and free of charge unless tariffs on motor vehicle parking for those who bring vehicles motorized.

In line with the goal of revitalization as a contractual agreement in the form of contracting out in the form of outsourcing or build operate transfer model of the concept of *public private partnership* between the Government of Makassar with corporate PT Tosan Permai Lestari can realize Karebosi region becomes defenseless function fits the purpose of revitalization. Namely improving the functioning Karebosi in various dimensions as a *public space*, a business area that provides profit to entrepreneurs, the social benefits for the community for use as a means of recreation, and as urban green areas. And most importantly the Makassar City Government already provides one means of public space as a place of social interaction representative for urban communities, and also as a means of economic development of the people. In addition, through public private partnerships in managing the assets of the public, the Government of Makassar can reduce the financial burden for no longer burdened provide resources not least in the form of personnel and funds to carry out the management, maintenance and repair facilities (items) that become assets of government, open space for entrepreneurs to play a role in regional development.

CONCLUSION

Policies implemented by the Government of Makassar with Tosan Permai Lestari PT as entrepreneurs in partnership managing government assets had a positive impact in the form of mutual benefit to both parties, including the communities of Makassar. Form partnerships undertaken through a model of contracting out in the form of outsourcing or model build operate transfer in the concept of public-private partnership where both parties in this case the private parties were given the right to manage with all the rights and obligations to utilize, manage facilities, maintain, maintain order and security in a term of 30 years and after the time period of the contract is

ABSTRACT

Health development has implemented evenly by the Government, not only physically but also the development of health service in terms of its quality. One of the efforts to improve the quality of health services is implementing e-health. E-health is a service in the form of information and communication technology applications are linked to the overall functional element supporting the health sector.

The application of e-health is identical to the e-government which is the utilization of information and communication technologies in implementing governance by government institutions to improve the performance and the Government's relations with other parties. E-health that was applied is affected of eight key elements of the success of e-government, i.e. 1). Political environment, a State or a political atmosphere where the project in question is or was implemented. It is related to top down projects and bottom up projects, 2). Leadership, leadership factors have an important role in influencing the implementation of policies or programs, 3). Planning, planning is done prior to the initial stage of a project or policy implementation, 4) Stakeholders, is the various parties who have an interest towards organizing projects, 5.) Transparancy visibility, implementation of e-government is expected to embody the transparency in each process, 6). Budgets, the size of the Government budget is highly dependent on the level of priority given by the Government against the status of related projects, 7.) Technology, the choice of technology used depends on the budget available, 8). Innovation, human resources involved projects must have a sufficient level of creativity.

Keywords: implementation, e-health, service excellence.

A. INTRODUCTION

Health is one of human needs in addition to clothing, food and shelter. Various people's needs are met through the development, including the development of health. Development in the field of health is equally by the government, not only physical development but also the development of health quality services.

In the provision of health services are often encountered problems, for example in the field of administration of medical records. Administratively, electronic medical records useful for storing information electronically, which contains of health status and health care of patients throughout his life. In addition to the electronic medical record provides benefits

to physicians and health care workers to access patient information and ultimately assist in clinical decision-making. Record-keeping is mandatory for doctors who perform a medical procedure to the patient, in accordance with the rules so there is no reason for doctors not to make the medical record. Electronic medical records is a solution for hospitals to overcome the various problems that often occur in hospitals as places of storage, the loss of medical records, spending the required data, and others. (www.mutupelayanankesehatan.net).

In addition to these problems, there are also inaccurate data or medical records of patients, which can lead to medical error. This happens because there is no medical records data sharing between health institutions. Each health institution has its own medical record. Medical error is caused due to lack of accurate medical record of the patient, due to the patient's medical record in several health institutions. Therefore it is needed a system that could save the patient's historical medical records from birth to death (dinus.ac.id).

Complaints about health care have prompted efforts to improve the quality of health services for the public.

B. PUBLIC SERVICE

1. Definition of Public Service

Talking about public service, many opinions are expressed by experts. As expressed by Widodo (2001:271) which says that the public service as the delivery of services to the person or people who have an interest in the organization in accordance with the basic rules and ordinances that have been stated. Opinion by Sinambela (2011:15) gives the definition of public service that is "the fulfillment of desires and needs of the people

by State Administrator. According to Law No. 25 of 2009 on public service, mentions that:

"Public service is an activity or series of activities in order to meet the needs of the service in accordance with the laws of every citizen and resident in the goods, services and/or administrative services provided by public service".

In the Decree of the State Minister for the Empowerment of State Apparatus No. 63/KEP/M.PAN/7/2003, public services are grouped into:

- a. Administrative Services group which services produce an official document required by the public, such as ID cards, marriage certificates, building permit.
- b. Goods Services Group which service that produces various forms/types of goods used by the public, such as the telephone network, electricity supply, water supply and so on
- c. Group Services are the type of services that generate various forms of services required by the public, such as education, health care, management of transportation, post and so on.

Based on the opinion of some experts, it can be concluded that the public service is an activity carried out by government agencies in order to meet the needs of the community through the provision of good service and quality goods and services that can ultimately give satisfaction.

2. Public Satisfaction

Public Satisfaction is a government's efforts to meet the wishes and demands of the public for services provided. According Sedarmayanti (2012:280) satisfaction is defined as the levels of one's feelings after comparing the performance (results) that is perceived to his expectations.

Decree of the State Minister for the Empowerment of State Apparatus and Bureaucratic Reform of the Indonesian Republic Number 3 of 2003 on General Guidelines for the Implementation of Public Service stated that the level of public satisfaction as a measure of the success of the service is determined by the level of service recipient satisfaction. Satisfaction of service recipients achieved if the recipient of the service receive services in accordance with the required and expected.

Improving the quality of health care today can be achieved by utilizing technological developments. Utilization of technology developed is by providing information and computer-based data in support of governance and development, known as e-government.

C. ELECTRONIC GOVERNMENT (E-GOVERNMENT)

1. Definition of Electronic Government

The development of science, technology, information and communications in this century, making the government is trying to improve its performance in meeting the demands of society requiring professional services. In this case the government takes advantage of developments in information technology or electronic based or better known as *e-government*. Young Opinions (2003:45) defines *electronic government* is the use of technology by the government especially the use of web-based internet applications.

In the opinion of the World Bank in Indrajit (2002: 2), defines electronic government as follows:

"E-government refers to the use by government agencies of information technologies (such as wide area networks, the internet, and mobile computing) that have ability to transf, the internet, and mobile computing) that have ability to transform relations with citizorm relations with citizens, business, and other arms of government"

Thus the *electronic government* is the use of information and communication technologies by the government.

2. Benefits of Electronic Government

In the application of electronic government implemented through the reform of management information systems and communication among government agencies with optimizations of utilizing information and communication technology. There are several benefits to implementing Electronic Government at a government agency. According to Yustianto in Kurniadi (portalgaruda.ac.id) the benefits of the implementation of e-government are:

- a. Improving effectiveness and efficiency performance of the apparatus in the governance process.
- b. Improving Good Governance by control, transparency, and accountability.
- c. Empowering society through the new community creation of technology concept and able to anticipate global changes.
- d. Improving quality of public services from the government to the people.

According to Gore and Blair in Andrianto (2007:46) the following benefits are:

- a. Improving the quality of government services to its stakeholders (community, business and industry), especially in terms of effectiveness and efficiency performance in various areas of the country life
- b. Improving transparency, oversight and accountability of governance in order to implement the concept of *Good Corporate Governance*.
- c. Significantly reducing the total cost of administration, relations and interactions are issued by the government and other stakeholders for the purpose of activity every day
- d. Provide an opportunity for the government to obtain new sources of revenue through its interaction with the parties concerned
- e. Creating a new community environment that can quickly and accurately answer the various problems faced in line with various global changes and trends that exist
- f. Empowering communities and other parties as the government's partner in the process of making public policies equitably and democratically

The benefits of *electronic government* implementation by Presidential Decree of 2003 include two related activities, namely:

- a. Data processing, information management, information systems management and electronic work processes
- b. Utilization of information and communication technologies for improving public services that can be accessed easily and cheaply by people throughout the region

With the benefits generated through the implementation of *electronic government* make the activities of government easier in providing services to the public.

3. Types of Electronic Government Services

There are many types of services provided by the government. Grouping the types of services is influenced by aspects of the complexity and the beneficial aspects. In connection with these two aspects then by Indrajit (2002:29) the types of *e-government* services can be grouped into:

a. *Publish* (Publication)

This type of service is a service with one-way communication. The government publishes data and information held to be accessible via the internet by the public and other interested parties.

b. *Interact* (Interaction)

In this type of service has created two-way communication between the government and those who concerned. There are two applications, namely the form of portal sites that deliver searching facilities for people who need the data or information and the government to provide channels so that people can have discussions with certain units concerned, both directly and indirectly.

c. *Transact* (Transaction)

In this type of service occurs two-way interaction, but there was transaction relating to money from one party to another party.

4. Success Elements of Electronic Government

Based on the research results in the of *e-government* field, led by Prof. David Darcy of *University of Maryland*, which resulted in the formulation of the eight elements of success in implementing *electronic government*. The elements of success are in Indrajit (2002:62) as follows:

a. *Political Environment*

At this element is the condition or a political atmosphere in which the project concerned is located or implemented. In connection with these elements, there are two types of projects, namely "*Top Down Project*" (*TDP*) and the "*Bottom Up Project*" (*BUP*). "*Top Down Project*" (*TDP*) type relating to the existence of a project is determined by the environmental initiatives of the executive (e.g. President or Prime Minister) as the highest authority of government, or sponsored by the legislature (House of Representatives) as a fiduciary. In the *TDP*, there are two important aspects, namely through campaigns (*marketing*) against the desire to build *e-government* services to all members of society with a view to creating an efficient government and put this project as one of the highest priorities in the implementation of the country's development.

While the type "*Bottom Up Project*" (*BUP*) executed for their ideas or initiative from the head unit or employee (bureaucrats) who are in one government agency or department. There are three important aspects to be considered for the success of a project is the ease of getting links from internal circles, the clarity of the *e-government* application, significant benefits gained by the users (*end users*) of the implemented *e-Government* project.

b. Leadership

Leadership factors have an important role is the responsibility of the project manager to execute a project from beginning to end in accordance with the executed project cycle (*project life cycle*). By Indrajit (2002:63) the scope of leadership in an *e-Government* project boils down to the ability to manage the three things, namely:

- 1) Various political pressure that occur on *e-Government* project which lasted from both optimists and pessimists
- 2) A variety of resources required and allocated by *e-Government* project in question, such as human resources, finance, information, equipment, facility, etc.
- 3) A number of interests from various parties (*stakeholders*) of the existence of *e-Government* projects are executed.

A leader in order to be successful must have ability to do things as follows:

- 1) Articulating the vision and mission of *e-Government* in the implementation of the project activities
- 2) Developing a careful project planning and comprehensive (overall)
- 3) Conducting lobbying and negotiation
- 4) Having the ability to detect and examine obstacles that appear to happen in the middle course of the project and find a solution
- 5) Knowing exactly and details of the business processes associated with the implemented *e-Government* project
- 6) Learning the technical matters related to information technology and the Internet (Indrajit, 2002:64)

Leadership is not only on the ability of a good leader, but it takes a leader who can professionally carry out the strategic functions.

c. Planning

Planning has an important role because it is used to measure the extent of the results to be achieved, and the methods used in the implementation of *e-government*. Good planning will have a huge contribution to the overall project implementation.

d. Stakeholders

Stakeholders are parties related in *e-Government* implementation project. Is the leader's job to understand the interests of each stakeholder there and tried to unite in order to achieve the vision and mission of *e-Government* (convergence). Parties are considered as stakeholders in the *e-Government* include: government (agencies associated with the entire device management and employees), the private sector, communities, non-governmental organizations, companies and others.

e. Transparency/Visibility

According to Indrajit (2002:66) the transparency of *e-Government* project is closely associated with the presence of *stakeholder*, within the meaning of the word is that all the data and information should be available on the ins and outs

and the status of ongoing projects to be freely accessed by *stakeholder* that diverse, The availability of such information access project status, resource allocation, evaluation per stage of the project, and others aim to create credibility and legitimacy for both the organizers of the project or stakeholder as monitoring party. Allowing for the concerned parties to access the data and information related to ongoing projects indirectly a means of marketing (*marketing*) is quite effective, because there involved the seriousness of the government to always provide the best to its people through the implementation of numerous projects of *e-Government*.

f. Budgets

The strength of allocated financial resources to *e-Government* project is one of the strategic elements that determine the success of a project. Based on the facts, amount of the budget provided by the government (and the other sort of private or foreign aid) is very dependent on the level of priority given by the government against the related project

g. Technology

One of the important elements is technology. The technology started from the simplest and cheapest to the most sophisticated (*state-of-the-art*). Selection of the technology to be applied in an *e-Government* project is highly dependent on the available budget. The greater existing budget, increasingly sophisticated technology that can be selected and used, which tends to increase the probability of success of a project

h. Innovation

The final element that contributes to the *e-Government* implementation is an ability of the project's member to perform certain innovations. Innovation is not limited to the ability to create new products, but must have a sufficient level of creativity, especially in managing the *e-Government* projects that exist, so that many obstacles that are often encountered in a project can be easily removed.

E-government with this eight success elements can be implemented in all areas of public service, one of which is in the field of health. Utilization of information and communication technology in health sector is known as e-health.

D. ELECTRONIC HEALTH (E-HEALTH)

According to Kristianto *e-health* is a service in the form of information and communication technology applications are linked to the overall functional element supporting the health sector). E-health is a service in the form of information and communication technology applications are linked to the overall functional element supporting the health sector (portalgaruda.ac.id). On *E-Health*, data is transmitted, stored and retrieved electronically for the purposes of clinical, educational and administrative. Eysenbach in Kristianto explains that:

Electronic health is an emerging field of medical informatics, refers to the organization and health services and information using the Internet and related technologies. In a broad sense, the term that is the way in technical development, but

also a new way of working, attitude, and commitment to the network, global thinking, to improve locally, regionally, and worldwide health care by using information and communication technology (portalgaruda.ac id)

E-health is the innovation to improve the quality of health services based on the technology, as stated by the WHO, that *e-health* is:

Utilization of the Internet and the technology associated with it in the healthcare industry to improve access, efficiency, effectiveness and quality of clinical and business processes that run by health care organizations, practitioners, patients and Consumers in order to improve the health status of patients

(<http://www.who.int/trade/glossary/story021/en/>)

The WHO issued a resolution regarding *e-health* in 2005. In that resolution, the WHO encourages countries to:

1. Developing a long-term strategic plan to develop *e-health* services in various areas of health is good for health administration, legal and regulatory frameworks, infrastructure as well as public and private partnership mechanism
2. Developing ICT infrastructure for *e-health*
3. Building collaboration with the private sector and profit agency to support *e-health*
4. Developing *e-health* that reach people in particular are prone to health problems (*vulnerable*) and in accordance with their needs
5. Mobilizing cooperation across sectors in adopting the norms and standards of *e-health*, evaluation, the principles of cost-effectiveness in *e-health* to ensure the quality, ethics and security by promoting confidentiality, privacy, equity and equality
6. Developing a center of excellence and a network of *e-health*
7. Developing a model public health information systems for surveillance, response and emergency (<http://www.who.int/trade/glossary/story021/en/>)

Eysenbach in Kristianto (portalgaruda.org) explains that the "e" does not only refer to electronic, but broken down as follows:

1. Efficiency. One objective of the *e-health* implementation is the health services efficiency, reducing health care costs, such as lowering cost to diagnosis or consultation between doctor and patient.
2. Improving the quality of health services with the qualified informations and the believed resource, expected that information obtained by patient is more precise.
3. Based on the evidence, where all information should be based on scientific research.
4. Empowering consumers and patients, with knowledge information on medicine, treatment and electronic records of personal, health care is expected to be centered on the patient.
5. Creating a new relationship between patients and health profrsional towards a true partnership where decisions are made jointly.
6. Education for doctors and patients are sourced from on line
7. Enables standardization of information exchange between companies that engaged in the health industry.
8. Widening the scope of global health information because information technology has been able to make it happen with Internet technology.
9. Ethics. New challenges in their professional ethics and patient privacy.

10. Equity, health services should be able to reach all people of all age groups.

According J.CHealy in Kristiarto (portalgaruda.org) starring role in *e-health* is:

1. UN Agencies and International Agencies related to health, telecommunications and trade.
2. The government authorities from the national to local health and communicationrelated.
3. Educational institutions and research
4. The health professionals and their associations.
5. The customers, patients and their associations
6. Government organizations
7. The health industry and telecommunications
8. The mass media

It can be said that e-health is a service in the form of information and communication technology applications associated with parties supporting the entire health sector, including health departments, hospitals, health centers, pharmaceutical, universities, polyclinics and others. According to Kurniadi (portalgaruda.ac.id) basically, e-health is a healthcare application that consists of several components. The most important component in the implementation of e-health is the Electronic Medical Record (EMR). EMR contained in the health care system remotely by using telecommunications and information networks.

By implementing an integrated medical record, known as the Electronic Medical Record (EMR), the benefits to be gained are:

1. Data is to be complete and standards-compliant
2. The searching process is faster and more accurate
3. Abstraction, reporting more easily and even automatically
4. Storage is more compact, does not require a spacious room
5. Data can be displayed quickly as needed
6. Integrated with LIS (*Laboratory Information System*) for the results of laboratory tests
7. Integrated with PACS (*Picture Archive Communication System*) for radiology results (MRI) (www.bvk.co.id)

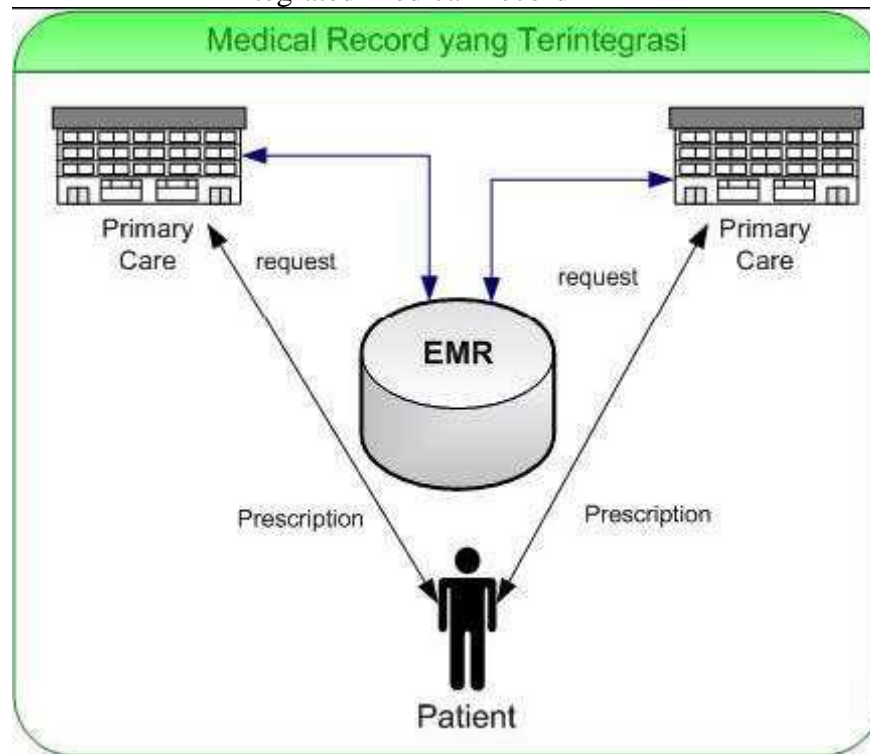

Richard et al delivers the benefits of Electronic Medical Record in improving the quality of health services, among others:

1. Increasing productivity: the use of an EMR system can reduce costs
2. Efficiency: EMR system is adopted, it can reduce the available resources to improve quality of service
3. Reduce the incidence of side effects of drugs in the treatment of inpatient and outpatient
4. EMR system can integrate recommendations of evidence-based for preventive care (such as screening tests) with patient data (such as age, gender, and family history) to identify patients who need certain services. This system can alert providers to offer services during routine visits and reminding patients to schedule maintenance.
5. EMR system can be an instrument for the management of disease (for high-risk patients, case management system helps coordinate workflow, including

communications between specialists and patients)
(www.mutupelayanankesehatan.net)

Below is a picture of two health institutions that use the data in the medical record of a patient together. With the EMR, it is possible to carry out the exchange of medical information from one place to another to assist the implementation of medical procedures with the aim of improving the quality of public health services.

Picture1.
Integrated Medical Record

Source: Supriyanto et all in Kurniadi (dinus.ac.id)

The implementation of e-health not only in terms of EMR, but also when the community of health center patients is being treated. With e-health, each patient only needs to scan the fingerprints to be checked. In addition, enables patients to get health care at the clinic, patient data will be integrated with other health centers and hospitals. This is particularly important when the patient's health center will be referred to the hospital. Therefore, all the data can be known easily by the hospital. In addition, the existing e-health data collection of stocks of medicines in all health centers and hospitals so they can know the use and drug stocks every day. Data on the number of patients, the ten most prevalent diseases, the ten most services, the type of patient and examination by fingerprints (www.jpnn.com)

With the implementation of e-health, the quality of health services is expected to increase with the availability of information quickly, easily, and quality and satisfaction materialized society.

CONCLUSION

The implementation of e-health is a form of innovation within the framework of the implementation of e-government. Eight important elements consisting of political environment, leadership, planning, stakeholders, transparency-visibility, budgets, technology and innovation are elements that are interrelated. By understanding the process of managing *e-Government* can improve success probability for the organization of public services, especially in the health sector through the implementation of e-health.

E-health are supported and implemented at the national, provincial, district/city, can be application that support public health. Quality of health in health sector is expected to increase with the availability of information quickly and qualified.

Processes and Institutions of the Juvenile Justice and Welfare System in the Philippines

Marilou F. Siton Nanaman, Sulpecia L. Ponce & Irene Estrada

Email address: mfsnanaman@yahoo.com; sulpecia.ponce@g.msuiit.edu.ph;

ABSTRACT

The Philippines established its juvenile justice system in 2006 through the passing of Republic Act No. 9344 (An Act establishing A comprehensive Juvenile Justice and welfare System) and amended in October 3, 2013 as Republic Act no. 10630 (http://senate.gov._acts_www.gov.ph/2013/10/03/republic-act-no-10630/ Philippines). The passing of this law manifests the country's recognition of the dignity and rights of accused Filipino children. This is also in consonance with Article 40 of the United Nations Convention on the Rights of the Child which specifically mandates member states to recognize the rights of children alleged or accused of infringing the penal law and adopt measures that fully respect and safeguard the rights of the children

Using the legal framework of R.A. 10630 and the rehabilitative model of Bradshaw and Roseborough (2005) and focusing on the cases in Region X (Northern Mindanao) of Southern Philippines, this inquiry found that government agents such as the women and children's desk officers, the social workers and the local barangay officials represent the primary institutions that handle and attend to the welfare of the Children in Conflict with the Law (CICL). Thus, their manner of handling the CICLs is crucial to the pursuance of appropriateness and effectiveness of the interventions for the children to eventually become productive adults and citizens of the country.

Keywords: Juvenile Justice System, Juvenile Offenders, Children in Conflict with the Law (CICL)

INTRODUCTION

In August 28, 2006 in compliance with its international obligations the United Nations Committee on the Rights of the Child, the Philippines took a major step in enacting the "Juvenile Justice and Welfare Act of 2006" which is called the Republic Act No. 9344. Section 1 of Chapter 1 of the said act states that the law shall "cover the different stages involving children at risk and children in conflict with the law from prevention to rehabilitation and reintegration." Thus putting primacy on the protection and promotion of the CICLs best interest through the implementation of appropriate and rehabilitative programs, programs that attend to their physical, moral, spiritual, intellectual and social well-being. The rehabilitative model of juvenile justice according to U.N. (2006) is implemented to transform the children through holistic interventions that will deter minor offenders to engage in criminal acts. This process, according to the said law, provides an avenue for the children as victims of socio-economic circumstances to reform and become adults that are active in nation building. The law further emphasized the protection of the best interests of the child through measures that will ensure the observance of international standards of child protection, especially those to which the Philippines is a party. (http://www.senate.gov.ph/republic_acts_Republic_Act_9344)

In 2013, the amended act of R.A. 9344 now known as R.A. 10630 provides that a child older than 15 years old but has not yet reached 18 years can also be exempt from

criminal liability and be subjected to intervention programs unless he has acted with discernment. To ensure effective implementation of the law at the local level, the said law requires the creation of regional Juvenile Justice and Welfare Councils. and support the CICLs in the city (Ancheta-Templa et. al., 2004).

Intervention programs for CICLs is deemed by Basmore and Washington (1995) are applied not only to positively reform the minor while in custody among juvenile justice professionals but to also inculcate accountability and develop their unique competencies.

This approach according to Yangco (2010) is manifested by the Philippines through the DSWD. In 2010 the DSWD implemented the program that they called SHEPHERD whose main focus is the effective rehabilitation of the youth. It is composed of Social Services, Homelife Services, Educational Services, Psychological Services, Health Services, Economic Programs and Services in Rehabilitation Centers, Recreational Services, Developmental Services and Socio-Cultural Programs. Yangco (2010) adds that there is one-year assistance provided to the youth after they have left the rehabilitation center. The program also engages in a close monitoring to the youth's whereabouts to guarantee that the youth is coping well with the reintegration process (Yangco, 2010).

Similar initiatives were also implemented in Cebu and Davao cities. Cebu City constructed a child center facility named *Balay Pasilungan* for both children at risk (those who are caught loitering in the streets and public places) and CICLs. These children were turned-over to the CSWD wherein this agency conducts counselling to the parents and children

(Etemadi et. al., 2004). In Davao City, several organizations (such as the Juvenile Justice Group (JJG) gave assistance to CICLs. They formed a cluster with the Kabiba Alliance for Children's Concerns, which is composed of more than 20 organizations in Davao City that aim to work towards juvenile justice and CICL issues, protect the rights of children and youth in Davao City.

The rehabilitation process experienced by CICL'S after the commission of an offense and the interventions that they were subjected to are thus examined in this inquiry if they were effective in ensuring the best interest of the CICLs in Region 10, Northern Mindanao, Philippines.

Conceptual Framework

This inquiry utilizes R.A. 10630 and the rehabilitative model as its tools for understanding the phenomenon of CICLs in Region VI, Northern Mindanao, Philippines. R.A. 10630 posits that CICLs in custody (younger than 18 years of age) should be subjected to intervention programs and if they were handled by those who are part of the Juvenile Justice and Welfare Council in Region 10.

The rehabilitative model (Bradshaw and Roseborough, 2005) on the other hand, focuses on the treatment of the juvenile delinquent with the assumption that interventions such as probation supervision, work readiness, training, cognitive skills training, and behavior therapy will change behavior and reduce the frequency of juvenile offenses." Moreover, rehabilitation is deemed essential to juvenile delinquents and re-entry into mainstream society because being rehabilitated sets the foundation to lead a healthy lifestyle in the

community once out of the juvenile justice system.

Methodology

The study is basically descriptive in nature. The accuracy and meaningfulness of the information were gathered and identified through the use of survey questionnaires, key informant interviews, and review of office records. A triangulation of data through the conduct of Focus Group Discussion was conducted to ensure the validity of the information. The data was supplemented with the secondary data and field observations.

Purposive sampling method was used in the selection of the 49 CICLs and 20 interview respondents (parents of CICLs and personnel handling CICLs) from the 7 foster home or child-centers in the cities of Ozamis, Oroquieta, Tangub, Cagayan de Oro, Gingo-og, Malaybalay and Valencia. The child-centers are otherwise known as Bahay Pag-asa or Bahay Pangarap. Data gathering period covered from May 2015 to February 2016. The CICLs however choose not to answer all the questions, which explains the variation of the total frequency per table.

Descriptive statistics was employed to examine and compare the data from the research areas. However, data obtained from in-depth interviews and focus group discussions were analyzed using content analysis based on the themes that emerged from the data transcripts.

RESULTS AND DISCUSSION

The Process experienced by the CICLs of Region 10

The Juvenile justice and welfare system of the Philippines starts at the moment a young citizen below 18 years of commits an offense under the Philippine laws, is apprehended while committing an offense or is reported to a police officer.

The Experiences of the CICLs when apprehended

Table 1. The Experience/s of the CICLs upon being apprehended

Experience/s	Frequency	%
Was brought to the police station	9	22.0
Was reported to the Barangay/brought to the center	1	2.4
Was high with drugs	1	2.4
In fear/afraid /Got worried/was shocked/nervous/ cried/ Violence conducted by policeman/ sec. officer	21	51.3
Thankful/Willingly surrendered/was taken cared of/Psychologically prepared	5	12.1
Was framed	2	4.9
Tested the CSWD facility	1	2.4
Did not feel anything	1	2.4
Total	41	100

In the case of the CICLs who were housed in the 7 child center facilities of Region 10, they stated that after they were apprehended, they were brought to the police station (22%), while the other children were reported to the barangay and then brought to the center (2.4%). Moreover, majority of them felt afraid, worried and nervous (51.3 %). Only a few of them experienced care and felt thankful (12.1%) afterwards.

It is clear then that when the minor offender is under the custody of the authorities, they begin to feel scared of what will happen to them. At this stage the child

is now in the care of the state through its juvenile justice officer (either a police or a barangay official), respect of the rights and welfare of the child, Stier (2009) posits, is now incumbent on the state.

Table 2. Experience/s of CICLs during their current apprehension

Experience/s	Frequency	%
Was fed/detained at the police station	5	15.2
Turned over to the center with a court order	8	24.2
Experienced violence/was afraid	9	27.3
Was arrested in a raid/was caught at the site of the crime	4	12.1
Felt bored and lonely	1	3.0
Was made to buy drugs	1	3.0
Had lectures/schooling at the center	1	3.0
Surrendered/was resigned to my fate	4	12.1
Total	33	100

It is significant to note that some of them were quite afraid and experienced violence from the apprehending officers (27.3%). The other CICLs however experienced being turned over to the child center facility (24.2%) when the apprehending officer was able to secure a court order. For the children who were brought to the police station, they indicated that they were fed (15.2%) while they were temporarily detained there. Furthermore, few (12.1%) of the CICLs were apprehended in a raid which also serves as the site of the crime.

One child however (3%) was made to buy drugs as compared to another (3%) who went through a more appropriate measure in which he underwent lectures or some schooling at the child center facility.

The experience of violence of some of the CICLs contradicts the requisite of child protection that is mandated on the juvenile justice practitioners (R.A. 10630).

Personnel handling CICLs

Table 3. Experience/s with the Police Personnel

Response	Frequency	%
Experienced violence/ harassment/ was afraid/ was lied at/ was mad/ angry/ threatened	19	41.3
Was fed/ was lectured on/counselled/no complain/ good/it's okay	24	52.2
Was arrested	3	6.5
Total	46	100

Majority of the CICLs (51.2%) stated that they were treated well by the police personnel who attended to them by being fed and counselled at the station. The other children (41.3%) on the other hand, were subjected with violence by the said personnel that is why they felt threatened and angry when they while in custody. Lastly, a few (6.5%) of them were subjected to arrest. These children who are incarcerated in facilities for adult offenders are apprehended in Oroquieta and Malaybalay cities where there is no child center facility.

While the CICLs under custody are deprived of their liberty (R.A. 9344), they are however entitled to appropriate interventions that function as transformative measures with the aim that these children will become better persons once released from custody. Nonetheless, some authorities in Region 10 still subject the CICLs to violence.

DSWD Personnel

Table 4. Experiences with the DSWD Personnel

Response	Frequency	%
Counselling/ was fed/ taken care of/had good influence on the children/ thankful/ Good it's okay	29	67.4
Was not attended to sometimes/was brought to the prison for detention	3	7.0
None/No idea/don't know them	11	25.6
Total	43	100

The CICLs (67.4%) who were in the care of the DSWD personnel at the child center facility were counselled, fed and other were given other service that will help them transform positively. A number (25.6%) did not seem privy to what services were provided to them yet a few (75) claimed that their experience was not positive because they were not attended to and were brought to prison after being apprehended.

The DSWD personnel who manage the child center facility employs services that serve to address the family and social factors of delinquency and to correspond to the learning styles of the CICLs. Day, Howells and Rickwood (2004) label this practice as using both needs and responsivity principles of effective rehabilitation centers.

Table 4. Experiences with the Family

Response	Frequency	%
Was worried/cried/pitied/guilty/ was full of regrets/ missed them	11	31
Was given support/ Counseled on/ Treated fairly	12	34
Thankful/willingly surrendered	5	13
No comment	8	22
Total	36	100

As CICLs in custody they felt worried, guilty and missed (31%) their parents a lot. The parents of other CICLs gave them support, some counselling and fair treatment (34%). A few (13%) of them are thankful for having their parents and through their parents' prodding they willingly surrendered to the authorities.

The restriction of liberty of the CICLs once in custody brings out negative emotions among them. At this stage, they long for the support of their parents and is indeed crucial for them throughout the process.

Court Hearing

Table 6. Experiences with the Court Hearing process

Response	Frequency	%
It takes time and is always postponed/ A long process /medical test	6	21.4
Was read/informed about the case with the complainant/ Plead guilty at the 2 nd hearing/cried	4	14.3
Had settlement at the court and paid for the damage/Okay	7	25.0
Temporarily dismissed/ Lost our evidence when the hall of justice caught in fire	2	7.2
No court hearing scheduled/ Escorted by the guard to the court, no CSWD personnel, with lawyer	9	32.2
Total	29	100

A good number of the CICLs (32.2%) related that their cases have become uncertain because they have not

been scheduled yet for a hearing and observed that there was no proper escort while they attended their hearing as there was no DSWD personnel present. The other CICLs though are quite positive (25%) with how their case is being handled at the court while the cases of some (21.4) are subjected to delays and postponement.

The experience of delays, postponement and uncertainty of the process of court hearing for the CICLs in Region 10 is a violation of R.A. 9344. Section 5 of the said law provides that the CICL is entitled to due process at the Family Court.

Foster home/child-center/Bahay Pag-asa

Table 7. Experiences and learnings gained at the foster home/child-center/ Bahay Pag-asa

Response	Frequency	%
Not to commit the act again/Not to steal/ had regrets/ Not to take the law in to my hand/ Not to be influenced/to room with my peer/ Not to defy my parents	26	72.23
Learned how to cook, do gardening and cleaning/ to study well	8	22.2
Learned Nothing	2	5.56
Total	36	100.00

Many of them (72.23%) had regrets of what they had done and experienced as a CICL. They vowed not to commit any offense in the future, not to be influenced by their peer and vowed to obey their parents. These were their realizations while at custody at the child center facility. Some of them (22.2%) stated that they acquired

productive skills like cooking, gardening and the ability to study well. Only 2 (5.56%) indicated that they did not learn anything at the center. This reveals that the CICLs are subjected to rehabilitation at the center that cater to their social and other learning skills.

Intervention Programs received by CICLs

Table 8. Intervention Programs that the CICLs were Subjected at the Child Center Facility

Response	Frequency	%
Growth in faith/prayer worship/spiritual	13	30
Schooling (ALS)and Cooking	14	33
Was taken cared of	4	10
Recreation/get together	3	7
Sportsmanship exercise	4	10
Counseling	4	10
Total	42	100.0

Among the interventions that the CICLs underwent at the child center facility were spiritual activities (30%) and alternative learning system (ALS) and cooking (33%). They were also given counselling (10%), exposed to social activities like recreation and get together (7%) and physical activities (10%) like sports.

Table 9. Effectiveness of the intervention programs

Response	Frequency	%
Imprisonment as compared to the center	1	2.9
A lot/ Was taught how to become a better person/ Good in faith/ To finish schooling/ Given a chance to work	31	91.2
None	1	2.9
Have fun	1	2.9

Total	34	100.0
-------	----	-------

Most of the CICLs (91.2%) affirmed that they find the intervention programs have taught them a lot. They said that through the said programs they have learned to become better persons, to have a strong faith in God, to pursue schooling and acquired skills that will make them productive in the future. Only a few (2.9%) stated that imprisonment of CICLs is a better measure to reform them that being made to stay at the child center for the duration of their custody.

Police Personnel

Table 10. Experiences of the CICLs with the Police personnel

Response	Frequency	%
They hurt us/punish/scolde d/one sided/Did not sleep well/ It takes a long time to give the release papers	8	27.5
Okay	3	10.34
No comment	18	62.07
Total	29	100.00

Majority (62.07%) of the CICLs chose not comment on the handling of the police personnel of CICLs. A good number (27.5%) of them stated their negative experiences with the police personnel, that they experienced being hurt, scolded and delayed release of papers. Only a few (10.34%) of the CICLs said that they are treated nicely by the police personnel.

On the implementation of the intervention programs for the CICLs in Region 10

Table 11. Measures to be done by the DSWD Personnel

Response	Frequency	%
They should help the minor who have abused	1	3.23
Okay	4	12.90
No comment	24	77.42
Thank them/okay	5	16.13
Others: (The case)	1	3.23
Total	31	100.00

Majority of them chose not to comment on the handling of CICLs at the center. The DSWD personnel according to a CICL (3.25%) should be at the center to help them.

Family

Table 12. The action taken by the Family of the CICLs while in custody

Response	Frequency	%
None	22	73.3
Seldom visit	1	3.3
Hopes of visit by parents/ to thank them	4	13.4
Nobody to talk to	2	6.7
They have to realize what I have done	1	3.3
Total	30	100.0

The CICLs's family did not pay a visit to them either at the child center or at the jail (73.3%). They can only hope to see their parents and be able to thank them (13.4%). Only one of them was visited by their family. 60% of those who chose to provide their view said that they did not undergo any hearing.

Table 13. Court Hearing

Response	Frequency	%
----------	-----------	---

None	15	60.
Takes a long time/slow process/postponed/ To plead to a crime I did not commit	6	24.00
To thank/ Settlement	4	16.00
Total	25	100.00

While in custody, the hearing of their case takes a very long time(24%), they were also urged by the lawyers and the personnel handling them to plead guilty of the crime (16%) that they are accused of to shorten their term at the prison or facility.

The Juvenile Justice and Welfare System Practitioners of Region 10

Table 14. Designation of Personnel Handling CICLs in Region 10

Designation	N	%
CSO Center/ DSWD Social Worker/ Center Head	15	37.5
Guard Center/ House Parents/ Caretaker	14	35.0
Police/ Women Disk	9	22.5
LGU	2	5.0
Total	40	100.0

A good number of the juvenile welfare practitioners are Social Workers of the Social Welfare Department (37.5%) and personnel at the child center facility (35%). Police officers (9%) and local officials at the barangay(2%) also handle CICLs at their respective localities. This is in consonance

with R.A. 10630 mandating the composition of a functional Juvenile Justice Council.

Table 15. Personnel Handling CICLs by Area Assignment

Area Assignment	N	%
Iligan City	2	4.8
Cagayan de Oro City	10	23.8
Ozamiz City	4	9.5
Gingoog City	6	14.3
Oroquieta City	4	9.5
Malaybalay City	8	19.0
Valencia City	5	11.9
Tangub City	3	7.1
Total	42	100.0

Cagayan de Oro City has the most personnel handling CICLs (23.8%) as it is an urban city with a child center facility that houses both CICLs and children at risk (street children). This is followed by Malaybalay (19%), Gingoog (14%), Valencia (11.9%), Ozamiz (9.5%) and Oroquieta (9.5%). Tangub (7.1%) and Iligan (4.8%) has the least number of personnel devoted to CICLs.

Table 16. No. of Years handling CICLs

No. of years in handling the CICL's	N	%
1-12 months/ 1 yr.	1	2.9
1 - 2 years	3	8.6
2 - 3 years	9	25.7
3 - 4 years	2	5.7
4 - 5 years	4	11.4
5 - 6 years	1	2.9
6 - 7 years	3	8.6

7- 8 years	4	11.4
8 - 9 years	1	2.9
9 - 10 years	2	5.7
10 years & above	5	14.3
Total	35	100.0

The Personnel handling CICL in Region 10 has handled them for 2-3 years (25.7%), 4-5 years (11.4%), 7.8 years (11.4%). This means that their exposure in handling CICLs vary because some practitioners are new to the job while the others have been in the job longer than 5 years.

Table 17. On whether the arrest of the CICL is documented or reported

Responses	N	%
Yes, Turned over to CSWD immediately for further interview	6	16.7
Yes, Turned over to police then to CSWD	5	13.9
Yes, Thru DSWD interview	3	8.3
Yes, There thru police procedure	12	33.3

BPSO then to PNP (Brgy. Peace and Security Officers)	10	30.3
PNP then forwarded to the Court	1	3.0
Total	33	100.0

When the children were apprehended when they committed an offense, the apprehending personnel were either the police officer (36.4%) or the barangay personnel (30.3%) and witnessed by authorities from police and the social welfare departments.

Table 19. The agency and institution of the personnel handling CICL

Responses	N	%
PNP	21	43.8
CSWD/DSWD	14	29.1
Barangay Officers	7	14.5
DOJ/PAO	4	8.3
DILG	1	2.1
NBI	1	2.1
Total	48	100.0

A good number of the personnel handling CICLs are police officers (43.8%), followed by the CSWD workers (29.1%). Other personnel include Barangay Officers (14.5%), Department of Justice OJ (Public Attorney's Office) (8.3%), Department of

Interior and Local Governance (2.1%) and the national Bureau of Investigation (2.1%).

Table 20. The location where CICLs are apprehended

Responses	N	%
During the commission of the crime/ <i>Sa siyudad, kon asa sila mangawat</i> (At the city proper where they committed theft)	28	51.9
Outside the home	22	40.7
At home	4	7.4
Total	54	100.0

Majority of the CICLs apprehended were caught in the act or during the commission of the crime (51.9%). This is followed by those who were apprehended just outside their homes (40.7) and the child's residence (7.4%).

Table 21. Steps after the apprehension of the CICL

Responses	N	%
Turned over to DSWD/CSWD (for counseling) Referred to the Rehabilitation Center	24	77.4
Turned over to PNP/ WCPD /Depends upon the crime committed if it is a major offense, referred to the Court	7	23.6
Total	31	100.0

Most of the CICLs are turned over to the social welfare officer at the rehabilitation or child center facility for counselling (77.4%). In some cities where there is no child center

facility, the other CICLs are either turned over to the police. But in cases whereby by the apprehending officer determined that the CICL has committed a major offense (e.g. rape, murder), the child offender is referred to the court (12.9%).

Table 22. The treatment of the CICL when he/she was apprehended.

Responses	Frequency	%
Treat the CICL in a good way/ Counseling/Okay	24	85.7
Separate from adult detainees/ Detained for a while	4	14.3
Total	28	100.0

According to most of the personnel handling CICLs, the children under their custody should be treated in a good way (85.7%) such as through counselling. A few of them however stated that the CICLS should be separated from adult detainees at the detention center (14.3%).

Table 23. Name of the center where the CICLs are subjected to Rehabilitation

Responses	Frequency	%
Pag-asa Youth Home/ Dangpanan/ Pag-asa Youth Holding Center of CSWD	4	14.3

Brought to the Court	4	5
Counseling/ Social Services/ Rehabilitation Services/Home Life Services	64	1
Education	25	2
Medical Services	9	4
Religious Services	11	3
Visitation of the family	1	6
Total	114	

*Multiple Responses

Counseling, social services and related services to transform the CICLs are among the primary services that they are subjected to at the child center facility. This is complemented with other services that include education, activities related to strengthening their faith, medical services, court hearings and the visitation of the family of the CICLs

Table 25. Length of stay of the CICL at the Juvenile Center Facility

Responses	Frequency	%
6 months to 2 years rehabilitation	13	43.3

Days only if street children	3	10.0
Depending upon the case	3	10.0
Depending on the CICL recovery	1	3.3
Depending on the court order	7	23.3
Turned over to the parents	3	10.0
Total	30	100

6 months to 2 years rehabilitation (43.3%) is the duration of stay of some CICLs at the child center facility. The stay of other CICLs depend on the court order (23.3%) and may also depend on the case (10%). The street children or children at risk (10%) on the other hand stay only for days at the center. A few of the children are turned over to parents (10%). Some of the children's stay at the center depend on the success of their rehabilitation process (3.3%).

Table 26. The personnel who supervise and attend to the CICLs

Responses	Frequency	%
BJMP/Jail Guard	3	12.5
Court/ PAO	2	8.4
House Parent	4	16.7
PNP	1	4.2
Social Worker	14	58.3
Total	24	100.0

For the CICLs who are in custody at the child center facility, it is mainly the social worker (58.3%) who supervises and attends to their needs. The house parents (16.7%)

at the facility assist the social worker. For the CICLs who are detained in a detention center or a prison facility for adults, it is the jail guard (12.5%) who supervises them. And when they are brought to court for hearing, the lawyer from the public attorney’s office (PAO)/DOJ and a police officer supervise the CICL at the proceeding.

Table 26. The Personnel in charge of the case of the CICL

Responses	Frequency	%
DSWD, CSWD, Social Worker/ Center Head/ Social Worker with the assistance of the police	25	67.6
House parent and Watchman	1	2.7
PAO	5	13.5
Women's Desk Officer	6	16.2
Total	37	100.0

The personnel in charge of the case of the CICL is a designated Social Worker (67.6%). They are assisted by the women desk officer at the police station (16.2%), by the house parent at the child center facility (2.7%). During court hearings the social worker is assisted by the legal officer from the Public Attorney’s Office (13.5%). Thus it is the social worker that mainly handles the cases of the CICLs at the facility and at court hearings.

Table 26. The procedure that the CICLs go through before they are released

Responses	Frequency	%
-----------	-----------	---

Pre discharge case conference with their parents/ Counseling with the parents and the child	9	28.1
With a Court Order - it depends on what division that issues the order/ File case before release	11	34.4
Monitoring	1	3.1
DSWD documentary	4	12.5
The Center Head in charge of the case will do the progress report/Interview program	7	21.9
Total	32	100.0

The CICLs according to the personnel handling them undergo a court hearing (34.4%), other CICLs go through a pre-discharge case conference with their parents/ Counseling with the parents and the child (28.1%). The Center Head in charge of the case will interview the CICL and do the progress report (21.9%), DSWD documentary (12.5%), monitoring (3.1%).

Table 27. Conditions set before the CICL Is released

Responses	Frequency	%

Close monitoring	5	17.2
Total	29	100.0

Among the conditions that are set for the CICLs before they are released are for them to undergo 6 months after care services by the social worker in charge (37.9%). Other conditions include counseling (17.2%), close monitoring (17.2%), division program (13.8%). The conditions set however according to a few depends on the case (10.3% of the CICL).

Table 28. The problems, difficulties and challenges encountered by the institutions in handling CICL's and in implementing restorative justice for CICL's

Responses	Frequency	Rank
CICLs are hard headed/ Unresponsive Client/ Recidivist	18	1
CICLs were used by adult offenders	4	4
Financial problem/ limited budget/ The benefits were not fully given to the CICL/ Insufficient program for the juvenile offender	18	1
Lack of facilities/ personnel	15	2
Lack of parental support	9	3
Multi-tasking lead TO lack of focus on the case	1	8
Okay	2	6
Overload of court cases	1	7
Recording problem	1	7
Some CICLs are accepted from detention center	3	5
The Laws are not	3	5

implemented well		
Turned over to the parents	3	5
Total	78	

*Multiple Responses

The hardened attitude and behaviour of recidivist CICLs and the insufficient budget are among the top challenges experiences by the juvenile justice and welfare practitioners in Region 10. This challenge is followed by the lack of facilities and personnel at the child center facility, lack of parental support, the use of the CICLs by adult offenders, laws are not fully implemented, turned over to the parents, some of the CICLs are from detention center (of adults). 7 overload of court cases, recording problem. 8 multi-tasking lead to lack of focus on the case of the CICL

Table 29. Suggestions and Recommendations to enhance the implementation of restorative justice on the CICL's

Responses	Frequency	%
Active barangay officer/s	1	4.0
Additional skilled personnel for the detention Center/ Complete facilities for CICLs	9	36.0
Amend R.A. 6975	2	8.0
CICLs should be in a Rehabilitation facility	1	4.0
Enough budget	1	4.0
Livelihood program	3	12.0
More Training regarding R.A. 9344/ Implementation of the Law	7	28.0
Social Worker should be	1	4.0

forwarded only with CICLs		
Total	25	100.0

The implementation of juvenile justice and welfare system in Region 10 can be attained through additional skilled personnel for the detention center/ complete facilities for CICLs (36%), More Training regarding R.A. 9344/ Implementation of the Law (28%), livelihood program (12%), the amendment of R.A. 6975 (an act Establishing the Philippine National Police under a Reorganized Department of the Interior and Local Government) (8%), CICLs should be in a Rehabilitation facility, enough budget and that social workers should only be forwarded with CICLs cases only (4%).

This means that most child center facilities at the Region lack skilled personnel and facilities to be able to properly rehabilitate and transform the CICLs under their custody.

Table 30. The kind of assistance needed by the personnel and institutions to solve the problem on the CICLs and from whom they need help

Responses	Frequency	%
Additional sufficient budget	2	5.7
Well trained social worker/ LGU on services local government concerned with CICL	16	45.7
Complete facilities for CICLs/ Livelihood program	8	22.8
Implementation of the law	2	5.7
Conduct an orientation about CICL	1	2.9
Community	2	5.7

Coordination with the parents	2	5.7
Follow legal procedure	1	2.9
To God	1	2.9
Total	35	100.0

The personnel and institutions handling CICLs are in need of well-trained social workers and for the city or barangay concerned to provide services (45.7%) and complete facilities for CICLs that include programs like livelihood (22.8%). The full implementation of the law concerning CLCLs (5.7%) is also deemed as an important measure that will help address the problem of CICLs. Other measures include cooperation from the community (5.7%), coordination with parents (5.7%), conduct an orientation about CICL (2.9%) and the application of a proper legal procedure (2.9%) on the cases of the CICLs.

Table 31. The program/ project recommended by the personnel and institutions handling CICLs so that the CICLs will no longer commit crimes

Responses	Frequency	%
Education/ Intervention/ Livelihood and recreation program/ Skills training/ Program that will address the needs of their psychosocial, spiritual aspects	20	57.1
Close monitoring	1	2.9
Strict policy like curfew	1	2.9
barangay action officers	2	5.7
Seminar for parenting/ parental guidance	6	17.2
Complete facilities	1	2.9

Okay	1	2.9
Total	35	100.0

An intervention approach that include livelihood (skills) and recreation program, that will address the needs of their psychosocial, spiritual aspects (57.1%), and seminars for parenting and parental guidance (17.2%) were the programs recommended so that the CICLs in their custody and in their area will no longer resort to committing offenses in the future. This may be strengthened when there are trained barangay action officers (5.7%), there is close monitoring among the CICLs by social workers (2.9%) and there is strict policy of curfew (2.95%) for minors in all localities. The provision of complete facilities (2.9%) at the child center is also recommended to facilitate the rehabilitation of the children concerned.

Table 32. What should the LGU do to CICLs who were apprehended

Responses	Frequency	%
Center-CICL for intervention and diversion Education	19	63.4
Coordinate with the parents/ parenting activities/ Give punishment for the parents	5	16.6
Follow what is mandated by law	3	10.0
Education	2	6.7
Hearing of the case should not be delayed	1	3.3
LGU - Community extension	2	6.7
Total	30	100.0

Recognizing the role of the LGU where the CICLs are apprehended in minimizing if not eliminating the problem of having CICLs, the practitioners believe that the LGU should establish a center for intervention and diversion Education (63.4%), coordinate with the parents/ parenting activities/ Give punishment for the parents (16.6%), implement the law (10%), education and LGU-community extension ((6.7%), prompt hearing of cases of the CICLs (3.3%). Indeed some cities still has to establish a child center facility for the CICLs in their area.

Table 33. What the LGU can do to minimize the repeated commission of crimes by the CICLs

Responses	Frequency	%
Activate BCPC in every barangay/ Community based program	6	20
Assessment	2	6.7
Close monitoring	3	10.0
Counseling/ Programs and Services/ Livelihood program	9	30.1
Full establishment of a center	4	13.3
Seminar on responsible parenthood	2	6.7
Strictly implement the laws	4	13.3
Total	30	100.0

In order to minimize commission of crime/s by the CICLs, the LGU should employ programs and services that include counselling and livelihood training (30.1%), The city and the barangay should also activate the barangay committee for the protection of children (BCPC) and strengthen its community based program

(20%). The full establishment of a child center facility (13.3%) and the strict implement the laws at the local level (13.3%) is also deemed to help minimize the occurrence of children turning into CICLs. These strategies has also to be supplemented with close monitoring (10%), seminars on responsible parenthood (6.7%) and an assessment (6.7%) of the cases of the CICLs at the local level respectively.

CONCLUSIONS

The CICLs apprehended at Region 10 of the Northern Mindanao are under the custody of the state through its trained personnel such as the police officer at the women's desk and the social workers. The said personnel cognizant of the rights of the child as stipulated in R.A. 9344 applied appropriate interventions that address the fear and isolation experienced by the CICL. The children were fed, counselled and were given other services. Some of them however experienced delays in their court hearings.

The children regret of having committed a crime and have benefited from the intervention programs at the child center facility because it has made them become better persons. This affirms Basemore and Washington's theory on intervention approach to minors that the intervention programs applied on CICLs should aim to positively reform the minor while in custody among juvenile justice professionals and to also inculcate accountability and develop their unique competencies.

It is salient to note that some minors though still believe that imprisonment is a better punishment to correct youth offenders.

Proper legal and other related procedures before they were released from

custody along with after care services from the social workers were experienced by the CICLs.

The biggest challenge for the personnel and institutions handling CICLs however is the recidivist attitude and behaviour of the CICL and they need more well-trained social workers to effectively handle this. This must also be supplemented with an appropriate budget, good facilities and the full implementation of R.A. 9344 starting at the barangay level. Crucial for the prevention of the occurrence of CICLs at the barangay level is the activation of the barangay committee on the protection of the child, a seminar on the R.A. 9344 and the active role of the parents.

RECOMMENDATIONS

For Policy recommendations, the following are advanced:

1. To prevent children from being exposed to crimes in the streets, a strict implementation of the curfew is needed at the local level.
2. To mandate the parents of CICLs to undergo seminars on R.A 9344 and be involved in the skills training of the children so that they will encourage the children to reform and become productive adults.
3. For the barangays to organize barangay committee on the protection of children (BCPCs) and have dedicated and trained personnel as members.

China, Sulu and Cebu Connection:
A Preliminary Study on the 16th century trade relations

Iligan City, Philippines

ABSTRACT

The earliest contact between China and the Philippines hasn't been definitely established but according to archaeological excavations, trading first occurred between the two countries beginning in the 10th century AD. Based on records, trade relations began to flourish during the Sung and Ming Dynasties between the 12th to the 16th centuries. Trading between China and the Philippines became possible only when the Philippines was drawn into it due to the existence of extensive trading in several entrepots found in the Malay-Indonesian archipelago. By browsing documents, carefully checking on existing literature and employing the archival method of research, the main issue of this paper is an attempt to establish trade relations between China and some parts of southern Philippines, giving emphasis on the roles of the Sulu Archipelago and the island of Cebu in the 16th century. Furthermore, this paper seeks to 1) Identify the reasons that drew Chinese traders to Sulu and Cebu; 2) Examine the commercial activities between Chinese and the native traders; and 3) Discover what goods attracted the Chinese to visit the abovementioned places.

Keywords: trade, entrepot, Chinese

INTRODUCTION

For centuries, before the advent of Western powers in Asia, imperial China was the only power that lorded all nations. Because of China's advance culture and great influence, it was considered as the center-of-the-world and its emperor, the son of heaven. All nations that had come into contact with China bowed down to it and those who refused to acknowledge its overlordship risked being invaded by its powerful army. China was not just a political power to contend with but its economy was also admired due to the vastness of its reach. During the times when travel over land was still long, tedious and risky, its citizens had already reached various parts of Europe via the silk road. Not content with land-based trade routes, Chinese citizens have also explored various parts of the world, as far as the Americas and even Africa in order to trade. China's maritime trade with Southeast Asia is so ancient that it is said to have started in the 3rd century BC.

When various polities in Southeast Asia were formed, the Chinese, on junks carrying goods from the mainland came to trade with them. It was because of this brisk trade with China and other countries that the entrepots of Malacca and Moluccas were formed in the late 14th

century to the early 15th century. It was probably through these entrepots being just found along the maritime route that the Chinese also came to trade with Sulu and Cebu in the Philippine archipelago. This paper, which is a preliminary study, will tackle the trade relations of China, Sulu and Cebu in the 16th century and will specifically seek to 1) Identify the reasons that drew Chinese traders to Sulu and Cebu; 2) Examine the commercial activities between Chinese and the native traders; and 3) Discover what goods attracted the Chinese to visit the abovementioned places.

METHODOLOGY

In conducting the study, the researchers relied on translated primary materials, as well as secondary materials available at the University of San Carlos library, Cebu City; MSU-IIT Main library in Iligan City, personal libraries and online journals.

FINDINGS OF THE STUDY

Early Chinese Maritime Trade in South East Asia

Different sources tell of different times when the Chinese first went into maritime trading. Some peg it in the 3rd century BC but others reckon it to the 2nd and 3rd

century AD, when Chinese silk first reached the Roman Empire by way of the high seas. As a result, ports along the coasts of China began to develop. The succeeding dynasties began to gradually expand the maritime trade of China with other countries, thus, crossing vast seas and oceans.

As early as the 3rd century BC, Malay sailors were already known in China. Hall posits that thereafter the Chinese first sailed to the Strait of Malacca. Sometime on the 2nd or 3rd century AD, Chinese traders had found their way to Funan where traders bought goods from Malay sailors from different Southeast Asian ports passing by the Strait of Malacca. Malay sailors brought goods to China themselves but in order to make their trip worth their while, they also brought back goods from China to their respective ports. During the T'ang Empire (618-907 AD), records show that Chinese junks had already frequented the Moluccas (Goodio 2002:1) Such states as *Shu-nai* and *Kamtang* islands (located in the southeast which apparently corresponds to the Philippines) begin to be mentioned in T'ang annals by 628-939 AD (Craig 1916:6)

Trading between the empire and the regions around South East Asia, also known as the "*Nanhai Trade*" in reference to South China Sea became an important commercial trade route (Goodio 2002:2).

The significance of *Nanhai* to the commercial activity of China prompted the emperor (around 960-1279 AD) to take such drastic measures to control the area (Scott 1983:1), which included the Champa coast (Vietnam), Srivijaya (Palembang) and the Strait of Malacca (Melaka). The opening of additional shipyards in the provinces of Guangdong, Fujian and Zhejiang contributed to the increasing numbers of Chinese junks during the Song Dynasty.

However, during the early period of the Ming Dynasty (around 1371 AD), a policy that prohibited maritime trade with other countries was implemented. This was introduced during the leadership of Ming's first emperor Hong Wu to regulate foreign trading to the empire. The empire would then establish a stipulation to the number of envoys and vessels that tributary countries will send. In effect, the policy disrupted the established maritime links of China with other countries since trading only became possible as part of the imperial tribute system (Schottenhammer 2012:29). Only the tributary missions from other countries were allowed permission to enter the ports of China. This became the only way for Southeast Asian countries to acquire goods from China. The scarcity that was created due to the new policy instead stimulated illegal activities such as smuggling and piracy within the region. The illegal activities happened because of the defiance of most merchants from

various parts of the South China against the Ming Dynasty's attempt to curtail their livelihood (Bradley 2008:29).

The prohibition on maritime trade had severely affected the development of one of China's important port-city, Quanzhou. It was described that this port-city was the starting point for what is known as the "*Maritime Silk Road*". The empire's policy against private trade forced some Chinese merchants to migrate to nearby ports that were not that strictly monitored by the government, such as the Moon Port of Zhangzhou. China returned to the center of maritime trade under the reign of Chinese emperor Yung Lo (1402-1424), who changed the policies that were introduced by his predecessor. Because of this, the economic maritime trading and other developments in the empire became unparalleled as compared with the previous dynasties. This was described as the dynamic and outward-looking period in Chinese history as evidenced by the empire's commercial revolution. Overseas trade flourished in coastal ports around the Pacific and Indian Ocean, eastern coast of Japan, Korea, Philippines, South Sea Islands and even west to the Arabian Peninsula. It was also in this period when overseas expeditions were sent under the leadership of the Muslim eunuch Zheng He (1371-1433) (Bradley 2008:80). Private Chinese maritime traders, who were deprived of commercial trading during the early part of the Ming, have increasingly

established trade partnerships with Muslim merchants in the South East Asian region. This resulted in the linking of the empire with the central and the southern parts of the Philippines.

The initiative of the Chinese emperor regarding the expedition resulted in the opening of more opportunities for trading. It increased the distribution and exchange of goods between the countries in Southeast Asia and China. During this period (in the early 15th century) Malacca (Melaka) became one of the entrepots in the flourishing maritime trade in the region. Goods from the empire were then distributed to the Indonesian Archipelago and to the Islamic World (which included the province of Sulu in the southern parts of the Philippines). This route was also used by Arab ships along the trading port in the Malacca region (Goodio 2002:4). Because of such significance, a permanent and official trading post was established by the Chinese in the same area.

The Moluccas was an old entrepot in Southeast Asia which served as a market for glarwood, sandalwood and various spices. Apparently, traders from the said entrepot did not only sell goods there but also sent out ships to various parts of Southeast Asia to sell or buy goods. Chinese traders were also frequenting this port. (Patanne 1996:65)

Map 1. The Chinese trading to the North Moluccas. (The black line shows the direct “eastern” route; this route appears to have been used during the Yuan period. The dotted line shows the route via the Chinese overseas settlements in Northern Java; this route was probably used by private Chinese merchants during the Ming Period) Taken from Roderich Ptak’s *The Northern Trade Route to Spice Island* (1992) p.30

The entrepot of Malacca (Melaka), was perhaps, one of the significant factors why the region became an active maritime trade route. This brought other Southeast Asian entrepots together via commercial trading. Melaka served the region as a

transshipment point of supplies, a pit-stop which offered provisions for long-distance voyages, and a drop-off point of various goods from other regions. Moreover, the place provides convenience to maritime traders who were waiting for the trade winds to change (Hussin, 2008:2). According to the *Song Shi* annals, Chinese junks sailed in the region for the purpose of purchasing cloves in exchange for porcelain and silk. These cloves were then re-exported to China by merchant-ambassadors from places such as Champa, Java, Srivijaya and Butuan (an ancient kingdom in Mindanao, Philippines). With linkages to these places, China made a gradual expansion of her maritime trade into the Sulu-Celebes-Moluccas areas even in the late Song and early Yuan Dynasty (Ptak 1992:3).

In the early period of the Ming Dynasty, the maritime trade was curtailed and ship-building was state-controlled (Nie n.d:25). The policy of “maritime trade proscription”, which was introduced by the emperor, halted China’s maritime trade with other countries. As stated earlier, the policy did not only allow trade with other countries if these were not part of the tributary countries. It was also in this time that private merchants began to establish their own shipbuilding industry, as a result from the empire’s restriction. This prompted private merchants to develop their own ships and began to conduct trading with other countries illegally without the empire’s authority. Famous ships during the Ming Dynasty were the Fujian “*Fu*” ship, Guangdong “*Guang*” ship and the Zhenjiang “*Sand*” ship, to name a few (Nie n.d:26). Despite enabling China to monopolize the Sino-foreign trade, it also contributed to the increase of Chinese private mercantile power in the region and the gradual expansion of trade networks by India and South East Asia-based Muslim traders (Schottenhammer 2002:79,83). This also resulted to the migration of more and more Chinese to overseas countries, most especially in the South East Asian region, where private trade networks were conducted.

Chinese traders were very significant for Southeast Asia such that they were said to have caused the economic upturn in the region which was evidenced by the influx

of Chinese cash starting in the 14th century and accelerating in the 15th and 16th centuries. As a matter of fact, Chinese coins with a hole in the middle became very common. In the 1500s, in fact, the Chinese currency became the principal currency in market ports such as Malacca, the Moluccas and other areas. (Tarling 1999:II:129)

Trade relations between China and the Philippines in the 16th century

Based on records, China had already established trade contacts with the natives of the Philippines as early as the 10th century, as indicated in the *Song Shi* annals and *Chau Ju-Kua’s Chu Fan Chi*, the first dated account on the Philippines. The latter mentioned of the trade between the Chinese and the natives of Ma-I, the Chinese name for the country, where the exchange of goods such as silk, cotton, lead, medicinal betel-nut, porcelain, beads and iron ware, tortoise shells, pearls and yellow wax took place (Hirth and Rockhill 1911:160). The *Song Shi* annals, on the other hand, also stated the first tribute mission from the Philippines to China came from Butuan in 1001 AD. The local chieftain of Butuan, named Kiling, sent missions every year since then.(Scott 1983:3)

It would seem that it was during the T’ang Dynasty that close contacts between the Philippines and China took place. In fact

the H. Otley Beyer, an American anthropologist who did studies on pre-Spanish Philippines identified 20 sites in the country where T'ang and T'ang type ware were located. Besides these, T'ang currency were also found in several areas. (Patanne 1996:67)

In the 14th century, trade relation between the two countries expanded when both countries exchanged ambassadors. In 1372 AD, Emperor Hong Wu welcomed the tributes brought by the Filipino envoys to his court, who, in exchange, were given valuable gifts by the emperor in the form of porcelain vases and colored threads (Fox 1967:57). In the succeeding 15th century, however, the focal places where trading was conducted were in the communities of Manila, Cebu and Sulu (Fox 1967:58). For the purpose of this paper, we will only tackle Cebu and Sulu as participants in the international maritime trade with China.

Cebu trades with China

Based on recovered artifacts by archaeologists, the Chinese would have traded with the natives of the island of Cebu sometime in the 10th century due to the recovery of T'ang and Sung porcelain ware in Cebu City. The island's location together with its sheltered port was what made it attractive to commercial and cultural contacts with China and other countries in Southeast Asia. The discovery

of early Ming blue and white ceramics, however, suggests that Cebu was an important trading center for Chinese merchants at least a century before Spanish arrival. (Hutterer 1975:56) The quantity of ceramics brought to Cebu was considerable. The archaeologist H. Otley Beyer mentioned that "Cebu island is truly a mine of ancient porcelain and other artifacts of pre-Spanish times." (Beyer 1947:282)

Trade pottery was very important to the social and religious life of the Cebuanos so that you find them almost all over the island. Antonio de Pigafetta, the scribe of the Magellan expedition, in fact, mentioned in his diary that the ruler of ancient Cebu ate turtle eggs in porcelain dishes and that early Cebuanos served the first explorers with meat on Chinese porcelain platters. (Blair & Robertson 1909:XXXIII:149) So it is not a wonder if Chinese porcelain wares are found in present-day Argao, Naga, Carcar, Talisay and Oslob on the eastern part of the island and in Ginatilan, Badian and Malabuyoc in the Western part of the island.(Fenner 1985:16) Other than porcelain ware, the Chinese also brought musical instruments like large gongs and plausibly embroidered cloth and even silk clothes worn prominent Cebuanos. (Fenner 1985:17)

In the 16th century, the port of Cebu was probably the largest entrepot in the

Visayas. Based on Spanish accounts, there was no other one in the Visayas as a major regional trade center. While in Limasawa island, the crew of the Magellan expedition asked a native ruler where they could buy provisions. The ruler answered that there were three locations but added that "Zubu was the largest and the one with most trade." (Blair & Robertson 1909:XXXIII:129)

Cebu was indeed the most significant entrepot in the Visayas in the 16th century and Chinese merchants visited for what it could offer. The Spaniards themselves give us a clue why the Chinese came. Many years after the Magellan expedition, the Loaysa expedition (1525-1526) while in the island of Mindanao heard from the natives that Cebu had "gold, for which the Chinese come to trade each year." (Blair & Robertson 1909:II:35) A member of the Saavedra expedition (1527-1528) reported that the place "has gold (and) they say that people from China come hither and that they trade..." (Blair & Robertson 1909:II:42) A member of the Villalobos expedition (1545-1546), on the other hand, also reported later that the "Chinese were wont to go thither (Cebu) to buy gold and certain precious stones." (Blair & Robertson 1909:II:72) The gold found in Cebu at that time were not only produced on the island but some of it came from other places from other parts of the Philippines such as Catanduanes, Masbate, Bohol and Butuan and were only

brought to the island being an entrepot. (Fenner 1985:17)

Apparently, it was not only gold which attracted the Chinese to come to Cebu. Before Spanish colonization, Cebu also served as a market place for slaves. A survivor of the Loaysa expedition deposed that eight members of the Magellan expedition who had been abandoned in Cebu in 1521 were later sold as slaves to the Chinese. (Blair & Robertson 1909:II:42) This statement was further bolstered by the fact that some days before the Magellan expedition arrived, a merchant from Siam went to the place in order to load gold and slaves. (Blair & Robertson 1909:XXXIII:139)

Besides gold and slaves, the Chinese probably made a stop over in Cebu in order to stock on provisions which could have consisted on hogs, according to a member of the Loaysa expedition.(Blair & Robertson 1909:II:42) Fenner posits that the Chinese could have also loaded rice, millet, sugar cane, palm wine and various fruits which "may have formed part of the trade." (Fenner 1985:18) Moreover, it could also be that Chinese traders also obtained cotton articles in Cebu.(Echevarria 1974:5,6)

Sulu- Chinese Trade link

Sulu archipelago is strategically known for maritime trade and commerce, precisely

because of its geographical location. Sulu occupies nearly the central position of the triangular insular Southeast Asian trade routes. Sulu lies between Mindanao on the east and Borneo on the west, and separates the Sulu Sea from the Celebes Sea. To the north lie the Visayas and Cebu, Palawan, Luzon, Formosa, China, and Japan; to the South, the Moluccas, Celebes and Java; to the east, Mindanao and Basilan; and to the west, Borneo, Sumatra, and the Malay Peninsula (Saleeby, 1963)

Historically, Sulu had been an open frontier of maritime trade since pre-colonial era. For centuries before the advent of Western colonizers in the Philippines, dynamic trade had already existed in Sulu. It did not only have commercial relations with Indonesia and Malaysia, but also with the Dutch, the British, but especially with China (Majul, 1973). The maritime trade contact between Sulu and China is believed to have started even before the coming of Islam. However, there is no available written material on this thus far.

In 971 AD, during the Sung Dynasty, Majul mentions that Canton (Khanfu) was reopened to foreign trade. Later, in 977 AD, Majul adds that a Chinese ship owned by a Muslim from Canton named Abu Rashid appeared in Borneo or Brunei to initiate trade. Subsequently, in the same period, Brunei sent an embassy to China. Due to this, the Sulu- Brunei- Palawan-

Luzon- Canton trade route had emerged during the Sung period (Majul, 1999). Moreover, Canton became one of the famous and progressive ports of foreign goods and strange treasures from foreign lands. Perhaps among those foreign goods were from Sulu.

Bruno (1973) also says that the Tausugs, owing to their love for the sea and for adventure, had extended trade to the ports of neighboring Indonesia and Malaysia, and possibly to China, which trade, even centuries ago, was profitable enterprise. By the 13th century, commercial relations between the Chinese and the inhabitants of Sulu was already brisk.

Religion, in this case, could be one of the critical factors that inspired both Arab and Chinese traders to actively engage in trade with the local inhabitants of Sulu during the Yuan Dynasty. According to Majul (1999) it was not only trade goods from China that the junks brought in but also the religion of Islam. It was brought in by Chinese-Muslims called locally as "*Lannang Hoy-Hoy*" (Hue-Hue, the Chinese term for Chinese Muslim), accompanied by Arab missionaries. There is a prevailing belief in Sulu that Karim-ul-Makdum, a trader and Arab missionary, came to Sulu on a Chinese vessel in the 13th century. Patanne (1996) quoting Majul explains that the famous missionary Sayyid An-Nikab, commonly known as Mahadum Amin-Allah in Sulu, was a

Chinese Muslim who was buried in Bud Agad, Jolo, by the Tausugs. It is indeed in accordance with the teaching of Islam that trade and religion is equally important obligation for every Muslim. This harkens back the words of the Prophet Mohammad which states that "trade and commerce is nine out of every ten parts of our nourishment'.

Undoubtedly, Sulu has distinct products that had attracted neighboring Asian regions to trade with Sulu. Patanne (1996) mentions that the Chinese were drawn to Sulu for laka-woods of average quality, yellow-wax, soft tortoise shells and pearls. Majul (1966), on the other hand, mentions such products as bird's nest, coral and other forest products. Of these, the archipelago's blue-white in color and round in shape pearls were the most sought-after. Sulu pearls command high and the Chinese used them for ornaments. Their color never fades and the biggest of these is almost one inch in diameter. A big pearl, for instance, costs more than 700 or 800 ting of trade-silver; a medium one, 200 or 300 ting and a small one 10 or 20 ting. The Chinese, on the other hand, barter these with gold, trade-silver, cloth, green beads, Chowchow porcelains, iron bar and so on.

During the second half of the 14th century, the Hung-wu emperor, T'ai-tsu (1368-1398), restored state trading through a tributary system, stipulating that only tributary countries could bring their goods

to China. Because of this royal edict, according to Patanne (1996), Sulu became well-known in the annals of the Ming Dynasty (1368-1644), being among the first country in the Nanhai to send an envoy to China first in 1370, and continued to send tribute missions to China in 1417, 1420, 1421, 1423 and 1424. In return, Sulu was visited by Zheng He's expedition in 1405 and in 1407.

But what was the most impressive and extensively recorded detail, based on this account, was the visit by the three rulers of Sulu to the Ming court in 1417. Patanne (1996) tells us the interesting detail of this visit:

"In the year 1417, the Eastern King of this country, Sulu, Paduka Phala (Batara), the western king Ma-ha-la-ch'ih (Maharaja) and the King of the Mountain Ka-la-ba-ting called Paduka Prabu, brought their families and their chiefs, altogether more than 340 persons, and came over the sea to the court in order to carry tribute. They presented a letter of gold, with characters engraved on it, and offered pearls, precious stones tortoise shell and other articles. They were treated as those of Malacca, and after sometime they were each appointed king of their country and presented with a seal, a commission, a complete court dress, a cap, a girdle, a horse with trappings, insignia to their rank. The three kings remained twenty-seven days and when they were about to return, each of them got silk with patterns, three-

hundred pieces of plain silk, ten thousand taels in paper money, two thousand strings of each, one robe embroidered with golden snakes, one with dragons and one with kilins.

The Eastern King died in the government hotel at Te-chou (in Shantung province); the Emperor sent an officer to perform sacrifices and ordered the authorities to provide the funeral and to arrange the tomb. He got a posthumous title and his wife and concubines remained with eighteen followers to take care of the grave; when they had finished the three years mourning, they were sent back to their country..."

CONCLUSION

The first recorded interaction between the Chinese and Filipinos happened during the T'ang Dynasty between 628-939 AD. These are found in the Shong Shi Annals and Chau Ju-Kua's Chu Fan Chi. It is plausible that the Philippines was drawn into the international maritime trade because the Philippines is near Malacca and the Moluccas, the old entrepots in Southeast Asia which the Chinese had been frequenting as early as the 3rd Century BC. The Chinese had significant effect on the region so that Chinese money flooded its markets and later in fact became the regional trading currency. There were a few places in the Philippines which the Chinese visited in order to trade

but for the sake of this paper, we only focused on Sulu in Mindanao and Cebu in the Visayas.

In the case of Cebu, trade with the Chinese dates back to the 10th century as evidenced by porcelain ware recovered in Cebu City made during the T'ang Dynasty. The Chinese were drawn to Cebu island to sell porcelain ware, among other things, which were highly prized by the Chinese. In return, the Cebuanos also sold the Chinese gold, slaves, precious stones and even cotton. Chinese presence in Sulu could also be dated at the same time when they were in Cebu. Full trade, however, with Sulu occurred during the 13th century during the time of the introduction of Islam in the said archipelago. Unlike Cebu, however, Sulu was really able to send trade missions to China and the Chinese in turn came to Sulu to purchase yellow-wax, corals bird's nest, tortoise shells and pearls, among others.

HISTORY OF BARANGAY SANTIAGO OPEN DUMPSITE OF ILIGAN CITY: A CURSORY STUDY FROM 1973 TO THE PRESENT

ABSTRACT

In the early 1970s, Iligan City experienced a booming economy extensively due to the establishment of various industries. This became possible since Iligan City offered cheap electric energy to many investors and company owners. This in turn attracted people from various places all over the country to seek their fortunes in this city. As a result, rapid urbanization took place simultaneously with the growth of population which resulted to a drastic increase of wastes from the citizens. In 1973, the City government of Iligan established an open dumpsite that would accommodate the growing volume of wastes collected. This open dumpsite was located in Barangay Santiago.

With this, it is the aim of this research paper to trace the historical development of Barangay Santiago Open Dumpsite. This also seeks to determine the ordinances passed by the City Council declaring Barangay Santiago as an area meant for the solid waste management program of the city. Furthermore, it seeks to identify the waste characterization; its impact to the environment; and it will also investigate the current situation regarding waste management especially on issues affecting the inhabitants of the area.

Keywords: Barangay Santiago, Open Dumpsite, Solid Waste Management

INTRODUCTION

Iligan City is highly categorized as 1st class urban city with a total land area of 813.37 square kilometers. It encompasses forty-four (44) barangays which is about 25 percent of the total land area of the province of Lanao del Norte, making it as one of the largest cities in the Philippines. The total land area utilized for agriculture is 37 percent, forest land is 56 percent and only 6.3 percent are built-up areas and the remaining 0.7 percent is mineral

land (City Planning and Development, 2012).

On June 17 1950, it became a chartered city. Accordingly, industrialization is one of the most important features of the development and growth of Iligan. With this, Iligan City earned such title as the “*Industrial Center of the South*” and sometimes with some exaggeration, the “*Pittsburg of the Philippines*” because of the proliferation of multi-million pesos

industrial complex in the area (Salgado, 1996). The Hydroelectric power harnessed from the Maria Cristina Falls made this possible. National Power Corporation which has been responsible for the development of the Maria Cristina power plant sites, offers cheap electric energy to many investors and company owners. Today, Iligan is a host to at least sixteen (16) large manufacturing plants that make use of this natural source of power.

It should be noted that the rapid urbanization accompanied with the rising growth of population are basically the factors to the increasing quantity and complexity of wastes. These solid wastes are generated from combined residential, industrial and commercial activities. It can be classified according to its origin (domestic, industrial, commercial, construction or institutional); according to its contents (organic material, glass, metal, plastic paper and among others); or based to hazard potential (toxic, non-toxin, flammable, radioactive and infectious). In response to the increasing amount of wastes generated and collected in the city, Mayor Camilo P. Cabili during his administration in 1972 notably made a certain area in Barangay Santiago later on known as Cabili as a solution for it. This led to the operation in Barangay Santiago as a prospect area for an open dumpsite.

However based from the study of Chalmin and Gaillochot (2009) in many cases, city and municipal wastes are not well managed in developing countries, as cities and municipalities cannot cope with the accelerated pace of waste production. It can be observed

that waste generation in different places of the Philippines tend to be faster than any program of collecting and disposing them safely. In the case of Iligan which is considered as highly urbanized city with a population of approximately 344,000, it generates around 165 tons of mixed solid waste per day (Task Force CMRF, 2014).

With this, Republic Act 9003, the *Ecological Solid Waste Management Act of 2000* was passed by the Congress as a solution to a range of environmental problems caused by solid wastes such as flood, pollution, congestions and others. This law specified the need to adopt a systematic, comprehensive and ecological solid waste management program that aims in protecting public health and environment by ensuring proper segregation, collection, transport, storage, treatment and disposal of solid waste through the formulation and adoption of the best environmental practices in ecological waste management.

The management of solid waste thus intends to reduce or eliminate adverse effects on the environment, human health and supports economic development and improved quality of life. A number of processes are involved in effectively managing waste for a municipality. These include proper and systematic monitoring, collection, transport, processing, recycling and disposal.

In pursuant to the Philippine Local Government Code, it is mandated in Republic Act 9003 that Local Government Unit will be the primary responsible unit in the implementation of the Act (Section 10). They are given

the task of establishing provincial and city/municipal solid waste management boards and preparing a 10-year solid waste management plan for their community (Section 11, 12 and 16).

More importantly, under Republic Act 9003 it provided that wastes must be deposited in sanitary landfill and a mandatory closure to all open dumpsites to ensure protection of public health and environment. Best example of this would be the case of Cavite Open Dumpsite that was owned and operated by the Cavite City local government. Abida (2014) mentions that the Cavite City Open Dumpsite was investigated by the Department of Environment and Natural Resources (DENR) who deemed it “stinky” for a number of reasons.

In DENR’s report dated December 2013, the Cavite City Dumpsite was found in violation of the following laws:

1. **1987 Philippine Constitution:** Art. 2 Sec. 16 of the Philippine Constitution, which is the foundation and basis of all republic acts and writs, states that “The State shall protect and advance the right of the people to a balanced and healthful ecology in accord with the rhythm and harmony of nature.
2. **RA 9003 or Ecological Solid Waste Management Act of 2000:** Sec. 37 of the RA disallows the utilization of open dumps for solid waste. The act further states “Open dump sites shall not be allowed as final disposal sites. If an open dump site is existing within the city or

municipality, the plan shall make provisions for its closure or eventual phase out within the period specified under the framework and pursuant to the provisions under Sec. 37 of this Act.” The phase-out period for open and controlled dumpsites as specified in the law is 2002 and 2004, respectively.

3. **Supreme Court Decision G.R. Nos. 171947-48 or Writ of Continuing Mandamus:** The writ mandates 13 government agencies “to clean up, rehabilitate, and preserve Manila Bay.” DOH and DENR-EMB are also directed to “develop a toxic and hazardous waste management system by June 30, 2011 which will implement segregation of hospital/toxic/hazardous wastes and prevent mixing with municipal solid waste.”
4. **RA 8749 or Philippine Clean Air Act of 1999:** Sec. 20 says that “Local government units are hereby mandated to promote, encourage and implement in their respective jurisdiction a comprehensive ecological waste management that includes waste segregation, recycling, and composting.”
5. **RA 9275 or Philippine Clean Water Act of 2004:** Sec. 27 prohibits the “Discharging, depositing or causing to be deposited material of any kind directly or indirectly into the water bodies or along the margins of any surface water, where the same shall be liable to

be washed into such surface water, either by tide action or by storm, floods or otherwise, which could cause water pollution or impede natural flow in the water body.”

The fact that solid waste management was already promulgated, this paper pertains to assess the actions taken by the local government of Iligan with its implementation and of particular its extensive impact in our subject matter given its strict mandate against the use of open dumps for solid waste. More importantly, this paper will trace the history of Barangay Santiago Open dumpsite as it served for about four (4) decades as dumping site of the city, highlighting the factors that led to its operation and later on its closure. This paper also aims to identify issues and concerns among the residents of Barangay Santiago and the challenges encountered by the local government.

Significance of the Study

Out of the literatures and studies accumulated and reviewed by the researchers, it was found out that none of these materials discussed extensively not even a brief narrative about Barangay Santiago as open dumpsite of the city. The local office of Barangay Santiago itself did not even have a well-documented report pertaining to its start of operation and closure and its issues and challenges to the local government, to the community and to the environment. Most of the reviewed materials customarily examined and recounted the implementation of Solid Waste Management Program and the city government’s compliance on it. It is

interesting to note that this study is actually pioneering. The researchers with their utmost attempt in writing the history of Barangay Santiago Open Dumpsite believed that the findings of this study in one way or another has a contribution to the following:

- (1) Towards the progress and development of writing the local history of Iligan City;
- (2) Awareness to the barangay officials to be responsible for the collection, segregation and recycling of biodegradable, recyclable, compostable and reusable wastes and most importantly stakeholders’ participation in the success of a solid waste management;
- (3) Immediate action of the local government of Iligan on what to do with the former or abandoned dumpsite in Barangay Santiago as informal settlers began to inhabit the area despite of the restriction and prohibition imposed by the local government;
- (4) With the relocation of the dumping site in Barangay Bonbonon, this study may serve as a lesson and guide for the local government of Iligan to impose a proper and full implementation of the provisions under Republic Act 9003 as this present site in Bonbonon tends to be still an open dumpsite.

With this, there is a need therefore to conduct historical inquiry on Barangay Santiago Open Dumpsite.

Methodology

Related Literatures and Studies. The researchers first collected various literatures and studies relevant to the subject matter from the internet, MSU-IIT Main library and its satellite libraries in the Department of History, College of Arts and Social Sciences, College of Science and Mathematics and College of Education. These materials served as a guide and basis of the researchers in conducting the study. Materials regarding solid waste management in the city contributed to the study as it helped to supplement a substantial narrative.

Documents and Records. The researchers gathered the available documents and records from the barangay offices of Saray, Tibanga and Santiago, Sangguniang Panlungsod and the local offices of City Planning and Development, City Engineer and City Assessor. Example of these documents are Barangay profile and fact sheets, Environment Sector Plan, City Ordinances and resolutions, and Barangay Development Plan.

Oral Interviews. In order to supplement and corroborate the data and information taken and extracted from the materials gathered, the researchers also conducted an oral interview with the following expert and reliable key informants such as the city government officials and personnel, New Frontier Home Association, scavengers and residents located within the vicinity of open dumpsite who are equipped with knowledge about the operation and closure, issues and concerns of open dumpsite in Barangay Santiago.

FINDINGS OF THE STUDY

Background

Barangay Santiago is located on the coastal part of Iligan City bounded on the north and northeast by Barangay Hinaplanon; on the east by Barangay Sto. Rosario; on the south by portion of Barangay Tibanga and San Miguel; and on the west by coastline of Iligan Bay. Barangay Santiago was created on November 23, 1985 through the people's initiative and a plebiscite was done to separate the area from the mother barangay which is Barangay Saray. It was officially declared as a separate barangay named Barangay Santiago by the virtue of City Council Resolution No. 344, series of 1985 and City Ordinance No. 1638 (Barangay Development Plan, 2008:16).

It has a land area of approximately 110.42 hectares. By actual land use, residential areas occupy nearly all of central and eastern half of the barangay starting from the west of Saranat Street up to Mandulog River on the north and national highway on the southeast. These include the subdivisions of New Frontier Homes, Orchid Homes, Balete Drive and Cabili Village. In addition, agricultural areas are located on the south central portion bordering Canaway Creek. Patches of institutional and industrial establishments are located within the agricultural and the residential areas.

Furthermore, the barangay is endowed with two natural attributes, the presence of Iligan bay and the Mandulog River coursing through to empty at its bay. These bodies of water once teemed with aquatic life and along its coasts is a mangrove land. In the

Barangay Development Plan (2008), intensive rehabilitation and proper management could somehow restore the richness of the aquatic resources of this area.

From the total land area of Barangay Santiago, 26.53% of it is a vacant land. This includes the area utilized as an open garbage dumpsite, which at present is about 3 hectares along the north-western seacoast.

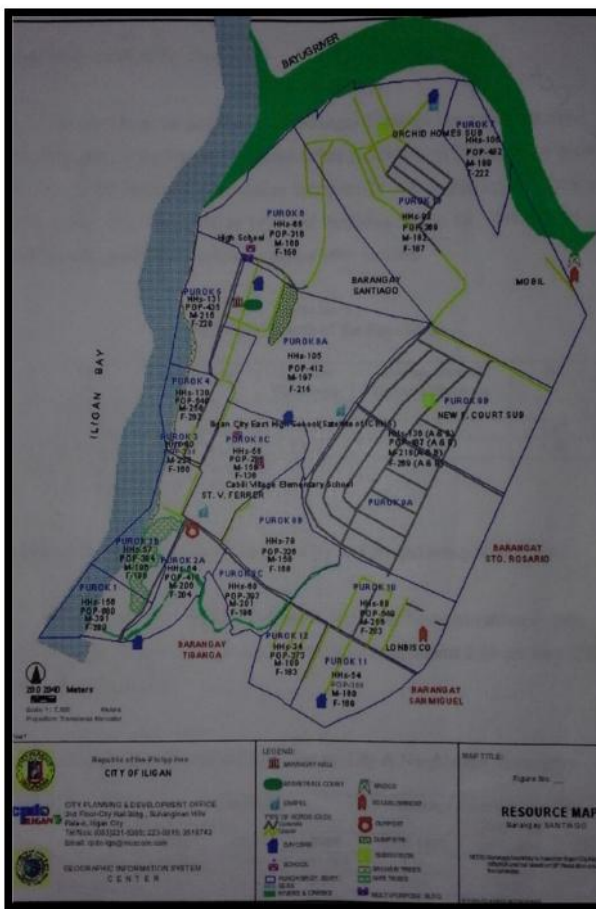

Figure 1. Resource Map of Barangay Santiago. Source: Barangay Development Plan, 2008.

Operation of Barangay Santiago Open Dumpsite

Before the establishment of an open dumpsite in Barangay Santiago, Iligan City based from the records has no specific dumping area intended for the wastes. According to the interview

with some local officials of the city government, in the early 1960s the present site of what is now Barangay Poblacion Hall and Wet market was actually the garbage dumpsite of the city. This activity operated without any city ordinances or resolutions. And this supports the claim of Salgado (1998) that Iligan since its founding as chartered city in 1950 until 1975 did not have a master plan, zoning regulations or building code. Later on, the said site was reclaimed by the city government.

Subsequently the wastes in the city were indiscriminately thrown everywhere without consideration to the negative effects on the environment and health of the community. Open dumps were also visible along riverbanks and in flat areas near bodies of water.

On the other hand, an area in Barangay Santiago that used to be a marshy area covered with thick mangroves, nipas and coconuts, dumping of wastes by the residents were accommodated and highly welcomed in order to elevate and fill the area. The shallow part of this marshy or swampy area were filled with garbage then followed by limestone and gravel until such time that the area was filled up.

But due to rapid urbanization that the city experienced at that time, it led to the increasing amount of waste coming from industrial, residential and commercial. This eventually resulted to the pervasive and prevalent dumping of wastes in the area not only by residents of Barangay Santiago but including as well the wastes that were collected in the city.

As a result, the marshy area in Barangay Santiago by 1970s during the administration of Mayor Camilo P. Cabili became an open dumpsite of the city and expanded to 10-hectares because of the growing volume of all types of wastes discarded in the area. There were private lands affected and were included impulsively as part of the open dump site.

In making Barangay Santiago as open dumpsite, there were no provisions provided for the leachate collection, vent pipes to manage and control methane generation and lining system. Ecologically, it is a highly sensitive area being near the estuarine stretch of the Mandulog River and close to Iligan Bay.

Based from the records, in Barangay Santiago the number of households and the data of waste generation from ICSWWP, the city generates 0.60 kilogram of waste per persons per day. It is estimated that the barangay generates 4.89 tons of garbage per day. This is schedule to be collected by garbage trucks of the Public Services Division (PSD) 2 or 3 times a week, however the actual collection of waste in Barangay Santiago is only once or twice a week because it has to serve the other 28 coastal barangay in Iligan City.

Due to the inefficiency of collection and increasing volume of unmanageable solid waste and improper handling of garbage waste in the respective households, resulted to indiscriminate disposal of waste by the community that leads to problem of canal clogging, eventual flooding and increasing rate of health problems.

It was observed that during the operation in Barangay Santiago the waste collectors apparently gathered all types of wastes and effort for segregation started only in the dumping area. Furthermore, within the vicinity of open dumpsite, informal settlements were very evident despite of the discomforts and prohibitions of the local government. As a matter of fact, since the start of its operation growing numbers of scavengers or garbage pickers and informal settlers were very perceptible and efforts of the local officials of Barangay Santiago were futile because of their strong resistance and assertion. For the scavengers, the dumpsite was a blessing for it became their source of income. Out of the garbage they can support their family and sustain their needs. In other words, what is garbage for many, is a resource for them.

When the dumpsite was still operational the family of Linda (40 years old), Berto (50 years old), Virginia (66 years old) and Avelino (52 years old) earned a minimum of 1,000 – 2,000 pesos per week. They added that the Barangay Council of Santiago formed an organization for the scavengers (garbage pickers). Accordingly, there were 40 bona-fide members divided into 3 groups. The first group with 15 members were assigned every Monday, Wednesday and Friday of the week. The second group with 15 members were assigned every Tuesday, Thursday and Saturday schedule. The remaining 10 members were assigned for the night shift who were allowed to sift the garbage every night. While Sunday was open to all members of the organization. This

organization was formed in order to prevent disagreements among garbage pickers or scavengers and to make it systematized.

Resolution 01-579.

Returning to the Barangay Council of Santiago, this city, its Barangay Ordinance No.01, s. 2001 entitled, "Imposing an ordinance to all scavengers in Barangay Santiago who are collecting junk/garbage to any point in Iligan City (City Ordinance, Sangguniang Panlungsod, August 21, 2001).

Aside from scavenging Merly (53 years old), Virginia (66 years old), Alicia (60 years old) and Ivy (35 years old) mentioned also that garbage in the dumpsite was a source of food for their domesticated pigs and other animals. Most of the scavengers who were living in the dumpsite were backyard hog raisers usually having 4 to 10 pigs. In the morning their hogs were also scavenging for their food and returned to the respective place of their owners. Unlike other hog raisers, they were free from worries of where to find money for the feeds of their hogs. The proceeds of their backyard raising help in attaining the tuition fees and school projects of their children.

The local government also exerted efforts such as compaction and rapid composting using enzymes were made to extend the life span of the dumpsite. Based on the Feasibility Study for the Iligan City Solid Waste Management System, an estimated volume of 352, 000 cubic meter of solid waste can be accommodated by the

dumpsite until 2007 (City Planning and Development, 2012).

Figure 2. Barangay Santiago Open Dumpsite. Source: Barangay Development Plan, 2008.

With the expansion of the dumpsite in Barangay Santiago, to the extent that it encroached and affected other private lands, later on the owners petitioned for compensation for the damage it had caused to their property. The negotiations between the local government of Iligan and those private owners of particular by Elvira Caños Bibera, were taken into consideration that led to the passage of series of resolutions:

Resolution No. 07-219.

Resolution authorizing the Honorable City Mayor Lawrence Ll. Cruz to negotiate and enter into a Contract of Lease with any property or landowner preferably at Barangay Santiago for appropriate dumping site and subject to a rental of not more than Php 50, 000.00/month which contract shall be submitted in a

special session within this month containing all requirements of laws, source of funds and the duration of lease (City Ordinance, Sangguniang Panlungsod, March 20, 2007).

Accordingly, the registered owner has been communicating with the city government with regards to the property being used as dumpsite until they decided to issue a Notice of Closure starting March 24, 2007 because the city government has not undertaken any steps addressing the condition for the use of the subject property after several months of waiting. Furthermore, Chonilo Ruiz being the Chairman on the Committee on Environment informed that there was already a Memorandum of Agreement submitted, only it is subject for amendment because of the contract price of Php 75, 000.00 which the body is not amenable including the lack of sources of funds.

It is clear then that Elvira Caños Bibera owner of a 2-hectare lot at Barangay Santiago used as open dumpsite by the city government demanded Php 75, 000.00 per month for compensation. Because of the price set by the owner, there was a delay for the approval of such negotiation due to budgetary constraints faced by the city government. To add, the city has been dumping 35 truckloads of garbage daily at the Bibera's lot and because of this, the owner demanded the city government to stop dumping garbage in her lot, unless the city would rent her property at Php 75, 000.00 per month.

Resolution No. 07-278.
Resolution Authorizing the Honorable City Mayor Lawrence Ll. Cruz to negotiate and enter into

contract with any property owner, preferably at Barangay Santiago, as dumping site at a rental of fifty five thousand pesos (Php 55, 000.00) per month, from July-December, 2006 and seventy five thousand pesos (Php 75,000. 00) per month from January 2007 on a month to month basis until such time the city shall have its own dumping site. (City Ordinance, Sangguniang Panlungsod, April 3, 2007).

The city could not just accede to the request of the owner for the closure of her property as it will adversely result to the piling of uncollected garbage in the city streets, endangering the environment and the health of the people. Moreover, in as much that the Materials Recovery Facilities (MRF) at Barangay Bonbonon is still under construction and that there's no alternative areas than can be used as immediate dumping site.

After a series of negotiation, the city government approved it and by 2007, they started to pay Elvira Caños Bibera by the amount they have agreed.

Closure of the Open Dumpsite in Barangay Santiago

The use of 10 hectare area as open garbage dumpsite has created a pollution which degraded the environment of the water zones of this place. The once thick mangrove had been replaced with large volumes of mixed bio-degradable and non-biodegradable wastes. Likewise informal housing settlements and government facilities sprawled as well on the vicinity of dumped garbage.

According to the study, the most crucial aspect of hazardous landfill

design and function is the site selection. The ideal site underlies very sparse ground water preferably protected by a layer of bedrock. There should be little water and it should not lead or drain into rivers or lakes. The preferred soil is clay since it is less permeable to leachate. Furthermore, landfill leachate may find its way through underground watercourses and hence contaminate sources of drinking water, possibly at a considerable distance from the landfill site causing contamination by toxic metals and organic compounds such as pesticides (Zabala, 2008).

With this, local government of Iligan had taken steps and measures in solving this problem. As stated in Resolution No. 01-584:

Resolution No. 01-584. *Urging the appropriate City government agencies through His Honor City Mayor Franklin M. Quijano to adopt measures to address the environmental and health concerns of the residents of Barangay Santiago relative to the garbage dumpsite situated therein (City Ordinance, Sangguniang Panlungsod, August 21, 2001).*

However, the situation became worse. The open dumpsite threatened the health conditions of the population nearby due to its unsanitary situation. No mitigating measures were in place to control the flow of people to the site, since houses have been constructed near the dumpsite. Scavenging activities by residents and domestic animals were uncontrolled and there was always the hazard posed by leachate contamination of the marine waters. Runoff from this open dump pollutes the nearby sea and river system. The persisting bad odor

constitutes an environmental nuisance. Combustible gases like methane generated by the covered waste materials may eventually reach the surface and could potentially cause sudden fires and explosions. It became a breeding ground for rats, flies, birds and other organisms that serve as disease vectors.

People were starkly complaining of the intolerable and unbearable foul order cause by the garbage. They were mostly residents of Barangay Santiago and even the nearby barangays of Saray and Tibanga. To add, daytime was even worse due to the influx of “*langaw*” (flies). Nets for the residents of Barangay Santiago in particular those within the vicinity of the dumpsite were very useful and needed. They used mosquito nets whenever they take their meal.

Lack of potable water was also their complained. They have to pay Php 2.00/container of water since no public faucet was installed by the Barangay to them. Moreover, the scavengers and residents in area evidently suffered from skin-related diseases and recurring cough.

As a result, local residents in Barangay Santiago started to petition for the closure of the dumpsite in their area. Also, it was found out that the move towards the closure of the dumpsite was headed and agitatedly directed by the New Frontier Homes Association. Most of the respondents vehemently mentioned the name of Ms. Llonila Salig, the acting president of the New Frontier Homes Association. According to Salig (2016), the movement for the closure of the dumpsite in Santiago was instigated

because of the health problems and discomfort it brought to the place. To note her words, “*grabe gayud kaayo ka baho!*”

Basically, Republic Act 9003 - *Ecological Solid Waste Management Act of 2000* mandates against the use of open dumps for solid waste. Therefore, Barangay Santiago open dumpsite, under RA 9003 must be close for apparently, it is a threat to public health and to the environment. It states that:

Republic Act 9003, Chapter 3, Article 6, Section 37:
Prohibition Against the Use of Open Dumps for Solid Waste – No open dumps shall be established and operated nor any practice or disposal of solid waste by any person including LGUs which constitutes the use of open dumps for solid wastes, be allowed after the effectivity of this Acts: Provided, that within three (3) years after the effectivity of this Act, every LGU shall convert its open dumps into controlled dumps, in accordance with the guidelines set in Section 41 of this Act: Provided further that no controlled dumps shall be allowed five (5) years following the effectivity of this Act.

Thus, under Republic Act 9003 there is a mandatory closure of all dumpsites. The Department of Environment and Natural Resources (DENR) and National Solid Waste Management Commission (NSWMC) even provided guidelines on the categorization of final disposal facilities. So under Republic Act 9003, Iligan City is required and mandated to close its existing dumpsite and be replaced with

a Central Material Recovery and Composting Facility of the City (CMRCF) in Barangay Bonbonon by 2007.

Closure order was signed in 2012 to fully stop its operation however it was only in the year 2015 during the administration of Mayor Celsio Regencia that the operation in Barangay Santiago Open dumpsite had ceased. As mentioned by the Barangay Secretary of Santiago, Alma Villaver (2016), our Barangay is no longer an open dump site. Today, the former dumpsite has been filled and covered with limestone.

Figure 3. Present view of the former Barangay Santiago Open Dumpsite. Source: Photo taken by the researchers during their field research on January 20, 2016.

Issues and Concerns

The worsening condition of the open dumpsite in Barangay Santiago when it was still operational created environmental and health problems. Garbage is considered a third pollution inextricably interlocked with the air and water pollution creating environmental hazards (Small 1971 as cited in Ancheta 2005:2). Improper disposal of solid wastes contribute to air, soil and water pollution. Solid waste clogs drains, creates stagnant water for insect breeding and causes floods during rainy

seasons. Insect and rodent vectors also spread diseases such as cholera and dengue fever due to improper waste disposal.

In other words, two of the most important issues when the operation of an open dumpsite in Barangay Santiago started were environment and health-related issues. According to UN Habitat (2009) garbage pickers or scavengers were the ones highly susceptible to diseases. Informal waste pickers, who most often operate without any protective measures, are exposed to a wide range of health risks such as: tetanus (due to handling of jagged metals), respiratory problems (due to exposure to smoke), neural damage (due to lead), injuries, skin and gastric problems. Furthermore, it can cause risk to the community:

1. There is a significant increase in the incidence of sickness among children who live in households where garbage is dumped or burned in the yard.
2. Uncollected solid waste clogs drains and causes flooding and subsequent water-borne diseases.
3. People living downwind of a burning dumpsite will likely suffer from respiratory diseases.
4. Contaminated liquids or leachate, leaking from dumpsite could pollute city's drinking water supplies.
5. Waste dumps potentially serve as breeding ground for Malaria.

However, the respondents unanimously answered that they could

bear all the discomforts brought by the dumpsite to their lives. What they could not afford was the loss of their income. They also said that they were very angry to the concerned citizens who continuously rallied for the closure of the dumpsite and also for the government in not giving them alternative livelihood after the closure of the dump site. In short, all the disadvantages outweigh the benefits offered by the dumpsite.

Another issue was directed towards the local government of Iligan. In section 32 of the Republic Act 9003 it provides that barangays should have their own Material Recovery Facility (MRF) but 15 years after the enactment of this law no barangay in Iligan has a functional Barangay Material Recovery Facility (BMRF). Even as the Central Material Recovery and Composting Facility of the City (CMRCF) already started to operate in 2012, there was no improvement in the solid waste management in the city which for more than 40 years exceedingly depended on a 10 hectare open dumpsite in Barangay Santiago. But with the closure of open dumpsite in Barangay Santiago, the local government although provided for the 'enactment' of CMRCF but it did not work.

With the failure of the CMRCF built in a 12 hectare site in Barangay Bonbonon, the solid waste management of the city reverted into an open dumpsite which is no longer permissible under Section 37 of Republic Act 9003. This is due to the inability of the city to build barangay-based MRF's as required by Section 32 of Republic Act 9003. The weak enforcement of this law, waste

reduction, and segregation, composting and recycling were not strictly observed in many households.

More than a decade after the implementation of Republic Act 9003, the solid waste problem of Iligan City continues to worsen even after the completion of the CMRCF which took seven years to complete. Considering that the CMRCF is no longer functional, the local government of Iligan under the acting mayor is under pressure to find solution to the solid waste problem. Instead of focusing on how to make the multi-million pesos CMRCF operate, the solid waste officials of the city only find another place to dump the solid waste of the city.

Today, the PSD continues to collect the mixed wastes of the entire city. The targeted 80 tons per day capacity of the CMRCF was never achieved. Since the operation of the CMRCF has stopped and all the wastes collected by the PSD are thrown in an open dumpsite. With the absence of BMRF and while CMRCF is not operational, this dumpsite continues to be the only alternative.

CONCLUSION

In this study it was found out that the local government at the height of the industrial growth of Iligan accompanied with increasing growth of population did not have a master plan, zoning regulations or building code. When Barangay Santiago started to accommodate all types of waste generated in the city, environment and health related problems began to upsurge. Because of the extensive effects that the dumpsite in Barangay Santiago had cause to the community

and neighboring areas, movements toward its closure started to commence. Under Republic Act 9003, the dumpsite was strongly mandated to cease its operation. With the closure of the open dumpsite in Barangay Santiago, informal settlements started to proliferate despite of the strict prohibition of the local government.

Furthermore, the failure of the implementation of the provisions under Republic Act 9003 was largely brought by the political dynamics within the local government of Iligan. The lack of an adequate policy and regulatory framework complicates matters even further.

Recommendations:

The researchers would like to recommend the following:

1. City leaders should try to encourage a fundamental change in the mindsets and attitudes toward waste. Public information campaigns need to encourage urban populations to help reduce the waste stream and to turn what used to be considered as “waste” into “resources.” From an environmental point of view, efficient use of resources can lessen environmental burdens at local level, such as urban air/water pollution, floods induced by solid waste clogging drainage canals, reduced availability and quality of freshwater supplies, and land degradation.
2. To help those scavengers in the former open dumpsite in Barangay Santiago who

depended their life and basic needs from the garbage, the researchers would like to suggest that the local government can actually use them in minimizing the cost of Iligan Solid Waste Management by establishing a cooperative for them. This cooperative or organization will be tasked to assist in the operation of CMRCF and BMRF.

3. Most importantly, the local government of Iligan must strengthen its Solid Waste

Program in order to include and fully implement the important and salient provisions of Republic Act 9003. The lack of an adequate policy and regulatory framework complicates matters even further. Therefore, Iligan City should adopt appropriate policy options to work towards long term goals and provide an enabling framework to promote Solid Waste Management.

Abstract

Bureaucratic reformation is the fundamental structuring efforts are expected to have an impact on changing systems and structures. The system deals with the relationship between the unsure or the element that influence each other and are associated to make a form totally. The change in one element can influence the other elements in the system. The structure relates with the order of who arrayed a regular basis and systematically. Structure changes is also included with the mechanism and procedure, human resources, facilities and infrastructure, organization and organization's environment in terms of the achievement of the efficiency of government bureaucracy. These changes include allowing all of the aspects of the bureaucracy has sufficient capacity to carry out the duties and the basic function. Bureaucratic failure in a term for service the public until now represent poor governance both at central and local government level. The urgency of bureaucratic reform in Indonesia is driven by a number of important note. First, the increased apparatus expenditure is caused by increased of apparatus recruitment without unmeasured control. *Second*, the ballooning cost of democracy (election) affected the floated of local government budget have increased significantly. Unfortunately, these competition is not borned the good leadership for local government. The magnitude of the election budget and the impact on governmental bureaucracy resulted not ready to close the budget deficit. More than these bureaucracy has loyalty dilemma caused by dispersed of concentration in every election's activity. *Third*, increased of develop the bureaucratic organization without planning and analysis of the measured trigger financing and recruitment of apparatus that not less. As a result, the bureaucracy in most areas are overload, or even lack in outside of Java. In other side, less of local incomes make dependence to central government, while the local government expenditure is to far from efficiency, even tend to be less controlled due to the high cost of the organization. Fourth, extensive corrupt behavior in almost all public sector bureaucracy encourages lose confidence as a public servant. *Fifth*, lack of oversight resulted in most local governments tend to be consumptive, wasteful and lacking focus. The problem are how to reform the bureaucracy, what the obstacles to reform the bureaucracy, and how about the better reform bureaucracy design to minimize the extensive problem?

Keywords: Bureaucratic Reformation, bureaucracy design, local government, Good Governance

Introduction

Bureaucratic reform is an effort of basic management expected will make a good result in changing system and structure. System is connected to the relationship among elements influencing one to another and making a totality of purpose, the change of an element may impact other elements. Structure is

connected to systematic mechanism. The change of structure comprise of mechanism and procedure, human resource, facilities and infrastructure, organization and climate of the effort of reaching the objective of governance bureaucracy. This changes the whole aspect which make the bureaucracy has an adequate capability in carrying their

job description and function. The lack in delivering public service at this time describes the failure of bureaucracy in conducting public administration in both central and local.

Urgency of bureaucratic reform in Indonesia at least encouraged by a number of important things, first, the increase of personnel expenditure caused by the increase in the recruitment of employees without effective control and the enlargement of the organizational structure of government bureaucracy. It can be seen from the results of the evaluation of Indonesia Forum of Budget Transparency (2011), in which 124 local governments tend to use the budget inefficiently. Lumajang is one of the districts in which the apparatus expenditure swelled until 83% of the total budget. It means that more or less 2% of the employees may take personnel expenditure, the rest 17% is allocated for 98% of the public in the form of capital expenditure and development. Uncompetent employee recruitment as well as a tendency to develop organizational structure of central and local governments to make budget deficit. Second, the high cost of the election takes local government coffers significantly. Ironically, the election process has never led to a good leadership for the achievement of decentralization objective. The amount of election budget and its impact on government bureaucracy resulted in a bit overwhelmed in controlling the budget deficit. In local level, bureaucracy suffers as a result of the concentration fragmentation of loyalty dilemma in the election. Third, the high arousal state bureaucracy organization fattening without a review of the needs of the organization triggering the

financing and recruitment of employees in an amount to exceed the initial planning. As a result, the local bureaucracy experiencing overload, while in other areas experiencing the opposite, especially in the regions outside of Java. On the other hand the low local revenues created a dependency on the central government, while local government spending away from efficiency even uncontrollable due to the high burden of the organization. Fourth, the spread of corrupt behavior encourages the bureaucracy to lose confidence as a public servant. Fifth, weak oversight resulted in many local governments tend to act consumptive, wasteful, arbitrary and lacked transparency. Overall negative indication is supported also by the bad behavior of the bureaucracy in the service of society as a slow and reactive attitude, arrogance, nepotism, cumbersome, wasteful, work instinctively (instinct), are reluctant to change, and lack of community-driven.

This paper aims to address the problem in several regions in Indonesia are (1) What should be done bureaucratic reforms, (2) whether the challenges faced, and (3) how the design of bureaucratic reform should be carried out in minimizing the spread of the problems encountered?

This paper will try to answer some of these questions by starting from the meaning of bureaucracy and good governance, good governance characteristics, problems and challenges faced in the effort to reform the bureaucracy in the region, as well as strategic efforts to reform the bureaucracy and the implementation of good governance.

The changes are expected to not only incremental but fundamental. It was

recognized that efforts to reform the bureaucracy is part of the grand design of creation of good governance (good governance). This concept is expected to be able to bridge a state of poor governance (bad government) towards the establishment of good governance (good governance). Of course the government bureaucracy as an instrument of implementing a major focus of which must be corrected through bureaucratic reform policy.

Research Method

This study is a desk study using historical methods in the form of bibliographic (literature) to gather information relevant to the issues being studied based on secondary data sources that will support the research. Sources of secondary data obtained from scientific books, similar research reports, regulations, various papers, books, and journals relevant to the problems assessed.

Result And Discussion

Coverage of the results of this study include the reform of government bureaucracy, both central and local, though ultimately more displays portraits of local government bureaucracy in Indonesia. However, we understand that the bureaucratic reform at the local government level are part of bureaucratic reform policy nationally.

Bureaucracy and Good Governance

The concept of the bureaucracy itself commonly refers to the idea Maximilliam Weber (1864-1920). Nevertheless, many developing Albrow bureaucracy concept from different angles. Etymologically, the word comes from the red tape bureaucracy (UK), or

burocratie (Germany), burocrazia (Italy) and bureaucatie (France), which means a desk or office. The term was raised again by the French philosopher, Baron de Grimm top notes Vincent de Gournay. Cracy (kratos) itself shows the rule or rules. In another equivalent term is often associated with governance (process), because the government has the power to make rules or even perform the process and sources of the rules in the relationship between the governing and the governed. This statement is at least in line with the mind Gornay and Laski (1930) which then define the bureaucracy as a system of government where the control completely in the hands of officials who came to a certain extent can delay or reduce the freedom of ordinary citizens. Two other examples of assimilation results may be synonymous with the word but there will be discussed such as the concept of democracy and oligarchy. If the source of power comes from the people commonly called democracy. Similarly, if the power source is controlled by a group of smart people (professional) commonly known as the oligarchy. In fact, through a provocative sentence Michel (1962) states that those who talk about the organization, must talk about the oligarchy. At the pragmatic level more detailed affairs ministry strongly associated with what is commonly called a bureaucracy.

Meaning of bureau is identical with the reality in the bureaucracy, in which the structure in the form of more complete work on the table. Officials usually sit behind a desk. All practical problems solved on the table, beyond that may be contrary to the etymological meaning. This is understandable because historically the beginning of the emergence of traditional bureaucracy in

France (18th century) featuring faces that seem wasteful, exploitative, repressive, opportunist, collusive, corrupt and nepotism. Cynicism over these symptoms gave birth to the term *bureaumania*. By functional reality of the service became more efficient and effective without going through the bureaucratic counter that sometimes convoluted and energy drain. In our daily activities many find the term *bureaus* in the organizational structure. In Indonesia, at the level of provincial and national organizations, for example, there is the post bureau headed by a bureau chief echelon two. For example, the law firm, bureau organizations, government agencies, public agencies and so on. Bureau oversees a number of sections and subsections on the lowest level. Even to distinguish technically, an official of the facilities are sometimes given a table by the term size of the bureau or bureaus half. The second notion (*office*), referring to almost all forms of both civilian and military organizations. We often call the office at almost all organizations are *fisual* visible through the magnificent building, complete with systems and equipment. Similarly, the office of a private organization. In the Indonesian context, the organizational structure of local government offices such as using the term to distinguish the unit to government offices and agencies. Office became the smallest unit size before moving up to the Agency or Department. At the level of provinces in Indonesia, as an instrument of central government offices in the area, such as regional offices (*regional offices*) and departments (*kandep*). While the term in office of the district and municipal levels of government are part of the local government unit under the department.

In the centralized administration, the central government instrument can reach down to the lowest level of government (*dekonsentratif*). By contrast, democratic governance nuanced usually put controls on certain levels of government to further perform functional supervision (*decentralized*).

In the perspective of Weber, bureaucracy is a rational organization with all the characteristics inherent therein. Characteristics referred to among others the existence of a position, duties, authority, hierarchy, system, formality, discipline, professional competence and seniority. These characteristics form the bureaucracy as a means to achieve collective goals. Bureaucracy within the meaning of the concrete is an organization which has a pyramidal-shaped chain of command, where more people are at lower levels than the upper level, both on the military and civilian agencies. Getting to the top of increasingly scarce power holders, because he confirms leadership with broader powers. Conversely the downward more and more employees, but he continued to show a more limited authority. The power in the end completely distributed in the form of specialization and smaller structures. Thus power flows according to the laws of nature (*natural of law*). Power flows into structures that are shared in detail and hierarchical. Bureaucracy in the end is seen as a reflection of the institutionalization of power flowing from top to bottom. From this aspect of bureaucracy is practically an instrument / instruments of power to achieve common goals leader and carried by the leader in question. On a more tangible example, a president chosen by the people in Indonesia have extensive

powers. The hierarchical power flowed through the Minister, the Governor, Regent / Mayor, Head, Head to Head Village. At the level of the governor, the power is divided by the number of received authority, and instituted the formal structures such as government agencies, part of government and so on. Similarly, the flow of power at the level of district / mayor to village government. Power in this context formalized detailed and clearly accountable. This is called the authority (authority). In that regard the bureaucracy present and refers to how governments carry out and make a formal legal regulations. The validity of all the activities and decisions made are expected to reflect a good government with various characteristics contained therein.

The phenomenon of today's government has extended not only to the world of government alone, but also on non-governmental space such companies. Efforts in the framework of the implementation of power through a series of mechanisms to ensure accountability, legitimacy and transparency in the various sectors outside government showed symptoms government intensified. At least this is seen in the formation of a series of rules or structure of authority in certain communities that play a role or resource management functions including in maintaining social order. Widespread efforts to restructure government to make better encourage international donors to develop the concept of good governance. The development of this concept is driven by the symptoms of increased obstacles and political administration in the development of the third world. Symptoms include increased corruption, collusion, nepotism, individualism and the loss of political

legitimacy, especially in countries that are less able and without adequate democratic system. The opposite of the ideal concept to be developed, bad government is the reason also for international organizations to develop a pattern that is more likely to face the impact of global economic and political management.

In the perspective of developed countries, the two main reasons that led to the birth the idea of creating good governance is first, the failure of the government to perform its functions characterized by a lack of rules governing the operation of the law and causing distrust in the government about how the government interacts with citizens. This of course relates to the government's responsibility to its people, as well as the obligations and rights that are binding between those who govern and the governed. Second, the pressure of neo-liberal group that supports the reduction of the role of states and balances of power to the provision of services by the purchaser and regulator. Or in other words, trimming the role of government as far as possible by way of submission of interests between the seller and the buyer in the market mechanism.

Even if efforts to create a better government done for example through decentralization of power, governance reform, bureaucratic reorientation and expansion of public participation to restore accountability, legitimacy and transparency, but by no means devoid of the increasing impact of governance. In developing countries, thus further strengthening the growth policy of liberal democracy, which in turn encourages the return of the government increased control over repressive. However, we

still believe that creating a strong government is absolutely necessary for political stability can guarantee the success of development. Finally, the bureaucracy sometimes back into the classic problem with no obvious way out.

Good Governance Characteristic

According to the UNDP (1997), a good government at least have the characteristics of accountability, transparency, participation, rule of law, responsiveness, consensus, equity, efficiency and effectiveness, and has a strategic vision. Components involved are not just the domain of government as executor, but also includes private groups as stakeholders and society as civil society. These three components should run in parallel, support each other and interact with each other. Such interactions should be guided by a number of characteristics that enable good governance running. In this context, good governance is more focused on aspects of the process through a functional approach in order to achieve the desired goal. Further details will develop the meaning of a number of characteristics inherent in the concept of good governance. Accountability refers to the responsibilities of each actor in governing interactions. Laying the sole responsibility of the public sector is not the best idea to create good governance. Responsibility is an important value that should apply to all elements in the governance process. As a government, the responsibility is required as a consequence of all types of contracts from the lowest level up to the central government. Responsibility is

a value that is capable of bridging the relationship between government and the community to ensure the sustainability of the government. The government's responsibility to all stakeholders as beneficiaries at least trigger the growth of trust as capital for the continuity of government. The onus on the community elements needed so that people are aware of any output of services provided is the maximum effort that can be in the government products. Ultimately the responsibility of society as effectively as possible not only take advantage of what is given by the government, also maintains all services provided including the products responsible for the failure of a government elected by themselves. Similarly, the other elements, the holders of capital (private) should hold to the principle of responsibility in the interaction with the community and government. Any action that is practical as well as the associated burden on society and the government, should be accounted for consistently. Lapindo Mud case in Indonesia (2005) reflects the responsibility of all the elements, not only the government, private and public. Hard to imagine if a private party run from the responsibility, because all three elements had to have limits on their own responsibility. Transparency is a characteristic that enables the establishment of public trust in what the government articulated in terms of the interests and needs of the community. Lack of government transparency with respect to the planning and implementation of policies shows the weakness of good faith in realizing the goals and expectations of society. One major focus today is how effectively the government is able to fight for the interests of the community through the

available budget. Transparent planning to convince the public about the extent of their interests honestly afford documented by the government. At a much deeper level, how strong government commitment to realize all the planning that has been agreed upon. The absence of transparency is often shown by stagnant all planning documents without realization, or change a crossroads in the interests of certain individuals and groups. As a result, all the government planning to lose connectivity with the public interest. In addition, an indication of the spread of corrupt behavior within the government convinced the public that the government is losing the characteristics of transparency in running the service function. Such diseases not only hit the government, as well as the private sector and the community at some level. This can be seen in the case of Pensions Athlete Development project in the Ministry of Youth and Sports. Participation, demonstrated community involvement in the preparation of development planning documents. Community participation further illustrates the extent to which their interests have been accommodated properly, in addition to involving them in terms of broader responsibility. Low community participation in governance due to lack of public awareness about the importance of participation in development. Education becomes an important key factor in encouraging community awareness. The following problem lies precisely in the lack of government transparency in public participation. The condition is of course related to the value of transparency, so that the government seemed difficult to engage public participation in

governance. Bad government often suffer from feelings of excessive suspicious when people are involved in every process of development planning. Here it is clear that if the participation is low, lower the likelihood of their realization due to the low level of education obtained so apathy. Conversely, if the government was reluctant to involve public participation, the possibility of government awareness is also low so as to encourage prejudice against any community involvement. Legal order is a characteristic that allows the creation of a law-abiding society. The rule of law provides the foundation for government in implementing the vision and mission carried, at the same time shows the level of accessibility of the public against the government. Increasingly low legal compliance society shows the lower the level of public acceptance of the government. The rule of law is intended to create a social order, which is a condition of an orderly society, aware of the rules that cater to the interests of society itself. In that connection, it takes a leader to provide examples awareness so as to encourage the establishment of the rule of law. The presence of the government in each community services indicates the presence of protection for people, also indicates the law itself. That is why the government is often seen as a symptom symptoms law. Responsive is characteristic of government that is able to respond as early as possible, to every problem facing society. The ability to provide answers to any problems faced by the community showed the government's ability to understand what the main needs of the community. Failure to respond to any problems faced by the community shows the government apathy and loss of sense of

belonging on the problems experienced by the community. In the perspective of society, let alone the presence, despite government statements can be judged as a positive response to the problems they are facing. The consensus is a characteristic that describes the government's ability to build consensus between the demands of the bottom-up and top-down. Consensus was also referring to how the government build an agreement which allows all interests can be accommodated in the available channels. Consensus is the cornerstone for the achievement of shared commitment. A shared commitment with regard to the interests of stakeholders in realizing the goals mandated by the government. Failure to build a consensus can undermine public confidence that the government can be assessed betray the mandate given. The ability of the government maintaining the consensus that has been built can be interpreted as the government's ability to maintain the trust. Adil is a characteristic that can encourage the public acceptability of the government. Justice is one of the objectives to be achieved by each government. Justice is typically attached to the perpetrators of the government, especially leaders. Justice aims to create equity, while providing rights and obligations proportionally. Efficiency and effectiveness are characteristic of good governance that reflects the ability of the government in achieving the goals appropriately efficiency and effectiveness. Achievement of objectives taking into account aspects of efficiency and effectiveness of government can boost productivity become more qualified without wasting large capital. The government's failure to consider the efficiency and

effectiveness of capital loss and make the government could not do much, except employees within their finance respectively. These conditions make the government suffered substantial budget burden in addition to not being able to make strategic policy. Characteristics of strategic vision with regard to the government's ability to realize the ideals but realistic based on community needs. Without a clear vision of the government in fact only function instinctively, without reasoning far ahead. Vision is expected to be a clue that can dikonkritkan in the form of missions, programs to technical activities. Vision describes the future governance and load ideals of society can be realized by the leader as far as he is able and consistent. Strategic vision requires continuity in guarding the agenda that has been set. Which departed from the government is a government that has a vision of a distant view of the future, as well as have an ideal long-term and sustainable. Here are some characteristics of good governance (good governance) according to the UNDP. In general, these characteristics become important variables not only for the government, as well as the private sector and the public at large. The creation of good governance is not merely to be a part of government policy, but also in touch with the values and attitudes shared by the private sector and the public. According to Gerry Stoker (1998), proposition governance includes five topics; First, refers to the set of institutions and actors who are in and out of government. Second, identify the vagueness boundaries and responsibilities for addressing socio-economic issues. Third, identify the dependence of power contained in the relationship between institutions that

conduct collective action. Fourth, it is about the actor who is independent network and organize themselves. Fifth, recognizing the capacity to accomplish something that does not rely on the power of government to command or use its authority. Governance looked governments have the ability to use tools and new techniques in directing and guiding. In addition, Hayden (in Hamdi, 2002: 14), mentions four variables in the concept of governance, namely; authority which means the existence of a legitimate power, reciprocity, namely the development view of the use of power is not necessarily a zero-sum game, but it can also be a positive sum game. Trust, which means living together and bound, competitively or cooperatively in pursuit of a common goal. Accountability pada essentially strengthen public confidence and vice versa.

The Challenge of Bureaucracy Reform and Good Governance

Challenges bureaucratic reform in Indonesia at least covers three main issues: first, the internal factors include the inability of the bureaucracy to change himself for the better. Second, external factors relating to the high political intervention makes the bureaucracy to lose concentration in running the service function. Third, factors public doubt on the effectiveness of policies planned and implemented by the bureaucracy. The first factor is caused by the weakness of the bureaucracy in renewing their performance development environment (Muhammad, 2007). The high dynamics of society in demanding better services is not necessarily matched by the bureaucracy's ability to develop intelligence, aptitude and skills in the management of government. Patterns of

approach and service to the community as a real indication of traditional behavior. Service bureaucracy was based on kinship, emotional, far from the ideal character of the bureaucracy, which is an impersonal relationship. It must be recognized that cultural differences in the west and east is a reality that must be recognized in the provision of services to the community. Leaned service by putting the principles of impersonality rigidly referred Weber does not create a sense of justice are adequate. Every community served consisting of people who are able and unable to physically and non-physically. Those who are physically unable, of course, requires an approach to be served by way of shuttle-ball. While they were not able to be non-physical, such as financial problems, should be given incentives remain balanced so that the service can be received evenly. Instead, lean service by putting the relationship overall personality as well as creating discrimination to groups of people who do not have direct access to the government, Because only Reviews those who are known personally who will be served. The inability of the bureaucracy to understand plurality in society Often leads to inequities in service. In this context it is Necessary bureaucracy that is Able to adapt to the development of society, and be Able to answer every question of not only structurally, but functional. Structural approach in service are Often faced with rules and norms, making it difficult, to solve the problem completely. Settlement pattern leaning problem with all the regulatory aspects do not always bring maximum results. Often feel frustrated Because Society Reviews their service is deadlocked because of the inability of the bureaucracy simply

translating the applicable rules. Instead, a group of bureaucrats seem like a robot who lost humanity when all the cases resolved by the applicable rules. Persoalaannya, what if the people's demands go beyond the rule itself, which sometimes arrive late, or even regulatory vacancy occurs. Does the same reasons the government must refuse service to the community? It therefore requires a functional approach that can resolve to the root of the problem. In this context, the bureaucracy often store and take care of the problem for the particular interests, do not attempt to solve the problem completely. Functional approach in the service of an approach pattern to compensate for a structural approach which sometimes inhibits, cumbersome, time-consuming and the cost is not small. Keep in mind that bases all the functional services are also not appropriate, because all services are basically require formal institutionalization that can be monitored and controlled. This adult pattern functional approach a lot of progress, especially at the central government level. Birth of bodies, agencies and commissions that are mezzo-structure in addition to the existing formal institutions, a reflection of the pattern of problem solving by combining structural and functional approach. Yet not without a note, these institutions do not only burden the budget of the government bureaucracy in general but the cause overlapping and less productive.

The second factor is a challenge bureaucratic reform is the high political intervention in the bureaucracy. Politicization of bureaucracy to get a room when a group of elite political parties use the momentum of the election to move the bureaucracy as

well as the political engine of political activists. As a result, as said Agus Dwiyanto (2011), the bureaucracy experienced a breakdown of concentration while at the same time failing to serve the public according to the mission of assuming. Rupture of bureaucratic concentration caused circulation regional head once every five years. Those who rely on the dominant incumbent candidates are often disoriented in the competition when they lost the next election. On the other hand the politicization of the bureaucracy to create a relationship between the executive and legislative experience serious dynamic tension if not continuous. As a result, most of the bureaucracy that take the path of compromise in the end helped enrich the level of leakage due to perform a collective conspiracy. The indication can be seen through the increased leakage current budget planning and budget at their establishment. Bureaucratic distancing explicitly with political groups experienced tension as vulnerable to losing positions. The remaining group of bureaucrats who took the apathy of the dynamics that occur in every rotation of government. Political intervention against the bureaucratic apparatus has stimulated appetite for building a secret commitment with the elite during the circulation of power. The commitment is in the form of a political deal that led to the question of who can be what, how much and when. In this context awakened effective coalition between the executive and the legislature in the budget burglary. Such polarization makes local bureaucracy oscillate and difficult to determine its neutrality as a public servant. All of that is supported by the head of the region's ability to mobilize resources through the most

successful team members who come from the ranks of the bureaucracy. Resource mobilization is done even in a brightly lit through recruitment by primordial ties and patronage instead of merit system that emphasizes competence. This situation clearly develop corrupt behavior within the bureaucracy as a consequence of the relationships that are transactional. As a result of bureaucratic impressed not belong to the public but the ruling elite which can be seen from the attitude and orientation are likely to see upward (hierarchical peak) rather than looking down (the public).

The third factor is the challenge of bureaucratic reform public doubts against any policies implemented by the bureaucracy. Lack of education and lack of analysis of any policy diproduk make the bureaucracy was unable to make the policy effective in solving problems. The high resistance is marked by rising public demonstrations and private parties who feel aggrieved by any policies established corroborate the above two reasons. Doubts public and private sectors of the bureaucratic policy effectiveness is caused by two factors other than the above is also a problem of credibility bureaucracy. The low credibility of the bureaucracy in designing a policy can be seen from the low involvement of experts in the form of assistance, the lack of an academic paper on the draft regulation (particularly local regulations), as well as the lack of public consultation on the draft regulations are made. Overall these indications lead to the poor quality of the design of policies that lead to resistance from stakeholders (stakeholders). Policy design weaknesses at the planning stage to the implementation stage does not

necessarily create a bureaucracy to evaluate ongoing but trying to cover up the weakness of the policy. Eksklusivistik attitude and seemed to know all the problems pushing bureaucracy at every arrogant behavior when responding to the demands of society. Besides, the public doubt on the effectiveness of policies to grow due to an abundance of bureaucratic programs that are promised but lose focus on implementation. As a result, more programs are mailing service than expected reality. Society sometimes abhor bureaucratic indolence and greed, as pointed out by Barzelay (1982) in 'Breaking Through bureaucracy'. In the end, public skepticism toward bureaucratic reform in general is growing due to the low confidence in the systems and human resources. Poor system in the service of the people do not feel the bureaucracy makes clear in solving the problem. Similarly, the bad behavior of the bureaucracy in terms of service to make people not believe what had been done by the government. This picture has been alluded least Osborne and Gaebler (1992) in the 'Reinventing Government, that the government issues rather than on what they do but how these services can be implemented properly.

Bureaucracy Reform and the Implementation of Good Governance

Reform of the bureaucracy is the effort to organize the institutional capacity concerning systems and bureaucratic structures in performing basic functions as public servants. If the political bureaucracy is an instrument of power in realizing the vision and mission of the ruler accordance with the

mandate of the people who poured in the form of a formal policy, the bureaucratic reform should be directed towards creating a situation conducive for neutral bureaucracy of the influence of excessive power. If sociologically bureaucracy is seen as the most rational organization which has a number of characteristics as the executor of the interaction between the government on one hand and society on the other hand, the bureaucratic reform should be directed at strengthening the characteristics in question, even if necessarily with the exception of a number of records in the implementation phase. If the administrative bureaucracy is seen as a medium that allows services, emphasizing aspects of effectiveness and efficiency and have clear mechanisms and standardization in the interactions, the bureaucratic reform should be directed at a number of alternative policy options such as structural reform, capacitation and instrumentation. This section will examine how the bureaucratic reform policy design should be taken to realize the function of the bureaucracy as well as encourage the creation of good governance (good governance).

First, reform of the organization (structural). Organizations can be interpreted in two kinds, the first in a static sense, namely the organization as a place where cooperation activities carried out. Both in terms of dynamic, namely the organization as a system of processes of interaction between people who cooperate, both formal and informal. Further details will be more focused on the second sense, ie in the sense of a dynamic organization. It is caused by external and internal factors. Internally the organization is driven by high pressure power, while externally

driven by changes in the wider environment. Both factors are dominant enough to make the government appear dynamic organization. The design of structural reforms can be done by laying a strong foundation that the organization is a means to an end, not an end in itself. Understanding the differences in the management of government bureaucracy often make ineffective duties and functions. Perhaps in the perspective of a local chief bureaucracy is the ideal tool to materialize ideas in the form of a vision and mission for five years, but in the perspective of the bureaucratic apparatus is the ultimate goal with respect to how the highest position as a reflection of power can be achieved. The problem is then incremented when most regional heads just thinking the same as the apparatus that is how to make the bureaucracy as a means to gain access to the overall resources available. Organizational reform is not just a slogan rich poor function of the structure, but more than that organizations in the design based on need, not political interests or a particular group. In the hierarchical level needed pruning allows shorter structural level. Within a certain distance is required delegation that allow a more efficient and effective services. At the horizontal level required functional organ which is more flexible in responding to completely root of the problems encountered. The dominance of the structural aspect has been created rigidity, besides wasting time and expense that is not small. The length of hierarchical lines create any problems expiry impressed when returning to society, due to the difficulty in direct contact with decision makers (decision maker).

Organizations should be compiled based on the results of job analysis and workload instead of a political compromise. It should be recognized that the preparation of the cultural organizations in the region have tended to practice ways of preparing the organization at the central level. The election system has trapped the regional head for reconstruction of local government organization in ways resembling cabinet as happened at the central government level. Penjenjangan career patterns less attention even just an element of formality Baperjakat results in the placement of personnel in the structure of government. Case takedown secretary-level officials in the area a short time and large-scale mutations are examples that can be observed in the area of local government. As a result, local government organizations showed symptoms of obesity-ridden political interests of local elites making it difficult to move an end. In fact the organization was formed to address the interests of the regime rather than answer the problems facing society. This condition not only prevailing in the area, but practiced well-lit at the central level through the expansion of government organizations. The portrait looks not only to the expansion of ministry departments, but looked at dozens level organization of institutions, agencies and commissions. Ironically, the tightening of the organization to be more lean and rich functionality preferably at the level of local governments through the policy of government regulation, but failed to make the efficiency of the organization at the level of central government organizations are increasingly widening. Widening the size of the organization without a needs

assessment of positions and workloads making performance government organizations particularly impressed fat and static. This can be understood if associated with increased recruitment every year without control based on competence. Recruitment without competence ultimately absorb the amount of budget that is not a little in order to improve skills and the skills of employees, in addition to tersisihnya opportunities for recruitment of employees who have competence ideal as teachers, policy analysts, physicians, pharmacists and nurses. Posture local government organizations who are overweight can certainly suck apparatus expenditure is greater than the construction expenditures. This reality can be found in a number of districts such as Lumajang, Tasikmalaya, Sragen, Palu, Ambon and Bitung for example, where more than 70% of the budget is sucked to personnel expenditures (FITRA: 2011).

Secondly, the necessary reform of adequate capacitation in order to enhance the ability of personnel in serving the community. Capacitation reform is an attempt to increase the ability of the bureaucracy in the service resource to be able to keep pace with the dynamics of the community. Capacitation reform the bureaucracy associated with the ability of either individually or in groups shown in the ability to translate the vision and mission, programs and activities. The development of human capacity focused on aspects of education and experience will determine the value of the professionalism of the bureaucracy before the public. Professionalism demonstrated by at least a certification of the level of basic education to a higher level. These aspects were offset

by a wealth of experience in various organizations who share values and core competencies. The second aspect was at least able to form individual abilities while at the same time encouraging the collective ability of the bureaucracy.

Lack of education apparatus resulted in a gap between those who served and those who serve. This gap often cause tension at the same suspicions about the performance of the bureaucracy. Worse, the closing of educational development policies and the birth of discrimination in resource development in the area bore indications of cases shortcut through fake diploma and a degree. To anticipate that the necessary reform of policy design capacitation long term and short term. In the long term the necessary education based on the needs and characteristics of the local government organization. For comparison, the areas of competency-based marine, fisheries, agriculture and services, would require officials who control the leading sectors in question. It is important to encourage the development of more rapid and competitive area. Development of local excellence requires a bureaucracy that is able to answer the challenges that arise. In the long term needs of personnel who have sufficient knowledge for the preparation of the action plan to implement a program of skills effectively. In the end, the higher the capacity of local governments lower the risks to be faced in the future. Conversely the lower the capacity of local governments the higher the risk to be faced. The impact of bureaucracy and government as a whole may lose public confidence.

In the short term the necessary practical policy design, first, an increase in incentives that serve to encourage the spirit and performance of the bureaucracy. Spirit is directed to deliver competitive value so as to create justice for bureaucratic achievement. Justice can be applied through incentive payments based on an assessment of performance of the bureaucracy. Equitable had only proves that those who work and, equally get special treatment. This fact clearly less encouraging competition and creating injustice, including lowering the rewards for those who really have professionalism. Payroll and incentive patterns varied as ever applied to a number of local authorities such as Jembrana district of Bali Province, showed a positive impact in boosting the performance of the bureaucracy. Secondly, bureaucratic reform in the short term should be able to create an internal system that can drive slowly growing awareness of the bureaucracy as a public servant. Increasing awareness to produce innovation, creativity and self-reliance should be awarded in kind in order to encourage the same spirit in another apparatus. Similarly, the pattern of sanctions is needed as closely as possible with the intention of fostering proportionally. The imposition of sanctions is not an end, it is much more important than that is the birth of a positive impact for the bureaucracy to get back on the duties and functions of each. The omission of the growth of creativity without appreciation can reduce the spirit to work and serve the organization. On the other hand let the same meaning bureaucratic negligence by agreeing at the same time allowing arbitrariness in community service. Therefore it should

be understood that penarapan reward and punishment have a strategic significance for the organization, which encourages the development of bureaucracy to be more disciplined and responsible and able to respond to the development of society, while protecting the bureaucracy of the bad behavior of personnel who interact therein. Third, the necessary arrangements are externally system can effectively reduce the politicization of the bureaucracy can solve the concentration apparatus in serving the community. Through the existing system, the bureaucracy is very vulnerable to intervention by local elites in order to satisfy the interests of certain groups in the circulation of power. In order to reduce the political interests of the bureaucracy should take distance to be neutral. This statement of course is not easy to obtain empirical field, in fact on the contrary, difficult bureaucratic elites refuse stimuli for coalition won a particular candidate. All of these consequences do of course is based on a minimum transaction through strategic positions and lucrative. Politicization of bureaucracy making apparatus became the butt of the local elite. Taking the distance is too much risk of losing position, too close together means to plunge into uncertainty riskier, because it required an external system that can fortify the bureaucracy of excessive political interests. Fourth, reform of the bureaucracy in the short term aimed at preventing (preventive) behavior of corruption within the bureaucracy. So far, the corruption perception index in Indonesia have not changed according to Transparency International notes, amounting to 2.8. This shows that the bad behavior of the bureaucracy needs to be fixed. Corruption is an extraordinary crime that requires efforts

are remarkable. The establishment of the Corruption Eradication Commission intended to assist the government in minimizing the symptoms of corruption. Reflecting on China who dare to apply decisive action for corruption, it is necessary to reform the bureaucracy that is able to prevent the occurrence of corruption within the government bureaucracy. Corruption is not a positive culture that grows in society, because all social norms including religion does not tolerate such bad behavior. It should be understood that the system of incentives as proposed earlier is not the only way to reduce corruption. The behavior of a corrupt bureaucracy tends to be motivated by environmental influences as well as domestic demand. Related to the reform of the bureaucracy required strictly binding system, in addition to the application of severe sanctions on any alleged action. Of course, bureaucratic reform in the long term, including short-term difficult to do without starting from the working culture change towards the positive. Changes in work culture that begins from inculcate the habit of the overall characteristics of a good government is expected to produce bureaucracy to perform its function as a servant of the state and public servant. As civil servants, bureaucracy requires de jure legitimacy to run all the political decisions of the government. Meanwhile, as a public servant, the bureaucracy requires legitimacy de facto as a connector to the interests of the ruling government. Culture of positive work is expected not only transmitted to the government, as well as the elements of society and the self-employed.

The third part of bureaucratic reform ideas regarding reform of instrumentation that includes the preparation of a good regulatory

legislation at the national level to the regulation at the level of local government. Instrumentation reform policies that serve as the foundation-formal legalistic to avoid public demands on the performance of the bureaucracy. Policy platform in general are expected to protect the government and all stakeholders in the sphere of good governance. In many cases, the bureaucracy often failing to prepare the instrument for public service foundation. These symptoms can be seen in a number of the findings of the CPC where the local government budget expenditures, especially miss the juridical basis. Reform instrumentation at a technical level at least be able to clarify the mechanisms and procedures by government bureaucracy. Without a standard operational procedure, bureaucracy trading using instinct which in certain circumstances may be in conflict with the norms and regulations. Instead, the tightness of the mechanisms and procedures can establish a culture of bureaucracy which in turn drives the behavior of "bounced" (by pass) to speed up service. Such a situation is often fostered bribery, collusion and development of mafia networks in the bureaucracy. Although the grounds of efficiency, ultimately lead to a more complex problem, namely high economic cost (high cost economy). Bank Century case, Wisma Atlit, a false letter of the Constitutional Court until Kemenakertrans are clear examples in the context of the formation of the bureaucratic mafia networks between government, stakeholders and ordinary citizens. Instrumentation reforms are expected not only related to the legal basis, mechanisms and procedures, as well as a set of tools associated with both the facilities and

infrastructure that enable the bureaucracy was able to develop itself in providing quality services. Proactive service strategy through the use of available facilities and infrastructure such as information technology and transport is a whole package of reforms within the framework of a large instrumentation bureaucratic reform and the implementation of good governance.

Relating to the implementation of good governance, the government basically has a lot to make a breakthrough through the various regulations that provide opportunities implementation of the characteristics of good governance. One example can be seen in the policies of Law No.32 / 2004 on Regional Government, where the principles of governance becomes an important cornerstone in local governance, although not yet fully realized can be implemented. Another concrete example can be seen in the regional administration of the evaluation instrument which contains a number of variables and indicators as a reflection of the achievement of the characteristics of good governance, such as the juridical basis of policies and the level of community participation. Other indicators that can be observed are the requirements of the SOP as a guideline for every local government in carrying out the functions and duties of principal field. On the characteristics of transparency, for example, birth regulations on public disclosure by the Ministry of Information and Communications showed the government's commitment in providing the widest access to the public. Characteristics consensus done through the efforts of state and local budgets planning documentation as a form of mutual agreement between the

executive and the legislature that in fact selected and represent the community itself. The development of equality as part of the characteristics of good governance can be seen in the selection mechanism of political leaders that gender friendly and open for every citizen under the constitution limits and laws. Characteristics of efficiency and effectiveness is a principle that is always accommodated in local government legislation including regulations into derivatives, notwithstanding the fact that these principles are often violated by local governments. Characteristics strategic vision becomes absolutely necessary for each candidate government leaders when running for public office. This strategy is done through the terms of fit and proper test conducted at a number of candidates for regional head level officials as well as leaders of institutions, agencies and commissions. The principle of accountability can be seen in a number of liability instruments such as PP No.3 / 2007 on Regional Head covering Accountability LPPD, LKPJ and LIPD. These principles have evolved since the inception of the institution which serves an evaluation and monitoring either internally, externally, functional, political and public scrutiny. Submission of progress reports the assets held by any public authority reflect the implementation of the principles of accountability and transparency. Even the declaration of character education from an early age by the Ministry of National Education is a long-term breakthrough in efforts to instill the values of honesty, discipline, responsibility, transparency, equity and accountability. All of it is the basic capital in the context of the growth,

development and implementation of the characteristics of good governance.

Conclusion

1. In that regard the bureaucracy present refers to how governments carry out and make a formal legal regulations. The validity of all the activities and decisions made are expected to reflect a good government with various characteristics contained therein
2. Challenges bureaucratic reform in Indonesia at least covers three main issues:
 - a. first, the internal factors include the inability of the bureaucracy to change himself for the better.
 - b. Second, external factors relating to the high political intervention makes the bureaucracy to lose concentration in running the service function.
 - c. Third, factors public doubt on the effectiveness of policies planned and implemented by the bureaucracy
3. Bureaucracy reform design should be established in overcoming the problems in bureaucracy reform . In the short term the necessary practical policy design :
 - a. An increase in incentives that serve to encourage the spirit and performance of the bureaucracy
 - b. Bureaucratic reform in the short term should be able to create an internal system that can drive slowly growing awareness of the bureaucracy as a public servant
 - c. The necessary arrangements are externally system can effectively reduce the politicization of the bureaucracy can solve the

concentration apparatus in serving the community.

The Basic Standard of Obedience toward the Ruler in Javanese Culture

(Critical Study of *Serat Siti Jenar Inkgang Tulen*)

By: Aris Fauzan

Doctoral Program (S3) of Psychology of Islamic Education (PIE)

Postgraduate of Muhammadiyah University of Yogyakarta

e-mail: mas_arisfauzan@umy.ac.id and mas_arisfauzan@yahoo.co.id

Abstract

This paper attempts to reveal how the doctrine leads a person's political obedience in the context of the background setting of the monarchy system power in Islamic kingdom in Demak (16-17 centuries). The Islamic kingdom of Demak was known as the first Islamic Kingdom as the continuation of Majapahit Hindu kingdom. The doctrine that the writer means is taken from *Serat Siti Jenar Inkgang Tulen*. This *serat* (Text) especially is about the disobedience of Syekh Siti Jenar (a member of *Walisongo*) towards the Islamic kingdom of Demak. Because of his attitude, Syekh Siti Jenar finally had to be beheaded in front of the King and other *Walisongo* members.

To reveal that doctrine, the writer read the whole content of that script from the beginning to the end, then analyzed by using a descriptive method towards the whole content from the beginning to the end in *Serat Siti Jenar Inkgang Tulen*.

The writer got at least six instruments of doctrine for a person or group or institution that is considered to meet the basic standard of obedience towards the ruler. The instruments are: *first*, the person or group or institution has to accept and understand the system of pattern and religious identity that is same as the ruler; *second*, the person or group or institution has to attend the *Jumat* prayer in mosque or worship place that is built by the kingdom. Although a prayer is personal matter, in the context of praying which is done together, hierarchically it cannot be done personally or forming a group of their own pilgrims. *Third*, periodically, they have to attend the meeting in the central government as the ruler's initiative, as the form of monoloyalty to the ruler. This attendance is as controlling medium to the regional leaders under the central ruler. *Fourth*, they are not carelessly to use the word *ingsun* (I), because the word *ingsun* is the ruler's, not the common people. *Ingsun* is only used by the ruler and noblemen. In this context, for the common people, when they mention first person pronoun, they are only allowed to use the word *saya* (I) in the form of *kawula*, *kula*, *mami*, *manira*, *patik*, and *ulun*. These six first person pronouns literally mean slaves. In other words, the public is consciously constructed to make themselves as slaves in front of the ruler. *Fifth*, the person or group or institution is forbidden to teach philosophy and Sufism to any people with different backgrounds. Moreover, the philosophy is related to the creation, human nature, and the nature of God. Because when the material is considered to be able to inspire common people to question the existence of ruler who considered as God's representative on earth. *Sixth*, a person or group or institution may not coordinate or gather the family or supporters of political opponents by any reason or pretext. This can lead to a number of interpretations that lead to political suspicion.

Keywords: Ruler, obedience instrument, monoloyalty, ingsun, philosophy-Sufism.

A. Introduction

The Islamic kingdom of Demak, which is estimated to be located in Demak, Central Java, was the first Islamic kingdom in Java in the 16th century. Raden Patah, the first king of the Demak kingdom, was a direct descendant of the breed of Hindu kingdom, Majapahit. The kingdom that existed less than a century was colored by various ideological and political conflicts. However, to maintain the stability of his power, the ruler of Demak implemented a number of strict rules that lead to the attitude of the people that were submissive and obedient to the ruler. The principles of the rule implicitly are contained in the text of SITI JENAR, a text containing life and a way of dying of Sheikh SITI JENAR amid the Islamic kingdom rulers of Demak.

Actually texts or manuscripts containing the story of life, teachings and philosophy of life of Sheikh SITI JENAR figures are very diverse. The diversity can be seen from language styles (Surakarta, Yogyakarta, Cirebon, coastal Central Java, and East Javanese); from the letters used (Java letter, Arabic letter and Latin letter); from the languages used (Javanese, Dutch, Malay); and from his way to narrate (poetry/song, prose, and novel). This research succeeded in finding a note that there are at least 50 kinds of the texts or manuscripts¹ containing the life story of Sheikh SITI JENAR. However, in this short research, I will focus on one text, namely *Serat/Buku SITI JENAR INGKANG TULÈN*.²

Text of *Serat/Buku SITI JENAR INGKANG TULÈN* can be referenced in a catalog of Girardet and Ricklef. Girardet noted that *Buku SITI JENAR* of Kanjeng Sunan Giri Kedhaton's work was printed in Kedhiri in the Latin letter of the Javanese language with registration number 31525 (247);³ and *Serat SITI JENAR INGKANG TULÈN* from of Kanjeng Sunan Giri Kedhaton's work was printed in the Javanese letter and language with registration number 31695 (192),⁴ and Ricklef

⁴ Nikolus Girardet, *Descriptive Catalogue of the Javanese Manuscripts*, p. 525.

noted one text with the title *Book Siti jenar* with registration number 231242.⁵ Furthermore, the text of *Serat Siti Jenar Inkgang Tulèn* of Mas Harjawijaya's work was used by the author as the material object.

B. Regarding *Serat Siti Jenar Inkgang Tulèn*

Serat Siti Jenar Inkgang Tulèn is one of the papers which contain Java Sufism teachings. Generally, writing of the Java Sufism teachings was compiled by using *tembang macapat* which is also called *sekar macapat*. This *sekar macapat* is also used to compile teachings of literature and information on the royal family environment. Names often used to refer to literature of kejawen Islam are *primbon*, *wirid* and *suluk*.⁶ *Primbon* is one of Javanese literary works that summarize a wide variety of teachings that developed in the Javanese tradition such as *ngelmu petung*, *divination*, *witchcraft* and others. *Suluk* is a kind of literature of the coastal Islamic boarding school containing supernatural teachings derived from the Islamic teachings. *Suluk* is also understood as a discourse that is sung by a puppeteer on the puppet show to create a certain atmosphere in accordance with the situation of the scene.

The name of a copyist of *Serat Siti Jenar Inkgang Tulèn* is Raden Mas Harjawijaya who is estimated that he lived in the end of the 19th century until the early 20th century. However, based on the time of publishing, *Serat Siti Jenar Inkgang Tulèn* was published after two of *Serat Siti Jenar* written by Raden Sasrawijaya and Mas Ngabehi Mangunwijaya.

Mas Harjawijaya was an employee of the Dutch government as contained in the following article:

“*Serat Siti Jenar Inkgang tulèn, anggitanipun Kangjeng Sunan Giri Kadhaton. Panganggitipun nalika warsa 1457 sinengkalan pandhita misik sucèng tyas babon saking 'Mas Harjawijaya' Klereg Opsir Inlansesaken ing Nagari Wéltiprédhen.*”⁷

⁵ M.C. Ricklefs, *Indonesian Manuscripts in Great Britain: a Catalogue of Manuscripts in Indonesian Languages in British Public Collections* (Oxford: University Press, 1977), p. 50.

⁶ Simuh, “Mistik Islam Kejawen dalam Wedhatama” (*Paper was compiled and presented in the context of regular discussion of lecturers of IAIN Sunan Kalijaga*), 6th Year of Academic 1983/1984, p. 3. See also M. Wasim Bilal, *Mistik Dalam Suluk Pesisiran* (Yogyakarta: Yayasan Ilmu Pengetahuan dan Kebudayaan “Panunggalan” Lembaga Javanologi, 1988), p. 6.

⁷Raden Mas Harjawijaya, *Serat Siti Jenar Inkgang Tulèn*, 1st ed. (Kediri and Solo: Tan Khoen Swie , 1922), page of front cover. The author intended to show the time of the Serat writing. The use of the candrasengkala calendar describes that the influence of Islam to use the calendar of Qomariyah begins to enter the Javanese culture. The use

Meaning:

The original *Serat Siti Jenar* is an essay of Kangjeng Sunan Giri Kadhaton. Its writing was in 1457 in the sentence of candra sengkala of Sufism preacher that has a pure heart. The main source is from Mas Harjawijaya who was *Klereg Opsir Inlansesaken* in *Nagari Wéltiprédhen*.

As mentioned in the beginning, *Serat Siti Jenar Ingkang Tulèn* was copied by Mas Harjawijaya taken from *Serat Suluk Walisana* authored by Sunan Giri Kedhaton. The content of this book is different from *Serat Siti Jenar* written by Raden Sasrawijaya. Even explicitly in the beginning of *Serat Siti Jenar Ingkang Tulèn* of Mas Harjawijaya mentions that *Serat Siti Jenar* written by Sasrawijaya deviates from the real story.⁸

In writing, literature of kejawen is presented systematically and organizingly in the form of prose and *tembang macapat*. *Tembang macapat* (*macapat song*) is a song in the form of traditional Javanese poetry using the New Java language with having rules or standards of Javanese literature, such as *guru gatra*, *guru lagu* and *guru wilangan*.⁹

The composition of the canto and the song in *Serat Siti Jenar Ingkang Tulèn* is 6 (six) cantos and 4 (four) songs in 32 pages. The following table is about cantos, songs and page layout in *Serat Siti Jenar Ingkang Tulèn*:

Table

***Serat Siti Jenar Ingkang Tulèn* of Harjawijaya's Copy**

Order of Cantos	Name of Songs	Number of Stanzas	Pages
------------------------	----------------------	--------------------------	--------------

of this candrasengkala calendar has already begun since the period of Ajisaka, an inventor of Javanese letter. The presence of Ajisaka is considered as the first year of Saka marked with the sentence "*Kunir awuk tanpa dalu*, (The turmeric was rotten without waiting night).. See Meirissa Ramadhani, *Candrasengkala as Representation of Ngayogyakarta Royal Culture*," *Minithesis* (Jakarta: Department of Javanese of Faculty of Science and Culture, University of Indonesia, 2009), p. 13.

⁸ Raden Mas Harjawijaya, *Serat Siti Jenar Ingkang Tulèn*, p. 1.

⁹ *Guru gatra* is the number of lines of each stanza in *macapat* song. *Guru lagu* (*dhong-dhing*) is a rule of final rhyme on *macapat* song. *Guru wilangan* is the number of syllables of each stanza in *macapat* song. These rules apply to all kinds of *macapat* song. The names of the songs and the rules of the structures are as follows: *Dhandhanggula*, 10-I, 10-A, 8-E, 7-U, 9-I, 6-U, 8-A, 12-I, 7-A; *Sinom*, 8-A, 8-I, 8-A, 8-I, 7-I, 8-U, 7-A, 8-I, 12-A; *Asmarandana*, 8-I, 8-A, 8-E, 8-A, 7-A, 8-U, 8°; *Pangkur*, 8-A, 11-I, 8-A, 7-A, 12-U, 8-A, 8-I; *Durma*, 12-A, 7-I, 6-A, 7-A, 8-I, 5-U, 7-I; *Mijil*, 10-I, 6-O, 10-E, 10I, 6-I, 6-U; *Kinanthi*, 8-U, 8-I, 8-A, 8-I, 8-A, 8-I; *Pucung*, 12-U, 6-A, 8-I, 8-A; *Maskumambang*, 12-I, 6-A, 8-I, 8-A; *Gambuh*, 7-U, 10-U, 12-I, 8-U, 8-O. Aris Fauzan, "Ajaran Tasawuf dalam *Serat Siti Jenar*," p. 5.

The above numbers explain the number of syllables in each line. The capital characters explain the final vowel of each syllable in the end of each line. While the writing of the script explains the number of lines that must be written.

Canto I	Asmaradana/Asmarandana Ia	26 stanzas	3-7
Canto II	Sinom II	24 stanzas	7-12
Canto III	Kinanthi IIIa	26 stanzas	12-16
Canto IV	Asmaradana/Asmarandana Ib	46 stanzas	16-24
Canto V	Kinanthi IIIb	29 stanzas	24-28
Canto VI	Dhandhanggula IV	16 stanzas	28-32

C. The Basic Standard of Obedience

The Islamic kingdom of Demak which became the setting of Sheikh Siti Jenar is estimated to be born around the 15th century of Masehi shortly after a collapse of the Hindu Majapahit kingdom. The collapse of Majapahit is immortalized in an expression of *Candra Sengkala* that said *Sirna Ilan Kertaning Earth*. This sentence is interpreted with the year of 1400 Saka or around 1478 AD. The first king of Islamic Demak kingdom is Raden Patah (Fatah). Raden Patah is a descendant of Brawijaya King who has converted to Islam. Islamic religion is estimated to have evolved in Majapahit since the 11th century AD in which was characterized by the presence of Muslim grave named Fatimah binti Maemun who died in 475 H / 1082 AD.¹⁰ In situation of the transitional government, Raden Patah who got the support from the members of walisanga applied rules of obedience to the ruler strictly.

The short research toward *Serat Siti Jenar Ingkang Tulèn* succeeded in revealing that in order to establish obedience among people of the Islamic kingdom of Demak, the king applied at least six following provisions:

First, the person or group or institution has to accept and understand the system of pattern and religious identity that is same as the ruler. Religion for the people is a human right. But in the context of power, every citizen must understand and follow the pattern of religion in accordance with the provisions of the ruler. Even in the context of power, the ruler has the sole authority in determining the citizen's religion. It was an ideal of Raden Patah to unify his citizen's religion in one religion, especially in the area of Java. This ideal was expressed in the following stanza:

¹⁰ Anasom, "Sejarah Masuknya Islam di Jawa," in M. Darori Amin, *Islam dan Kebudayaan Jawa* (Yogyakarta: Gama Media, 2000), p. 29.

(39) *Radèn Patah matur aris; inggih nadyan makatena; jer tan nunggil agaminé; pangangkah kulo ing mangkya; inggih sanuswa Jawa; sampun ngantos wowor sambu; sageda nunggil agama.*

Meaning: Raden Patah said wisely. Although (currently) person's religion is not same, my wish is later that all people of Java homeland will not be undercover as a code. hopefully all can be one religion.

Unification of the religious ideology is not only in the physical area (Islamic law, *sharia, exoteric*) but also in the spiritual matter (mysticism, *esoteric*). If there is a citizen who deviates from the religion professed by the ruler, the citizen will get punishment. The most extreme judgment is that the citizen is considered not to trust the ruler, in which means he defies the government. A form of punishment for those who do not accept and follow the ruler's religion understanding is a death sentence. The death sentence was practically applied to Sheikh Siti Jenar and his followers.

It was revealed in the following stanzas:

(1) *Aywa sira adrèng rèhing kapti; gurunira aliwat druhaka; manggung sinangгаа dhéwé; ya apa pédahipun; angla(hlm. 23) buhi wong dosèng Widhi; marmané kawisésa; trang karsaning ratu; luputé ambubrah sarak; kang wus pada ingimanaken Narpati; lakuning kuna-kuna.*

Meaning: You should not insist on your wish. Your teacher is too wicked. Let him always bear it himself. There is no point to defend the sinner to God. Therefore, the power is the Queen's wish. Her mistake undermines the rule that has entrusted it to the king. It is like earlier times.

(2) *Angugeming agémé ing ngèlmi; ngorakaken ing sarak saré'at; wus ana angger-anggeré; ing kang muni ing kukhum; anemahi ukuman pati; ing Ngarab Sèh Mubarat; tepané ing dangu; iya kukhum ing nagara; déné wani tan ngimanaken agami; uger ageming Nata.*

Meaning: He upheld his conviction and rejected the rule of the sharia which have been the rules.. As it is contained in the law, he will receive the death sentence. It

was like Sheikh Mubarat in Arabic in earlier times. He was punished by the country because he dared to not believe in religion and the king's rule too.

The above stanzas explain that the religion, the ruler's understanding of religion, and the power are one. The ruler, who is in this case the king, represents God on earth. The ruler is the policy maker and the giver of the verdict or punishment for people or institutions considered deviant or different in manner. The logical plot of the death sentence toward those who are assessed to resist is based on several things: the religious basis, the consideration of religious understanding which is not different from the ruler, and the historical basis which refers to cases that have occurred in the world of Islam in the Middle East.

Religion and the ruler are one, although may be there is an irrational and imperfect gap when the ruler understands religion. However, refusing and defying the rules of the ruler are assessed on two assessments, that are defying the ruler and not submitting to the religious rule, because the religion and the ruler are like a coin, whose two sides complement each other.

Second, the person or group or institution has to attend a *Jumat* (Friday) prayer in a mosque or a worship place that was built by the kingdom. Although a prayer is personal matter, in the context of praying which is done together, hierarchically it cannot be done personally or with forming a group of their own pilgrims.

(16) *Sangsaya kasusrèng janma; akèh kang amanjing murid; ing praja-praja myang désa; dalah akèh ing ngulami; kayungyun ngayum sami; kasoran kang wali wolu; gunging paguranira; pan anyuwungaken masjid; karya suda kang maring agama mulya.*

Meaning: He was more well-known in the society. Many came to be students in villages and towns, and many Muslim scholars are interested to get knowledge. He defeats eight guardians. His religious community became bigger but it empties the mosque. It decreases his religion glory.

Many ordinary people joined and became one of the disciples of Sheikh Siti jenar. The students came from various different backgrounds from the rural and urban society, and even there were also muslim scholars who joined. There was spread news that Sheikh Siti Jenar and

his disciples were considered not to pray in the mosque and even did not carry out the Friday prayer. The action of not praying in the mosque among Muslims in that context was considered as a form of disloyalty to the royal ruler. In the simple language, praying in the mosque (not at home) together was transcendently understood as a form of spiritual communication with the God, but immanently it was also as a form of formal communication with fellow humans, especially with the ruler.

Attendance at mosque on every prayer time, especially on the Friday prayer, for every Muslim became the variable standard to measure person's loyalty to the king and the royal rule. The mosque institutionally became the media to control and conduct indoctrination of truth values according to the ruler. Because, in a number of practices of the Friday prayer until the end, if there was a worshiper who whispered, he was morally deemed to have committed futility. The presence of a Muslim in practice of the Friday prayer was coming, being silent, listening, and being forbidden to argue.

(2) *Sapratingkahnya sadarum; dènira angorak-arik; saruning sarak saréngat; jumeneng guru gugurit; rosing sarasèng rarasan; akarya suwunging masjid.*

Meaning: All his behaviour were destructive. It was inappropriate according to the shariah. He became *gugurit* teacher. Lack of the sense in discussion made the mosque empty.

Third, periodically, they have to attend the meeting in the central government as the ruler's initiative, as a form of monoloyalty to the ruler. This attendance is as controlling medium to the regional leaders under the central ruler.

(1) *Sèh Lemah Bang nayogyani; prapta ing ari Jumu'ah; nuju Ramelan wulané; marengi tanggal ping lima; kumpul para oliya; anedheng kalaning dalu; ngrakit papan kang prayoga.*

Meaning: Sheikh Lemah Abang approved. On Friday precisely in Ramadhon 5th, the guardians gather in the night to arrange the appropriate place.

The presence of the religious leader or figure (the guardian, the ruler of the territory under the kingdom) who became reference of the political and religious issues for surrounding community is needed, in each month Ramadan month.

Fourth, They are not carelessly to use the word *ingsun* (I), because the word *ingsun* is the ruler's, not the common people. *Ingsun* is only used by the ruler and noblemen. In this context, for the common people, when they mention first person pronoun, they are only allowed to use the word *saya* (I) in the form of *kawula*, *kula*, *mami*, *manira*, *patik*, and *ulun*. These six first person pronouns literally mean slaves. In other words, the public is consciously constructed to make themselves as slaves in front of the ruler.

Ethically, the common people and the ruler of the territory under the kingdom have to use expressions of *kawula*, *kula*, *mami*, *manira*, *patik*, and *ulun* when referring to themselves as the first singular person in front of the higher ruler. The sixth words literally mean slave or servant. For the the ruler and nobles to call themselves, they use the word *ingsun*. *Ingsun*, in Javanese literature, is not only understood as the first singular pronoun, but also used to describe the nature of God. It becomes the representation of verbal experience of unification between God and human (*ittihad* or *hulul*), and it is also spoken by the first and second person when both of them are involved in the conflict. Therefore, being the common people who say *ingsun* for themselves is considered as a people who do not know manners, and also considered as a person who compares himself with the ruler. Sheikh Siti Jenar is one of the figures of that was beheaded, among the reasons because she came from the lower class and taught his spiritual experience by telling *ingsun* to the various level of society.

Fifth, a person or group or institution is forbidden to teach philosophy and Sufism to any people with different backgrounds. Moreover, the philosophy is related to the creation, human nature, and the nature of God. Therefore, the material is considered to be able to inspire common people to question the existence of ruler who is considered as God's representative on earth.

In this part, there is prohibition on teaching freely to common people on the material of philosophy and mysticism, exactly philosophical Sufism. If this material is understood by the common people, it can be dangerous. *First*, It could supposedly damage the principles of belief in religion (that blends with the kingdom); *second*, it could be a trigger for people to question the

status of the ruler as God's representatives on earth; *Third*, it could lead society on religious understanding which is not same as the ruler.

In the text of *Siti Jenar Ingkang Tulèn*, it is mentioned that the teaching of understanding in philosophy and Sufism on society from various backgrounds is not understood in tune. Even not few of Sheikh Siti Jenar's disciples committed suicide in order to choose life after death. Life in the world is understood only temporarily, while the life after death in the world is eternal. Therefore, for them to welcome death or to be killed by other people, they perform riot and damage.

(14) *Murtat murang tékad praja; tan ajrih yèn kenèng sarik; katatangi driyanira; dènira boya antuk sih; gya késah saking Giri; mantuk mring dununganipun; tanah ing Siti Jenar; lajeng ngubalaken ngèlmi; kathah janma kacaryan apuruita.*

Meaning: He deviated from the rule of the country. He was not afraid if he got disaster. Because he did not get attention, then he went from Giri. He backed to his place, land of Siti Jenar. Then he spread knowledge. Many people learn to him.

(22) *Kawula amedar ngèlmi; angraosi katunggalan; déné jisim sadanguné; mapan jisim nora nana; déné kang kawicara; mapan sajatining ngèlmu; sami amiyak warana.*

Meaning: *Kawula* (I) explain knowledge and feel unity. Nobody is placed forever. While what is discussed, the true of science, is unlocking the secret of God.

(33) *Sakathahing para wali; pra samya mèsèm sadaya; miyarsa ing pamuwusé; kukuh tan kena ingampah; saya banjur micara; amiyak werananipun; nora nganggo sita-sita.*

Meaning: All of the guardians smiled in hearing his saying. He was firm and could not be prevented. He continued talks and open the partition without using ethic.

(34) *Angaku jeneng pribadi; andadra dadi rubéda; ngraribedi wekasané; nenerang anerak sarak; rembugé angaliga; mawali pra wali wolu; winolong kurang walaka.*

Meaning: On behalf of the individual, he increasingly made the circumstance complicated. Finally it was clear that he violated the sharia. The conversation is outspoken. He did not want to obey eight guardians. *Winolong* is less honest.

Sixth, a person or group or institution may not coordinate or gather the family or supporters of political opponents by any reason or pretext. This can lead to a number of interpretations that lead to political suspicion.

Other rule applied by the ruler in order to build public submission is implementing a prohibition on gathering or collecting people, especially collecting the family or followers of a person, group, or institution of which political and religious ideology is different from the ruler. The action of gathering or collecting people from the political opposition could arouse suspicion and could be considered as a form to plan to take the fight against the rightful government. It was as revealed in the following stanzas:

(16) *Sangsaya kasusrèng janma; akèh kang amanjing murid; ing praja-praja myang désa; dalah akèh ing ngulami; kayungyun ngayum sami; kasoran kang wali wolu; gunging paguranira; pan anyuwungaken masjid; karya suda kang maring agama mulya.*

Meaning: He was more well-known in the society. Many came to be students in villages and towns, and many Muslim scholars are interested to get knowledge. He defeats eight guardians. His religious community became bigger but it empties the mosque. It decreases his religion glory.

(17) *Santri kathah kang kabawah; mring Lemah Bang manjing murid; yata Sang Sèh Siti Jenar; sangsaya gung kang andasih; dadya imam pribadi; mengku sarèh bawahipun; paguroning ngèlmu kak; kawentar praptèng nagari; lajeng aran Sang Pangé(hlm.8)ran Siti Jenar.*

Meaning: Many students followed Lemah Abang and became his disciple. Sheikh Siti Jenar's subordinates grew bigger and bigger. He became a personal priest. He patiently master the subordinates and the disciples. His teaching was about the real science. He was famous until the country. He was Sheikh Siti Jenar.

(18) *Pan tedhaking Majalengka; kalawan darah ing Pengging; kèh prapta apuruita; mangalap kawruh sajati; nenggih Kiageng Tingkir; kalawan Pangéran Panggung; Buyut Ngerang myang Betah; kalawan Kiageng Pengging; samya tunggil paguron mring Siti Jenar.*

Meaning: Although Majalengka was near, many came to the religious community to look for genuineness, including descendant of Pengging. They were Kiageng Tingkir with Pangerang

Panggung. Buyut Ngerang also joined. Together they were in one religious community of Siti Jenar.

D. Closing

Thus, it is description of the paper entitled The Basic Standard of Obedience toward the Ruler in Javanese Culture (Critical Study of *Serat Siti jenar ingkang Tulen*). At least it can be concluded that:

1. Many Javanese texts have still not been studied in depth. Recognized or not, for the Java society, classical texts are understood as the document containing the teachings, philosophy, and a Javanese's way of life particularly. Because of that, reviewing is an entrance to understand Javanese people more thoroughly.
2. History of Islamic kingdom of Java is an integral part of a long trip of modern Indonesia history. Patterns of tradition, thought and philosophy of life between old Java and modern Indonesia have similarities, especially in the context of building subservience.
3. To build obedience to the ruler based on the text of *Serat Siti jenar ingkang Tulen*, at least there are six basic principles that have to be fulfilled: being same in religion and understanding of religion, attending formally religious rituals according to the approved time, coming to the kingdom palace in any particular period, not using the word "I" mistakenly, not teaching philosophy and mysticism to anyone, and not joining or gathering people from families who are politically opposed to the ruler.

Prof. Marjorie Joy Almario-Magdadaro
Marjoriejoy.almario@g.msuiit.edu.ph
MSU-IIT, Faculty

Abstract

The documentation on the foundation of Initao as a Municipality is not yet documented but the problem arose when the scarce source and a little mention of the place in primary sources revealed that was as if not worthy of mention in the pages of history. Thus the researcher prompted to conduct this study entitled “*Ynito and Kanitaw: Looking for Initao in Text and Memory*, in which this will be answered through the following research questions: 1. How did *the Philippines Islands* present Initao as a village?; 2. What are the accounts of Initao as a town in *Errection de los Pueblos*?; 3. How do toponyms with *Higaunon* origin provided information about Initao?

In order to reveal Initao from the selected sources in which the place is in little mention, the ‘Cracks in the Parchment Curtain’ was used and in terms of the Higaunon narratives the ‘Vichian methods, by which history can transcend mere reliance on the statement of authorities’ is used. The findings of the study then revealed that Initao as a village started in the 1754 when there was a series of Moro attacks in the place, and became a Visita in 1832, then in 1836 finally became a Pueblo. Also in 1836 the Poblacion was transferred to Sitio Silacan. The oral narratives of the Higaunon also revealed the longevity of Initao in history.

It is recommended that in further study one should look for other existing primary sources about Initao in olden times and toponyms on Cebuano origins.

Key Words: *Ynitao*, Initao, Higaunon, Toponyms

INTRODUCTION

The case of Initao is unfortunate. It doesn’t celebrate an “Araw ng Initao”, or a foundation day. In the first place, there is hardly a cause for celebration. The people do not know when was Initao established as a town and they have no records which speak about it.

The historical amnesia in Initao, a municipality, part of the province of Misamis Oriental, in Northern Mindanao, where the people do not remember their

story of beginnings, shows why the writing of local history is relevant and invaluable. Local history brings back events which transpired in the place, long forgotten in memory. It gives a place, identity. The traditional identification of Initao as a ‘no man’s land’ and a ‘land of witches’ deflates local pride. A place with ‘no history’ and a people ‘stigmatized’ negatively, these prompted the writing of this paper.

Ynitao and Kanitaw: Looking for Initao in Text and Memory, as the title suggests,

is a modest attempt to visit written records which provide information about the beginnings of Initao as a village and as a town. Select Spanish texts, the *Ereccion de los Pueblos* and Blair and Robertson's the Philippine Islands, were gleaned using William Henry Scott's approach, termed as 'Cracks in the Parchment Curtain'. The scant data are supplemented by the oral narratives of the native settlers, the *Higaunons*, speaking about toponyms. This research hopes to contribute in providing a clear picture of the history of the municipality of Initao.

Research Question

This study is an attempt to look for Initao in Selected Spanish texts and *Higaunon* collective memory. The following are the questions this inquiry hopes to answer:

1. How did *the Philippine Islands* present Initao as a village?
2. What are the accounts of Initao as a town in *Erreccion de los Pueblos*?
3. How do toponyms with *Higaunon* origin provide information about Initao?

Significance of the Study

Initao today has no foundation day or any date to celebrate its establishment as a town. This requires the task of writing a history of Initao especially that much of its colonial period is yet to be documented. This study is an invaluable contribution to the municipality of Initao, for the latter to increase their knowledge about their locality.

The forgotten beginnings of Initao as a village and as a town prove the importance of writing local history. Local history serves as the building block of the national history. In addition, toponyms as gathered from the oral narratives of the *Higaonon* are also important so as to record their testimonies which are not

articulated in written texts. These oral testimonies would surely enrich the knowledge to be collated about Initao.

METHODOLOGY

This qualitative research explores the politics and poetics of Initao, Misamis Oriental, based on the Spanish texts and from the collective memory of the *Higaunon* natives, who were the first to settle in the area. This research work accomplished archival and field researches to achieve the desired objectives of this paper.

This research is designed to be supported with primary sources, which can provide first-hand accounts subject for data analysis. Its inadequacy and subjectivity would impel the use of 'other' sources other than written documents, thus, oral history is also employed for the completion of this study.

Oral history is a historical methodology which uses interview as its basic technique. This is very appropriate for 'talking' people like the *Higaunon*, who do not possess documentary evidences. This research therefore also relies from the tribal knowledge about the matters in question. Although primary sources remain invaluable as they undoubtedly carry greater weight when judging the veracity and the accuracy of data it can provide, but where written materials are not available or lacking, corroborated oral history can help fill the gaps of history.

Admittedly, oral tradition, as a historical material, is not suited for historical analysis. But it can still be useful when careful distillation process is involved; extracting only the necessary, credible and reliable particulars for this inquiry.

Theoretical Framework

To approach the Spanish texts used for this research, the theory behind William Henry Scott's "Cracks in the Parchment

Curtain”, is used as the basis. Iron Curtain and Bamboo Curtain, are terms which become prominent in the English language, popularized by media, referring to the imaginary divisions between the Communist Bloc and the ‘Free’ World during the Cold War era. They also implicitly refer to the state control, imposed by USSR and People’s Republic of China, respectively, on information, censoring the entry and exit of the latter, preventing the outsiders from learning the true conditions of those countries and their people.

William Henry Scott used the parchment curtain, as a metaphor, to signify the official Spanish documents from which the Filipinos have difficulty of reading their own history, getting information about themselves. Aside from the apparent language barrier, the documents were written with biases, only for the Spanish usage and consumption, almost devoid of Filipino reference.

But there are “cracks” in the parchment curtain, as Scott (1985) asserted. According to him:

...through which (cracks), fleeting glimpses of Filipinos and their reactions of Spanish dominions may be seen. These are more often than not unintentional and merely incidental to the purpose of the documents containing them. Original letters and reports, bickering complaints among conquistadores, appeals for support, reward and promotion, long-winded recommendations that were never implemented and decrees inspired by local obstruction of government goals – all these contain direct or implied references to Filipino behavior and condition...

This theoretical approach made popular by William Henry Scott is used in this paper, attempting to ‘read’ Initao in texts written in Spanish, by the Spaniards, for Spanish purposes. Despite these pitfalls, this research hopes to find relevant

data contain in the original documents, which were unintentionally included by the authors, but of historical value for the purposes of this paper. “Cracks” in the “parchment curtain” might reveal information about Initao, culled out from these little known Spanish records.

The Spanish texts were primarily concerned on the politics and the missions, thus, it is posited that the socio-cultural aspect of the people would be hardly mentioned. Thus, oral sources of the *Higaunon* natives were also used, to ‘search’ for Initao in their collective memory, using the Vichian methods, by which history can transcend mere reliance on the statement of authorities. (Collingwood, 1946)

Giambattista Vico shows how languages can throw light on history. He argued:

...Etymology can show what kind of life a people was leading while its language as coming into existence. The historian is aiming at reconstruction of the mental life, the ideas, of the people he is studying; their stock of words show what their stock of ideas was... (Collingwood, 1946)

... thought and language are intertwined. It thus follows that the words people use and how they use them offer an excellent indication of the ways in which they thought about the world... (Warrington, 2000)

Vico therefore argued that etymology, words – they can offer insights about the people who originated them. He also makes similar use of mythology. He doesn’t discount its usefulness in telling about the people who invented them. Mythology, as stories in a dateless past, with divine involvement, is not a rational historical material. But Vico said: “...the gods of primitive religion represent a semi-poetical

way of expressing the social structure of the people who invented them...” and “...they are representations of the domestic, economic and political life of the ancients...” (Warrington, 2000)

Furthermore, Vico proposed another approach in dealing with traditions. They are useful in history accordingly by:

...not taking it as literally true but as a confused memory of facts distorted through a medium whose refractive index we can to a certain extent define. All traditions are true, but none of them mean what they say;; in order to discover what they mean, we must know what kind of people invented them and what such a kind of people would mean by saying that kind of thing... (Collingwood, 1946)

In the interpretation of these, Vico too pointed out how these will be treated in the data analysis. He said,

...any statement made by person in the past must never automatically accepted for historical truth. Rather, historical truth is to be found in the critical examination of words, myths, traditions, and rituals ... (Warrington, 2000)

The above-mentioned theoretical approaches are deemed necessary in the treatment of the sources and the data. Applying the theories of “Scotty” and Vico, this research hopes to distill substantial data to provide answers for the research questions of this paper.

Setting of Initao

Initao is located within the geographic coordinates between 8°29’52’ to 8°36’ north latitude and 124°18’17” to 124°24’ east longitude it is situated 52 kilometers west of Cagayan de Oro City - the capital city of Misamis Oriental, and 36 kilometers from Iligan City which is part of Lanao del

Norte. It is bounded on the north by the municipality of Libertad on the east by the municipality of Alubijid, on the south by the municipality of Naawan, and on the west by Iligan Bay. (Socio-Economic Profile, 2013)

PRESENTATION OF DATA AND ANALYSIS

Ynitao: As Gleaned through the Accounts of Selected Spanish texts (*Ereccion de los Pueblos and Blair and Roberston’s the Philippines Islands*)

Spanish sources revealed that the Recollect missionaries labored hard for the conversion of the natives to Christianity, in Caraga and Misamis Oriental Region. Although there were implicit reference of a predecessor who came before them for the said evangelistic mission, as it is written:

...A flourishing mission has also been established on the river of Butúan, where had formerly been a Christian mission, now abandoned... (Blair and Robertson, 1909, vol. 21, p. 15)

The text apparently referred to the Jesuits, who pioneered the area in late 16th century, but left for the lack of resources and personnel (Blair and Robertson, 1909). The Recollects followed the trail they left off and extended their missionary works to further west of the island. They proceeded with the establishment of villages or *visitas* in the areas they visited and successfully reached the corridor between Cagayan de Oro and Iligan, as the accounts wrote:

...Another mission is opened on the Cagayan River in Misamis, northern Mindanao; the fathers meet great trials and hardships, but finally succeed in converting the leading headman on the river... (Blair and Robertson, 1909, vol. 21, p. 15)

...Our predecessors *also* succeeded in getting to the lake of Malanao, and the village of Iligan, and Bayug... (Blair and Robertson, 1909, vol. 28, p. 342)

Take note of the adverb, 'also', as aforementioned. This suggested that like the Jesuits, the Recollects in the same way made it to the Lanao area, passing through the area of Initao, which is located midway. Now, it is likely possible that Initao formed a village eventually, as the Recollects frequented the areas, as an account further read:

...After that, they continued to found many other villages dependent on the first, which were then considered as *visitas* or subject villages. Some of those villages came in later times to be the residences of our Recollect ministers, according to the available number of religious that the corporation possessed, or according as the necessities or growth of population in the said subject villages demanded... (Blair and Robertson, 1909, vol. 28, p. 341)

Figure 2: Location of Initao Village
© Demetrio, 1995

Now the prerequisite for those villages to be a parish was *the growth of population in the said subject villages* which required a resident minister. Now who were the natives who populated the area? Interestingly, the chroniclers were able to describe them:

...The owners of these islands¹ are those who people the mountains. They, enamored with their peaceful mode of living, and fed with the happy returns of their cultivation, built their nests there and lost their liking for the coast and love for its occupations... (Blair and Robertson, vol. 40, p. 123)

This description found resonance on the very nature of the *Higaunon* people, who were defined literally as mountain-dwellers. Aside from their location, the above-mentioned texts revealed the occupational activity of the natives, being upland farmers. They were also described as peace-loving and disliked the coast. Now, that's a question, because we've been informed that our ancestors lived where a water source is found. The

¹ It meant the natives of the northern coast, as the next paragraphs, continued discussing the opposite direction by saying, "...on the south coast, the rulers of the people are the Lutaos

accounts were not clear in explaining why the Spaniards found the coasts deserted, but contemporary studies would tell us that raid expedition was a common practice among the tribes along the shorelines (Alamario and Daug, 2013). This could be one of the reasons, among others, why the natives opted to go inland in a defended position, perhaps avoiding to become vulnerable targets of *pangayaw*. However, there were isolated cases that some of these natives were resettled in *reduccion*

...they gradually became mountaineers; and, their intercourse with other peoples ceasing, they became less alert and more barbarous, allowing the foreign traders to seize the coasts, harbor-bars, and rivers which they found deserted. Since by their trade, and in every way, the latter were making themselves masters of all things, the aborigines, being less valiant, yielded to the foreigners, as these were more civilized... (Blair and Robertson, 1909, vol. 40, p. 123)

Now the word 'yielded' impressed that some of the native inhabitants gave in to the missionaries who lured them to move down to the coastal plains. However, not everyone was pleased with this turn of events. The *Maguindanaon* sultanate which exercised suzerainty over the area was furious learning about this spiritual aggression.

...Those Indians were vassals of King Corralat (of whom we shall speak later) to whom they paid tribute. Collectors came yearly along the level land from his court to the river to collect the tribute. That king was a Mahometan, and consequently hostile to Christians. He learned that our religious were in the lands of his dominion as guests, and ordered that they be killed without any objection...

(Blair and Robertson, 1909, vol. 21, p. 231-236)

As a consequence of this, Initao experienced Moro attacks, as a punishment for their 'weakness' and to dislodge the foreigners out from the territory.

...Last of all, the two villages *Ynitao* (*emphasis supplied*) and Lubungan, on the northern coast of the Island Mindanao, especially experienced the fierce attacks of the Mahometans on four occasions, when they sustained continuous assaults, repulsing them with vigorous sallies, and inflicting heavy punishment, with evident losses, on the Moros... (Blair and Robertson, 1909, vol. 48, p. 50)

Now in 1751, the prior provincial sent out a report about the progress that they were making in Mindanao

Tables showing tributes and number of souls in Recollect provinces and villages in Mindanao, in 1751, as published by father Fray Juan de la Concepción (Blair and Robertson, 1909, vol. 28, p.344)

Villages and provinces	Tributes	Souls	Regular Ministers
Caraga	3,340	14,995	5
Curregidorship of Iligan	1,167	4,970	4

Table 1: Iligan, as a military province, is reflected with having fewer population and tribute collection. It is surmised that Initao was under the jurisdiction of Iligan.

The table illustrated above showed that Iligan in 1751 had 4,970 persons, although, only 1,167 tributes were received (Acut, 1989), which means to say, only 23% of the total population allowed to be 'subjected', paying in the form of a tribute. But the table did not show anything about Initao. It only tells about two provinces under the Recollect ecclesiastical jurisdiction, Caraga and

Iligan. However, looking for the villages comprising the military district of Iligan, which was elevated as a province in 1656, the accounts revealed the following:

...Iligan became a corregimiento in 1656, whose jurisdiction extended from the Subano country of Zamboanga to the Lanao area... In western Mindanao, the villages part of the Provincia de Yligan were Dipoloc (300 families), Duyno (600); Manucan (100), Tubao (100, Sindagan (500), Mucas (200), Quipit (300) – a total of 1,750 families part of the parish of Dapitan with 5 resident priests... (Blair and Robertson, 1909, vol. 28)

Now, there is still no Initao in these enumerations. But circumstantial evidences would tell us, that Initao was part of the *Provincia de Yligan*. Geographically, Initao is closer in distance to Iligan, than the Caraga region. Especially that between 1650-1750 significant happening occurred which has a telling-effect as to which province was Initao part of. Blair and Roberston provided as an insight:

...As there were certain questions regarding the spiritual jurisdiction, his Majesty defined them, marking out the limits of religious zeal between the two families (who were equally inflamed with the desire for the salvation of souls), by drawing a line from the point of Suloguan to the cape of San Agustin, and assigning the administration on its western side to the most religious fathers of the Society of Jesus, while our peaceful possession was marked on the eastern side. Lastly, when the reverend Jesuit fathers left the islands, the administration of Zamboanga was adjudged to us in the year one thousand seven hundred and sixty-eight, as well as the villages of Lubungan, Dapitan, and Misamis

(and consequently their barrios— some of which, as time went on, came to be villages)...(Blair and Robertson, 1909, vol. 28, p. 342)

Now this means to say, that Mindanao was divided between the Jesuits and the Recollects, in order to appease their rivalry. The boundary points are Suluguan point in the northern coast and Cape Agustin in the southern coast. The west was given to the Jesuits and the east to the Recollects, like the figure shown below

Figure 3: The ecclesiastical jurisdictions of the Recollects and Jesuits in accordance to the intervention of the Cabildo of Manila ©Demetrio, 1995

Accordingly, the Recollects tried to make petitions in 1730 (Blair and Robertson, 1909, vol. 35), but to no avail. The map showed that the location of Initao belonged to the Jesuits. This means to say, Initao from the Recollect hands, was turned over to the Jesuit, putting it under the control of the *Curregidorship of Iligan*.

However, the expulsion of the Jesuits in 1768 from the Spanish empire led Mindanao to be solely controlled by the Recollects. There was also a political reorganization of the districts and Iligan ceased to exist as a province, and there was only Misamis.

...However, in 1768, when the Jesuits were expelled from the Spanish empire, Mindanao was

left to the Recollect administration, including the districts of Lubungan, Dapitan and Misamis... (Blair and Robertson, 1909, vol. 28)

Henceforth, it can be inferred that Initao as a village became part of *Provincia de Misamis* which according to reports had increased in tribute receipts and number of population

In 1839, by the prior provincial, father Fray Blás de las Mercedes (Blair and Robertson, 1909, vol. 28 p. 344)

Provinces	Tributes	Souls	Regular ministers
Misamis	5,046	36,591	7
Caraga	6,140	29,292	5
Zamboanga	—	5,704	1

Table 2: the table showing the Province of Misamis, having the largest number of tribute collection and population, covering the areas previously administered by Iligan

However, it must be noteworthy, that in 1836, Initao can be presumed to have already possessed a town status, that it was already a *pueblo*. *Erreccion de los Pueblos* was able to document this, by providing its first record of tribute receipts of 112 in 1837. (Acut, 1989)

A table below showed the tribute receipts reported for the *pueblos*, belonging to the newly-created province of Misamis, whose capital was Cagayan de Misamis.

Provinces	Pueblo	Tributes
Misamis		
	Ynitao	112

Table 3: the table showing Ynitao having the tribute collection in 1837 (*Erreccion de los Pueblos*, n. d.)

The increase of the collection of tribute, a primary requirement for a village's elevation to a *pueblo*' status was seen here why Initao was changed into a town. As seen above, it recorded a tribute of one hundred twelve (112).

It was note-worthy that the previous year, 1836, a proposal was made for the change of site, of the old town proper, to a more secured location. The petition said that, it be transferred to Sitio Silacan, situated along the coastal line. The capitan municipal of Ynitao during this time was Ramon de Sta. Catalina. The said proposal reads:

...solicitud de Comun de principals y demas habitantes del pueblo de Ynitao prova de Misamis, pidiendo permiso para traslador dicho pueblo a oho lugar major en el sitio de Silacan en la misma playa.....

Manila, 14 de Enero, 1837 (Erreccion de los Pueblos, n. d.)

Subjected through an internet application, translating these texts into English, it revealed a rough translation as follows:

A common request of principal people (principales) and other inhabitants of the town of Ynitao, of the Misamis province, asking for permission to move the people to a better location , in Sitio Silacan, in the beach...

Manila, January 14, 1837

Now this request was sent October 22, 1836 and was received by the Capital on January 14, 1837. Now the request was based on the common grievance that the old town had poor location, by the river. It made the people sick. This old town (*pinagbayanan*) was presumably located in the present sitio *Bugwak*. *Bugwak* and *Silacan* are both located in the present barangay Poblacion. Only that, the former

was by the river, while Silacan was, *en la misma playa*.

Documentary evidences further stated that a Spanish fort was erected in Ynitao, to serve as a fortress of defense. The *pueblo* suffered Moro attacks in the past and it was seen imperative to construct this defensive structure, because of the following cause:

...ser invadido por los moros por ser la unica poblacion que su encuentra en el intermedia de Yligan a Sulawan...(Errecion de los Pueblos, n. d.)

(rough translation: ...attacked by the moros for being the only population located in the middle of Yligan to Sulawan...)

What do secondary sources tell about Initao: An Analysis

The previous studies of Prof. Patrocenia T. Acut (1989) and Prof. Celyn O. Junio (2006), which were both reviewed earlier for this study, provided little significant information about Initao. The latter wrote about the Jesuit pioneering in 1624, which however abandoned the missions and were succeeded by the Recollect Fathers of Saint Augustine. In 18th century, the Jesuits Priests were later restored in the Philippine territory after their expulsion in 1768 and had visited Initao from their base in Dapitan. In 1832, there were already elected Capitans in Initao and the old settlement was located in the present-day Sitio Bugwak yet there was a shift of location of the Poblacion. A fort was also constructed along the vicinity of the old Poblacion, as supported by *Resolution 60 of 1929* which wanted to preserve the important place for defense, the *Ilihan Hill*. In addition, the fort was constructed because of the Moro invasion in the municipality. Today, the patron saint of Initao is Saint Francis Xavier, one of the

indicators of the Jesuit presence in the place.

Prof. Acut (1989), on the other hand, found out that in 18th century, Mindanao and Visayas were under the bishopric of Cebu which includes the provinces of Cebu, Iloilo, Capiz, Misamis, Zamboanga, Samar, Leyte, and Marianas. Since the bishopric of Cebu was a vast territory, Mindanao had to be subdivided into different districts under a military government. This resulted Iligan to become a town of Misamis Province which included Initao as a visita in 1832. On July 30, 1860, a civil-military kind of government was introduced in Mindanao which added districts, from six (6) to eight (8). Misamis District was subdivided into 27 pueblos, 18 visitas and 34 rancherias. Cagayan de Misamis was the capital. This means to say that in 1860, the former visitas of Yligan had become towns of the Misamis district, including Initao which numbered 3,412 persons.

From these information gathered from primary and secondary sources, it can be analyzed, that the findings of this study have validated the second hand accounts saying about *Bugwak* being the first settlement and a fort constructed atop *Ilihan Hill*. As it was mentioned earlier in this paper, that a fort was necessary to defend Initao from Moro attacks and *Bugwak* and described as a poor location for a town proper. Indeed we can conclude that after the Jesuits reasserted their rights on the lands west of Punta Sulawan, they returned to Initao. The latter being a visita of the Province of Iligan. Recognizing St. Francis Xavier as the patron saint of Initao is a clear proof of this.

The findings of this study pointing 1836 as the year of establishment of Initao, as a Pueblo, indeed, coincided with Acut's findings, as the latter on the other hand, stated Initao as a visita in 1832. Therefore it can be surmised that Initao,

from 1832-1836 was a visita of Iligan, but in 1836, it was elevated into a town status. In 1860 Initao reported a population of 3,412.

Kanitaw: Kernels of Historical Truth in Higaunon Stories

Higaunon, who speak the *Binukid* language, tell and retell stories about their experiences and exploits in countless times, from generation to generation. This oral transmission to the community made the memory of the place collective. And for them, Misamis Oriental was traditionally a *Higaunon* territory. In the words of Connie Saturno, *Bae Keram* (2015) states that "...before, the tribe did not have any sort of sitio or barangay but rather a territory from Tagoloan to Bayug..."

Tagoloan is a municipality of Misamis Oriental and Bayug, a sitio in Barangay Hinaplanon, Iligan City in Lanao del Norte. The area was said to be inhabited by the tribe which is found in Northern Mindanao. Apparently, Initao was included which is located in the midway of the boundary points above-mentioned.

Initao etymologically, originated from the term *kanitaw*. *Kanitaw* means "ours". As a possessive pronoun, *kanitaw* refers to an area which was traditionally 'owned' by the *Higaunon*.

"...before, when the tribe stand-by because Naawan was left since it is territory but it bears no name, it is only named because it was left. That is why a leader of the tribe said that "dia kay ta Kanitaw" "let's go there because we have a place there" [pointing Initao] which means "our place" that is the meaning of Initao means, Kanitaw, ours... " (Saturno, 2015)

Some of the places found in Initao were also derived by the Higaunon. **Butay**, where pottery and other artifacts were unearthed (Junio, 2006), is a native

term which meant elevated (Sangcoan, 2015). The present-day sitio *Butay* is part of barangay Poblacion, the sixth (6th) Purok of the barangay, which is situated in a higher ground.

Figure 4: A picture showing the elevation of **sitio Butay**

(The picture is taken from the **Ilihan Hill** as the point of reference)

© Researcher (taken last March 10, 2015)

This is a photo-evidence showing the elevation of sitio *Butay*. The area between *sitio Butay* and *Ilihan Hill*, was the first human settlement in Initao (Junio, 2006).

Ilihan Hill (also referred as Ilihan Hill) or the *Ilihan* word itself is a Higaunon term which means a fortress (Sangcoan, 2015). Erreciones del Pueblos (n. d.) mentioned that a proposal was sent for the construction of a fort in the said site. This must have been the reason why the native settlers came to identify the place with a fortress, thus, the place named *Ilihan*.

Figure 6: The topmost portion and the only plain area of the **Ilihan Hill**

© Researcher (taken last March 10, 2015)

Sitio Bugwak is derived from a *Higaunon* term (Sangcoan, 2015). *Sitio Bugwak* of the Poblacion area is located beside the Initao River. Sangcoan (2015) elaborated that the term means surge in the English language, definitely referring to the river waters flowing in the area, near the settlement. The latter is said to experience frequent river flooding. It is likely possible that, this place was the '*pinagbayanan*' or old town established by the Spaniards. The unsanitary condition of the place prompted a petition to transfer the Poblacion of Pueblo de Ynitao to *Sitio Silacan*. The petition papers stated the frequent river flooding experienced by the settlers.

Figure 7: The Initao River and the **Sitio Bugwak**

© Researcher (taken last March 10, 2015)

Sitio Tagpaco, has two versions of its origins. First is based on a story of how the place of Initao was often visited by migratory birds. It is a *Higaunon* term which originated from the word *tagpak* or in English, "to land on". A *Balete* tree, is said to serve a sanctuary for these birds, which became a landmark in the present-day sitio Tagpaco in Sinalac, Initao, Misamis Oriental. (Saturno, 2015)

Another version pointed out by Sangcoan (2015) that *Tagpaco* was named after an edible river fern which

abounded along the banks of the tributaries of Initao River. The edible fern is locally called "*pako*".

Pako or in scientific term is called *Athyrium esculentum*. *Athyrium*. It comes from the two (2) Greek words, "*a*" and "*thureous*" which means "without" and "shield". *Esculentum* is a latin word for the edible. Thus it is an edible unshielded fern. The young leaves of the fern are eaten as salads and often sold in local markets in the provinces. *Pako* is a member of a large fern family, *Aspidiaceae* and a very large genus represented by about 600 species in the world in which the 63 are known in the Philippines. Usually grows in wet open places or long streams and may reach a height of 1 (one) cm (centimeter) (UP Science Education Center, 1971). And according to oral accounts, the place name, *Tagpaco*, was coined from the said river fern (Sangcoan, 2015).

Figure 8: A picture of young **Pako** leaves
© google.com

Oguis, is a barangay, which literally means white (Sangcoan, 2015). A story of Sangcoan (2015) suggests that in earlier times, an albino Carabao was found in the area. Thus, the place eventually is called **Oguis**. At present the albino Carabao is no longer found in the area. Yet when the migrants had arrived the said Carabao is still present (Vedra, 2015).

Figure 9: A picture of a white Carabao

What's in a Place Name?

The language used for these place names presented in the preceding section is already indicative of who derived them and what group peopled the areas. These toponyms pointed to the *Higaunon* roots of some of the areas of Initao. *Kanitaw* itself reflects how the Higaunon perceived the area as theirs, part of their traditional territory which knew no political boundaries, like what we have today. These toponyms further reflected some of the aspects that were not explicit in Spanish documents.

The nomination of place names in Initao would be categorized into many types: naming based on geography and human activity or events that are associated with the place. There are also place names ascribed based on the floral species abundant in the area or legends and myths, which are largely imaginative. Although the factuality of legends and myths are in question, yet they connote cultural practices of the natives who once people the area of Initao.

Most of the places which bear names based on *Higaunon* origins and stories are found in the hinterland areas. *Butay* and *Ilihan* are the evident examples. These connote that when natives were pushed back to the interior, hinterland settlements were developed. The location of *Ilihan* was associated with the fortress erected in the

same area. This can be surmised that the frequency of natives in the area, made them call it after a built structure that became a landmark. Places were also named after its flora and fauna, like the case of *Tagpaco* and *Oguis*, respectively.

What's in a place name? Indeed the names not only for the identification of the places. They also carried the human experiences of the people who created them, reflecting their settlement patterns and their natural environment.

CONCLUSION

The findings of this study and the content analysis made reveal that why Initao knows little of their history, because primarily, there was little documentation made by the Spaniards about the place. It was as if, Ynitao was not worthy of mention. That Ynitao did not make history to be worthy of mention in the Spanish texts. However, the colonial historiography still become useful when "cracks of the parchment curtain", show fleeting glimpses of their early lives, providing hints as to what Initao was like in the past. Although the initial scrutiny made using the accounts in Blair and Robertson's *Philippine Islands*, made mention of Ynitao, only once, when in 1754, Ynitao suffered Moro attacks four (4) times. But despite these insufficiency of direct reference, the sources indirectly stated that during these periods, Initao was already a mission village, part of the military district of Iligan. That Initao bore brunt of pillages made by the Moros, which proved to be punitive and defensive - sporadic attacks which led to erection of a fortress of defense. Other than that, only *Errecciones del Pueblos* was able to explicitly tell that Ynitao became a town in 1832 and its poblacion was transferred in a more preferable location, following a petition.

Indeed, the initial thesis of this study that Spanish documents would reveal

scant data is proven correct. But toponyms offer clues as to the settlement pattern of the natives in Initao and what group peopled it. *Higaunon* undoubtedly, were the natives referred as “the natives who were vassals of King Corralat”. This we can conclude based on the etymological origins of some of the first places of human settlement in Initao. These place names were eventually adopted as names for sitios and barangays in Initao.

Indeed, this attempt to look for Initao in written texts produced by the Spaniards and in the collective memory of the *Higaunon* people is not a labor in vain. In fact, it yielded information telling the people that Initao didn't just sprout from nowhere. That Initao had beginnings and trivial it may be, Initao also has a place in history.

RECOMMENDATION

This study paper does not claim perfection due to some weaknesses and shortcomings that were confronted during this undertaking— the lack of time and resources, thus, the following are recommended for the betterment of this paper:

1. To look into other primary sources which talk about Initao in order to find the missing pictures that might complete its history.
2. To make a similar study however using secondary materials or intangible materials. They might offer information that written and primary sources failed to disclose.
3. To make a similar study about the toponyms with Cebuano origins, telling the story of the place from a migrants' perspectives.

Abstract:

Zoning and rotation of power was designed to enshrine peaceful co-existence especially amongst diversity of ethnic nationalities as well as those with different religious and regional backgrounds. In Nigeria, the country is known to have the largest population in Africa. It is a State with different ethnic nationalities across the geo-political zones. Zoning became a tool as used in 1999-2007 to enshrine peaceful co-existence between the Nigerian people whom are known to have different ethnic, religious and regional backgrounds. The quest for political power and the control of the seat of power in the country's capital, Abuja, became a political tussle. The research paper seeks to investigate the role of the zoning formula model on how it could be used to resolve the continuous agitations for the control of the Nigeria's seat of power, the presidency, especially with the new agitation for the creation of Biafra Republic as spearheaded by some quarters from the South-East Region of Nigeria. The work made use of qualitative research through the conduct of interviews, as well as the review of previous literature. The findings revealed that, each of the six-geopolitical zones in Nigeria needs to have a representation within the top six positions of the country's leadership. Thus, zoning formula model would be a panacea for resolving conflict between the different ethnic nationalities with different religious and regional backgrounds. The paper recommends Nigeria to apply the zoning formula model as attributed to this research to resolve the conflict therein.

Keywords: Conflict Resolution, Nigeria, Zoning Formula Model, Biafra Agitation.

Introduction

The Nigerian State is a strategic country in Africa given her position as the country with the largest population of over 170 million people (Terwase, Abdul-Talib & Zengeni, 2014; Terwase & Madu, 2014). Issues concerning Nigeria are viewed globally and her position in Africa as the largest economy also strategically placed her in the view of community of nations. Nigeria's leadership role in Africa among other countries such as South Africa, Egypt, Kenya, and Ethiopia, is to see peace and security sustainability within the continent. More so, there are a lot of challenges that faces the continent such as political instability in some countries, poverty, illiteracy, as well as health challenges.

This paper thus, focused on the peace and security dimension with the view of understanding how peace and political stability could be promoted within Nigeria as Africa's most populous country. The country has faced so many challenges in the past and present as it relates to security sustainability. We have seen the likes of the Niger-Delta conflict and the Boko Haram conflict which has bedeviled the country's peace and security sustainability (Idemudia & Ite, 2006). But the very issue here regarding this paper is the Biafra agitation which we have seen in the time past during the 1966-1970 Nigeria's civil war. The civil war lasted for a period of three years and a lot of people were consumed during the war as many were killed (Tamuno, 1970).

Leadership tussle in Nigeria has remained the very primary issue that makes the Nigerian people to be divided as it relates the quest for political power in Nigeria. This is well seen through the division of the country between the North and South along

geographically segregation. After the Nigeria's civil war in 1970, the country is yet to produce a leader the South-East geopolitical zone of the country in as such as the other zones where the two major ethnic nationalities had produced leaders who ruled Nigeria from one time or the other after the country's civil war.

Nigeria's quest for power mostly revolves around the three (3) major ethnic nationalities known as the Hausa-Fulani, Igbo and Yoruba. However, the country is endowed with more than 250 ethnic groups whom are known as the minorities outside the three major ethnic groups. Agitations within Nigeria are mostly stirred through the quest for power control between the North and South. In the North, we have the Hausa-Fulani as the major ethnic group while in the South, we have the Yoruba from the South-West and the Igbo from the South-East as the major ethnic nationalities in Nigeria. But the question is when will the Igbo rule Nigeria?

After the civil war, the hope for an Igbo presidency remains the dishing part during the military rule where the North dominated the country's leadership. The return to civilian rule in 1999 is yet to answer the same question of an Igbo presidency. The paper therefore, would bring to the fore more light on how such agitations for the quest for power could be resolved using the zoning formula model as proposal to the federal government of Nigeria for adoption and implementation in order to resolve the current agitation where not only the Igbo would be allowed to rule the country but all the six geopolitical zones would have equal opportunity to do so.

Research Objectives

The research work intends to bring the strategic model to the fore on how it could be used to resolve the quest for power by the Igbo ethnic nationality and as well proffer solutions on how it could resolves other issues such as religious and ethnic tussle for political power in Nigeria. Specific objectives are:

- i) To bring to the fore on how the Zoning Formula Model could be used in resolving the current agitation for the creation of the Republic of Biafra as a Separate State from Nigeria.
- ii) To suggest to the Federal Government of Nigeria on how the Model could be applied in resolving the ethnic and religious divides in Nigeria as it affects the peaceful co-existence of the country as well as cases of political instability.
- iii) To showcase how the Zoning Formula Model could be used in uniting all the six geopolitical zones of the country.

Methodology

The method used in this research is qualitative approach through the conduct of interviews for the purpose of collecting data. Both primary and secondary data were collected through the usage of interviews, journal publications as well as internet sources. Other method includes the selection of six states to represent the six geopolitical zones of the country such as

Benue State, Oyo State, Taraba State, Kaduna State, Rivers State and Enugu State.

Discussion of Findings

There were issues that necessitated this research and findings were equally drawn from the study which we shall be discussing below.

1) The Marginalization Factor:

The big question is who is the marginalized in Nigeria's political equation? And why the marginalization process in Nigeria? At the end of the Nigeria's civil war in 1970, all those who have ruled the country were either from the North or the South-West. This forms the first stage of marginalization in Nigeria's political equation. *Table 1* below has demonstrated how the country has been ruled from 1966-1999 which were mostly the years of military rule in Nigeria's political system. Most of the leaders were from the Northern part of the country starting from Yakubu Gowon who assumed power in 1966 and ruled till 1975 when his government was overthrown by another military coup.

Here, the North had ruled from 1966 to 1976, and 1979 to 1999. Although, these years were practically in the control of the country's leadership by the North but the South had her own share of power through the leadership of Olusegun Obasanjo in 1976-1979 and the few months of Ernest Shonekan's rule from August, 1993 to November, 1993. However, the *table 1* also has shown that, the South-East which is the Igbo domiciled zone had no share of the country's leadership.

Table 1*Nigeria's Leadership 1966-1999*

S/No.	Leadership Position/Zone	Duration
1	Yakubu Gowon, North-Central	1966-1975
2	Murtala Mohammed, North-West	1975-1976
3	Olusegun Obasanjo, South-West	1976-1979
4	Shehu Shagari, North-West	1979-1983
5	Muhammadu Buhari, North-West	1983-1985
6	Ibrahim Babangida, North-Central	1985-1993

II) Geopolitical Segregation:

The Nigerian State is subdivided into six geopolitical zones which include the thirty-six (36) States of the federation as well as the country's federal capital territory, Abuja, known as the nation's seat of power. These six geopolitical zones connote the North-West with states such as Sokoto, Zamfara, Kebbi, Kano, Katsina, Jigawa, and Kaduna. The North-Central has Benue, Nassarawa, Plateau, Niger, Kwara and Kogi. That of the North-East includes Borno, Yobe, Taraba, Adamawa, Bauchi and Gombe. The states from the South-West are Lagos, Ogun, Oyo, Ondo, Ekiti, and Osun. South-South states are Delta, Cross River, Bayelsa, Rivers, Akwa-Ibom and Edo. The South-East includes Anambra, Imo, Enugu, Ebonyi, and Abia. These are the thirty-six states of the federation located across the six geopolitical zones.

All the zones need equal representation at the federal level so as to ensure the

integration of the totality of the Nigerian people at the federal level irrespective of their affiliations and backgrounds. This would promote a sense of belonging among the people and a sense of accommodation where all the people are united into the whole which is known as the Nigerian State. In all these zones, there are peculiarities such as the majority and minority question. Nigeria has three major ethnic nationalities that are found among the Yoruba of South-West region, the Igbo from the South-East and the Hausa-Fulani located across the Northern region.

An introduction of the zoning formula model is to ensure there is equal representation in Nigeria's political governance especially at the top level occupying the seats of the President, Vice-President, Senate President, Speaker of the Federal House of Representatives, Secretary to the Government of the Federation and the position of the Chairman of the Ruling Political Party in Nigeria. *Table 2* above has shown that, when power and seat of the

president resides in the North for a period of time, it will go to the South and when the North had held their share. This is where we call it, zoning and rotation of power between the North and South as seen in that zoning formula model one. The North-West would occupy the position of the President for the proposed five years single tenure after which, the South-East would be allowed to occupy the seat of the president for another five years single tenure.

After power has been shared between the North-West and South-East for a period of five years each, making ten years, it would go to the North-Central for another five years. That would promote peaceful co-existence between the North and South. As proposed in *Table 3* of the zoning formula two, the position of the president would rotate to the South-South after five years of the country's leadership in the North-Central. *Table 4* of this research work indicates that power would rotate from the South-South to the North-East and after which it would be the turn of the South-West. This would resolve all forms of political marginalization as regards power sharing between the North and South as well as the six geopolitical zones in the country.

The essence of the zoning formula model is to accommodate all the zones as seen in the *model 1-3* of this research work. It is all designed as a tool for unity in diversity of the ethnic-nationalities in Nigeria. It gives a sense of belonging. Through the process, there is promoting of national unity and national integration of the Nigerian people. The work of Duruji (2012) suggest that, the renewed agitation of the Igbo people from the South-East geopolitical zones is as a result of the zone been marginalized within the Nigerian political system. This could

also be suggested to the fact that since after the Nigerian civil war 1967-1970 and till date (2016) under study, no Igbo man or woman has occupied the seat of the President of the Federal Republic of Nigeria.

Conclusion

Nigeria's unity and integration is bedeviled by the factors of ethno-religious and regional segregations. These forms the bases where there are divisions among the people irrespective of their nationalities as seen in the case of Nigeria over time. The most disturbing issues revolve around the quest for political power especially in the case of the seat of the country's presidency. This paper has attempted bringing to the fore on how such issues that bedeviled the country's unity could be resolved using the zoning formula model. The focus most especially is in the direction of the renewed agitation for the creation of the Republic of Biafra which is seen as a threat to Nigeria's national security.

The paper therefore, proffers that; the zoning formula model could be applied by the Federal Government of Nigeria in resolving such agitations where all the zones would be equally represented at the federal level. It would also solve the problem of rotational presidency thereby providing equal opportunities for all the zones as well as solving the ethno-religious differences on who and when to occupy the country's top positions. This is purely aimed at uniting the people through the process of national unity and integration of the Nigerian people. This research work recommends the constitution of Nigeria to be revisited and should enshrine the zoning formula

model for the purpose of equal belonging and accommodation of all people.
representation and to promote a sense of

POLITICAL MARKETING VS POLITICAL PARTY IN LOCAL ELECTION BEKASI CITY 2012

Nurliah Nurdin¹

Political marketing is not a concept to "sell" a political party or candidate to the voters, but rather a concept that offers how a political party or candidate can create programs that relate to actual problems². Therefore, in the multiparty system, Political Marketing require for large and small parties to promote their program as well as their candidate. Small parties applying political marketing to get popularity while major parties use it as a tool or instrument to maintain votes and avoid lower voters in election.

Political Marketing can be done using survey agency. It is a phenomenon of agency survey and quick count in influencing public sympathy. In general, the survey results make public choose underdog figure from the survey and the survey results make public choose leaders who tend to lose in the survey. Bekasi City, West Java Province has implemented Election Mayor / Deputy Mayor in 2012 for the period 2012-2017, which was won by the a pair Rachmat Effendi- Ahmad Syaikhu. Obviously winning the election in the city of Bekasi is not easy and not cheap. Moreover, during the election battle was followed by five pairs of candidates including incumbent Rachmat Effendi with Akhmad Syaikhu. The incumbent partner was supported by Golkar Party, PKS, PKB, Hanura, while the other couples were carried PAN, Gerindra and PPP who was used to be the Secretary Kota Bekasi Dada Mulyadi paired with soap opera actress Lucky Hakim. Meanwhile, the PDI-P, the wife of former Bekasi Mayor Mochtar Mohammad, Sumiyati (SM2) with the Chairman of Commission C DPRD Kota Bekasi Anim Imanudin from PDIP. Democratic Party carried Awing Asmawi and Andi Zabidi. In addition to candidates promoted from political parties, independent candidates also enliven the arena of elections the Chairman of Bekasi City, DPC Peradi Bekasi Salih Mangara Sitompul and Anwar Anshori Mahdum³. Here, we could assume that political party barely has no vision in promoting their candidates, for example the former major was committed corruption, but party still blindly promote his wife.

Bearers of political parties not only serve to give tickets as a political vehicle but the ideal level required to conduct internal selection of the prospective candidates on worth selling them in the community. Factors of integrity, a clean track record and leadership capacity should be the candidate requirements. The fifth pair is a fairly well-known figure among the community and phenomenal Bekasi. It is certain, that the best strategy that can win the hearts of the people of Bekasi. In this case it takes a mature marketing partner, both contain characters prospective partner, vision and mission to their work program. It is high demands of fame candidates who contrary to the ability of political parties to give full support to the nomination process, and the election campaign, it is unavoidable the growing role of third parties outside the political parties to sell candidates who have gained political party ticket. The fact in some areas show the same

³ Accessed at <http://metro.sindonews.com/read/678746/31/pilkada-bekasi-diikuti-5-pasangan-calon-1349901847> on 11th June 2015

symptoms that parties only be used as a political vehicle alone. Once elected, the candidates felt no connection with the parties supporting him. When we focus to the mayor and deputy mayor elected, namely Rachmat Effendi and Ahmad Syaiku, it can be concluded that they have the best level of political marketing, the interesting thing is they won a political fight with only one round, it is certainly not easy. 43.87% victory is proof of the greatness of both partners in attracting the attention of people in the major Bekasi election.

Bekasi local elections held on December 16, 2012 became the arena of political constellation in Bekasi, West Java. Certainly, marketing strategy though only for performance used by the candidates and the parties supporting him. Here we need a mechanism to invite public participation in the political parties ranging from the recruitment process for candidates of political parties, the track record of the candidate, the campaign process, the funding process, and the process of election of candidates. Society wish all the process is open and transparent. On one occasion, as quoted in the Daily Independent, Chairman of the Parliament of Bekasi, Ronny states "... to inform the candidate to the public via the media about what is in the survey, who, how methods of survey and survey institute a credible, objective and be independent."⁴ This statement shows the survey institution to boost the role of the election of the candidates is very large.

In the era of massive democracy and direct elections, survey organizations become an integral part of any attempt to introduce and raise the election of a candidate. However, the downside is too much, including political cartel to do if it turns out this survey organizations are not neutral, and only " to sell" candidates who have paid them. It is also stated by the Coordinator of Clean Indonesia Movement (GIB), Andie M Massardi assessing survey institute has become a business cartel caused it doubles as a consultant or political contestant winning team.⁵ Even with Andie plainly stated: "Polls grow into democracy parasite that sucks the power of our democracy when they (the survey agency) released a quick count by the spirit is not neutral, partisan as a propaganda tool,"⁶ So many roles undertaken by business company in encouraging the election of candidates to be very interesting to understand in order to prevent mismanagement in improving the quality of candidates elected so that the people really vote for a candidate who has the capacity and leadership to be honest not as the result of a political cartel that would mislead the government.

When the candidate does not get the maximum support of the community there is a tendency that the level of legitimacy of the government running. Based on data from LSI, it is ranging from 51.19 percent, people who did not participate in the elections and only 48.81 percent of the ballots to the polling stations (TPS). Allegedly the cause of low public participation

⁶ ibid

is not due to a lack of socialization elections⁷ but more inclined because of the figure of the candidates. In addition, on violation occurred when the candidate winning strategy was an invitation to civil servants to choose a particular candidate and the dissemination of leaflets vilifying one of the candidates.⁸

The strategy of winning in the elections in Bekasi does not specifically be a problem in the city of Bekasi alone, if political strategies are not mature in a political party, then all sorts of ways that are not legal and unsympathetic done to achieve more voters including the swift practice of money politics. Researchers interested in examining how political marketing was done by the mayor and deputy mayor elected Bekasi City, so this study entitled "Political Marketing Strategy In Winning Candidate Regional Head Elections At the head of City of Bekasi In the Year 2012"

Identification & Formulation of the Problem

Departing from the above problems, the authors identify the problems regarding local election in Bekasi City are as follows: 1) The rise of political cartel in marketing strategies to encourage the election of candidates for regional heads. 2) The role of political parties merely replaced by the third business party to promote the candidates electability. 3] There was a change of management in political marketing political parties to win voters .4] The low public participation election.5] Lack of public interest to exercise their votes.6] Independent Candidate is difficult to compete other political parties based candidates who have backgrounds. Based on these problems, the questions of the paper are 1] What was the strategy applied by candidates to win local election in Bekasi City, West Java. 2] What were the factors supporting and inhibiting the winning candidate in the local election of Bekasi City?

Theoretical Overview

This section will explain the theories, laws and regulations that help authors analyzed political marketing problems that occur in the city of Bekasi. The role of political parties versus survey organizations are likely to be the winning team the candidate becomes the new things that occurred in the multiparty direct election for head of local and national elections.

Political Party

Carl J. Friedrich stated that a political party is an organized group of people who are firm with their goal to seize or retain political control of the government for his party leader and in parliament to get their benefit of power⁹. R.H. Soltau: stated that a political party is a group of

⁹ Miriam Budiardjo. Basics of political Science, published by PT Gramedia Jakarta 1977, page 161

citizens were somewhat organized, which acts as a political unit and that the benefit aims to master the power to choose and implement government policy¹⁰.

Functions of political parties at least mention below¹¹:

- a. Political socialization; The process of formation of political attitudes and orientation of community members in terms of the delivery of the message, political socialization is divided into two, first, political education is a process of dialogue between political parties and the voters. In this process the community will begin to understand the values, norms, symbols, that attached in political party. Second, political indoctrination, the process to the public by the government to follow the values, norms which are considered good by the authorities.
- b. Political recruitment; election or selection as well as appointment of a person or group of people to carry out a number of roles in the political system in general and the government especially. At this unusual recruitment of cadres - the selection of party cadres in the selection of premises specifically set by the next party cadres of the party will be the successor to the party and cadres of political leaders in the future.
- c. Political participation; political participation is a process of community participation in choosing representatives and political leaders turn, influence the process of policy-making and implementation.
- d. Guiding interests; this guide means being the main key player to summarize, to accommodate and to integrate the various interests that exist. Furthermore, political parties and the duty to convey the interests of the community.
- e. Political communication; transmission of information about politics, public policy and necessary issues concerning public from the government to the community or society contrary to the government from the community
- f. Control of the conflict; in this case political parties serves to control the individual conflict to a larger conflict. Political parties can be a mediator to unify the differences that the security and tranquility.
- g. Political control; political parties serves to control, supervise as well as guarding the government works, political parties become aligners when a deflection or deviation from the rule.

Political Marketing

Political power struggle in several countries only to find a formulation that is reliable in attracting more sympathizers in community in order to gain more voters in the elections. For that reasons, people should know about the party and both terms of ideology, their figure as well as vision and mission of the party. On his way political parties began to market themselves to the public, giving rise to political marketing. Political marketing approach is trying to systematize and

¹⁰ Miriam Budiardjo, Op.Cit. 161

¹¹ Ramlan Ssurbakti, Op. Cit. 149-154

bring tips or tricks to achieve success. With this approach an individual or political organization can exist and persist. Marketed in politics are people, not things. However, people here not in a physical sense or just performance. In politics, which is sold mainly is the idea, but selling political ideas different from selling the idea of housing development or apartment nor does the same by offering promise of rising stock prices or the rise in the exchange rate. Politics come into contact with the ideological aspect.¹²

Political marketing purpose is to help political parties to become better in recognizing people represented or targeted, and then develop a work program or political issues in accordance with the their aspirations and able to communicate effectively with the public¹³. O'Shaughnessy 2001 found political marketing differs from commercial marketing. Marketing politics is not a concept to sell a political party or candidate to voters, but a concept that offers how the program related to the actual problems. Political marketing is the permanent concept to be done constantly by a political party or consistently in building trust and public image.¹⁴

Furthermore, *Lees-Marshmant* mentions that political marketing should be viewed comprehensively, *Lees-Marshmant* political marketing is more than just a political communication; however applied in the whole process of organization of political parties. It is not only about the campaign but also at the stage of how to formulate a political product through the development of symbols, images, platforms, and programs offered; political marketing using marketing concepts widely, it is not only limited to marketing techniques but also to marketing strategies, from technical publications, offer ideas and programs, and product design to market intelligent and processing of information; political marketing involves many disciplines within the discussion.

Nursal in Firmanzah stated that three approaches that can be done to look for and obtain political support or political product market, namely¹⁵:

1. Push Marketing, political parties trying to gain support through the stimulation given to the society. Society needs to obtain encouragement and energy to go in the voting booth and cast a contestant. Besides, political parties need to provide rational and emotional reason to the voters to be able to motivate them and willing to support political party or their contestants.
2. Pass Marketing, this strategy is applied by individuals and groups that can influence the opinion of voters. The success or failure in the future campaign will be determined by the selection of these influencers. The more precise the selected influencers, the more effects are achieved even greater influence opinion, the assurance and public mind.
3. Pull Marketing, focusing on the formation of political image or the image of the product. Typically used mass media.

¹² M. Alfian Alfian M, *Being Politic's Leader: Talks of Leadership and Power*, by. Jakarta : Gramedia Pustaka Utama, 2009 Page 305

¹⁴ Firmanzah, *Op.Cit*, page 156

¹⁵ Firmanzah, *Op.Cit*, page 216

Furthermore, political marketing approach must be carefully through the political positioning strategy with a view¹⁶: 1). The political positioning strategy will assist voters in determining who will be selected, clear political positioning will allow voters to identify a political party once distinguishes it from other political parties. 2). a clear political positioning also helps members of the political party itself in shaping their identity. 3). a clear positioning will also help develop a strategy in their approach to the public. 4). clear positioning will also assist in directing what kind of political resources they need.

Positioning in marketing is defined as all activities to impress on the minds of consumers so that they can differentiate the products and services produced by the respective organization¹⁷. Political marketing has some similarities with the business marketing, as illustrated in Table 1¹⁸

Table 1. Similarities Between Commercial Marketing and Political Marketing Evolution

Political Marketing		Commercial Marketing	
Party Concept	An internally driven organization runs by party bosses and centered on the political party.	Pre-industrial marketing	Products are selected by distributors and delivered to consumers generically. When something sells out, more is ordered.
Product Concept	An internally driven organization run by Washington insiders and centered on the candidate. Stresses finding the best possible candidate.	Product Concept	Sells the quality of the product through the brand. Example: Model T Ford manufactured for quality.
Selling Concept	An externally driven organization run by Madison Avenue experts and centered on the candidate.	Selling Concept	Companies like Procter and Gamble create markets for new products. They begin to experiment with

	Attempts to create favorable impression of the candidate by the voter.		image-based advertising.
Marketing Concept	An externally driven organization run by marketing experts and centered on the voter. Polling determines the message sent to the voter.	Marketing Concept	Companies first identify consumer needs and then develop products to meet those needs.

Source: Newman, 31-4 (c.f. Grigsby, 1996)

According to this table, political marketing is a facility of exchanges process between arts and knowledge. A set of program for political party is micromanagement in electoral campaign that coordinated all link and communication and organization paralleled on the name of political party, and to apply all marketing research and to be focused on resources.

Direct Local Election in Bekasi City

Bekasi City local election was held in 2012 when five pairs of candidates running for Mayor and Deputy Mayor. The candidate Rahmat Effendi - Ahmad Syaikhu managed to lead four other pairs of candidates. The pair is known to excel in the vote while the election of Bekasi City on a quick count results (quick count) released by the two survey organizations namely the Indonesian Survey Institute (LSI) and Indo Barometer and Strategic. The survey by the two institutions, the couple candidates for mayor and vice mayor of Bekasi, Rahmat Effendi - Ahmad Syaikhu carried by the Golkar Party, the Prosperous Justice Party and the National Awakening Party have gained voters above 42 percent. Director of Public Citra Indonesia, Hanggoro Doso Pamungkas explained that, a quick count conducted by using a seal 250 polling stations with 116,000 respondents.¹⁹

In addition to the two survey organizations mentioned above, there are two institutions other survey conducting a quick count (quick count) on election Bekasi, both the Cooperation of internal Democrats with IBI Consulting who also favor the couple Rahmat Effendi-Ahmad Syaikhu with the vote Public image 43 percent and Indonesia (CPI), which also favor the same pair with 43.87 percent of votes.²⁰ So, there are a total of four institutions that participated in the survey quick count (quick count) on election Bekasi. The role of survey organizations in each elections is a concern in our country. Since the reform, virtually no elections without intervention survey organizations through rapid count (Quick count). Pollsters have always been at the forefront of publishing voting results on election. In the process of democratization, the survey institute is a necessity and euphoria of political parties is still a bureaucratic oligarchy. However,

¹⁹ <http://www.suarapembaruan.com/home/pasangan-pas-unggul-di-pilkada-kota-bekasi/28279>

²⁰ <http://jakarta.okezone.com>

apart from that survey organizations should really be in the corridors of professionalism. Survey agency was on track to be controlled so that it does not damage the existence of the democratic order. Pollsters cannot be separated from politics because the principle of representation and is an important element in designing a decision and policies.

The existence of a survey institution was legally been reinforced by the decision of the Court 24 / PUU-XII / 2014, stated that "Article 247, paragraph 2, paragraph 5, paragraph 6, Article 291, and Article 317, paragraph 1, paragraph 2 of Law No. 8 Year 2012 on the General Election of DPR, DPD and DPRD that contrary to 1945 in which does not have binding legal force.²¹ Constitutional Court judge until now no one showed the quick count results cause unrest and disturb public order.

Political Marketing Campaign Candidate Pair of Regional Head of Bekasi City

As has been mentioned earlier that the process involves the concept of political marketing which offers political candidates into a program systematically with the intent to sell the candidate to the public in a manner that is programmed, structured and has a timeline that must be implemented so that victory can be achieved.²² This function properly attached to a political party because the election law mentioned pairs of candidates proposed by political parties or coalition of political parties. This function does not just give a card or ticket to the candidate to advance and to compete together candidates from other political parties, but it is inherent responsibility to create programs and measures systematically that the candidate is able to win votes in elections.

Lees-marshmant theory which states political marketing is more than just a political communication but is an overall process of political party organizations ranging from political campaigns until the product formulation through the development of symbols, images, platforms, and programs offered. It means that the parties themselves must already existing mechanisms of marketing techniques and marketing strategies, starting from technical publications, offer ideas and programs, and product designs to market intelligently and processing information. Therefore, it cannot be denied that political marketing involves many disciplines. In connection with this, Mrs. Chusnul Mariyah, Ph.D., Commissioner of the Commission in 2004-2009 in an interview stated:

"... .. Political marketing is part of the role to be performed by the parties. The role of political parties today seem to follow directions in the style of the American model, capitalist, who started from the power of the media, etc. The development of political parties and political marketing we just imitate it. While many other models such as the Anglo-Saxon. Media today many makes framing and agenda setting rather than as a trust or a public trust, the parties eventually evolve towards there, in this situation candidates who have money who wins, the candidate does not have a network,

²¹ Stated by Dr. Lanang Putra Prabawa, an Academics and Political Analysts at <http://news.detik.com/kolom/2549309/lembaga-survei-antara-integritas-kekuasaan-dan-komersial>

²² Firmanzah, Op.Cit, page 156

resources, does not have a policy, all do not have eventually they rely on institutions that had it all, namely the marketing of political institutions, it is purchased, it is a matter of supply and demand "²³.

This statement provide an adequate explanation for the light that free competition takes many capacities ranging from campaign program, what policies will be sold to the public, how to set up some media that assists positive news to prospective and network resources, all of this should owned by a political party bearer of the candidate. However, if it is not owned, then the the institution that has the resource. That is why the survey institute which originally only wanted to introduce to the public audience about the candidates who will advance in the elections turned into a winning team depending on how many candidates can pay. The inability of political parties to collect a number of resources makes the candidates do not possess self-confidence if one does not use the services of a political consultant as well as a winning team.

Further mother Chusnul Mariyah expressed about it:

"... Political conditions that make them a lot of limitations, they are not confident if they are not using surveys, involved NGOs political consultant, unfortunately, political parties are not beating their own drums themselves, rather go with the flow, ideology is still lacking, because it is still a power struggle."²⁴

In line with the argument that Mrs. Chusnul Mariyah Nursal in Firmanzah²⁵ which mentions three approaches that can be done to seek and obtain political support political or market products, namely: Push Marketing, political parties are trying to get support from stimulant given to voters. Society needs to obtain encouragement and energy to go in the voting booth and cast a contestant. The theory apparantly has not been proven in the political party who advanced in the elections of 2012 Depok. Description of Bawaslu province, Supervisory Committee and the City of Bekasi City Election Commission²⁶, political parties have not implemented socialization generally that functions should be attached to political parties. Instead they are providing the foundation for organizing the elections as KPU to dominate the socialization. Moreover, there is a question on political party function that should be able to provide a number of rational and emotional reasons for voters to be able to motivate them and willing to support the party' contestants. There are still many political parties do not practicing transparency in determining the candidate who will get tickets to the elections. This also makes the degradation of the candidate in the election.

²³ Interview with Chusnul Mar'yah ,PhD in Depok, Saturday, 13th of September 2015

²⁴ ibid

²⁵ Firmanzah, Op.Cit, page 216

²⁶ Interviewed on September and October,2015. To Commissioner KPUD Bekasi, Panswaslu Bekasi City also Bawaslu Indonesia.

Pass Marketing strategy in which individuals and groups can influence the opinion of voters through certain strategies are still under-used. If the factors that affecting voters opinion such as media, then there is a tendency that the couple will not be elected. Accumulation of future success or failure will be determined by the selection of these influencers. The more precise the selected influencers, the more effect achieved even more than opinion influence, the assurance and public mind. In Kota Bekasi election candidates who are less advanced this approach, the strategy to create the image or the formation of a political label that sells pairs of candidates. Of course this program requires the media to create positive labels for the candidate. It is still very under-used by a political party or coalition of parties that brought the candidate. The birth of a survey institution concurrently as the winning team the candidate is also due to several factors which in theory performance, Firmanzah stated also the lacking political parties.²⁷ In encouraging the election of the candidate is also required positioning strategy, means parties must be able to explain why a certain candidate pair is selected and given a ticket.

Among the advanced fighter in the selection of candidates for mayor of Bekasi in 2012, information about the reasons parties choose the candidate is very vague and unclear. When this is done the least clarity of political positioning will allow voters to identify a political party once distinguishes it from other political parties. Clear political positioning can help members of the political party itself in shaping their identity; a clear positioning will also help develop a strategy in their approach to the public; a clear positioning will also assist in directing the politics of what kind of resources are needed; Positioning in marketing is defined as all activities to impress on the minds of consumers so that they can differentiate the products and services produced by the organization concerned²⁸. Previous research suggests that political capital is critical in selling the candidate. In Bekasi, there are five candidates who have been assigned the General Election Commission (KPU), and has budgeted Rp 26 billion taken from the budget of the city of Bekasi 2012. Determination of the candidate Mayor and Deputy Mayor of Bekasi period 2013-2018 was contained in Bekasi City KPU Decree No. 50 / Kpts / KPU-City-011.329172 / 2012 on Wednesday 10 October 2012 . The serial number obtained by the candidate city mayor and his Deputy Salih Manggara Sitompul Anshory Mahdum to run from individual lines (independent). The number two candidate for mayor Sumiyati with Deputy Anim Aminudin. Sumiyati and Anim carried by a political party (parties) Democratic Party of Struggle (PDIP), the Prosperous Peace Party (PDS) and the Crescent Star Party (PBB). At number three is the partner Regional Secretary (Secretary), Dada Mulyadi paired with an actress Lucky Hakim as Deputy Mayor of Bekasi. Pair number three is carried by Gerindra, the National Mandate Party (PAN) and the United Development Party (PPP). Number four is the incumbent partner Rachmat Effendi, who still serves as mayor of Bekasi paired with Ahmad Syaikhu. The incumbent pair carried by the Golkar Party, the Prosperous Justice Party (PKS), Hanura, and the National Awakening Party (PKB). Finally, the pair serial number five which couples Awing Asmawi and Andi Zabidi that carried the Democratic Party (PD).

²⁷ Firmanzah , P.hd , managing political party, communication and positioning politic ideology in the era of democracy, ,obor indonesia foundation, member of IKAPI DKI Jakarta.2008. Page 208

²⁸ Firmanzah, Op.Cit, page 209

To find out how the candidate strategy in winning strategies of all the ideal answer would appear yet the question of whether they pay dearly for political marketing that can accelerate fame candidates is still somewhat difficult to uncover. This is confirmed by the Chairman of the Supervisory Committee Bekasi, who states:

"... The voters actually do not know much about who is promoted by political parties to come forward as a candidate for regional head, the problem is the lack of transparency from the outset about the criteria and requirements of candidates to be nominated by political parties"²⁹

Whatever the debate about existence of survey institutions in the development of democratization in Indonesia, everything is back again on the integrity of the survey organization itself. Since the Reformation era, almost no elections could escapes from observation-or even "intervention" - the survey agency. The election of regional heads of district / municipal level up to the presidential elections/vice president, constantly survey agency coloring early on, ranging from the detection of the prospective candidates to conduct a quick count (quick count) sometime after the elections.

As long as the surveys are done correctly and objectively then survey institute has a constructive role, among others, to add to the excitement of the election so that voters are interested and want to come to the polls. Survey agencies have a big role, especially in predicting the outcome of the election. The prediction results is then responded to the public, particularly the observers to elections become attractive shows. Pollsters have to be able to position itself as an institution that is independent and accountable survey. Pollsters must be aware that a survey institution is not a business organization. Somehow, the position the institution is a business survey, then the cost-benefit is the based construction of the political works. The result is that inconsistency survey organizations in carrying out their duties which are likely to see profit to be derived from the political parties or candidates.

In recent years, a survey institution becomes a strategic tool for the parties to make a living. Its existence is considered to be a business area or industry of interest for profit. Profit was considered quite large. Such as reasoning makes the survey institute far from value of integrity as part of the democratization process elements. If this happens and continues to happen, society and politics will be skeptical about the objectivity, independence and professionalism of the survey of existing institutions, because of the survey results tend to be questionable and polemical³⁰. Some agency survey results have a high accuracy rate, but there are also predictions are far from reality. A survey institute completely objective, but there is also a professional survey agency hired political party or candidate that objectivity is at stake. Given juridical basis for the survey institutions in Indonesia, does not mean freedom possessed by survey organizations had no control. In a democratic country, "power control to power" that still have to run, so the survey institute is also part of influencing public opinion, including

²⁹ Ibid, interview with Panwaslu Bekasi City

³⁰ *Ibid.*

opinion political forces and powers. Therefore, the main control there in the community, in addition to the existing democratic institutions, including the Commission, Bawaslu and the mass media.

Factors which widened attention survey organizations in carrying out their duties to keep trust and positive response from the public are³¹, first, the integrity factor. A survey must be justified scientifically and legally. In addition to the methodology to be correct, the size of the scholarship depends on the level of honesty survey organizations. If the collection process, data scrutinize, and delivery of the results of the survey carried out correctly and honestly, then the survey can only be as scientific survey and can be accepted by the public. The problem is when the survey institute is engaged in a deal to favoring one candidate so that all sorts of methodologist reasons and objectivity can be calculated to increase the level of fame and the election of the candidate. Second is the transparency factor. Political survey results should be presented openly to mention a variety of information that needs to be known by the public. One of the most important is, the institution must be able to inform the survey related to the financing of the public survey. Pollsters must be transparent to mention the source of funding of the activities of the survey, including those who ordered the surveying services.

The problem that arises at this point is the difficulty of opening the kitchen the survey institution because it involves company secrets. Of course candidates who use the services of this survey institutions also do not want if the public know such as collaboration. Budget transparency survey institute is very difficult to be revealed so that supply and demand will continue to change the public mindset. Third is the independence factor. Pollsters must be stated that the publication of the survey results free from political interests. The survey results should not impressed directing people to certain political interests, and not also claims as though the survey has represented the opinion of the whole society. The problem is also very difficult to prove the independency because generally treaties or agreements between institutions with funds withheld survey so that the results can be trusted publications in the level of independence. Closed and difficult to access network that makes political marketing survey agency is difficult to detect. In the same time, political party seems to be helpless with their functions taken over by the surveys institution that is supposedly party mainly function in encouraging the election of the candidate promotion. Too many political parties who feel less confident in the race if it does not involve survey organizations in their team.

Survey institute became successful teams certainly not prohibited. This is because usually the survey agency is also part of the larger framework (grand design) of a political consulting firm that aims to win a particular party or candidate. However, if the results of a survey conducted due to the business and money involved then it will be a problem. This is because: First, there will be mixture between academic work objectively and independently with the work of a successful team full of interest. Although the methodology both are equally accountable academically, still there is another side that differ significantly between the two, for example in the selection of samples, preparation of questions, and others.

³¹ *Ibid.*

The General Election Commission (KPU) Kota Bekasi mayor before the election in 2012 and has banned survey organizations announced the results of a quick count on the election of the mayor. The ban is intended to avoid the appearance of debate in the community before the results were officially announced. The debate in which will culminate in the emerging social conflicts post-election. According, the Chairman of the Commission Bekasi, Hendry Irawan said that Pollsters will race as fast as possible in announcing the results of the vote counting their respective versions. The calculation results are usually different from one institution to another institution. This can happen because usually is the result survey organizations interested parties to influence public opinion about the position of the voters acquisition candidates carried.³² Associated with some of the above explanation regarding the integrity Pollsters, It can be said that at this point the value of the integrity of the institution is at stake survey. Assuming that "there will be no smoke, if there is no fire," meaning that the public and the parties involved directly and indirectly in the political world will not necessarily infer, as considered not credible polling organizations, considered very independent survey agency, and so that the main subject or the body's own survey that actually perform actions that affirm the notion that the behavior integrity, independent, transparent, and accountable in carrying out their duties.

Candidates who win Bekasi elections, Rachmat Effendi and Ahmad Syaikhul already has enough name to sell. Rahkmat Effendi as the incumbent vice mayor already easy political capital in the community, civil society and bureaucracy .Furthermore, the candidate is promoted by a coalition of political parties is quite solid. The existence and the Prosperous Justice Party (PKS) as one of the supporters of the party making the couple can win the election with just one round. PKS has a mass base that is solid and strong. They work with coordination systematically and tended without pay. PKS volunteers able to work from their own funds to support the candidate. In this case, survey organizations really just doing his job to publish yet not far entered the realm of political parties to create a platform, work programs and the workings of the campaign. In one example cited how the media Ahmad Syaikhul supporters to embrace the spirit of togetherness:

"... During the meeting, Ahmad Syaikhul provides guidance regarding the winning strategies PKS in Bekasi. He also touched on the target PKS number one in Bekasi. "It's time to reach all potential mobilized public trust," said Ahmad Syaikhul, in Jakarta, Saturday (11/1). Ahmad Syaikhul also stressed the importance of togetherness. Cooperation into things that can not be ignored if PKS wanted to come back to win in Bekasi.³³ It is certainly a very solid performance of the party in support of the candidate to be an example of this show. That is, the parties no longer simply appear to give a ticket or a political vehicle rather be involved from the beginning to sell the candidacy and campaign for the candidate promoted.

³² <http://www.pikiran-rakyat.com/politik/2012/05/24/189725/kpu-bekasi-larang-lembaga-survei-lakukan-penghitungan-cepat>

³³ Vice Chairman of the MCC DPW West Java Give Direction To Board DPC Bekasi City wakil-ketua-dpw-pks-jabar-beri-arahan-kepada-pengurus-dpc-kota-bekasi

Critics of the political party that does not work well in nominating candidates for instance expressed by Professor Syamsudin Haris, Senior Researcher of LIPI in an interview at the Office of LIPI states: "... the wife of former mayor who captured the Commission forward a candidate for mayor of Bekasi, this is evidence of one of duping the public , which is problematic and his immediate family still promoted and able to appear as a candidate. In situations like this, the strength of civil society that can enlighten ... "³⁴. Enlightenment conducted by civil society is certainly a long way into our collective responsibility. Political parties cannot be left to walk alone to fix itself as a political party functions inherent in the interests of all citizens in order to become a political party discipline and integrity. If not, then the fate of the people much at stake to simply put people who have capital without needing a lot of integrity and the capacity to lead the community. In line with the argument Syamsudin Haris, Chusnul Mariyah also revealed that:

"... The solution needs to be done is to improve the political parties, from recruitment, organization, it takes along time to get there, with the election rules can accelerate this process, parties should try to win votes in the region, such as the elections in Papua do not have to pay the Metro, there should be limit spending, not only the contribution limit..."³⁵

Chusnul Mar'iyah statements that have been explicitly revealed expenditure of political parties and individual candidates in the regional head election competition is huge. If the same level as the village head election, a candidate for village head could spend Rp 100,000-200,000 per head, you can imagine how much money rupiah or other donations to gain public support. Indeed the political parties have not been able to work up to make the party better in supporting the candidate. The inability of political parties in terms of networking, creating programs and platforms, making the study of the campaign as well as reliable communication made should choose a third party to help them. Unfortunately due to a third party is actually dominated the substance of programs and fame of the candidate. When the function of political parties in encouraging the candidate is already working with both the large automated election costs can be minimized. That is, political parties have done since the beginning of the regeneration of the prospective head region to be promoted, not along with the candidate such as artists and owners of capital who will use the party flag.

Associated with the ability of civil society to recruit candidates who properly qualified, have integrity and a good track record, Syamsudin Haris stated:

"... It took a long time to strengthen political parties, because it is the principle of democracy while foundations are welfare and education is still not enough. The shortcut is through the delivery of election scheme, there should be a system and a standard mechanism, electoral regions discipline, the mechanism of nomination. Currently the existing system has not been designed for two things: 1) accountable political elite that

³⁴ Interview held in his office 3rd Floor WidyaGraha Building, LIPI Gatot Soebroto Building Jakarta, 9th October 2015

³⁵ Interview with Chusnul Mar'iyah, PhD, Commissaries General Election Commissions 2004-2009, interview bdil

state officials are responsible to the people, and 2) have not been designed to produce effective government both at national and local level ".³⁶

Local elections in the city of Bekasi least show unpreparedness of political parties and election organizers to educate the masses in these elections. This is evidenced by the low level of the votes cast by voters in the city of Bekasi. Voter turnout or the number of voters who use their right to vote is only about 40%. This amount lost by voters who do not use their right to vote is 50% more. If this low level of voter turnout will automatically generate questions on the level of legitimacy of the candidate who won. They are only chosen by half of the number of voters who came to polling stations. The low level of public knowledge of the candidate pairs may account for the low use of the voting rights of the people. Therefore, these study as well as to illustrate the important role of political parties in the process of political recruitment. Associated with the important role of political parties in the process of recruiting candidates, Bawaslu Chairman of Indonesia, Professor Dr Muhammad, M Si states:

“ Political party has the responsibility in selecting candidates that are reliable, clean and have the capacity, due to the political parties to function as a mediator between the government and the people within socialize every policy and government decisions, the parties have responsibilities political education so that people know their rights and obligations in the government. It is true that already present survey institute, which encourages the candidate fame but do remains the responsibility of political parties to conduct campaigns for their candidates. Pollsters only a matter of assistance...”³⁷

In his capacity as Chairman of the Election Supervisory Body of the Republic of Indonesia, Muhammad certainly has a lot to see, watch and get a report on the performance of public on political parties and the role of survey institutions that are massively doing political marketing. Furthermore Professor Muhammad, states:

“... Because of the influence of openness, the surveys institution in depth has a larger role, political parties are consistent with winning alone, it should be since the beginning of political parties has had a major role, as a result of political parties did not fully get the information needed because the third party is involved, so it needs fundamental changes in the rules and in the life of our political parties are supposed to function attached to it that is political marketing, internal changes which political party capacity building of human resources, upgrade, reform and institutional change as well as addressing the needs and obligations of the parties. While externally the changes that should be made, especially the role of the state, media and socialization to strengthen the regulation of political parties”³⁸.

In other words that can not be denied, the election of regional head candidates should be the concern of a political party is not a survey institution or a third-party survey that

³⁶ Interview with Prof Syamsudin Haris. Op,cit.

³⁷ interview with RI Bawaslu Chairman, Professor Dr Muhammad, MSi, on Monday, 21st of September 2015

³⁸ ibid

dominates. If this happens, then the intervention of the party's platform and principles become blurred. Parties must fix themselves in the recruitment function by recruiting people who have the capacity. In the developed countries the party system that is solid and sophisticated, the organization of political parties has been structured all the parts responsible from the process party recruitment, as a full assistance for candidate to win election. It should also be distinguished that both parties recruit the best candidates on the list of cadres and members of the public.

Supporting and Inhibiting Factors Winning Strategies in Bekasi City Election

In this part of paper will be described what are the factors that support or inhibiting the strategies of electoral winning.

Political parties

Political parties in the local election process Bekasi City has an important role for some candidates for mayor when candidates who register must use political parties as the "boat" to fight in the race for mayor of Bekasi. Various unique things found in research in the field related to the urgency of political parties in an effort to support the winning candidate for mayor of Bekasi partner. Political parties often only considered as a means to open the door for a pair of candidates contesting the election Bekasi after that the candidate perform their own way. This is similar to the results of interviews conducted for one candidate mayor of Bekasi who stated that:

“ it is a campaign team that works the maximum to pass the candidate, They are generally of public figures, influential individual in the region, RT / RW and all parties who have access to voters including KPPS ... parties themselves generally regarded as a political vehicle alone, means they are just a tool, the legitimacy of the political parties to get tickets, as mandated by law, but the political parties support only up to the stage of filing the name of the candidate, then the work is a campaign team that likely also involve NGOs or Survey Institute “

The interview results illustrate that the role of political parties in the conduct of leadership succession and a cadre of leadership can be said to fail when the candidate is only considered as a political party as the boat to take them to stage of elections. In addition to the above shortcomings, it turns out the urgency of political parties in the winning pair candidate for mayor of Bekasi has advantages and a major contribution to the election winner Bekasi. That is because as the Prosperous Justice Party (PKS) has a strong based in Bekasi so the couple promoted and supported by PKS that is Rakhmad Effendi (Pepen) Bekasi city won the election of 2012. This is in line with that expressed by the chairman of the Supervisory Committee Bekasi City in interviews that done, he said that³⁹:

“... Political parties continue to play a role, but political marketing is carried out by non-

³⁹ Interview with Bekasi City Panwaslu Chairman, Mr. Ucu Ismail, on Wednesday, 23rd of September 2015

governmental organizations are also much more active in promoting the candidate promoted. Especially for the elections in Bekasi, the role of political parties large enough due to the winning pair is Rachmat Effendi from Golkar political party and the Deputy Ahmad Syaiku derived from PKS, and the support of a coalition of political parties, namely Golkar, PKS, PKB. Hanura. However, supporters of the PKS where Bekasi City is one of the base with a very militant movement capable of uniting for the candidate's voice. Maybe if without the support of PKS supporters, the massive support of the parties is not so visible."

On the other hand, the quantity of a successful team that is owned by each partner candidate for mayor of Bekasi is unknown. There is an indication due to the presence of most successful team shadow. As revealed by the Chairman of the Supervisory Committee that the "official campaign team of the candidate must be registered to the Election Commission, but many campaign team that is not registered, that means many more unofficial campaign team are volunteers, who were able to move massive".

Institutions Survey

Pollsters is an institution that conducts research and field observation before, while and after the implementation of the general election. The goals of establishment survey institute is to provide statistical picture of the opportunities and the results of the election by presenting quantitative data so that the results can be predicted based on the information that is processed. Not a bit of running and survey organizations operating in a selection of either a regional head and president. For a district election process Bekasi City in 2012, there are institutions that survey was ordered and financed by the candidate to give a positive impression to the people (voters) thus indirectly lead people to choose the candidate pairs. Detection of survey organizations that actually do the survey and survey institution which is the order one candidate is very difficult to distinguish. Based on the results of interviews conducted research to the Chairman of the Supervisory Committee Bekasi City, he said that "The existence of institutions that survey as well as a regional head candidate winning team, rather difficult to explore because it is inherent in campaign team". In addition, interviews were conducted to Bawaslu Chairman of West Java Province strengthens previous statements, he said that "to sell the candidate to the level of fame will rise then Survey Institute was used, unfortunately this is not done openly and transparently".

According to the Elections Supervisory Board Mr. Harminus Koto interviewed the author related to the marketing strategy of the candidates for regional head stated:

"... In fact people are not so knowing who the candidates appointed by political parties, all the process of candidate selection done completely closed. Ranging from the emergence of the name that is driven by the political parties, why they are elected, who choose them, money politics, the bureaucracy movement to encourage the election of

one candidate, but it is rather difficult to prove until the people doing the reporting, if not, then the actions that violate the rules and ethics is hard to detect.."⁴⁰

Candidate characters (Positioning)

Personally the candidate becomes a determining factor for winning the local election process. In the case of the Bekasi municipal elections in 2012, the winning candidate cannot be separated from the position Rahmat Effendi (Pepen) which is an incumbent or previous mayor. Moreover, the existence of Luky judge as a candidate for deputy mayor accompany Dadan Mulyadi also get its own place in the eyes of the public because Judge Luky is an artist and public figure so that people easily recognize. Therefore, the positioning of the candidates for mayor of Bekasi is very important and an asset in winning the mayoral election. This is similar to that expressed by the mayor of Bekasi today that:

“Campaign conventional models are becoming obsolete candidates, though still show of force when the campaign gets open. Campaign sympathetic, creative as mutual cooperation, “blusukan” markets and villages, fishing, visiting community leaders into a new model. It was to build an image to the public”

Campaign conducted during the election of the mayor of Bekasi in 2012 presents a picture that campaigns such as blusukan was an appropriate campaign used to attract the attention of the public because the public assumes considered as candidates for regional heads asking and listening to public complaints

Budget

It is inevitable that the fund is the most important aspect of the democratic process of local and national level in Indonesia. It is no exception when the Bekasi municipal elections but not guarantee victory a couple of candidates. The data on the number of wealth each pair of candidates for mayor of Bekasi in elections in 2012 are as follows:

Table 5
Wealth Candidate Mayor and Deputy Mayor of Bekasi

No	Candidate	Wealthy (in 000)
1	Salih mangara Sitompul Anwar Anshori	1.170.178 262.947
2	Sumiyati Anim Imamuddin	-235.866 949.484
3	Dadang Mulyadi Lukman Hakim	2.304.028 1.049.909
4	Rahmat effendi Akhmad Syaikhu	3.682.537 620.302
5	Awing Asmawi Andi Zabidi	60.552.531 3.374.998

⁴⁰ Interview with West Java Bawaslu Chairman, Herminus Koto Wednesday 23rd of September 2015

Source: KPU Bekasi

Based on Table 5 above, it appears that the pair candidates for mayor and vice mayor of number 5 which is Awing Asmawi and Andi Zabidi a pair of wealthiest with nearly 65 billion, while the pair number 2 Sumiyait and Anim is a partner with the wealth of the lowest among the five candidates for the accumulation of wealth approximately 700 million.

Conclusion

Based on the results of research conducted, the conclusion of this paper is:

1. In general, marketing strategies politics (political marketing) that are used by the regional head candidate for mayor of Bekasi form of strategy, the use of a political party, a successful team, institute survey, positioning and the budget has done fairly well. However, the use of political marketing strategies that have done well in order to be maintained and more suppressed the use of funds so as to reduce the use of funds. Parties should carry out regeneration and preparation to the candidates for mayor and / or the head of the region so that the position of political parties not only as a "boat" but making machine cadre quality so prospective head region does not issue funds to buy a boat as a bridge to fight in election which affects the orientation to recoup when the candidate becomes head of the region.
2. The supporting factors and obstacles on the award of candidates for regional heads in Bekasi city election process is still considered only a political party as opening the door for candidates who will fight but on the other hand the political parties can also be miners sound when it is at its base. Success Team to support the winning candidate by providing assistance in the form of a poll for floating voters but become an obstacle when successful teams committed an administrative violation which affects the sanctions for the candidate. Survey Institute may be supporters of the winning candidate pairs by providing positive publicity for the winning candidate survey. Positioning can support the election winning in Bekasi with a personal background of each candidate pair. Budget or funds supporting the aspects of smooth operations during the campaign and attract public sympathy.

The Conflicting issues between the Corporate Governance Code of SEC and other Legal Regimes in Nigeria

Adejoh Edogbanya

Department of accounting, Kogi State University, Anyigba
adejoh17@yahoo.com

&

Gloria Tokula Edogbanya

Department of Business Administration, Kogi State University, Anyigba

Abstract

The code of corporate governance was developed by the Security and Exchange Commission (SEC) to strengthen the activities of public limited liability companies in Nigeria. Nigeria is lacking an alignment of its code of best practices with the relevant laws thereby creating conflicting issues and lacuna for SEC in effective implementation of her policies. The Company and allied Matter Act 1990 (CAMA) and other laws governing the operating activities of companies provide very limited protection to shareholders against poor corporate governance and unethical practices by the executive. This paper attempt to develop a frame work to address the lacuna and shortcomings. This paper examines the development of corporate governance mechanisms in Nigeria and further seeks to advocate for a review and update of Nigeria's corporate governance code to meet global best practices.

Keywords: Corporate governance, corporate governance codes, Regulators, Nigeria

Introduction

The Nigerian corporate governance code of best practice is developed by the Security and Exchange Commission (SEC) to address lapses and lacuna in business practices by the executives of companies (Edogbanya, Ekpa, & Kamardin, 2015; Edogbanya & Kamardin, 2015). The shortcomings by the board of directors have brought about collapse of businesses around the world such as Enron in the United States, the Palamat saga in the

United Kingdom, Rank Xerox and also on the local scene such as the Nestle over statement of financial statement in Nigeria, the AP crisis and collapse of several financial institutions in Nigeria (Abiola, 2012; Adewuyi & Olowookere, 2013; Brown & Caylor, 2008; Edogbanya & Kamardin, 2015b; Ehikioya, 2009; Kamardin & Haron, 2011; Kamardin, Latif, Mohd, & Che-Adam, 2012). The objectives of this paper are to develop a frame work to address the lacuna and shortcomings created by the relevant

legal framework to the effective management of companies in Nigeria.

Corporate Governance in Nigeria

It is generally agreed that bad and weak corporate governance has been factor responsible for some recent corporate failures in Nigeria. In order to improve corporate governance, the Securities and Exchange Commission (SEC), in September 2008, inaugurated a National Committee chaired by Mr. M. B. Mahmoud for the Review of the 2003 Code of Corporate Governance for Public firms in Nigeria to address its weaknesses and to improve the mechanism for its workability. In particular, the Committee was given the responsibility to identify weaknesses in, and constraints to, good corporate governance, and to assess and recommends ways of effecting compliance and to advice on other issues that are relevant to promoting good corporate governance practices by public limited companies in Nigeria, and for aligning it with global best practices. The Board of SEC therefore believes that this new code of corporate governance will ensure the highest standards of financial transparency, accountability and good corporate governance, without unnecessary inhibiting enterprise and innovation. Whilst the Code is limited to public firms, the Commission would like to encourage other venture not covered by the Code to use the principles set out in the Code, where necessary, to guide them in the conduct of their affairs of business. The code was further reviewed in 2011 to include Adoption of International Reporting Standard and whistle blowing (Edogbanya & Kamardin, 2014). The code of best practice is categorized into eight parts; Application of the code, the board of directors, relationship

with shareholders, relationship with other stake holder, accountability and reporting, communication, code of ethics and Interpretation (Edogbanya et al., 2015). SEC recommends that firm should disclose more than the statutory requirements to show the level of transparency. Also, the consolidation of the banking sector in Nigeria in 2005 led to renew of the existing corporate governance code and development of corporate governance code for banks in Nigeria in the year (Ikoh, Nsien, & Tamuno-Inam, 2013; Nworji, 2011)

Duties of the Board of Directors and Chairman

The duties of the Board shall include the formulation of Management policies and overseeing the conduct of the business, formulation and of risk management framework, succession planning and appointment, remuneration, training, and replacement of board members and senior management, overseeing the efficiency and adequacy of internal control systems, ensuring effective communication with relevant stakeholders and shareholders and ensuring the integrity of financial reports and statements. Statutorily, the board of directors is the highest authority in any organization. Boards of directors are charged with overall responsibility for the company, specifically the oversight of management and control. Boards of directors have a fiduciary duty to represent the equity shareholders' interests and to assure that there is alignment between the interests of the managers and the shareholders. In legal terms board of directors have three major important duties: duty of Loyalty, duty of care and disclosure duties. Furthermore, Epstein (2012) suggested the three primary responsibilities

of the board of directors includes corporate accountability, staffing and evaluation of top management and Strategic oversight

Company Legal Regimes in in Nigeria

Corporate Governance is governed in Nigeria by three legal order to wit; Companies and Allied Matters Act (CAMA,2004), Investment and Securities Act (ISA, 2007) and Bank and Other Financial Institutions Act (BOFIA, 1991) (Edogbanya et al., 2015). The mandatory legal instrument for all incorporated companies in Nigeria is CAMA as it specifies the duties and functions the key players in corporate administration of companies (Adelopo, 2011) It also provided for disclosures of relevant material fact in the financial statements, the control of the board by the equity holders through the of mandatory annual general meeting which gives powers to the shareholders to vote and be voted as controlling executives of the company(Edogbanya et al., 2015). The following was re-affirmed ISA for the continued “leading regulatory role of the Securities and Exchange Commission (SEC) on capital market investments in Nigeria. SEC ensures that investors are protected against fraudulent dealings through the maintenance of fair, efficient and transparent market and reduction of systematic risk. In order to properly ground protection beyond mere stipulation, the Act made adequate statutory safeguards in ensuring that businesses must be registered in accordance with the provisions of the Act in order to forestall sharp practices as a way of promoting transparency and accountability. The responsibility for ensuring the integrity of financing

controls and reporting is squarely placed on the shoulders of the Board of Directors under the Act. Auditors who prepares such financial reports upon which disclosures is anchored are also required to be registered with the commission under the Act” (Edogbanya et al., 2015:125)

The Act imposes strict penalties for infringement of the provisions by institutionalizing prosecution through the Investment and Securities Tribunal (IST), as avenue for quick resolutions of disputes under the Act.

Similarly, BOFIA, the Central Bank of Nigeria (CBN) as the apex statutory regulator of banks and other financial institutions in Nigeria charged with the topmost tasks of supervising and monitoring activities of financial institutions in Nigeria. The CBN under BOFIA has the powers to make subsidiary legislation and guidelines in management of firm’s affairs. This is how corporate governance has become a practice introduced by CBN especially in the face of incessant banks failures in Nigeria owing to un ethical practices such as insider and corrupt trading among several others (Adetunji & Olaniran, 2009; Edogbanya et al., 2015; Obembe, Adebisi, & Adeleye, 2010). This Act provides the prosecution of directors contravenes the provision of the law.

Similarities and Differences between CAMA 1990 and SEC Corporate Governance Code 2011

Similarities

CAMA 1990	Corporate governance Code, 2011
------------------	--

Section 335(1) of the Act requires that accounts should be prepared in accordance with the accounting standards	The preparation is also in line with the corporate code of best practice in Nigeria
Section 342 of the CAMA (1990) requires that the directors should provide a report of their activities to the shareholders	The corporate governance also requires the detailed activities of the board of directors
Section 342 of the CAMA (1990)The annual report should contain the list of the directors	Section 342 of the CAMA (1990)The annual report should contain the list of the directors

committees are not required	committees such as Audit Committees, remuneration committee, risk management committee, such be disclosed in the annual report.
-----------------------------	---

Regulatory Framework for Accounting and Financial Reporting in Nigeria

The responsibility for regulating accounting and financial reporting in Nigeria is shared by three main statutory bodies. The Corporate Affairs Commission (CAC), which is responsible for the supervision of company formation, registration, management, incorporation and winding up. The Securities and Exchange Commission (SEC) for regulating the capital market, and the Nigerian Stock Exchange (NSE), for ensuring compliance with the listing rules and reporting requirement for companies listed on the exchange in addition to providing a trading platform for listed equity and debt. The Nigerian Accounting Standard Board (NASB) is responsible for the introduction, review and removal of local accounting standard. General legal requirements for the preparation of financial statements by limited companies in Nigeria are contained in the provisions of the Companies and Allied Matters Act of 1990(CAMA, 1990) section 334 subsections 2(a)-(i). This is in addition to specific legal requirements such as the Banks and Other Financial Institutions Act (1991) for firms operating in the banking sector, the Nigerian Insurance Act (2003) for firms operating the insurance sub sector among others

Differences

There is no requirements that the list should state whether the directors are independent or not	The corporate governance of 2011 in Nigeria requires the name of executive and non-executive directors
It provides for a maximum of 20 and minimum of 5 directors on the board. It does not provide any guidance on the structure of the board	It provides for a maximum of 20 and minimum of 5 directors on the board. It provide guidance on the structure of the board
there are no statutory frequency and duration of their meetings	The members of the board of directors are expected to meet at least four times in a year.
Reporting board	All the board

(Adelopo, 2011) CAMA (1990) section 334 subsection 2 specify the mandatory disclosure required in the annual report to include “ A statement of accounting policy, the balance sheet as at the last day of the year, a profit and loss account or, in the case of a company not trading for profit , an income and expenditure account for the year, notes on the accounts, the auditor’s reports statement of the source and application of fund, value added statement for the year, five year financial summary and In the case of a holding company, the group financial statement” (Adelopo, 2011:6).

Framework for Harmonization of Corporate Codes and CAMA 1990 in Nigeria

The figure 1.1 below explains the possibilities of harmonizing all the code with the relevant laws governing the activities and operation of companies in Nigeria. The corporate governance code of best practice is introduced by government regulatory body to monitor the activities of the companies under them. The compliance with the corporate code by company is not normally total because there are no consequences for lack of compliance. The proposed framework is for possible inclusion of corporate code to the relevant laws and legal framework to strengthen its compliance and its enforceability.

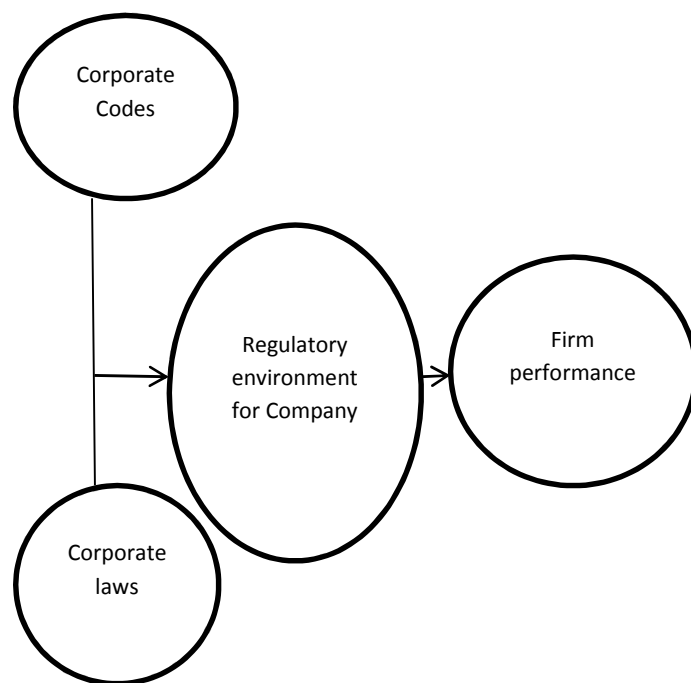

Fig 1.1 The SEC code 2011 and Corporate Law Framework

Conclusion

The importance of corporate governance cannot be over emphasized because corporate governance is a way that directs the activities of the companies. Nigeria is lacking an alignment of its code of best practices with the relevant laws thereby creating conflicting issues and lacuna for SEC in effective implementation of her policies. The Company and allied Matter Act 1990 (CAMA) and other laws governing the operating activities of companies provide very limited protection to shareholders against poor corporate governance and unethical practices by the executive. This paper suggests possible alignment between the corporate codes and other legal regime to pave way for full implementations compliance by companies and enforceability by the relevant regulatory agencies.

INFLUENCE OF ORGANIZATIONAL CULTURE AND LEADERSHIP STYLE TO WORK SATISFACTION AND EMPLOYEE PERFORMANCE IN INSTITUTE OF LOCAL ADMINISTRATION (IPDN) BUKIT TINGGI, INDONESIA

Ismail Nurdin, Sukree Langputeh, Sri Hartati
ismailnurdin@gmail.com
Institute of Local Administration (IPDN) Indonesia

Abstract

With the change in the number of students in IPDN Bukit Tinggi in the last years, there is a need to make assessment and evaluation towards the performance of employees. To do so, this study will analyze several related factors of employee's performance, which are organizational culture, leadership style and work satisfaction. Data were collected through questionnaires, interview and observation, and are analyzed through quantitative methods of Structural Equation Modeling. Findings of this study present that organizational culture, leadership style and work satisfaction have positive influence to employee performance. The performance of employee in IPDN Bukit Tinggi can be improved by implementing bureaucratic leadership with open system culture of organization, along with the efforts to improve work satisfaction within the given tasks to the employee.

Keywords: Organizational Culture, Leadership, Work satisfaction, Employee Performance, IPDN Bukit Tinggi

1. INTRODUCTION

In Indonesia, Institute of Local Administration (IPDN) is a university established to educate the cadres of local administration leaders. It has several branches, among others is located in Bukit Tinggi of West Sumatra. In the last years, the number of students enrolled in IPDN Bukit Tinggi had been fluctuated with a tendency to decrease (Figure 1). In the mean time, the number of employee in the university was relatively same across years, which are about 110 persons.

Fig. 1 Number of Student in IPDN Bukit Tinggi, 2011-2015

With the decreasing number of students over years, employee's work loads were becoming smaller. This might decrease the meaning and value of working for some employees, which might decrease the motivation and satisfaction of employees in performing their tasks. Whereas, employee's performance is very important to the achievement of organizational objectives. Each employee is expected to understand his tasks, goals and targets that he should achieve. While employee's performance plays very important roles in organizational objectives, up to now, IPDN Bukit Tinggi was managed by emphasizing on formalization, with limited evaluation to the performance of employees as well as limited fulfillment of the psychological needs of employees.

An understanding about employee's performance and the contributing factors is essential to the management of IPDN Bukit Tinggi. This study aims to analyze the relationship of leadership style,

organizational culture, working satisfaction and performance of employee in IPDN Bukit Tinggi.

2. THEORETICAL FRAMEWORK

2.1 Employee's Performance

Seymour (1991) defines performance as the measurement of task implementation, while Byors and Rue (1998) define it as the degree in which an employee achieved in conducting the targeted objectives. Bernadine et all (1993) state that performance is the result of work in a designed period. According to them, there are six categories to measure the performance of employees, which are quality, quantity, time accuracy, effectiveness, autonomy and working commitment.

2.2 Organizational Culture

Organization culture is a set of values and believes existing within organization that becomes a reference to act and to differentiate from the other organization (Mas'ud, 2004). Within the organization, employee are bound by the goals, strategies, values and behavior standard of organizational culture. Organizational culture can be identified by analyzing several indicators, which are professionalism, distance from management, trust between colleagues, regularity, hostility, and integration (Hofstede et all, 1993).

2.3 Leadership

Hersey and Blanchard (1985) define leadership as a process to influence the other people in an organization to achieve the stated objectives. Based on the nature of relationship between the leaders and the followers, there are several kinds of leadership styles, which are participative, nurturance, autocracy, bureaucratic, and task oriented style.

2.4 Work Satisfaction

Work satisfaction is the positive attitude of employees towards their jobs (Umam, 2010). Generally, work satisfaction is influenced by intrinsic factors from the employee and extrinsic factors from the working environment (Johan, 2002). Indicators can be used to measure work satisfaction include satisfaction with salary, satisfaction with promotion, satisfaction with colleagues, satisfaction with supervisor, and satisfaction with the job itself (Mas'ud, 2004).

2.5 Research Framework

The framework of this study has four variables with totally 23 indicators, as presented in Fig 2.

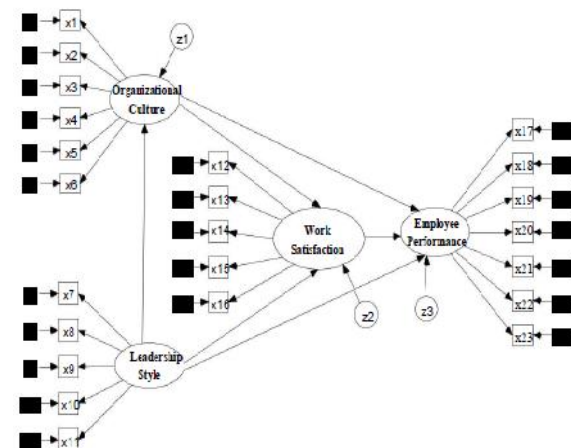

Fig 2. Research Framework

List of Variables:

Organizational Culture	Work satisfaction
X1: Process oriented	X12: Satisfaction to salary
X2: Employee oriented	X13: Satisfaction to carrier development
X3: Parochial system	X14: Satisfaction to working partner
X4: Open system	X15: Satisfaction to the leader
X5: Degree of control	X16: Satisfaction to the given task
X6: Norm of organization	
Leadership Style	Employee Performance
X7: Participative style	X17: Workingreport
X8: Nurturant style	X18: Technical skill
X9: Autocracy style	X19: Autonomy
X10: Bureaucratic style	X20: Refer to the policy
X11: Task oriented style	X21: Giving information
	X22: Control to the cost
	X23: Delivered service

2.6 Hypotheses

There are six hypotheses in this study, as follows:

H1: Organizational culture has positive influence to employee's performance

- H2: Leadership style has positive influence to employee's performance
- H3: Work satisfaction has positive influence to employee's performance.
- H4: Organizational culture has positive influence to work satisfaction.
- H5: Leadership style has positive influence to work satisfaction.
- H6: Leadership style has positive influence to organizational culture

3. RESEARCH METHODS

The population of this study was 108 employees, from which all of them were selected to be the respondents. The questionnaires were made in interval scale, with the value ranging from 1 to 10 in each question. Data were collected through questionnaire, interview and observation. Data were analyzed through quantitative methods, which mainly included Structural Equation Modeling operated through AMOS program.

4. RESULTS

4.1 Description of Study Site

Most of the employees had university degree of education (37%), 30-49 years old (70%), and 6-10 years experience of service in IPDN Bukit Tinggi (52%) (Table 1).

Table 1. Profile of Employee in IPDN Bukit Tinggi, 2015

No	Indicators	Number	Percentage
1	Education		
	- Low Secondary	39	35%
	- High Secondary	30	27%
	- University	41	37%
2	Age		0%
	- 20-29 years	30	27%
	- 30-49 years	77	70%
	- above 50 years	3	3%
3	Years of service		0%
	- under 6 years	27	25%
	- 6-10 years	52	47%
	- 11-15 years	25	23%
	- above 15 years	6	5%

Source: Field Survey, 2015

4.2 Result of Structural Equation Modeling

Structural Equation Modeling test is conducted through model fitness test and causality test. The result of model fitness test presents that chi square, probability, TLI, CFI, CMIN/df, and RMSEA are good, while GFI and AGFI are marginal but still acceptable (Table 2).

Table 2. Result of Model Fitness Test

Goodness of Fit Indexes	Standard	Result	Interpretation
Chi-Square	259.91	251.937	Good
Probability	0.05	0.097	Good
GFI	0.90	0.844	Marginal
AGFI	0.90	0.807	Marginal
TLI	0.95	0.973	Good
CFI	0.95	0.976	Good
CMIN / DF	2.00	1.125	Good
RMSEA	0.08	0.034	Good

Source: Primary Data

Casualty test is conducted through T Test and Regression model, which results as follows:

Table 3. Standardized Regression Weight SEM

Variable	Variable	Estimate	S.E.	Std. Est	C.R.	P Value
Organizational culture	<- Leadership Style	0.275	0.126	0.243	2.184	0.029

Source: Primary Data

Overall, the score of CR (Critical Ratio) that is identical to T Test in regression is larger than 1.96 with P value is smaller than 0.05. These mean that the casualty test is accepted.

4.3 Relationship among the Variables

1. Organizational culture toward employee's performance

The result of this study presents a positive influence of organizational culture to employee's performance with score 0.22. The ways to improve the influence include building open system within the office, orientating the organization toward the the process and the employee, making flexible control, and building parochial and normative culture within the organization. These will improve employee's performance through the control over working cost, improving initiative, autonomy, information, technical skill service, policy and report writing.

2. Leadership style toward employee's performance

The result of this study presents a positive influence of leadership style to employee's performance, with score 0.26. The most appropriate style of

leadership in IPDN Bukit Tinggi is bureaucratic style, followed by autocratic, nurturance, task oriented, and participatory style.

3. Work satisfaction toward employee's performance.

The result of this study presents a positive influence of work satisfaction to employee performance, with score of 0.30. The most important type of satisfaction is satisfaction to the given tasks, followed by satisfaction to the leader, to the salary, to the working partner, and to the carrier development.

4. Organizational culture toward work satisfaction.

The result of this study presents a positive influence of organizational culture to work satisfaction, with score of 0.33. In this regard, the most important type of organizational culture to work satisfaction is open system in the office, followed by the culture of process oriented.

5. Leadership style toward work satisfaction.

The result of this study presents a positive influence of leadership style to work satisfaction, with score of 0.25. Generally, it is the style of bureaucracy leadership, followed by autocracy style of leadership, which will influence very much to the work satisfaction in IPDN Bukit Tinggi.

6. Leadership style toward organizational culture

The result of this study presents a positive influence of leadership style to organizational culture, with score of 0.24. It is found that the most important style of leadership is bureaucratic and autocracy style of leadership, which will have greater positive influence to open system and task oriented culture of organization.

5. CONCLUSION AND POLICY IMPLICATION

It has been found in this study that: Organizational culture has positive influence to employee's performance; Leadership style has positive influence to employee's performance; Work satisfaction has positive influence to employee's performance; Organizational culture has positive influence to work satisfaction; Leadership style has positive influence to work satisfaction; Leadership style has positive influence to organizational culture

Theoretically, findings of this study are consistent with the studies conducted by most scholars in the related theme, among others are by Daultram (2003), Soon Hee Kim (2002), Cotton et al. (1998), and Ostrof (1992). Overall, they find that there is positive influence and interconnection among organizational culture, leadership style, work satisfaction and employee's performance.

Practically, findings of this study present the needs for IPDN Bukit Tinggi to optimize the employee's performance by giving attention to the organizational culture, leadership style and work satisfaction. These can be done through prioritizing the work satisfaction related to the working partner, the given tasks, and salary, to build an organizational culture with open system, task oriented, participative and based on regulation, and to build a leadership style of bureaucratic, nurturance and participatory leadership.

EVALUATION OF THE PHILIPPINE NATIONAL AQUASILVICULTURE PROGRAM (PNAP) IN TWO BAYS IN NORTHERN MINDNAO

Dr. David N. Almarez, david.almarez@g.msuiit.edu.ph
Vanessa Anne V. Jariol, jariol.anne@gmail.com
Ana L. Naul, ananauls@gmail.com
Mindanao State University – Iligan Institute of Technology

ABSTRACT

This is an evaluation of the Philippine National Aquasilviculture Program (PNAP) of the Bureau of Fisheries and Aquatic Resources (BFAR). It looked into the strategies of implementation, role of implementers, funding requirements and the management of the program. Likewise, the attitude of beneficiaries towards the program and the effects of the program to their livelihood were studied.

This descriptive study covered the PNAP projects that were implemented by MSU-Iligan Institute of Technology along Iligan Bay and Panguil Bay in Lanao del Norte. Data were gathered from personal interviews of key informants from local governments and national government agencies that participated in the implementation. Moreover, focus group discussions were conducted among participating Peoples' Organizations.

Results showed the following: the program has inadequate funding; climate disturbances adversely affected the mangrove rehabilitation and reforestation component of the program; some implementers believe that the technology of the aquasilviculture component of the program has failed because its technology is not yet matured or not yet tested before implementation; among the three components, the community-based multi-species hatchery is the most successful. Beneficiaries of the program indicated their need for more livelihood support like strict implementation of fishery laws in order to protect the two bays that are suffering from illegal fishing and unregulated conversion of mangrove forests into fishponds by wealthy operators.

The study concluded that the PNAP is effective in mangrove rehabilitation and reforestation as well as in the community-based multi-species hatchery. However it is ineffective and inefficient in the case of the aquasilviculture component. It is recommended that additional funding should be allocated to sustain the program which has lasted only for four years.

Key words: evaluation, aquasilviculture, livelihood, fishery, mangrove

INTRODUCTION

Climate change is one of the most crucial problems the world is facing now and as oceans and other bodies of water cover almost 71% of the earth, water needs to be studied in the protective context. In addition, as the county's population is increasing, so does the need for food (Tablante, 1996). To many Filipinos, the sea provides not only food but also livelihood. This comes in the form of aquaculture. However, the process of aquaculture resulted into various problems like the spread of parasites and diseases and environmental hazards like the decline in the mangrove cover of Philippine coastlines (Primavera, 2005). These challenges resulting from extensive aquaculture practice in the Philippines gave birth to the alternative concept of aquasilviculture in food production.

Aquasilviculture is the "integration of aquaculture with mangrove forestry, otherwise known as silviculture" (Castaños, 1997). It allows production of fish in a mangrove reforestation project where the watered area is enclosed with a net but does not allow the cutting of any mangrove tree (Dieta & Dieta, 2014). It also aids in human security as it provides local communities with environmental and economic systems that give "people the building blocks of survival, livelihood, and dignity" (Commission on Human Security, 2003).

According to the Philippines' Bureau of Fisheries and Aquatic Resources (BFAR) and the Department of Agriculture (DA) as mandated by Republic Act (R.A.) 8550 or the Philippine Fisheries Code of 1998, they implemented the Philippine National Aquasilviculture Program (PNAP) with the concept of "mangrove resource rehabilitation and livelihood provision to help address climate change, food security and poverty among municipal/artisanal coastal fisherfolk" with the help of participating agencies (Dieta & Dieta, 2014). The program involves three

major components: (1) resource rehabilitation and protection of mangroves, (2) aquasilviculture, and (3) community-based multi-species hatchery (CBMSH).

PNAP aims to mitigate poverty by engaging the services of Community Organizers (CO) to directly implement the program in the field wherein participating fisherfolks will be encouraged to collect, plant, and nurture mangrove propagules (Dieta & Dieta, 2014). The program is projected to compensate for the declining fisheries catches (Primavera, 2006) and the negative impacts of clearing mangrove forests. However, the initial findings on the PNAP in Northern Mindanao by the participants of the regional meeting on March 6, 2015 in Cagayan de Oro City have shown that there are problems in the program's implementation. With the need to evaluate the effectiveness and efficiency of the program, this research project was conducted. Furthermore, this paper aimed to confirm or deny the mentioned initial findings.

Moreover, this study aimed to determine the specific factors affecting the implementation and operation of the program, specifically its (1) nature in terms of its objectives, strategies, roles of participating officials, participating agencies and PO presidents, component projects and the program's target beneficiaries. It also determined (2) the social needs of the beneficiaries; (3) the inputs provided; (4) process and (5) outcomes of the program according to its objectives and established procedures; (6) the factors that affected the program like the attitude of beneficiaries, participating officials and involved agencies, weather disturbances and the coordination among implementing agencies and other stakeholders; (7) the problems encountered by the implementers; and (8) the actions taken to address these problems; and finally, (9) the effectiveness and (10) efficiency of the program.

THEORETICAL FRAMEWORK

This study used Program Theory, Process Analysis, Efficiency assessment and the R.A. 8550 or the Philippine Fisheries Code of 1998 as framework. This included the use of the four assessments under the theory (Rossi, Lipsey and Freeman, 2004) namely: assessment in relation to social needs wherein a program's objectives must be in line with what the beneficiaries need, second is the assessment of logic and plausibility where the objectives and activities of the program must be achievable and attainable (Wholey, 1994), the assessment through preliminary observation (Patton, 2014) for the first-hand observations to the assessment process and includes the data of the viewpoint of the respondents and finally, the assessment through comparison with practice and research (Rossi et al., 2004) which involves the gathering of information from other literatures.

Process analysis, on the other hand, assesses how the program is being implemented and evaluates whether the target population has been reached and that the staff are adequate enough for their respective assignments. This theory is also used to evaluate the implementation of PNAP since ineffective and incorrect

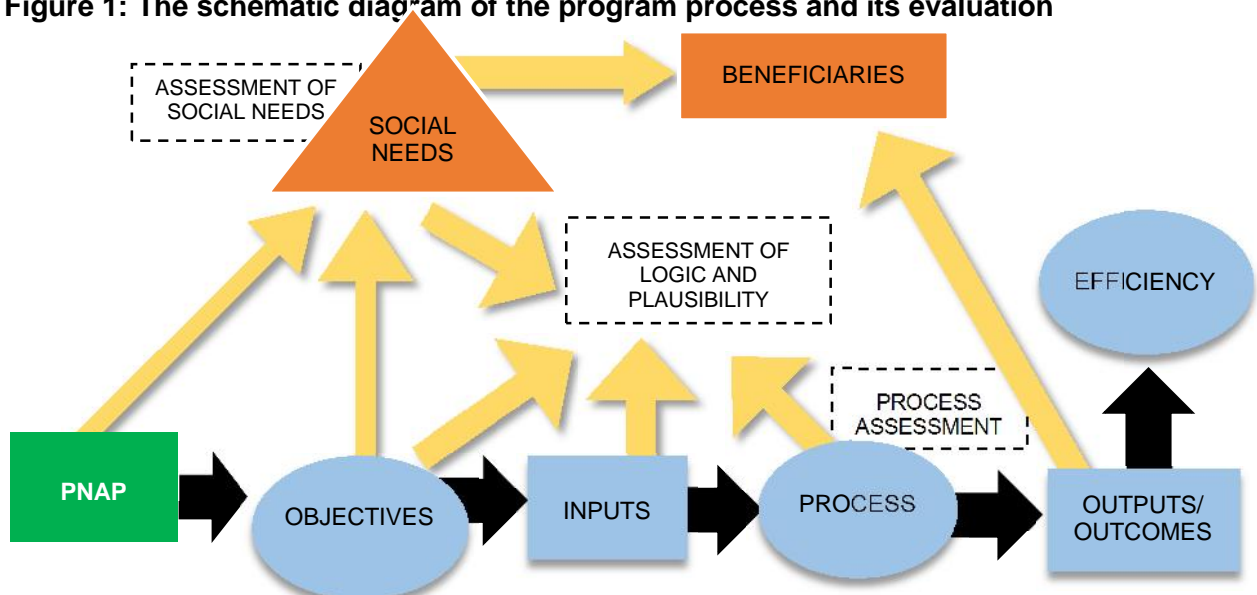

implementation will produce the equivalent type of negative outcomes that would be produced by poor innovation (Preskil et al., 2014).

The Efficiency Assessment is used to evaluate through cost-benefit analysis which assesses the efficiency of the program through the financial support that is being given. It answers the problem of whether the allocation was enough to support the benefits that the program anticipates or what kind of benefits will the target population enjoy with the type of funding that the program will receive (Eveland, 1986).

Lastly, the Philippine Fisheries Code of 1998 of the R.A. 8550 provides for the protection of mangroves. In Section 81, it is stated that *"the Department (Department of Agriculture) may establish fish refuge and sanctuaries to be administered in the manner to be prescribed by the BFAR at least twenty-five percent (25%) but not more than forty-percent (40%) of bays, foreshore lands, continental shelf or any fishing ground shall be set aside for the cultivation of mangroves to strengthen the habitat and spawning grounds of fish"*. It further highlights the importance of the presence of mangroves in coastal areas.

CONCEPTUAL FRAMEWORK

Figure 1: The schematic diagram of the program process and its evaluation

The schematic diagram shows the dependent and independent variables used in assessing the effectiveness and efficiency of PNAP. The concepts in blue boxes in the diagram show the program process starting from its intended objectives, inputs provided, implementation process, and outputs or the results of the implementation. Outputs indicated the efficiency and effectiveness of the program.

PNAP is a program of BFAR which is the subject of this study. Being a program, it follows a series of activities planned to achieve its intended objectives.

The objectives are the guiding aims of the program that helps determine the inputs, outputs and processes in the implementation. The objectives of PNAP are the following: (1) replanting of destroyed mangrove resources, (2) establishment of CBMSH, (3) provision of aquasilviculture livelihood projects to fisherfolk-beneficiaries. In the area assigned to MSU-IIT as implementing partner, there are nine mangrove rehabilitation sites covering 33 hectares, 15 aquasilviculture projects and one CBMSH. The mangrove rehabilitation sites and aquasilviculture are spread in six municipalities (Kauswagan, Maigo, Bacolod, Kolambogan, Baroy and Kapatagan), and one city (Iligan City). This places are located along Iligan Bay and Panguil Bay). The CBMSH is in Iligan.

The inputs refer to the information, materials, and people needed to operate in the program. This includes the strategies, financial and technical resources, scope and coverage, participating agencies, identification of target beneficiaries of the program, and seedlings.

The assessment of social needs was used to study whether the social needs of the beneficiaries and the social needs catered

by the program and its objectives are addressed.

The process refers to the activities, projects and opportunities by PNAP that the participating agencies undertook with the assistance of target beneficiaries. These include mangrove plantation, capacity-building projects, establishment of CBMSH, the provision of livelihood projects, organizing, and MOA with LGUs and POs.

Assessment of logic and plausibility was used in the evaluation to determine whether the social needs, objectives, inputs, and process are achievable and feasible.

The theory of process analysis was used in assessment the process of implementing the program. This includes the adequacy of the staff and resources needed to make the program successful.

The outputs are the results of the activities of the program. These are measured through the benefits gained by the beneficiaries, planted propagules, and reports of successfully completed activities. These data were obtained from interviews, focus group discussion, and from secondary data from BFAR – Northern Mindanao.

The beneficiaries are the recipients of the outputs. In this study, they were assessed to find out their social needs and whether these were provided by PNAP in line with its established objectives.

The effectiveness and efficiency of the program is based on the evaluation of the implementation with other factors taken into consideration. It is the interpretation of the combined result of the primary data obtained from the structured interviews and focus group discussions and the secondary data from reports submitted to the BFAR-

Northern Mindanao. The evaluation of the efficiency and effectiveness of the program was done through qualitative cost-benefit analysis by answering the question of whether the allocation provided which was enough to support the benefits that the program anticipated. When the effectiveness and efficiency of the program are evaluated, the findings can be used to determine the problems and their causes which in turn can be used to improve the implementation of the program (Rossi et al., 2004).

Effectiveness assessment was used in determining to what degree the outputs of the PNAP projects have met the objectives of the program.

RESEARCH METHODS

As a descriptive-evaluative study, this paper used the qualitative method to examine the efficiency and effectiveness of the program and to analyse the data gathered. The researchers gathered data through personal interviews with key informants, FGD with the beneficiaries of the program, and secondary data from BFAR.

The locale of the study are the two bays in northern Mindanao (Iligan Bay and Panguil Bay) assigned to MSU-IIT as one of the State Universities and Colleges SUCs) that were selected partners of BFAR-PNAP. These bays are among the “heavily exploited areas in the Philippines” because of the open access nature of fishing, widespread technological advances, growing human population, and large increase in prices of fish for a growing global market (Green et al., 2003).

The participants of the study included eleven (11) key informants who were interviewed and four (6) presidents of Peoples’ Organizations (PO’s) who represented the beneficiaries of the program in their respective areas. The key informants of the program consist of: (1) Regional PNAP Aquasilviculture Component Focal Person

from Bureau of Fisheries and Aquatic Resources (BFAR), (2) City Environment and Natural Resources focal person of Iligan City, (3) Provincial Environment and Natural Resources, focal person of Lanao del Norte, (4) the City Agriculturist of Iligan City, (5) the Community Organizer (CO) of MSU-IIT, Local Government Unit (LGU) representatives from (6) Brgy. Maria Cristina and (7) Brgy. Hinaplanon, and MAOs from the municipalities of (8) Kauswagan, (9) Bacolod, (10) Maigo, and (11) Kolambugan. The personal interviews were conducted according to their availability while the FGD for the beneficiaries was held at the Floating Restaurant at Brgy. San Juan, Baroy, Lanao del Norte.

Data obtained from these personal interviews and the FGD were sorted, arranged, and subjected to thematic analyses. The findings were presented narratively and arranged in response to the statement of the problem.

RESULTS AND ANALYSIS

1. Nature of PNAP

According to the MOA between the SUC (MSU-IIT) and BFAR (2012), the PNAP is implemented with the aim “to ensure resource sustainability, to attain food security, and to alleviate poverty”. Another objective of the program is to let involved parties (SUC and BFAR) “extend full support and cooperation for the effective implementation, operation, and good governance” of the program among the recipient areas in Iligan City and in municipalities of Baroy, Kolambugan, Bacolod, Maigo, Kauswagan, and Kapatagan.

The program consists of three (3) component projects, namely: (1) mangrove plantation, (b) aquasilviculture projects, and (c) Community Based Multi-Species Hatchery (CBMSH). The mangrove plantation and aquasilviculture activities are

implemented under Memorandum of Agreements (MOAs) between the POs, their Barangay and Municipal LGUs, and the SUC. Meanwhile, the CBMSH activity is implemented under a MOA between BFAR and the SUC or MSU-IIT.

The involved participating agencies and officials include the Regional Fisheries Office (RFO) and Provincial Fisheries Office (PFO) of BFAR, the Provincial Environment and Natural Resources Office (PENRO), and Community Environment and Natural Resources Office (CENRO) of the Department of Environment and Natural Resources (DENR), the Community Organizer (CO), the City Agriculturist of the Department of Agriculture (DA) and the Municipal Agricultural Officers (MAOs) and Barangay Chairpersons from the Local Government Units (LGUs).

Their roles are categorized into six (6): firstly, the persons responsible in **planning** are the SUCs, COs, and MAOs. The SUCs and COs have frequent communication and field visits to the sites, while the MAOs assisted in the signing the memoranda needed to implement the projects; secondly, **governance** is mainly the obligation of the SUC, RFO, PFO and CO. They monitor the development of the projects and prepare reports to be submitted to the central office of the BFAR and to the Commission on Audit (COA). Moreover, the BFAR implementers (RFO and PFO) provide the funds needed by the program; thirdly, **organizing** is done by the SUC, CO, and the City Agriculturist. They organize the beneficiaries into Fisherfolks Associations in order to serve as PO partners in the implementation process; fourthly, **technical support** was provided by the PENRO, CENRO, CO, MAOs, and the City Agriculturist. This support ranges from providing information on the plants to be grown, materials to be used, suitability of the area, site assessment and validation, methods in maintaining the plant; suitable species for the aquasilvi ponds and the

CBMSH, among others. They also provide periodic monitoring and evaluation. Lastly, **problem solving** was provided by the SUC, CO, and MAOs, since they are the ones who are in frequent contact with the beneficiaries and conduct field visits more often than other implementers. They solve the problems by providing funding and other inputs of the program, and reporting to the BFAR implementers for assistance.

The implementers of the program namely PFO and RFO of BFAR, the SUC, and the CO, hold infrequent meetings to discuss the current state and problems of the projects in different areas; contact, and coordinate with the LGUs and partner agencies. The meetings may be consisted of other agencies, but, the PENRO focal person indicated in an interview that she was not included in those meetings. Likewise, the representatives from the DA were seldom invited in these meetings.

Moreover, only the SUC and the CO have direct frequent contacts and communication with the MAOs and POs in the monitoring and evaluation of their projects. Only the MAO of the Municipality of Kauswagan who commented to have tried direct contact with the RFO in relation with problems arising from projects established in the municipality. In most areas, mangrove rehabilitation activities proceeded with seldom involvement from the MAOs.

The partner agencies, DA (City Agriculturist), PENRO, and CENRO, are assigned with the technical components of the project. They assisted the implementers in assessing the area and validate whether it is suitable for the project or not. When in contact with the POs, they also provide technical assistance. However, the City Agriculturist of Iligan claimed that he has no role in the implementation of the program. He also stated that his functions overlapped with the CO with regards to organizing the POs. Also, despite being under the same agency (DENR), the PENRO and CENRO

have different areas of assignment in the implementation. The PENRO was assigned in the municipalities of Lanao del Norte that include Kolambugan, Tubod, Lala and Kapatagan, while the CENRO handles the PNAP operations in Iligan City and the municipalities of Kauswagan, Bacolod, and Maigo in Lanao del Norte. Incidentally, the municipalities covered by PENRO are located along Panguil Bay while that of the CENRO are located along Iligan Bay

The LGU representatives who actively participated in the municipalities consisted of the MAOs while in Iligan the Barangay Chairperson of Barangay Ma. Cristina and the Barangay Chairman of the Committee on Coastal Resource Management of Barangay Hinaplanon were actively involved. They assisted the SUC (MSU-IIT) in making projects proposals; ensure that projects are implemented according to government requirements and procedures; oversee the program and help solve problems encountered by PO beneficiaries; coordinate with partner agencies; and assist in the enactment of necessary ordinances needed to support the sustainability of the projects under the PNAP.

Although MAOs are also tasked with monitoring the projects, they don't have standard way of doing it. For example, one MAO said that they have no direct hands in the operation, they only assist. They have no template followed in monitoring; thus it is not done rigorously. Oftentimes, monitoring is informal and the system of reporting and feedbacking is poor. On the other hand, another MAO said that they have frequent field visits and used feedback mechanism. Differences in the experiences of MAOs indicate lack of established procedural guidelines needed in performing their tasks. This resulted to a situation where they are left to innovate methods in executing their duties in relation to the PNAP projects in their areas. The PNAP as a whole has no specific implementing guidelines or reliable

implementing rules and regulations provided for its smooth implementation.

The target beneficiaries of the program are People's Organizations (POs) from the areas assigned to the SUC and CO. The POs are the partners of SUCs that provided labor and materials for the project and are paid for by the SUC, according to the MOA with BFAR. In the case of the mangrove rehabilitation project, the payment scheme is as follows: Php1.50 for the planting material; Php2.00 for the labor; and Php2.50 for each plant that survived after a year from date of planting. It is also the responsibility of POs to actively participate in the program by mobilizing their members, collect payment from the SUC, and maintain and protect the mangrove plantation, and "ensure the survival of the plants until they are ready for aquasilviculture projects" (MOA between SUC and POs and LGUs, 2013). During the FGD, the POs shared their common responsibilities such as initiating activities for their associations and gathering opinions and problems from their members with regards to their needs.

2. Social Needs of Beneficiaries

The results of the study showed that among the social needs of the beneficiaries are livelihood, capacity-building, education, funding, support, healthcare, sanitation, fishing gears, watch towers, and values formation. Most key informants responded that there is a need for sustainable livelihood where fisherfolks can apply and enhance their skills in order to continuously provide for their family needs, aside from aquasilviculture and the payments they collected from planting mangroves. The CENRO confirmed that, *"The people are in need of additional livelihood especially because the program is not that consistent since they have to wait for the plants to grow before they can establish aquasilvi projects. So, while it hasn't grown yet, the fisherfolks have to look for another source of income."* In addition, education and values formation

are also needed by the beneficiaries to address internal group problems and the problem of non-participation of those who still do not know the importance and benefits of the program. Furthermore, the POs expressed their need for a watch tower to enable them to secure their area from rampant illegal fishing, poaching and stealing. In terms of livelihood, PNAP has

provided limited benefits due to its nature. It has not provided a sustainable livelihood although mangrove rehabilitation takes time before its benefits are felt. Moreover, the aquasilviculture project is a failure since none of the 15 projects was successful.

3. Inputs of the Program

Table 1: Inputs for the Program Provided by the Implementers

Implementers/ Beneficiaries	Responses
LGUs	Planting materials
	Budget
	Fishing paraphernalia
	Fish nets
	Materials for the aquasilvi structures
	Legislative support support
	Livelihood
	Technical assistance
	Training
	Propagules
	People to monitor (manpower)
Partner agencies (DENR, DA)	Funding mainly from BFAR in contract with MSU-IIT
	Technical assistance from DENR such as site assessment and validation
	Fish nets
	Protection like maritime police
Implementers (SUC, BFAR)	CBMSH
	Fingerlings
	Additional source of income
	Technical support in understanding climate change
	Bamboo
	Hatchery construction materials
	Stock
	Feeds
	Nets
Beneficiaries	Crabs
	Tilapia
	Fish nets

The inputs of the program are what the implementers provided for its proper implementation. According to the CO, the initial budget downloaded to MSU-IIT for the implementation of the program was Php3 Million. The second download was Php1.6 Million. The first download was intended for the three components of the program while the second download was mainly for mangrove rehabilitation. The funds downloaded to MSU-IIT were used to provide the inputs necessary to implement the components of the program and support

the beneficiaries including livelihood through the program as well as education provided through trainings and technical assistance. Fishnets and other fishing gears were also provided. However, MAO Bacolod criticized the inputs from being procured from outside the area, which made the fish stock and propagules stressed and expensive. Other MAOs also have difficulty in maintaining some inputs like fishnets and fish foods because they get stolen and sold to other people.

4. The Implementation Process of the Program

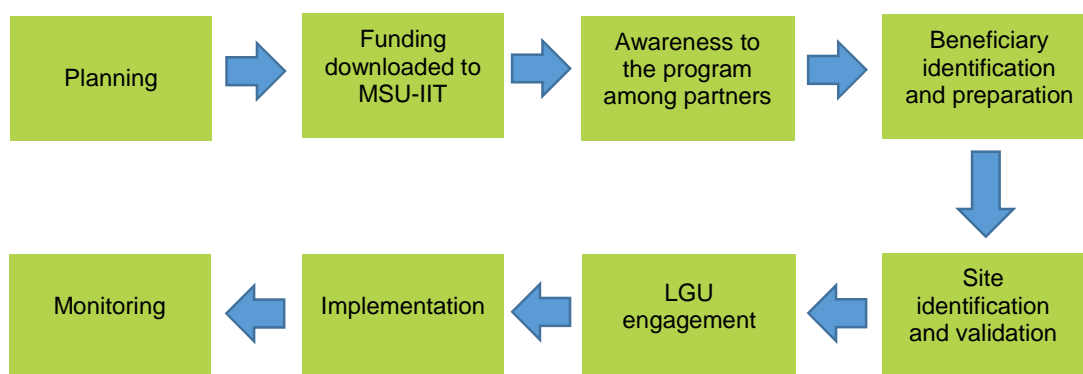

Figure 2. The Implementation Process of the Program Based on the Themes Gathered Through the Responses of the Key Informants

During the conceptualization of the program, BFAR called for meetings and trainings with SUCs and COs. After the conceptualization and planning of the program, BFAR downloaded the funds of the program to MSU-IIT. BFAR then coordinated with other agencies and meetings were held to orient other implementers of the objectives and benefits of the program. The implementers then contacted Fisherfolk Associations and POs whose members were based on the fisherfolk registration. After that, an orientation on the benefits of the program for the POs. With the help of partner agencies, areas were provided for the projects and their POs. As soon as the area and the project was approved by the Barangay or the Local Government through local legislation, the project starts. The project is then monitored. In summary, the process is as follows: holding of BFAR meetings and trainings, funding, orientation of COs, LGUs, and other partner agencies by MSU-IIT, identification and orientation of the beneficiaries, site assessment and validation, legislation, implementation and realization of the program, and monitoring. However, not all implementers and partner agencies are aware of the steps of the implementation and not all of them participated in each step. This indicates the lack of interaction and insufficient engagement into the various activities of the program by some implementers.

5. Outcomes of the Program

5.1. Outcomes of the Program According to its Objectives

According to the key informants, they were able to perform the following activities in line with their objectives: mangrove planting activity, planting of target number of propagules, established aquasilviculture, reached target number of beneficiaries for mangrove planting and aquasilviculture, provision of livelihood projects,

conceptualization of projects and activities, capacity-building activities, establishment of a CBMSH, developed enhanced technology and provision of training component.

While all key informants affirmed that there was a success in the establishment of mangrove plantations and in organizing the targeted number of beneficiaries, they admitted that some members weren't participative and the survival rate of propagules is not high as they expected. In addition, although the PENRO was assigned to provide technical assistance, they did not know whether the target number of propagules was planted because it was not monitored by the agency. In addition, the beneficiaries undertook training for mangrove planting and aquasilviculture, however the CO received none for the CBMSH component and has to depend on his own knowledge as a fisheries graduate.

5.2. Outcomes of the Program According to its Established Procedures

The implementers reported that they were able to achieve the following activities in line with their implementation guideline: coordination between LGUs and POs, provision of sufficient resources, site selection and validation, planting design, payment scheme, beneficiary selection, established schedule of regular meetings, identification of POs, orientation of POs, area assessment and validation, participation of beneficiaries, and field visits.

However, while the implementers dutifully established the said procedures, the results also revealed that said procedures were not strictly followed. For example, in some areas, although site assessment and validation were made, they ended up being unsuitable for the mangroves. In addition, the beneficiaries observed the existence of poaching, illegal fishing, and cutting of trees that directly affected the attitude of the other

members and discouraged them from continuing their work. There is also no strict monitoring of law enforcement in the sites. Weather disturbances also affect the project, resulting to the low survival rate of mangroves planted. Irregular holding of meetings and incomplete attendance from the beneficiaries also presented problems which were not closely looked into. LGUs also failed to have regular field visits which means not all problems are addressed immediately.

6. Factors Affecting the Program

6.1. Attitudes of Beneficiaries and Participating Officials of Involved Agencies

With regards to the attitude of the beneficiaries and participating officials of the program, they are generally positive. Their responses revealed that they were participative and supportive and this encouraged the POs to make the program successful, boost their morale, and build trust and confidence between them and the implementers. However, this positive attitude contrasted with the analysis of the results of established procedures which showed that they have infrequent field visits and they did not have regular meetings.

The beneficiaries showed their support for the project through their positive attitude and participation because they understood the services provided by mangroves. However, some members exhibited negative attitudes like lack of commitment, appreciation and cooperation.

6.2 Weather Disturbance

El Niño

The El Niño phenomenon that occurred in the Philippines starting in the first half of 2015 and persisted up to May of 2016 had a profound impact to many sectors. However, most MAOs indicated that there are no significant effects of El Niño to the PNAP

program while the beneficiaries say otherwise. Beneficiaries said that most fishes go to deeper parts of the sea to avoid the heat. Thus, the climatic change according to them has contributed to the mortality of fish. In addition, extreme heat posed a threat of heatstroke to some fisherfolks who has to stay indoors most of the day, thus limiting their activities related to the maintenance of mangroves. It can be observed that the MAOs are not aware of the problems confronting the beneficiaries which implies that they may have not been on field visits to assist beneficiaries. Due to dry conditions, some beneficiaries who are into gardening in order to augment their income, lost their livelihood.

Storms and Typhoons (Sendong, Pablo, Yolanda)

Prior to the the El Niño of 2014 and 2016, the Philippines were battered by storms while the PNAP program is being pursued. In 2011 when the program was about to start, Typhoon Sendong, the strongest ever to hit Iligan and Lanao del Norte came, leaving behind much destructions in the communities along Iligan Bay and Panguil Bay. In 2012, Typhoon Pablo and other Typhoons that followed it caused storm surges that uprooted many mangroves. In 2013, Yolanda, the strongest typhoon to hit the land, has uprooted at least 50% of planted trees. In many planting sites, replanting were conducted three times to replace those that were destroyed. Typhoons and storm surges caused by strong winds were among the problems encountered by the program.

All the key informants except PENRO and all the beneficiaries conveyed that one of the biggest effects of typhoons is the damage of young plants, resulting to unusually high mortality. Strong waves caused by typhoons carry logs and tons of wastes. Their movements along the shore broke and uproot many plants.

6.3 Coordination among Implementing Agencies and Other Stakeholders

During mangrove planting, some beneficiaries and implementers, particularly LGU officials, participated and showed coordination in many activities. Nevertheless, some stakeholders seldom show up in many PNAP activities even if their presence is needed. Agency heads and LGU officials sent only their representatives. Their conspicuous absence affected the attitude of both the implementers and beneficiaries towards the project since it discourages the participation of beneficiaries.

On the aquasilviculture projects, there were participative beneficiaries, but there were PO members who did not participate due to intragroup leadership competition. Some POs are afflicted by factionalism which in some cases were encouraged by the attitude of some LGU officials whose support to the program has political color.

One factor that discouraged active engagement from beneficiaries is the fact that in the case of the mangrove rehabilitation, they earn only when they plant and they have to wait for a year before they can have their money from plants that survived. Before that however, weather disturbances destroyed many of their plants, thus reducing their prospective income to as low as 30% as it was in many cases following the destructions caused by Typhoons Pablo and Yolanda. Beneficiaries also observed that some implementers either lack participation or did not participate at all. This resulted to lack of coordination between the implementers and beneficiaries. BFAR did not recognize these relationship dynamics among implementers which implies that they were not keen in observing the participation of other officials in the monitoring and implementation activities of the program.

In the case of the aquasilviculture projects, its technical nature prevented the

participation of other agencies including the LGUs. Only the BFAR and DENR through the PENRO and CENRO that have the technical capability to intervene. However, what is perceived by the beneficiaries as too limited support has totally shut up all the aquasilviculture projects. To many beneficiaries, as they look at the unproductive structures set up for their aquasilviculture projects, they think that said projects were designed not to succeed.

7. Problems Encountered During the Implementation and Processes of the Program

Participants of the study observed that although beneficiaries were supposed to be well-trained, the conduct of trainings were infrequent and not sufficient enough to develop needed skills. Another problem was the lack of related program activities that develop leadership and teamwork. However, due to the attainment of the objectives of the mangrove rehabilitation in terms of the rate of survival and the positive attitude of implementers and beneficiaries it can be asserted that this component is effective.

In the case of the aquasilviculture component, it was beset by so many problems and it ended without benefiting the beneficiaries. This component is a total failure.

The CBMSH of MSU-IIT is one of the most successful among those assigned to SUCs in Northern Mindanao. Its implementation is very effective.

Participants of the study observed problems with the planting area, including problems of strong currents, lack of species matching, and overlapping with the mangrove planting area of DENR. In addition, key informants also articulated the problems about funding, materials and tools needed which are insufficient and delayed in delivery. Series of weather disturbances which brought heavy rains and winds in the

coastal area contributed to high plant mortality.

Key informants and beneficiaries alike expressed the need to further educate all the participants of the PNAP to ensure that the objectives and benefits of the project will be internalized.

Furthermore, it has been observed that national agencies do not have the police power to enforce laws to protect the program. The local government has police power and therefore partnership with them should be re-evaluated to redefine their role in the program. Also, the PENRO pointed out that BFAR lacks the technical skills. However, PENRO should also maximize its contributions according to its technical capabilities. And lastly, the beneficiaries mentioned many problems in their relationship with their barangays. Due to the failure in following the established procedures of implementation, the program is deemed inefficient.

In summary, the mangrove rehabilitation, although said to be effective, is not efficient considering that replanting was made several times due to weather disturbances. The aquasilviculture projects are very inefficient considering that they did not give any benefit to the beneficiaries. For the CBMSH, it was completed within established timeline without additional cost and it is now operational. Thus, among the three components of the PNAP, it is the most efficient.

8. Actions taken by BFAR to Address Problems during the Implementation of PNAP

Some implementers commented that there has been no effort done to address problems that they encountered in the implementation of PNAP. However, there are also others who said otherwise, that there were actions taken to fix problems in the program. Participants pointed out that BFAR has repeatedly provided training for

beneficiaries, and that the agency frequently monitored their areas. The CO expressed that BFAR gave both advice and technical support in solving the problems.

Lastly, it has also been observed that for others, BFAR has always made an attempt to solve and provide their needs whenever problems arise. However, in the case of Kauswagan, it was the local government that took efforts to help them solve their problems.

9. Effectiveness of the Program

PNAP was able to achieve some of its objectives such as ensuring resource sustainability and alleviating poverty through its projects. The key implementers were supportive and cooperative in the implementation of PNAP. Further, based on the positive attitude and participation of the beneficiaries, it can be assumed that the program is effective in educating stakeholders on the importance of mangrove rehabilitation and aquasilviculture. Moreover, the program was able to achieve the target beneficiaries and acceptance of inputs and services intended for the beneficiaries. Based on process analysis, the results show that the program is effective. Generally, the program is effective because it was able to achieve most of its targeted outcomes (Schillinger, 2010) particularly on the mangrove rehabilitation and CBMSH projects. However, the program failed on the aquasilvi culture component. It has not contributed to the objective of food sufficiency. Its operation was not sustained due to insufficiency of financial support and BFAR's failure to intervene in order to improve its technology.

10. Efficiency of the Program

Efficiency was evaluated using three (3) guides. According to the theory of process analysis, a program is efficient if the staff are adequate enough for their respective responsibilities. However, the researchers observed that the program particularly the

aquasilviculture component needs more technical personnel for its implementation. On the assessment of logic and plausibility of the program, some participants indicated that resources and funds were insufficient and that activities are not enough. And lastly, on the theory of efficiency assessment, one criterion of efficiency is the sufficient financial allocation satisfying the objectives and services of the program. There were participants who expressed that there is the need for more funding. Moreover, the failure to strictly adhere to established procedures and with many identified problems that were not addressed, made the program inefficient.

CONCLUSIONS

The Program theory and its four approaches was used in assessing whether the implementation of the program was able to attain its targeted outcomes. In the assessment in relation to social needs, the needs of the target beneficiaries should be successfully attained through the program. According to the results of the study, the aim of the program which is to provide livelihood for the beneficiaries was only partially successful; the Mangrove rehabilitation achieved its objective of providing livelihood for the participating POs but the aquasilviculture project failed. Second, in line with the assessment of logic and plausibility, the program was well-defined, the objectives were feasible, and the features were well-defined. Because of these achievements, the program is deemed effective.

However, most of the characteristics of a logical and plausible program has failed. First, according to the results, there were not enough activities needed for the successful implementation of the program. Second, there were cases of overlapping functions among implementers and there was lack of participation caused by not well defined functions of some stakeholders. Third, there were some established procedures that were not observed. And lastly, most of the

participants of this study affirmed the inadequacy of funding allocation. These factors contributed to the inefficiency of the program.

RECOMMENDATIONS

It is recommended that the PNAP shall be continued with modifications to strengthen it. In order to strengthen the program, the key implementers must deal with the identified problems with the end view of solving them. The objectives of the program should be redefined to embrace the social needs of beneficiaries. This entails the necessity of introducing additional livelihood program while waiting for the mangroves to grow. The technology of the aquasilviculture project must be updated. Its funding should be adjusted according to realities encountered. Other agencies should also be mobilized for support in transforming the mangrove rehabilitation areas into ecotourism destination. Ecotourism should be encouraged as part of any effort in providing alternative source of livelihood for the beneficiaries

In the problem of safekeeping and law-enforcement, a watch tower should be established to keep watch of the site at all times to ensure the protection of the projects from poachers, illegal fishers and tree-cutters. The police power of the local government unit should also be utilized for this purpose because there are instances where the fishermen are incapable in confronting armed violators.

Therefore, for the purpose of additional livelihood and law enforcement, the budget for the program should be increased.

Further, implementers must conduct more frequent monitoring and hold formal evaluations of the area. This should be done with the representatives from partner agencies and the beneficiaries themselves to ensure a multi-agency approach where all parties could contribute and apply their knowledge and insights on the projects. In

line with this, there must be more information campaigns and values formation trainings for the beneficiaries and implementers to ensure that they know the objectives and aims of the program and how economically and environmentally important is the project.

Ultimately, the program needs to be higher in the priority list of the implementers. Mangroves do not just protect coastal areas from storm surges and typhoons, but it also serves as livelihood for the POs and spawning grounds for fishes. In the current state of Philippine fishery and aquatic resources, intervention for costal protection and provision for alternative livelihood for coastal dwellers are imperative. With climate change and poverty, prospects for the future can only be worse if both livelihood and coastline protection are not into the equation of any development program.

The beneficiaries of PNAP must also educate themselves regarding the program and its operations. First, they needs to educate themselves about the implementation process. They should know who should be doing what, when and where so that when problems arise, they know who should be helping them. They should improve their coordination with all agencies involved.

Second, they need to educate themselves more regarding the objectives, aims, and the importance of the success of the program. Inculcation of values towards oneself will result to better participation and commitment to making the program work. A lot of internal problems among the POs will be solved if there is a deeper appreciation of the objectives of the program among the beneficiaries.

Partner agencies of the PNAP should re-evaluate their roles on the project and commit themselves to the job they were set to do. They were made partner agencies because of their specialized skills and

capabilities necessary in the implementation of the program.

Partner agencies must also consistently monitor and evaluate all activities undertaken in order to identify early some problems that beneficiaries or other implementers cannot detect immediately.

The LGU, with its law enforcement capabilities and police power, should act as the protector of the project. Their barangay police or **tanod** should free their areas from poachers, illegal fishers and tree-cutters.

And finally, all participants and stakeholders of the program must develop teamwork by close coordination with each other. They need to communicate with each other for updates and other needed information from partners. An open communication line can lead to a quick and successful problem-solving.

Abstract

The Philippines, by virtue of its geographic circumstances, is highly prone to natural disasters such as earthquakes, volcanic eruptions, tropical cyclones and floods, making it one of the most disaster prone countries in the world. Reports revealed that in the past 20 years, at least 31,835 Filipinos have reportedly been killed and 94,369,462 have been affected by natural disasters and calamities. Worldwide, network [alliances]-building or inter-local partnership is considered as strategic importance in addressing local governments' common issues and problems that do not respect political boundaries. Alliance of local government units (LGUs), which interchangeably referred to as inter-local cooperation has been proving to be cost effective and efficient in the delivery of services to its multi-stakeholders especially the LGUs. eGovernment has contributed to public sector reform by digitizing and simplifying procedures. It is advanced that we need a new paradigm in which eGovernment is being reinvented according to the needs. This is not about convenience but about creating public value. In the Philippines, inter-local cooperation of LGUs believed to be formally started after the proclamation of Republic Act No. 7160 or the Philippine Local Government Code of 1991. Using the exploratory research design, particularly the development model instrument, this paper aimed to analyze the Philippine models of pre-disaster preparedness vis-à-vis disaster risks reduction and management framework and develop a paradigm in building local government alliances and network that could raise the levels of effectiveness and efficiency pre-disaster preparedness collaborations.

Keywords: network governance, collaborative governance, pre-disaster preparedness, e-networks

INTRODUCTION

It has been widely recognized that the Philippines by virtue of its geographic circumstances is highly prone to natural disasters, such as earthquakes, volcanic eruptions, tropical cyclones and floods, making it one of the most disaster prone countries in the world. Disasters have destroyed human, social, and physical

capital, and they have derailed social and economic development, as funds are reallocated from ongoing programs to finance relief and reconstruction assistance. While the documented losses caused by disasters are formidable, the full impacts are not known, and are probably much more significant.

According to a World Bank study (2005), the Philippines suffered an average

annual direct damage (to agriculture, infrastructure and the private sector) of Php15 billion per year (in real 2000 prices) between 1970 and 2000. The total cost of damage to infrastructure and agriculture of Typhoon Frank alone was Php13.525B. Sixty percent of the damage was in the Western Visayas region, which contributes 6.5% to the national GDP. The amount is equivalent to 0.7% of annual GDP. The report also cited the losses equivalent to 2.6% of GDP in 1991 due a major earthquake and very damaging typhoons that year.

Human and social impacts are worst felt locally. These are manifested in terms of displacement of people and homelessness, lost household incomes, occupation of school buildings as evacuation centers, increased exposure to diseases, psychosocial illnesses. As discussed in several literatures, these impacts have not been very well understood and quantified until the present. With repeated destruction of houses and economic dislocation over the long term, disasters reinforce pre-existing socio-economic divisions among Filipinos.

This study, primarily, would like to advance a new framework for network governance online platform integrating LGU work-plans and approaches for pre-disaster preparedness.

PHILIPPINES: AT THE FOREFRONT OF DISASTERS

Data from the report of the Philippine National Red Cross revealed that in the past 20 years, at least 31,835 Filipinos have reportedly been killed and 94,369,462 have been affected by natural disasters and calamities. Information gathered from Royal Meteorological Society, Typhoon2000.com, PDCC and NDRRMC show that five out of ten worst disasters in terms of Casualties and seven out of ten costliest typhoons in

Philippines occurred from 2000-present; Typhoon *Haiyan (locally named Yolanda)* is the latest.

Table 1
Worst disasters in terms of casualties from 2000-present (Sources: Meteorological Society, Typhoon2000.com, PDCC and NDRRMC)

Disaster	Date	Number of People Killed
Typhoon Yolanda (Haiyan)	8-Nov-2013	6,300
Typhoon Pablo (Bopha)	4-Dec-2012	1,901
Tropical Depression Winnie	29-Nov-2004	1,619
Typhoon Sendong (Washi)	15-Dec-2011	1,439
Typhoon Reming (Durián)	30-Nov-2006	1,399

Table 2
Costliest typhoons in Philippines occurred from 2000-present (Sources: Meteorological Society, Typhoon2000.com, PDCC and NDRRMC)

Name	Date	Cost in Phil. Pesos	Cost in US Dollars
Bopha (Pablo)	Nov. 25 – Dec. 9, 2012	42.2 billion	1.04 billion
Haiyan (Yolanda)	Nov. 3 – 11, 2013	35.5 billion	809 million
Parma (Pepeng)	Oct. 2 – 10, 2009	27.3 billion	608 million
Nesat (Pedring)	Sept. 26 – 28, 2011	15 billion	333 million
Fengshen (Frank)	June 20 – 23, 2008	13.5 billion	301 million
Ketsana, (Ondoy)	Sept. 25 – 27, 2009	11 billion	244 million

The country is unusually susceptible to natural hazards (with earthquake, volcanic eruptions, tropical cyclones, and floods being the most catastrophic) being at the junction of several tectonic plate boundaries, as well as being in an area of frequent tropical cyclones. This is compounded by uncontrolled settlement in hazard-prone

areas, high poverty rate, failure to implement building codes and construction standards, and degradation of forests and coastal resources, among others.

According to UNICEF Philippines, the brunt of these natural hazards is felt by 27.6 million Filipinos who are among the poorest and marginalized. They are often trapped in a seemingly never-ending cycle of disaster, displacement and rebuilding.

The Citizens' Disaster Response Center (CDRC), a non-government organization based in the Philippines, cited the records of the Center for Research on the Epidemiology of Disasters (CRED), which showed that the Philippines is second to Japan in 2011 with 1,924 people killed. This was mainly due to tropical storm Sendong (Washi) that hit the country in December, claiming more than 1,400 lives. In 2012 and 2013, records showed that the country topped the list, with 2,360 people were killed due to natural disasters in 2012 and a total of 8,382 persons were killed in 2013 – with 6,201 people killed during Typhoon Haiyan (*Yolanda*) alone.

INTER-LOCAL PARTNERSHIP AND COLLABORATION: PARADIGM SHIFT TO NEW PUBLIC VALUE

Over the past few decades, a new form of governance has emerged to replace adversarial and managerial modes of policymaking and implementation. Collaborative governance, as it has come to be known, brings public and private stakeholders together in collective forums with public agencies to engage in consensus-oriented decision-making (Ansell and Gash, 2007). Collaborative governance facilitates both local and system integration and effective delivery of services. Models of integration range from informal service coordination through formal joint ventures to organizational mergers, and they span the

full continuum of care (Center for Governance Excellence, 2014).

Although collaborative governance may now have a fashionable management cache, the untidy character of the literature on collaboration reflects the way it has bubbled up from many local experiments, often in reaction to previous governance failures. Collaborative governance has emerged as a response to the failures of downstream implementation and to the high cost and politicization of regulation. It has developed as an alternative to the adversarialism of interest group pluralism and to the accountability failures of managerialism. More positively, one might argue that trends toward collaboration also arise from the growth of knowledge and institutional capacity. As knowledge becomes increasingly specialized and distributed and as institutional infrastructures become more complex and interdependent, the demand for collaboration increases. The common metric for all these factors may be, as Gray (1989) has pointed out, the increasing “turbulence” faced by policy makers and managers.

The development of coherent models of interagency working is dependent upon systematic analysis of new forms of professional practice, framed by understanding of the historically changing character of organizational work and user engagement. Given the current economic climate of limited resources, increasing demands on services and complex community expectations, it is important that local government units look at strategic collaborations and partnerships as ways to respond to the challenges faced by LGUs, particularly in pre-disaster preparedness. Norris-Tirrell and Clay (2010) emphasized that almost any problem today is too complex to be addressed individually or by organizations – say a political subdivision in the case of the local governments, working

alone in their silos: *“What in the past would have appeared as a straight forward administrative problem now more than not requires working with other programs, agencies, citizens, and multiple stakeholders across policy arenas.”* They further noted that public and non-profit administrators often stumble into collaboration without a strategic orientation.

Worldwide, network(alliances)-building or inter-local partnership considered as strategic importance in addressing local governments’ common issues and problems that do not respect political boundaries. Alliance of local government units (LGUs), which interchangeably referred to as inter-local cooperation has seen by scholars to have been proving to be cost effective and efficient in the delivery of services to its multi-stakeholders especially the LGUs.

In the Philippines, inter-local cooperation of LGUs believed to be formally started after the proclamation of Republic Act No. 7160 or the Philippine Local Government Code of 1991.

eGovernment has contributed to public sector reform by digitizing and simplifying procedures. We need a new paradigm in which eGovernment is being reinvented according to the needs. This is not about convenience but about creating public value (Poelmans) – guarantee that the constituency will be safer, and feel more secured when confronted by threats of a disaster.

Looking into the literatures, most of the published researches and governance experiences, particularly in pre-disaster preparedness, deal with either adopting network governance or collaborative framework in addressing problems at the local level, even in the delivery of network’s services. Less, if not nothing, had been encountered that network governance,

collaborative governance and eGovernance approaches had been integrated to manage the pre-disaster preparedness of local governments. Most LGUs are in loose management and administration of disasters. Linkages to other same-level LGUs are rarely, or have not been utilized.

COLLABORATION AND REASONS FOR COLLABORATIONS

Agranoff and McGuire (2003) defined collaboration as the process of facilitating and operating in multi-organizational arrangements to solve problems that cannot be solved or easily solved by single organizations. In Selden, Sowa, and Sandfort’s (2006) dimensional illustration of a collaborative continuum, the right-hand side of the continuum describes the highest level of service integration and the least autonomous relationships, while the left side describes relationships where the joint action is less central to organizational mission.

On the **practical side**, most major challenges are larger than one organization, requiring new approaches to addressing public issues (O’Leary, 2014).

Another reason found in theory as to why organization leaders choose to collaborate is **common purpose**. Organizations form linkages in order to achieve similar, compatible, or congruous goals (Gray, 1989). Issues that were previously thought of as single agency issues are now increasingly understood to have broad linkages and to be interconnected with other issues (O’Leary, Gerard and Bingham, 2006).

The notion of shared beliefs. A similarity in values and attitudes make the formation of inter-organizational linkages more probable (Aldrich, 1979 and Alter & Hage, 1993) and make these linkages more stable over time. A common belief system,

including norms, values, perceptions, and worldviews, provides the principal 'glue' to hold together networks of actors.

Resource Dependency Theory of inter-organizational partnership.

The basic assumptions:

Individual organizations do not have all the resources they need to achieve their goals (Pfeffer & Salancik, 1978). Organizations must rely on a variety of inputs from a collection of interacting organizations, groups, and persons in the external environment to do their jobs and do them well. Relatively independent organizations may collaborate to take advantage of available resources (Emerson, Nabatchi, and Balogh 2012).

Although public administrators have been working in a network environment for many years, related empirical analysis and theory building is more recent and has been relatively slow to develop (Kettl, 2003; O'Toole and Meier, 2004). Kettl (2003) acknowledges a lack of consensus in the field on whether networks reflect an approach, theory, or loose construct; he suggests that to date, the analysis of networks best represents a framework that may offer some early steps toward the development of tools for better managing within a network model.

The literature clearly reflects, however, increased attention to issues related to managing public agencies which operate in environments characterized by networks. There seems little question that networks have emerged as an important form of governance (Agranoff, 2005; Agranoff and McGuire, 2003; Frederickson and Smith, 2003; Kettl, 2002; O'Toole and Meier, 2004). In fact, their importance has led some to call for the development of a paradigm for network management similar to

the hierarchical, bureaucratic model that preceded it (Frederickson and Smith, 2003; Agranoff and McGuire, 2001).

Experts concluded that, although hierarchical management structures continue to work well in addressing more routine problems, networked approaches are needed to more effectively tackle complex problems where responsibility for solving them is more diffused (Kettl, 2005).

NETWORK GOVERNANCE: ITS INCREASING ROLES IN PUBLIC MANAGEMENT

The terms "network organization" (Miles & Snow, 1986), "networks forms of organization" (Powell, 1990), "interfirm networks", "organization networks" (Uzzi, 1996a, 1996), "flexible specialization" (Piore & Sable, 1984), and "quasi-firms" (Eccles, 1981) have been used frequently and somewhat metaphorically to refer to interfirm coordination that is characterized by organic or informal social systems, in contrast to bureaucratic structures within firms and formal contractual relationships between them (Gerlach, 1992; Nohria, 1992). We call this form of interfirm coordination network governance. Network governance constitutes a "distinct form of coordinating economic activity" (Powell, 1990) which contrasts (and competes) with markets and hierarchies.

A number of scholars have offered definitions, typically using different terms and providing partial definitions. These definitions cluster around two key concepts: (1) patterns of interaction in exchange and relationships; and (2) flows of resources between independent units. Those who emphasize the first concept focus on lateral or horizontal patterns of exchange (Powell, 1990), long-term recurrent exchanges that create interdependencies (Larson, 1992), informal interfirm collaborations (Kreiner & Schultz, 1993) and reciprocal lines of communication (Powell, 1990). Some highlight patterned relations among individuals, groups, and organizations (Dubini & Aldrich, 1991), strategic long-term

relationships across markets (Gerlach & Lincoln, 1992), and collections of firms using an intermediate level of binding (Granovetter, 1994). Those who emphasize the second concept focus on independent flows of resources (Powell, 1990) between nonhierarchical clusters of organizations made up of legally separate units (Alter & Hage, 1993). They emphasize the independence of interacting units.

Network governance involves a select, persistent and structured set of autonomous firms or organizations (and may include non-profit agencies) engaged in creating products or services based on implicit and open-ended contracts to adapt to environmental contingencies and to coordinate and safeguard exchanges. These contracts are socially, not legally, binding.

Networks have been widely recognized by both scholars and practitioners as an important form of multi-organizational governance. The advantages of network coordination in both public and private sectors are considerable, including enhanced learning, more efficient use of resources, increased capacity to plan for and address complex problems, greater competitiveness, and better services for clients and customers (Alter and Hage 1993; Brass et al. 2004; Huxham and Vangen 2005).

Since the 2nd World War, due to the perceived success of the Weberian model, governments and their administration came to be increasingly guided by principles of hierarchy and standardization. In contrast, at the same time, Western society in general developed into an open democratic system in which networks play an important role (Raadschelders and Rutgers, 1996). Long before the concept of an emerging 'network society' (Castells, 1996) became popular in the 1990s, politicians and societal stakeholders promoted the involvement of more parties in policy preparation and decision-making since the 1970s. Scholars and practitioners claimed that the classic hierarchical paradigm had to be replaced – at least for multi-actor, multilevel policymaking - with a network or arena paradigm (Dirven, 1998). Less 'command

and control' and more 'open processes' were expected to improve the effectiveness of the governmental organizations (Ringeling, 1997). The "IT-revolution" of the last decades has also increased the importance of networks in social life.

Network management is the key theme in government today, as compared to the hierarchy command and control approach of the past (Salamon, 2002). Public sector reform programs of the early 2000s concentrate on this objective to a substantial extent. Network governance has also become popular in public management consulting (Eggers and Goldsmith, 2004). However, according to Hesse (2003) this does not imply that network governance has been widely implemented. The introduction of network governance in the public sector is sometimes a symbolic rather than a serious attempt.

Governance is a topic that has long been studied by organizational scholars. In public management, governance refers not to the activities of boards, but mainly, to the funding and oversight roles of government agencies, especially regarding the activities of private organizations that have been contracted to provide public services (Hill and Lynn, 2005). A critical role for governance in all these sectors, and consistent with principal-agent theory, is to monitor and control the behavior of management, who are hired to preside over the day-to-day activities of running the organization (Eisenhardt, 1989; Fama and Jensen, 1983). Although there is much recent evidence that boards do not necessarily take their responsibilities seriously enough, board members do have a legal obligation to perform their duties and are liable if the organization they represent engages in illegal or irresponsible behavior.

In defining the term, we need to define it narrowly. In this way, we will define "network" as groups of three or more legally autonomous organizations that work together to achieve not only their own goals but also a collective goal. As classified by various authors, such networks may be self-initiated, by network members themselves, or may be mandated or contracted, as is

often the case in the public sector. Thus, networks can become extremely complex entities that require explanations that go well beyond the dyadic approaches that have been traditionally discussed in the organization theory and strategic management literatures.

Addressing complex issues that demand multilateral coordination, as is often the case in the public and nonprofit sectors (to deal with major disasters, increase economic activity in the region, address critical and complex health or human service needs, etc.), requires more than just achieving the goals of individual organizations (O'Toole, 1997). It requires collective action and the governance of these activities. Although network governance may not be a legal issue, as with organizational governance, many scholars argue that it is critical for effectiveness. Unlike organizations, networks must be governed without benefit of hierarchy or ownership. In addition, network participants typically have limited formal accountability to network-level goals and conformity to rules and procedures is purely voluntary.

Functioning of networks is the process by which certain network conditions lead to network outcomes. The network as a form of governance approach treat networks as the unit of analysis. Network is viewed as a mechanism of coordination, or what has often been referred to as network governance. Starting with Williamson's (1975) *Markets and Hierarchies*, a rich literature has developed on different forms of governance. From an organization and administrative science perspective, organizations cannot be taken as something for granted (Perrow, 1986) and that other forms of coordination, such as networks, can equally achieve goals.

Provan and Kines (2007) said, "Although the governance approach considers networks as the unit of analysis, the tradition has been for networks to be treated as undifferentiated forms, as if they all could be characterized in the same general. This may be due to the fact that for the most part, networks were seen as a "new" and "positive" mode of coordination

that needed to be distinguished from markets and hierarchies. A functionalist argument dominated, claiming that networks are a response to failures of markets, failures of hierarchical coordination, and to societal and technological developments. The implication was, and continues to be, that despite problems, networks in general can produce positive outcomes that would not be possible in a market or a hierarchy."

Moreover, they mentioned that networks are considered to vary with regard to their structural patterns of relations. Consistent with this logic, scholars view network as a variable, examining different network governance configurations and the conditions for the effectiveness of each form. Only by demonstrating that networks with different configurations have different network-level effects can a rationale for developing network-level theories be established. They argued that the role of management is critical for effective network governance, especially regarding the handling of tensions inherent in each governance form. Essentially, the focus is not on networks as a means of governance, but on the governance and management of networks themselves (Provan and Kenis, 2011).

NETWORK GOVERNANCE MODELS AND STRUCTURES

A defining feature of governance involves organizational networks and their role in dominating public policy (Lynn, Heinrich, and Hill 2000; Pierre and Peters, 1998; Salamon, 2002; Stoker, 1998). Frederickson and Smith (2003) state, "Governance is the modern theory of network management." Salamon (2002) argues that today's emphasis on indirect policy tools has also contributed to the increasing role of networks in governance. Others suggest that networks have evolved to more effectively tackle complex public management problems that demand a collective and coordinated response (Agranoff and McGuire 2001; Milward and Provan 2006; O'Toole, 1997).

In a governance framework, networks involve interdependent relationships between the state and other

third-party actors from the private and non-profit sectors. Although the state acts as an important partner in the network, it is conceptualized as just one of the interdependent actors. As noted in the section above, Pierre and Peters (2005) describe varied models of governance differentiated, in part, by the strength (or lack thereof) of the state's power in this balance. Of relevance here, is that in a governance framework, power dependencies exist within the relationships involved in the collective action of the network (Stoker, 1998).

Given the network's composition and power differentials, the straightforward command and control administrative mechanisms of the past are compromised by the fact that varied organizations now control some of the traditional tasks of government (Milward and Provan, 2006). In a governance relationship, various organizations may dominate certain processes, but no one agency can easily command given that problems are no longer controlled within the boundaries of one agency (Milward and Provan, 2006; Stoker, 1998). Subsequently, a mutual resource dependency is created among network partners, including those from the public sector, whereby a single organization cannot command but is more often dependent on the compliance of the other participating actors (Peters and Pierre, 1998; Stoker, 1998).

However, hierarchical relations with command and control structures are not entirely replaced by a configuration of networks; our governance system is rooted in a constitutional scheme that requires some amount of hierarchical relations that address political and judicial requirements for accountability (Heinrich, Hill, and Lynn, 2004). Heinrich, Hill and Lynn (2004) argue that less likely are the extremes of pure hierarchy or networks, instead, the more practical problems of governance rest "where networks are hierarchical tools of government." Obviously, this leads to consideration of how government can most effectively manage networks (Goldsmith and Eggers, 2004).

Networks can vary in structure, size, and complexity (O'Toole and Meier, 2004) and are referred to as "partnerships, coalitions, alliances, strategic alliances, consortiums, and networks" (Milward and Provan, 2004). Based on a study of twelve networks in the Midwest, Agranoff (2003) identified four types of networks including informal networks, developmental networks, outreach networks, and action networks. In a more recent report, Milward and Provan (2006) also describe four types of networks: service implementation networks, information diffusion networks, problem solving networks, and community capacity building networks.

At one extreme they explained that networks may be governed completely by the organizations that comprise the network. Every organization would interact with every other organization to govern the network, resulting in a dense and highly decentralized form. This is called "shared governance." At the other extreme, the network may be highly brokered, with few direct organization-to-organization interactions, except regarding operational issues such as the transfer of business, clients, information on services, and the like. Instead, network governance would occur by and through a single organization, acting as a highly centralized network-lead organization, regarding issues that are critical for overall network maintenance and survival.

At the mid-range, a single organization might take on some key governance activities while leaving others to network members. Alternatively, network members may divide governance responsibilities among various subsets, or cliques of network members, with no single organization taking on significant governance tasks.

A second distinction regarding governance has been advanced by the authors. By focusing on whether the network is participant governed or externally governed, participant-governed networks are, at one extreme, governed either collectively by the members themselves, meaning shared, or at the other extreme, by a single network participant that takes on the

role of a lead organization. Externally governed networks are governed by a unique network administrative organization (NAO), which may be either voluntarily established by network members or mandated as part of the network formation process. Each of these forms has certain key structural characteristics, which we identify below. Each form is utilized in practice for a variety of reasons, and no one model is universally superior or effective. Rather, each form has its own particular strengths and weaknesses, leading to outcomes that are likely to depend on the form chosen.

Network management is understood as different from hierarchical public management. Based on what is known about networks and network interactions, there are certain critical contingencies (Drazin and Van de Ven, 1985) that can be identified to explain whether or not a particular form of network governance is likely to be effective. It is hoped that this paper will enable to develop a theoretical rationale for the adoption of one form over another in a way that the successful attainment of network-level outcomes, or what some have referred to as network effectiveness can be predicted as inspired by the ideas of Provan and Milward (1995; 2001).

Networks work well in knowledge-rich environments because they have superior information-processing capabilities; they are also more adaptable and flexible than hierarchies because of their loose coupling and openness to information (Achrol and Kotler, 1999). Such organizations have in common that they focus on content instead of power, and are designed in a way that their highly professional employees have maximum freedom of operation. Like all styles of governance, network governance also has its typical weak points. Networks are unstable constructions that tend to either disintegrate, or convert into a formal organization.

“Network management” and “meta-governance” are the dominate labels used by scholars who advocate the necessity to manage governance networks. While

network management takes its departure in steering governance network directly, from within, meta-governance encompasses also the idea of steering from a distance, from the outside (Jessop, 1997; 2002, Sorensen, 2003, Sorensen and Torfing, 2009). Although the notions of network management and meta-governance may seem different the management strategies those advocate are rather complementary regarding the steering of governance networks so that they function well. Network management aims at governing “coordination activities, exchange of information and policy proposals by means of initiating and facilitating, creating and changing network arrangements for a better coordination.”

Managing a governance network means guiding, persuading, stimulating and facilitating processes in a network in order to achieve a better coordination, or simply to influence network’s functioning in the direction the manager, or an authority wants (Klijn and Edelenbos, 2007, Kickert, 1997, Mandell, 1990, Rogers and Whetten, 1982). Coordination of actors requires “active and deliberate managerial strategies” which at the same time ought to leave “some scope of self-steering within interaction processes” (Klijn and Edelenbos, 2007).

The pioneers of network management identify two management lines of thought: process design and institutional design (Kooppenjan and Klijn, 2004, Klijn and Edelenbos, 2007). Managing processes in a governance network is about facilitating and guiding participation processes in the network. But it is also about establishing rules that structure “the game of interactions.” Klijn and Edelenbos (2007) propose diverse strategies to make a good process design. For example, if a network faces stagnation regarding enthusiasm or interests, the manager must look into the content of interactions, provide an interesting agenda, make social arrangements, introduce new actors, or consult experts to qualify the discussions. The manager can also engage actors who are interested in creating energies. In the case of conflicting interests in the network, a manager needs to clarify perceptions, seek goal congruence, combine

different package solutions, in which reciprocity, compensations and substitutes, are an important dimension in process management.

Even more important is that network members participate in shaping network's institutionalization of common ground norms and values (Klijn and Edelenbos, 2007; (Klijn, 2005). Managing network-processes may influence the content of the self-regulation and promote networks' collective negotiation capacity. Managing institutional design in is about changing network's formal and informal rules. The underlying idea is that institutional characteristics influence how actors act and which strategies of process design are more likely to be implemented (DiMaggio and Powel, 1983).

Institutions guide, limit and structure the course of action. Klijn and Edelenbos (2007) point out that each network has its own history (of relations) which influences how relations in the future may take form. It is unclear whether they think only about the history of relations inside the network (the game structures), or also the history of relations actors have had before coming into the network.

Metagovernance is synonymous with "governing of self-governance" and thereby is associated with steering from outside. Metagovernance is first and foremost related to the governing relationship between the network and formal authority.

Advocates of network management and meta-governance agree that network management can work out the uncertainties during interactions, conflicts of goal orientation, and even stimulate joint problem solving. Scholars also agree that the success of a governance network depends on actors' capacity to act collectively, to create identity that cherish solidarity, forges new and specialized knowledge, and creates the perception of mutual interdependence (March and Olsen, 1995, Sorensen and Torfing, 2007). The success of metagovernance / network management can be evaluated regarding to whether it had helped developing these values. The chief dilemma is how far and how deeply to

manage the network and to interfere with the personal identities of its members (Rasmussen, 2011).

MANAGING DISASTERS

Perez and Thompson (1994) in their series on Natural Disasters, define a disaster as: *"the occurrence of widespread, severe damage, injury, or loss of life or property, with which the community cannot cope, and during which the affected society undergoes severe disruption."* The definition of a disaster adopted by the World Health Organization and the United Nations as established by Gunn is: *"the result of a vast ecological breakdown in the relationships between man and his environment, a serious and sudden (or slow, as in drought) disruption on such a scale that the stricken community needs extraordinary efforts to cope with it, often with outside help or international aid."* This definition also indicates that it is the damage that results from the impact on society that constitutes the disaster, not the event that is the disaster.

Disaster management should never begin with the disaster, nor should it end when rescue operations are complete. Rather, disaster management should be understood to be an ongoing process, from preparations that will reduce risks, to response, to mitigation based on lessons learned (Habitat for Humanity, 2012).

Disaster Risk Management includes sum total of all activities, programs and measures which can be taken up before, during and after a disaster with the purpose to avoid a disaster, reduce its impact or recover from its losses. Khan et al. identified and described the three key stages of activities that are taken up within disaster risk management:

1. Before a disaster (pre-disaster). Pre-disaster activities those which are taken to reduce human and property losses caused by a potential hazard. For example, carrying out awareness campaigns, strengthening the existing weak structures, preparation

of the disaster management plans at household and community level, etc. Such risk reduction measures taken under this stage are termed as mitigation and preparedness activities.

2. During a disaster (disaster occurrence). These include initiatives taken to ensure that the needs and provisions of victims are met and suffering is minimized. Activities taken under this stage are called emergency response activities.
3. After a disaster (post-disaster). There are initiatives taken in response to a disaster with a purpose to achieve early recovery and rehabilitation of affected communities, immediately after a disaster strikes. These are called as response and recovery activities.

The Disaster risk management cycle highlights the range of initiatives which normally occur during both the Emergency response and Recovery stages of a disaster. Some of these cut across both stages (such things as coordination and the provision of ongoing assistance); while other activities are unique to each stage (like Early Warning and Evacuation during Emergency Response; and Reconstruction and Economic and Social Recovery as part of Recovery).

Further, in their studies, they noted that DRMC also highlights the role of the media, where there is a strong relationship between this and funding opportunities. This diagram works best for relatively sudden-onset disasters, such as floods, earthquakes, fires, tsunamis, and typhoons, but is less reflective of slow-onset disasters, such as drought, where there is no obviously recognizable single event which triggers the movement into the Emergency Response stage.

According to Warfield (2008) disaster management aims to reduce, or avoid the potential losses from hazards, assure prompt and appropriate assistance to victims

of disaster, and achieve rapid and effective recovery.

The disaster management cycle presented by Khan et al. illustrated the ongoing process by which governments, businesses, and civil society plan for and reduce the impact of disasters, react during and immediately following a disaster, and take steps to recover after a disaster has occurred. Appropriate actions at all points in the cycle lead to greater preparedness, better warnings, reduced vulnerability or the prevention of disasters during the next iteration of the cycle. The complete disaster management cycle includes the shaping of public policies and plans that either modify the causes of disasters or mitigate their effects on people, property, and infrastructure.

The mitigation and preparedness phases occur as disaster management improvements are made in anticipation of a disaster event. Developmental considerations play a key role in contributing to the mitigation and preparation of a community to effectively confront a disaster.

DISASTER MANAGEMENT: FACTORS AND APPROACHES

Research on preparedness has resulted in general principles of preparedness that are applicable to any unit of analysis - including households, businesses, public sector agencies, networks, communities, and intergovernmental alliances.

Alexander (1997) argues that there is room for improvement in the approaches to disaster management based on the following three factors: (1) death tolls have not fallen dramatically in response to improved mitigation; (2) large-scale transfer of technology has not occurred and (3) disaster relief has not been adequately combined with mitigation and economic development. Kelly (1998), states that, there are four main reasons why a disaster model can be useful.

These are as follows:

1. A model can simplify complex events by helping to distinguish between critical elements. Its usefulness is more significant when responding to disasters with severe time constraints.
2. Comparing actual conditions with a theoretical model can lead to a better understanding of the current situation and can thus facilitate the planning process and the comprehensive completion of disaster management plans.
3. The availability of a disaster management model is an essential element in quantifying disaster events.
4. A documented disaster management model helps establish a common base of understanding for all involved. It also allows for better integration of the relief and recovery efforts.

Therefore, it can be argued that a well-defined and clear model is highly beneficial in the management of disasters because it facilitates the securing of support for disaster management efforts. Hence, disaster management needs a formal system, or a model, to manage and possibly reduce the negative consequences of a disaster.

Generally, in major disasters, various resources, conditions and activities are involved; identifying and utilizing such resources, conditions and activities at a detailed level should be the goal of a disaster management model. Incorporating this level of activities and conditions affecting disasters, into existing models, would provide the basis for an effective, useful and practical disaster management model; one

which would expand the attention to the full range of concerns about preparedness, mitigation, response and recovery.

NETWORK GOVERNANCE: EFFECTIVENESS AND EFFICIENCY

Although public administrators have been working in a network environment for many years, related empirical analysis and theory building is more recent and has been relatively slow to develop (Kettl, 2003; O'Toole and Meier, 2004). Kettl (2003) acknowledges a lack of consensus in the field on whether networks reflect an approach, theory, or loose construct; he suggests that to date, the analysis of networks best represents a framework that may offer some early steps toward the development of tools for better managing within a network model.

The literature clearly reflects, however, increased attention to issues related to managing public agencies which operate in environments characterized by networks. There seems little question that networks have emerged as an important form of governance (Agranoff, 2005; Agranoff and McGuire, 2003; Frederickson and Smith, 2003; Kettl, 2002; O'Toole and Meier, 2004). In fact, their importance has led some to call for the development of a paradigm for network management similar to the hierarchical, bureaucratic model that preceded it (Frederickson and Smith, 2003; Agranoff and McGuire, 2001).

Experts concluded that, although hierarchical management structures continue to work well in addressing more routine problems, networked approaches are needed to more effectively tackle complex problems where responsibility for solving them is more diffused (Kettl, 2005).

Networked governance can be defined as the interconnectedness of

independent units of authority and power (Kenedy School of Government) whether individual, community, state, or corporate. Networked governance moves from vertical to horizontal approaches to decision making and is characterized by systems of communications, knowledge exchange and dialogue. Homer-Dixon (2009) describes this as “open architecture democracy.”

Experts suggest that the new information society will be governed through networks of networks, each of which has its own internal logic, but which are all interconnected by a common set of governance protocols. Architecture of governance could be mirrored through using the architecture of the internet, and its layers of horizontal communications protocols.

Managed network requires that key elements be included in its design to work. A social network can be used to support the work of the managed network or can be hostile to it and create unexpected difficulties. If no social network exists, it may be necessary to create one to implement the managed network (Goldsmith and Kettle, 2008). A managed network is a type of communication network that is built, operated, secured and managed by a third-party service provider. A managed network is an outsourced network that provides some or all the network solutions required by an organization. This service is delivered as a cloud infrastructure service or installed and managed in-house by the service provider.

As this study aims at building theory in networking and collaboration (alliances) in the administration of pre-disaster preparedness at the local government level and develop a network governance model in pre-disaster preparedness management, it gave focus in integrating the concepts of network governance into pre-disaster management using the architectural landscape of the internet as third party

service provider in project management. Thus, this would also mean borrowing some principles in e-governance, as one of the subsets of New Public Management.

The diagram below shows the concentration of most of the exploratory studies in governance. It also shows how Network Governance++ may be develop as framework for pre-disaster preparedness.

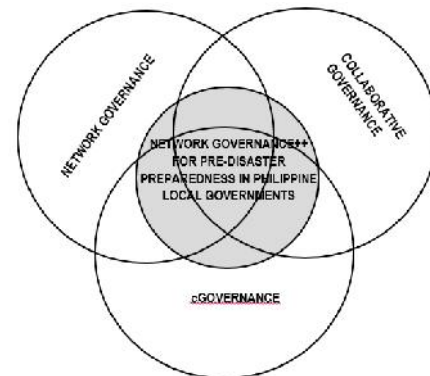

Figure 1. Locus of network governance++ for pre-disaster preparedness in Philippine local government units at the crossroads of the key concepts of Network Governance, Collaborative Governance and eGovernance (Constructed by R.B. Flores, 2015)

ADVANCING NETWORK GOVERNANCE++ AS A NEW PARADIGM FOR PRE-DISASTER PREPAREDNESS

Network Governance ++, as advanced in this study, is an online-hosted governance platform run by programming language, commonly known as source codes. Unlike the usual face-to-face network collaboration models, it will support real-time database for the “network” in which you may access and print open files in a single window. Network Governance++ platform is conceptualized to be significantly faster, dynamic and more interactive; therefore, more efficient than an entirely having a face-to-face collaboration model. *Figure 2* shows the Network Governance++ conceptual map.

Manuel Castells' network theory can be effectively used to explain how the characteristics of social networks (platforms) can be valuable for network governance. The advantage of the internet is that it allows the forging an egalitarian pattern of interaction. It also allows ties to be forged with incredible speed over vast geographical barriers.

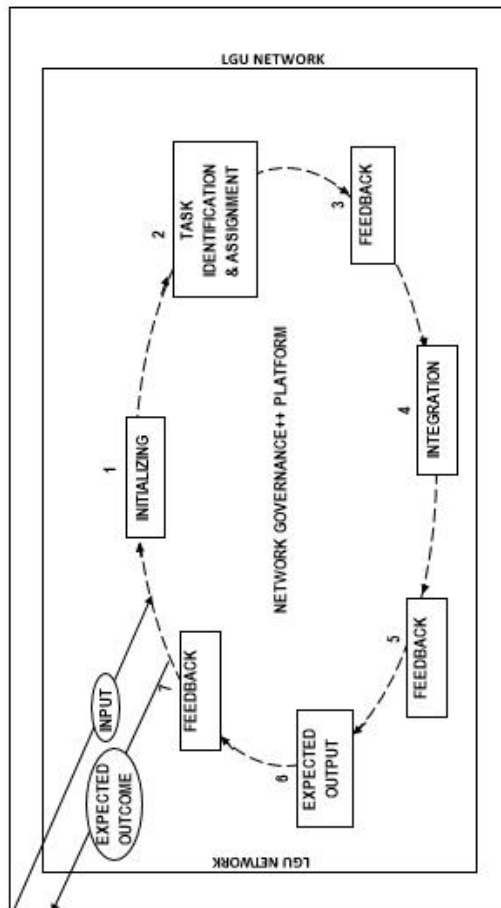

Figure 2. Network Governance ++ Conceptual Map (Constructed by R.B. Flores, 2015)

ASSESSING THE IMPACT OF HOUSE REHABILITATION PROGRAM TO POVERTY ALLEVIATION IN RIAU ISLANDS PROVINCE

Riau Sujarwani,
Faizal Rianto,
Raja Abumanshur Matridi
Shierly Viani Pratiwi

Abstract

The house rehabilitation program is part of Indonesia's nation-wide program targeting poor and low-income households living in uninhabitable house. The aim of the program is to improve the wellbeing of its beneficiaries by improving the living condition of targeted households. The purpose of this study is to assess the impact of house rehabilitation program to poverty alleviation in Kepulauan Riau Province. This study gather, compare and analyse the data from control and experimental groups. Control group constitute of households that have not receive the benefit of the program while the experimental group constitute of households that have benefited from the program. The data is then analysed to assess and to gain better understanding of its impact to poverty alleviation in Riau Islands Province.

Key Words: house rehabilitation, poverty alleviation, impact assessment, public policy

INTRODUCTION

Indonesia's Constitution and additional legislation guarantee the right to adequate housing as defined by international human rights law (UN-HRC, 2013). The Government of Indonesia has also reiterated its commitment to the progressive realization of the right to adequate housing and to address discrimination in access to housing in the National Long-Term Development Plan 2005–2025 (RPJPN) and the National Medium-Term Development Plan 2010–2014 (RPJMN), particularly with regard to low-income households (UN-HRC, 2013).

According to Galster and Killen 1995; Galster 2002 (as cited in ONPHA, 2008) housing is relevant to poverty reduction and social inclusion in two important aspects; first, as the single largest expenditure in a household's budget, housing costs crowd out other necessities and put pressure on an already inadequate income (housing induced-poverty), and second, poverty issues often manifest themselves in spatial patterns. Concentrated poverty is a neighborhood

issue and is directly linked to housing markets and housing assistance.

Unlivable House Rehabilitation Program

One of the key issues facing poor households is inadequate housing condition. Even though housing is a basic necessity in life, providing one is perhaps the most expensive item for a household. The amount of income that is spent to meet the needs of daily life causes no more money left for the eventual building of an adequate house. Moreover, the high price of land and building materials also led the poor and low-income households not able to provide adequate housing for their families.

To overcome the challenge of inadequate housing conditions, and to alleviate poverty, the Indonesian Government facilitated the access of poor and low-income households through Unlivable House Rehabilitation Program. It is a social rehabilitation program under the Social Ministry of Indonesia. The Unliveable House Rehabilitation Program is intended to improve and fulfil the needs of liveable

housing conditions as a social welfare improvement program targeted at poor and low-income households. The rehabilitation activity is community-based, meaning that the members of the impacted community plan organize and execute the program under guidance and supervision from local government agencies.

In plain view, the Unlivable housing Rehabilitation Program is considered able to alleviate poverty. The reduction of the poor is due to access of poor households to adequate housing is fulfilled by the program. Since 2013 to 2015, the beneficiaries of the program in Riau Islands have reached 4278 households. Although the numbers looks impressive, BPS noted that there are still 15.000 unimproved housing conditions still exists in Riau Islands (Batampos, 2016).

Since its first implementation, the program itself targets specific segment of the poor; meaning that only households which fulfil the criteria will be receiving the benefit of the program. Recipient criteria are: house must be a non-permanent building and/or damaged; walls and roof made from easily damaged or fragile materials, such as: plywood, thatch, bamboo, and others; walls and roof are damaged, therefore it endanger the safety of its inhabitants; damaged dirt or cemented floor; houses without toilet and bathroom facility (www.kemsos.go.id).

Other Research

In order to understand the role of improved housing condition to poverty alleviation, it is important to visit and take lessons from other research.

The Ghana Case

UN-HABITAT completed a field survey in Ghana that compared households from 4 different communities in rural and urban areas. Households from these communities were divided into control and experimental groups. The control groups consisted of households that have not received any improvement in their housing and living environment while the experimental groups consisted of households that have benefited from improved interventions by UN-HABITAT (Ardakwa, 2010, p. 4).

Evidence from the study suggests that households in experimental group living in improved UN-HABITAT have better living conditions. The experimental households are also better off, in terms of access to social services such as water, sanitation and some other housing indicators than those in the old and run-down housing environment. The study also found that there is fairly strong correlation between improved housing conditions and poverty reduction. Hence, the study suggests that housing can be used as a poverty reduction strategy (Ardakwa, 2010, p. iv).

The conclusion of study suggests that there is a strong correlation between improved housing and the poverty reduction efforts of governments. This is because adequate housing is one of the effective means to reduce poverty and is usually the most expensive item in the households' expenditure basket. The study also makes a strong point that the relationship between housing and poverty reduction is that the construction of homes in itself does not guarantee poverty reduction but can address some challenges of the households such as lower rents and improved access to water, sanitation, and other services.

The Peru Case

The study on Peru was done to investigate the construction of emergency houses as a means of poverty reduction in Peru. The study concentrated on the impact of improved housing conditions on a household's standard of living and economic situation. According to the result of the study, the access to adequate housing has had a positive effect on the household's standard of living, but it has left the economic situation unchanged. The study also noted that the poverty alleviation strategy carried out by the UTPMP as the leading organization in the project has improved the living standards of its beneficiaries.

In conclusion, the Peru Case's conclusion indicated a positive relationship between access to adequate housing and standard of living. However, the study also noted that it did not find clear relationship between economic situations and improved housing conditions.

By learning from the Ghana case and Peru, therefore, this study's aim is to assess the impact of Unliveable House Rehabilitation Program to poverty alleviation in Riau Islands. This study is especially keen in gaining better understanding on the impact of improved housing condition on poverty alleviation, especially in Riau Islands with relation to the Unliveable House Rehabilitation Program. The study will compare and analyse data based on control and experimental group that will be defined in the methodology. To assess the impact of the program, this study will base its indicators by taking the example on the Ghana Case. However since the nature of the program and its beneficiaries have different characteristics with Ghana Case, hence, adjustments to local context is needed.

Poverty in Riau Islands

Poverty is a multi-dimensional issue, characterized by lack of, or limited income. It is commonly associated with multiple forms of deprivation and consequences caused by inability to purchase basic goods and necessities (ONPHA, 2008). From income perspective, there are two basic types of poverty: the absolute poverty and relative poverty. Absolute poverty is the minimum cost necessary for a person to survive. Globally, the minimum requirement for a person to survive is USD \$ 1.90 per day, an increase of USD \$ 1.25 per day (World Bank). Meanwhile, relative poverty is the need for economic, social, political and economic goods minimum for a person to live in a society. (UNESCAP as cited in Ardakwa, 2010).

Riau Islands is divided into thousands of small islands and several large islands. Administratively, the province has 7 municipalities (two cities and five regencies). It sits at the front gate of Indonesia, to the east, it borders Malaysia; to the North, it borders Vietnam and Cambodia; and to the west, it borders Singapore and Malaysia. Although it is blessed by the bounty of the sea surrounding it, its unique position and archipelagic landscape presents it with its own sets of challenge, particularly in transportation, infrastructure development and poverty alleviation.

Riau Islands divided its poor categories into two: which are urban poor and rural poor. Both groups have different characteristics. Urban poor in Riau Islands is characterized with greater income inequality than rural poor, which means that the income distribution of urban poor is higher (BPS, 2014).

The BPS criteria of poor household placed housing condition as the first four indicators to measure poverty. These indicators are: floor areas less than 8 m² per person, floor is made from dirt, bamboo or cheap wood, the walls are made out of poor quality materials, and no sanitation (skpd.batamkota.go.id). Unable to fulfil these conditions could also be defined as housing poverty. Housing poverty can be defined as poor housing conditions such as small floor areas, overcrowding, and lack of amenities such as water, sanitation and kitchen, among others (Ardakwa, 2010).

The Government of Riau Islands defined the poverty line at a monthly per capita income of Rp. 415.800 (BPS, 2013). This amount equals to approximately USD \$30.75, thus it indicates a very low standard of living in the province although higher than the defined national poverty line of 330.776 rupiah monthly per capita income (www.worldbank.org). The number of poor in Riau Islands fluctuates every year. According to SUSENAS 2014, 6.70% or 127.779 Riau Islands' citizens live under the poverty line; increased 0.24% from 2013 (BPS, 2013).

Some common characteristics of poor households highlight the importance of focusing priorities as an important element in poverty alleviation strategies. In Riau Islands, most of the poor (40.99%) relied on agriculture as the main source of income (BPS, 2014). Furthermore, 30% of the poor households' head has only attained a high school level of education. These indicate that job opportunity, education and basic infrastructure are among the sectors that should receive more attention in a poverty alleviation strategy in Riau Islands.

METHODOLOGY

In order to assess the impact of Unliveable House Rehabilitation Program in Riau Islands, field data collection is needed. The study uses a qualitative approach with

descriptive analysis to analyse the data. Field data collection is done to gather data from households in control and experimental group. The control group in this study consist of poor and low-income households that have not received the benefit of Unliveable House Rehabilitation Program while the experimental group consist of households that have received the benefit of Unliveable House Rehabilitation Program.

Data Collection

For the purpose of data collection, this study adopted survey method and conducted a survey to 20 households in two municipalities. The respondents of the survey are the households' head in control and experimental groups.

The respondents are divided into two groups. Control group; consist of 10 households with no intervention and experimental group consist of 10 households with intervention in the form of house rehabilitation program. Households in both control and experimental group have the same characteristics (poor and low-income households) and are considered a homogenous population. To gather data and assess the impact of the program this study designed two sets of questionnaires in Indonesian language. One set of questionnaire is for the experimental group and the other for the control group.

Simple random sampling is used in the survey to gather sample of respondents.

Respondents are then selected randomly in two municipalities: Tanjungpinang City and Bintan Regency. The sampling method used was the simple random sampling. Simple random sampling is the basic sampling technique where sample of respondents are selected from a population. Each individual respondent is chosen entirely by chance and each member of the population has an equal chance of being included in the sample.

Indicators

This study is especially keen in gaining better understanding on the impact of improved housing condition on poverty alleviation, especially in Riau Islands with relation to the Unliveable House Rehabilitation Program. To assess the impact of the program, this study adopted the indicators on the Ghana Case. However since the nature of the program and its beneficiaries in Riau Islands have different characteristics with Ghana Case, hence, some indicators are adjusted to local context.

List of indicators used in this study is adopted from the indicators of UN-HABITAT's study in Ghana (Ardakwa, 2010). The poverty dimension indicators consist of three dimensions: income poverty; lack of access to basic services; and deprivations in human development. This study based its indicator on the above three dimensions.

Table 1
Indicators Adopted for Analysis
Poverty Dimensions Indicators

Poverty Dimensions	Indicators
Income or Consumption Poverty	Average household expenditure
	Average household income
Lack of Access to Basic Services	Type of water source
	Average distance to water source
	Reliability of water source
	Average cost of water
	Type of toilet facility
	Condition of toilet facility (level of hygiene)
	Method of solid waste disposal
	Availability of bathroom in the house
Condition of the bathroom	

	Availability of kitchen facility for cooking
	Cooking fuel used for cooking
Deprivations in Human Development	Average number of rooms
	Average number of habitable rooms
	Average number of people occupying a room

(Ardakwa, 2010)

FINDING AND DISCUSSION

This part of the study is concern on the presentation of the findings to assess the impact of house rehabilitation program in Riau Islands. It contains the descriptive analysis of the data which discuss the differences in the indicators of the study among control and experimental groups. The discussion will not only look at the income and expenditure, and human development across both groups but it will also look into the households' access to essential services such as access to water, sanitation facility and cooking facility.

The findings were drawn from the data collected randomly in two municipalities: Tanjungpinang City and Bintan Regency; both are on Bintan Island, Riau Islands Province. In all, twenty (20) households answered the questionnaires; ten (10) households from control group and ten (10) households from experimental group.

The poverty dimension indicators consist of three dimensions: income poverty; lack of access to basic services; and deprivations in human development. Each poverty dimension has its own indicators with both response for control and experimental groups.

Table 2
Respondent's Characteristics

Respondent's gender	Male			Female		
Control	7			3		
Experimental	8			2		
Respondent's occupation	Not working	Farmer	Fisherman	Merchant	Laborer	Others
Control	1	-	3	-	3	3
Experimental	-	-	1	-	7	2
Respondent's education	No education / Not finished primary school	Primary School	Secondary School	High School	Diploma	University
Control	2	2	2	4	-	-
Experimental	3	1	1	5	-	-

Source: Processed Data, 2016

Data from the survey indicate that among the control and experimental groups, the respondents are mostly male (75%) followed by female respondents (25%). The

table show that occupation on experimental group is more diverse compared to occupations of control group. Labourers (70%) formed the majority of occupation in experimental group while in control group,

fisherman (30%), labourers (30%) and other type of occupation (30%) is more dominant.

Access to education is one of the important aspects in alleviating poverty in a household. The table shows that majority of the respondents surveyed attained high school education (40% in control group; 50% in experimental group). Higher level of education means that a person could increase his/her chances and opportunities to work in formal sectors which in turn could generate higher income for his/her household. On the contrary, lower education means that a person might have lower chances to find work in formal sectors due to competition from higher educated competitors and certain barriers in skills, thus reducing his/her chance of gaining higher income level.

Table 3
Income or Consumption

Average household's income	Income
Control	1.465.000
Experimental	1.475.000
Average household's expenditure	Expenditure
Control	984.000
Experimental	1.025.000

Source: Processed Data, 2016

Respondents, both in control and experimental group have difficulties in estimating the monthly income and expenditure of their households. Findings on the field suggest that the situation is due to the type of occupation a respondent has. Most of the respondents from both groups that were surveyed are working in informal sectors. Due to that situation they do not have fixed monthly income. It is also difficult to estimate their monthly earnings due to the nature of their occupation. For example, a respondent with an occupation as fisherman does not have fixed monthly income due to the uncertainty of his/her catch. The respondents cannot ascertain that he/she would receive stable income throughout the year. Expenditure wise, it is the same. Due to the uncertainty of the income, household's expenditure is also

difficult to estimate. Household's budget across both the control and experimental groups were not planned; therefore, it is difficult to determine the exact level of household's monthly expenses.

To give a description, this study categorizes household's income and expenditure based on the average figure given by the respondents during the survey. The figures presented here are based on respondent's rough estimates of his/her household's income and expenditure from both control and experimental groups.

Comparing the figures of average income on experimental group with control group, it can be observed that the situation of experimental group is slightly higher. Based on the findings, average income on experimental group is 1.475.000 Rupiah compared to average income of control group of 1.465.000 Rupiah (experimental group gain 10,000 Rupiah more per month). Comparison on the expenditure on the other hand, shows that control group is slightly spending less money than the experimental group. The average expenditure of control group is 984.000 Rupiah while the average expenditure of experimental group is 1.025.000 Rupiah which means that per month the control group is spending 41.000 Rupiah less.

Even though housing is the largest expenditure in a household's budget, these findings, however, cannot establish a clear link between the impacts of improved housing condition through house rehabilitation program on household's level of income and level of expenditure. Data from the field survey revealed that on average experimental group have slightly better income than the control group. However, findings on the average expenditure suggest that control group spend less compared to experimental household.

Data from BPS (2015), suggest that 25.64% of household's expenditure in Riau Islands was on housing and household's facility. If there is a direct link between the impacts of house rehabilitation program on experimental group, its impact would be on the expenditure of a household, such as for example: reduced expenses due to improved housing conditions.

Table 4
Basic Services
Water

Type of water source	Pipe water	Water well (dug / drill)	Spring water	Rain water	River	Lake/Pond
Control	3	7	-	-	-	-
Experimental	1	9	-	-	-	-
Average distance to water source	<20 Meter	>20 Meter	<40 Meter	>40 Meter	<60 Meter	>60 Meter
Control	6	-	2	2	-	-
Experimental	6	2	1	1	-	-
Reliability of water source	Reliable			Unreliable		
Control	9			1		
Experimental	6			4		
Average cost of water	Lowest			Highest		
Control	Rp. 0			Rp. 100.000		
Experimental	Rp. 0			Rp. 80.000		

Source: Processed Data, 2016

The survey revealed that water well, either dug or drilled is the main water source for the majority of control (70%) and experimental group (90%). The survey also revealed that the experimental group relied mostly on water well compared to control group for its source of clean water.

The usage of household's water source is also reflected in the distance between the water source and the residential area. Households in both control (60%) and experimental group (60%) have access to its water source in less than 20 meters. However, in contrast, the reliability of water source for control group (90%) is better than experimental group. This means that control group has stable and reliable access to its water source all year-long while the experimental group does not have reliable water source for the same time period.

Respondents have difficulties in determining the monthly cost of water. This is due to the majority of the respondents owns and uses their own private water well as water source for their household. The location of the water well itself, as the data is showing, lie in close proximity (<20

meters) to the residential area and in most cases the water well is inside the house. This condition has resulted in the difficulties of estimating the average cost of water that each household has to spend.

To give a description of the cost on water a household would spend across both groups, this study categorize household's expenses from the lowest to the highest. Based on the categorization of the findings it could be seen that both groups' lowest spending is 0 Rupiah on water while the highest a household has to spend is 100.000 Rupiah for control group and 80.000 Rupiah for experimental group. The control group's higher spending on water is due to 30% of the respondents' uses pipe water as the main source of clean water compared to only 10% for the experimental group. Pipe water is provided by State's Water Company that charge bills on households for monthly use of water. In contrast, however, households with its own well does not have to pay any water bill, thus, they spend 0 Rupiah on water.

Table 5
Basic Services
Sanitation Facility

Type of toilet facility	Flush toilet	Squat toilet	Pit latrine	Public toilet	others	
Control	2	5	3	-	-	
Experimental	-	6	4	-	-	
Condition of toilet facility (level of hygiene)	Good			Poor		
Control	4			6		
Experimental	5			5		
Method of solid waste disposal	Septic tank	Pond	Sea/River	Ground Holes	Open field	Others
Control	7	3	-	-	-	-
Experimental	6	-	4	-	-	-
Availability of bathroom in the house	Available			Unavailable		
Control	10			-		
Experimental	10			-		
Condition of bathroom	Good			Poor		
Control	8			2		
Experimental	5			5		

Source: Processed Data, 2016

Most of households in control group have access to squat toilet (50%) while another 30% uses pit latrine as means of waste disposal. The same could be also being seen in experimental group where 60% of the households is using squat toilet and another 40% is using pit latrine as means of waste disposal. Pit latrine toilet waste disposal method is different than squat or flush toilet. Flush or squat toilet method of waste disposal is by flushing waste with water, either manually or by using flush mechanism, thus sending waste directly to a special holding tank, meaning that the waste will fall and contained to a specific tank under the ground. Pit latrine uses a different waste disposal method as it needs a hole in the ground where the solid waste goes directly in to a pit, or the waste

falls directly to the sea, river or flowing water.

Traditionally, due to its archipelagic landscape, households in Riau Islands tend to build their houses at the coasts or river banks. This social characteristics lead to the adoption of pit latrine to dispose waste. Pit latrine is still a common type of toilet as it is a convenient and widely used method that suits the specific settlement characteristics. This type of toilet facility could still be found among low and middle-class households around coastal or river settlements in Riau Islands.

In addition to the type of toilet facility and its method of waste disposal, this study also surveyed the condition of toilet facility among both groups. The survey revealed that both groups have poor toilet facility. However, the experimental group have

better toilet facility condition (50%) compared to control group (40%).

Both household groups also indicate that they have bathing facility that could be used to clean themselves. Conditions across both groups are varied. The bathroom condition of control group, however, is better (80%) compared to the poorer condition of bathroom in experiment group (50%). Bathroom is one important aspect of hygiene in a household; therefore improving its condition should be taken into consideration. Furthermore, improved access to bathing facilities in the house provides household members some level of

comfort which is a necessary condition of wellbeing (Ardakwa, 2010).

The finding shows that control group has less access to adequate bathing facility in their house. This finding also indicates that the Unlivable House Rehabilitation Program does not include personal hygiene facilities such as bathing and toilet facility as component for improvement. This is evident across indicators on experimental group. Experimental group as the beneficiaries of the program have poorer bathing facility compared to control households. However, in contrary to earlier findings, both groups have poor toilet condition with experimental group has slightly better condition.

Table 6
Basic Services
Kitchen Facility

Availability of kitchen to cook	Available		Unavailable	
Control	10		-	
Experimental	8		2	
Cooking fuel	Fire wood	Charcoal	Kerosene	Gas fuel
Control	1	-	3	6
Experimental	4	-	1	5

Source: Processed Data, 2016

The survey results indicated that all households in the control group have kitchen facility for cooking at their house. On the other hand, only 80% of households in experimental group have kitchen facility available to cook their meals.

The response from experimental group indicates that the house rehabilitation program does not necessarily improve a household's kitchen. Two respondents without kitchen facility narrated that the program rehabilitated their house by improving the condition on certain parts of the house, mainly roof and walls. However, due to financial limitation of the program, the financing was not enough for additional building materials to build a fully functioning kitchen. In contrast, a respondent from experimental group also narrated that the kitchen in his house was built with the assistance of the program. It was indeed

true that the program rehabilitated the house on certain parts, but as long as the extent of the rehabilitated part of the house is not severe, it is possible to allocate building materials to improve other necessary parts of the house.

The results also identify that household in both groups' uses a variety of fuel to cook their daily meals. Majority of households in control (60%) and experimental group (50%) uses gas as cooking fuel due to its efficiency and ease of access in market. The usage of gas as cooking fuel indicate that there is a shift of cooking fuel from wood, charcoal and kerosene to using a more efficient, although expensive cooking fuel such as gas. However, one thing to note is that there are households in experimental group that still uses wood as the main fuel for cooking. These households responded by narrating that gas

is too expensive and they are better off by using wood as cooking fuel because it is

easy to collect and it is available in abundance in their area of residence.

Table 7
Human Development

Average number of rooms	Experimental	Control
	4.8	4.4
Average number of habitable rooms	Experimental	Control
	2.9	2.4
Average number of people occupying a rooms	Experimental	Control
	4.9	4.4

Source: Processed Data, 2016

Data from field survey indicate that on average number of rooms, experimental group have slightly more room if compared to control group. On average, experimental group have 4.8 rooms per house, compared to control group with 4.4 rooms per house. The findings also suggest that the households benefited by the house rehabilitation program have more habitable rooms compared to households that have not benefited by the program. The average number of rooms experimental group has is 2.9 rooms per house, slightly better compared to the control group with 2.4 rooms per house. However, control group have better average proportion on the number of people occupying a room with 4.4 persons per room while experimental group have 4.9 persons per room on average. One implication of the relatively few people in a room is the possible decrease in the spread of communicable diseases which has a toll on household expenditure, and hence poverty (Ardakwa, 2010).

As a result of the house rehabilitation program, the experimental households are benefited by the improvement in housing conditions on two aspects; first, the increased number of rooms and second, the increased number of habitable rooms in an impacted house.

CONCLUSION

From the discussion and presentation of the data on this study, the following findings emerge:

1. The findings suggest that the study cannot find direct link between the impacts of improved housing condition with the slight increase in income of experimental group. Data from BPS (2015), suggest that 25.64% of household's expenditure in Riau Islands was on housing and household's facility. If there is a direct link between the impacts of Unliveable House Rehabilitation Program on experimental group on this indicator, its impact would be on the expenditure of a household, such as reduced expenses due to improved housing conditions.
2. The findings indicate that respondents from both groups have good access to source of clean water. Majority of respondents across both groups also have access to water well. The cost of clean water on the other hand, is practically zero for respondents in both groups which uses water well. Therefore, there is no evident that the house rehabilitation program had improved the access to clean water across experimental group.

3. The findings on sanitation facility indicate that the Unlivable House Rehabilitation Program does not include personal hygiene facilities such as bathing and toilet facility as component for improvement. This is evident across indicators on experimental group. Experimental group as the beneficiaries of the program have poorer bathing facility compared to control group. If experimental group receive improvement on bathing facility, its conditions could be better. However, in contrary to earlier findings, both groups have poor toilet condition with experimental group has slightly better condition.

4. The house improvement program does not necessarily improve or provide households with kitchen or cooking facility. The respondent indicates that it depends on the beneficiary or the program's recipient whether to improve specific parts of the house or not. However, the funding of the rehabilitation program is limited per household, therefore benefited households need to choose the most needed or necessary improvement on his/her house.

5. The only clear evident of the impact of Unliveable House Rehabilitation Program on poverty alleviation in Riau Islands is on the human development indicators. All of the above indicators indicated weak relation of the program across most of the indicators. The experimental households are benefited by the improvement in housing conditions. The improvements are on two aspects; first, the increased number of rooms and second, the increased number of habitable rooms in an impacted house.

Abstract

In the 1970s, Iligan City experienced rapid industrial growth brought upon by the establishment of hydroelectric power plants that generated cheap electric power cost. But the mushrooming of industries in the city somehow led to environmental degradation because of the uncontrolled industrial waste, as observed in the 1990s. Accordingly, this was largely due to the absence of master plan, zoning regulations or building codes of the city government.

With this, the study seeks to assess the development of city ordinances and the compliance of the select industries to solid waste management program. This study collected various documents and records both from the government offices and industries in Iligan City. Furthermore, the researchers also conducted oral interview to key respondents such as city government and industry officials, and even the community wherein the industries are located to provide a qualitative substance to the paper.

Keywords: *Industrialization, Solid Waste Management, Iligan City, industries*

INTRODUCTION

As industrialization moves fast-forward so is the risks of environmental protection becomes threatened. It is true that the expansion of human technological progress certainly brought forth the rapid advancements in economic growth and this progress made possible the rise of skyscrapers and machines that dilute work time. All these were seem impossible centuries back. Development, sometimes, is equate with number of industries around, hence, more industries similarly means urbanization and development. This becomes a reason for countries particularly developing ones to invite investments to put up industries, to uplift economy and achieve the goal of becoming self-reliant. As industries generate economic production and income, it also spawns solid industrial wastes, which are produce in bulks. Quantified in particular are manufacturing industries which is the most susceptible to produce toxic wastes that are harmful to environment and individuals. United States, for example, records that its industries facilitates waste disposal at estimated 7.6 billion tons per year back in 1980s (United States Environmental Protection Agency, 2016) when most probably there was still minimal concern on environmental degradation. This “minimal concern” can be related somehow to the internet-less era of the 80s. Hence, the call for environmental protection only became business of the few. Nevertheless, as time progress, a shift in attitude on ecological protection has become a battle cry. The need to

be responsible earth-settlers have been advocated by different groups and agencies, to name a few, *Sierra Club* in 1892 known as one of the earliest in existence, *Environmental Defense Fund* in 1967, and *Friends of Earth*. These agencies adopt the principle that the corporate world needs to reconcile with mother earth and it offers no other option. They do not necessarily call for a stoppage in the growth momentum as these industries frankly offers us that but should always put into prime consideration and practice to safeguard the needs of nature. Manufacturing industries, foremost, must create a mechanism to guarantee nature’s interests because after all, industries relies on nature’s abundance hence making the two involved in tangled relationship in which the former only becomes beaten once this connection breaks down. These industries and its waste disposal are warming up the climate that is detrimental to nature’s state and likewise to human condition. The protection of environment is the principal take, which should be over and above corporate demands. As the maxim express, we cannot live in another earth because we only have one hence, human race will go extinct if the whole ecological system collapse.

Countries have advocated the growing needs to be environment conscious society and urging foremost the manufacturing industries to comply with the waste management regulations. In the Philippines, the passing of *Ecological Waste*

Management Act on January 26, 2001 was adhered by local government units (LGUs) through the passage of city ordinances and in Iligan City, Ordinance No. 09-5488 on January 22, 2009 was put into effect which aims to further strengthen the preceding Ecological Management Act. But prior to such adherence, the city government have already sponsored environment protection acts as a logical response to the growing number of manufacturing industries in the city at the start of 1960s when the harnessing of Agus River created cheap power therefore attracting interests of various manufacturing companies. This study will therefore look at the extent of compliance of known manufacturing industries in the City to the solid waste management protocol.

Statement of the Problem

Primarily, the purpose of this study is to examine and assess the compliance of Mabuhay Vinyl Corporation and Granex Manufacturing Corporation to Solid Waste Management Program of the city. This study aims to answer the following questions:

1. What are the raw materials and final output/product of these companies?
2. What type of industrial waste does MVC and Granex produce or release?
3. How does these pollutants/wastes being controlled or disposed?

4. What are the safety measures adopted by MVC and Granex in protecting the environment?

Significance of the Study

This study is conducted in order to assess the waste management program of Mabuhay Vinyl Corporation and Granex Manufacturing Corporation of Iligan City. This could be a good way, of particular to the public and concerned citizens, to know how Mabuhay Vinyl Corporation and Granex Corporation control and manage their pollutants and wastes. Hopefully, this would provide awareness to the general public regarding the risks of industrial wastes if improperly managed.

Results of this study would hopefully provide empirical information that would serve as a basis by the local government of Iligan, Department of Environment and Natural Resources (DENR) and other concerned agencies in strengthening the enforcement of their environmental laws and policies for waste management.

Scope and Limitation

This study is bounded mainly on the compliance of Mabuhay Vinyl Corporation and Granex Manufacturing Corporation in Iligan City to waste management program of the city. Furthermore, this study will also provide brief information about the historical background of these industries, their operation and products. The basis of the researchers in selecting these industries lie in this reason; considering that these

industries are widely considered as major industries that made Iligan a vibrant city for trade and commerce and contributed to the rapid industrialization, one cannot simply deny that they use and utilize complex raw materials and at the end of the process produces enormous amount of waste. Since it produces major pollutants and these companies are just adjacent to Iligan Bay, then this could raise important question and concern that must be given extensive attention.

Figure 2. Map showing the location of Granex Manufacturing Corporation within the vicinity of Iligan Bay. Source: <https://wikimapia.org/551824/Granexport-Manufacturing-Corporation>.

Figure 1. Map showing the location of Mabuhay Vinyl Corporation within the vicinity of Iligan Bay. Source: <https://www.google.com.ph/maps/place/Granexport+Seaport>.

Practically, all factories are oriented to the Iligan Bay. The advantage of accessibility for sea-going vessels which transport the firm's raw materials and finished products was the paramount consideration for the selection of their present plant sites. According to Salgado (1996) Iligan holds the distinction of having the most number of private piers in the entire country. However, pollution of the environment is one stark reality staring the inhabitants of Iligan in the face. Since most factories are situated on the coast with very limited area, chances are the industrial pollutants of various types would easily get concentrated beyond what is humanly tolerable or safe. In Iligan, all types of industrial waste are found.

Thus, this study is conducted to assess what could be the possible effect and impact of Mabuhay Vinyl

Corporation and Granex Manufacturing Corporation towards Iligan and its environment.

Research Methodology

Solid Waste Management refers to the supervised handling of waste material from generation at the source through the recovery processes to disposal. Managing solid waste is very essential for it can create unsanitary conditions, and these conditions in turn can lead to pollution of the environment if improperly disposed. This research attempts to explore the solid waste management of two of the known industries in Iligan City, Granex and Mabuhay Vinyl Corporation in collecting, treating, segregating, transporting and disposing their solid waste material that is discarded because it is no longer or less useful. In this, the research is descriptive in approach that used quantitative and qualitative analysis. Interviews through key informants such as local government officials from different offices, engineers and personnel in the industries and residents within the locale of the study were taken into consideration. In addition, government documents, records and reports from industries and secondary sources were used to draw the findings of the study. The data gathered by the researchers are described and analyzed to present the level of waste management of these companies and recommended portions needed to improve to ensure the protection of the public health and the environment.

FINDINGS OF THE STUDY

Brief Background to Waste Management Program

As call for environmental protection become intense amidst growing industrial production, not only agencies or groups became advocates but country leaders also gave in to the pressure. A necessary paradigm shift was adopted and environmental protection became the language of respective countries. Enforcing environment protection regulations have become a prominent feature in country policies in order to make a more environment conscious society. This move is initiated by both developed and growing countries, Thailand for example provides the *National Solid Waste Management Policy* in 2007, which importantly strategize awareness raising and re-uses waste. Philippines, with its growing desire for economic expansion, also moved to implement the **Republic Act 9003** or also known as **Ecological Solid Waste Management Act**. The Philippine government has enacted various policies related to waste management since 1938 to 2001 (Atienza, 2011 as edited by Kojima and Michida, 2011). These laws were implemented depending on the circumstances encountered but even earliest laws already strictly impose penalties to the compliance. Even the Local Government Code of 1991, which is used as guiding principle in the operations of local government units, also urged local units to advance

waste management practice in the local administration (Oceanar, 2001 as cited by Atienza, 2011). Then the RA 9003 was approved, which made the LGUs participation as prime in the implementation of the law but private sector and community are also persuaded. With the mandate provided in the law, the local government unit of Iligan City enacted **Ordinance No. 09-5488** on January 22, 2009, the **Comprehensive City Ecological Solid Waste Management System**. However, before such ordinance was passed as form of compliance to national mandate, Iligan City government since 1975 have shown concern in keeping a healthy environment but implementation sadly turns futile since awareness among people to keep up with the ordinance was flimsy. Community consciousness to keep the environment in form holds significance for the law to thrive because the latter only serves as an instrument but realization and application of the instrument remain as the prerogative of the people and community.

Iligan City, mouthed as the “industrial city of the south”, experienced rapid economic expansion when the National Power Corporation started to harness potential energy source in Agus River in 1950s. This resulted to cheap power costs enough to attract big industries to operate to the once sleepy town of Iligan. But from 1962-79, it was sleepy town no more with the coming of more industries which generated great economic gains for the city (Salgado, 1998). *More industries the better*, was

the language of the city since it can generate more jobs that replicates to better income and can further reciprocate to inward migration hence the town’s growth and development was foresee as bright.

These industries tied their factories strategically near the sea to facilitate shipping convenience hence private piers were put up making Iligan to have the most number of private piers in the country. Indeed, more industries mean more income and growth but more industries can also mean more waste disposal that leads to environmental degradation. As observed by Salgado (1998), the growth experienced of the city is not without pains and sacrifices among others were the apparent “degradation of physical environment due to industrial waste”. Until 1975, the city has no master plan to respond to the possible environmental effects on the proliferation of industries. In Salgado’s conclusion, the years when manufacturing industries multiplied in the city, almost types of industrial waste were also found in the city, in fact it is apparent particularly in the sea areas where most industries have congregated. However, this dirty practice have gradually decline, though waste management issues and problems comes out every now and then, when the enforcing of laws strongly requires their compliance. The RA 9003, which is further strengthened by the city ordinance, requires representatives from the manufacturing and packaging industry to become member of the *Provincial Solid Waste Management Board* and

the *City/Municipal Solid Waste Management Board* as indicated respectively in Section 11 & 12 of the act. Furthermore, imposing strict and penalties to any person that fails to comply with law and in case corporation commits the offense it is the chief executive officer, president, general manager, or officer-in-charge shall be held liable under the law as prescribed in its Section 49. The local government held the foremost responsibility in the promulgation of the provision under the act, otherwise administrative sanctions be faced (Section 50 of the law). Meanwhile, Section 48 of the law outlines the prohibited acts:

(1) Littering, throwing, dumping of waste matters in public places, such as roads, sidewalks, canals, esteros or parks, and establishment, or causing or permitting the same;

(2) Undertaking activities or operating, collecting or transporting equipment in violation of sanitation operation and other requirements or permits set forth in established pursuant;

(3) The open burning of solid waste;

(4) Causing or permitting the collection of non-segregated or unsorted wastes;

(5) Squatting in open dumps and landfills;

(6) Open dumping, burying of biodegradable or non-

biodegradable materials in flood prone areas;

(7) Unauthorized removal of recyclable material intended for collection by authorized persons;

(8) The mixing of source-separated recyclable material with other solid waste in any vehicle, box, container or receptacle used in solid waste collection or disposal;

(9) Establishment or operation of open dumps as enjoined in this Act, or closure of said dumps in violation of Sec. 37;

(10) The manufacture, distribution or use of non-environmentally acceptable packaging materials;

(11) Importation of consumer products packaged in non-environmentally acceptable materials;

(12) Importation of toxic wastes misrepresented as "recyclable" or "with recyclable content";

(13) Transport and dumplog in bulk of collected domestic, industrial, commercial, and institutional wastes in areas other than centers or facilities prescribe under this Act;

(14) Site preparation, construction, expansion or operation of waste management facilities without an Environmental Compliance Certificate required pursuant to Presidential Decree No. 1586 and this Act and not conforming

with the land use plan of the LGU;

(15) The construction of any establishment within two hundred (200) meters from open dumps or controlled dumps, or sanitary landfill; and

(16) The construction or operation of landfills or any waste disposal facility on any aquifer, groundwater reservoir, or watershed area and or any portions thereof.

The Case of Mabuhay Vinyl Corporation

Background

Mabuhay Vinyl Corporation was established in 1963. It is the first and largest caustic soda polyvinyl chloride (PVC) resin producer in the Philippines. Before, Mabuhay Vinyl Corporation manufactures and sells six chemical products namely: caustic soda, liquid chloride, hydro chloric acid, sodium hypochlorite, compressed hydrogen and polyvinyl chloride.

Founded in 1934 by Judge Guillermo B. Guevarra, the company was then known as Mabuhay Rubber Shoe Factory, with manufacturing facility located at Cuneta Street, Pasay. The company eventually ventured into the manufacturing of related industrial rubber products such as gaskets, rubber soles and heels, rubber parts for farm equipment and other molded rubber products. Unfortunately its production facilities were completely destroyed during World War II (Viajante *et.al*, 2000).

In 1963, the Company was reconstructed into a manufacturing firm of caustic soda and PVC resin. In 1964, new production facilities were constructed in Iligan City due to low cost of labor and great source of electricity.

The plant started as a small company. The original plant was designed to produce 6,000 tons of PVC resins and 5,000 tons of caustic soda per year. In 1966, the plant undertook a 2,000,000 expansion program to increase its production of PVC and Caustic Soda by 60%. This increased the output of vinyl chloride monomer and polymer resins to 9,000 tons a year and caustic soda to 7,000 tons a year. In 1967, the name Mabuhay Rubber Shoe Factory was changed to its present name the Mabuhay Vinyl Corporation.

At present, Mabuhay Vinyl Corporation is located in Assumption Heights, Iligan City. It has an area of about 279,000 square meters. It is situated nine kilometers south of the city proper and is adjacent to the state-owned National Power Corporation's generating station at the Maria Cristina Falls. In addition, it produces four main products; caustic soda, hydrochloric acid, liquid chlorine and sodium hypochlorite. It maintains depot warehouses strategically built to transport its chemical products. Complementing them are fleets of flatbeds and lorries suited for the transport of chemical products to their domestic and multi-national consumers (Miranda *et.al*, 2000).

Indeed, Mabuhay Vinyl Corporation has contributed to the rapid industrialization that Iligan City has experienced. It also boosted Iligan's capital and employment. Moreover, MVC is one of the major industries that made Iligan a vibrant city for trade and commerce. MVC, therefore is very essential due to its enormous contributions to the over-all development of Iligan City.

Raw Materials

In an interview with Engineer Bayor (2015) salt is one of the most important raw materials in their operation. The company uses around 33,000 metric tons of industrial salt per year. Aside from salt, water and electricity are important raw materials as well it the production.

Products and Application

The company currently produces four basic and intermediate chemicals with a wide range of industrial and household applications. The biggest consumer buyer of these products are the San Miguel Corporation, Coca-Cola, Unilever Philippines, Procter and Gamble Philippines and Pepsi-Cola.

Based from the MVC's Report (1997), included within the chlor-alkali group of products are the following:

1. **Caustic Soda.** This is the common name for the sodium, a clear slippery and highly corrosive liquid compound which is used as a raw material in the manufacture of soaps, detergents, textiles and papers. MVC ranks as the country's

largest manufacturer of caustic soda with a production capacity of about 1,290 metric tons per month.

2. **Liquid Chlorine.** It is a clear, amber-colored liquefied gas that is kept under high pressure in steel cylinders. It is a highly reactive gas with a pungent and irritating odor and is primarily used for drinking water purification, water treatment as a bleaching agent for paper and textile manufacturing and for producing insecticides, refrigerators and chlorine-synthetic chemicals. Presently, MVC is the only chemical company in the country that produces C12 in commercial quantities.
3. **Hydrochloric Acid.** This chemical is commercially known as "muriatic acid." It's commonly used in the pre-treatment of metals in steel manufacturing, activation of geothermal oil wells, food processing, production of zinc chlorine for batteries and steel pickling in electronics assembly. MVC is the only producer of hydrochloric acid in the country with a production capacity of about 1,290 metric tons per month.
4. **Sodium Hypochlorite.** It is used as bleaching material for clothes and as disinfectant and deodorant in dairies, sewage disposals, hospitals, school canteens, bathrooms and kitchens. MVC has a 2-production capacity of about 1, 670 metric tons per month.

Equipment and Facilities

The plant equipment and facilities are deep sea water pier, caustic chlorine, deionized water tank, takuma boiler, drying plant, purifier tank, pipe and foundry shop, packaging plant, blast furnace (MVC Prospectus, 1997).

Manufacturing Process

Salt is dissolved in water and electrolyzed using a diaphragm cell process to produce hydrogen gas, chlorine gas and caustic soda with 10% concentration. Then water is reduced to its content through a triple affect evaporation system, diluted caustic soda yielded by the diaphragm cell is concentrated to fifty percent. From the electrolysis cells, chlorine and hydrogen gases are channeled to a combustion tower. The gases, are combined to an exothermic reaction to form hydrogen chloride gas. This gaseous intermediate product is absorbed in water or with a dilute hydrochloric acid solution, producing a concentrated thirty-two hydrochloric acid solution. Some of the hydrogen gas is directed into the hydrogen purification plant where it is cooled, deoxidized, compressed and then charged into steel cylinders.

Part of the chlorine gas is diverted to the liquid chlorine plant. There it is dried, compressed, liquefied and then charged into steel cylinders. Liquid caustic soda and chlorine are mixed together with softened water in a sodium hydrochloric reactor. This

mixture then passes through a filter for further refining into a premium grade sodium hydro chlorite solution.

Waste Management

Mabuhay Vinyl Corporation has secured the necessary permits and clearance from the Department of Environment and Natural Resources (DENR) to operate all of its plant facilities. When the need arises, MVC disposes waste chemical products in accordance with the appropriate disposal procedures. It is true that MVC produces large amount of waste water (cooling water), however, excess hydrochloric acid for instances, is neutralized using lime hydrate before it is discharged to the disposing tank. In Air pollutant, they have the so called Chlor Alert System, 24/7. This equipment detects chlorine leak at 1ppm. That is why, according to Engr. Gorgolon (2015) MVC believes that the necessary precautions are being taken by the company to comply with the applicable environmental regulations. As a matter of fact, within the vicinity of Mabuhay Vinyl Corporation in every area or part of their site, collection and segregation of wastes are properly observe and practice.

In this manner, certificate from the DENR proved that before the company operates its business, it had complied with all the necessary safety precautions and safety devices that could not cause the destruction the environment but rather it would maintain its beauty and preserve its resources for the benefits of the people. It cannot be denied that Mabuhay Vinyl Corporation supports a

precautionary approach to environmental challenges, undertake initiatives to promote greater environmental responsibility and even encourage the development and diffusion of environmentally friendly technology. Based from their 2008 report in their website entitled UN Global Compact 2008, MVC carried out advocacy activities on waste management program by:

1. Participating in the Barangay Waste Management Council of Barangay Maria Cristina under the Barangay Captain.
2. Conducted orientation to ten members of the Education and Promotion Committee of Mindanao State University (MSU) – Iligan Institute of Technology.
3. Hosting the Capability Building Training for Barangay Maria Cristina Solid Waste Management Committee.

Engineer Gorgolon (2015) also emphasizes that MVC successfully passed the surveillance visit of TUV-SUD on MVC's Environmental Management System. Aside from that, MVC is granted 3 ISO Certificates from their three systems, namely; Quality Management System (QMS) - ISO 90001, Environmental Management System (EMS) – ISO 14001, Occupational Safety and Health Management System (OSHM) – OSAS. And these three systems are called as the Integrated Management System (IMS).

Furthermore, based from the Occupational Safety and Health

Standards, MVC formed their Safety Committee known as Corporate Council on Quality Security Safety Health and Environment. This group is composed of various committees:

1. Resource Conservation
2. Customer Satisfaction
3. Support for Climate Change
4. Chemical Safety
5. Fire Prevention and Emergency Drills
6. Water/Air Pollution/Spill Prevention
7. Mechanical Safety
8. Motivation, Safety and Environment, Education and Health
9. Disaster Assistance and Response Team
10. Solid Waste Management

These are the following activities which MVC has undertaken in support of its Environmental responsibility:

1. Conducted Safe Chlorine Handling Orientation for 33 employees of Iligan City Waterworks System.
2. The Pollution Control Association of the Philippines conferred MVC with its Success Story-Environmental Award during its 28th National Convention in Subic Bay. The award is in recognition of the efforts and programs of the company to remain steadfast in putting to practice and aligning itself with the principles it has established in protecting the environment and conserving resources through adoption of environment friendly technologies.

3. Celebrated Earth Day/Month thru a volunteer community clean-up at Purok 13 Highway, Timoga creek and coastal area near MVC Pier. Purok 13 residents and MVC employees were the volunteers.
4. The entire operations of MVC Iligan Plant shifted to the Ion Exchange Membrane Technology which is a more environment-friendly technology. This eliminates use of asbestos, reduction in power and materials usages and will definitely enhance safety and health concerns of workers.
5. Conducted orientation/tour of the new IEM plant facilities for Purok 13 officials. Emphasized to them the safety/environment friendly features of the new plant.
6. DENR through its DENR-EMB Industrial Eco watch program upgraded the rating of MVC from blue to green. The rating criteria based on D.O. # 98-51 are as follows:
 1. Black - Very Bad
 2. Red – Bad
 3. Blue – Good
 4. Green - Very Good
 5. Silver - Excellent Performance
 6. Gold - Outstanding Performance

With this, MVC met all the DENR/LLDA requirements and has been rated Blue in the previous rating period. Their effluents/emissions are consistently lower than the applicable standards by at least 20%. MVC has a well-functioning monitoring equipment such as flow meters, continuous

emission monitoring system. They have discharge points which are accessible to inspection.

Aside from complying with the environmental regulation and proper chemical waste disposal, MVC initiated an activity such as tree planting and coastal clean-up under the supervision of the Technical department head, Engineer Eric Pagaling. This was decided in support of the government's drive of preserving our environment. Trees such as the Mahogany and Gimelina were planted in strategic areas around the company site.

Thus, all these efforts have been duly noted, as MVC was awarded by the Department of Environment and Natural Resources (DENR) with a Citation for its Energy Conservation Programs

The Case of Granex Manufacturing Corporation

Background

Granex is located at Barangay Kiwalan, Iligan City, Lanao del Norte, Philippines. Kiwalan is one of the earliest settlements and one of the oldest local government units of Iligan City. Its strategic location makes it suitable for human settlement and economic activities. For this reason, Kiwalan is ever since a vibrant and a dynamic community. This is also the reason why many industries came to establish their operation in the barangay (Explore Iligan, 2012).

Accordingly to Miranda *et.al* (2000) Granex Manufacturing

Corporation is probably the biggest coconut oil milling company in the world. Granex belongs to the Coconut Industry Investment Fund group of companies administered by the United Coconut Planters Bank.

It was founded in 1954 bearing the name GRANEX Phil., later changed to Grand Export in 1996. Then manned by three personnel and involved in the study of copra business feasibility and the coconut industry. As an enterprise, it started with copra buying and exporting of copra. When the copra supply was abundant, the company decided to expand with the crushing of Iligan Coconut Oil Mill from 500 to 1,000 MT in 1979, which made Granex Manufacturing the Biggest Coconut Mill in the world. The company put up a coconut oil mill in Kiwalan, Iligan City and around 20 copra buying stations in the Philippines. All copra bought from these stations is transported or shipped to its plant in Kiwalan, for milling.

Generally, Granex produces crude oil and coco pellet. Crude oil is a raw material for the manufacture of edible oil, soap, detergents and other chemicals. Minola cooking oil and crude coconut oil for domestic consumption, and copra pellets, crude coconut oil and Cochin coconut oil for exports are the company's products. These products are mainly exported to the USA, Europe, Japan. Every year, the plant produced 1,000 metric tons of crude oil and 102, 000 metric tons of coco pellets (Granex Port Manufacturing Corporation, nd).

Equipment and Facilities

The plant equipment and facilities includes Type C Unloading Pier, Type B Loading Pier, BI Pipeline connected to the Loading Pier, Long Conveyor belt connected to the Loading Pier, Mooring Dolphins, Breasting Dolphins since Granex has also a port Area. As to its equipment during processing and production, the following includes milling plant, refinery plant, deodorizing plant, and acidulation plant.

Raw Materials and Products

According to Engineer Lugatiman (2016) the raw materials are processed in Plants to come up with a product. Copra is processed in Milling plant and produced crude coconut oil and copra solvent extraction pellets, *Crude Coconut Oil* processed in a Refinery Plant which produced refined bleached oil (RBO)/ *Cochin* and soapstock, *Refined Bleach Oil/Cochin* processed in the Deodorizing Plant which produced refined bleached deodorized oil (RBDO) / minola premium edible oil, *MINOLA Premium Edible Oil and Palm Oil Stearine* is processed in a *Shortening Plant* which produced minola vegetable shortening and *Soapstock* processed in Acidulation Plant which produced acidulated oil.

Waste Management

Out of the raw materials, it is undeniable that during its processing and production, Granex Corporation disposes waste which might affect the public health and the environment. First, production waste includes *Copra*

Dust which the company either sell it to local scrap buyers or land filling. *Used Bleaching Materials* from the Refinery, it is either reuse it at Oil Milling Plant Filtering Process or sell to local scrap buyers. Land filling is usually done with the Coconut shell ash from Solid – Fired Boiler. For used sacks, the company either reuse it or sell to local scrap buyers.

Second, Fabrication and Maintenance Waste just like Metal cuttings & chips, the damaged equipment or equipment parts and used/damaged conveyor belt are sold to local scrap buyers, for the Wooden Crates it is recycle and reuse it as alternative fuel for Solid – fired Boiler, and for Busted lighting fixtures (bulbs & lamps) and Damaged / defective storage battery the company just stored it to a designated area.

For the office waste, used papers and cartoons are either reuse or sold to local scrap buyers and for the canteen waste just like food leftovers, usually it is given to the backyard hog raisers within the community, and plastic bottles are also sold to local scrap buyers.

CONCLUSION

Industrialization is considered the synonym to development but it is necessary to review the impact of industrialization on society and environment. The most prevalent and evident consequence of this would be the pollution that it can cause to the environment and community. Based from the studies conducted by Salgado and among others, it showed that Iligan at the outset of its industrial growth, pollution of the environment is

one stark reality. Since most factories are congregating on the coast with very limited area, chances are the industrial pollutants of various types would easily get concentrated beyond what is humanly tolerable or safe. Accordingly, in Iligan, practically all types of industrial waste are found.

In response to the critical condition of waste management problem and the threat it poses to the environment and human health if it remains unsolved, the Philippine government enacted the Republic Act 9003 on January 26, 2001. Unlike previous environmental policies, this Ecological Solid Waste Management Act of 2000 takes a holistic approach to the problems of solid waste management. It declares the intention of the state to adopt a systematic, comprehensive and ecological solid waste management program that will ensure the protection of public and environment. The Act also mandates that Solid Waste Management Board in every province city or municipality should have a representative from the NGO sector, recycling industry and manufacturing or packaging industries (Section 11 and 12). Sections 29 and 30 prohibit the use of non-environmentally acceptable products and packaging within a year of the Act coming into force.

In this study it was found out that wastes from the industries, the case of Mabuhay Vinyl Corporation and Granex Manufacturing Corporation they strictly and properly observed the salient provisions and mandates of local government of Iligan pertaining to Solid Waste Management.

Furthermore, these industries were very practical and ingenious as they viewed wastes a resource rather than a local problem.

Thus, this paper will conclude that Mabuhay Vinyl Corporation and Granex Manufacturing Corporation, as leading industries in Iligan City have properly and strictly observed waste management in their workplace, taken into consideration the protection of the environment.

RECOMMENDATIONS

Since this study is primarily bounded only to two of the major industries in the city and their compliance to solid waste management, the researchers recommend to look further and study comprehensively the waste management (including chemicals and toxic waste) of other industries in the city. For the local government, a “hands on approach” will fit to look if these companies really follows and comply the said protocol. Also, there should be a strong collaboration among different sectors in the community to control solid waste for the common good of the residents and the environment.

Dependency, Disengagement and Life Satisfaction: The Challenges Confronting the Elderly of Maramag, Bukidnon, Philippines

Raquelyn Jumawan-Dadang
Eva Natividad-Mendoza
giging_dadang@yahoo.com
Central Mindanao University
Musuan, Bukidnon, Philippines

Gerontology researches have become one of the most important fields of inquiry in Sociology today. In the Philippines more particularly, there is a call to study the life of the elderly that describes their life, problems, challenges and pressing issues. Filipino values and traditions say that the family's elderly has to be taken-care of at home, be loved, be respected and be valued. But, modernization tends to over-run this most ideal way. In fact, the Filipino elderly has become one of the marginalized sectors.

The study was conducted in Maramag, Bukidnon. Three groups of elderly were considered: an Indigenous People's (IP) community, a group of retired government employees and a community of farmers. The study focused on financial dependency, physical dependency, disengagement with family, work and social life and life satisfaction. The challenges and issues confronting the elderly were also given emphasis. The study is descriptive. It is quantitative and qualitative in approach using survey, in-depth interview and key-informant interview.

The study revealed that the three groups revealed that they have different challenges, concerns, and issues, and they want these to be addressed by the local and national government.

Keywords:

Elderly, Dependency, Life satisfaction, Challenges, Filipino Culture

INTRODUCTION

Aging, though considered a natural process, is one of the most profound puzzles of human life, hence gerontology studies have become one of the most important fields of inquiry in Sociology today. There is a call to study the life of the elderly that will describe their life and present their concerns, problems, challenges and pressing issues. Be it noted that in the Philippines there is a dearth of systematic studies concerning this group (Gaston-Mills 2005 as cited by Villegas, 2014) because most sociological

studies are focused on the younger age groups.

Practically, as individual grows old, he/she becomes weak, is prone to diseases, physical impairments and is likely to suffer disengagement from family, work and social life. This is giving us an idea that the elderly are vulnerable and perhaps, in some cases, helpless.

Filipino traditions and values say, our elderly are to be taken-care of, be loved,

valued and be respected. However, it has been observed that some of our elderly are in abject conditions. They are stricken with economic and physical dependency while experiencing disengagement from family and social life. Some are not even treated fairly by their own families. Does growing old mean to be alone, to be detached, deprived and lonely? What is really the condition of our elderly? Are they contented and satisfied. Has modernization overrun our traditional way of caring our elderly?

There is the need to study the life of the elderly, particularly in Bukidnon. The findings may feed information to the different institutions and agencies of the Philippine government and its LGUs and maybe a good basis for their activities and programs. This could also be a potent benchmark on extension programs.

This paper argues that unlike other cultures, income is not related with life satisfaction. The Filipino elderly is satisfied with their life though are struggling with poverty. It is not money that positively affects their life satisfaction but their solidarity and good relationship with their family.

Secondly, this paper argues that the once strong kinship of the indigenous peoples (IP) community has been altered by exogamy. Intermarriage of IPs with non-IPs limits the IP parent's closeness with their children, thereby adversely affecting their close bond.

Thirdly, this paper argues the need to put up a home for the aged in the municipalities. While it is true that most elderly are in good situation, some are abandoned and are extremely poor to survive. The intervention of the government is highly needed.

Objectives of the Study:

The study was conducted to describe the financial and physical dependency of the elderly. It sees how disengaged are the elderly from their families, work and social organizations. The study also describes the levels of satisfaction of the elderly, correlating it with dependency and disengagement. It also digs on the needs, concerns, and challenges confronting the elderly.

Methodology:

The study is descriptive. It is quantitative and qualitative in approach. A triangulation method of survey, In-depth interview and Key-informant Interviews (KII) were used by the researcher. The study was conducted in the municipality of Maramag, Bukidnon. Three sectors were considered in the study: a group of farmers, retirees, and an indigenous people's (IP) community. The top three farming barangays of Maramag were picked to represent the farming community. These were South Poblacion, Base Camp and Dagumbaan. The retirees of CMU represented the retirees sector, and the IP community of Panadtalan represented the IP Community.

The survey had seventy-four respondents, distributed as follows:

IP	22
Retirees	22
farmers	30
Total	74

The survey used interview method. This was seen to be more feasible than questionnaires with the assumption that most of the respondents have eye-defects because they are already old. Some also do not have the ability to read because they have not gone to school.

Key informants were seen vital. The information they feed will certainly substantiate the findings in the survey. There were five key informants. They were the presidents of the Senior Citizens Organizations of South Poblacion, Dagumbaan, Base Camp, Panadtalan and the Senior Citizens federation president. The KII was conducted at the Senior Citizen Federation office situated at Maramag, Bukidnon.

The study obtained quantitative and qualitative data. Quantitative data were analyzed through thematic analysis, while the quantitative data on dependency, disengagement and life satisfaction were presented through frequency count and percentages. The relationship between dependency and life satisfaction and between disengagement and life satisfaction were determined through Cross-tabulation Method.

The study observed research ethics and protocols. It secured the consent of the mayor of Maramag, Bukidnon, the federation president of the Senior Citizens organization, the respective presidents of the Senior Citizens Organization of South Poblacion, Dagumbaan, Base Camp and Panadtalan, and the president of Central Mindanao University.

Contextual Backdrop

Maramag is a first class municipality in the province of Bukidnon, Philippines. It is a landlocked area of 44,726 hectares that was formally created as a municipality through Executive Order No. 272 on July 1, 1956. It has twenty barangays with a population of 90,901 based on the 2010 census. Given the approximate elderly population of 7%, the approximate population of the elderly of Maramag is 6,363. These elderly comes from different

occupation sectors like farming, business, and government employees.

The respondents:

Category	Description	Frequency	Percentage
Sex	Male	36	48.6%
	Female	38	51.4%
	Total	74	
Civil Status	Married	53	71.6%
	Widow/widower	19	25.7%
	separated	2	2%
Age	Minimum	60	
	Maximum	83	
	Average	70	
Years of Residence	Minimum: 1		
	Maximum: 70		
	Average: 36.83		
Religion	Catholic	61	82.4%
	Non- Catholic	13	17.6%
Educational Attainment	No Education	7	9.5%
	Elementary	38	51.4%
	High School	10	13.5%
	College	19	25.7%

BODY TEXT

The elderly in the Philippines are called as senior citizens. The findings presented below will give as a picture on their plight. Their physical dependency, financial dependency and disengagement from family, work and social life are described and are correlated with life satisfaction. Their concerns and challenges are also presented.

Physical Dependency.

Physical dependency refers to the elderly's physical condition, describing their health and their capacity to do things by themselves independently. To measure this, the Katz Index of Independence in Activities in Daily Living (ADL) was used. ADL is a standardized instrument that measures one's independence in bathing, dressing, toileting, transferring, continence and feeding. It claims to be the most appropriate instrument that assesses the functional status of the elderly in performing daily activities and is widely used in clinics and home environments.

Table 1: Physical Dependency

sector	Physical Dependency						total
	low (very dependent)	2.0	3.0	4.0	5.0	High (very independent)	
IP	0	2	1	1	1	17	22
Retirees	2	0	0	1	0	19	22
Farmers	0	0	0	0	0	30	30
Total	2	2	1	2	1	66	74

The data shows that 100% of the farmers have high level of Physical independence while only 86 % of the retirees and 77.3% of the IPs fall to the same level. These respondents can bath and dress themselves very independently. They can go to the toilet alone, can transfer themselves independently, can control urination and defecation and can get food from plate into mouth very

independently. However, there are few respondents who are physically dependent. They need the assistance of other family members.

This independence however does not mean they are totally free from sickness and diseases. The respondents complain about hearing impairments, and chronic illnesses like arthritis, diabetes, cough, colds, etc. They see themselves to have deteriorated physically. This information finds support in the work of Maciones (2009). He calls the elderly as the final stage of life, which begins around mid-sixties. At this stage, gray hair, wrinkles are becoming apparent and energy starts to decline. Their bones become brittle, injuries take longer to heal and chronic illnesses as arthritis and diabetes, and life threatening diseases like heart diseases and cancer rise steadily. Sensory abilities like taste, sight, touch, smell, and especially hearing decline.

However, amidst physical limitations, most elderly are not discouraged (Maciones 2009). This is also true among the respondents of this study.

They said “dawat na namu ang among kahimtang” (We have accepted our fate).

Independency on Activities of Daily Living

The study also measures the elderly's independence in performing the activities of daily living. Using the Lawton Instrumental Activities of Daily Living Scale (IADL) the study described the ability of our elderly to shop or go to market, prepare food, do the housekeeping, do the laundry, capability to travel, responsibility to take medications, ability to handle finances, and ability to operate cellphones. IADL describes how a person is functioning at the present time.

Table 2: Independence on Activities of Daily Living

sector	Function/Independence on Activities of Daily Living								Total
	1.00	2.00	3.00	4.00	5.00	6.00	7.00	8.00	
IP	0	1	4	2	3	4	8	0	22
Retirees	1	0	2	2	4	5	2	6	22
Farmers	0	0	2	3	5	5	11	4	30
Total	1	1	8	7	12	14	21	10	74

Same with the findings on Physical dependency, the farmers are seen to have high level of independence on activities of daily living. 66.7% of farmers have 6-8 scores or high level of functioning or independency, followed by the retirees having 59.09% and IPs with 54.5%. This means that the farmers are more able in performing the daily activities than retirees and IPs. These activities include going to the market alone, preparing food, performing housekeeping, doing the laundry, traveling alone, taking medications alone, and managing financial matters independently like paying bills personally.

Financial Dependency

Despite favorable cultural background and efforts of the Philippine government, many of our elderly are found to be in abject conditions. Some studies conducted in the Philippines show the plight of the elderly. They are stricken with economic dependency. According to Villegas (2014), the population of the elderly ranks eight among the nine sectors with the highest poverty incidence. While well-off elderly rely on their savings and investments, the poor depends on pensions and state subsidies on health expenditures. Nevertheless, the country's pension scheme fails to cover the most vulnerable sectors of society, the unemployed and those who worked in the informal sector. Hence, as they grow old, they are expected to be living in decency.

This contention of Villegas finds support in this study.

Table 3: Regular Income

Sector	Regular Income		Total
	No	Yes	
IP	12	10	22
Retirees	1	21	22
Farmers	7	23	30
Total	25	49	74

The table shows that 95% of the retirees and 76.7% of the farmers have a regular income, while only 45.5% of the IPs have.

Table 4 will give as an idea on the earnings of our elderly. This earnings are derived from their regular income and benefits like pensions or state subsidies.

Table 4: Earnings

Sector	Earnings					Total
	Below 1000 Php	1000- PHP- 5,000	5,001- 10,000	10,001- 15,000	15,001- 20,000	
IP	12	10	0	0	0	22
Retirees	3	4	6	4	5	22
Farmers	1	23	2	4	0	30
	16	37	8	8	5	74

The retirees are far better-off compared to the farmers and IPs. 22.7 % of them have income ranging from 15001-20,000 pesos, 18% have an income between 10,001-15000 pesos, 27% have an income of 5,001-10,000pesos, 18%

have an income of 1000-5000 pesos, and 13% have an income of 1000 and below. For the farmers, 13% have an income between 10,001-15,000 pesos, 6% have an income between 5001-10,000.00 and 76% have an income of 1000-5000 pesos.

It is very apparent that the IPs are the most economically-stricken. 45% of them have an income of 1000-5000 pesos, while 55% claim to have an income below 1000.00. According to generoso, “Abi nimu, lisod gayud among kahimtang sa imung nanay. Wala nami lain panginabuhian. Maglisod nami sa pang adlaw-adlaw na pagkaon. May gani kay makadawat pami ug pension nga 500 kada bulan. Pero kulang ra gyud kini kaayo” (You know, our situation is really hard. We do not have others sources of income. We even could hardly provide our food. Good and we receive pension of 500 pesos a month. But the amount really is not enough). The pension of 500 pesos Generoso receives is a state subsidy for the indigent elderly.

The presidents of the senior citizens organization realized the plight of their fellow elders. “Bisan sa pagkaun galisod. Gamay ra ang 500 na pension, kulang pa sa tambal. Dli tanan naay pension”. (They could not even sustain their food. The pension is too minimal. Not even enough for medicines. Not all have pensions), according to Wilfred of

Dagumbaan. “Ge antos ra jud nila ang mga problema. Ug walay magpaguna, wala jud kita” (They just bear the problem. If no one asks their services to laborer in the farms, they will have no income), Willie continued. This picture gives us an idea that the situation of our elderly in Maramag is very different with the

situation of the elderly in Europe and America whose graying population enjoys a better standard of living. Their elderly have more food and have better health conditions. Their governments afforded better health services. This is one positive offshoot of industrialization (Henslin 2005).

However, this is not sustainable because their children also do not have stable jobs nor have good income. Hence, the life of the IPs and farming senior citizens is below decency. “70% sa atong mga tigulang ang galisod” (70% of the senior citizens are struggling to survive), according to Victor of South Poblacion.

Sources of Income

Table 5: Sources of Income

sector	Pension	Children	Farming	Others	Total
	IP	6	9	4	3
Retirees	21	0	0	1	22
Famers	22	8	0	0	30
Total	49	17	4	4	74

Data shows that 95% of the retirees receive pensions. These are monthly allowances from the Government Service Insurance System (GSIS) and the Social Security System (SSS). They receive entitlements because they are retirees from a government office.

On the other hand, 73% of the farmers receive a state subsidy which they also call as pension. This is a monthly allowance of 500 pesos per month extended by the government to indigent senior citizens. However, not all indigent senior citizens are able to receive pensions, “Bisag naay qualified na dapat i-pension, dili ma-approve and application” (There are those who are qualified to receive pensions but whose applications are not approved), said Victor of South Poblacion. The five hundred pesos is too minimal, but somehow, it helps the elderly survive. The sad thing, the state subsidy does not come on time. Recipients receive it every three months.

It is worth noting that most IP and some farmers rely on their children. Their children support them with food.

Disengagement

Cummingham (as cited by Kunkel 1981) defined disengagement as a “mutual withdrawal of the person from society and society from the person”. This dynamics however involves loosening of social interaction. Likewise, according to Villegas (2014), the stage of the elderly is also considered the stage of retreat. This is the time when one is disengaged from work and from social life. At this point of time also, their children are already married or are already having their own independent careers, a situation that contributes more to disengagement of the elderly.

On the context of this study, disengagement refers to the elderly’s detachment from their families, work and social life.

“very much”, while 42.9% say quite a bit and 28.6% say some. This is surprising.

Table 6: Time Spent with Family Members

sectors	Time Spent with Family Members					Total
	Very little	Little	Some	Quite a bit	Very much	total
IP	1 (4.8%)	7 (33.3%)	7 (33.3%)	6 (28.6%)	0 (0.0%)	21 (100%)
Retirees	1 (4.5%)	1 (4.5%)	2 (9.2%)	11 (50%)	7 (31.8%)	22 (100%)
Farmers	0 (0%)	3 (10.0%)	10 (33.3%)	15 (50.0%)	2 (6.7%)	30 (100%)
Total	2 (2.7%)	11	19	32 (43.8%)	9 (12.3%)	73 (100%)

The retirees spent much time with their family members compared to the farmers and IPs. 31.8% of them spent very much time while 50% of them spent quiet a bit with their family members. 6.7% of the farmers spent very much time while 50% of them spent quiet a bit for their families. Whereas, only 6 (28.6%) of the IPs spent “quite a bit” and 7(33.3) spent “some” and 7 (33.3%) spent “little” time for their families. In general, 43.8% of the elderly spend “quite a bit” and 26% spent “some” with their families.

Table 7: Closeness with Family Members

sector	Very little	Little	Some	Quiet a Bit	Very much	Total
IP	0 (0.0%)	3 (14.3%)	6 (28.6%)	9 (42.9%)	3 (14.3%)	21 (100%)
Retirees	1 (4.5%)	0 (0.0%)	0 (0.0%)	8 (36.4)	13 (59.1%)	22 (100)
Farmers	0 (0.0%)	1 (3.3%)	1 (3.3%)	19 (63.3%)	9 (30.0%)	30 (100%)
Total	1 (1.4%)	4 (5.5%)	7 (9.6%)	36 (49.3%)	25 (34.2%)	73 (100%)

Generally, all the three sectors are close with their family members. The retirees show to be closest with their family members. 59.1% say they are very much close, while 36.4% say they are quite a bit close. Followed by the farmers that has 30% very much close and 63.3% quite a bit close. The IPs are the least close with their family members. Only 14.3% say

The IPs are conventionally believed to be closest to their families. They are conceived to be a very intact community. Why, what happened? In the interviews, it came out that the children of the IPs have intermarried with the non-IPs, making the parents hesitant to come or live with them. Some children also are

no longer in the community. They live in other places. The IP parents, being poor, could not visit them. They also do not have cellphones, hence they could not talk to their children. Intermarriage and exogamy, poverty and distance hamper the traditional close family ties of the IPs. The data below on correspondence will support this claim.

Table 8: Correspondence with Family Members

sector	Correspondence with Family Members					Total
	Very little	little	some	Quite a bit	Very Much	
IP	0 (0.0%)	3 (14.3%)	6 (28.6%)	7 (33.3%)	5 (23.8%)	21 (100%)
Retirees	1 (4.5%)	0 (0.0%)	2 (9.1%)	9 (40.9%)	10 (45.5%)	22 (100%)
Farmers	0 (0.0%)	1 (3.3%)	3 (10.0%)	16 (53.3%)	10 (33.3%)	30 (100%)
Total	1 (1.4%)	4 (5.5%)	11 (15.1%)	32 (43.8%)	25 (34.2%)	73 (100%)

The data reveals that the retirees have stronger correspondence with their children, followed by the farmers. The IPs has less correspondence with their children.

Likewise, the data shows that the children of the retirees are able to visit them compared to the children of the farmers and the IPs (see table below). This is because the children of the retirees are financially stable compared the children of the farmers and the IPs. None of the children of the IPs have finished college and so jobs and income for them are limited.

Table 9: Children Visiting Parents

IPs	Children Visiting Parents		
	No	Yes	Total
IPs	2 (9.5%)	19 (90.5%)	21 (100%)
Retirees	0 (0.0%)	22 (100%)	22 (100%)
Farmers	3 (10%)	27 (90%)	30 (100%)
Total	5 (6.8%)	68 (93.2%)	73 (100%)

Disengagement from Work

Table 10: Disengagement from Work

sector	Disengagement From Work			
	Yes	No	Retired	Total
IP	11 (52.45)	10 (47.6%)	0	21 (100%)
Retirees	0 (0.0%)	0 (0.0%)	22 (100%)	22 (100%)
Farmers	11 (36.7%)	19 (63.3%)	0 (0.0%)	30 (100%)
Total	22 (30.1%)	29	22	73 (100 %)

More than half (52.45%) of the IPs still engage with their occupation. This includes small-scale farming and labor/services in the neighboring farms. 36.7% of the farmers are still active in their profession. 100% of the government employees have totally retired from their professions either as staff or as faculty members of Central Mindanao University. The IPs and the farmers find it important to work in order to survive. Unlike government employees, they have no pensions to depend on.

Table 11: Social Disengagement

sectors	Seeing/ Socialization with other People					Total
	Very little	Little	Some	Much	Very Much	
IP	3 (14.3%)	13 (61.9%)	4 (19%)	1 (4.8%)	0 (0.0%)	21 (100%)
Retirees	2 (9.1%)	1 (4.5%)	8 (36.4%)	5 (22.7%)	6 (27.3%)	22 (100%)
Farmers	0 (0.0%)	7 (23.3%)	7 (23.3%)	14 (46.7%)	2 (6.7%)	30 (100%)
Total	5 (6.8%)	21 (28.8%)	19 (26.0%)	20 (27.4%)	8 (11.0%)	73 (100%)

The retirees have spent more time socializing with other people. 27.3% of them say very much, 22.7 say much, 36.4% say some. Only 6.7 of the farmers say they spent “very much” with other people. While 46.7% spent “much”. None

of the IPs said they spent “very much time” with other people. Most of them (61.9%) spent “little time” with other people. This is because they are busy earning a living, compared to the

government employees who have totally retired from service. The retirees have ample time, and so they have the privilege to socialize with other people of their choice.

On the other hand, the farmers and the IPs are more active in civic and political activities. They are more responsive to the programs and meetings called by the government and civic organizations. This is because they believe they can gain something from the membership, which may include giving of dole-outs like food, goods, farm inputs, or availment of pensions. Pensions, however, are too minimal. It is only five hundred pesos (500.00) per month.

Table 12: Participation in civic-political Activities

sectors	Participation in civic-political Activities					Total
	Very inactive	inactive	somewhat inactive	active	Very active	
IP	0 (0.0%)	3 (14.3%)	6 (28.6%)	10 (47.6%)	2 (9.5%)	21 (100%)
Retirees	2 (9.1%)	4 (18.2%)	7 (31.8%)	7 (31.8%)	2 (9.1%)	22 (100%)
Farmers	0 (0.0%)	2 (6.7%)	6 (20%)	18 (60%)	4 (13.3%)	30 (100%)
Total	2 (2.7%)	9 (12.3%)	19 (26.0%)	35 (47.9 %)	8 (11.0%)	73 (100%)

Life Satisfaction

Life satisfaction is defined as an “overall assessment of feelings and attitudes about one’s life at a particular point in time ranging from negative to positive” (Diener 1984). To describe the life satisfaction of the respondents, the Satisfaction with Life Scale (SWLS) of Diener et.al was used.

The study reveals that most respondents are slightly satisfied, satisfied and extremely satisfied. The retirees are seen to be more satisfied compared with the farmers and IPs. 67% of them are extremely satisfied, 40.9 % are satisfied and 18.2% are slightly satisfied. Only 13.6% of the retirees are dissatisfied.

On the other hand, 10% of the farmers are extremely satisfied, 50% are satisfied and 36.7% are slightly satisfied. Only 3.3% of the farmers are dissatisfied.

Among the IPs, 19% are extremely satisfied, 14.3% are satisfied, 42.9% are slightly satisfied. It is worthwhile noting that 23.9% of the IPs are dissatisfied of their lives.

Table 13: Life Satisfaction

sector	extremely dissatisfied	dissatisfied	slightly dissatisfied	slightly satisfied	satisfied	extremely satisfied	total
IP	1 (4.8%)	1 (4.8%)	3 (14.3%)	9 (42.9%)	3(14.3%)	4 (19%)	21 (100%)
Retirees	0 (0.0%)	1 (4.5%)	2 (9.1%)	4 (18.2%)	9 (40.9)	6 (27.3%)	22 (100%)
Farmers	0 (0.0%)	0 (0.0%)	1 (3.3%)	11 (36,7%)	15 (50.0%)	3 (10.0%)	30 (100%)
Total	1 (1.4%)	2 (2.7%)	6 (8.2%)	24 (32.9%)	27 (37%)	13 (17.8%)	73 100%)

Physical Dependency and Life Satisfaction

The findings suggest correlation between physical dependency and life satisfaction. The lower the level of independency, the lower is the level of satisfaction. The higher the independency, the higher is the life satisfaction. This findings conform with previous studies that objective life conditions like physical health affect life satisfaction (Ardelt 1997).

Table 14: Physical Dependency Correlated with Life Satisfaction

			Extremely dissatisfied	Dissatisfied	Slightly dissatisfied	Slightly satisfied	Satisfied	Extremely Satisfied	Total

Financial Dependency and Life Satisfaction

The findings suggest no relationship between income and life satisfaction. The table below shows that those with regular income are satisfied. Some (14.6%) are extremely satisfied. Most (75%) are satisfied and slightly satisfied. However, even those with no regular income are still satisfied (36%) and extremely satisfied (24%). The findings contradict with previous

researches claiming that economic status and financial situation influence life satisfaction.

Table 15: Regular Income and Life Satisfaction Cross tabulation

		% within Regular Income	1.4%	2.7%	8.2%	32.9%	37.0%	17.8%	100.0%

Despite their conditions, the elderly in the locality of Maramag is satisfied and contented with their life. One respondent said “OO, malipayun. Unsaun taman ra man jud ta ani, pobre man jud ta. Mahatagan gamay malipay na mi” (We are only up to this. We were born poor. When we receive even just little graces, we are already happy). This is supported by one respondent who also said “Independent ang kalipay sa income” (Income has nothing to do with happiness). A key informant also said “lipay man japon bisag lisod na, dawat man ang ka pobrehun sa kinabuhi” (We are happy despite poverty. We have accepted our situation).

Disengagement and Life Satisfaction

The theory on disengagement suggests that withdrawal and disengagement from personal and social activities gives high morale to the elderly, thereby influencing their life satisfaction. The findings of this study will tell us how the

theory works in the rural areas of the Philippines.

Disengagement with Family and Life Satisfaction.

The findings of the study suggest that the more close the respondents are with their families, the more satisfied they are. Data shows that 36% of those who are Very close with their families are extremely satisfied, 44% are satisfied. Whereas, 100% of those who are much less close with their families are slightly dissatisfied. This data truly portrays the Filipino culture. Filipinos are closely attached with their families. Their family is their most-valued treasure. Disengagement with them certainly affects their life satisfaction.

Table 16: Disengagement Family and Life Satisfaction Cross tabulation

			Life Satisfaction					Total	
			Extremel y dissatisfi ed	Dissatis fied	Slightly dissatisfi ed	Slightly satisfied	Satisfi ed		Extremel y Satisfied

Disengagement from Work and Life Satisfaction

The data suggest no relationship between disengagement from work and life satisfaction. 40% of those who are still engaged with their work are slightly satisfied, 36.4 % are satisfied and 13.6%

are extremely satisfied. The situation is almost the same with those who are already disengaged from their work. 29.4% of them are slightly satisfied, 37% are satisfied, and 19.6 % are extremely satisfied.

Table 17: Disengagement Work and Life Satisfaction Crosstabulation

		Disengagement Work2 * Life Satisfaction Crosstabulation						Total
		Life Satisfaction						
		Extremely dissatisfied	Dissatisfied	Slightly dissatisfied	Slightly satisfied	Satisfied	Extremely Satisfied

	% within Disengagement Work2	1.4%	2.7%	8.2%	32.9%	37.0%	17.8%	100.0%

Likewise, the data suggest no relationship between social disengagement and life satisfaction. 15.8% of those who are active in socio-civic-political activities are extremely satisfied, 15.8% are satisfied, and 52.6% are slightly satisfied. The picture is almost the same with those who are inactive in socio-civic-political activities. 18.5% of them are extremely satisfied, 44.4% are satisfied and 25.9 satisfied.

Table 18: Social Disengagement and Life and Life Satisfaction

The Needs and Challenges Confronting the Elderly

Out of the 74 respondents, 41.9% said food is their primary problem. Be it noted, that in the previous discussion, it was revealed that 50% of the respondents had an income of 1000-5000 pesos only, while 21.6% have an income below 1000 pesos only. This income is too minimal for a person to live with decency. Our elderly is poverty-stricken.

The elderly (17.6%) also finds medicine a problem. While it is true that there are health centers in the barangays, its services and medical supply are insufficient. The elderly are compelled to buy the medicines on their own. Some other needs are livelihood, clothing and shelter.

Table 19: Needs and Challenges

		Frequency	Percent

Aside poverty, our elderly is also challenged by the changes in the dynamism of a Filipino family. A key informant claims that in general, the relationship of the elderly towards their family members is not good. He said, the traditional close family ties among Filipino family members have reduced significantly. Some children are no longer taking care of their parents. Some elderly are unattended and abandoned and are on grave conditions. That is why he is in favor of putting up a home for the aged in the province.

Grand-parenting is also found an issue. The grandparents are acting as parents over their grandchildren because the parents are irresponsible. "Akong anak kay dili musuporta sa iyang mga bata. Nabilin sa ako ang ilang unom(6) ka anak. Grabe ka irresponsable gyud ni akong anak, wala man lang konsensya, sa ako gipa atiman na tigulang na baya ko intawun" My son is not supporting his children. His 6 children are with us. He is a very irresponsible son. He is not even guilt-stricken. He left his children with me without considering that I am already old), a lament of Maria who finds taking care of his grandchildren a burden. But Maria's situation is not an isolated case. Many Filipino grandparents are serving as yayas, attendants or guardians of their grandchildren whose parents are busy at work.

Conclusion and Policy Implications.

This paper concludes that unlike other cultures, the Filipino elderly finds income not related with life satisfaction. The Filipino elderly is satisfied with their life though are struggling with poverty. It is not money that positively affects their life satisfaction but their solidarity and good

relationship with their family. Disengagement from work and social life do not affect life satisfaction, but disengagement from family does.

The study as well concludes that the once strong kinship of the indigenous peoples (IP) community has been altered by exogamy. Inter-marriage of IPs with non-IPs limits the IP parent's closeness with their children, thereby adversely affecting their close bond.

It is also very apparent, that among the three sectors (IPs, farmers and retirees) the IP elderly is the most marginalized. They are more poverty-stricken. They should be prioritized in health services and in livelihood programs.

Lastly, this paper would want to propose the institutionalization of homes for the aged in the municipalities. While it is true that most elderly are in good situation, some are abandoned and are extremely poor to survive. The intervention of the government is highly needed.

Abstract

The *Lumad* refers to indigenous people (IP) who are distributed in the various communities in Mindanao, Philippines. They are known to be among the most peaceful and gentle yet the most vulnerable group. Their communities are usually affected by the armed conflict between the Armed Forces of the Philippines (AFP) and communist insurgency group. The sporadic clashes of these conflicting groups resulted in total displacements of the Lumad adversely affecting their culture and livelihood in Cabanglasan, Bukidnon. They had been displaced since January this year and were previously staged in front of Bukidnon Provincial Capitol. This paper examines: what are the atrocities experienced by the Lumads when the armed conflict occurred; and how the Local Government responded to the needs of Lumads, specifically the implementation of the existing policies and ordinances. Using qualitative research method employing in-depth interviews, the findings of the study revealed: the difficulties and challenges encountered; and aspects in the implementation must be prioritized for possible interventions of this perennial problem. This study has implications on policies protecting IP rights, their ancestral domain and support services for the disadvantaged sector in the Philippine society.

Keywords: atrocity, displacement, poverty trench warfare, Lumad, Mindanao, Philippines

INTRODUCTION

The Philippines is known to have a diverse culture, which signifies itself as a unique country. The vast culture encompasses the uniqueness of Filipino people, specifically the Indigenous People. The Philippine Constitution, in recognition of this diversity and under the framework of national unity and development, mandates state recognition, protection, promotion, and fulfilment of the rights of Indigenous Peoples (IP). Hence, the mandates is specified in Republic Act 8371, also known as the "Indigenous Peoples Rights Act" (1997, IPRA), recognized the right of IPs to manage their ancestral domains and has become the cornerstone of current national policy on IPs.

However, despite the significant importance and guarantees, the fact shows that these IPs still belong to some poor and

disadvantage individuals. Episodically, they are even used as dummies in conflict and political disparities. According to the first-ever Report on the State of the World of Indigenous Peoples, issued by the United Nations Permanent Forum on Indigenous Issues in January 2010, revealed that IPs make up fully one-third of the world's poorest peoples, suffer disproportionately in areas like health, education, and human rights, and regularly face systemic discrimination and exclusion. Such that, the IPs have been subjected to marginalization against armed rebels and political interest.

With the conflicts from different parties, these IPs are most of the time affected greatly. Specifically, loss of ancestral lands, displacements, and destructions of livelihood arise. Many would resort leaving their places and to look other places to stay, wherein they will feel secure.

The conflicts greatly threaten not only their stability and potential development, but also sacrificing the loss of their identity.

The prolonged armed conflicts in Mindanao are no excuse, citing the province of Bukidnon. Those IPs found in Bukidnon are commonly called “Lumads”. The *Lumad* refers to indigenous people (IP) who are distributed in the various communities in Mindanao, Philippines. They are known to be among the most peaceful and gentle yet the most vulnerable group. Their communities are usually affected by the armed conflict between the Armed Forces of the Philippines (AFP) and communist insurgency group, Communist Party of the Philippines - New Peoples’ Army (CPP-NPA).

The recent “bakwit” that took place in front of the Provincial Capitol captured the attention of the many. The sporadic clashes of these conflicting groups, CPP-NPA and AFP, resulted in total displacements of the Lumad adversely affecting their culture and livelihood in Cabanglasan, Bukidnon. They had been displaced since January this year and were staged in front of Bukidnon Provincial Capitol until April 7, 2016.

This research examined the atrocities experienced by the Lumads during armed conflict between the Armed Forces of the Philippines (AFP) and communist insurgency group, Communist Party of the Philippines - New Peoples’ Army (CPP-NPA). Based from the interviews conducted with the Lumads, they professed the lack of sustainable support from the Local Government. Even for their demand of justice with their Lumad brothers that were killed during the armed conflict.

It further aimed in investigating the actual programs and initiatives of the Local Government as responses to the *Lumads* through implementation of the existing policies and ordinances. Based from the interview with the Local Government Unit officials, through the Provincial Social Welfare Development Office, they were definite that they have provided the

necessary support the Lumads need, from the time they arrive in the Provincial Capitol, until their departure.

BACKGROUND

The conflict between the government and the CPP-NPA, the armed wing of the Communist Party of the Philippines, is one of the world’s longest running. It continues to attract little national or international attention. Peace talks, resumed in 2011, have so far progressed very little as neither party appears willing to make any concessions (IDMC, 2013). The effects of this unending warfare are badly felt in different parts of the country, but extremely felt in eastern Mindanao, one of the NPA’s bastions. Inhabitants are being displaced during armed conflict struggles but also because of militarization as the army establish stronghold of their communities and in the region. Several claims of human rights violations had been reported. These include indiscriminate bombardments, the use of schools as barracks and command centres, harassment, threats, forced labour, restricted freedom of movement and extra-judicial killings that are contributing to a climate of fear and insecurity and leading to displacements (IDMC, 2013).

METHODOLOGY

This research employed qualitative method in its exploration to the atrocities of the displaced Lumads. The data presented in this paper are based on the participant observation and in-depth interviews of the Lumads in ‘*kampohan*’ a ‘*bakwit camp*’ site staged in front of the Bukidnon Provincial Capitol, Malaybalay City, Bukidnon. A “*bakwit camp*” refers to an evacuation area where displaced individuals find temporary refuge. For the mean time it became the temporary home to communities avoiding

the conflict between paramilitaries and the AFP in Cabanglasan, Bukidnon.

Informants were selected based on the purposive sampling. Interviewees were informed prior to the conduct of the research study.

There were two hundred sixty seven (267) people comprised of sixty seven (67) families in the bakwit camp, researchers carefully observed the condition of the lumads in the camp and interviewed the elders from April 24, 2016 to April 27, 2016.

Our aim was to gather narratives and to get the first-hand account of these people who actually experienced armed conflicts between the New People's Army (NPA) and paramilitaries. The interview was informal, conversational, and free flowing – with quick reference to the guide questions designed to encourage participants to provide more detail in their narratives.

Given sensitive nature of our interviews, we ensured that we followed ethical procedures of research. Upon the gathering of the data, a formal letter of request was provided to the community and approved by the community leaders. The researcher has set moral principles in conducting this study, which applied to what is appropriate to the respondents. Respondents also have the right to keep their identity confidential for security purposes. This informed consent is the principle of research ethics that requires investigators to inform research subjects of all questionable features of the research before the subjects decide whether to participate or not (Selltiz, et. Al, p. 211-212).

To understand the broader context of our field of study, we consulted also the National Commission on Indigenous Peoples (NCIP) - Malaybalay and Provincial

Social Welfare and Development (PSWD) – Bukidnon.

LUMADS STANDPOINT

Those displaced by the conflict are mainly indigenous people (called Lumads in Mindanao) who live in remote, mountainous areas. Many of the NPA fighters are also Lumads recruited locally. As a result the military tend to perceive and suspect Lumads of predominantly being NPA insurgents or supporters. As part of its counterinsurgency strategy the army is also encouraging Lumad communities to form or join civil defence militias or paramilitary groups to help fight the NPA. Caught between the two warring parties, the Lumads are exposed to high levels of violence and are at risk of abuses by both sides (IDMC, 2013).

The Lumads in Mindanao are once again caught not only in the armed conflict but also in the conflict of various interests between the extreme left Communist Party of the Philippines - New Peoples' Army (CPP-NPA), the Armed Forces of the Philippines (AFP), and with the special participation of para-military group "MagahatBagani." Unfortunately, innocent civilians, especially lumad women and children are left suffering and defenceless (Palaso, 2015).

In this case, this community is demanding justice against these paramilitary groups - "*Alamara, Bucalas Brothers, and Dela Mance Brothers*". The community wanted justice for those people who had been murdered by the paramilitary groups as they claimed. They wanted to go back to their homes but threatened by the atrocities of trench warfare.

"Kampohan" - a "Bakwit camp" by the Lumads in front of the Bukidnon

Provincial Capitol was assembled last January 21 this year until April 7. It was there for almost three-months. However, one of their community leaders and the spokesperson claimed that there was no enough support from the government since they started their rally. Even up to the last day, the government support was never enough.

CONSTRUCTIVE SIDE OF THE GOVERNMENT

The Government was created to protect and help the people. The law mandates that the Government must at all times protect its welfare at all times. Article II, Section 4 of the Philippines Constitution states that the prime duty of the Government is to serve and protect the people. Thus, it is the government's priority to keep the people protected from all possible harm, whether from international, national and local threats.

In the case of the displaced *Lumads* in the Province Bukidnon, many government agencies responded to the issues, provided them what they needed and helped them in any way possible. The Local Government of Bukidnon, headed by the Provincial Governor is the direct agency wherein the *Lumads* asked for support. They even opted to stay in front of the Provincial Capitol, since they feel that it is a safe place, away from the impact of the armed conflicts.

RA 7160 Chapter 2, Section 17, elaborates the responsibility of the LGU hand in hand with the Provincial Welfare and Development Office to provide Social welfare services which include programs and projects on rebel returnees and evacuees; relief operations; and population development services.

As we interviewed the PSWD, the claimed that they provided them with the

basic services they need to sustain, like food, shelter, clothing, contrary to what the community leader and the spokesperson of the community have said. The LGU even provided cash assistance as they went home.

FINDINGS

The salient findings of this paper are as follows:

The Lumads mis look at the in-depth analysis of the situation, and put most of the blame to the government. Hence, some issues on the reliability and credibility of the information came out.

On the other hand, the Local Government lack sustainable support to the Lumads. The Lumads even expressed that the resources provided to them were insufficient.

RESULTS AND DISCUSSION

Based on participant observation and in-depth interviews, the results are drawn.

Physical Condition

The bakwit camp that staged in front of the Bukidnon Capitol was not in a good condition and had devastating situation. The Lumads made use of bamboo and tarps to build their camps. Scorching heat of the sun during daytime and freezing night time.

They make use of plastic bags, pieces of plywood, logs and recycled tarpaulins for their temporary family quarters. The back of the provincial capitol and the open space of People's Ecological Park served as makeshift kitchen and comfort rooms.

Food and Health

The food the *Lumads* consumed were provided by some militant groups

(Bayan Muna, Kabataan, etc.), religious group (Iglesia Filipina Independente, Rural Missionaries of the Philippines, etc) and some of the LGU, side by side with the Provincial Governor and Provincial Social Welfare and Development Office (PSWDO). Accordingly, the moment the *Lumads* camp out of the Provincial Capitol, they were directly provided with the basic supplies they need, like rice, canned goods and others.

Despite of, the *Lumads* were claiming that the supplies were not enough. The water is not safe to drink, such that the *bakwits* have to fetch water from unsanitary sources such as public faucets in the area. Food supply was limited. The meals were often canned goods that were not favourably healthy.

The deplorable conditions had contributed to several health problems, a number of '*bawkits*' suffer from skin disease, cough, colds and poor digestive conditions. There are 3 new born babies in the camp whose healths are compromised because of their condition. We met a 6-year old boy who had difficulty in breathing and the community's leader had to be rushed to the hospital due to amoebiasis.

Security and Protection

We met a nine-year old boy who experienced 9 gunshots and survived the case due to armed conflict of the paramilitary and AFP. The majority of the displaced were eager to return home as soon as security conditions permitted. However, conflict did not stop it has even erupted. Therefore, they resorted to looking for another place to stay. When the "bakwit" happened, they felt assured that they were safe camping outside the Provincial Capitol.

The Provincial Capitol is surrounded with Civil Security Unit (CSU) members, who

also served as the *Lumads* protection against possible threat. Consequently, they were well guarded by the CSUs. Police visibility was also observed and has provided stronger security to all the *Lumads*.

The *Lumads* have also formed their security system – there are marshals during day and night to ensured confidence - since there were allegedly paramilitary groups watchful to their camps. They remain vigilant and reporting immediately to their team leaders if they see unusual people.

Social and Cultural Sphere

Even their lives disrupted and subsequently uprooted from their community, there is still a sense of community. They are organized. Willing to listen to their leaders and willing to help one another. Cooperation was a concrete manifestation during our fieldwork. Segregation of tasks is particular as to who prepare the foods for the whole community and who will fetch for the water. Language considered as the spirit of culture and its driving force to mobilize these people – even they know how to speak Cebuano - are greatly spoken and preferred by despite of the presence of the outsiders.

These people are also used to farming, several informants that we've interviewed said that they really wish they could go back to their respective dwellings because they have nothing to do. There are no works for them. They were bored already but they could not do anything about it.

In spite of these miserable conditions, there remains a sense of dignity among the *bakwits*. One child, for example, handed us the star apple she just harvested, as if hunger did not bother her. During meal time, they always prioritise us and make sure I have a food to eat. They are grateful for our

presence and are generous with their smiles and stories.

CONCLUSION

The growing diverse cultures and people in the Philippines did not only capture the eyes of the many but also ignited internal and external issues. Armed conflict is not new to most Filipinos, specifically in Mindanao, with this, people were used to it. However, the most affected, which are the Indigenous People don't find it as something usual. They are the ones carrying the burden of the collisions between both parties. The incident with the *Lumads* that took place in the Province of Bukidnon between the AFP and NPA was one example.

Based from the findings, realistic experiences have immersed in this research. Hence, the *Lumads* were clamouring for sustainable support from the government. While the Government were boasting for what they have provided, more than what was mandated of them.

The conclusion drawn was that both have credible and considerable explanations to affirm the issues – the government and *Lumads*. It is but true that, first, there were initiatives that could have been done better for the *Lumad* community, and would have not resulted to their complaints against the lack of support from the government. Second, is the inappropriate assistance that the LGU provided. They could have looked at the bigger perspective, like giving solutions to the root cause. What must have been done, could have yielded results weighing both sides.

Not a lot of people are concerned with the issue of displacement. People in Malaybalay easily turn a blind eye on the bakwit camp. Tagging the Lumads as members of the NPA makes it easy to dismiss them as undeserving of state

support. In an era where being 'connected' is so easy through social media and digital technologies, our fieldwork experience made us realise, that we are, in reality, so disconnected from each other. Experiencing their struggle first hand can change the way we view the lumads. As individuals who have the capacity to evaluate both sides, should evaluate both sides.

This struggling community is not different from us. Their struggles might be also our struggles. These communities were once living at peace in Balauo (Talaandig), St. Peter (Higaunon) and Indalasa (Umayamnon) Cabanglasan in Bukidnon but because of armed conflict, they have seen their lives disrupted and subsequently uprooted. Life in the margins is fragile.

Managing Ethics in Public Sector: Integrity Approaches¹

Songklin Prayote²

prayote@hotmail.com, prayote_songklin@yahoo.com

College of Politics and Governance, Mahasarakham University.

Abstract

1 There are two main approaches of ethics, integrity and compliance approach, applying in
2 public administration. In this paper, I would like to study specifically about integrity approach, focusing
3 on ethics education and training and ethical models. Methodology used in the study is a documentary
4 research. The finding might be help public officials in decision-making when they have to encounter
5 some ethical dilemmas in public administration.

6 Integrity and compliance can be perceived as a soft and a hard approach, respectively. An
7 integrity approach uses internal controls and a compliance approach uses external controls in order to
8 operate as an ethical organization. The integrity approach is assumed to be more effective.

9 This paper has focused on the integrity approach to organizational ethics, therefore describing
10 its orientation and components. Moreover, it clarified the way of implementing this approach within an
11 organization. Ethics education and training programs, which are embedded in an integrity approach,
12 are cognitive programs in ethical decision-making. Ethical models studying in this paper; Ethics
13 Triangle Model, Ethical Decision-making Model, Ethical Problem-solving Model, and Moral
14 Development Model; can be used to help individuals and groups of individuals in organizations to
15 analyze ethical dilemmas they are faced with in daily practice. These models, consequently, are
16 considered as effective means for enhancing decision-making of public officials.

17 KEYWORDS: ETHICS, MANAGING ETHICS, PUBLIC SECTOR, INTEGRITY, INTEGRITY
18 APPROACHES

¹ This article is a part of research title "Ethics in Public Administration: Theoretical Foundation and Strengthening Approaches" supported research funding by College of Politics and Governance, Mahasarakham University, fiscal year 2016.

² Assoc.Prof.Dr., Lecturer at College of Politics and Governance, Mahasarakham University.

1. Introduction

Ethics might be defined as the way values are practiced. It is both a process of inquiry (deciding how to decide) and a code of conduct (a set of standards that govern action). It is a system of right and wrong and a means to live accordingly. It is a quest for the good life. Ethics, then, studies how one ought to live, principles of right and wrong, and what it is to live fulfilled life. (Bowman and West, 2015, p. 46)

Ethics in public sector might be defined as a process in which a public administrator identifies the ethical standards involved in issues within an agency context, independently critique those decision standards, and becomes personally and professionally accountable for the decisions rendered. Consequently, such a definition entails two aspects: a content component in terms of the ethical standards that serve as guidelines for the administrator, and a process component that establishes a method to determine and critique ethical decisions in order to act rightly. (Cooper and Wright; cite from Hejka-Ekins, 2001, p. 80)

Ethics management is relatively new. It has never received the attention that the hallmark values of efficiency, economy, and effectiveness have in modern public administration scholarship or practice. This is due largely to the assumptions of 19th century civil service reformers like Woodrow Wilson and his intellectual successors over the decades. Administrators, from the Wilson's assumptions, were expected to be men and women of high moral character and integrity. From this opinion, there was little reason to be concerned about the need to add a fourth "e" (ethics) to the holy trilogy of efficiency, economy, and effectiveness. (Menzel, 2001, pp. 355-356)

In the last quarter of the 20th century, ethics has become academic talk and shop talk. It is increasingly common to find public administration graduate programs offering ethics courses and public organizations providing in-house ethics training. This trend is a result of an increasing incidence of wrongdoing in government. Moreover, there is a more compelling explanation, that is, a growing recognition by private and public sector managers that productive, high performing

units are value driven units that place ethics high on their list of value. When such a relation exists between ethics and organizational performance, prudent managers and scholars have focused on understanding and studying the dynamics of the ethical workplace and the role that professional associations and ethics codes and pronouncements play in the scheme of things. (Menzel, 2001, p. 356)

There are two main approaches of ethics, integrity and compliance approach, applying in public administration. In this paper, I would like to study specifically about integrity approach, focusing on ethics education and training and ethical models. The finding might be help public administrators in decision-making when they have to encounter some ethical dilemmas in public administration. The topics, I will present, are as follow:

1. Integrity and Compliance Approaches
2. Ethics Education and Training
3. Ethics Triangle Model
4. Ethical Decision-making Model
5. Ethical Problem-solving Model
6. Moral Development Model
7. Conclusion

2. Integrity and Compliance Approaches³

John Rohr was one of the first scholars who made a clear distinction between an integrity approach and a compliance approach, between the 'high road' of integrity and the 'low road' of compliance. (Lawton, Rayner, and Lasthuizen, 2013, p. 118)

The integrity approach is a virtue-based or characteristic strategy to organizational ethics. Programs within this type of approach aim to define organizational (moral) values and encourage employee commitment to act upon these leading values and ethical aspirations. Integrity approach is based on the principles within the organization and the wider environment. An important role in

³ Information concerned with this topic see: Bowman and West, 2015; Koven, 2015; Svava, 2015; Lawton, Rayner, and Lasthuizen, 2013; Lewis and Gilman, 2012; Menzel, 2007; Richter and Burke, eds., 2007; Gorofalo and Geuras, 2006; and Hejka-Ekins, 2001.

this strategy to organizational ethics is played by managers. (Lawton, Rayner, and Lasthuizen, 2013, p. 118)

The compliance approach is a rule-based or legal strategy to organizational ethics, which focused on the prevention of unethical conduct by detecting integrity violations and sanctioning employees who transgress the law, rules and organizational norms. Programs within this type of approach tend to emphasize the prevention of unlawful conduct, primarily by increasing surveillance and control and by imposing penalties for wrongdoers. Organizations that follow a compliance approach are mainly concerned with avoiding legal sanctions and conceive ethics as ‘that what is legal and within the law’. (Lawton, Rayner, and Lasthuizen, 2013, p. 118)

Cooper distinguishes internal and external controls, which can be employed to foster responsible behavior in organizations. Internal controls are instruments that aim to internalize moral values to foster employee ethical conduct, such as ethical dilemma training, exchange of information and experiences, and reinforcement by rewarding exemplary behavior. Ethical leadership and the fostering of an ethical culture and climate are important ways to accomplish desired behavior of employees. Internal controls are important instruments within an integrity approach. In the opposite side, external controls are imposed, top-down instruments to steer employee ethical conduct, such as laws, rules and codes, and monitoring and reinforcement of such rules by sanctioning wrongdoers. External controls fit with the compliance approach. (Lawton, Rayner, and Lasthuizen, 2013, p. 118). The features of the two approaches are shown in table 1 and table 2.

Table 1: Integrity Approach

Aspect	Integrity Approach
Ethics	Self-governance and subjective responsibility according to chosen standards within organization
Aim	Enable ethical conduct and moral reasoning
Behavioral assumptions	Social beings guided by values, principles, (public service) motivation and leaders and peers
Methods and	Internal controls, ethics education and training, communication and

instruments	deliberation, ethical leadership, ethical culture and climate, reinforcement by rewards
Standards	Organizational mission, values and aspirations, social obligations, including law, rules, codes and norms
Leadership and staffing	Managers, ethics officers
Activities	Lead (bottom-up) development of organizational values and standards, training and communication, integration in organizational system and culture, providing guidance and consultation, assessing values and performance, identifying and resolving problems and dilemmas
Education and training	Ethical decision-making and values, dilemma training

Source: based on the “Compliance Versus Integrity Approach” by Lawton, Rayner, and Lasthuizen (2013, p. 121)

Table 2: Compliance Approach

Aspect	Compliance Approach
Ethics	Conformity with externally imposed standards and objective responsibilities
Aim	Prevent and combat unethical conduct and integrity violations
Behavioral assumptions	Autonomous beings guided by economic self-interest
Methods and instruments	External controls, education of rules and codes of conduct, reduced discretion and autonomy, auditing, monitoring and controls, reinforcement by sanctions
Standards	Criminal and regulatory law
Leadership and staffing	Lawyers, compliance officers
Activities	Developing (top-down) compliance standards, education and communication, handling reports of misconduct, conducting investigations, overseeing compliance audits and monitoring, enforcing standards with clear sanctions
Education and training	Compliance standards and system, codes of conduct

Source: based on the “Compliance Versus Integrity Approach” by Lawton, Rayner, and Lasthuizen (2013, p. 121)

3. Ethics Education and Training⁴

From the previous topic, it shows that a compliance approach will stress the importance of objective responsibilities, whereas an integrity approach will stress the significance of subjective responsibilities in ethical decision-making by public officials. These will subsequently become emphasized within organizational education and training programs, which can, in turn, support the individual ethical decision-making of employees. (Lawton, Rayner, and Lasthuizen, 2013, p. 123)

Normally, education and training refer to processes and experiences that are designed to impart knowledge, understanding and skills. More specifically, ethics education and training often offer cognitive programs in ethical decision-making. The aim and focus of ethics education and training is to prevent unethical conduct by raising individual moral awareness and improve moral judgment (both integrity and compliance) because these serve as an internal psychological guideline or condition for actual ethical behavior. It is supposed that how people think is related to what they do. (Lawton, Rayner, and Lasthuizen, 2013, p. 123-4)

Although ethics education and training is relevant to all employee, four key moments in a person's organizational career are seen as most important to advance and maintain professional ethical acting. They are (1) right from the start (2) shortly after the start (3) when moving to a new ethically vulnerable position and (4) when moving to a leadership position, as shown in table 3.

Table 3: Key Moments of Ethics Education and Training

Key Moment	Ethics Education and Training
1. Right from the start	To become aware of the ethics aspects of professional life and understand the meaning of the guiding organizational values

⁴ Information concerned with this topic see: Lawton, Rayner, and Lasthuizen, 2013; Lewis and Gilman, 2012; Martinez, 2009; Menzel, 2007; Gorofalo and Geuras, 2006; Cooper, 2001; Hejka-Ekins, 2001; Mayer and Harmon, 2001; Rohr, 2001; and Yoder and Denhardt, 2001.

	and principles in daily practice, public officials should be best educated and trained right from the start in the organization.
2. Shortly after the start	To reflect on specific work-related dilemmas and to confront objective with subjective responsibilities, and formal with informal practices, public officials should be educated and trained shortly after the start in their working environment.
3. When moving to a new ethically vulnerable position	To become aware and discuss the specific ethics issues, aspects and risks of their position, public officials should be educated and trained when moving to a new ethically vulnerable position.
4. When moving to a leadership position	To become ethically competent as a leader and be able to realize ethical leadership, public officials should be educated and trained in special leadership programs, when moving to a leadership position.

Source: based on the “Ethics Learning Moments in the Professional Career” by Lawton, Rayner, and Lasthuizen (2013, p. 126)

Most education and training programs in cognitive moral reasoning are offering a practical ethical decision-making model. Four of such widely used and applied models, and I would like to study here, are: (1) Ethics Triangle Model, (2) Ethical Decision-making Model, (3) Ethical Problem-solving Model, and (4) Moral Development Model.

4. Ethics Triangle Model⁵

As a scholar who has supported the combined use of all ethical theories; virtues, principles, and consequences; Svava argued that each of the three depends on and is supported by the others. Furthermore, the responsibilities from duty give a focus and direction to the ethical commitments of public administrators. Drawing on the philosophical perspectives, what virtues, principles, and consequences are in the public interest? The elements can

⁵ Information concerned with this topic see: Bowman and West, 2015; Svava, 2015; Richter and Burke, eds., 2007; and Gorofalo and Geuras, 2006.

be combined to form a triangle with duty at the center. Using this graphic representation of the model suggests that the four elements are interconnected and contained within a common space. The central ideal is the public interest, and the ideal at each point of the triangle are virtues, principles, and the consequences. The ethics triangle conveys the idea that administrators should act on their duty to promote the public interest by seeking a balance of virtues, principles, and good consequences. (Svara, 2015, p. 82) The ethics triangle model is presented in figure 1.

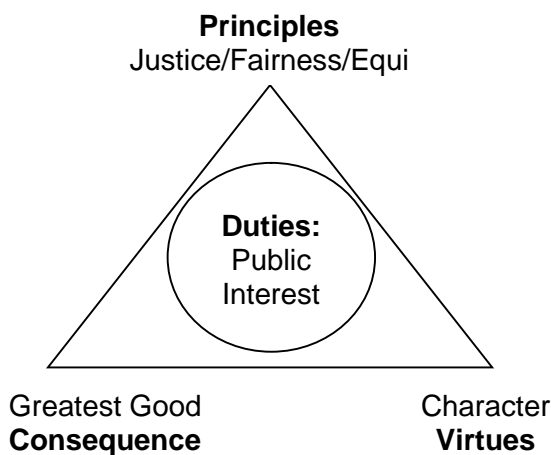

Figure 1: Ethics Triangle Model

Source: based on “the ethics triangle” by Svara (2015, p. 82)

Svara (2015, p. 83) pointed that the elements of the model; duty, virtues, principles, and consequences; serve as distinct filters that reveal different aspects of a situation requiring an ethical choice. This method helps to clarify the options and ethical considerations associated with each approach. Using all the approaches together helps to prevent the shortcomings of using any of the approaches alone. The use of all three approaches also balances different ways of thinking about ethical issues. The virtue-based approach relies on feeling and reflection, the principle-based approach uses reason, and the consequence-based approach stresses analysis. Individual weaknesses in one of these ways of thinking can be offset by strengths in others.

In order to draw out key ideas associated with each approach, public administrators should internalize these ideas. Questions to guide the discussion would include as shown in table 4.

Table 4: Questions to Guide the Discussion in Each Element

Element	Question
Duty	<ol style="list-style-type: none"> 1. How can the public interest be advanced in general and in particular situations? 2. What are my responsibilities to the organization, political superiors, and to the public?
Virtues	<ol style="list-style-type: none"> 1. What virtues should public administrators generally or persons working within a specific field or agency have? 2. What do these virtues mean, and how does one act in terms of each? 3. In general, what does it mean to have integrity and character?
Principles	<ol style="list-style-type: none"> 1. What should one do to promote justice, to ensure fairness, and to expand equity? 2. What are the most important principles that should guide any public administrator or person working in a specific field or agency? 3. How would one prioritize the principles? 4. Are there any that can never be set aside to advance another principle? 5. What does it mean to apply these principles to specific situations?
Consequences	<ol style="list-style-type: none"> 1. How can the greatest good for the greatest number be achieved in making a specific decision? 2. What ends should public administrators or persons working within a specific field or agency seek to advance? 3. How should one ensure that all stakeholders have been identified and that the calculation of benefits and costs is universal, equal, and complete? 4. Can the means to be sued be reconciled with the standards of the public interest, virtue, and principle?

Source: based on the “Promoting Use of the Ethics Triangle” by Svara (2015, pp. 85-86)

5. Ethical Decision-making Model⁶

To practice and learn how to deal with ethical issues and dilemmas that public administrators are confronted with on a daily basis, Cooper recommends using the ethical decision-making model for systematic reflection. This model can be used by individuals or groups to analyze and resolve such problems within the context of the public organization. Even in less complex cases, applying this model could result in more self-awareness, clarity and conscious choices about their course of action and its basis. Consequently, by using an ethical decision-making model, the skill for thinking in a more principled fashion can be improved. (cite from Lawton, Rayner, and Lasthuizen, 2013, pp. 126-127) The five steps of the model are presented in figure 2.

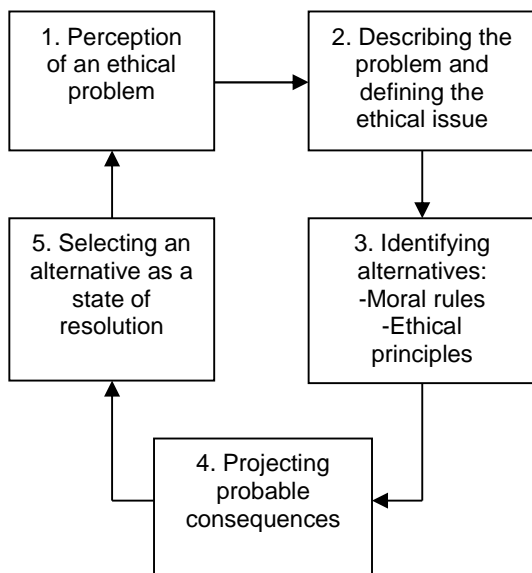

Figure 2: Ethical Decision-making Model

Source: based on “An Ethical Decision-making Model” by Cooper (cite from Lawton, Rayner, and Lasthuizen (2013, p. 127)

The descriptions of the five steps are demonstrated in table 5.

⁶ Information concerned with this topic see: Lawton, Rayner, and Lasthuizen, 2013; and Wittmer, 2001.

Table 5: The Five Steps of Ethical Decision-making Model

Step	Description
1. Perception of an ethical problem	The first step is perception of an ethical problem. In daily situations we do not always recognize the ethical dimensions and implications of the problems we face. Nevertheless, in many professional decision-making situations ethics does play a role and public officials are encountered with conflicts between values that are equally important.
2. Describing the problem and defining the ethical issue	The second step is to objectively describe the facts of the situation: Who are the actors and stakeholders that are involved, what are their viewpoints, the events and issues, and what are the ethical risks and challenges? What do we know and what information is still missing?
3. Identifying alternatives	The third step is to identify all alternative courses of action: What are the options? What are the consequences and implications of each option, what are the pros and cons? What about your own values and norms, and those of the wider audience? So, what are the creative solutions for the problem?
4. Projecting probable consequences	The fourth step is projecting the positive and negative anticipated consequences of alternatives. Use your moral imagination to construct a scenario with actors, interaction and implications for each alternative. Connect rational aspects and affective aspects of the ethical decision-making.
5. Selecting an alternative as a state of resolution	The last step is selecting an alternative. You can subsequently make a decision and choose the ‘best’ course of action.

Source: based on “An Ethical Decision-making Model: The Five Steps” by Cooper (cite from Lawton, Rayner, and Lasthuizen (2013, pp. 127-128)

6. Ethical Problem-Solving Model⁷

Svara (2015, p. 131) argued that it is possible to improve the quality of ethical problem solving by using some kind of systematic approach. Better quality would

⁷ Information concerned with this topic see: Svara, 2015.

mean considering a broader range of issues and making greater use of universal values in ethical decision making. He proposed the problem-solving model sets forth a series of questions that potentially enable public administrators operating ethical dilemmas they encounter. The model is divided into three stages: description, analysis, and decision, as exhibited in figure 3.

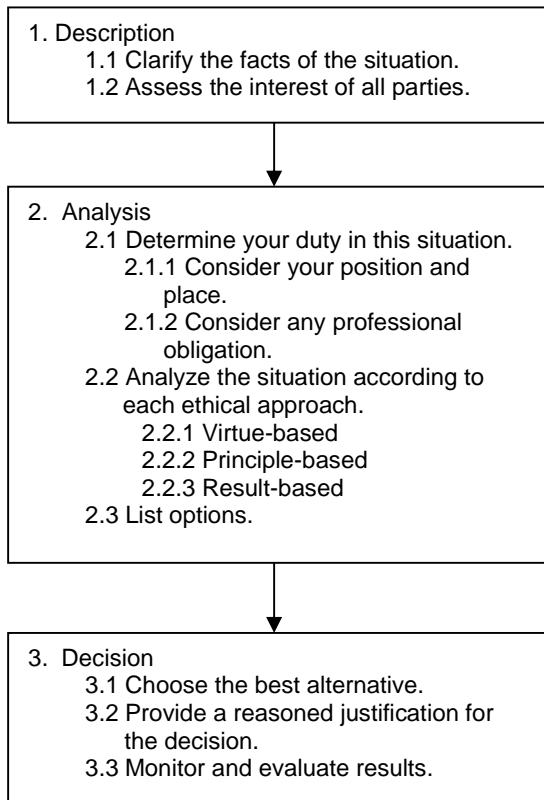

Figure 3: Ethical Problem-Solving Model

Source: based on the “Stages and Steps in Problem-solving Model” by Svava (2015, p. 135)

The descriptions of the stages and steps are displayed in table 6.

Table 6: Stages and Steps in Problem-Solving Model

Stage	Step
1. Description	1.1 Clarify the facts of the situation. It is important to get as much information as possible and to not interpret the information at this stage. 1.2 Assess the interests of all parties who have stakes in the outcome of the situation and how they are

	potentially affected (stakeholder analysis).
2. Analysis	2.1 Determine your duty in this situation considering the obligations and responsibilities of your position and your professional role. 2.1.1 Consider your position and place in the organizational structure and what you are expected to do by the organization. 2.1.2 Consider any professional obligations that are distinct from what the organization expects (specific standards for your profession and general obligations, including advancing the public interest and promoting the democratic process). 2.2 Analyze the situation according to each ethical approach. Analysis is guided by using each of the three ethical approaches guided by these questions. 2.2.1 Virtue based: What would a good person do in this situation? 2.2.2 Principle based: What principles apply to the situation and what action would follow from these principles? 2.2.3 Results based: What are the best consequences that could be achieved in this situation, and what actions would be taken to achieve them? 2.3 List options. From the answers to the questions in step 2.2, a set of options can be developed.
3. Decision	3.1 Choose the best alternative. Choosing among conflicting options is difficult, but at least one can feel confident that the choice did not ignore an important alternative. Furthermore, specifying multiple options increases the likelihood of making an ethical choice. 3.2 Provide a reasoned justification for the decision. It will be easier to explain the basis for the decision if duty and all three ethical approaches have been considered. 3.3 Monitor and evaluate results. Make adjustments if necessary.

Source: based on the “Stages and Steps in Problem-solving Model” by Svava (2015, pp. 134-136)

7. Moral Development Model⁸

⁸ Information concerned with this topic see: Bowman and West, 2015; Svava, 2015; Lawton, Rayner, and Lasthuizen, 2013; Lewis and Gilman, 2012; Luke and Hart, 2001; and Stewart, Sprinthall, and Shafer, 2001.

To describe how people acquire attitudes about ethics and morality, Lawrence Kohlberg proposes a moral development model to help understand how the capacity for ethical reasoning develops and explains the motives for action at different stages of development. Although Kohlberg is concerned with morality broadly, but we can assume that the level of moral reasoning will be transferred to the way that individuals make ethical judgments about their role and behavior in an organization or profession. (Svara, 2015, p. 23)

Kohlberg established three levels and six stages of moral development that children go through in the maturation process as they are influenced by a variety of socializing force. The levels are (1) pre-conventional levels, where the child is starting to respond to rules but has values that are self-centered; (2) conventional levels, where the older child and adult internalizes the values of doing the right thing in order to meet the expectations of others or to comply with prevailing standards; and (3) post-conventional levels, where moral values are grounded in universal principles. (Svara, 2015, p. 23) The levels and stages of the moral development model are presented in table 7.

Table 7: Moral Development Model

Level	Stage	Social Orientation	Motive
Pre-conventional	1	Punishment and obedience	Stimulus/response
	2	Instrumental relativist	Self-serving good behavior
Conventional	3	"Good boy; nice girl"	Meeting the expectations of others with whom one interacts
	4	Society maintaining /law and order	Meeting standards imposed by society through law and convention
Post-conventional	5	Social contract	Seeking to promote rights of all as agreed to by society

	6	Universal ethical principle	Seeking to act in ethically principled way
--	---	-----------------------------	--

Source: based on the "Ethical Development" by Kohlberg (cite from Svara, 2015, pp. 23-25)

Kohlberg suggests that the stages always occur in this order, and that people always incorporate the values of one stage before moving to the next. Most adults have moved to stage 4, but most do not move beyond that stage. Stage 4 reflects reasoning that emphasizes what is legal and supports social institutions. Sophisticated moral or ethical reasoning reflects post-conventional thinking, but it appears that this level of reasoning is somewhat uncommon. (Svara, 2015, p. 24)

Kohlberg's moral development model is useful for identifying why people behave the way they do at each of the differing levels of morality. Each stage is associated with a different motive for following rules or taking moral action, as described below: (Svara, 2015, pp. 25-28)

At stage 1, a person does whatever he or she can get away with and avoid getting caught and punished. It would represent a base level of moral reasoning and is likely to be rare, although instances of such behavior certainly occur in government organization.

Stage 2 reflects a narrow cost-benefit calculation: "I will follow the rules because I benefit more from doing so than from breaking the rule." There is no respect for the value of the rules themselves. Ethical standards are low and likely to stress what one should not do.

At stage 3, we do the right thing because it is expected by those with whom we interact. We do not want to disappoint them or let them down, and we do not want to incur their displeasure. It is highly personalized approach to deciding what is right and wrong, and the standards are influenced by our perceptions of the expectations of others and a feeling of loyalty to them.

At stage 4, persons accept the legitimacy of laws and other rules of behavior, including codes of ethics. They feel obligated to action in terms of these

laws, policies, and rules based on the narrow or reactive sense of duty. Persons at this stage may not understand the reasons for the rules or feel a sense of commitment to the principles or purposes on which they are based, but they feel an obligation to follow the rules. They feel a sense of guilt when they do not.

Stage 5 and stage 6 reflect a deeper understanding and broader commitment than stage 4. At this level, there would be much more likelihood of critically examining the reasons for acting and seeking to alter unfair laws, policies, and rules than at the lower levels.

8. Conclusion

Integrity and compliance can be perceived as a soft and a hard approach, respectively. An integrity approach use internal controls and a compliance approach uses external controls in order to operate as an ethical organization. The integrity approach is assumed to be more effective.

This paper has focused on the integrity approach to organizational ethics, therefore describing its orientation and components. Moreover, it clarified the way of implementing this approach within an organization. Ethics education and training programs, which are embedded in an integrity approach, are cognitive programs in ethical decision-making. Ethical models studying in this paper; Ethics Triangle Model, Ethical Decision-making Model, Ethical Problem-solving Model, and Moral Development Model; can be used to help individuals and groups of individuals in organizations to analyze ethical dilemmas they are faced with in daily practice. These models, consequently, are considered as effective means for enhancing decision-making of public officials.

COLLABORATIVE ENTREPRENEUR AND COLLABORATIVE MANAGER: THE NEW LEADERSHIP ROLES IN FORMING AND SUSTAINING LOCAL GOVERNMENT COLLABORATION

Pobsook Chamchong

pobsook.c@msu.ac.th

College of Politics and Governance (COPAG), Mahasarakham University

Abstract

Collaboration is widely accepted as an effective policy for improving the capacity and efficiency of small local governments in delivering services, without decreasing the quality of local democracy that small local authorities can provide. This article is drawn on a critical review of the literature on collaboration. It argues that inter-local government collaboration means a new form of managing organisation and public services shifting from bureaucratic, hierarchical managements to governance, horizontal arrangements. To achieve successful and sustainable collaborative working relationships across professional and organisational boundary, local leaders, either political or managerial or both, are required to play new leadership roles. Essentially, they must effectively play different **boundary spanning roles** at different stages of cross-council collaboration. At the stage of the formulation of collaboration policy local leaders must play the role of **collaborative entrepreneurs**, who are competent to develop new collaboration solutions, build trust and coalition among putative partners facing common issues or having shared interests to work collaboratively together. Although collaborative entrepreneurs may be successful in initiating collaboration policy, they do not necessarily have competencies to maintain cross-council working relationships. Rather, to sustain cross-council collaboration after it has been formed, it requires leaders to efficiently exercise the role of **collaborative managers** who are competent to facilitate interagency working relationship, secure long-term commitment and contributions of partnering councils to shared goals, maintain sustainability of the cross-council working, and gear further integration across councils. The distinction between these two boundary spanning roles had been seldom discussed in the literature. Hence, identifying and distinguish these new leadership roles offer valuable insights conceptually for local governments seeking to enter into collaboration and wishing to have enduring cross-council working relationship.

Key Words: local government collaboration, boundary spanners, collaborative leadership

INTRODUCTION

Inter-local government collaboration is a new mode of working allowing people and local government units to form collaborative working arrangements across professional and organisational boundaries (Williams, 2013). It can be referred to as governance in managing organisation and public services (Hughes, 2010). Collaboration is an essential policy that enables local governments to obtain cost-efficiency, to

achieve improved local services to citizens, and to solve wicked issues – the problems that cannot be easily solved by a single organisation working independently, particularly in the face of limited resources and fiscal retrenchment (Chamchong, 2016; Williams, 2013). Hence, there has been a growing range and deepening of collaborative activities in local governments across the world, particularly in Western countries, for decades. As a result, existing research on inter-local government

collaboration is flourishing (see for example, Chamchong, 2016; Dickinson and Sullivan, 2014; Labianca, 2014; Blaire and Janousek, 2013; Hulst et al., 2009; Hulst and Van Montfort, 2009; 2011; Warner, 2006). Nevertheless, Chamchong (2016) points out that a great deal of attention has been paid by scholars to a specific, only one aspect of collaboration policy. For example, some scholars investigate the formulation of collaboration policy, the driving force for collaboration in particular (Krueathep et al., 2010; Gazley, 2008). Some studies explore factors influencing successful and sustainable implementation of collaboration policy (Sloper, 2004; Tomlinson, 2003).

According to Pollitt (2008, p.6), insights into public policy and successful implementation of such a policy are unlikely to be gained by studying the initiation of policy separate off from how its practice will be managed. However, existing research focusing on the interaction between the decision making of collaboration policy and its implementation is scarce (Chamchong, 2016).

Regarding collaboration policy, a number of scholars have long recognised that having individuals who deploy the necessary competencies for working across boundary is vital to successful and enduring collaboration (Chhotray and Stoker, 2009; Sullivan and Skelcher, 2002; Williams, 2013; 2011; 2002; Huxham, 1996). These individual actors are often termed **boundary spanners** (Sullivan and Skelcher, 2002; Williams, 2002). However, little attention has been paid by scholars to define different required skills and roles of boundary spanners at the different stages of collaborative working policy.

This academic article fills these gaps by synthesising the literature on collaboration policy specifically in local government context. It generates new insights into academic and practical relevance. It argues that as inter-local government collaboration means a new form of governing based on

joint activities between partners, the successful initiation and implementation of this new mechanism require new roles of leadership which is boundary spanning. Boundary spanners in local government collaboration must be performed by either political or managerial leaders or both. Also, this article distinguishes two new leadership roles at different stages of collaboration policy. It is proposed that local governments wishing to have sustainable inter-local government collaboration require leaders to act as **collaborative entrepreneur** at the stage of policy formulation. Then to effectively manage interagency relationship, the role of **collaborative manager** is required.

This article opens with providing the rationale for collaboration in local governments. Also, the way in which inter-local government collaboration policy has been implemented is illustrated. Then, it considers a shared notion between *governance* and *collaboration*. Next, it discusses the concept of *boundary spanners*, i.e. the key persons who have dedicated responsibility and have specific competencies to work in collaborative environments. Then, it suggests the new two boundary spanning roles of local leaders, namely *collaborative entrepreneur* and *collaborative manager*.

WHY COLLABORATE?

In an attempt to assist local government to increase efficiency in management and providing services, two key policy choices have been suggested by scholars and have been implemented across the world namely *amalgamation* and *collaboration*.

Amalgamation, i.e. the merger of two or more local governments into a single larger unit, has been implemented by a number of countries such as Japan, New Zealand and Australia that believe that a larger size of local government is the

optimal way of achieving efficiency in services provision (Swianiewicz, 2002). In Australia, for instance, the number of local governments has dropped 'from 1067 to 557 over the time-period from 1910 to 2008' (Dollery et al., 2010, p.292), resulting from municipality merger initiative.

However, a number of studies proved that Australian local government amalgamation policy has not led to a significant enhancement of efficiency gains in local government services (Dollery et al., 2007; 2009; Financial Sustainability Review Board; 2005; Allan, 2003;). This is consistent with the study looking at international evidence on economic results of local government merger by Sancton (2000) which found that the improved efficiency of local governments' service delivery and management does not require a bigger local government unit.

Moreover, amalgamation, the idea of 'bigger is better', is challenged concerning political and democratic aspects. Allan (2003) pointed out that amalgamation lowers the vibrancy of local democracy and people participation in local policy and activities as the size of local authority is large. Lassen and Serritzlew (2011) confirmed this argument by stating that when councils are bigger, internal political efficacy decreases. People are more likely to be interested and participated in policy process and local affairs in the small areas where they can easier develop a strong sense of ownership.

Essentially, local democracy and local self-governance are well operated in small local government with small territory. These issues led to the discussion on the better approach to realising the reduced cost and enhanced efficiency in local government services that is collaborative organisational arrangements (Aulich et al., 2011; Local Government Centre, 2008; Dollery et al., 2007; 2009; 2010).

Alternatively, **Collaboration**, i.e. inter-local governmentworking in various forms

"where there is a shared interest in positive outcomes" (Sullivan and Skelcher, 2002, p. 1), has evolved as a potential policy mechanism in the pursuit of increased efficiency (Krueathep et al., 2010; Agranoff and McGuire, 2003; Lowndes and Skelcher, 1998). Particularly, in the phenomenon of resources and financial constraint facing small local governments across the world collaborative arrangements provides the great possibilities for small councils to realise cost-efficiency (Hulst et al., 2009).

Furthermore, collaborative working across boundaries and sharing key resources in providing services equip small councils to achieve economies of scope and scale even if they are small, without losing sense of local self-governance and local identity (Lassen and Serritzlew, 2011; Warner, 2006). Collaborative arrangements enables small councils to deliver local public services to a larger set of citizens and a bigger territory, and to sustain frontline services or even improve the quality of services delivered (Chamchong, 2016; Benton, 2013; Blaire and Janousek, 2013; Hulst et al., 2009).

In the recent study on collaboration between small local governments, Chamchong (2016) synthesized existing relevant literature and provides a comprehensive explanation as to the rationale for cross-council collaboration. It found that small local governments voluntarily decide to collaborate with one another because of some key driving forces (See figure 1). These are positive management experience of local leaders in inter-authority joint working; to increase efficiency in the face of resources and financial scarcity; to improve policy delivery in response to the proliferation of wicked and cross-cutting issues; and to improve coordination between service providers in a specific policy area in the situation of overlapping jurisdictional functions between local governments in different tiers (Chamchong, 2016).

Figure 1: The rational for cross-council collaboration

Source: Chamchong (2016, p. 70)

INTER-LOCAL GOVERNMENT COLLABORATION POLICY IN PRACTICE

At present collaboration is preferable to amalgamation approach. Collaboration arrangements between local governments, particularly ‘shared services’, is a widespread phenomenon throughout Western world (See Labianca, 2014; Hulst and Van Montfort, 2011; Hulst et al., 2009; Warner, 2006; Agranoff and McGuire, 2003).

In the United State of America, inter-local, bilateral collaboration between US local governments has been norm for service provisions and addressing community challenges since the 1980s (Blair and Janousek, 2013; Warner, 2006).

According to Benton (2013), inter-local collaboration in the US can be both informal and formal institutional relationships. Informal collaboration is relationships without any written agreements such as ad hoc meetings and information exchange in a specific task or policy area. Formal collaboration refers to relationships that require a formal, written agreement on joint working and sharing key resources. Warm (2011) indicates that collaborative arrangements presently are more formal and complex which aim to achieve long-lasting cost-efficiency gains, resulting from less state funding in the face of rising demands of citizen. Benton (2013) confirmed that financial retrenchment is a

catalyst for a formal form of collaborative service provision in the US.

In European countries, the situation of financial austerity throughout Europe and the greater demands of citizens over the past decades have put local governments under great pressure as they must produce improved services with limited resources (Labianca, 2014; Hulst et al., 2009; Hulst and Van Montfort, 2007). To response to such challenges, a number of local governments, especially small ones, have voluntarily developed intermunicipal cooperation with neighboring municipalities in various institutional forms such as joint planning, an agreement on joint service delivery, and a single organisation for providing shared services (Hulst and Van Montfort, 2011). These new forms of organisational arrangements bring about enhanced efficiency in services delivery which is a shared goal of partnering councils (Labianca, 2014). Also, Hulst and van Monfort (2011, p. 122) state that they “increase the capacity for solving policy problems that escape the boundaries of a single municipality”.

England has prolonged experience in practicing cross-council collaboration. Central governments have been proactively promoted collaborative arrangements as a key strategy for local councils to achieve better performance and efficiency in service provision since 1997 (Dickinson and Sullivan, 2014; Sullivan and Skelcher, 2002).

Especially, to urge local governments to implement collaborative working in the climate of government spending cuts, the 2010 coalition government promulgated the Local Government Act 2010 which empowered local councils to develop innovative forms of collaboration (Chamchong, 2016). In an attempt to survive in the phenomenon of financial austerity, a number of English local governments have voluntarily formed and operated cross-council collaboration in various types throughout the country (Dickinson and Sullivan, 2014). These are, for example, collaborative budgeting (Raine

and Watt, 2013), shared services, a shared chief executive and management team, and an integration of officer structures into a single workforce serving two sovereign councils (Chamchong, 2016). These are crucial policy choices that offer opportunities for small governments to achieve significant savings, to secure frontline services, and to provide better quality of services to citizens under financial pressure (Local Government Association, 2015; Heley and Moles, 2012; Williams and Sullivan, 2007).

Recently, Chamchong (2016) conducted a comparative analysis of local government collaboration in England and Thailand. **In Thailand**, the study found that collaborative workings between local governments in formal, institutional forms are scarce because there is an absence of law supporting such new collaborative arrangements. The collaborative working relationships between Thai councils then grounded and built on inter-personal relationships among agents - local leaders.

However, cross-council collaboration policy is continued to be a key policy choice for enhancing the capacity of small local councils to achieve better outcomes. Hence, it is essential to investigate the way in which this policy can be successfully formed and implemented, which the role of agent is the main focus of this article.

GOVERNANCE AS COLLABORATION

It is conceded that 'governance' and 'collaboration' are slippery and contested concepts. Despite the widespread use of both terms in the literature, there is no unified accepted meaning and definitional clarity among scholars in the political science and public administration.

The term **governance** has been used to signify various notions such as governance as good governance, governance as the New Public Management (NPM), and governance as networks (Rhodes, 1996). Hughes (2010) argues that 'governance' is essentially a simple term with simple

definitions. He also points out that the term governance should be widely used and discussed but it just requires the clear purpose and the explanation when using the term. Similarly, a number of terms are employed interchangeably to define **collaboration**, i.e. a new form of working which people and organisations can work jointly together. Indeed, "collaboration is known by many names" (Gajda, 2004, p.68). Many scholars employ different terms such as networks, partnership, co-operation, joint working, coordination, and integration to refer to collaboration for different purposes (Chamchong, 2016; Williams and Sullivan, 2007; Mandell and Steelman, 2003),

According to Hughes (2010, p. 87) "governance is about running organisation, about setting up structure to enable the organisation to be run". Given the fundamental idea about managing through interagency collaborative arrangements, Rhodes (1996) argues that the notion of governance can be referred to as interorganisational collaboration or 'networks' in his term. Rhodes (1996, p.660) suggests that "governance has too many meanings to be useful, but that the concept can be rescued by stipulating one meaning...So, governance refers to self-organizing, inter-organisational networks".

This article argues, after Hulst and van Monfort (2011), Hughes (2010), Haveri and Airaksinen (2007) and Rhodes (1996), that the notion of inter-local government collaboration is consistent with the basic governance - horizontal arrangements emphasizing on bringing people and various organisations to work jointly together to achieve shared interests.

In this article, the term **collaboration** is employed to refer to a new way of organising local government organisation and providing public services focusing on bringing together organisations to work jointly across institutional boundary which "reshapes the processes of decision making

or service delivery” (Warm, 2011, p. 61). Hence, in order that collaboration policy can be successfully formulated and sustainable, new skills and roles of leadership are required.

BOUNDARY SPANNING: THE VITAL ROLE IN COLLABORATION

Collaboration is a form of governance that is different from managing in traditional public administration. Hence, building and sustaining collaborative relationships need new and specific set of competencies that are different from those employed to govern in bureaucratic, hierarchical public management (Williams, 2013). In essence, it requires individuals who are dedicated and be able to effectively engage and manage in this new form of governance in which people from different agencies with different cultures, values, and interests come to work together (Williams, 2013, Williams and Sullivan, 2007; Sullivan and Skelcher, 2002). These individual actors are referred to as **boundary spanner** or **reticulist** (Williams, 2002; Sullivan and Skelcher, 2002; Alter and Hage, 1993; Friend et al., 1974; Challis et al., 1988).

There have been a number of studies that point out the key roles of boundary spanners. According to Sullivan and Skelcher (2002), successful boundary spanners are those who are able to play a number of different roles to formulate, facilitate, and maintain collaborative endeavours. Along with this argument, Williams (2013, p.19) points out that boundary spanners must “co-ordinate, facilitate and service the processes of collaboration between the diverse set of interests and agencies”. A comprehensive notion of dominant roles of competent boundary spanner that are pivotal for sustainable collaboration is provided by Williams (2002). He suggests four key roles namely “building sustainable relationship; managing through influencing

and negotiation; managing complexity and interdependencies; and managing roles, accountabilities and motivations” (Williams, 2002, p. 114). Oborn et al. (2011) added to those literature by mentioning that when practicing collaboration in public sector, the job of boundary spanners must be more about a personal and political aspect, rather than technical one.

In order to discharge those job roles, individuals need proper competencies to assist them to effectively conduct their roles. In this regards, a number of scholars pinpoint necessary required skills and capacities that make up the right competencies for boundary-spanners or reticulist to perform within collaborative environments. Sullivan and Skelcher (2002) critically review literature of boundary spanner in collaborative environments. They found that individuals who can be capacity for collaboration must have excellent communicating, networking, negotiating, and conflict resolving skills. Also, competent reticulists have capacity to empathize and to see the big picture. Having the combination of these skills and attributes equip them to discharge their roles successfully.

In the empirical research on managing collaboration and interdependency, Williams (2005) proposes four highly connected components of boundary-spanners which are entrepreneur, reticulist, interpreter and communicator, and co-ordinator. Each of these dominant roles is concerned with a specific set or competencies. The boundary as entrepreneur emphasises on the ability to create solutions to tackle facing organization, build coalitions and trust among potential partners to agree to collaborate (Challis et al., 1988).

The reticulist means the powerful intermediaries who develop, manage and maintain network links. The needed skills enable them to perform such role are understanding diversity and complexity of partners, influencing and strategic seeking

consensus among partners with different sources of power. The interpreter and communicator forefronts the importance of understanding the different motivations, cultures, and interests of partners, which can change over times. The ability in listening, communication, negotiation, and consensus building are also significant (Williams, 2013) Particularly, Webb (1991) states that the key ability to perform this role is creating trust by fostering and maintaining inter-personal relationships among persons working across boundary.

Collaborative arrangements need planning, organising, co-ordinating, and servicing. The heart of co-ordinator role then concerns understanding different organisational context, helping them to frame agreements for governing relationships, and maintaining their contributions to inter-organisational working (Williams, 2005; 2013).

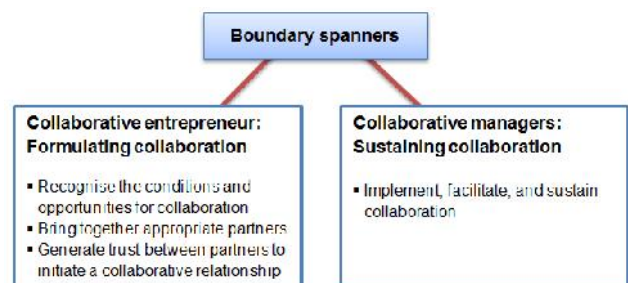

In local government collaboration, having boundary spanners is one of the necessary ingredients for successful collaboration. A number of literature points out that the boundary-spanners' competencies and roles must be learned and discharged by local leaders, managerial and more specifically political (Warm, 2011; Department for Communities and Local Government, 2009; Williams and Sullivan, 2007; Lowndes and Skelcher, 1998; Himmelman, 1996). In order to undertake boundary spanning roles, leaders need to have and exhibit the combination of right skills, knowledge, attributes and abilities to equip them to play their roles effectively.

Although there is a key literature on boundary spanners in the public sector (Williams, 2002; 2005; 2013; Sullivan and Skelcher, 2002), the roles and competencies of boundary spanners provided are still broad. Moreover, from the arguments provided above, it can be realised that successful collaboration requires boundary spanners to perform their roles throughout the processes of

collaboration, ranging from bringing different agencies together, facilitating joint working, to maintaining commitment and relationships between partners. However, the specific competencies in each stage of collaboration policy still need to be clarified. One exception to this is the empirical research of Chamchong (2016), who suggests that the roles of boundary spanners must be divided into different stages of local government collaboration policy as each stage demands different capabilities.

This article attempt to develop insights into the new leadership roles that support the formulation of inter-local government collaboration policy and secure interagency relations after initiation. Therefore, it argues, after Chamchong (2016), that the boundary spanning roles, i.e. the new leadership roles for enduring collaboration policy, must be distinguished into the different key stages of inter-local government collaboration policy. These new roles are referred to as **collaborative entrepreneur**, who play vital role in the stage of policy initiation, and **collaborative manager**, who facilitate the implementation of collaboration policy (see figure 2). The required skills and competencies of each role also be provided in following sections.

Figure 2: The two different roles of boundary spanners

Source: adapted from Chamchong (2016, p. 91).

COLLABORATIVE ENTREPRENEUR

A successful formulation of inter-local government collaboration policy depends much on collaborative entrepreneur role of leaders, i.e. mayor, chief executive, and directors (Chamchong, 2016). The use of the term entrepreneur comes from the notion of Kingdon's (1995) multiple streams model. In his agenda setting model, Kingdon argues that the initiation of policy needs 'policy entrepreneur', i.e. key individual actors in and around government who advocate and seek to push their pet proposals to become policy by coupling three relatively dependent streams – problem, policy, and political. Lober (1997) employed the notion to explore the initiation of collaborative arrangements within organisational context. Individuals or groups that play policy entrepreneur role then were referred to as 'collaborative entrepreneur' by Lober (1997) and then Takahashi and Smuty (2002).

Lober (1997) argues that without the collaborative entrepreneur, collaboration would not occur. Essentially, this job focuses on the ability of leaders to develop proposals on collaborative working to address problems facing organisations or to achieve common tasks and shared goals among putative councils (Williams, 2013; Challis et al., 1988). Also collaborative entrepreneur must act as facilitator to assist putative partnering councils to determine the possible ways of working together, what resources and contributions they can provide to achieve shared goals.

Regarding core skills, competent entrepreneur are those who have networking, *communicating, emphasising, and negotiating* skills (McGuire, 2006; Sullivan and Skelcher, 2002; Williams, 2002).

Empirically, Chamchong (2016) studies the way in which inter-local government collaboration policy can be formed and implemented in four cases of small local

government collaboration in England and Thailand. Empirical evidences from case studies allow the study to suggest comprehensive roles of collaborative entrepreneur. It pinpoints that the successful initiation of cross-council collaboration policy requires local leaders to perform key roles namely *considering the occurrence of potential for collaboration, bringing together putative partnering council, and building trust among them* so that collaboration proposals can be elevated to the status of policy. The particular required competencies that enable them to discharge each of those roles are also clarified as follows:

Considering conditions and opportunities for collaboration and creating cross-council collaboration initiatives

Realising the presence of driving forces for collaboration between is a precondition of the successful formation of such policy. Chamchong (2016) provides empirical evidence from the cases of collaboration between small local demonstrate in England and Thailand which can be seen as valuable notions about this role.

In England, the team of senior officers including a chief executive and directors of two neighbouring councils (Chamchong, 2016) performed this job. The team of managerial leaders realised the government spending cuts of 25%, which put all small councils across the country under pressure on both service provision and organisational management. Moreover, they considered that collaborative arrangements between local councils is a mechanism that have been continuously supported by national government, particularly by the 2010 coalition government in the climate of austerity. The support of collaboration by national government was seen as an opportunity to initiate various, innovative forms of collaboration. Hence, they develop

possible ways of collaborative working as solutions to such financial constraint facing them. Proposals were developed namely amalgamation and collaborative working, i.e. a shared services and management and a single workforce serving two separate councils.

In contrast, mayor rather than managerial leader played entrepreneur role in Thai cases. Small councils in Thailand have very limited resources – qualified staff, high quality equipment, and money – to efficiently deliver some services (Krueathep, 2004), which is a driving force for considering cross-council collaboration. However, there is no specific law supporting a formal form of cross-council collaborative arrangements which create fear for councils' leaders to enter into joint working. Hence, formulating collaboration requires strong and competent political leaders to act this role. Such mayors take risk to create proposal on shared services as they are brave enough and confident that such a radical idea can be achieved as long as it complies with relevant registrations. This also enables them to persuade prospective partnering councils to take risk together (Chamchong, 2016).

Bringing together potential partnering councils

Employing a narrative that conveyed the shared interests and benefits to all partners of collaboration is a significant skill to persuade putative partners. Rather than pointing at the limited resources of potential partners which may inhibit them to make a contribution to joint working, talking about how each of them can play which role and what activities they can do for common goals is preferable. Effective entrepreneur invest their resources includes skills, time and money to connect with appropriate partnering councils and bring them to collaborate (Lober, 1997; Takahashi and Smutny, 2002).

To be able to conduct this job, they must have excellent communication and networking skills, especially the use and talk the right language, giving them the ability to connect up potential partners who may face common issues or have shared interests and goals. Combining these skills with the capacity to greatly understand the different background and the limitations of each partnering council and seeing the big pictures of collaborative working equipping entrepreneurs to win support for collaboration (Chamchong, 2016; Sullivan and Skelcher, 2002; Williams, 2002). In addition, this competency allows the sense of common understanding about shared objective to create which helps them to build coalition for a collaborative working proposal that they wish to push it to be the policy.

Creating trust among putative partners

Cross-council collaboration policy can be formed partly because of trust, grounded in interactions between inter-personal relationships of people working across organisational boundary (Chamchong, 2016; McGuire, 2006; Himmelman, 1996). To build trust, entrepreneur must use the right communication language and create evidence-based proposals on collaboration to assist prospective partners to understand the mutual problems and shared objectives (Sullivan and Skelcher, 2002). Exercising this competency help them gain support and build trust from politicians of partnering councils.

Leaders can generate trust from putative partners by having the combination of the ability to empathy and excellent communication skill. This also makes them an effective broker and negotiator. In Thai cases, for example, Chamchong (2016) found that having powerful mayor of a larger council with more resources who show understanding of how small budget each of

smaller councils has and offer to contribute more in shared services help them to win the heart of partners. Specifically, in the situation of no law support the creation of some formal institutional forms of collaboration between local governments, a strong and highly trusted political leaders acting as entrepreneur is needed. In Thai cases local leaders of small councils decided to take risk to collaborate in shared services without law stipulating that councils can do because they have a high degree of trust in the mayors who have good reputation and make them confident that such a radical idea of joint working will work and have good reputation (ibid.).

COLLABORATIVE MANAGER

The collaborative manager is a critical catalyst for the effective and sustainable inter-local government collaboration policy. This article argues, after Chamchong (2016), that even if leaders as collaborative entrepreneur may succeed in formulating collaboration policy and brining councils to work together to response to common issues or to pursue common goals, they may not have specific competencies to practice such cross-councils collaboration. To effectively implement and drive forward cross-council collaborative arrangements after formulation, leaders as collaborative managers must act as facilitator and negotiator to cement and sustain both inter-personal and formal institutional relationships among partnering councils.

Leaders as competent collaborative managers have ability *to manage and facilitate the implementation of collaboration, to maintain commitment of partners to shared goals, and to secure and deepen collaborative arrangements over time* (Chamchong, 2016; Takahashi and Smutny, 2002; Himmelman, 1996). To be able to discharge their actions previously mentioned, it requires leaders to shift their management style from hierarchical and

conventional style concerning direction of others to *non-hierarchical leadership style* which encourage working across boundary (Williams, 2002; Williams and Sullivan, 2007). Indeed, the role of leaders must be transformed from **'bureaucracy management role and skills'** used in traditional public administration to **'enablement role and skills'**, which is more suitable for managing in collaborative working environment (Salamon, 2001).

The competency of collaborative managers is made up by specific skills and contributes. They have the excellent skills of *collaborative leadership, negotiation, communication, and conflict resolution*. In addition, they are able to *understand different background* of partners including resources each organisation has and different organizational culture. Having this set of competencies permits leaders as collaborative managers to do assist partners *to identify their roles and contributions to collaborative working, to form agreement and governance structure of collaborative endeavours, and to build collaborative culture for working across organisational, professional, and cultural boundary*. Doing these activities guarantees the long-term participation and commitment of partners (McGuire, 2006; Williams, 2002; Sullivan and Skelcher, 2002; Huxham, 1996).

Evidently, when collaboration arrangement means a highly integrated relationship between collaborating councils, for example, a merger of officer structures into a single workforce covering two separate councils in England, senior officers rather than political leaders are greatly needed to play collaborative manager roles. A single team serving two sovereignty councils requires competent managers who can glue relationship between two councils through work closely with councillors of both councils. This article clarifies required skills of collaborative managers under each of

key roles of competent boundary spanners provided by Williams (2002) as follows:

Building sustainable relationships

Assisting collaborating councils build a sense of ownership of collaboration initiatives is the vital role of managers. Empirical evidence from case studies on local government collaboration in both England and Thailand demonstrated that *using the right communication skills and language* and *setting themselves as an example for others* equip leaders to develop sense of belonging of collaboration initiatives among key stakeholders – staff and councillors. Once sense of belonging is developed, partners would make an effort to maintain and even deepen collaboration.

A valuable example is the way in which the mayors of the leading council in a joint disaster prevention and mitigation services among Thai local councils always go out to the provide services in the filed by themselves to show their enthusiasm and support for shared services (Chamchong, 2016).

Managing roles, accountabilities and motivations

Having the ability to understand ‘who does what’ and encourage them to be participate in collaborative efforts are essential competencies of collaborative managers (Williams (2002, p.120). Showing an understanding that collaborating councils may not be able to provide equivalent resources into collaborative working activities as long as they still make a great effort for shared objectives is important. This motivates councils continuously provide contributions to collaborative working instead of withdraw from it (Chamchong, 2016).

Managing through influencing and negotiation and managing complexity

The study of Chamchong (2016) pinpoints that *harmonising the councils* is highlighted as one of the key roles of collaborative managers, especially where collaboration means a single workforce serving two sovereign councils. To do such job requires negotiation, *an acute understanding of differences*, *influencing* and *steering* skills of leaders. Collaborative manager must support the councillors and staff related to collaborative working initiative of collaborating councils to build inter-personal relationships, put differences behind them, and work collaboratively to achieve mutual goals. Williams (2002, p. 117) added that playing ‘*the honest broker role*’ by acting objectively and honestly when dealing with different interests and demands of partners is another significant role.

CONCLUSION

This academic article argues that inter-local government collaboration fits into the notion of governance as it focuses on bringing people and originations to work collaboratively across organisational and professional boundary to pursue common goals or to tackle common issues facing councils. Collaboration then is a new form of managing organisation and providing services where its success and sustainability requires new roles of leadership. This paper proposes that local leaders, either political or executive or both, must be able to perform two different roles of boundary spanners at different stages of inter-local government collaboration policy. To successfully formulate collaboration policy, leaders must play collaborative entrepreneur role by developing collaboration proposals, bringing together putative partners and matching solutions to the defined problem in the stage of policy

formation. Then, collaborative managers are required to play a vital role in managing and sustaining collaboration after initiation. The distinction of boundary spanners' role can be employed as a conceptual framework for future research to investigate the leadership roles or boundary spanners in collaborative arrangements in public sector and specifically in local government context.

THE POLITICAL POWER IN CLASH OF CLANS (COC) VIS-À-VIS THE PHILIPPINE CONCEPT OF POLITICAL POWER

Jann Anthony A. Mag-abo
michans_LEE@yahoo.com

Joy Melyn J. Porquis
joymelynjayma.porquis@gmail.com

Abstract

The study was focused primarily on the concept of political power which was viewed through the virtual and actual world using the strategy of simulation. It was aimed to identify the concept of political power present in the game Clash of Clans (CoC) as to how it simulates the concepts correlated with political power such as its sources and manifestations, power-holder, acquisition, scope/coverage and the security of the power-holder.

In order to justify such simulations, the concepts manifested in CoC were compared to the already established political concepts found in the current political power structure of the Philippine Government to determine its similarities and differences. Along with simulation, primary and secondary data were used. With the limited sources, data were gathered mainly on direct observation on the game CoC. Secondary data were taken on the literature reviews pertaining to the field of study including books, articles and mostly from internet sources.

The study found out the existing political power being rooted in CoC. Though, the concepts found in the game and in the Philippine government gave different conceptualizations, the presence of political power in the game is pervasive. As political power was identified to be simulated in CoC, it generated new avenue for video games being used as an educational tool rather than just purely for entertainment. It aimed to make

video games, by the use of simulation, become a stable political space or trend not just in studying power structure or of a political system but also all other political concepts. As the new generations are so hooked up in video games, they can use it as a field for practicing and enhancing their leadership skills which is a positive form of escapism.

Keywords: *Political Power, Simulation, Video Games, Clash of Clans, Philippine Government*

Introduction

Despite the various researches about the structure of power, the very definition of power remains a matter of controversy. Whereas, power and politics are two different concepts yet cannot be separated with each other. Political power, just like power politics is believed to be redundant by some theoreticians. For them, all politics involves power and vice versa (Baldwin, 2012). But for the purpose of this study, the term political power is used to emphasize its very definition which is distinct yet interdependent from the definitions of politics and power. As Way (n.d.) puts it:

“Political power is the ability to shape and control the political behavior of others and to lead and guide their behavior in the direction desired by the person, group, or institution wielding the political power. Political power is the capacity to influence, condition, mold, and control human behavior for the accomplishment of political objectives.”

To better understand the concept of power which is political by every means is by studying its structure within a political system. Power structure research is an approach to study power as to where it is based or resides within a political system. With these, the research study was focused primarily on the concept of power specifically on its structure or the location of the power in a political system. The strategy video game CoC was used as a lens in viewing a political system vis-à-vis the actual and current political system of the Philippines. It will be highly dependent on the

CoCs' game system that limits or sets the actions of the players.

Under the concept of power, it will try to describe its sources, the holders, acquisition of power, scope/coverage and the security of the power holder and in a way, comparing the virtual and the reality in regards to these concepts. Using the technology specifically a video game just like CoC, it will surely provide valuable information in a new and fun way of presenting political concepts.

Objectives of the Study

The research study has the following objectives:

1. To identify the concept of political power in Clash of Clans (CoC) in terms of:
 - a. Sources of political power
 - b. Manifestations of political power
2. To describe the power structure in CoC in terms of:
 - a. Power-holder
 - b. Acquiring political power
 - c. Scope/Coverage of political power
 - d. Security of the power holder
3. To compare the CoC's concept of political power to the Philippine concept of political power in terms of:
 - a. Sources of political power
 - b. Holders of political power
 - c. Acquisition of political power
 - d. Scope/Coverage of political power
 - e. Security of the power holder

Significance of the Study

The findings of the study will contribute to the existing knowledge of political systems. The study generated helpful

information concerning the usage of video games not just for entertainment but also for educational purposes. By the use of the video game CoC as a simulation of a political system vis-à-vis the real-world politics, specifically the actual and current political system in the Philippines, it would bring a better understanding about how a political system works in an interesting yet very informative way of presenting political concepts. With these, this study will help simulation become a stable political space or trend in studying power structure, and ultimately opens up a haven for knowledge not just for the field of Political Science but also, the other fields of study.

Scope and Delimitation

The research study was focused primarily on the strategy video game CoC being used as a lens in studying a political system. It will only revolve around the concept of political power specifically on its structure or location within a political system specifically on the concepts that can be correlated with political power such as its structure, sources, acquisition, and scope/coverage. It only compared the top ranks in CoC, namely: Leader, Co-Leader and the Elder vis-à-vis the grand powers of the Philippine Government, namely: Executive, Legislative and the Judiciary. The study was highly dependent on the Clans of Clans' (CoC) system of the game that limits or sets the actions of the players. Though, the players were limited by the game system, some of its aspects were mainly player-dependent which gave variation on the data. It was also limited on the game update of CoC in the month of July of the year 2015.

Results and Discussion

The major focus of this study revolved around the concept of political power as to how it is being structured in a certain political system in terms of its sources, manifestations, holder, acquisition, scope/coverage and security of the power holder.

Sources and Manifestations of Political Power in COC

In 1959, social psychologists John R. P. French and Bertram H. Raven identified five sources or forms of power which are now known as French and Raven's Five Sources of Power, namely: Referent Power, Legitimate Power, Expert Power, Coercive Power and the Reward Power (Belen, 2008).

The following tables show how each source is being manifested in the game CoC:

Table 1. Referent Power

Sources of Power Theory	Manifestation in CoC
<ul style="list-style-type: none"> Referent Power – The ability of leaders to develop followers from the strength of their own personalities (Belen, 2008). 	<ul style="list-style-type: none"> usually observed in clans which are mostly composed of real-life buddies. (Saltin, 2014).

This kind of power is usually observed in newbie clans in CoC that is yet to build their own identity. The leader is followed by the members because of how he or she deals with the situations in the clan and provided that the members already knew the personality of the leader in real-life.

The next table shows how legitimate power is manifested in CoC:

Table 2. Legitimate Power

Sources of Power Theory	Manifestation in CoC
<ul style="list-style-type: none"> Legitimate power – stems from an authority's legitimate right to require and demand compliance (Belen, 2008). 	<ul style="list-style-type: none"> The player's position as a leader gave him the power to decide most of the clan's actions and set the clan's settings (Supercell, 2015).

As manifested in Clash of Clans (CoC), the games system provided a number of administrative powers in each rank. The members follow the Leader's rules because of his or her position being the highest rank.

The next source of power which is the expert power is shown in the following table as to how it was manifested in CoC:

Table 3. Expert Power

Sources of Power Theory	Manifestation in CoC
<ul style="list-style-type: none"> Expert power – It is the ability to control another's behavior because of the possession knowledge, experience, or judgment that the other person does not have but needs (Belen, 2008). 	<ul style="list-style-type: none"> A leader must lead by his examples. It is advised that a clan should be created when the player already reached Town Hall 7-8 or much better, Town Hall 9-10 and has higher level of troops and defenses than the members (Jeepyurongfo, 2015).

One rule of thumb is that a clan should be created at Town Hall level 7 or 8. (Galadon, 2014).

Another source of power which is the coercive power is shown in the table below:

Table 4. Coercive Power

Sources of Power Theory	Manifestation in CoC
<ul style="list-style-type: none"> Coercive power – The extents to which a manager can deny desired rewards or administer punishment to control other people (Belen, 2008). 	<ul style="list-style-type: none"> Those members who kept on violating the rules will be punished by the superiors (Neggs, 2013).

Coercive power uses fear as a motivator. As manifested in Clash of Clans CoC, the game system provided a power to the Leader and Co-leader/s to demote or kick members in the Clan (Saltin, 2014).

The next table will show how reward power was manifested in CoC:

Table 5. Reward Power

Sources of Power Theory	Manifestation in CoC
<ul style="list-style-type: none"> Reward power – This power enables the leader to provide additional facilities, increase in pay, promotion of the subordinates, etc. The reward power also enables the leader to recognize the services of the subordinate through appreciation (Belen, 2008). 	<ul style="list-style-type: none"> One thing that a leader should do is to appreciate the performance of his or her members during their successful outcome of their attacks or when the member had donated sufficient amount of troops during wars or even in looting (Benjen, 2014).

The same with the power to demote and kick a member, the Leader and the Co-leader/s were also provided the power to promote a Clan member by the game's system.

Tables 1-5 show how sources of political power is being simulated and manifested in Clash of Clans (CoC). It goes to show that the concept of political power is being embedded in the game as sources were identified and manifested just as from the presence of the different ranks alone, each having their own sphere of political power, which justifies such presence.

Let us now discuss the second main objective of this study which is to describe how political power is structured in the game in terms of its power-holder, acquisition of the political power, scope/coverage of political power and security of the power holder.

Power Structure in CoC

CoC creates a kind of hierarchical organization with the presence of different ranks, namely: Leader, Co-leader, and the Elder whose powers vary in each rank. This manifestation is indeed suitable for power structure research which is shown in the table below (Supercell, 2015).

Power Holder

Table 6. Power-Holder/s in Clash of Clans (CoC)

- Leader** – Clan leaders are the ones who have the big responsibility of managing their Clan. In order to create a brand-new Clan, it costs an additional 40,000 gold, whereupon the player will immediately become the first member and leader of the new Clan (Soagsi, 2014).
- Co-leader** – Co-leader is the rank next to a leader. You can have as many co-leaders in a Clan at one time as the leader wishes. (Control Yours, 2015).
- Elder** – Elder is the title for the Clan members with a higher reputation and level of respect than regular Clan members. (Donate Society, 2013).

With the presence of political power, it follows that power-holders were also simulated in the game. Power-holders vary significantly among political systems, electoral systems, and administrative structures (Balalaeva, 2015).

What can be found in CoC is in the form of hierarchical organization. Wherein, members are ranked at various levels within the organization, each level is one above the other (Hierarchical Organisation, n.d.).

Next to power-holder would be the ways political power was acquired by the identified power-holders in Clash of Clans (CoC).

Acquisition of Power in CoC

Theoretically, Belen identified some tactics for a person to gain political power which will be used as a guide, namely: Social Exchange, Alliances, Identification with Higher Authority, Selective Service, Power and Status Symbol, Power Plays, and Networks (Belen, 2008).

The following tables show how each of these tactics are being simulated or manifested in the game Clash of Clans (CoC):

Table 7. Social Exchange

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> • Social Exchange – relies on the powerful norm of reciprocity in society, where two people in a continuing relationship feel a strong obligation to repay their social “debts” to each other (Belen, 2008). 	<ul style="list-style-type: none"> • One of the options of a member in a clan in order to be recognized by his/her superiors and be promoted is to focus on the donation of troops to the other members (Neggs, 2013).

In CoC, this tactic is usually observed in most Clans which require members to donate a significant amount of troops and in return, they will be given strong troops from the superiors and the extent of being promoted into a certain rank.

Another tactic identified was the concept of alliances being manifested in CoC which is shown in the next table:

Table 8. Alliances

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> • Alliances – two or more persons join in a longer-term power group to get benefits that they usually desire (Belen, 2008). 	<ul style="list-style-type: none"> • A member can be promoted by staying in the clan for a significant number of months and not just hopping (Control Yours, 2015).

Alliances are usually observed in the Clans that already established a strong relationship with each other having members that have stayed in the Clan for a long time already. Thus, a person can acquire political power by forming alliances with other persons within a certain political community as observed in the presence of political parties in the real sense.

Another tactic identified is the identification with higher authority which is shown in the following table:

Table 9. Identification with Higher Authority

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> • Identification with Higher Authority – gaining special privileges by becoming identified with a powerful figure in the organization (Belen, 2008). 	<ul style="list-style-type: none"> • If the superiors recognized the member, which is usually in person, he/she will have the edge over other members in terms of promotion (Saltin, 2014).

In Clash of Clans (CoC), members can get special privilege in a Clan which is usually observed in Clans consisting of a group of friends in real-life. After all, promotion

of the members in CoC is entirely based on trust (Saltin, 2014).

The next table shows how selective service as a tactic to acquire political power was manifested in CoC:

Table 10. Selective Service

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> Selective Service – giving service selectively to gain support, often by bending the rules (Belen, 2008). 	<ul style="list-style-type: none"> This kind of tactic is observed on those members that only donate troops on their superior's requests in order to gain recognition (Indian Royals, n.d.).

In CoC, this tactic is observed on those members not really contributing to the clan as a whole. They are labeled as "hoppers". (Indian Royals, n.d.).

Next tactic that will be shown in the following table is the power and status symbol:

Table 11. Power and Status Symbol

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> Power and Status Symbol – acquiring power and status symbols imply that you are an important person in the firm (Belen, 2008). 	<ul style="list-style-type: none"> When some players who had already established their village having high experience level, high level of troops and defenses join a clan, it is most likely that they can automatically acquire ranks (Saltin, 2014).

In CoC, players with already high level of troops and defenses usually get promotions

in a Clan especially those newbie Clans who are in need of war donors.

The next table shows how power play was manifested in CoC:

Table 12. Power Play

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> Power Play – aggressive tactic involving grabbing of power from others (Belen, 2008). 	<ul style="list-style-type: none"> A member can take over on other's rank by outperforming others in terms of their troops' donations, consistency in achieving 2-3 stars in wars, etc (Control Yours, 2015).

As manifested in Clash of Clans (CoC), the rules for promotion vary in every clan, so every member tries to compete in order to get a promotion.

The last identified tactic is the concept of networks which was also found to be manifested in CoC as shown in the following table:

Table 13. Networks

Tactics in Gaining Political Power	Manifestation in CoC
<ul style="list-style-type: none"> Networks – joining or forming interest groups that have a common objective. The group operates on the basis of friendships and personal contacts (Belen, 2008). 	<ul style="list-style-type: none"> This kind of tactic is common in Clans which were entirely built for the purpose of fun. Wherein, the leader gives out free promotions to his or her friends (Saltin, 2014).

In CoC, this tactic is usually observed in newbie Clans that are yet to build their own identity as a Clan. The friends of the Leader

acquire any of the ranks without performing any actions to justify such promotions being given out freely.

Tables 7-13 show some of the options that a member should do in order to acquire any of the ranks. Though the requirements in acquiring the ranks vary in every clan, the main criteria there is trustworthiness and loyalty in the clan (Saltin, 2014).

With these manifestations, acquisition of political power is definitely simulated in CoC in the form of trust-based promotions. It is in acquiring the ranks wherein a member also acquires political power.

Scope/Coverage of Political Power in CoC

The next specific objective is to identify the scope/coverage of political power attached in each rank as shown in the following table below:

Table 14. Scope/Coverage of Political Power in CoC

<ul style="list-style-type: none"> • Leader – Leaders can: (1) Invite players to join the clan; (2) Accept and decline requests to join the clan; (3) Promote members to Eldership; (4) Promote and demote clan Elders; (5) Demote themselves as Leader and give leadership to a Co-leader; (6) Update the settings of the Clan; (7) Start Clan War; & (8) Send messages to the whole clan. • Co-leader – Co-leaders can: (1) Invite players to the clan; (2) Accept players into the clan; (3) Promote and demote clan Elders; (4) Promote new Co-Leaders; (5) Kick out clan Members and Elders; (6) Update the settings of the Clan; (7) Start Clan war; & (8) Send messages to the whole clan. • Elder – Elders can: (1) Invite players to join the clan; (2) Accept players into the clan; & (3) Kick out clan Members (once every 20 minutes) (Supercell, 2015).

As already mentioned, each of the ranks identified, namely: Leader, Co-leader, and the Elder, has its own attached sphere of political power following a hierarchical form of organization. Though, the most responsibilities lie in the hands of a Leader, other ranks also performs a vital role in the overall progress of the clan.

Security of the Power-Holder in CoC

The security of power in each rank is shown in the following table:

Table 15. Security of the Power Holder

<ul style="list-style-type: none"> • Leader – It is only the leader that can give up his or her position by promoting a co-leader into becoming a leader and in a way, demoting himself/herself into a co-leader. • Co-leader – The co-leader cannot be demoted by the other co-leaders, elders and the members. • Elder – The elder cannot be demoted by his/her fellow elders and members.
--

The power-holders in Clash of Clans (CoC) don't have absolute security in their rank except the leader. After all, it is all based on the leader's decision vis-à-vis the performance of the clan members (Saltin, 2014).

With political power identified to be simulated in CoC, it follows that the concepts correlated into it such as the sources and manifestations of political power, power-holder, acquisition of political power, scope/coverage of political power and the security of the power holder were also simulated in the game. Just as from the presence of the different ranks up to the scope and security of the power-holder proves the prevalence of political power in the game, making it a potential tool to present and study political concepts.

Let us now proceed to the third main objective of this study which is to compare the concept of political power that were found in

CoC with the concept of political power in the Philippines through its current government in terms of the sources of political power, the power holder, acquisition of political power, scope/coverage of power and the security of the power holder.

CoC’s Concept of Political Power VIS-À-VIS the Philippine Concept of Political Power

The concepts correlated with political power that was identified to be found in CoC were compared to its closest representation that can also be found in the Philippine Government. Basically, the top ranks in CoC vis-à-vis the grand powers of the Philippine Government. As ranks in CoC, which actually holds political power, were divided into Leader, Co-Leader and the Elder, the Philippine Government on the other hand, has the presence of its three branches of government, namely: Executive, Legislative and the Judiciary being the Leader v. Executive, Co-leader v. Legislative, and Elder v. Judiciary.

The following tables below would compare and in a way, contrast both worlds, the virtual and reality:

Table 16. Sources of Political Power: Virtual v. Reality

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Having no fixed system provided as to the clear source of power, the French and Raven Five Sources of Power was used as a guide. Some sources of power identified to be present in CoC were Referent, Legitimate, Expert, Coercive and Reward Power. 	<ul style="list-style-type: none"> • The Philippines being a democratic and republican state provided an electoral system in choosing its government officials (Teehankee, n.d.).

Clash of Clans (CoC) did not provide a fixed system that would identify a clear source of power in the ranks especially the leader. It

is all player-dependent which put most of the responsibilities to the leader (Saltin, 2014). Though, the used five sources of power guide was still manifested in the game.

On the other hand, the Philippine Government practices the concept of election. Ideally, elections serve as a major source of political recruitment. With this, election is believed to be one of the factors that make government authorities legitimate.

Let’s now start with the concept of power-holder which is shown in the following tables:

Table 17. Power-Holder: Leader v. Executive

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Leader – Clan leaders are the ones who have the big responsibility of managing their Clan. In order to create a brand-new Clan, it costs an additional 40,000 gold, whereupon the player will immediately become the first member and leader of the new Clan (Supercell, 2015). 	<ul style="list-style-type: none"> • Executive - The executive branch is headed by the President, who is elected by a direct vote of the people. As head of the Executive Department, the President is the Chief Executive (Magz, n.d.).

The Leader as the first member of the clan has the most responsibilities in making his or her clan successful. The Executive Department on the other hand as headed by the President do not own the most responsibilities in the Philippine government as the Legislative and the Judiciary also perform their own sphere of powers showing co-equality of the branches.

The table below will compare the power-holders, Co-leader in CoC and the

Legislative Department of the Philippine government:

Table 18. Power-Holder: Co-Leader v. Legislative

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Co-leader – Co-leader is the rank next to a leader.. Co-leaders are highly experienced and exceptionally active players within the clan (Control Yours, 2015). 	<ul style="list-style-type: none"> • Legislative – The legislative branch, which has the authority to make, alter or repeal laws, is the Congress. Under a bicameral system, the Congress is composed of the Senate and the House of Representatives (Magz, n.d.).

Co-leaders have almost the same administrative powers with the Leader. (Control Yours, 2015).

On the other hand, the Legislative Department of the Philippine government is not directly under the supervision of the Executive Department or the President. Legislative, together with other branches have the concept of co-equality, wherein, they have same sphere of power in the government.

Table 19. Power-Holder: Elder v. Judiciary

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Elder – Elder is the title for the Clan members with a higher reputation and level of respect than regular Clan members (Control Yours, 2015). 	<ul style="list-style-type: none"> • Judiciary – Judicial power is vested in the Supreme Court and in such lower courts as may be established by law. The Supreme Court is composed of a Chief Justice and fourteen Associate Justices (Magz, n.d.).

Elders in Clash of Clans (CoC), though under the supervisions of the Leader and the Co-leaders, still perform a vital role in the overall progress of a Clan as they are given trust by the superiors. Judicial Department on the other hand, the same with the Executive and the Legislative, has the same sphere of powers which are also vital for the overall progress of the Philippine Government.

The Philippine Government on the other hand, has a complex power structure which in contrast with how power is structured in CoC which is just linear hierarchical organization in which the main power only resides on the leader. The Philippine government being divided into three branches of government alongside with the concepts of separation of power and checks and balances principle which prevents one branch to dominate the others allowing co-equality in all of its branches (Pamaos, 2008).

Let us now compare and discuss the forms of acquiring the political power:

Table 20. Acquisition of Power: Leader v. Executive (President)

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Leader – The creator of the Clan will automatically become its first member and at the same time, the Leader. It is by system's default (Supercell, 2015). 	<ul style="list-style-type: none"> • Executive – Qualifications: (1) Natural born citizen of the Philippines; (2) Registered voter; (3) Able to read and write; (4) At least 40 years of age on the day of election; & (5) Resident of the Philippines for at least 10 yrs immediately preceding the election. He shall be elected by direct vote of the people (Magz, n.d.).

As already discussed, any player can just create his or her own Clan castle, and in way, creating a brand new Clan. By the game system's default, the creator of the clan automatically becomes the first member and at the same time, the leader of the clan.

The Philippine government on the other hand, any person cannot just create his or her own government. Before a person can become a President of the Philippines, he or she must be voted upon by the direct vote of the people and must possess certain qualifications to get through the process of election.

Let us now compare and discuss as to how acquisition of power is portrayed in Clash of Clans (CoC) and in the Philippine Government by the power-holders, Co-leader and Legislative, specifically, the Senate:

Table 21. Acquisition of Power: Co-leader v. Legislative (Senate)

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Co-leader – Promotion of the Co-leader will only be given out if the superior feels another leader is needed, and only to mature, loyal players whose judgment they feel they can trust (Death Elevator, n.d.). 	<ul style="list-style-type: none"> • Legislative – Qualifications: (1) Natural-born citizen; (2) At least 35 years old on the day of election; (3) Able to read and write; (4) A registered voter; and (5) Philippine resident for at least 2 years immediately preceding the day of the election. The qualifications of both Senators and Members of the House are limited to those provided by the Constitution. The Senate together with the District-Representatives shall be elected by direct vote of the people (Magz, n.d.).

The Leader is the only one in the Clan who can give out positions such as Co-leader. It is all on the prerogative of Leader based on the trustworthiness of the members. The Legislative Department on the other hand must possess certain qualifications in order to join the election and be voted upon by the direct vote of the people.

Table 22. Acquisition of Power: Elder v. Judiciary

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Elder – To become an elder in a clan, a player should at least have done the following: (1) Must have been a Member for at least two months; (2) Must consistently donate and take part in clan wars; (3) Must be a high level (Control Yours, 2015). 	<ul style="list-style-type: none"> • Judiciary (Supreme Court) – The power to appoint by the President includes appointment of the members of the Supreme Court. Following are the qualifications to become a member of the Supreme Court: (1) Natural-born citizen of the Philippines; (2) at least 40 years of age; (3) a judge in a court of record for at least 15 years or engaged in the practice of law in the Philippines for the same period; and (4) a person of proven competence, integrity, probity and independence (Magz, n.d.).

The same with the Co-leaders, promoting Elder is all based on the personal decisions of the Leader. The Judicial Department, specifically the Supreme Court, is not elective contrary to the President of the Executive and the Legislative. The power to appoint by the President includes appointment of the members of the Supreme Court.

In CoC, wherein there is no fixed system that will put players on a certain rank by achieving a certain requirement, acquiring the

ranks vary in every clan which are all player-dependent especially the leader's personal decisions. Promotion is all based on the player's dedication and ultimately, trustworthiness (Saltin, 2014).

However, in the Philippine Government, there is a Constitution that stipulates all of the requirements in acquiring such positions from becoming a President down to the local officials which made both worlds very different when it comes to this aspect. It is through the process called election that the Philippine officials are able to acquire certain positions (Teehankee, n.d.).

Let us now proceed on the comparison of both worlds in terms of the scope/coverage of political power:

Table 23. Scope/Coverage of Political Power: Leader v. Executive (President)

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Leader – Leaders can: (1) Invite players to join the clan; (2) Accept and decline requests to join the clan; (3) Promote members to Eldership; (4) Promote and demote clan Elders; (5) Demote themselves as Leader and give leadership to a Co-leader; (6) Update the settings of the Clan; (7) Start Clan War; & (6) Send messages to the whole clan (Supercell, 2015). 	<ul style="list-style-type: none"> • Executive – The power of the President includes: (1) Executive power; (2) Power of appointment; (3) Power of removal; (4) Power of control; (5) Military powers; (6) Executive Clemency; (7) Borrowing power; (8) Diplomatic power; (9) Budgetary power; (10) Informing power; & (11) Residual or Other Powers (Magz, n.d.).

The game system of Clash of Clans (CoC) provided a fixed sphere of powers that a Leader can perform, in which the Leader

based his or her prerogative powers which are crucial in maintaining the pace of the clan and its overall progress.

The President on the other hand, which is the head of the Executive Department was identified to have possessed many forms of power taken out from his executive power.

The comparison of the Co-leader and the Legislative's Scope/Coverage of political power:

Table 24. Scope/Coverage of Political Power: Co-leader v. Legislative

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Co-leader – Co-leaders can: (1) Invite players to the clan; (2) Accept players into the clan; (3) Promote and demote clan Elders; (4) Promote new Co-Leaders; (5) Kick out clan Members and Elders; (6) Update the settings of the Clan; (7) Start Clan war; & (8) Send messages to the whole clan (Supercell, 2015). 	<ul style="list-style-type: none"> • Legislative – Legislative Power is the authority to make laws and to alter or repeal them. There are 4 Classifications of legislative power: (1) Original; (2) Delegated; (3) Constituent; & (4) Ordinary. There are also limits on the legislative power of Congress: (1) Substantive; & (2) Procedural (Magz, n.d.).

Co-leaders were also given a fixed sphere of power that they can perform which is very crucial to the Clan. The Legislative Department on the other hand, the same with the Executive, has set of powers under it.

The next table shows the scope/coverage of political power of both Elders and the Judiciary present in Clash of Clans (CoC) and in the Philippine Government respectively:

Table 25. Scope/Coverage of Political Power: Elder v. Judiciary

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Elder – Elders can: (1) Invite players to join the clan; (2) Accept players into the clan; & (3) Kick out clan Members (once every 20 minutes) (Supercell, 2015). 	<ul style="list-style-type: none"> • Judiciary – Judicial power includes: (1) The duty of the courts to settle actual controversies involving rights which are legally demandable and enforceable; and (2) to determine whether or not there has been a grave abuse of discretion amounting to lack or excess of jurisdiction on the part of any branch or instrumentality of the government (Magz, n.d.).

As discussed already, the scope of political power in CoC especially in each of the ranks follows a hierarchical pattern. Wherein, the leader holds the most responsibilities in the clan followed by the co-leader/s, elders and members respectively. The Leader and the Co-leader/s have almost the same administrative powers except that the Leader is the only one that could kick Co-leader/s whenever they are starting to abuse their power (Saltin, 2014).

The Philippine Government on the other hand, does not cross powers. Each of its branches has its own specific powers essential for the overall process of the government. They are of co-equal status because of the principles, separation of power and the checks and balances. Basically, the Executive headed by the President are assigned to

execute or administer laws, the Legislative on making Laws, and the Judiciary on interpreting these laws (Pamaos, 2008). In whatever way, even with the great difference on the concept of the scope/coverage of political power present in both worlds which is the virtual and the reality, political power is prevalent.

Let us now compare and discuss the security of the power holder simulated in Clash of Clans (CoC) and the ones established in the current Philippine Government which is shown in the following tables:

Table 26. Security of the Power-Holder: Leader v. Executive (President)

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Leader – The game system provided that there are no other ranks that can remove a leader on his position by ways of demoting or the extent, kicking out a leader. It is only the leader that can give up his or her position by promoting a co-leader into becoming a leader and in a way, demoting himself/herself into a co-leader (Supercell, 2015). 	<ul style="list-style-type: none"> • Executive (President) – President – Term of Office: (1) 6 years beginning at noon on 30 June immediately following the election and ending at noon on the same day 6 years later; (2) Term limitation: Single term only; not eligible for any reelection; & (3) Any person who has succeeded as President, and served as such for more than 4 years shall not be qualified for election to the same office at any time (Magz, n.d.).

In CoC, the Leader was vested with the most powers than the other ranks, allowing the Leader to enjoy absolute security in his rank. However, the President of the

Philippines does not enjoy that much security as the Philippines Constitution limit such concept.

The next table shows how security of the power-holder is being conceptualized in both the Co-leader of Clash of Clans (CoC) and the Legislative branch of the President:

Table 27. Security of the Power Holder: Co-leader v. Legislative (Senate)

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Co-leader – The co-leader also enjoys some security in his/her power by not being demoted by the other co-leaders, elders and the members. It is only the leader that can promote, demote or kick a co-leader (Supercell, 2015). 	<ul style="list-style-type: none"> • Legislative (Senate) – (1) Term of Office: 6 years, commences (unless otherwise provided by law) at noon, 30 June next following their election. (2) Term Limitations: No Senator shall serve for more than 2 consecutive terms. (Magz, n.d.).

The rank of a player being a Co-leader is entirely dependent to the hands of a Leader, giving the Co-leader no assurance to stay on the rank. However, being next to the Leader, the Co-leader cannot be demoted or kicked by an Elder or a Member.

On the other hand, The Legislative department of the Philippine government, which is co-equal to the Executive department when it comes to the sphere of power, is also limited by the Philippines Constitution.

The table below shows how security of the power-holder in Clash of Clans' Elder and Philippines' Judiciary was conceptualized:

Table 28. Security of the Power-Holder: Elder v. Judiciary

Clash of Clans (Virtual)	Philippines (Reality)
<ul style="list-style-type: none"> • Elder – The game system provided that there are no other ranks that can remove a leader on his position by ways of demotion or the extent, kicking out a leader. It is only the leader that can give up his or her position by promoting a co-leader into becoming a leader and in a way, demoting himself/herself into a co-leader (Supercell, 2015). 	<ul style="list-style-type: none"> • Judiciary (Supreme Court) – Tenure/Disciplinary Power of Supreme Court: (1) Members of the SC and judges of the lower courts hold office during good behavior until: (a) The age of 70 years old; or (b) They become incapacitated to discharge their duties; (2) Removal of SC Justices: (a) Only by IMPEACHMENT; (b) Cannot be disbarred while they hold office (Magz, n.d.).

The Elder in CoC, being the lowest rank with an administrative power over the members in the Clan, does not have an absolute security on his or her rank as an Elder is subject to the Co-leader, and especially, the Leader's actions.

However, the Judicial department of the Philippine government has a certain security in its office. Being co-equal in power with the Executive and the Legislative, the Philippine Constitution also provided its limitations.

Conclusion

Based on the findings of the study, the game Clash of Clans (CoC) simulates an active political system wherein there is the presence political structure where political power resides. With all the results and comparisons made between the game CoC and the Philippine Government, it can be determined that both worlds differ in many aspects. Though, CoC and the Philippine Government both possess the concept of political power and the aspects correlated with it such as the source and its manifestations, power-holder, acquisition of the political power, scope/coverage of the political power, and security of the power holder. Despite these similarities, they greatly differ on the structure of political power.

CoC was designed to be simple so that everybody could easily understand and enjoy the game without ever thinking its political aspects. Though, it may not be that obvious, political power surely resides in the game. After all, it is a game and not designed to be political in every means. It can then be determined that the use of video games is not just purely entertainment but can also offer a political arena that one could study and learn into. One can play simulation games and in the process learn from it politically in the sense that, it could shape one's political beliefs, attitudes toward a political system and develop one's sense of political efficacy. It can be a training ground for players to develop and improve their leadership or managing skills and experience being in a group where political power is pervasive. It also serves as an outlet for someone who wanted to experience holding some sort of power which is a positive form of escapism.

This study was a simulation of the game Boom Beach in the context of Philippine-China territorial dispute. It sought to determine the characteristics of territorial conflicts in Boom Beach; determine the definition of territorial limits or boundaries; identify the reasons of engaging in territorial wars; identify the practices found in Philippine-China Case; and determine the similarities between Philippine-China relations and Boom Beach in terms of definition of territory, military resource building, military alliance building, and military aggression.

The study had identified that definition of territory, military resource building, military alliance building, and military aggression are present on both Boom Beach and Philippine-China territorial dispute. These have proven that the game is an image of the territorial dispute like the Philippine-China case. It was found that virtual games can be used as lens in analyzing events and timely issues. Boom

INTRODUCTION

Territory is important for a state for this is the place where people live; exercise their sovereignty and the venue of the government to do their task as an agency made by the people. The more territory they occupy the more resources they exploit and the more power they have. That is why some states have conflict on territories with other states. Historically, issues in territorial disputes are frequent that even in virtual world it is visible. These disputes are themes of some virtual games nowadays, wherein the object is to fight with their territories or for money, resources and

Beach is a territorial conflict by its characteristics and its similarity to that of Philippine-China case in terms of the definition of territory is the mode of subjugation. In military resource building was purchasing and upgrading resource builders and storages and is similar with the Philippine-China territorial dispute which is land reclamation. In military alliance building, Boom Beach has Task Force that is similar to Philippine-China territorial dispute which are South China Sea claimants. Moreover, in military aggression, Boom Beach applied direct aggression and while Philippine-China territorial dispute applied indirect aggression.

Keywords: simulation, territorial dispute, alliance, aggression

power.

In line with this, the researcher ventured on analyzing a virtual game. Furthermore this study had simulated the game Boom Beach in the context of the current status of the territorial dispute of Philippines and China. The researcher used one of the popular virtual games, the Boom Beach, as a simulation tool on this study.

Objectives

The general objective of the study is to simulate the game Boom Beach in the context of Philippine-China territorial dispute. The following are the specific

objectives of the study:

1. To determine the characteristics of territorial conflicts in Boom Beach.
 - a. To determine the definition of territorial limits or boundaries of clans.
 - b. To identify the reasons why they engage in territorial wars.
2. To identify the practices found in Philippine-China Case in terms of the following:
 - a. Military resource building.
 - b. Military alliance building.
 - c. Military aggression.
3. To determine the similarities Philippine-China relations and Boom Beach in terms of:
 - a. Definition of territory.
 - b. Military resource building.
 - c. Military alliance building.
 - d. Military aggression.

Scope and Limitations of the Study

This study is limited in simulating the territorial wars in the game Boom Beach in the context of Philippines-China territorial dispute. The Boom Beach version 23.140.1 updated last October 21, 2015 was used.

Video games may vary in most kinds of situations, the reason why Boom Beach was chosen because it correlates more in terms of explaining territorial dispute.

The researcher is limited by the facts on the Philippine-China Case since the case is still in progress. Thus the study focused only until October 29, 2015, upon the ruling and decision of United Nations Convention on the Laws of the Sea (UNCLOS) regarding the said case.

Boom Beach was used as an instrument and a lens in the simulation

BACKGROUND OF THE STUDY

According to David Carter on his book in titled *Territory and Group Conflict in*

International Relations (2011) he said that territorial conflicts have been found to be the most contentious and difficult to resolve in international politics. At a theoretical level, territory is central to almost any aspect of international relations. However, much remains unexplored both theoretically and empirically. Guntram Herb (1999) emphasizes that one of the reasons why state or nation engages on conflict is to establish or protect the essence of identity.

The long-standing relations between the Philippines and China, which span several centuries, have developed into a multifaceted and wide-ranging partnership. In recent years, Philippines-China relations have experienced fiery issues that resulted in a “cooling off” of bilateral ties, hitting its lowest point since the establishment of their diplomatic relations in June 1975. The relationship has lately been dominated by the territorial disputes in the West Philippine Sea that has deteriorated since the April 2012 naval standoff over the Scarborough Shoal.

Then virtual games were rapidly making its way into popular culture and gives an easy perspective towards understanding territorial dispute.

Virtual worlds like World of Warcraft (WoW) and Second Life are a cultural and social phenomenon in North America and throughout the networked society. Some virtual worlds like WoW contain a role-playing game at the core of the experience in which large numbers of players interact. Game-like virtual worlds are classified as Massively Multiplayer Online Role-Playing Games (MMORPGs).

Hilde Corneliussen and Jill Walker Rettberg (2008) on their book *Digital Culture, Play, and Identity: A World of Warcraft Reader* affirmed with Sánchez' statement that user base is co-evolving with the technology and they captivate users, for them it is because of the character identification of the player. The player and the character are here perfectly connected,

which requires that the player has internalized the controls and game mechanics. The character now becomes an extension of the player may identify through either embodied or imaginative empathy (or both), depending, among other things, on the visual, fictional, and ludic context of the gaming situation.

According to Betsy Book, both game worlds and social virtual worlds share five common features: 1) Virtual worlds are shared spaces used by many players at the same time: 2) Virtual worlds contain a graphical user Interface that depicts space visually: 3) Interaction in virtual worlds occurs in real time; users experience immediacy: 4) Virtual worlds allow users the ability to alter the world they are in; the space is interactive: and 5) Finally, virtual worlds are persistent worlds; the worlds continue even when a player logs out or quits a game. Book's classification is useful in identifying the similarities between gaming worlds and social worlds, but she ignores both the social and technical evolution and co-evolution of the users of and the technology of virtual worlds.

Virtual gaming is based on the assumption that the individual and social learning that emerges in the game can be transferred to the world outside the game. This transfer is largely negotiated and not immediate, thereby making a simulation game low in external risks and giving the players a sense of safety, which is a prerequisite for experimentation and creativity. The concept of simulation has started way back in the latter half of the 1960's which it had become a highly popularized teaching strategy. As Cousins (1976) puts it, "Simulation is an attempt to recreate, for instructional purposes, some dimensions of reality. The simulation, or model of reality, usually involves a setting or scenario roles to be assumed and carried out, a problem or problems to be confronted, constraints or rules, and an outcome or set of outcomes." Based on

Mayer (2009) and Cousins' (1976) lines we could say that we can correlate politics in the real world with the virtual world. There were several simulations made in context with virtual world and on virtual gaming.

One of the virtual games aroused in twentieth century with the context of politicking was the game Boom Beach which gives a fresher view towards world politics. Boom Beach is a strategy game that combines attacks on other with attacks against computer generated bases. The game's storyline is set in a tropical archipelago with the player on an island with defenses and troops. Players can build their base, upgrading their defenses and other buildings, and unlock troop upgrades. Boom Beach combines single player campaign play as well as the ability to attack other players in multiplayer mode on the same map.

This study will simulate the game Boom Beach in the context of Philippine-China territorial dispute because based on the description presented about the game it may clearly or depicts the current context of Philippine-China territorial dispute. Moreover, based on the literatures presented above, this study which aims to have a simulation of the Boom Beach in the context of Philippine-China territorial dispute is indeed valid for it uses alternative avenue of theorizing political discourses in connection with the literatures presented and by the use of the simulation process to know and analyze Philippine-China and Boom Beach.

METHODOLOGY

This study uses simulation as its research tool. Simulation as a social science research tool is defined by Dawson (1962) as the construction and manipulation of an 'operating' model, that is, a physical or symbolic representation of all or some aspects of a social or psychological process. For the social scientist, simulation leads to building a

model of an individual or group process and experimenting with the replication of this process by manipulating the variables and their interrelationships within the model. By developing a model, the components and relationships which are hypothesized as crucial are abstracted from reality. Simulation tools permit the experimenter to study processes in ways nature prohibits, because the simulation can be run many times with the values of the parameters modified between runs and the changes in outputs observed. This study simulates Philippine-China territorial dispute in Boom Beach. It also uses primary resources such as books and secondary data in analyzing the Philippine-China case and the Boom Beach.

RESULTS AND DISCUSSION

Let us start the discussion on the territorial limit as one of the characteristics of territorial conflicts.

Table 1. Characteristics of Territorial Conflicts: Territorial Limit

CHARACTERISTICS OF TERRITORIAL CONFLICTS	BOOM BEACH
Territorial Limit	<p><u>Archipelago</u> - the "map" of the game, where we can find the Bases. The Home Base, Resource Bases, Submarine Dive Points, and Events.</p> <ul style="list-style-type: none"> a) Home Base b) Resource Bases c) Submarine Dive Point

Figure 2. Boom Beach Archipelago

The Home Base (Figure 3) is where the Player's Base (player's own island) can be found, among all the islands in the archipelago, Player's Base (Figure 4) is where players customize its base and build up their defenses, such as putting up their Headquarters.

Figure 3. Home Base

Figure 4. Players Base

In the Home Base, the Headquarter (Figure 5) is the brain and the heart of the base and operation, the goal on defense is to keep the latter protected at all costs.

Figure 5. Headquarters

Resource Bases (Figure 6) can be taken over from other players by destroying the base's Outpost (similar to the Headquarters). Resource Bases are additional bases that are independent of home base and are scattered throughout the Archipelago.

Figure 6. Resource Bases

WOOD IRON STONE

The game's definition of territorial limits or boundaries lays on the archipelago or the "map" of the game, where we can find the Bases namely the Home Base, Resource Bases, Submarine Dive Points, and Events. This is where territorial wars happen. This archipelago serves as a guide of each player where they can set themselves on conquering bases from other players. This will also limit or restrict a player and or to what extent one can go beyond other players' bases or territory. In finding and conquering territories on the archipelago the presence of leveled radar and the uncovering of the fog of war are needed so that players can raid the islands. These two scenarios in the game help the player expand its territory and gain resources on other islands in the archipelago.

The presence of the archipelago gives an idea that the game has limitations on the boundaries it covers, especially on

the player's territory. The Boom Beach itself has limitations not just on the player but on the territory as well. It provides authority and power to the player to their owned resource bases because they are already determined based on the limitations that the game has provided.

Boom Beach demonstrates how the bases are being acquired and lost similar in the concept of International Law. The bases can be acquired through discovery and occupation. The resource bases are on the state of being *terra nullius* when they are discovered by unveiling the fog of war and occupied when it was successfully raided. Another concept of International Law in the case of lost territory is subjugation. Subjugation is applied when the bases are being successfully invaded and occupied by new player. That the bases are being conquered or occupied in the course of war by the enemy. As a whole in defining territorial limit Boom Beach had set its method of acquisition and loss of bases based on the conducts of International Law.

Let us now discuss the second characteristic of territorial conflict which states the reasons why the game Boom Beach engages in war.

CHARACTERISTICS OF TERRITORIAL CONFLICTS	BOOM BEACH
Reasons why they engage in war	<ol style="list-style-type: none"> 1. To collect and store resources such as gold, wood, stone, and in higher levels, which is iron. 2. To the expansion of areas in archipelago. 3. To regain the lost bases.

Table 2. Characteristics of Territorial Conflicts: Reasons Why They Engage in War

As shown in Table 2, there are several reasons why a player undergoes war on games. In Boom Beach the player engages war for three reasons first it requires the player to collect and store resources such as gold, wood, stone, and in higher levels, which is iron (Figure 7). These resources are used to upgrade troops and buildings. Last reason would be to regain the lost island.

Figure 7. Boom Beach Resources

The gold is used for building and upgrading troops and gunboat equipment and unlocking new areas of the map. The wood is the most basic building resource. Meanwhile, iron is used in the construction and upgrading of high-level buildings. The game also uses a premium currency, diamonds.

The second reason was for the expansion of territory. As they build their bases, the player needs to expand its territory by conquering and raiding bases within the archipelago. This would help the player explore more resource bases and other bases that can be used for building, purchasing, and upgrading resource builders and storages.

This lead to the last reason why Boom Beach engages in territorial war to regain the lost territory or bases. They have to regain these bases because of the resources which are highly needed in the game. They are highly needed because they unveil new bases, produce new resources, and help each player to level up.

The abovementioned reasons imply

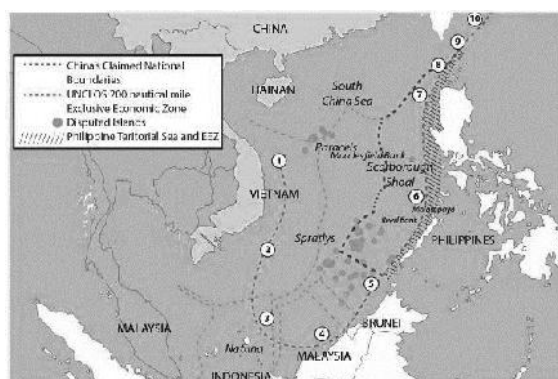

on the two theory of expansion of territory, the colonialism and imperialism. Colonialism was manifested in the context of the game because it establishes, exploits, maintains, and expands its colony in one base by a war from another base. The second theory was imperialism, it is manifested in the game that player builds their power and influence to other territory by the use of military force.

The Philippine-China Territorial Dispute

For the purpose of the study, it is best to understand the conflict starting from the assertion of ownership by China on the island by sending naval task forces to the islands, which is now being disputed between Philippines and China, up to the period where the conflict began until October 30, 2015, as specified in the scope and limitation of the study.

Scattered over the South China Sea are various geographic features, the most prominent of which are known internationally as the Spratlys, the Paracels, Macclesfield Bank and Pratas Island. There are overlapping claims by various countries to these features and to the waters and resources surrounding them, including parts of the West Philippine Sea.

Figure 8. Nine Dash Line

The claim of China regarding the Nine Dashed Line Map was questioned. The well entrenched doctrine in the law of the sea is that “the land dominates the sea.”

The failure of the claim on the Nine Dashed Line Map, China insists with their claims on the West Philippine Sea and uses their “Historical Right” which is the Historical Facts such as Maps to prove their claim on the said latter sea. A noted French geographer, Francois-Xavier Bonnet, who has made an extensive research on the South China Sea dispute, exposed in a forum at the Ateneo Law School in Manila last March 27, 2015 that China actually planted its so-called “abundant historical evidence” in the Paracels and the Spratlys. He presented the 1136 AD “Hua Yi Tu” Map of China. However Philippines gives its counter evidence on the map by using the 1734 Murillo Velarde Map.

Figure 9. Historical Map of China

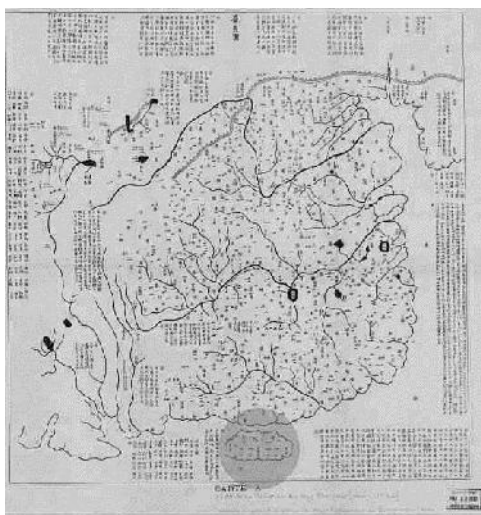

Figure 10. 1732 Murillo Velarde Map

This study ventured to analyse the practices found on the dispute such as military resource building, military alliance building and aggression. These three military practices were identified because these are the highly visible activities in any territorial dispute. These three practices are major determinants of the victory in war.

Table 3. Philippine-China Dispute: Military Resource Building

PRACTICES	PHILIPPINE-CHINA TERRITORIAL DISPUTE
Military Resource Building	<ul style="list-style-type: none"> • Land Reclamation • Food Security • The Livelihood and Economic Welfare • Energy Security - Vital Sea of Communications and Trade

One part of the West Philippine Sea that China took for reclamation was the Mischief reef (Figure 11). Mischief Reef is an LTE that is 125 NM from Palawan (Figure 12), well within the 200 NM EEZ of the Philippines. As an LTE, Mischief Reef is part of the submerged continental shelf of the Philippines. With an air and naval

base in Mischief Reef between Palawan and all the Philippine-occupied islands in the Spratlys, The total reclaimed area can reach at least 500 hectares.

Figure 11. Reclamation in Mischief Reef

Figure 12. Exclusive Economic Zone

The West Philippine Sea (WPS) is important to the Philippines’ food security because of its rich fisheries and fish breeding areas. Filipino scientists believe its ecosystem is linked to the Sulu Sea and other marine ecosystems of the archipelago, which makes the fishery resources in these areas interrelated and interdependent.

According to Aliño and Quibilan’s *The Kalayaan Islands: The livelihood and economic welfare was also considered as one of the resource buildings of the West Philippine Sea, especially of hundreds of our coastal communities, are tied to all our marine waters.* In the book of K. Hinz and H.U. Schlüter, “Geology of the Dangerous Grounds, South China Sea, and the

Continental Margin off Southwest Palawan” he also pointed out that West Philippine Sea is important to energy security since it is known to have largely untapped petroleum reserves as well as mineral deposits.

Based on United States Geological Survey, “Assessment of Undiscovered Oil and Gas Resources of Southeast Asia, 2010,” it is believed that there may be deposits in the area of the WPS. The Northwest Palawan, Southwest Palawan and Reed Bank. The area of Northwest Palawan, including Reed Bank, is where significant discoveries have already been made and where we are most likely to find petroleum resources, especially natural gas, in the near future.

In the book of Paret (1989), he emphasized that the ultimate yardstick of national power is military capability. Because countries subsist in an environment where internal and external threats to security are both common and ever-present, the effectiveness of their coercive arms becomes the ultimate measure of power. Through those islands and additional territory a state may use it as a source for their economy or for their military building.

Now on the practice of Philippine-China dispute which is the military alliance building.

Table 4. Philippine-China Dispute: Military Alliance Building

PRACTICES	PHILIPPINE-CHINA TERRITORIAL DISPUTE
Military Alliance Building	<ul style="list-style-type: none"> • South China Sea claimants • United States and Japan • United Nations Convention on the Law of the Sea (UNCLOS)

In the context of the military alliance building the Philippine-China territorial dispute gave way to three military alliances, the South China Sea claimants, the United States (US) and Japan, and the United Nations on the Law of the Sea (UNCLOS).

One of South China Sea claimants who expressed their cooperation with the Philippines was Vietnam. The budding cooperation between Vietnam and the Philippines is the latest development stemming from China's aggressive territorial claims in the region. In 2009, China put forward the so-called "Nine-Dash Line" map which claimed the whole of the South China Sea, leaving four other countries that border on the strategic body of water with nothing more than their 12-mile territorial seas.

On June 27, 2013, at a press conference in Quezon City, Philippines, Philippine Defense Minister Voltaire Gazmin and his Japanese counterpart, Itsunori Onodera, announced that the Philippines would establish basing arrangements with both the US and Japanese militaries. China was the explicit target of this move allowing the US and Japan to station military personnel and equipment in the Philippines.

On the other hand, basing on the United Nations Convention on the Law of the Sea (UNCLOS) an arbitration court ruled last October 29, 2015, said that it has jurisdiction to hear some territorial claims the Philippines has filed against China over disputed areas in the South China Sea.

Philippines filed the case in 2013 to seek a ruling on its right to exploit the South China Sea waters in its 200-nautical mile exclusive economic zone (EEZ) as allowed under the United Nations Convention on the Law of the Sea (UNCLOS). The Hague-based Permanent Court of Arbitration rejected Beijing's claim that the disputes were about territorial sovereignty and said additional hearings would be held to decide the merits of the Philippines' arguments.

These alliances also imply that it would pull the strength of the state. These strengths are the resources especially in military. The military resources as discussed earlier, as military alliances also help increase the military resources of the states.

Let us now go over with the last practice found in the Philippine-China Territorial dispute which is the military aggression.

Table 5. Philippine-China Territorial Dispute: Military Aggression

PRACTICES	PHILIPPINE-CHINA TERRITORIAL DISPUTE
Military Aggression	<ul style="list-style-type: none"> • <u>March 25-26, 1995</u> – Philippine Military Evicts Chinese from Mischief Reef • <u>January 26, 1996</u> – Gunboat Battle near Capones Island • <u>January 1998</u> – Philippine Navy Arrests Chinese Fishermen • <u>May 26, 2000</u> – Philippine Troops Open Fire on Chinese Fishermen • <u>October 18, 2011</u> – Philippine Vessel Rams Chinese Fishing Boat

There were six aggression documented of which these aggressions were merely a high level aggression that may lead to war on the two disputed states. The six aggression were the; March 25-26, 1995 when Philippine military evicted the Chinese from Mischief Reef and destroyed all Chinese-built structures on the reef; the January 26, 1996 when there was a Gunboat Battle near Capones Island, after Chinese vessels approached Philippine waters near Capones Island, a Philippine navy gunboat fired warning shots then engaged in a 90-minute gun battle with the vessels; January 1998 when Philippine Navy arrested twenty-two Chinese fishermen off Scarborough Shoal who were suspected of illegal fishing; May 26, 2000 when Philippine Troops had an open fire on Chinese Fishermen, Philippine soldiers shoot at Chinese fishermen off Palawan Island (the Philippines), killing one fisherman and detaining seven; and lastly October 18, 2011 when Philippine Vessel Rams Chinese Fishing Boat. A Philippine naval ship rammed a small Chinese fishing boat in disputed waters near Reed Bank. Manila promptly issued an apology to the Chinese embassy in Manila claiming the incident as an accident.

Considering also the theory of aggression, it was said that there were two kinds of aggression present, the direct and indirect aggression. The direct aggression is the use of force by the military operation by a state or group of states against another state. On the other hand, indirect aggression uses force that does not involve direct military use by regular troops, but involves active military or other assistance to a state. The current military aggression on Philippine-China case is an indirect aggression because both states have not resorted to the use of armed forces to claim these islands but they used assistance, going back to the military alliances.

Similarities of Boom Beach and Philippine-China

Now to determine the similarities of the game Boom Beach and Philippine-China case. The similarities will be determined based on the definition of territory, the military resource building, the military alliance building, and the military aggression. Let us start with the definition of territory.

Table 6. Similarities of Boom Beach and Philippine-China Case: Definition of Territory

BOOM BEACH	PHILIPPINE-CHINA TERRITORIAL DISPUTE
<p style="text-align: center;"><u>Definition of Territory</u></p> <p>Archipelago is the "map" of the game, where we can find the Bases. The Home Base, Resource Bases, Submarine Dive Points, and Events.</p>	<p style="text-align: center;"><u>Definition of Territory</u></p> <ul style="list-style-type: none"> • Exclusive Economic Zone (EEZ) • Nine Dashed Line or Ten Dashed Line and or Eleven Dashed Line, • Historical Rights

If the game Boom Beach be simulated with the Philippines China dispute, the Archipelago is the West Philippine Sea, and the islands such as Paracels Islands, the Pratas Islands, Scarborough Shoal and the Spratly Islands are called the resource bases. These can be resource bases as presented above the West Philippine Sea it was proven that it has a lot of resources. The Exclusive Economic Zone (EEZ) is called the fog of war in Boom Beach since EEZ and dash lines correspond to the limitations and boundaries to what extent the state can explore and manage on its territory. This is

similar to Boom Beach which has the fog of war and determines to what extent the player can raid the bases and expands its territory upon unveiling the fog of war. The historical right in the Philippine-China case is simulated with the regaining process of lost bases in Boom Beach, that these bases once owned by a player and was raided and owned by other player. In accordance to the rule of the game, if the base of a Player X was conquered and owned by Player Y, the Player X can raid and reclaim the island if it wins the battle. However in the case of Philippine-China as to the decision of the UNCLOS historical rights and claim of China is non-bearing to the case.

On this note, Boom Beach and Philippine-China territorial dispute are similar on the context of its definition of territory. The limited boundary is the similarity of Boom Beach and Philippine-China case.

In Boom Beach, bases can be discovered, occupied, and subjugated but in the Philippine-China case, the islands are fixed, except only in land reclamation made by China. Their similarity of Boom Beach and Philippine-China case in the concept of acquisition and loss of territory is that bases and islands can be subjugated. In Boom Beach subjugating bases to occupy new bases and regaining the lost bases are present. In Philippine-China case the islands in the West Philippine Sea can be under subjugation by the Philippines or China.

Let us now discuss the next similarities of Boom Beach and Philippine-China case in terms of military resource building.

Table 7. Similarities of Boom Beach and Philippine-China Case: Military Resource Building

BOOM BEACH	PHILIPPINE-CHINA TERRITORIAL DISPUTE
<p style="text-align: center;"><u>Military Resource Building</u></p> <ul style="list-style-type: none"> • Purchasing and Upgrading Resource Builders and Storages 	<p style="text-align: center;"><u>Military Resource Building</u></p> <ul style="list-style-type: none"> • Land Reclamation • Food Security • Livelihood and Economic Welfare • Energy Security • Vital Sea of Communications and Trade

In the simulation process, Boom Beach uses purchasing and upgrading resource builders and storages for military resource building. These resource builders and storages are gold storage, iron mine, iron storage, quarry, residence, sawmill, stone storage, vault, and wood storage. Purchasing resource builders and storages is also gaining resources that will be used to buy troops for the consumption for the future territorial wars and to raid islands and bases in the archipelago. To upgrade resource builders and storages is to increase the production of the resources on the Home Base as well as on the Resource Bases. Increasing resources production means that one could purchase strong troops that will be used for the future raids and territorial wars. In the situation of Philippine-China Case, it uses land reclamation as the military resource building. This is the same with Boom Beach in terms of upgrading resource builders and storages in the occupied territories, which are the islands of the West Philippines. China was able to upgrade the land through the resources found on those islands. This

is to expand the area on the islands in the West Philippine Sea and creating new land form for military purposes. They used the areas for warship production and warship equipment building and trainings. This scenario is alike with the Boom Beach which increases the production of resources through upgrading its resource builders and storages. In the case of Philippine-China, China have reclaimed the islands and trained military armies and launched warship equipment. Boom Beach and Philippine-China Case share common goal of reclaiming and upgrading the land area which is to strengthen their military.

In the issue of food security, the livelihood and economic welfare, energy security, and vital sea communication is similar to the game Boom Beach because like the resource bases they are important in securing and supplying resources to the game. They are like food which is needed by the inhabitants of the state as well as gold, wood, stones, and irons which are needed in the game. They are needed because the game evolves on these to unveil the bases, to purchase and raid the bases, and to train troops for the future war.

The comparison of Boom Beach and Philippine-China case in terms of military resource building implies that even in the game, resources are considered as valuable tool in the conduct of territorial expansion or claim.

Let us now discuss the next similarities of Boom Beach and Philippine-China case in terms of military alliance building.

Table 8. Similarities of Boom Beach and Philippine-China Case: Military Alliance Building

BOOM BEACH	PHILIPPINE-CHINA TERRITORIAL DISPUTE
<p><u>Military Alliance Building</u> Task Force – The social and multiplayer aspect of Boom Beach in which you can create or join a Task Force and fight the Blackguard together.</p>	<p><u>Military Alliance Building</u> South China Sea claimants United States and Japan –United Nations Convention on the Law of the Sea (UNCLOS) –</p>

The second practice is the military alliance building. In the Philippine-China Case the South China Sea claimants, the United States and Japan, and the United Nation Convention on the Laws of the Sea were found as the allies of the Philippines in the said territorial conflict. Comparing military alliance building in the game Boom Beach, it is the same on the context of the Task Force which is the social and multiplayer aspect of Boom Beach in which you can create or join a Task Force and fight the Blackguard together. This Task Force in Boom Beach is creating alliances with other players so that you could be able to get resources and territory at the same time. In comparison to the Philippine-China case, these Task Force in Boom Beach are the South China Sea Claimants, the United States and Japan, and the UNCLOS of which they create or join into alliance to fight the Blackguard in Boom Beach which is equivalent to China in the Philippine-China Case.

The last similarity on the military alliance building was that they could receive a reward in terms of the position in the Task Force. In the context of Boom

Beach, one could be held as the leader, the officer, or a member only. In the Philippine-China Case, these alliances will gain sympathy to millennial world politics that they could be upheld as the leader of the best military forces who help the weak states to combat one of the best military forces in the world.

This would imply that alliances are seen in the game. This alliance could make a strong military force. It links to other states or to other bases to create threat or to oppose a threat which could produce violence. The combination of two or more forces would lead to a strong force to combat both the Blackguards and of the case of China. Through alliances it would create strategies and better plans to defeat the rivals. This shows that allies are needed in waging aggression both in virtual world and physical world.

Let us now tackle the last practice found in Boom Beach and Philippine-China dispute which is the military aggression.

Table 9. Similarities of Boom Beach and Philippine-China Dispute: Military Aggression

BOOM BEACH	PHILIPPINE-CHINA TERRITORIAL DISPUTE
<u>Military Aggression</u> Territorial Wars	<u>Military Aggression</u> The Events accounted starting from March 25-26, 1995 – Philippine Military Evicts Chinese from Mischief Reef. January 26, 1996 – Gunboat Battle near Capones Island. January 1998 – Philippine Navy Arrests Chinese Fishermen. May 26, 2000 – Philippine

	Troops Open Fire on Chinese Fishermen. October 18, 2011 – Philippine Vessel Rams Chinese Fishing Boat.
--	--

The military aggression found in Philippine-China Case was when Philippine Military evicted Chinese men from Mischief Reef, had a Gunboat Battle near Capones Island, when Philippine Navy arrested Chinese Fishermen, Philippine Troops opened fire on Chinese Fishermen, and the Philippine Vessel rammed Chinese Fishing Boat. Those were accounted events of aggression on the case, but perhaps caused a little stability of the two states but not in the extent that these states engage in war. They use force to protect the islands and their interest on it but they never use strong military forces to combat for the interest of the two states. This military aggression in Philippine-China Case can also be compared with the game Boom Beach, of which the main aspect of the game is aggression through territorial wars.

The abovementioned emphasized that Philippine-China Case have committed indirect aggression. Boom Beach's territorial wars are similar to Philippine China case since it inflicts force to get the bases. Both Boom Beach and Philippine-China case has a military aggression. But there are two theories of aggression as mentioned above, the direct and indirect aggression. In the case of Philippine-China it applied indirect aggression, Boom Beach on the other hand applied direct aggression. The Philippine-China case has an indirect aggression since the military forces do not have direct military use on conquering the islands being occupied by China. Boom Beach on one hand has direct aggression since it uses direct military forces to raid and conquer the bases.

This means that aggression is happening on both virtual world and

physical world. This aggression may differ on how they are being used in the Philippine-China case and Boom Beach but still they used aggression. That aggression has reached as a theme on games even before and until the present. The use of force has gone virtual even if it cannot be felt but the impact is like the force being enforced in the physical world.

The Philippine-China territorial dispute claimants are being assertive in terms of who is the rightful owner of this sea. China is now becoming more powerful as it encroaches on the boundaries of the Philippines. They have strengthened their forces with the use of the islands and the territories they have owned in the South China Sea. These events and scenario imply that this case would be easily resolved however the sanction and the consequences be inflicted in both states and other claimants because of the great power induced as the case struggled through time.

CONCLUSION

Based on the findings of the study, the game Boom Beach is a good simulation of the Philippine-China territorial dispute. The study had identified that establishment and protection of territory, military resource building, military alliance building, and military aggression are present on both Boom Beach and Philippine-China territorial dispute. These have proven that the game Boom Beach is a reflection and an image of territorial disputes like the Philippine-China case. The researcher found out that the virtual games can be used as lens in analyzing events and timely issues.

Boom Beach made it clear that games can be new medium of political discourse. Games can introduce the concepts and theories that were expounded by researches and they are not only for entertainment but a space for new knowledge.

Abstract

The cause of the destruction of this country is one of them because the practice of CCN (corruption, collusion and nepotism) that pervades the massive consequences for society. Corruption in the legal world has been classified as an extraordinary crime (extraordinary crime) because it is not only detrimental to the State finances, but the practice also violates the rights of the social and economic broadly to act eradication should also be done in a way that the extraordinary. That is expressed in the preamble of Law On Combating Corruption.

Keywords: Government, Corruption, Crime, Law on Corruption Eradication

A. Preliminary

Literally corruption is something rotten, evil and destructive. If we are talking about corruption will indeed find such a reality because of corruption concerns the moral aspects, the nature of the foul, office for administration, economic and political factors, sera ancestry or class placements into official under position power. Thus, it can literally be concluded that in fact the term corruption has a very broad sense. Corrupt behavior is basically caused by several factors. I think there are several factors that the main cause of corrupt behavior, including:

1. Economic demands of actors / economic urgency;
2. The influence of the surrounding environment, whether home, office, or a community;
3. Weak law enforcement; and
4. Lack of socialization anti-corruption social.

Of the factors mentioned above, one of the factors that were most active in fighting corruption is a factor of weak law enforcement against corruption and the lack of socialization anti-corruption in this country. In an effort to combat corruption, required the cooperation of all parties and all elements of society, not only related institutions alone. Some institutions authorized to eradicate corruption, among others, the Corruption Eradication Commission (CEC), Police, Indonesia Corruption Watch (ICW), and the Attorney General.

The existence of CEC is a bold step in the government's efforts to eradicate corruption in Indonesia. Lately, many of the people who are often not satisfied with the sentences given to the perpetrators of Corruption. The majority of people who are not satisfied with the sentences for the

perpetrators of corruption assume that the law does not guarantee fairness, certainty, and benefits to society. Law is always sharp and blunt bottom upwards. This is caused because in the court itself sometimes there is also corruption in law enforcement so that the perpetrators of corruption are also less effective. When compared with the case of theft committed by the grassroots as has been reported previously that Minah in the case of stealing three (3) pieces of cocoa and should be punished with confinement 1 month and 15 days (one month of fifteen days) and a fine of Rp. 1.000.000, - (one million rupiah), then grandma asyiani accused of stealing property of Perhutani teak and received a sentence of one year in prison with probation of 1 year 3 months and a fine of Rp. 500.000.000, - (five hundred million rupiah) subsidiary 1 day probation, and much more uneven law enforcement in this country. But the punishment for perpetrators of corruption in itself is lighter than what is stated in the Law on Anti-Corruption Crime which the penalty is a minimum of 4 years in prison with a minimum fine of Rp. 200.000.000, - (two hundred million), and a maximum of life and even the death penalty with a maximum fine of Rp. 1 billion as it sounded in Article 2 and Article 3 of Law No. 31 Year 1999 on Corruption Eradication. However, whether the threat contained in the Anti-Corruption Act has made the deterrent effect for corruptors? to see the rise of such cases prove that the Law on Corruption Eradication no threat deterrent effect to the perpetrators. There is also a thought that the perpetrators of Corruption should be impoverished and the confiscation of its assets to the State. So, with such penalties how that can catch the perpetrators of corruption and make the deterrent effect for offenders ?.

B. Theoretical framework

a. Word Origin and Definition of Corruption

According Fockema Andreae in the book Hamzah, said corruption is derived from the Latin *corruptio* or *corruptus* (2008). It was also stated that corruption was derived from the original word *corrumpere*. Similarly, a Latin word older. From the Latin word that fell into many European languages such as English, namely Corruption, corrupt; France, namely corruption; and the Netherlands, which is corruptive (*korruptie*). We can presume that from the Dutch language is the word down into Indonesian, the "corruption".

According Poerwadarminta in the book Hamzah (2008), the term corruption has been accepted in the Indonesian vocabulary, it was concluded in the Indonesian General Dictionary of corruption is bad deeds such as embezzlement, receiving kickbacks and so forth.

Definition of corruption described by experts in the above described back by UNCAC in journals Setyawati (2008). is :

1. Promising, offering or giving, directly or indirectly, an undue advantage to a person who lead or work in a capacity, to an entity in the private sector, for himself or another person, so that he violated his duties, perform something or refrain from doing any act.
2. Solicitation or acceptance, directly or indirectly, an undue advantage, which is done by someone who lead or work in an any capacity for a body of private sector for himself or for another person, so that he is against the rights, do or refrain to do something.

From some of the top experts in defining the meaning of the word corruption, Hamzah (2008) concludes that corruption actually

understanding corruption as a very broad term meaning. As summarized in the Encyclopedia Americana, corruption is a bad thing with their various means, varies according to time, place, and nations. Judicial corruption depicted with variations in many countries, but there is no point in general equation.

b. Painting Cause and Effect of Corruption

According to Prof. Syed Hussein Alatas professor of the University of Singapore there are 7 (seven) typology of corruption in the journal Situmorang (2014), namely:

1. Transactive Corruption which is the type of corruption by mutual agreement;
2. Nepotistic corruption;
3. Extortive corruption or corruption by squeezing;
4. Investif Corruption that gives services or goods for the benefit of the future;
5. Defensive corruption that is forcing other people involved in the process of corruption;
6. Outgenic corruption or corruption committed by himself;
7. Supportive corruption that is corruption support.

After knowing tipolgi above proposed by Situmorang, Diansyah (2009) suggests any problem of corruption committed by criminals. Corruption as an economic decay, of failure of collective political and extraordinary crimes may not be viewable both the micro and sectoral observation hopping. He is not a crime that broke and once finished. But it is a black dot that was built by the political system, power is concentrated in a few hands, and the empire that take advantage of the power to make a profit, either in the bureaucracy, state institutions or political institutions

outside of parliament. Thus, people become victims.

In the end we believe, the eradication of corruption is not just the application of articles, legal reasoning of a decision, debate or commentary among legal experts, but much larger. What we are doing now is preparing flake puzzle. But, do we know, understand and know how the macro picture of the puzzle that is being prepared? Studies of political-business oligarchy, and a little overview of the rentier important to understand.

After Diansyah explain what causes corruption, then Hamzah (2008) explained the intent in the law on the eradication of corruption. Corruption tu there are no rules on direct preventive efforts on acts of corruption. Criminal provisions as contained in the legislation is only a preventive indirectly, namely that others do not or are afraid to do acts of corruption or concerned (convicted) deterrent for repeat offenses of corruption in the future.

From the above explanation related Hamzah explanation of eradication of corruption contained in the law on combating corruption, Hamzah (2008) added an explanation regarding the eradication of corruption. Although it has been adapted to the circumstances of Indonesia, among others, by inserting certain clauses deemed appropriate and meet the needs of Indonesian society's own law, unification was opposed by many legal scholars Netherlands itself. Things are generally opposed to codification of customary law among scholars as ter Haar who wants to vote is not Europe (Indonesian) were given a separate codification.

Then Hamzah (2008) explains the purpose of combating corruption contained in the Code of Penal (Penal Code) (for further description used the term only in accordance with Law No. 1 Year 1946 jo.

Law - Law No. 73 of 1958). Is a system, and all chapters and chapters in it bound by that system. Therefore, drawn nineteen chapters (it) goes into another system, namely the Law on Combating Corruption, which it turns out that between the two systems there is a difference, is in itself a problem occurs thorny juridical-quaint. Such problems will be described in the following chapters.

Corruption offense which is a crime positions listed in Chapter XXVIII Book II Criminal Code, while the offense of corruption in connection with the offense positions such as Article 209 and 210 (the person who bribed public servant or commonly known as active omkoping), are in the other chapters, but also in book II Criminal Code (of the crime). Details of the offenses of corruption emanating from the Criminal Code has been referred to in Chapter I Introduction. All are ordinary crimes, meaning that instead of a misdemeanor or violation as known in our criminal law. Similarly, in the Penal Code, the offense of office as it was included in a book about ordinary crime. As known, common crime and misdemeanor separated in different books according to the systematics of the Penal Code.

That corruption is caused partly by poor regulation has existed since time immemorial. Syed Hussein wrote that a great Chinese reformer named Wang An Shih (1021-1086) was impressed by the two sources of corruption are bad laws and bad man. This paper is cited by Sudarto in the book Hamzah (2008).

According to Hamzah (2008) proof regulations on combating corruption after another, the latter always improve and add to the first, but the perceived corruption in all its forms is still raged.

Nevertheless, the notion that anti-corruption legislation will bring improvements also due to reduced corruption spawned legislation to

eradicate corruption from the Lord of the Central War.

Surely such a restriction is IMHO too wide meaning so as to include the mismanagement of state property such as Pertamina, PJKA, Pelni, GIA, and others. Is not it harms the financial mismanagement and the economy of the country?.

Related to the application of Article 60 of Law State of Emergency Number 74 of 1957 on 17 April 1958 will no longer apply, the third regulation military authorities mentioned above according to the law, replaced by Regulation Corruption Eradication Prn Lord of War Centre No. Prt / Peperpu / 013 / 1958, defined and published on April 16, 1958 and broadcast on BN No. 40/1958.

Related restrictions written by a save in the book Hamzah (2008) argues that the focus of this regulation is a special form of acts of corruption, namely concerning the financial state or regional or other legal entity that use capital and / or allowances other than public , This is understandable because at the time of making that rule (around 1957-1958) crowded takeover and management of the companies belonging to the Netherlands became a State enterprise.

Nye stated that the consequences of corruption in the journal Revida (2003) are:

1. Wastage of resources, capital fled, disruption of capital investment, waste of expertise, assistance disappears.
2. Instability, social revolution, the takeover of power by the military, causing social and cultural inequality.
3. Reduction in the ability of government officials, the reduction of administrative capacity, the loss of administrative authority.

Furthermore Mc Mullan in the journal Revida (2003) states that as a result of corruption is inefficiency, injustice, people

do not trust the government, wasting state resources, does not encourage companies to strive especially foreign companies, political instability, restrictions in government policy and not repressive ,

Based on the expert opinion of the above, Revida (2003) to conclude related consequences of corruption above are as follows:

1. Economy system as capital flight out of the country, the disruption to the company, impaired capital investment.
2. Socio-cultural system as the social revolution, social inequality.
3. Rules such as the takeover of political power, the loss of foreign aid, the loss of government authority, political instability.
4. Such as inefficient administrative procedures, lack of administrative capacity, loss of skills, loss of state resources, limited government policies, taking repressive measures.

Generally due to corruption is detrimental to the state and the decimation of togetherness and slow the achievement of national goals as stated in the Preamble to the Constitution of 1945.

There is determined, that the acts of corruption consists of:

1. Criminal and corrupt practices;
2. Other acts of corruption (Article 1).

Hamzah (2008) suggests some explanation of what is meant by the criminal acts of corruption, namely:

1. The act of a person by or for committing a crime or offense to enrich themselves or another person or entity that directly or indirectly detrimental to the finances or the economy of the country or region or harm an entity that receives aid from

the state finance or other legal entity that use capital and concessions on society;

2. Unlawful for anyone with or for committing a crime or offense enrich themselves or an agency and carried by abuse of office or position;
3. The crimes listed in Article 41 to 50 Lord of War Regulation of the Centre and in Article 209, 210, 418, 419, and 420 Criminal Code (Article 2).

These three things are taken over by subsequent legislation to repair the editor as well as the addition of the offenses of the Criminal Code, according to Hamzah (2008) to meet the first element mentioned above is that there should be a crime or offense committed in advance, then meet also the element of its next enrich themselves or another person or entity that directly or indirectly harm the financial or economic harm state or regional or other legal entity that uses capital and concessions on society. In this case the regulator did not describe the crime or offense or what kind of shape is meant.

Thus, it is to be very spacious perfunctory consequences enrich themselves and so on. Formulation of acts of corruption criminal sub a of this later turned out to be taken over by Article 1 sub a of Law (Prp) No. 24 of 1960 with the editor that is completely identical, only the word "action" is replaced with the word "action", because it turns out the law uses the term "criminal acts" instead of "criminal acts of corruption".

The principle of fairness must be juxtaposed with the principle of Equality before the law, according Kaligis (2007) that the right to file an expert witness from the outset violated by KPK investigators, without the suspect may resist the law (Article 65 of the Criminal Procedure Code). Favorable evidence such as CPC report for the fiscal year that runs prosecuted. As is known to calculate state

losses Three criteria are proposed to be met:

- a. Witness Examination;
- b. Suspect examination;
- c. There is documentary evidence.

From the explanation Kaligis above that the principles of justice must be juxtaposed with the principle of equality before the law, then Susanto (2011) describes criminology that k riminologi especially as the influence of critical thinking that directs studies on processes (criminalization), both the manufacturing process and berkerjanya legislation oF, can provide a major contribution in the field of criminal justice systems, particularly in the form of research on law enforcement, will be used to improve the operation of law enforcement agencies, such as to give attention to the rights of defendants and victims of crime, the organization (bureaucracy) as well as the law enforcement improvement of the legislation itself.

Of criminology described by Susanto itself, written by Lamintang (2013) explain that we can make the difference between so-called theoretische or zuivere criminologie who study the symptoms of crime as a whole, with the so-called practische or toegepaste criminologie that the best possible trying to observe a variety of criminal acts. For then by using certain methods attempted to investigate the causes of the symptoms.

In sociology, Jean-François Medard ever tried to explain the phenomenon of corruption by starting from the distinction Max Weber's "bureaucratic state" and "patrimonial state".

The above explanation related symptoms corruption by starting from the distinction, according to Nugroho (2015) in the bureaucratic state, namely the state with a modern administrative system, no distinction and separation between the public sphere to the private sphere and the

relationship between the two domains was impersonal. In the bureaucratic state, public officials or state officials shall act impartially, not to be impartial and must not show favoritism to the parties who have an emotional connection or a personal relationship with him. In this context, corruption is the abuse of office or public position for personal interests. So, corruption is considered as unethical actions on the grounds of violating the distinction and separation between "personal interest" and "public interest" or "public interest".

Nugroho of corruption-related explanation is rated as unethical, according Toule (2013) adds that the development of the law are also directed to eliminate the possibility of corruption and able to handle and resolve completely problems related to corruption, collusion, nepotism (CCN). The development of law is implemented through an update of legal materials to keep watching the plurality of the prevailing legal order and the impact of globalization in order to increase certainty and legal protection, law enforcement and the rights of man (HAM), legal awareness and legal services based on justice and truth, order and welfare within the framework of state administration more orderly, organized, smoothly, and globally competitive.

The causes and effects of corruption described by some experts, Susanto (2011) concluded that the correlation between mental disability with crime, people do that through means testing statistically and by way of case studies. In this case, the study of angles and corners mentally disabled crime. Although long before people are considered mentally disabled is because the incidence of crime.

C. Research methods

The approach used in this study is the juridical-empirical approach. Juridical (legal seen as the norm or *das sollen*), because in

this study to address issues using legal materials (both legal written or unwritten law). Empirical approach (the law as a social reality, cultural or *das sein*), because in this study used primary data obtained from the field. So, juridical empirical approach in this study means is that in analyzing the problems done by combining ingredients that law is secondary data with primary data obtained in the field, namely the analysis of normative acts of corruption.

D. Results and Discussion

a. Analysis of Normative Judicial Corruption

The formulation of the elements of corruption in the Law on combating corruption No. 31 of 1999 still lacks clarity related to what is meant by the element of "benefit yourself" and "enrich themselves" as defined in Article 2 paragraph (1) and Article 3 of Law OF eradication of corruption. Article 2 (1) and Article 3 is a favorite passages for law enforcement, especially the Corruption Eradication Commission (KPK) in ensnare offenders Corruption. The sound of article 2, paragraph (1) and Article 3 of Law No. 31, 1999, namely:

Article 2 (1): "Any person who acts unlawfully enrich themselves or another person or a corporation that can be detrimental to the state finance or economy of the state, subject to imprisonment to life imprisonment or imprisonment for a minimum of 4 (four) years and a maximum of 20 (twenty) years and a fine of at least Rp. 200,000,000.00 (two hundred million rupiah) and Rp. 1,000,000,000.00 (one billion rupiah). "From the wording of the article thus, clear article 2, paragraph (1) of Law No. 20 of 2001, requires that anyone convicted of corruption, as stipulated in Article 2 paragraph (1), will be sentenced to life imprisonment or imprisonment for a minimum of 4 (four) years and a maximum of 20 (two twenty) years and or a fine of Rp.

200,000,000.00 (two hundred million) and at most Rp.1.000.000.000,00 (one billion rupiah). In connection with sanctions for perpetrators of corruption in article 2, paragraph (1) of Law No. 31 of 1999, also confirmed that if a criminal act of corruption made against funds that are intended for coping with the hazards, national disasters, social unrest is widespread, tackling economic and monetary crisis, and the repetition of criminal acts of corruption, the perpetrators the death penalty can be.

Then in chapter 3: "Any person who with the intention of enriching himself or another person or corporation, abuse of authority, opportunity or means available to him because of the position or positions that could harm the state finance or economy of the state, shall be punished with imprisonment for life or imprisonment of a minimum of 1 (one) year and a maximum of 20 (twenty) years and or a fine of Rp. 50,000,000.00 (fifty million rupiah) and Rp. 1,000,000,000.00 (one billion rupiah). "

Article 3 of Law No. 31 of 1999 contains three (3) elements, namely: first, with the intention of enriching himself or another person or a corporation; then, Abusing the opportunity or means available to him because of the position or positions; and the last is the element Which can be detrimental to state finance or economy of the State. If discernible difference between the elements in Article 2 and Article 3, the two almost similar but different. The similarity between these two Articles lies in the element of financial harm or economy of the State, while the difference lies in the element of self-enrichment and benefit themselves. So therefore, the question arises why the formulation of the provisions in Article 2 included the phrase "enriched" whereas in Article 3 included the phrase "beneficial" ?. If you think logically speaking, a public official / Civil Servant who was appointed by the State is aimed to serve the nation and the country unconditionally, and

none is intended to enrich themselves. Interest enrich usually an attempt on the part of private individuals, and always hoped to be richer. However, is it not possible that a civil servant can do something to enrich themselves?. Furthermore then, why the minimum criminal penalty in Article 2 heavier (minimum 4 years) of the criminal sanctions under Article 3 (minimum 1 year) ?.

Moreover, not only Article 2 and Article 3 who have a problem to catch the perpetrators of Corruption, but also there is also in article 5, paragraph (2) and Article 12 letter a of Law No. 20 of 2001 on the Amendment of the Act No. 31 Year 1999 on Corruption Eradication. Based on my view, both articles of Article 5 paragraph (2) and Article 12 letter a is an article that was adopted from Article 419 Criminal Code (the Code of Penal Code), which also contained the element of intent (dolus), but has a penalty of different namely imprisonment of at least one (1) year and a maximum of 5 (five) years and / or fined at least Rp. 50,000,000.00 (fifty million rupiah) and Rp. 250,000,000.00 (two hundred and fifty million rupiah) to article 5 paragraph (2), and imprisonment for life or imprisonment for a minimum of 4 (four) years and a maximum of 20 (twenty) years and fined at least Rp 200,000,000.00 (two hundred million rupiah) and at most Rp 1,000,000,000.00 (one billion rupiah) for criminal sanctions in article 12 in Law No. 20 of 2001 on the Amendment of Act No. 31 of 1999 on Eradication of Corruption. In fact, both articles have different elements and is the same category of crime ie passive bribery. Article 5, paragraph (2) if examined is the category of the element of intent (dolus), while article 12 letter a besides there is the element of intent (dolus) there is also an element of negligence (culpa). Surprisingly, the offense culpa (negligence) heavier penalties than offense dolus (intent).

In the theory of criminal law, intent or *dolus* interpreted as "verboden handeling van het teweegbrengen Willens en wetens" or to perform forbidden acts are desired and understood. That is, if someone at the time it performs an action to bring about a result that is forbidden, be aware that such a result would certainly arise or may arise because of the actions that will or he is doing, while the incidence of these effects is he wants. While *culpa* or negligence by science and jurisprudence interpreted as "een aan tekfort voorzienigheid" which means a shortfall to look that far ahead about the possibility of legal consequences or "manco aan een voorzichtigheid" which means an attitude that is less cautious. Thus, both of these explanations we can clearly see the penal (penalty) the appropriate weight and appropriate light. In my opinion, based on the study *dolus* and *culpa*, then *dolus* (intent) was the one who should be listed under penalty (penal) in weight, while *culpa* (negligence) must be punishable by a mild or moderate. Because *culpa* is a willful or a fault will that have any legal consequences, in which the person does not mengingikan the occurrence of the act but on the basis of certain circumstances that led to the negligence of someone making legal consequences.

Then related the effectiveness of penalties for corruption, the death penalty and / or impoverished. Which is more effective?. Capital punishment contained in article 10 of the Criminal Code are at the laying of the top penalty and is the principal criminal, meaning that the death penalty can be applied to cases of serious crimes such as terrorism. But is it not possible for the perpetrators of Corruption? he replied, maybe. Because corruption is classified as an extraordinary crime (extraordinary crime). Not only because of the mode and systematic techniques, the impact of corruption crimes are parallel and ruin the

whole system of life, both in the economic, political, socio-cultural and even to the moral decay of society as well as mental. Economic losses from corruption, could clearly be felt by the community, reflected not optimal run economic development, besides the results obtained from the various economic activities of the nation, such as taxes, be much smaller than it should be achieved.

Losses in the fields of politics, corruption leads to discrimination or discrimination public service award for the rights of political society. While losses in the field of socio-cultural and moral corruption has caused the "disease" in the community, that the action seemed to be regarded as lawful and reasonable acts. Hamzah also argued that fighting corruption is not only depends on the renewal of the Act, but there should be more effort than that. If the perpetrators of corruption and sentenced to life imprisonment or the death penalty, it will result in a dependent state budget were great. instance, in the corruption case of former president of the Party of Social Welfare Lutfi Hasan Ishak or former treasurer of the Democratic Party Nazarudin sentenced each lifetime, this will lead to the imposition of the state budget (State Budget) several hundred million to a person convicted of a lifetime corruption in the holding cell because it must guarantee human rights in the holding cell. Not to mention spending State Budget (APBN) for national development with a certain period plus the cost of shipping, in preparation for burial, and funeral inmates who died in the Penitentiary who have undergone life sentence. Or as the case Labora Sitorus who have escaped from prisons Sorong, West Papua. Imposition is noteworthy by the judge in deciding the length of prison terms for corruption convicts. Well, how also in case the perpetrator of the Corruption was impoverished ?.

Basically, punishment for the perpetrators of Corruption is included penalties multiple or had a double-double , or in the language of the law known as *subsideritas* , where after the perpetrators of corruption are examined and tried, obviously sentence was as if the corruption was already impoverished automatically. It is seen from the freezing of the assets of the perpetrators of corruption, either by court bailiffs and investigators when the investigation process. Not to mention the imprisonment prescribed Act of Corruption and the obligation to pay fines for damages several million or billion State and State refund as much as had been corrupted. If examined legally, impoverishing suspected corruption has been classified as a violation of the principle of presumption of innocent (presumption of innocence) as set out in Article 8 paragraph (1) of Law No. 48 Year 2009 concerning Judicial Authority in conjunction with a general explanation item 3 letter c of the Code of Criminal Procedure (Criminal Procedure Code), which states that "Every person suspected, arrested, detained, prosecuted, or appear before the court shall be presumed innocent until no verdict court assert his mistakes and has obtained permanent legal force. "If a corruption suspect during the investigation alone is the seizure of assets, and then coupled with a court ruling shall make restitution and forfeiture and confiscation of certain items, the true law enforcement has changed paradigm of the presumption of innocence into a presumption of guilt. The concept of this idea of punishment as contemplated layaklah to advance to impoverish corruption so as not polemical back among the community as victims, observers, and political in this case the government together Parliament in making, discussed, and approved Law. For that it is necessary to think collective punishment as if that would make the deterrent effect for the perpetrators of criminal acts of corruption. If life imprisonment, the death penalty, refund

the loss of State (or punishment streak) which has waged law enforcement does not also reduce corruption in the country, then the punishment what else should be used with due regard to the principles of law, the economy for development national and public welfare. Because the concept of rule of law is essentially upholds the law, equality of each person before the law and public welfare. As said by Cicero a famous Greek philosophers, he said that " *salus populi suprema lex esto* " welfare of the people / society is the highest law.

b. Patterns eradication of Corruption in Indonesia

Based on the information and data the ministry secretariat of the Republic of Indonesia, that in order to tackle corruption behavior can be done by methods of prevention and repression as indicated by CEC deputy chairman Mochammad Jasin at a press conference at the CEC building a few months ago. Not only Mochammad Jasin, CEC leaders previously also been sounding a similar thing with the deputy chairman of the Commission today through CEC spokesman Johan Budi.

In eradicating this, various efforts have been made by the government through its policies. One of them with the formation of State Officials Wealth Audit Commission through Act No. 28 of 1999 on State Implementation of Clean CCN formed State Officials Wealth Audit Commission. In his work the State Officials Wealth Audit Commission successfully laid a good foundation for the wealth of state officials reporting mechanism comprehensively in the reform era. In his work the State Officials Wealth Audit Commission successfully laid a good foundation for the wealth of state officials reporting mechanisms in a comprehensive manner. Furthermore, in the present era has come institutes new anti *rasuah* the duties and authorities are granted in accordance with

Law No. 30 of 2002 on the Corruption Eradication Commission. Under the Act, the Commission granted authority to wiretap without asking directly by the Indonesian republic state police, prosecutors and the Supreme Court. Through this authority, the Commission referred to the anti rasuah super body. Commission itself have special fields that deal with prevention and prosecution.

CONCLUSION

From the above discussion it can be concluded, that is:

1. Factor who became the main cause of corrupt behavior, including:
 - a. Economic demands of actors / economic urgency;
 - b. The influence of the surrounding environment, whether home, office, or a community;
 - c. Weak law enforcement; and
 - d. Lack of socialization anti-corruption social.
2. In an effort to combat corruption, required the cooperation of all parties and all elements of society, not only related institutions alone. Some institutions authorized to eradicate corruption, among others, the Commission, the Police, the Indonesian Corruption Watch (ICW), and the Attorney General.
3. Due to corruption is inefficiency, injustice, people do not trust the government, wasting state resources, does not encourage companies to strive especially foreign companies, political instability, restrictions in government policy and not repressive.
4. In eradicating corruption, various efforts have been made by the government through its policies. One of them with the formation of State

Officials Wealth Audit Commission by Law no. 28/1999 on State Implementation of Clean CCN formed State Officials Wealth Audit Commission and subsequently in the present era has come institutes new anti rasuah the duties and authorities are granted in accordance with Law No. 30 of 2002 on the Corruption Eradication Commission. Under the Act, the Commission granted authority to wiretap without asking directly by the Indonesian republic state police, prosecutors and the Supreme Court. Through this authority, the Commission referred to the anti rasuah super body. Commission itself have special fields that deal with prevention and prosecution.

ABSTRACT

This study is about the stakeholders of the energy decision-making of the 20 MW Coal (+Biomass) – Fired Power Plant (CFPP) in Iligan City. First, the stakeholders were identified through purposive sampling techniques under non-probability sampling procedure. Second, the energy decision-making from its beginning to the issuance of City Resolution of No Objection of the CFPP were analyzed. Third, the perspectives of the stakeholders in the decision-making were analyzed according to their participations, position, bases and interest of the position by using qualitative coding and content analysis. Lastly, the action and resources used by the stakeholder to affect the outcome of the decision-making were determined and analyzed, and also they type of their influence.

Findings of the study show weak implementation of the Local Government Code of 1991 that requires active participation from different stakeholders in the decision-making of the CFPP. There was no proper consultation and information dissemination of the CFPP and the decision-making. The major bulk of the support was from the primary stakeholders consisting of the decision-makers while the major bulk of opposition was from the secondary stakeholder such as those coming from the Non-Government organizations (NGOs) and civil society. The positions of the stakeholders whether in favor or not in favor were equally divided among the stakeholders. The decision-making was framed primarily on the problem of power shortage. Majority of the interest was the additional electricity that the CFPP will provide to the city. The primary stakeholders had influence on the outcome of the decision-making primarily because they had the political authority and their votes whether to support or oppose had the major bearing on the decision-making process. Secondary stakeholders such as NGOs had no influence.

Keywords: Stakeholders, Decision-Making, Energy, Influence

INTRODUCTION

Coal-fired power plants (CFPP) are the biggest source of man-made Carbon Dioxide (CO₂) emissions (Green Peace, 2015). This makes coal energy the single greatest threat facing climate change. It also causes irreparable damage to the people's health and to the community. Unfortunately, governments across the world are allowing industry to spend billions of dollars to construct new CFPPs worldwide in the coming years. If they are

built, CO₂ emissions from coal are expected to rise 60 percent from 44% globally by 2030 (United States Environmental Protection Agency, 2015).

During the 2015 United Nations Climate Change Conference in Paris, the Breakthrough Energy Coalition was announced. The coalition brings government and universities around the world together that recognize the need to

shift from fossil fuels to renewable sources. At that conference also, Bill Gates, a world renowned businessman, together with Facebook's Mark Zuckerberg and other high-profile 30 investors launched a multi-billion dollar initiative to fund renewable energy technologies (Crew, 2015).

In the Philippines, the government has continued to allow investors and industries to put up CFPP most particularly in Mindanao. Mindanao has been enjoying cheap power supply from hydroelectric plants. More than 60% of Mindanao's energy sources come from the Agus and Pulangi hydroelectric plants. In 2011, available capacity dropped to as low as 827 megawatts (MW) which caused massive blackouts of up to 12 hours in most of the provinces. According to the business leaders during the 23rd Mindanao Business Conference, Mindanao needs to produce at least 3,000 MW of power supply by 2030 if it hopes to meet the increasing demand for electricity of the entire island (Ellorin, 2012).

Iligan City is largely dependent on the hydroelectric power generated by the Agus grid. Despite the city having the Maria Cristina Falls as the source of hydroelectric power, the city is experiencing power shortage since it provides power not only to the city but also other parts in Mindanao. In response to this, other power sources to boost its power supply were offered and implemented. One is the operation of a CFPP that will be constructed in Barangay Kiwalan, Iligan City.

A Resolution No. 14-1214 (See Appendix A) was issued on November of 2014 allowing the construction and operation of 20 MW-CFPP inside CRH-Aboitiz Iligan Plant (CAIP, formerly La Farge Republic) in Kiwalan to be operated by Power

Source Philippines Incorporated (PSPEI). The primary actors of the energy decision-making were the Sangguniang Panlungsod (SP) of Iligan City consisting of 13 city councilors, the vice-mayor and the mayor of the city. Three of the councilors voted 'No', while the rest voted 'Yes'.

But the CFPP project was also largely met by criticisms particularly from environmental groups such as Coal Resistance Movement (CORE). The CORE posted campaign slogans saying "No to Coal", "Climate Justice Now", and "Go Renewable" in many areas of the city (See Appendix B) to highlight the health and environmental risks posed by the CFPP.

Because of this, it definitely called for rethinking to analyze the energy decision-making of the CFPP project of the city by focusing on the stakeholders involved and the key driving forces. The study mainly focuses on the perspectives of the stakeholders that also included the process of the energy decision-making of the construction of the CFPP in Barangay Kiwalan, Iligan City. In examining the stakeholder's perspectives, this paper identified the stakeholders who had position and interest on the CFPP. The study analyzed the basis and interests of their position and the action and resources mobilized by them to affect the outcome energy decision making.

THEORETICAL FRAMEWORK

The study uses the Local Government Code (LGC) of 1991 as the legal framework. Under the LGC of 1991, Chapter 1, section 3, letter g, "public participation extends to all stages of project planning and implementation". In this section, the consent of the barangay is required before any development project in the local area is undertaken. It

is also stated in the LGC that “the capabilities of local government units, especially the municipalities and barangays, shall be enhanced by providing them with opportunities to participate actively in the implementation of national programs and projects”.

The study of Crosby (1991) was also used which acknowledged the significant role played by stakeholders in the determination of policy, its implementation, and outcomes. Groups or actors are analyzed in terms of the interest they take in a particular issue and, the quantity and types of resources they can mobilize to affect outcomes regarding an issue (Crosby, 1991).

Similarly, Varvasovsky & Brugha (2000) considered the use of qualitative or quantitative data collection methods for estimating stakeholder positions, levels of interest and influence around an issue and also described the process of identifying and approaching stakeholders. While Crosby (1991) and Varvasovsky & Brugha (2000) made use of qualitative and quantitative approaches, this study mainly relied on qualitative approaches to data collection and analysis.

Lastly, the study also used the ‘Prospect theory’ of decision-making of Jain V. and Deshpande A. (2010) which argued that “policy makers are left with no other option but to rely on the development of suitable conventional energy resources and energy efficient technologies to meet the immediate needs.

RESEARCH DESIGN

This study employed the qualitative method. It used key informant interviews (KII) and observational collection method. The stakeholders such as the decision makers and leaders of the groups and organizations and other stakeholders that

had an interest on the energy decision-making on the operation of CFPP in the city were the key informants.

Descriptive statistics was also used to show the variation of data of profile of the respondents and the bases and interests of the positions of the stakeholders. In treating the quantitative method, frequency and distribution percentage was used.

SAMPLING PROCEDURE

This study used purposive sampling technique under non-probability sampling in analysing the stakeholders’ role, position, basis and interest of the position, and action and resources mobilized to affect the outcome of the energy decision-making on CFPP. The study purposively selected and interviewed twenty-five (25) respondents as key informants who had role and interest on the decision-making of the CFPP. Hence, the total sample size for this study is twenty-five (25) respondents.

The research participants of this study were the stakeholders of the energy decision-making in the city on the construction of CFPP that had role, position, interest and influence on the energy policy such as the Sangguniang Panlungsod (SP), Barangay Council of Kiwalan, Environmental Management Bureau- Department of Environment and Natural Resources (EMB-DENR), Coal Resistance Movement (CORE), Healthy Environment Movement (HEM), CRH-Aboitiz Iligan Plant (CAIP), Iligan Light Power Inc. (ILPI), NAPOCOR Agus VII, Social Action Center, Maranao group, DXIC radio station and Academe Experts. The total respondents were twenty-five (25) consisting of only ten (10) City Councilors from the SP, four (4) Barangay Officials of the Barangay

Council of Kiwalan, one (1) representatives each from EMB-DENR, CORE, HEM, CAIP, ILPI, NAPOCOR Agus VII, Social Action Center, Maranao group, DXIC, and two (2) Academe experts.

ETHICAL CONSIDERATIONS

Confidentiality of statements gathered during the KII was ensured by assigning pseudonyms names to each respondents.

TREATMENT AND ANALYSIS OF THE DATA

The data collected from the KII was analyzed through qualitative-coding and content analysis. Qualitative-coding is the breaking down of data into distinct concepts and categories (Biddix, n.d.). Content-analysis is described as the scientific study of content of communication with reference to the meanings, contexts and intentions contained in messages (McNabb, 2013). Wherefore, the analysis was mainly drawn from the answers of the respondents.

FINDINGS AND ANALYSIS

This section presents the relevant data and its analyses necessary for the fulfilment of the objectives of this study. The flow of the discussions is as follows: 1 The Stakeholders 2. Energy Decision-making process, 3. Position of the Stakeholders to the CFPP Project, 4. Bases and interests of the Stakeholders' position, and 5. Action and resources mobilized by the Stakeholders to affect the energy decision-making.

The Stakeholders

The SP and the Barangay Council of Kiwalan are the primary stakeholders of

the CFPP project. They were the decision-makers who had direct involvements on the energy decision-making. Secondary stakeholders from different sectors that had position and interest on the CFPP project are NGOs, religious groups, industries, media and academe experts. But they do not have direct participation on the decision-making although some of them had indirect participations in the form of participating in a public hearings and consultations.

Energy Decision-Making Process of the CFPP

Conceptualization of the problem

According to Councilor Tomas, the construction of the CFPP was introduced to them by Power Source Philippines Energy Inc. (PSPEI), a private firm, after CRH-Aboitiz Iligan Plant (CAIP) asked the SP to have an independent power supply to avoid power shortages and that is when the PSPEI came in the picture. Although CAIP claimed that they do not have any involvements on the energy-decision making during the KII, Councilor Jerry validated that it was CAIP who requested first.

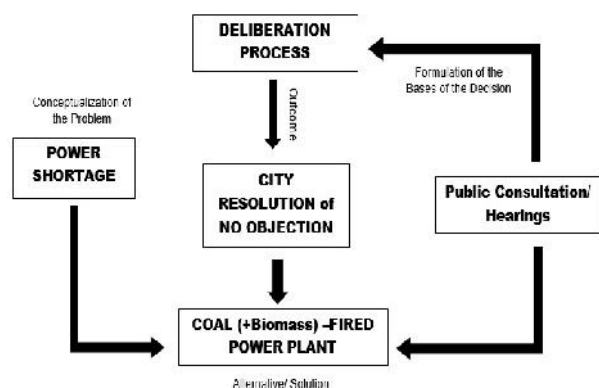

Figure 1. A Schematic Diagram on the Decision-making Process of the CFPP

While if we base the problem on the City Resolution and to Councilor Danilo, the City Government points out that the city is experiencing power shortage that resulted to rotating brown outs to the Barangays of the city. Councilor Danilo said that the city government got an offer from PSPEI which will provide additional power supply in response to the power shortage that the city is experiencing.

Finding Alternatives and Public Consultations

Because of the insufficient power supply from the Agus grid, the SP allowed the PSPEI to finance the CFPP project. But before that, the said firm was required to present a power point presentation showing the beneficial operation of CFPP. The presentation included the improved technologies that will be employed in controlling the pollution that the CFPP may cause.

Furthermore, the PSPEI conducted its campaign called Information, Education and Communication (IEC) lecture which was attended by the SP, Barangay Council of Kiwalan and its residents of on September 15, 2014. The firm later requested for a Resolution expressing “No objection” to the CFPP project before the SP on November 7, 2014.

A Public forum was initiated by CORE and its NGOs partners on October 9, 2014 through the committee on Environment chaired by Councilor Susana and was attended also by Councilor Danilo. The position of the audience was strongly divided, many were afraid of the consequences of the CFPP to the community. CORE representative, Joel said,

*“Daghan kaau dili uyon anang CFPP.
Public forum gani to pero giangkon*

sa Sanggunian nga Public hearing nila...”

(There were a lot who opposed to the CFPP. It was a public but the Sanggunian [SP] credited it as their public hearing... (January 18, 2016))

Councilor Danilo, Councilor Susana, and Committee on Health chaired by Councilor Tomas also conducted public hearings held at the SP legislative building on November 17 and 18, 2014. The public hearings were participated by SP, the Barangay Council of Kiwalan and from other Barangays, NGOs and residents who had position and interest on the CFPP. They claimed that there was only small number of opposition among the stakeholders during the hearings, majority were supporters of the CFPP project.

Apart from the public hearings, the SP together with PSPEI, Barangay Chairperson of Kiwalan, NGOs and other affected stakeholders made a site inspection of a nearby 232 MW CFPP of STEAG Power Plant Inc. in Villanueva, Misamis Oriental on November 20, 2014. The result of the site-inspection was used as a deciding factor. The decision-makers relied in their observation at the site in the case environmental concerns that the CFPP may cause once it is operational.

Formulation of the Bases of the Decision

A Committee Hearing was held at the Legislative Building, City Hall of Iligan City after the public hearings and site-inspection at Villanueva. Councilor A recommended the passing and approval of Resolution of “No-Objection” to the construction of CFPP. It was followed by a deliberation process where City Councilors shared their position and opinion on the CFPP.

The deliberation provided an opportunity for the councilors who were supporters or opposed to the operation on CFPP in the city to present the basis of their positions.

Energy Policy Passage

As a consequence of the deliberation process, majority of the SP supported the construction of CFPP with only 3 oppositions, then a Resolution of No-Objection was passed. It was signed by the secretary to the SP, its author, co-member-author and the vice-mayor of the city. It was received and signed on by November of 2014 by the Mayor of the city.

However, the resolution was conditional which means that the PSPEI will comply first with all the existing environmental requirements to be monitored by the DENR-EMB before they can construct and operate the CFPP inside the CAIP's compound.

After the passage of City Resolution, it was then followed by the passage of Barangay Resolution. But before the issuance of a Barangay Resolution, a public hearing was held on December 2, 2014 at Barangay Kiwalan sponsored by PSPEI. It was participated by the city mayor and other stakeholders including the EMB-DENR Regional Office as the monitoring team.

Then it was followed by a deliberation process on the issue of CFPP of the Barangay Council that resulted to Barangay Resolution of No Objection.

Findings of the study during the KII show that Barangay chairperson Lito, similar to the City Councilors was also convinced by the CFPP in Villanueva where he observed and found out that there was no presence of negative impacts to the

community caused by CFPP. While, Kagawad Haron being the chairman of the committee on health said that PSPEI assured them that pollution will not happen.

On the side of the Barangay officials who did not support the CFPP, findings of this study show the inconsistency and confusing statements of position of Kagawad Baste and Haron. Observations during the KII show that Kagawad Baste was nervous, uncomfortable, and he had the interview in a small congested place. Based on the Barangay Resolution, Kagawad A and B supported the CFPP and were included in the 5 affirmative votes which is contradicting with their statements during the KII.

Whereas, the result of the deliberation according to the Barangay Resolution (See Appendix B) shows 5 affirmative votes comprising 71.43%, 2 negative votes comprising 25%, and 1 Abstain. This shows that majority of the council supported the construction of CFPP. It was only after the city Resolution that the Barangay Council able to pass a Barangay Resolution.

Position of the Stakeholders on the Energy Decision-Making

This section determines the percentage distribution of the positions of the primary and the secondary stakeholders.

Figure II. Distribution of Percentage of Positions of the Stakeholders on CFPP

Findings of the study show that there is equal percentage between the supporters and opponents of the CFPP comprising 50% respectively. There are 12 supporters consisting of stakeholders from the SP, Barangay Council of Kiwalan, CAIP, Iligan Light Power Inc. (ILPI), NAPOCOR Agus VII, and DXIC Radio station, while there are also 12 opponents consisting of respondents from SP, Barangay Council of Kiwalan, CORE, HEM, Social-Action Center, Maranao group and the Academe experts.

This shows that the positions of stakeholders are equally divided towards the construction of the CFPP. Although the EMB-DENR did not sided to any position, it played as a monitoring and neutral body, only responsible in processing the environmental compliance of the PSPEI after the issuance of the City Resolution.

Bases and Interests of the Stakeholders on the CFPP

This section shows the distribution of percentage of the bases of the 25 respondents in their position on CFPP. There 12 supporters and 12 opponents.

Table I. Distribution of Percentage of the Theme of the Statement on Basis of the Positions of the Supporters of CFPP

Theme of the Statement	F (N=28)	P	Rank
Power shortage	10	35.71	1
Improved Technology to control pollution	8	28.57	2
Absence of negative effects and well processing of the CFPP in Villanueva	6	21.43	3
20 MW CFPP is very small compared to Kauswagan	1	3.57	4
Coal is cheap and easier to construct	1	3.57	4
Pollution only from highly progressive countries, Philippines only has little pollution	1	3.57	4
Lines of power from CFPP is near to ILPI	1	3.57	4
Total	28	100.00	0

Legend: Frequency (N=28) – Total number of responses

Note: Some respondents have multiple responses.

Findings of the study reveal that there are 10 responses constituting 35.71% of the total no. of responses confirmed “Power shortage” as basis of their position. According to Anthony from NAPOCOR Agus VII supports the CFPP project because of power shortage.

However, academe expert Erwan said that power shortage should not be the problem that the SP should focus on rather on the issue of the allocation of power supply. While it is true that there is power shortage in Mindanao as attested by NAPOCOR Agus VII office, Iligan City being the host community of the Agus Grid was not able to enjoy up to twenty-five (25) percentage priority of the available capacity of the three hydroelectric power plants, Agus V (55MW), Agus VI (200MW) and Agus VII (54MW) in times of power shortage. But the DOE did not grant the city the 25% priority of power supply in times of power shortage. The decision of the SP to allow the construction of the CFPP was mainly framed on the problem of power shortage in the City.

On the other hand, there are 8 responses on “improved technology to control pollution” comprising 28.57%, while there are 6 responses consisting of 21.43% on “absence of negative effects and well processing of the CFPP in Villanueva” as their basis.

On the other hand, the idea that “20 MW CFPP is too small compared to Kauswagan” gathered 1 response comprising 3.57%. This response is from Councilor Susana when she said,

“...this is just 20 MW compared to the Kauswagan, grabe biya to kadako.”

(This is just 20 MW compared to the Kauswagan which is very big. (February 17, 2016))

She also added that the Committee on Environment in which she is a chairman will intervene on the possible consequences of CFPP only after its construction.

Also, there is only 1 response each to “coal is cheap and easy to construct”, “pollution only from highly progressive countries, Philippines only has little pollution” and “Lines of power from CFPP is near to ILPI” has only 1 response from ILPI.

Thus, majority of the stakeholders who supported the CFPP based their position on power shortage. Majority of the respondents which is 10 out of 12 used it as basis in their position. This is followed by a close gap of percentage with improved technology to be used on CFPP and the absence of negative effects in Villanueva’s CFPP.

On the other hand, the table below shows the bases of the 12 respondents in opposing to the CFPP.

Table II. Distribution of Percentage of the Theme of the Statement on Basis of the Positions of Opponents on CFPP

Theme of the Statement	F (N=29)	P	Rank
Additional Power Supply	11	37.93	1
Protection of environment and health of the people	9	31.03	2
Development and Employment	5	17.24	3
8MW Power supply priority	1	3.45	4
Protection of Muslim cemetery near site of CFPP construction	1	3.45	4
Construct only Bigger CFPPs	1	3.45	4
Increase utilization of Renewable resources	1	3.45	4
Total	29	100.00	0

Legend: Frequency (N=15) – Total number of responses
 Note: Some respondents have multiple responses.

Results reveal that there are 10 responses constituting 66.67% of the total no. of responses confirmed “coal is detrimental to health and environment” as basis of their position. While there are improved technology to be used to control the pollution, most of the opponents do

not believe that these technologies will be effective. According to Barbara, a medical doctor from HEM, the fly ashes that will be produced by the CFPP will fly in the air going into the lungs of the people, settling in the skin, animals and more, containing chemicals hazardous to the health and environment. Moreover, the pumped water from into the plants for cooling will pumped out as hot to the sea raising the temperature of the sea. With this temperature, fish and other sea creatures will die.

On the other hand, there are 2 responses on “CFPPs were abolished in other countries” comprising 13.33%, while the items “Pollution in Beijing caused by CFPPs”, “20 MW CFPP is too small” and “too many installations of CFPPs in Mindanao” have only 1 response each comprising 6.6% respectively.

Unlike Councilor Susana who is a supporter and said that 20MWs is should not be constructed because of its very small capacity. In connection to it expert B based its position on the increasing numbers of installations of CFPP in the Philippines. He said that there are too many CFPPs being built particularly in Mindanao. Thus, results show that majority of the respondents opposed the CFPP because of its detrimental effect to the health of the people and the environment.

The table below shows the interest of the Stakeholders both the supporters and opponents.

Table III. Distribution of Percentage of the Theme of the Statement on the Benefits of the Positions of the Stakeholders

Theme of the Statement	F (N=15)	P	Rank
Coal is detrimental to health and environment	10	66.67	1
CFPPs were abolished in other countries	2	13.33	2
Pollution in Beijing caused by CFPPs	1	6.67	3
Too many installations of CFPPs in Mindanao	1	6.67	3
20 MW CFPP is too small to construct	1	6.67	3
Total	15	100.00	0

Legend: Frequency (N=29) – Total number of responses
 Note: Some respondents have multiple responses.

Findings show that majority of the interests of the respondents is on additional power constituting 37.93% with 11 responses followed by the protection of environment and health of the people with 31.03%. The idea that CFPP can help for the “development and employment gathered 5 responses constituting 17.24%.

Among the benefits of the stakeholders like SP and NAPOCOR such as additional power supply, development and employment, the benefit of CAIP will be a priority energy allocation of 8MW out of the 20MW of the CFPP as claimed by Martin from CAIP.

This means that the remaining 12MW is for additional power for the city thru ILPI. Thus, the three industries (CAIP, ILPI, NAPOCOR) including the DXIC view the same interest from the benefits that it will gain, the same with SP and NAPOCOR.

On the other hand, there are 9 responses from the respondents who are opponents due to cultural and environmental concerns. The interest is to protect the environment and the people from the CFPP such as CORE, HEM, and Social Action Center. While in the case of the Maranao Group, the interest is to protect

the Maranao cemetery located near the site of construction of CFPP in Kiwalan.

The CFPP is being constructed already as of March 2016, their land near the site of the CFPP is one of the affected areas and leaving the place is very difficult to them since according to their customary law their cemetery situated in their land cannot be left without anyone guarding it nor moved to another place.

A photo of the Maranao cemetery covering 1 hectare of land which is more than 50 meters away from the site of the construction of the CFPP (Photo taken on April 13, 2016)

Gary who is desperate and determined in protecting the land also said that the industry CAIP, a cement plant, has been causing already too much environmental damage. The CAIP is producing dust from its cement production daily. The photo below shows the cement dust that has affected the plants and trees, including the Maranao cemetery.

(Photos were taken on April 13, 2016)

According to him, the addition of a CFPP near the area will add more pollution which could further worsen the damage on its surroundings particularly the Maranao Cemetery.

On the other hand, in the case of Academe experts, expert Erwan's interest is to construct only bigger CFPPs rather than small 20 MW which does not makes sense for him. He said,

"...this is very small, there are very big power plant being constructed aside from Kiwalan, constructing another 20MW coal-plant in a separate location does not bring any sense." (February 18, 2016)

He further said that there is already the biggest CFPP being constructed in kauswagan, Lanao del Norte and other CFPPs in Davao which can supply the remaining power needs of Mindanao. While expert Samuel's interest is to minimize the installations of CFPPs and advocate instead the generation of renewable energy source citing that there is the Renewable Energy Act of 2008 that mandates the full utilization of renewable energy sources. He said,

"Ayaw na kay sobra na kaau. No to CFPP na gyud... Sa US nagkadecline ilang usage of CFPPs, pero sa ato nagkadaghan. We have to be vigilant nga tan-awun nato ang iyang pollution..."

(There are too many [CFPPs] already. No to CFPP. In US, the usage of CFPP is declining but here, its increasing. We have to be vigilant in looking into the pollution [of the CFPP]. (February 29, 2016))

For him, installments of renewable sources should be encouraged that non-renewable such as CFPP.

Actions and Resources Mobilized by the Stakeholders to affect the Outcome of the Energy Decision-Making

This section discusses the action and resources mobilized by the Stakeholders to affect the outcome of the energy decision-making. The energy decision-making that resulted to City Resolution 14-1214 was mainly participated by the decision-makers from the SP. The SP led by Councilor Danilo with also the presence of Barangay chairperson Lito made a site inspection in Villanueva where one CFPP is operating. The visit sponsored by PSPEI was the primary reason that influenced the outcome of the energy decision-making of both City and Barangay Resolutions.

But in response to the two Resolutions of No-Objection, Barangay Kagawad Ricardo participated in a radio program after City Councilor Angelo aired in the same radio station addressing the people of Iligan City that the CFPP will not be harmful. This comment by the City Councilor enraged Barangay Kagawad Ricardo who opposes the CFPP.

Still, in an effort to convince the public, DXIC broadcasted in its radio channel sponsored by the PSPEI, about the benefits of CFPP and that there was nothing to be afraid of it. It also maintained that their radio station covered both sides fairly.

Many stakeholders of the CFPP criticized the city government's decision because there was no proper consultations and dissemination of information to the public. Kagawad Ricardo claimed that even in Barangay Kiwalan, the residents were not properly informed.

The secondary stakeholders are hoping to cancel and reverse the City Resolution

despite the ongoing construction of the CFPP. Findings of the study reveal that stakeholders such as CORE, HEM, Social Action Center resorted to dissemination of campaign flyers explaining the effects posed by CFPP. CORE together with the other NGOs and concerned individuals organized a Climate Walk and sent petition letters to the SP. As of the month of February 2016, there was no response to the petition letters. But these efforts made by HEM, CORE, Social Action Center and Maranao Group have no influence before and after passage of the City Resolution.

According to Joel of EMB-DENR Region 10, they were trying their best to respond to all petitions submitted to them by the environmental groups. They were explaining to the petitioners the position of EMB that CFPP is not yet outlawed in the Philippines, unless the congress says that it is prohibited.

On the other hand, the three Industries (CAIP, ILPI and NAPOCOR) did not have any involvements in any of the process and/or activities of the SP or other stakeholders in support or oppose to the CFPP. They maintained that they have no influence on the outcome of the energy decision-making during the KII. CAIP said that they only got the offer from them and do not have any relationship with PSPEI prior to it.

Despite the efforts made by the opposing stakeholders to convince the SP to not allow the PSPEI to construct the CFPP and/or reverse the City Resolution of No Objection, Councilor Danilo and Jerry, author and co-member-author of the Resolution strongly maintained that it will not retract the decision of SP unless the PSPEI cannot comply with all the existing environmental requirements.

Thus, findings of the study reveal that the primary stakeholders, SP and Barangay Council of Kiwalan, monopolized the energy decision-making. It was only the Government that had influence on the outcome of the decision. Their position as a government official were their instrument to influence the decision-making thru their vote either to support or oppose the CFPP project.

Most of the secondary stakeholders do not have influence at all. Despite the efforts made by CORE, HEM, Social Action Center and Maranao Group to overturn the City Resolution, it did not affect the SP's decision at all.

Conclusions

The stakeholders of the energy decision-making of the CFPP are the primary stakeholders such as the decision-makers from the SP and Barangay Council of Kiwalan, and secondary stakeholders from the non-government sectors. This agrees with the arguments of Crosby (1991) and Varvarovsky and Brugha (2000) that the primary stakeholders are those who are directly affected by an organization's actions and whose continuing participation is necessary. While the secondary stakeholders are individuals or groups that can indirectly influence the organization's actions, and which are not essential to the operations of the organization even though their actions can significantly damage or benefit the organization. Both having significant role played as stakeholders in the determination of energy policy.

The decision-making was triggered by CRH-Aboitiz Iligan Plant when it requested the SP to have its own independent power supply before which the Power Source Philippines Energy Inc.

offered the SP a 20MW CFPP. The decision-making process of the CFPP took only four months inclusive of the three public hearings or consultations and one site-inspection to a nearby CFPP before the City government issued the City Resolution of No Objection to the construction of the CFPP.

The was weak implementation of the Local Government Code (LGC) of 1991, chapter 1, section 3, that while there was public participation on the decision making process on CFPP, it did not extend to all stages of project planning and implementation. The decision-making on the CFPP has limited political participation and no proper consultations from the secondary stakeholders despite the public hearings conducted by the SP. No documents accompany the official decision [or the City Resolution] to summarize the inputs received from the public and the discussions held at public consultations. This is further supported by the fact that the Barangay Resolution of Kiwalan was passed only after the City Resolution. This invalidates under the same chapter and section of the LGC that the consent of the Barangay is required first before the city can undertake any development project.

The major bulk of the support on the construction of the CFPP is from the Government while the major bulk of opposition is from NGOs. The decision-making was mainly framed on the issue of power shortage which lacks environmental basis though part of the City Resolution was crafted with consideration of environmental compliance and requirements. The primary stakeholders only relied to their observations to a site inspection of a CFPP in Villanueva that was not supported by any experts. Also, the SP to respond to the immediate needs of power demand of the city, they firmly supported

the CFPP construction for there are no other choice which agrees with Jain V. and Deshpande A. (2010) that decision-makers are left with no other option but to rely on conventional energy resources to meet the immediate needs without advanced knowledge of their consequences. On the other hand, the opposition opposed the CFPP mainly for environmental concerns.

While it is true that there is power shortage in Mindanao including Iligan City, power shortage would not be a problem if only the city as a host community of Agus grid was given the up to 25% percentage of power supply from the grid in times of power shortage thru NAPOCOR. This particular issue did not gain the much needed attention and no particular actions were made by the SP on this issue. And while it is beneficial to the city since 12 MW of the 20MW of the CFPP will be produced is for the city to be sold thru ILPI, the CFPP is being constructed primarily to serve the interest of CAIP because of the priority 8MW power supply once the CFPP is operational.

Furthermore, there were inconsistencies and imperfect knowledge of the decision-makers from the Barangay Council regarding CFPP and its energy decision-making. This agrees with Heywood's (2012) incremental model that decisions tend to be made on the basis of inadequate information and low levels of understanding.

On the other hand, because of inability to gain direct access to the decision-makers and failure to influence the decision-making, the opposing stakeholders had engaged to activism such as public campaigns, among others. Although there were opponents of the CFPP from the SP, the opposition groups from the non-government sector were not able to get

help or assistance from them because of the firm support of the City Government to the CFPP project. This shows that the SP could not be easily influenced or affected by any social forces and/or interest groups as they have their own views which happens to be disagreeable to the oppositions.

Agus Grid its rightful share of power supply especially during power shortage.

Recommendations

Based on the findings of the study, the following are recommended to address the failures and lapses of the energy decision-making on CFPP:

- 1.) The Iligan City Government should implement the Local Government Code of 1991, Chapter 1, section 3, letter g which states that public participation extends to all project planning and development. It should encourage the active participation of the affected stakeholders in the decision making relating to any projects to be implemented.
- 2.) The City Government must provide adequate information to all concerned stakeholders to be able to identify and weigh in different concerns and issues when deciding a project. Most importantly, it must first wait for the Barangay Resolution to be issued before it can pass a City Resolution.
- 3.) The stakeholders like the NGOs, religious groups and other potential alliances should work together and file a petition as one group to the SP so that a new Resolution will be issued. And strengthen public awareness campaign to the academe sector and affected residents of Barangay Kiwalan to gain more support.
- 4.) This study recommends that the SP should work on filing a petition to the DOE to grant the city as a host city of the

RESOLUTION NO. 14-1214

RESOLUTION EXPRESSING NO OBJECTION TO THE CONSTRUCTION AND OPERATION OF A COAL + BIOMASS (CO-FIRED) POWER PLANT INSIDE LAFARGE CEMENT PLANT IN KIWALAN, ILIGAN CITY, TO BE OPERATED BY POWER SOURCE PHILIPPINES INCORPORATED SUBJECT TO COMPLIANCE TO ALL EXISTING ENVIRONMENTAL GUIDELINES, AND PERTINENT LAWS, RULES, REGULATIONS, MEMORANDUMS AND OTHER ISSUANCES RELATIVE TO THE CONSTRUCTION AND OPERATION OF THE POWER PLANT

WHEREAS, the committee on Energy has made a report recommending the passage of a Resolution of No Objection to the establishment and operation of a coal fired power plant inside LAFARGE Cement Plant for reasons stated in the said report;

WHEREAS, a power point presentation has been made by Power Source Philippines before the Sangguniang Panlungsod showing the beneficial operation of a Coal Power Plant inside LAFARGE Cement Power Plant in order to support the energy/power requirements of the said cement factory and stay productive and competitive against cement market by increasing its production with available power source right inside the plant;

WHEREAS, the Committee on Energy Chaired by Hon. Ariel P. Anghay together with the Committee on Environment and Committee on Health, Chaired by Hon. Marlene L. Young and Hon. Usafeno F. Obial conducted a public hearing on Nov. 17, 2014, November 18, 2014 and made a site/ocular inspection of a nearby 232-MW coal-fired plant of STEAG STATE POWER, INC. in Villanueva, Misamis Oriental on November 20, 2014 to see for themselves and/or their committee representatives on how a coal-fired power plant technology operates

TIME: 1004 // 12-07/14
AA
SG MICRANAS P. YU M

and how it affects its environment and health of its people living near the coal fired power plant;

WHEREAS, coal fired power plants are not new in the Philippines as there have been established and operated Coal Fire Power Plants such as in Sual, Pangasinan (1990), Calaca Coal Power Plant, Calaca, Batangas (1995); Pagbilao Coal Power Plant, Pagbilao, Quezon (1996); Masinloc Coal Thermal Power Plant, in Masinloc, Zambales (1998) Quezon Power Plant, Villanueva, Misamis Oriental (2006), Davao Coal Fired Power Plant, Toril, Davao City, Davao del Sur which is presently under construction;

WHEREAS, advances in technology has allowed coal to improve living conditions with its current role in meeting man's fuel needs;

WHEREAS, advances in technology has allowed coal to improve living conditions with its current role in meeting man's fuel needs;

WHEREAS, coal has been used extensively in power generation where better technology is employed to ensure that there is a balance between ecology and economics in producing sustainable and affordable energy;

WHEREAS, one of the greatest advantages of coal fired plants is reliability. Coals ability to supply power during peak power demand either as base power or as an off-peak power is greatly valued as a power plant fuel. It is these facts that advanced pulverized coal fired power plants are designed to support the grid system in avoiding blackouts;

WHEREAS, it has been asserted that there are approximately 300 years of economic coal deposits still accessible and available for use;

WHEREAS, despite the fact that Iligan City has the Majestic Maria Cristina Falls under its belt being recognized as the famous hydroelectric power source serving the whole of the Philippines for decades, it cannot be denied that our city still falls prey to the menacing aftershock of power shortage and hence rotating brownouts comes as a result thereof;

WHEREAS, in order to address the prevailing discomfort and hassle of rotating brownouts that has been haunting us for years, the logical move is to find an alternative power source which can also be a back-up to augment the current energy shortage;

WHEREAS, Lafarge and the PowerSource Group, through PowerSource Philippines Energy Inc. ("PPEI"), timely manifested their intention to construct a coal+biomass (co-fired) power plant within the premises of Lafarge Iligan Inc., which in turn is a good move which will eventually benefit the City of Iligan into being diverse in terms of power dependence, re:Hydro Power and Coal Power as a legitimate combination so as to address our current power debacles;

WHEREAS, realizing that PPEI's intention is beneficial to all Iliganons, this August body strongly endorses and supports the furtherance of the construction of a Coal Power Plant and as such offers its no objection to its construction and operation provided that it satisfactorily complies with all pertinent laws and regulations as well as the Environment related laws legislated by the City of Iligan;

WHEREFORE, on motion by Member ARIEL P. ANGHAY, and BAYANI C. AREOLA, duly seconded by Members Cesarve C. Siacor and Frederick W. Siao;

BE IT RESOLVED AS IT IS HEREBY RESOLVED, by the Sangguniang Panlungsod of Iligan City to EXPRESS, as it hereby EXPRESSES, no objection to the construction and

RESOLUTION NO. 23-073

Series 2014

"RESOLUTION ENDORSING THE CONSTRUCTION AND OPERATION OF A COAL + BIOMASS (CO-FIRED) POWER PLANT INSIDE LAFARGE CEMENT PLANTS COMPOUND TO BE DULY OPERATED BY POWER SOURCE PHILIPPINES ENERGY INCORPORATED (PPEI) PROVIDED PPEI WILL COMPLY ALL REQUIREMENTS SET BY LAW AND ABIDE ITS COMPANY SOCIAL RESPONSIBILITY TO THE HOST AND NEIGHBORING COMMUNITIES".

WHEREAS, the proponent, PowerSource Philippines Energy, Inc. (PPEI) had already conducted an Information, Education, Communication (IEC) campaign of the said project attended by the Sangguniang Barangay and the constituents of Barangay Kiwalan, Iligan City last September 15, 2014;

WHEREAS, PPEI will supply primarily the power requirements of LaFarge Iligan Inc. and may sell excess power to Iligan Light and Power, Inc. (ILPI) or any other distribution utility or might be distributed directly to the host and neighboring barangays;

WHEREAS, PPEI must abide its Company Social Responsibility (CSR) to the host and neighboring barangays prior to answer the need of the residents directly affected by the power plant;

WHEREAS, PPEI will use "state of the art" technology, namely, the Circulating Fluidized Bed Combustion (CFBC) for the protection of the environment and the health of the people especially in host and neighboring communities;

WHEREAS, the power plant will also use environmentally friendly fuel, including Biomass, for the plant operation;

WHEREAS, the PPEI is committed to conform to the Environmental Laws of the Philippines and comply with the strident globally approved environmental standards imposed by the LaFarge Group of Companies;

WHEREAS, the benefits to these communities including Barangay Kiwalan will have positive impact such as employment opportunities, increase in local revenues through taxes and licenses, minimize brownouts, and potential subsidy from the implementation of ER 1 – 94

operation of a coal + biomass (co-fired) power plant inside LaFarge Cement Plant in Kiwalan, Iligan City, to be operated by Power Source Philippines Incorporated subject to compliance to all environmental guidelines, existing and pertinent laws, rules, regulations, memorandums and other issuances relative to the construction and operation of the power plant

RESOLVED FURTHER, that this resolution of no objection is a conditional approval subject to the fulfillment of the following conditions to wit;

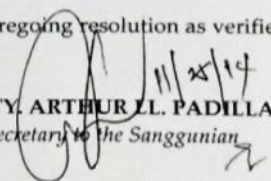

1. That the Power Source Philippines Energy, Inc. (PPEI) should install in their plant the Electrostatic Precipitation (EP) or Bag Filter to clean the fly ash before it emits to the air and adhere strictly to the Philippine Air Quality Standards of not more than 150 mg/Nm³
2. That the Iligan City residents particularly residents in Barangay Kiwalan, Acmac, Sta. Felomina, Dalipuga and nearby barangay should be given preference in hiring plant employees
3. That the DENR-Environment Management Bureau (EMB) in partnership with the Office of the City Mayor through City Environment and Management Office (CEMO) and SP Chair on Environment and SP Chair on Health should establish a multi-partite monitoring team to monitor the compliance of the power plant in implementing environmental laws;
4. That the power coal + biomass power plant will secure the Environmental Compliance Certificate and Permit to operate from the DENR - Dept. of Environment and Natural Resources - Environmental Management Bureau.
5. That in the event that the PPEI fails to comply with the environmental laws and standards, such failure would be sufficient or enough basis for Iligan City to demand the closure/shutdown of the said coal-power plant.

The map shows the site of the construction of CFPP. The CFPP is being constructed at the back of the CRH-Aboitiz Iligan Plant (CAIR) located in Barangay Kiwalan, Iligan City. The construction of CFPP will provide 12 MW power to ILPI to supply power to the City, and 8MW exclusively for CAIR energy consumption.

PERCEPTION ON THE EFFECTIVENESS OF LAKBAY-ARAL IN RELATION TO SOLID WASTE MANAGEMENT: A CASE IN KAPATAGAN, LANA O DEL NORTE

Meldgyrie Mae M. Andales- meldgyriemaeandales@yahoo.com

ABSTRACT

This study attempts to assess the role of the Lakbay-Aral Program (LAP) of the Municipality of Kapatagan, Lanao del Norte, the Philippines in relation to the municipality's program on Solid Waste Management which the local/municipal government perceived to be very important in the maintenance if not in the levelling up the physical living condition of the residents.

Expectedly, the study opened with a brief but substantial assessment of the objectives, activities, approaches of the Lakbay Aral Program focusing on thee Solid Waste Management Program of Kapatagan vis-à-vis those of the provinces, cities/municipalities and barangays as points of visit by LA participants (e.g. mayors etc.) which became the framework for the study.

In order to achieve the main objective of the study – assessment of the effectiveness of Lakbay Aral Program – 16 key informants (KIs) and 50 household (HH) respondents were selected from five (5) barangays through accidental sampling. Respondents' profiles were analyzed to determine if they impact on the perceptions on effectiveness of LAP.

Both KIs and HH respondents reported affirmative responses on LPA. Further analysis of the latter's responses however suggested that dissemination of the program is effective but as far as the application of the rules is concerned it is not.

And since, the Lakbay - Aral is effective to the Solid Waste Management Program, it therefore follows that it could help improve the lives of the residents of the community.

The researchers therefore recommend that a similar study and a follow up study shall be made to ascertain whether the LA is really a good vehicle to the program, thus encouraged.

Key words: Lakbay-Aral or Educational tour, Government, Politics, Development

INTRODUCTION

This paper attempted to study the Lakbay–Aral Program of the Local Government of the Municipality of Kapatagan, Lanao del Norte. The study is on solid waste management program which is one of the instruments used in Kapatagan, Lanao del Norte to improve the living condition of its residents. This study looked into the effectiveness of the Lakbay–Aral basing on solid waste management that the government of Kapatagan, Lanao del Norte participated through the Department of Interior and Local Government (DILG).

Lakbay–Aral, as encouraged by the Department of Interior and Local Government, will enable the Mayors, other municipal officials and government employees to witness first-hand on how municipalities, provinces and cities, managed their municipalities to address predicaments and issues on solid waste management, agriculture, organic farming, tourism and others. This program allows others – municipalities, provinces, and cities – to replicate the good practices of the visited localities.

Over a decade, Lakbay – Aral or the so-called travel of the government officials of different cities and municipalities of provinces is widespread. The travels are said to be for the benefit of municipalities in the province. The participants of the program claim that one objective of the activity is to present ideas on proper implementation, ways and methods and dos and don'ts of certain projects and programs and find solutions to problems.

Lakbay – Aral Program may develop participants' skills and employ different techniques in different perspectives.

The purpose of the Lakbay- Aral Program is to allow the participants to learn more in a different setting and a scene for a different outcome. Lakbay - Aral program can develop the participants' skills with regard to learning and gaining additional knowledge like, in a certain incident - participants shall know how to settle this kind of 'issue' on the basis of what they have learned on the Lakbay - Aral Program during the duration of time by applying it to the situation, their exposure by visiting and interacting something new around them, like a new perspective when it comes to interacting with a different culture. In another perspective, this programmed activity does prioritize the faculty and students for further learning with different themes like different scenery that includes the understanding of divergent and distinct culture, and most, develop a well-established of deeper sense of personal awareness.

LEGAL AND THEORETICAL FRAMEWORK

Floods and typhoons have been the by-products of improper handling of

wastes around the world hence, it is essential to the world to address the issue on wastes and waste management. The wastes generated by the people should be limited and should be monitored thus stipulated in the Local Government Code of 1991 in Section 17 that Local Government Units (LGUs) shall exercise such powers and discharge such functions and responsibilities as are necessary, appropriate, or incidental to efficiently and effectively provide basic services and facilities such as solid waste disposal system or environmental management system and services or facilities related to general hygiene. More so, with the high population density of cities and municipalities, high consumption rates, and concentration of packaged goods, the issue of proper management of wastes should be addressed immediately thus the creation of the Solid Waste Management pursuant to the mandate to the Local Government Units (LGUs) to have their own area-wide waste management systems. However, to this effect, the government has created, passed and enacted the Republic Act 9003 of 2000, known as Ecological Solid Waste Management Act of 2000. The said act is,

An act providing for an ecological solid waste management program, creating the necessary institutional mechanisms and incentives, declaring certain acts prohibited and providing penalties, appropriating funds therefor, and for other purposes.

Ecological Solid Waste Management, as defined in Art. II, sec. 3 (I) is,

The systematic administration of activities which provide for segregation at source, segregated transportation, storage, transfer, processing, treatment, and disposal of solid waste and all other waste management activities which do not harm the environment.

The implementation of this act shall be embodied in the Department of Environment and Natural Resources or DENR in its DENR Administrative Order No. 2001 – 31 s. 2001 also known as Implementing Rules and Regulations of Republic Act 9003 which has defined the rules of the local government's implementation and its adoption to the republic act. In Rule VIII or the Implementation of the Ecological Solid Waste Management Systems of DENR Administrative Order No. 2001 – 31 s. 2001 mandated that in sec. 2,

The Local Government Code defines the LGU as the primary responsible body for the implementation and enforcement of the ecological solid waste management systems within their respective jurisdictions.

Waste collection shall be conducted at the barangay, and further sorting and segregation at the Materials Recovery Facility.

In another perspective, as a way of delivering efficient and more effective means and method of Republic Act 9003, Lakbay – Aral related to solid waste management has been conducted and participated in by different barangays, municipalities, provinces and cities to replicate

essential best practices of the visited municipalities or cities in their own jurisdictions. In an effort to improve their (barangays, municipalities or provinces) own adoption to the Republic Act 9003, one can use Lakbay – Aral. A municipality, province or city may be allowed to conduct or participate Lakbay – Arals however, must follow the House Bill No. 3277 or Government Employees Official Travel Accountability Act of 2010 which is an act,

Regulating official local and foreign travels of government officials and employees to ensure transparency and accountability in the use of funds requested for the purpose, defining penalties for noncompliance with disclosure, accounting, liquidation and reporting requirements, and for other purposes.

The act defined in section 3 states the allowable authorized travels of the officials or government employees in or out of the country. Accordingly, only those local and or foreign travels which are urgent and extremely necessary are the ones to be entertained and to be allowed. Furthermore, this house bill has defined the allowable travel expenses, approving authority of travels of officials and employees, restrictions of foreign travels, and some common provisions on liquidations, reportorial requirements and penalties if officials fail to comply the following rules mandated by the law.

Taken as legal frameworks for this study are R.A. 9003 or Ecological Solid Waste Management Act of 2000, and House Bill No. 3277 or

Government Employees Official Travel Accountability Act of 2010.

This study is further anchored on the theories of policy implementation of Koenig (1986) and the effectiveness of laws of Allott (1981).

According to Anthony Allott (1981) one of the ways in addressing the social ill is to create laws; these laws created are for the benefit of the society. According to Allot (1981),

The purpose of the laws is to regulate or shape the behavior of the members of the society, both by prescribing what is permitted or forbidden, and by enabling them, through the establishment of institutions and processes in the law, to carry out functions more effectively.

Moreover, Koenig (1986) claims that public policies or laws are rooted in the needs, wants and desires posited by the environment. These needs, wants and desires come from the public which will be addressed by the law-makers or policy-makers. With the laws created by the policy-makers, it has the notion that this will bring goodness and prosperity to the community however, these laws are at some point, not all effective and efficient because according to Allott (1981), there are some instances that policy-makers forget to evaluate the policies that they created, they tend to neglect the laws after being passed. Allott (1981) points out that in policy ineffectiveness, policy – makers have this tendency to put the blame on people. That accordingly, “if only they may think, people would realize that obeying laws is essential for the smooth functioning of society and the achievement of the social goals set by those who appear to have command of the society” however, this pin pointing of policy – makers tend to be

pointing in a wrong way because as Allott (1981) emphasized, those people who make the laws are the ones who are largely responsible for the failure of the laws. His perspective explicitly showed that it takes two to tango, policy-makers and the people have both the responsibility to maintain, sustain and abide by the laws created.

As stated by Allott (1981) “Law lives and develops”; it evolves through the spectrum of implementation into which laws or policies have to cope with the new circumstances that it encountered which actualize potentials embedded in the original policy ideas (Koenig, 1986). Allott (1981) and Koenig (1986) define that as the law or policy is implemented, it changes through time because of the unanticipated circumstances encountered throughout the process of implementation. Furthermore, Majone and Wildavsky (1978) as mentioned by Koenig (1986) articulate that “Implementation is shaped by the original policy making from which it springs” which stresses that as the law or policy being implemented, it should follow the implementing rules and regulations of the said law or policy yet, Koenig (1986) indicates that through the process of implementation and through bureaucratic means, law or policy implementation tend to be reshaped and transformed because there are events and situations which are not anticipated by the policy or law makers before the creation of the law or policy. Moreover, Koenig (1986) emphasizes that the policies created which actually consist of goals, ideas and objectives must be dispositional. This means that in the implementation process, the policy to be imposed in society will depend on how policy implementers see the policy that would in way substantially transform and make these policies be workable as possible.

Koenig (1986) elaborates his idea on implementation that,

Implementation is a crucial juncture at which policy is endowed with essentials that were not and could not be provided for its formulation, including doctrines to explain and defend it, and to attract and maintain the support that established it in a logical niche in a densely occupied policy space.

It is being said, implementation is crucial since it transforms and changes in time depending on the resources given, problem addressed, implementer's objectives towards addressing the problem and to the implementer who implements the policy with such concern, effectivity of the policy or law is at stake. Allott (1981) said, "A general test of the effectiveness of a law (a particular provision of a legal system) is therefore

R.A. 9003 or also known as Ecological Solid Waste of 2000 and Lakbay – Aral Program were the variables needed in making and creating the Integrated Solid Waste Management Ordinance of Kapatagan, Lanao del Norte. These mentioned variables were the factors to the legal basis of the creation of the program. Lakbay – Aral Program, on the other hand, is an idea generated program into which officials can acquire proven and tested approaches in implementing Solid Waste Management and other best practices achieved in implementing the Solid Waste Management Program. Lakbay – Aral, as mentioned in the book of *Critical Steps for the First 100 Days: A guide for Municipal Mayors* (2007), introduces innovative ideas of program or policy implementation.

to see how far it realizes its objectives, i.e. fulfills its purposes." With this theory of effectiveness, this will be the basis of laws' effectiveness and the success of the law-makers to deliver the purpose to make the society peaceful and order.

CONCEPTUAL FRAMEWORK

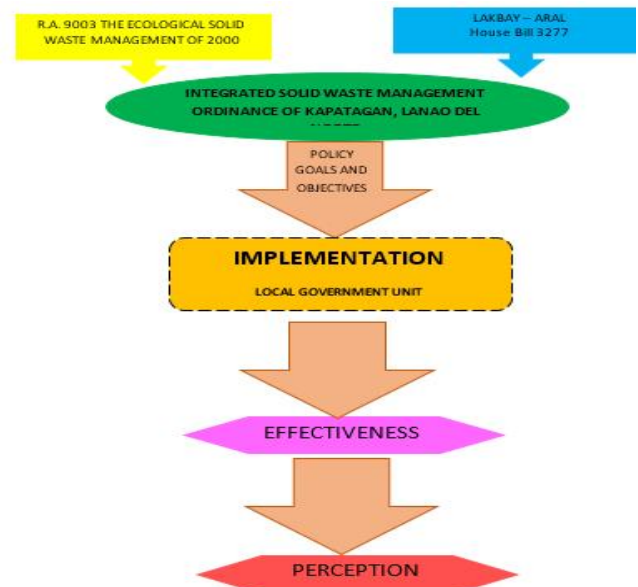

Figure 1 Shows the Schematic Diagram of this Study

Through the House Bill 3277 and Executive Order 248 s. 1995, Lakbay – Aral happens. These legal documents served as the determining factor of the approval of the participation of Lakbay – Aral which can be participated in by both government officials and employees of different provinces, municipalities, cities and barangays.

The ordinance is created in compliance with Republic Act 9003.

Implementation was the intervening variable through which the effectiveness of the law was evaluated and through such the perception of the respondents were drawn.

Through the help of the implementation process and approaches of the ordinance, the respondents were able to analyze the effectiveness of the law – RA 9003 – and the program Lakbay

– Aral. With the effectiveness or ineffectiveness of the law, the respondents' perceptions towards the law and the program were drawn.

Integrated in the ordinance are the RA 9003 mandates and Lakbay – Aral's learned ideas and approaches for the better implementation and enactment of RA 9003. The ordinance was one of the core bases of this study.

Implementation was the intervening variable through which the effectiveness of the law was evaluated and through such the perception of the respondents were drawn. With the help of the implementation variable, which is the core basis of the study, it helped determine whether the Local

METHODOLOGY

This type of research is a descriptive – correlational in nature. It is considered to be descriptive since it described and showed data in a meaningful way (Mcnabb, 2013). Moreover this study conducted surveys, interviews and questionnaires that helped describe the implementation process of Solid Waste Management of Kapatagan, Lanao del Norte. It examined the lessons learned of the participants of Lakbay - Aral and how the government of Kapatagan, Lanao del Norte implemented the project – Solid Waste Management through interviews and ocular inspections of the five selected barangays. Lastly, it is correlational since it determined the association existing between the respondents' socio-demographic characteristics and level of perception on the Lakbay – Aral Program. Using the data gathered the researchers have given their interpretations and their analysis and eventually, from these data, implications was then formulated. This study can be considered an exploratory one. It has limited number of Review of

Government Unit (LGU) of Kapatagan, Lanao del Norte have replicated what they have learned in Lakbay – Arals that they have participated; though there are variables as Allott (1981) claimed to be a testing factor of the effectiveness of the law. Under the implementation were the Local Government Unit (LGU) and the Barangay which enacted the law.

Through the help of the implementation process and approaches of the ordinance, the respondents were able to analyze the effectiveness of the law – RA 9003 – and the program Lakbay – Aral. With the effectiveness or ineffectiveness of the law, the respondents' perceptions towards the law and the program were drawn.

Related Literature. The data and information gathered were done through surveys and supported by interviews of participants and other participating units of the program like Department of Education.

This study focused on the Municipality of Kapatagan, Lanao del Norte. The researchers selected five (5) out of thirty three (33) barangays of the municipality. Kapatagan was known to be a second class municipality in the province of Lanao del Norte and it has 53,916 people. It is bounded by municipality of Lala and Panguil Bay on North; Municipality of Baroy and Salvador on the East; Municipality of Sapad in the Southeast; Municipality of Sultan Naga Dimaporo in the South and the Province of Zamboanga del Sur in the Western and Northwestern part. The Kapatagan is composed of 33 barangays (Please refer to Appendix D) and only Barangay Poblacion with a population of 11,254 in 2010 has been considered and classified as an urban barangay based on NSCB Board Resolution No. 9, series of 2003 (Municipal Solid Waste Management 10 year Plan).

Kapatagan, Lanao del Norte is known for its active participation in Lakbay – Aral. Over 9 years as a Mayor, Atty. Benjie Baguio, has been participating in Lakbay – Arals which he believes could be a good avenue to uplift the living condition of the people of Kapatagan, Lanao del Norte. As a result of such participation, Kapatagan, Lanao del Norte has received ample rewards, to mention: Seal of Good Housekeeping (2011-2013), Most Outstanding Local Chief Executive in Region X (2011), *Natatanging Bayan* Award (2011-2013), *Agri Pinoy* Rice Achievers (2012), *Sandugo Masigagsig* Award (2013) and Honor Roll, Implementation of Anti-Red tape Act (ARTA) (2012). Moreover, for three consecutive years, the seal of good local governance from the Department of Interior and Local Government has been awarded to the municipality as a symbol of its attempt to help and uplift the socio-economic life of the Kapataganons.

RESULT AND ANALYSIS

The researchers were able to grasp ample significant information through key informant interview guide questions to the sixteen (16) key informants about the municipality's Lakbay - Aral thus, presented in this section are the information about the Lakbay – Aral joined and participated by the Local Government of Kapatagan, Lanao del Norte especially on the Solid Waste Management Program. In addition, researchers were able to gain another 50 household respondents, from the 5 barangays (10 participants from each barangay). Since this study also focused on the Solid Waste Management Program of Kapatagan, Lanao del Norte, this section presents data regarding Solid Waste Management Program and Solid Waste Management Lakbay – Aral of

Kapatagan. More so, the best practices after their Lakbay – Aral related to Solid Waste Management, the implementation of the program and its effectiveness and the perception of the household respondents towards the Ordinance no. 5 Effectiveness are also included.

Through the interview of the Municipal Environment and Natural Resource Officer of Kapatagan, Lanao del Norte, the researchers have found out that although they have gone to different Lakbay – Aral related to solid waste management, they have somehow, in their own little ways, replicated and are, in some ways, encouraged by their Lakbay – Aral experiences.

After the researchers' interview with the Municipal Environment and Natural Resource Officer (MENRO), the researchers have identified challenges concerning the implementation of the program – Solid Waste Management. Accordingly, the researchers have identified five issues and concerns which are discussed thoroughly in the next sections. These five issues and concerns are: (1) implementation is time consuming, (2) lack of manpower, (3) lack of constituents' participation and cooperation, (4) lack of barangay officials' motivation and (5) lack of financial support.

As mandated in Section 10 of RA 9003 that the Local Government Unit has the primary responsibility in implementing and enforcing the Act within their jurisdiction. Furthermore, section 10 provides that, Segregation and collection of solid waste

shall be conducted at the barangay level specifically for biodegradable, compostable and reusable wastes: *Provided*, that the collection of non-recyclable materials and special wastes shall be the responsibility of the municipality or city. Moreover, the implementation and policy enforcement of SWMP should be operated by the Municipality in collaboration of its barangays. However, there are predicaments that may cause the implementation of the said rules towards the accomplishment and realization of the Integrated Solid Waste Management program.

Depicts twenty (20) descriptive statements which are integrated in the Municipality of Kapatagan. These were presented to the household respondents towards which the latter indicated their agreement or disagreement along *Very Low* to *Very High* continuum. The table shows that 16 out of 20 statements were evaluated **very high** (3.25 -4.00 rating). Only four (4) statements were rated **high** (2.50-3.24).

The above results indicate that the household respondents from five (5) barangays perceived the provisions of the Ordinance No. 5, which are anchored on R.A. 9003 are implemented to a great extent. This further implies that the implementation is efficient and effective.

Summarizes the relationships between the respondents' characteristics in terms of gender, occupation, age, and perception on the effectiveness of Lakbay Aral in relation to Solid Waste Management. As shown, there is no significant relationship between characteristics (independent) and perceptions (dependent). Simply interpreted, whether male or female, government or private or self-employed, young or old, these characteristics have **nothing to do** with the perceptions on effectiveness.

From the data gathered, it shows the key informants believed on the effectiveness of the Lakbay - Aral in relation to Solid Waste Management. However, the same respondents appeared to be very reluctant on the reality of the effectiveness of the Solid Waste Management project. From the very start, the participants were very energetic in handling the program. Later, the interest in realizing their dreams in the program is weakened. The project is confronted with challenges like, finances and cooperation on the participating sponsors. There is a demand of more garbage collectors but due to budget constraints, the project remains a dream. Moreover, the facilities are not enough and a complete machinery of recycling the materials is not visible and the imposition of the ordinance remains a crucial issue and continued to be a debatable matter in the place. Though it appears that Kapatagan, Lanao del Norte constituents are for the development of the community, one can regret the idea that participation and cooperation on the residents are likewise difficult to achieve.

RESPONSES	FREQUENCY	PERCENTAGE
YES	13	81
COULD BE	2	13
NO	1	6
TOTAL	16	100%

From the table being presented above, it shows the frequency and percentage responses whether the implementation of the Solid Waste Management Program (SWMP) is effective or not. Basically, the eighty one percent (81%) of the key informants believe that it is effective while the thirteen percent (13%) of the key informants are not sure whether it is effective or not. Moreover, the six percent (6%) of the key informants did not consider that it is effective. This signifies that although eighty one percent (81%) believe that it is effective, there is six percent (6%) who are not convinced nor consider the program is effective. Evidently, this suggests that there is someone who is not satisfied with the performance and implementation of the program.

SUMMARY

From the Key Informants, it implies that from the sixteen (16) Key Informants: five (5) of them are considered as the youngest from the age bracket of thirty three (33) to thirty nine (39) years of age and two (2) from the sixteen are considered to be the eldest, who are in the age bracket of sixty (60) to sixty four (64) years of age. For the gender, eleven (11) of them are male and five (5) of them are female. For the occupation, from the sixteen (16) of them, eleven (11) are government officials and five (5) of the government employees. For the socio-demographic characteristic of the Key Informants, their occupation, age and gender cannot affect their level of perception towards to the effectiveness of the implementation of Solid Waste Management. In addition, from the household respondents, it implies that, for the age bracket six (6) of them are considered to be youngest that are within the age range of twenty seven (27) to thirty eight (38) years of age and eight (8) respondents are considered to

be the eldest who are ranging from sixty three (63) to seventy four (74) years of age. For the gender, from the fifty (50) respondents, fifteen (15) of them are males and the thirty five (35) of them are females. For the occupation, from the fifty (50) of them, four (4) of them are working as under government; fifteen (15) of them are working under private sectors; twenty (20) of them are self-employees; and eleven (11) of them are unemployed.

For the summary of the Lakbay-Aral, researchers interacted with sixteen (16) Key Informants- who happen to be participants of Lakbay-Aral that is related to Solid Waste management; and another fifty (50) respondents for a different perspective when it comes to the implementation of the municipal government of Solid Waste Management to the barangays of the Kapatagan, Lanao del Norte. For their Lakbay- Aral they have been to different places that could last- depending on the nature of the Lakbay Aral. For a person to be able to join the Lakbay-Aral, a person must be significant to the nature of the Lakbay-Aral for them to be able to serve as a helping hand. In addition, their experiences also do vary depending on which place they have been, but the Key Informants' answers swirls around the idea of learning new rules, techniques, maintenance, recycling and segregation.

Summarizing the Solid Waste Management, researchers focus on the area of Kapatagan, Lanao del Norte along with their Solid Waste Management Program and Lakbay-Arals that are related to Solid Waste Management; which includes the implementation program and the best practices that could be related to Solid Waste Management. Upon data gathering, researchers did gain an ample amount of information about the

Key Informants' perception on Solid Waste Management Program that basically spins around the idea of fixing dumpsite, cleanliness and sanitation of the area, expansion on the notion of Solid Waste Management, and proper disposal of wastes. In addition, their issues and concern about Solid Waste Management focuses on the duration of the implementation, lack of man power, lack of constituents' cooperation, lack of barangays' motivation, and lack of financial support.

Furthermore, from the interviews and questionnaires being gathered by the researchers they have found out that the household respondents who came from the five (5) barangays believed that the implementation of the Solid Waste Management was effective, and believed the association between the socio-demographic characteristics of these respondents and their level of perception is not affected by their gender, occupation and age. Moreover, for perception of the effectiveness of Solid Waste Management through Lakbay-Aral, researchers interviewed sixteen (16) Key Informants who participated in the Lakbay-Aral related to Solid Waste Management and had a result that implies that Lakbay-Aral can make a big change, it can help people to be motivated, can educate people on proper waste disposal, and it can improve Kapatagan, Lanao del Norte.

For the effectiveness of the Implementation of Solid Waste Management Program in the Key Informants' perspective, from the sixteen (16) of them, thirteen (13) of them said, yes; two (2) of them believed that, it could be effective or not much, and one (1) of them believed that it was not effective. In spite of the good remarks of the household respondents on the effectiveness of the dissemination of the information regarding the Solid Waste

Management program to their barangays and the Key Informants' good remarks on their implementation action regarding Solid Waste Management, as the researchers asked these Key informants regarding their Lakbay-Aral only few of them can elaborate or explain their experience. With that, findings implied that Lakbay-Aral trips were only pleasure trips. Based on the findings of the study, the following conclusion are made divided in two categorical manner – Lakbay – Aral and Solid Waste Management of Kapatagan, Lanao del Norte.

CONCLUSION

For the Lakbay-Aral, It is evident in the data provided by the researchers that Lakbay – Aral was used by the Local Government of Kapatagan, Lanao del Norte as a vehicle to impart ample information with regard to solid waste management in terms of implementation, machineries and programs that may help not just the economy but as well the people. However, even though that the objectives of Lakbay – Aral are as viable as they may seem, the participants and the municipality do not have any records to the Lakbay – Arals that they have gone into thus, the data provided in Chapter 4 were solely based from the respondents' memory. They cannot provide the researchers the full lists of their Lakbay – Arals thus, making it difficult to trace back the Lakbay – Arals that they have participated and joined.

House Bill 3277 section 13 stipulates the reportorial requirements of the officials or employees. Accordingly, as mandated in the house bill,

Every official or employee assigned or authorized to travel in accordance with

the provisions of this Act shall, within sixty (60) days after his return to his official station, submit a report with his recommendations, if any, on the conference or seminar attended, examination or investigation conducted, or mission undertaken, to the head of his office.

Furthermore, when the researchers have asked the key informants whether they have submitted reports on their travel trips, most of them – government employees – affirmed that they have submitted and included it in their MANCOM; however, in the cases of *Punong Barangays* when asked the ABC or the Association of Barangay Chairman pointed out that it is in the Barangay Chairman's endeavor hence, they do not have copies about such reports.

Moreover, with regard to section 3 of the House Bill 3277, it states that,

Only local and or foreign travel which are urgent and extremely necessary, will involve the minimum expenditure for the government, and are expected to bring direct gain and immediate benefit to the agency concerned or the country shall be authorized.

The said travels of the government officials and employees have been for the good cause thus, provided that they abide the house bill 3277.

For the Solid Waste Management of Kapatagan, Lanao del Norte, In terms of the implementation of the Solid Waste Management of Kapatagan, Lanao del Norte, it is

indeed true in the case of Kapatagan, Lanao del Norte what Anthony Allott (1981) points out that in policy ineffectiveness, policy – makers have this tendency to put the blame on people. That accordingly, “if only they may think, people would realize that obeying laws is essential for the smooth functioning of society and the achievement of the social goals set by those who appear to have command of the society” however, this pin pointing of policy – makers tend to be pointing in a wrong way because as Allott (1981) emphasized, it is those people who make the laws are the ones who are largely responsible for the failure of the laws. This perspective of Allott (1981) explicitly shows that it takes two to tango, policy-makers and the people have both the responsibility to maintain, sustain and abide the laws created.

Moreover, as Koenig (1986) has emphasized that laws and polices change through time so that it should be evaluated and be monitored in order to cope with the changes it provides. More so, the theory of Anthony Allott's effectiveness of the law which can be tested into how far the law has realized its purpose and objectives is true and evident in the study hence visible in the data provided that the household respondents believe that it is effective while in *lakbay – aral*, the key informants have also believed that it did provide them ample information needed for the implementation of the program yet the problem within such is that those they have learn in those *lakbay – arals* are not properly realized by the government.

Moreover, Koenig (1986) emphasized that the policies created which actually consists of goals, ideas and objectives must be dispositional. This means that in the implementation process, the policy to be imposed in society will depend on how policy

implementers see the policy that would in way substantially transform and make these policies be workable.

RECOMMENDATIONS

The Municipality of Kapatagan, Lanao del Norte, may use one of the 2 common strategies presented by Koenig (1986) in his book "*Public Policy: An Introduction*" and these are: programmed implementation and adaptive implementation; the making of the ordinance should involve the constituents. They should create an office that will focus on the waste management of Kapatagan, Lanao del Norte. They must address their issue on the shortage of manpower, and they must continue to partner with other offices and private sectors, they should have enough financial support for sanitary landfills and they must provide reward and punishment approach. They should create livelihood programs that would generate jobs; and they should ensure that those implemented in the places they have gone to be replicated or would serve as their model. Those who have joined Lakbay-Aral shall be mandated to replicate in their own little ways; and lastly, they should oblige the constituents to re-echo the seminars and fora.

The Municipal Officials should be compassionate, committed, politically skillful leaders, and they should implement the ordinance in a strict way.

The Solid Waste Management should improve the approaches, methods, guidelines to fit into the cultural milieu of the community.

The Barangays, should formulate a barangay ordinance regarding solid waste management in line with the Ordinance No. 5 of Kapatagan, Lanao del Norte;

Orientation, seminars, workshops and lectures should be conducted at the barangay level; Implementation should be strict and consistent. Establish Barangay Material Recovery Facility. Collection of garbage, if may apply, must be consistent and must be sustained. Segregation in each household is highly encouraged.

The Municipal and Barangay Constituents, should be politically active, cooperative and participative.

The Researchers, if they wish to continue this study, they should be particular with: Wider scope of the study and larger number of respondents. They must have an ocular inspection of the places they have gone to for Lakbay – Aral. The level or degree of compliance of the Municipality of Kapatagan, Lanao del Norte with the R.A. 9003 s. 2000 must be strengthened and lastly, comparative analysis of barangays in terms of level or degree of compliance of the ordinance implemented which would lead to their perceived effectiveness of the program.

Transcending the Binary: Researching Governance as Metagovernance

Theerapat Ungsuchaval¹

School of Social Policy, Sociology, and Social Research, University of Kent, England

E-mail: t.ungsuchaval@gmail.com

Abstract

Governance is essentially a popular contested concept and its definition is variously applied. Commonly agreed, it refers to a change in the meaning of government, the way of doing public business which has shifted from vertical, hierarchical to more horizontal, synonymous with network. Hence, it has arisen as a new mode by which society is governed and denotes the institutions, traditions and processes which define how power is operated.

Given that, different governance scholars do have different ontological and epistemological positions. Two authoritative governance research strands have been noted: formal and institutional, and interpretive. The institutionalist approach assumes the capacity to understand governance through the behavior of institutions and organizations while the interpretative approach argues for the interpretations of individuals instead. However, this paper contends that both of them are commonly represented in binary and lack critical elements. This article thus tries to discuss the epistemological route to 'transcend the binary' by specifying critical realist insights, which can contribute a relatively new perspective to governance research as the concept by nature is non-intradisciplinary and, in reality, holding a mixture of various modes and levels of governance. The alternative approach is the analytic of metagovernance.

Metagovernance shows us an alternate way we can read contemporary governance which is, in particular, interested in power relations and interactive modes of governance, attempting to bring the centrality of the state back in the analysis of governance and then to call for the recognition of government and governance in the shadow of hierarchy. It sensitizes us the context and limits of governance rather than simply talking about the implications of the shift to governance with and thorough networks. The article does not suggest that there is one best/right way to study governance. Transcending the binary between institutionalist approach, on the one hand, and interpretivist approach, on the other hand, can offer a new perspective of governance and how we (re)think about it.

Keyword: Governance, Metagovernance, Institutionalism, Interpretivism, Critical Realism

INTRODUCTION

The idea of governance, which has become increasingly mentioned and applied starting from the 1980s, "*seeks to explain a whole series of realignments and offers a range of explanatory tools*" (Newman, 2001, p.22) about changing state and society and the meaning of government, pointing to something that is broader and beyond government.

Governance is essentially a popular contested concept in which its definition is "*as varied as the issues and levels of analysis to which the concept is applied*" (Krahmann, 2003, p.323). Popularly cited,

governance refers to a change in the meaning of government, the way of doing public business which has shifted from vertical, hierarchical to more horizontal, synonymous with network. Hence, it has arisen as a "*new method by which society is governed*" (Rhodes, 1996, p.652) and denotes the institutions, traditions and processes which define how power is operated. However, the state in modern governance is, to put it in Skelcher's term (2000), a 'congested state', full of fragmented and plural forms of governance, not just networks.

¹ The author is currently doing a PhD at School of Social Policy, Sociology, and Social Research, University of Kent, England. He also holds MA Civil Society, NGO, and Nonprofit Studies at the University of Kent, and B.Pol.Sci. at the Thammasat University, Thailand.

This article recognizes the diversity of governance theories and aims to specify main approaches to study contemporary governance: institutionalist and interpretivist accounts of governance. Different understandings of governance do not only reflect different readings or interpretations of the situation but also indicate the different ontological and epistemological positions of the analysis. Unfortunately, these two authoritative approaches are represented in binary and problematic in many senses. The article therefore deals with this issue and tries discussing an approach to transcend the institutionalist-interpretivist epistemological binary to the study of governance by suggesting an alternative account using critical realist insights which, consequently, points to the analytic of metagovernance.

Two Worlds of Governance Theory: Institutionalism and Interpretivism

The conceptual vagueness and contestedness of the concept of governance, surprisingly, leads the way for interpretative flexibility of how to study governance (Schneider, 2002) and make governance always attractive as it is compatible with a wide range of theories and approaches; *“it can be shaped to conform to the intellectual preferences of the individual author and therefore to some extent obfuscates meaning at the same time that it perhaps enhances understanding”* (Peters, 2011a, p.63). To some extent, the utility of the governance idea lay on which of several extant approaches of governance is adopted; questions and understanding towards governance reflect the perspective (Peters, 2000). Particularly, what makes one governance research differs from another is an epistemological standpoint of a particular governance theory. The governance research universe, consequently, consists of different research strands (see Levi-Faur, 2012; Bevir, 2011b). Nevertheless, as Bevir and Krupicka (2011) observe, two contrasted

types of recent authoritative governance theory can be noted: the formal and institutional theory and the interpretive theory.

Formal and Institutional Account of Governance

To make sense of the broader idea of governance (and networks), institutionalism would be an attractive starting point (Kjær, 2011; Baker & Stoker, 2015). The early governance literature has drew upon institutional theory and behaviorist analysis (Marsh & Rhodes, 1992; Rhodes, 1997; Kjær, 2004; Chhotray & Stoker, 2009; Peters, 2011b; Baker & Stoker, 2013) which views governance as driven by links between actors and agency in networks. Even now, much of dominant governance insights comes from the new institutionalism² which is interested in explaining how networked relationships between government and societal actors affect the policy process (Bevir, 2003; Rothstein, 2014) and investigate the formal and informal rules of the game in a polity (Feeny, 1993; March & Olsen, 1995; Hyden, Court, & Mease, 2004). Unsurprisingly, governance is popularly used to study multiagency partnerships, self-governing networks, the blurring of responsibilities between the public and private sectors (Stoker, 1998).

Common institutional analyses tend to explain ‘governance’ by positing it in contrast to ‘government’; governance refers to a more pluralistic pattern, process and the act of governing while government refers to institution or the governing body itself (see Osborne & Gaebler, 1992; Bevir, 2010). The thesis of the shift from government to governance is repeatedly portrayed by many institutionalist writings (see Rhodes, 1996, 1997; Smith, 1998; Richards & Smith, 2002).

Now, two key approaches should be mentioned: society-oriented approach and state-oriented approach. For example, some who took the first approach tended to look at the dynamics of interactions among the

² There are ‘old’ institutionalism and ‘new’ institutionalism. The old institutionalism fell out of favor and has been replaced by the new one. In the context of contemporary governance and in this work, new institutionalism is commonly referred to. New institutionalism *“is not a single animal but rather is a genus with a number of specific species within it”* (Peters, 2012, p.2). Three major understandings are normally mentioned as a version of the new institutionalism: rational

choice, historical, and sociological. Each offers a distinct comprehension about what institutions are and how they influence actions (see Schmidt, 2006; Peters, 2011c, 2012; Lowndes & Roberts, 2013; Baker & Stoker, 2015). Some might add a more ‘constructive’ or ‘discursive’ institutionalism as the fourth version which privileges more agency (see Hay, 2006, 2011a, 2011b; Schmidt, 2006, 2011).

actors in the network (Kickert, Klijn, & Koppenjan, 1999; Rhodes, 1996; 1997; Salamon, 2000, 2002) whereas the others who accept a more state-oriented approach were more focused on state steering and the role of the government as powerful actors in governance arrangement (Scharpf, 1994; Painter & Pierre, 2005; Peters & Pierre, 2004).

The institutional theory, for the most part, has symbiotic relationship with the society-oriented approach so-called 'network governance' or the 'Anglo-governance' school where Rhodes is counted as a prominent scholar (Bevir, 2003, 2012; Marinetto, 2003). Governance, in this respect, notably refers to networks defined as a distinctive coordinating mechanism on the contrary of hierarchies and markets; and the state is no longer the alpha and omega of governance arrangement. The apparent of networks indicates a basic alteration to the institutional configuration of government and society. Consequently, systemic account of governance is needed to be clear on how institutions are comprehended (Baker & Stoker, 2015). Kjær (2011) summarizes that dominant uses of the concept show common consideration with institutions and institutional change. As such, institutionalist approaches are well-established in governance research.

Typically, institutionalists argue that *"governance begins with structures and processes rather than the individuals within them"* (Peters, 2011a, p.69). Governance denotes the institutions, traditions and processes which define how power is operated. The institutional concept emphasizes the multilayered structural context of rule-governed understandings (Lynn, Heinrich, & Hill, 2001).

Governance in the eye of institutional theory is concerned with significance of institution and its nature, ability, and structural configurations to affect framework and capacity of the political system to govern effectively and shape the identities, institutions, and actions of civil society and outcomes (March & Olsen, 1995; Peters, 2000). If governance is about engaging with various actors, the role of the institution in

shaping opportunities for the engagement then matters. Peters (2011c) claims that institutionalism principally interprets governance choices by positioning facilitators or constraints on individuals within institutions, wither normatively or structurally. He summarizes that *"[p]erhaps the principal manner in which institutions influence governance is that institutions represent the interaction of structures and processes for governing"* (Peters, 2011c, p.81).

Epistemologically, majority of the underlying assumption towards institutionalist version of governance reflects a positivist orientation. Bevir (2005) points out that positivist assumptions influence forms of institutionalism in two major ways; firstly, they make institutionalists believing that explanation of individual behavior can be done with allegedly objective social facts about people; and secondly, they lead institutionalists to see individual actions by uncovering laws. Besides, Bevir (2005, 2010) criticizes the 'top-down' conception of institution in institutionalism as the lingering positivism which keen to explain everything with reference to observable, measurable phenomena.³ Institutions are seen in reified form that build rules and norms to govern and explain actions.

Typically, positivist institutionalists are likely to make a comprehensive account of governance through defining governance by reference to one or more of its essential elements, notably networks seen as sets of fixed structure which can be managed through different instruments and techniques, the position sharing with majority ideas of public management. These essential elements are general which characterize all cases of governance (Bevir & Rhodes, 2007). It also favors structural power over agency which will be discussed later. Institutional accounts tend to make the analysis positivist, though many institutionalists are likely to see themselves not as positivist but eclectic in their epistemology.

However, some institutionalists admit that institutional theory is not, and cannot be a perfect theory of governance as institutions

³ In response to critiques made by interpretivists (which will be discussed later), Peters (2011b) notes that *"the absence of support for the interpretivist approach does not imply an*

absence of interest in ideas or ideational explanations in governance. Most contemporary models of institutions [...] rely heavily on ideas and norms" (p.468).

consist of values and ideas which influence institutions (and vice versa) about governing as well (Peters, 2011c). Developing theory of governance thus demands developing means of combining individual level behavior with structures and institutions (Peters, 2011a). This call for more emphasis on agency and interpretive elements to study governance.⁴

Interpretivist Account of Governance⁵

Situating in governance theory, interpretive approach essentially rejects the lingering positivism of most other approaches to governance especially mainstream institutionalism. However, it shares a line with the institutionalist approach by accepting that the world of governance is characterized by a shift from government to governance. Government is not and should not be the main point of discussion of governance research. What is difference is that the interpretive approach develop an anti-foundational consideration for how networks construct meanings and practices.

Interpretivist approach addresses that social explanations, as a matter of course, entail recovering and situating beliefs in the context of the wider webs of meaning where they are a part of. Typically, it lead to a more 'decentered theory of governance' (Bevir, 2003, 2013; Bevir & Rhodes, 2007) which seeks to install agency and contingency into the idea of governance.

First of all, interpretivists hold that studying governance should not begin with institutions themselves, but the practices that maintain them; *"interpretivism is different because it recognizes that political life takes*

place through language and that meaning is subjective, varying with the context of communication and the agency of the interpreter" (Turnbull, 2011, p.253). Bevir and Rhodes (2006a) claim that the decentered approach to governance essentially changes the way governance is seen as it asks us to look at the social construction of networks through the way in which individuals give meanings. In other words, decentering governance is to investigate how individuals build, maintain, and modify their social lives, institutions, and policies. Institutional norms in this view do not direct individuals' actions; instead, it is the beliefs which individuals adopt against traditions and in response to dilemmas that determine the actions. Hence, a decentered account of governance epitomizes *"a shift of typos from institutions to meaning in action"* (Bevir & Rhodes, 2006a, p.99).

Strongly criticizing the innate logic of institutions of institutionalism, the interpretive approach denies the structural power and the construction of typologies and reified concepts assumed to be able to applied in a wide range of setting (Bevir & Krupicka, 2011). Institutions and networks are not a fixed pattern but 'the contingent product of the circulation of rationalities' created by situated agents, intentionally and unintentionally (Bevir, 2010, p.266). Having no essence, institutions are 'contingent, changeable, and contestable practices' (Bevir & Krupicka, 2011, p.452); they are not autonomous in themselves and are at best contingent and constructed by practices (Turnbull, 2011, p.257). Therefore, institutions are not, and cannot be the unit of analysis of governance.⁶ Instead, exploring the webs of beliefs of the actors against the

⁴ Actually, contemporary institutional theory has, in fact, become more diverse and not retain itself with its behaviorist-positivist background. New development of institutionalist approach is focusing more on informal and contingent; some of them do go beyond formal theory to emphasize the role of ideas, norms, practices (see Schmidt, 2006, 2011; Hay, 2006, 2011a, 2011b; Greenwood et al., 2008; Peters, 2012; Lowndes & Roberts, 2013; Scott, 2014). There are many types of institutional analysis which employs post-positivist or interpretivist epistemology; historical institutionalism, sociological institutionalism and, particularly, constructivist or discursive institutionalism are good examples. They also have reconsidered the actors' position vis-a-vis institutions and come up with the idea that institutions exist as actors live *through and by* them (Bevir, Rhodes, & Weller, 2003; Hyden, 2008; Leftwich, 2010; Kjær, 2011).

⁵ The article recognizes that there are diversity and disagreement in interpretive theory (see Bevir & Rhodes,

2002; Parsons, 2010). However, here, the works of Bevir and Rhodes are mainly focused given their work are unique, influential and have directly and actively engaged in governance literature. Therefore, by interpretivist account of governance, this article means the interpretivist (in a strict sense) of Bevir and Rhodes versions.

⁶ To be fair, this approach allows institutional effects, to some extent. But outcomes or behaviors will be mostly depended on the capability of individuals to create, interpret meanings and negotiate or resist such institutional effects. Institutions therefore exist but understood as traditions, modified by dilemmas, not as the same for institutionalists. For Turnbull (2011), Bevir neither negate the existence of institutions nor the influence and important of them but rather raises questions about their place in the study of governance; what he does is identifying a dominant kind of 'methodological institutionalism' in governance studies and criticizes it. Bevir and Rhodes (2003a) admit themselves that some material

background of traditions adapted by dilemmas is a better way to study governance.

Consequently, governance consists of “contingent practices that emerge from the competing actions and beliefs of different people responding to various dilemmas against the background of conflicting traditions” (Bevir, 2011a, p.5). The approach is based on an anti-foundational theory of the state which allow the appearance of a ‘stateless state’ (Bevir & Rhodes, 2011, 2015). This approach regularly questions the concept of a set of management tools for governance and rejects an idea and use of ‘model’; instead, ‘narrative’ is advocated (Bevir, 2003; Bevir & Rhodes, 2008). Any endeavor to steer and manage networks is considered here as pointless; governance has to be a ‘bottom-up’ construction. The social construction of patterns of rule through the ability of individuals to create (or co-create) meanings in action is the key (Bevir & Rhodes, 2015).

Although the interpretive approach seemingly is a counterweight to positivist analysis, it has not proceeded uncontestedly. There are many responses and critiques towards the approach. Some of them constructively inquire about whether the interpretative turn abandons the value of the earlier insights from institutionalist traditions and influence of deep, not directly observable, structural influences on policy and action and whether the emphasis on meaning offers an deficient understanding of power relations (McAnulla, 2007; Marsh, 2008; Smith, 2008; Glynos & Howarth, 2008; Peters, 2011b; Baker & Stoker, 2013). It fails to consider the persistence of hierarchy and structurally derived constraints on action in government (Baker & Stoker, 2013). As Bell and Hindmoor (2009) remind us, government is, in fact, influential not because its well storytelling ability but its capability to retain state power and authority

over resources and territory. James (2009) concludes that the decentered theory is just a ‘rhetorical device’ for articulating “*greater reflection about the tools of political analysis,*” but “*it offers little when compared to the insights of mainstream approaches*” (p.342).⁷

Marsh (2011) especially questions the way Bevir and Rhodes use interpretivism and their call for “*new, better, more interesting, more fruitful ways of speaking*” about governance (Bevir & Rhodes, 2003b, p.60) despite what they said that “*there is no such thing as governance, but only different constructions of the several traditions*” (Bevir & Rhodes, 2003b, p.59). Marsh (2011) argues that it is never clear that the network governance is a description of how UK government operate and/or narrative about how it functions. Besides, Bevir and Rhodes themselves are seemingly contradicted about how they see governance as they speak of narrative but see the network governance as a more definite description. Their interpretivist accounts are prone to ‘epistemological slippage’ (Davies, 2011, p.76) and risking of being reductionist (Peters, 2011b).⁸

What should be particularly emphasized here is the problem with binary worldview of Bevir and Rhodes (see Bevir & Rhodes, 2003a; Bevir, 2005) as they see ones who are not an interpretivist as a positivist or modern empiricist, reflecting their narrow version of interpretivism (McAnulla, 2007; Marsh, 2008, 2011; Smith, 2008). This implies an ‘either-or’ worldview

Following these, this article concurs that there is no simple an ‘either-or’ worldview between positivist institutionalism and interpretivism; many alternatives can be raised in relation to the study of governance. Both approaches seem to take meta-theoretical issues limitedly; especially, they privilege one side of the dualism regarding structure and agency, rather than addressing

constraints do have impact such as economic influences. However, some can argue that the idea of ‘situated agency’ is clearly influenced by the ‘traditions’ which almost practically work as an institution, a structural constraint/facilitator (see Marsh, 2011).

⁷ Arguably, the interpretivist account of governance has much prescriptive and normative value, rather than analytical one. The interpretivist account as ‘a very practical concern’ (Bevir, 2011a) suggests us to listen to the stories and dialogue, advocates a bottom-up approach to governance. In doing so,

it ultimately proposes the ways to improve or create better governance which emphasizes people and everyday lives.

⁸ A good governance lens ought to equip us to not only describe and interpret beliefs and practices but also to comprehend how various governance strategies have implications for policy outcomes; reading meanings and beliefs will only tell us “*what take place at lower and more horizontal organizational levels*” (Kjær, 2011, p.109). A better governance lens should allow us to see governance as it, in fact, consists of complex interactions between vertical and horizontal processes.

them as a duality (Marsh, 2008; see also Marsh, 2010; Hay, 2002). This article argues for a critical realism as an alternative account towards governance.

Meta-theoretical Reflections: Structure and Agency

Versions of governance raise questions about structure and agency in governing. In general, institutional explanations are inclined to base decisively on structural explanations (Peters, 2011a; see also Hooghe & Marks, 2003; Duit & Galaz, 2008). For example, they suppose that the nature of the networks can determine the patterns of interactions (see Klijn & Koppenjan, 2004). However, Peters (2011a) reminds us that “*the actual decisions made are made by individuals, whether as single actors or through interactions*” (p.69). Some theories are obviously relied on agential explanations.

The debate over structure-agency relations is continual and “*reasonably simple to state, but not that easy to resolve*” (Howarth, 2013, p.116). This article does not intend to solve the problem but propose an alternative way to study both structure and agency. Wendt and Shapiro (1997) note that the ontological differences between those who are more structure-centered and more agency-centered lead a conclusion about where to look for and what counts as the significant causal mechanism in the first place. For the methodological convenience, the duality of structures and agency is “*a reflection of an intellectual division of labour, a methodological ‘bracketing’ of one set of concerns in order to concentrate on another*” (López & Scott, 2000, p.5).

Structure refers to context and the setting within which social, political and economic events emerge and obtain meaning. It is also about the ordered nature of relations and entities. Those who explain social phenomena or outcomes exclusively with reference to structural or contextual factors are considered a ‘structuralist’. In contrast, agency is action which is a political conduct (Hay, 2002). It refers to the capacity of an actor to act consciously and realize one intentions. Here, an actor assumably has autonomy and choice to perform. Being set up as such, structure and agency is commonly seen as oppositional;

nonetheless, it is not always necessarily the case. Those who exclusively believe in the ability of actors to act without contextual or structural factors are considered an ‘intentionalist’ or ‘voluntarist’.

Hay (2002) points out the structuralist tendencies of the new institutionalism which emphasizes “*the mediating and constraining role of the institutional settings within which [...] outcomes were to be realized*” (p.105). Institutionalists put a lot of emphases into mechanism of institutional constraint. In contrast, interpretivists usually argue that structures do not exist independently of agents. For Bevir and Rhodes (2003a, 2006a, 2006b, 2006c), structures, if any, play little role and do not have independent causal role; institutions are needed to be decentered. However, it does not mean that social contexts are not allowed to have influence and constraining effects; in fact, interpretivists deny reified practices or traditions as structures (Bevir & Rhodes, 2006b, p.18). Being narrated, institutions do not exist independently of ideas.

Ultimately, institutionalist and interpretivist debates is about what and how to privilege in the study of governance, structure or agency. Both of the accounts, to some extent, recognize both structure and agency but with different priority. Traditionally, voluntarists see social processes as being reducible to the seemingly unconstrained actions and wills of individuals; they privilege agency over structure. Structuralists, in contrast, produce much of their strength by countering the voluntarist; they presume structural determinism with passive agency, if any. Both approaches are an ‘either-or’ approach which, using Sayer’s term (2010), can be called a kind of ‘intellectualist fallacy’. Although one may be interested in social structure, it does not imply any priority for ‘structure’ over ‘agency’; the assumed incompatibility of them is overstated and the suggestion that one has to decide between these two ideas is misguided (López & Scott, 2000, p.5). This article says that structures and agencies are operationally interdependent, albeit ontologically separated. Structures cannot operate on their own; they need individuals to operate them (Sayer, 2010). Institutions have independent casual power. There can be no

action without structure (and vice versa) (Archer, 1995). This idea points to critical realism which will be considered next.

Transcending the Binary: Towards Critical Realist Account of Governance

Even though Rod Rhodes, a prominent thinker of the idea of governance, remarkably converted his epistemological standpoint from behavioralism to interpretivism in collaboration with Mark Bevir (see Rhodes, 2007, 2011; Wanna & Weller, 2011), Rhodes's and Bevir's *oeuvres* and the extant literature on governance in general appear to overlook critical realism (Marsh, 2008; McAnulla, 2006a, 2006b; Fawcett & Daugbjerg, 2012; cf. Bevir & Rhodes, 2006c).

Critical realists do not follow anti-foundational theory of the state held by interpretivists. Instead, they are more interested in the role of the state in redesigning how modes of governing, e.g. hierarchies, markets, and networks, intricately operate independently and dependently. Not only that, they emphasize the ways the state modifies the strategic terrain to favor certain hybrid combinations of the three differing governing modes over and above others (Whitehead, 2007; Bell & Hindmoor, 2009; Fawcett & Daugbjerg, 2012).

Although Bevir and Rhodes (2006b, 2015) seem to doubt that critical realists are structuralists, institutionalists and empiricists, critical realists indeed are ontologically and epistemologically different from those labels despite some of critical realist analyses possibly showing a trace of institutional analysis.⁹ Critical realism has a

'realist' ontology but it is not a naïve realism which positivism assumes¹⁰ (Sayer, 2000; Cruickshank, 2003; Delanty, 2005; Gorski, 2013). Realism suggests that knowledge of realities do exist independently of our representations of it. Critical realists believe that how we see the world is theory-dependent; variables are always conceptual interpretations. It is philosophically post-positivist; its epistemology holds that "*there is a real material world but that our knowledge of it is often socially conditioned and subject to challenge and reinterpretation*" (della Porta & Keating, 2008, p.24; see also Jessop, 2005). This makes critical realism, in a certain degree, close to interpretivism in the epistemological aspect (Marsh, Hall & Fawcett, 2014; Sayer, 2000, 2010).

Importantly, critical realism tries to integrate three methodologies (Delanty, 2005). Firstly, it essentially defends the possibility of causal explanation as causal efficacy confirms the social reality (see Collier, 1994; Sayer, 2000, 2010). This causal law is not universal deterministic, but contingent and emergent. At the same time, it recognizes the interpretive notion of social reality as being communicatively constructed, without generating interpretivist solution.¹¹ Finally, it involves a critical dimension.

By 'critical', critical realism treats structure and agency as duality and contains normative and political value (Cruickshank, 2003). To begin with, critical realists avoid the explanatory weight on only structures or individuals resulting in determinism to explain individuals' social relations. Then, structure and agency should be linked

⁹ For example, given claiming himself as a critical realist, Marsh (2008) and his colleagues (see Marsh, Richards & Smith, 2002, 2003) actively apply the idea of path-dependency as a facilitating and constraining force, not a deterministic one (see also Marsh, 2011). Path-dependency is commonly known as a key concept in 'historical institutionalism' to explain an '*inertial tendency*' for institutions or policies to exhibit patterns (see Pierson & Skocpol, 2002; Powell & DiMaggio, 1991; P. Pierson, 2000a, 2000b; C. Pierson, 2004; Peters, 2012). Nevertheless, later Marsh with others developed the notion of 'path-dependency' with critical realist position and clarified that 'path-dependency' does not equate 'path-determinancy'. Additionally, there are three path-dependencies: institutional, discursive, and political-economic. They are related and frequently mutually reinforcing. In this sense, historical institutionalism can fit with critical realism (see Marsh, Hall, & Fawcett, 2014).

¹⁰ Unlike positivists, critical realists believe that there are things that can be observed and things that cannot be

observed (but needed to be posited as well). There are deep structures that cannot be observed and even if we find a way to do so, it might offer a false picture of the phenomena or structures and their effects. In the view of the initiator of the critical realism, Roy Bhaskar (2008), reality is stratified and emergent. In other words, reality should be seen as morphologically emergent. Social worlds cannot be reduced to mere observable objects, facts or ideas that people have about. The social world is an emergent reality which has its own particular powers and properties.

¹¹ This reflects considerable methodological implications. Critical realism suggests that there is a real world 'out there', yet outcomes are shaped by the way in which the world is socially constructed. It also brings about a turn to methodological pluralism as it argues for a mixture of methods and the linkage of theory and method, breaking from positivism and a more restrictive ethnography (Cruickshank, 2003). Hence, it would allow us to utilize both qualitative and quantitative data (Furlong & Marsh, 2010).

through the idea of emergent properties, i.e., seeing social structures as emergent properties created by the actions of individuals in the past, not as an independent existence apart from the activity of individuals¹² (see Hay, 2002). Such structures have causal power in their own right, albeit unobservable. Meanings do not occur independently of individual subjects; instead, they are shared and inscribed in institutions and processes which affect, but definitely do not determine, individuals (McAnulla, 2006a, 2006b; Marsh, Hall, & Fawcett, 2014).

Both aforementioned institutionalists and interpretivists, according to McAnulla (2007), share one common feature; they fail to recognize and/or lack an adequate study of social structures on which critical realists are actively focused. In particular, critical realists would argue that institutions are structures, norms, and practices shaping and be shaped by the ideas within the institutions about policy and organizations. Structures provide the context within which agents operate and, as such, facilitate or constrain (but not determine) actions. Agents, nonetheless, do interpret the structure and their interpretation is influenced by their prior values, experiences and practices. In effect, the agents alter the structure. The 'new' structure accordingly shapes the context within which agents operate and the actions and outcomes can also change, or add to, the agents' values, experience or practices. The relationship between institutions and ideas or structure and agency is thus dialectical, interactive and iterative (Hay, 2002; McAnulla, 2006a, 2006b; Marsh, 2008, 2010; see also Furlong & Marsh, 2010). In this sense, ones "*need neither a 'top-down' or 'bottom-up' conception of institutions, rather we require investigations of institutional change/continuity that examine the interaction of structure and agency*" (McAnulla, 2007, p.321).

In conclusion, critical realism treats structure and agency as a 'duality', rather than dualism, in which they have their own causal power and their distinctions are both a matter of ontological and analytical (see

Hay, 2002). Critical realists then recognize the important of ideas, narratives and discourse towards outcomes and phenomena while assert that institutions and material relations do play a part as well.

In addition, critical realist research should facilitate the move from facts to values by developing a normative critique against the status quo (Cruickshank, 2003, p.3). A critical realist would be interested in how to produce a theory-dependently empirical explanation carrying normative value of the explanation. For instance, critical realist account of governance aims to discover that, among different modes of governing, there is always a dominant, but not absolute, one. This dominant one affects but not determine the governance arrangement. Importantly, modes of governing are not fixed but always changed even though there might be path-dependency of them. Critical realism pays particular attention to power relations of elements in a particular phenomenon.

Sayer (2010) contends that "*one of the distinctive features of critical realism is that it combines two models that have often been imagined to be not merely different but incompatible*" (p.ix). In order to study governance, the critical realist position not only give its distinct analytical elements but also allows one to use analytical elements from both institutionalist and interpretivist views. Although scholars of both camps similarly claim that their approaches are the best means of undertaking governance research (see Peters, 2011b; Bevir & Krupicka, 2011), to sensibly study a mixture of various modes and levels of governance in reality where institution and individuals are equally considered should be seriously taken to account. In other words, to study governance by understanding structure-agency as a duality, not a dualism, can contribute a new perspective to governance research, which is the analytic of metagovernance.

Analytic of Metagovernance

Metagovernance and its powerful explanatory strength is essentially underpinned by and sympathetic towards

¹² It can be assumed that critical realism believes that social structures pre-exist individuals and are a necessary condition of individuals' actions; nevertheless, such social forms do not

exist apart from agents' conceptions of what they are doing, thereby—being discursive as well as material (Jessop, 2005).

critical realist epistemology. Some point out an association between critical realism and metagovernance (Jessop, 2004, 2005, 2007; Marsh, 2011; Fawcett & Daugbjerg, 2012; Davies, 2013; Bevir & Rhodes, 2015). This article suggests the epistemological route to the realization of metagovernance based on an attempt to transcend the institutionalist-interpretivist binary and its meta-theoretical issues. Metagovernance provides a helpful approach to researching governance; “it recognize[s] governmental capacity and the constraining role played by institutions and structures whilst allowing for the agency of networked actors” (Baker & Stoker, 2015, p.38-39). In other words, it provides the potential for simultaneous recognizing the continued power of the state and the reflexivity of networked players.

Besides, employing critical realism, one may argue that governance is stratified; strata or orders of governance can be found in metagovernance literature. And as critical realists seek an emerging order, it can be argued that the idea of metagovernance is treated as an emerging order, a third-order governance (Kooiman, 2003). The third-order governance emphasizes that the norms and principles for governing as a whole are the object of governance. It goes beyond the first-order of governing which keen on dealing with problem solving and opportunity creation, in other words, the day-to-day activities of governing, and the second-order in which the design, maintenance and care for the institutions in which first order governing take place are the analysis (Kooiman, 2003; cf. Jessop, 2016a).¹³ These are obviously corresponded with the critical realist insight.

Governance of Governance

Metagovernance is a recent development in governance studies which has become an attention to academic community in the last decade; and the literature of metagovernance is varied (see Baker & Stoker, 2012, 2013; Bell & Hindmoor, 2009; Jessop, 2004, 2011; Klijn &

Edelenbos, 2006; Kooiman & Jentoft, 2009; Meuleman, 2008; Sørensen, 2006; Sørensen & Torfing, 2008; Torfing et al., 2012).

Agreeably defined as the ‘governance of governance’, Jessop (2004) refers to metagovernance as:

“the organization of the conditions for governance and involves the judicious mixing of market, hierarchy, and networks to achieve the best possible outcomes from the viewpoint of those engaged in metagovernance. In this sense it also means the organization of the conditions of governance in terms of their structurally inscribed strategic selectivity, that is, in terms of their asymmetrical privileging of some outcomes over others” (p.70; see also Jessop, 2011).

The term ‘meta’ conveys meaning of something over and beyond (see Kooiman, 2003; Meuleman, 2008). For Jessop (1997b), the concept of metagovernance goes ‘beyond and above’ the governance concept. It is supervenient on that of governance (Jessop, 2016b, 2011b). Metagovernance is positioned above the three main modes of governing—hierarchies, markets, and networks—thereby, a multi-perspective, ‘helicopter view’ approach (Meuleman, 2008, p.68).

The first ‘governance’ term in the ‘governance of governance’ conveys a more etymological meaning. It is the ‘governance’ that has been used since Ancient Greek.¹⁴ The latter ‘governance’ term can be interpreted in two main ways. The first interpretation is ‘self-organizing networks’ as appear in governance by networks. The second interpretation is closely related to a broader definition of governance as complex, distinct, but operationally related, modes of governing, steering. In this sense, metagovernance therefore means the governance (steering, governing) of

¹³ Moreover, in metagovernance itself, it is classified into two forms depended on how governance is defined. The two forms are regarded as first-order metagovernance and second-order metagovernance (see Meuleman, 2011).

¹⁴ The term ‘governance’ is not new. It could etymologically be traced back to the Greek word ‘*kybernân*’ or ‘*kubernetes*’ used by Plato with regard to the art of steering, governing,

piloting; in other words, it is concerned with how to create a system of rule (Kjær, 2004; Cepiku, 2013; Torfing, et al., 2012). The Greek term then engendered the Latin ‘*gubernare*’ which connotes the same meaning. However, ‘governance’ is one of many words that is derived from the word ‘govern’; the others are, for example, ‘government’, ‘governor’, and ‘governability’.

governance (mode(s) of governing, steering).

Baker and Stoker (2015) suggest two underlying assumptions of metagovernance. The first assumption is that, correlated with Peters (2010), the disaggregation of the state has brought about the rise of relatively stable pattern of devolved institutions which are semi-autonomous, but are ultimately subjected to government authority. It links to the second assumption which is metagovernance suggests the hierarchical moment, i.e., government is still powerful and capable of steering, coordinating and shaping norms and values in some circumstances. Advocates of metagovernance would understand that, traditionally, government was the sole actor responsible for governance; then, the state has utilized non-governmental agencies and the instruments of 'new governance' (see Salamon, 2000, 2002; Jordan, Wurzel, & Zito, 2005), expanding a range of governing tool to include non-hierarchical ones. Even so, these new instruments are considered to operate in the 'shadow of hierarchy' and to be endorsed by the plausibility of using authority (Peters & Pierre, 2006).

Commonly, metagovernance refers to how the state re-conceptualizes its role in response to the changing context of governance. For example, Bevir (2013) understands metagovernance as "*an umbrella concept that describes the role of the state and its characteristic policy instruments in the new world of network governance*" (p.56). However, this is partially true; critical realists would argue for a better perspective.

To be truthful, although the term is new, the very idea of metagovernance is not limited to the '*world of network governance*'. The concept of steering, which is one of the theoretical background of metagovernance, has existed long before the new governance arise (see Jessop, 2011). What new governance did is increasing and intensifying the complexity of the situation. Metagovernance, for critical realists, does originally not emerge as a theory of new governance. Jessop, the forefront of the concept and a critical realist, is heavily

interested in state power and influenced by Antonio Gramsci and Micheal Foucault (see Jessop, 2007, 2016b). Unsurprisingly, metagovernance, arguably, implies some traces of the notion of Foucauldian governmentability and Gramscian hegemony.

Jessop's state theory and other ideas represent an effort to combine Gramsci and Foucault. Strategic-relational approach to the state is a good example of this case (see Jessop, 2005, 2007; Jessop, Ji, & Kytir, 2014; cf. Hay, 2002). It allows us to scrutinize "*the interrelations among different kinds of selectivity in social relations: structural, discursive, technological (in the Foucauldian sense of techniques of governance), and agential*" (Sum, 2015, p.39; see also Biebricher, 2013). Another trace showing that Jessop is trying to develop and integrate Gramscian and Foucault is how he sees metagovernance in modern state. Jessop (2016a) writes aphorism that is "*the state in its inclusive sense' can be defined as 'government + governance in the shadow of hierarchy'*" (p.176; see also Jessop, 2004). Gramsci also sees the state in its inclusive sense which contains 'political society + civil society'. Additionally, by analogy, Foucault's notion of statecraft can be regarded as relied on tactics of 'government + governmentality in the shadow of hierarchy' such that governing is 'conceptualized both within and outside government' (Sum, 2015, p.37-38).

In this sense, metagovernance involves the state's capability and mentality to steer networks by designing the context where they operate to secure the compatibility of outcomes and broader interests of the state. The idea is seemingly close to the 'governmentality' which views government as 'conduct of conduct' (Dean, 2010). Metagovernance is the 'governance of governance' or 'regulation of self-regulation' within which networks function (Sørensen, 2006, p.98).

The focus of a state-centric approach to meta-governance shifts to governance arrangements and their management by the state; it is more about the state and less about networks per se (Fawcett & Daugbjerg, 2012, p.198).¹⁵ Focusing more

¹⁵ Metagovernance should not only be considered in a state centric-approach. Non-governmental actors and institutions beyond the center can perform metagoverning as well.

According to Sorensen (2006), "*metagovernance is exercised not only by state actors but also by various networks of public and private actors and a whole range of supranational,*

on the state is not equal with eliminating other modes of governing. It instead says that governments play a more relative role by overseeing the various modes of governance through a process of metagovernance. Metagovernance does not consider that the state is hollowed out or marginalized, with the triumph of networks. In contrast, metagovernance *“highlights a revitalized role for the state in providing the context for the design of self-organization, ensuring the relative coherency of diverse aims and objectives, and setting the parameters within which governance transactions take place”* (Flinders & Matthews, 2007, p.196). Hierarchy and control persist and function even in self-organizing networks. Network governance is mixed and works within the shadow of hierarchy. Critical realist account of metagovernance is highly concerned with re-stating the role of the state in governance arrangement and contests a version of governance by networks.

Given above, although the state may have become less hierarchical, it does not necessarily *“exclude a continuing and central political role for national states”* in creating the rules and context within which governance takes place (Jessop, 2004, p.66). State and hierarchies are well and alive even in the new governance. The state might be less hierarchical in terms of organization, yet hierarchies still play an important role in terms of coordination.¹⁶ Self-regulating networks are, in fact, function in the ‘shadow of hierarchy’ where *“the state threatens—explicitly or implicitly—to impose binding rules or laws on private actors in order to change their cost–benefit calculations in favor of a voluntary agreement closer to the common good rather than to particularistic self- interests”* (Börzel & Risse, 2010, p.116).

regional, and local levels in the formal political system” (p.102; see also Sørensen & Torfing, 2008; in 't Veld et al., 2011). The separation between state-centric and society-centric governance is an important reason why the literature in metagovernance is quite various (Stark, 2015). In short, state-centric metagovernance is a condition in which state actors execute metagovernance with a relatively dominant role, mostly, by influencing the strategic context within networks; whereas a more society-centric or governance-centric one is a condition in which non-state actors enjoy a relatively dominant role for steering networks (Jessop, 2004; Daugbjerg & Fawcett, 2015). However, state-centric metagovernance is arguably a dominant approach. Advocates of state-centric metagovernance argue that the state relatively play a crucial

Governance + Government in the Shadow of Hierarchy

There are various versions to comprehend metagovernance (see Jessop, 2004; Sørensen, 2006; Sørensen & Torfing, 2008; Meuleman, 2008; Davies, 2013; Baker & Stoker, 2015). Sørensen and Torfing (2008) systemically identify four approaches of metagovernance: interdependence, governability, integration, and governmentality. Besides, metagovernance can be examined from the macro-level of the whole governance system (Jessop, 2003, 2011, 2016a; Kooiman, 2003; Kooiman & Jentoft, 2009) and from the more micro- or meso-level which focused on how networks are steered and, if it can be steered, they are done so by who (Sørensen, 2006; Sørensen & Torfing, 2008). The former chiefly emphasizes how the national governance system rearranges and interacts which better involve normative aspects. In contrast, the latter tends to see metagovernance as ‘network management tools and techniques’ for steering networks by ‘hands off’ approach which is implemented at a distance such as design and framing contexts and conditions and ‘hands on’ approach which is more interventionist and done by a network manager within the network such as management and participation. Although the latter seems to be a more technical matter, it can allow a more normative interpretation and analysis of power as well.

Additionally, some classify the perspective in terms of a more state-centric metagovernance in against of a more society-centric metagovernance while the others treat it as a balance approach between state-centered and society-centered perspectives.¹⁷ Different people adopted different theoretical approaches which leads to difference definition of

role and non-state actors have little incentive to metagovern (see Bell & Hindmoor, 2009).

¹⁶ This point says that hierarchies-as-organization is different from hierarchies-as-coordination. Scharpf (1993) distinguishes between hierarchical organization and hierarchical coordination, and reminds us that even hierarchical organizations has been increasingly relied on non-hierarchical forms of coordination as well.

¹⁷ For Torfing et al. (2012), metagovernance presents how to balance state-centered and society-centered perspectives on the ways society and economy are governed; ones who have authority to steer networks or metagovernors are no longer merely use traditional mode of governing, the hierarchy, yet need to consider *“the capacity for self-regulation of the*

metagovernance which subsequently points to different ways of deploying the concept. Among the differences of metagovernance approaches, it is important to note that they share understanding of metagovernance which is a concern with the external management of governance arrangement. However, to decide what is the dominant between state-centric and society-centric accounts governance has quite futile as in reality governance does not exist without government. Critical realists would cheer for an approach that look at state-centric and society-centric metagovernance as a continuum, rather than a dualism, which will opens up more opportunity for analysis (see Fawcett & Daugbjerg, 2012; Daugbjerg & Fawcett, 2015).

As a critical realist account, metagovernance first positions 'government' and 'governance' as a duality, not a dualism (Marsh, 2011). This essentially means that there is not necessarily to be 'governance, rather government' or 'governance, without government'. A unidirectional shift from government to governance suggested by aforementioned authoritative governance theories is rather simplistic and lack of analytical value. For critical realists, both government and governance are operationally, dialectically, interactively, and iteratively coexist in different ways across different policy areas and polities over different times. This implies the persistence role of the state in all processes of governing.

Essentially, Jessop (2016b, p.16) lists numerous ways that governments establish the ground rules for governance. How government and governance coexist could be understood as a series of state transformation trends and counter-trends (see Jessop, 1997a, 2008). What is emphasized here is the trend referred as 'a destatization of politics' in which "*governments have always relied on other agencies to aid them in realizing state objectives or projecting state power beyond the formal state apparatus*" (Jessop, 1997a, 305). This correlates with the government-to-governance thesis. It signifies an increase of 'partnerships' between governmental, para-governmental, and non-governmental

actors. In other words, this trend, in contemporary debate, means that the state is being replaced by non-hierarchical forms of governing and policy making and implementation such as networks and public-private partnerships. Consequently, whether with intention or not, the state is driven to think about metagovernance issues, particularly the establishment and management of self-organizing networks and inter-organizational partnerships either at a distance or within networks (see Sørensen, 2006; Sørensen & Torfing, 2008; Jessop, 2011). Increased role for the state in metagovernance by casting a shadow of hierarchy over governance arrangement and by adjusting the relatively mixed modes of governing is thus a counter-trend for government-to-governance thesis and this represent a way in which the state continues playing a role in a national territory. This reminds us that the trend towards more governance should not equate to a decline of the state role. Instead, the state retains its centrality, to some extent, in governance arrangement to ensure a certain degree of effective outcomes.

Moreover, rather than being network management, metagovernance in a critical realist perspective conveys a broader concern. Network management views governance as a response to networks by governments whereas metagovernance does not allow for an option to networks (Baker & Stoker, 2015). Metagovernance is focused on the collibration of different modes of governing occurred in the shadow of hierarchy. The term 'collibration' in practice means attempts to adjust the relative weight and targets of market, hierarchy, and network in the total coordination of relations of complex interdependence (Jessop, 2004; see also Dunsire, 1993a, 1993b, 1996; Meuleman, 2008; Jessop, 2011). Actually, an idea that governance arrangement consists of a mixed mode of governing is not new. What is new that metagovernance offers is a theorized consideration towards the compatibility or incompatibility of the relative mixed mode of governing within a specific governance arrangement.

interactive governance arenas in order to preserve the commitment of the public and private actors" (p. 132). In a way, this corresponds with the idea of how networks function

in the shadow of hierarchy but with an accent on how the metagovernors accomplish effective and legitimate outcomes (Sørensen & Torfing, 2008, 2009).

Apart from the sophisticated duality of government and governance, this approach makes itself distinct from traditional state-centric governance as it does not privilege merely hierarchy as the dominant modes of governing. Metagovernance pays attention to the struggle and power relationship between differing modes of governing and how they negotiate with each other. The underlying assumptions are the diversity, dynamics and complexities of the societies to be governed and to govern themselves. For Jessop (2004), "*studies of governance treat it as a general phenomenon concerned with issues of strategic coordination rather than as a state-specific matter*" (p.52). Metagovernance is contradicted with most of the early studies of governance which were focused more on certain practices or regimes oriented to certain objects of governance. Analytic of metagovernance views governance as a mechanism and strategies or structures and practices of coordination marked by complex, reciprocal interdependence among actors which occurs in all social fields (Jessop, 2004, 2011). Metagovernance consequently refers to the coordination of such governance. Every interactions and modes in metagovernance perspective have causal power and they are 'equal' as fundamental units of analysis and theory development in terms of 'and-and', not of 'either-or' (Kooiman, 2003, p.8).

Conclusion

A researcher's ontological and epistemological position is reflected in what is studied, how it is studied and the status of the findings given by the researcher. It is 'a skin, not a sweater' (Furlong & Marsh, p.2010). Given that, different governance scholars do have different ontological and epistemological positions (see appendix). The argument in this article is developed over two significant parts. First, this article argues that the institutionalist and interpretivist approach to study of governance lack a sufficient attention to power, structure-agency, elements of governance arrangement, and the persistent centrality of the state. Institutional approach mostly underpinned by positivism tends to equals governance with networks and particular institutional features is problematic and led to the narrow definition

and analytic of governance. The interpretivist approach to governance is limited in analysis as well. Now, it is common to see the limits of governance theory. Governance, actually, must do with much more than networks, institutions, or narratives.

Although it is appeal to employ institutional perspective as a starting point to study governance, there has to criticize and bring social interaction as analysis and ultimately develop it to metagovernance. The article argues that a critical realist approach can provide an alternative analytic to the study of governance which is metagovernance. It allows ones to take a position that is neither institutionalist nor interpretivist and suggests an operational co-existence of different governance modes. In other words, it allows ones to do not necessarily abide into one epistemology position—thereby, being eclectic perspective.

Second, metagovernance is not only an alternative attempting to 'transcend' the 'institutionalist-interpretivist binary' but also shows us an alternate way we can read contemporary governance which is, in particular, interested in power relations and interactive modes of governance, attempting to bring the centrality of the state back in the analysis of governance and then to call for the recognition of mixed modes of governing in the shadow of hierarchy. Metagovernance emphasizes government and governance as duality, namely interactive, interactive, and dialectical. It sensitizes us the context and limits of governance rather than simply talking about the implications of the shift to governance with and thorough networks. It is an analytic of governance that does not only imply a persisted role of hierarchy and the state in steering and regulating self-organizing networks, but also questions the argument that the social structure of the state has been being replaced by networks. It brings the re-inscription of hierarchy in governance literature. The article does not suggest that there is one best/right way to study governance. In fact, metagovernance can be both an alternative and a complementary depended on situations. Transcending the binary between institutionalist, on the one hand, and interpretivist, on the other hand, can offer a

new perspective of governance and how we (re)think about it.

THE DOCTORAL CURRICULUM OF PUBLIC ADMINISTRATION IN ASEAN: SIMILARITIES AND DIFFERENCES BETWEEN THAILAND AND MALAYSIA

Pratumtip Thongcharoen
yim.thongcharoen@gmail.com

The Faculty of Humanities and Social Sciences, Suratthani Rajabhat University, Thailand

Abstract

In 2013, the researcher had a site visit and attended a research exchange program at the Universiti Sains Malaysia for 4 months between September and December. The scholarship was funded by Office of the Higher Education Commission (OHEC). During the visit, the researcher had an opportunity to conduct an in depth interview with Prof. Dr. Ahmad Atory Hussain regarding a topic of PA curriculum in Malaysia. The results of the interview revealed that in Malaysia, Public Administration was just placed under a big umbrella of Political Science because in higher education in Malaysia Public Administration is seen, as Woodrow Wilson referred to in his article, in the role and status of “implementation” while Malaysia scholars view Political Science as “science” although Public Administration was dichotomy from Political Science since the first paradigm by Nicholas Henry. On the other hand, in Thailand, Public Administration is a popular curriculum that has been included in most higher education institutions. Although Malaysia is equipped with plenty of universities both local universities and the leading ones, only a few universities have started their PA doctoral degrees such as University of Malaya (UM.), Universiti Utara Malaysia (UUM.), and University of Mara. All universities in Malaysia provide a doctoral degree in “Doctor of Philosophy” (Ph.D.) while in Thailand various doctorate titles are awarded. In addition, Prof. Dr.Ahmad Atory Hussain confirmed that the education plan in Malaysia covers a long period of 20 years whereas in Thailand a long-term education plan has never been set up. Particularly, Dr Mahadi Mohamad, the former prime minister of Malaysia, expressed his wish in vision 2020 to see Malaysia becoming a developed country within 2020 as cited in AEC Insight episode 61 and 62 by Kasemsant Weerakul. The statistics from various sources also pointed out that Malaysia will reach their goal in 2018, following the effective policy “1 Malaysia, People First, Performance Now” by Najib Razak, Malaysia’s current prime minister. On the contrary, Thailand is undergoing extensive national reforms in 11 governmental functions including education and the ASEAN community is waiting to see which direction Thailand is taking after the reforms.

Key Words: Doctoral Curriculum, Public Administration

INTRODUCTION

The ASEAN community was established in 1967 but streams of collaboration of ASEAN countries seem to have just started. The ASEAN community collaboration has covered various aspects of our society socially, economically and academically. Thailand and Malaysia are neighbouring countries and are both in the ASEAN community. The two countries have

had close collaboration, particularly in learning and education. This article is a fruitful result of collaborative work in learning exchange between Thailand and Malaysia, which allows us to have a better understanding of similarities and differences between doctoral curriculums of Public Administration (PA) in Thailand and Malaysia.

The researcher had opportunities to participate in a research exchange programme “*the 2013 Thai-ASEAN Student Exchange Program Scholarships (Phase II)*” for 4 months (September and December 2013) at the School of Social Sciences, Universiti Sains Malaysia. The project was supported by Office of the Higher Education Commission (OHEC). The activity allowed us to investigate Public Administration curriculums between Thailand and Malaysia in the big umbrella ASEAN Community with the slogan “*One Vision, One Identity, One Community*”.

The results of the study will benefit scholars, Thai higher education institutions, and governmental agencies to better plan, develop and manage Public Administration curriculum in Thai Higher Education Institutions, scholarships, a holistic database, doctoral degree research interests and topics, as well as policy making. In order to identify similarities and differences of Thai PA and Malaysia PA, contexts, paradigms, theories, methodologies, innovations, and problems will be discussed in detail. The results of the study are also hoped to feed back to other countries in the ASEAN community in PA education.

RESEARCH OBJECTIVES

1. To study and compare contexts of PA both in Thailand and Malaysia.
2. To study and compare paradigms, theories, methodologies, and innovations of PA both in Thailand and Malaysia.
3. To study and compare problems and solutions of PA curriculum and management both in Thailand and Malaysia.

RESEARCH METHODOLOGY

The researcher used “mixed methods”, as referred by Creswell and Plano (2011) based on qualitative research, which consisted of documentary research, in-depth interview and observation.

A doctoral dissertation by Thongcharoen (2014), who analysed 155 doctoral dissertations between 1982 and 2012 from 7 higher education institutions in Thailand¹, was studied as part of documentary research to gain a broader perception of PA in Thailand. The dissertation was limited to “Thai curriculum” without covering “International curriculums”. Moreover, the higher education institutions used in the study were those within the Office of the Higher Education Commission (OHEC). The study did not cover doctoral dissertations published by autonomous Universities and private Universities. The results of Thongchareon (2014a) found only 3 doctoral titles as regards PA curriculums which studied by Kongritrajun (2007a), Leelakitpaisarn (2009a), and Nilthongkum (2010a).

For Malaysia PA curriculums, the researcher collected data from an in-depth interview the two experts; Ahmad Atory Hussain², and Mohamad Zaini Bin Abu Bakar³ as recommended by Nor Malina Malek⁴, as well as an interview with Thai students, Sakkarin Nonthapot⁵ and Hassuna Saiyakul⁶, who were studying at Universiti Sains Malaysia (USM) in

¹ Burapha University, Eastern Asia University, National Institute of Development Administration, Ramkhamhaeng University, Suan Dusit Rajabhat University, Surin Rajabhat University, Ubonrachatani University

² Prof.Dr, Lecturer of the school of Social Sciences, Universiti Sains Malaysia.

³ Dr., Deputy Dean for Academic Affairs, Lecturer of the school of Social Sciences, Universiti Sains Malaysia.

⁶ Undergraduate student, Political Science, School of Social Sciences, Universiti Sains Malaysia, interviewing by social network as line application and Facebook.

September 2013, and Koravidh Kohklang⁷, who was studying at Universiti Utara Malaysia (UUM) in October 2013. The interviews with the Thai students were carried out via “line application” and “Facebook”, the innovations for communication in globalization and Knowledge Base Society(KBS).

To be able to fully analyse and synthesise in “Holistic” and “State of the Art” (Suttawet, 2009a)⁸ of Thai PA curriculums, the researcher also reviewed literature about Thai PA curriculums from the leading universities⁹ in social sciences, including private universities, and a group of Rajabhat Universities. After that, data and information were integrated to compare Thai PA and Malaysia PA using “Meta-Analysis”. Finally, the results of the study were given to Thai and Malaysia PA experts to review based on Norman’s triangulation-based framework(1970).

⁷ Ph.D student in Public Management, College of Law Government and International Studies, Universiti Utara Malaysia (UUM.)

⁸ State of the Art is a special technique was used for this studying. Suttawet (2009) referred in his individual research in 1998 that a scope of State of the Art was larger than general literature review because it covered surveying, investigation, description, explanation, prediction, and evaluation. Particularly, evaluation is the highest level of studying by using State of the Art technique in which most scholars find it is difficult to achieve. Therefore, general academic tasks were often achieve a lower level than evaluation such as “surveying”, which was used in this study. Moreover, regarding the important principles of “State of the Art”, Suttawet pointed out that there are some major components; general contexts, paradigms, theories, methodologies, innovations, problems, discussions and suggestions.

⁹ Chulalongkorn University, Thammasat University, Kasetsart University, Chiang Mai University, Mahidol University, Khon Kaen University, Prince of Songkla University. Ranked by QS University Ranking between 2009-2013. However, the ranking order may have had a small change in the recent years

RESULTS AND DISCUSSIONS

In this section, a comparison between Thai PA curriculums and Malaysia PA curriculums in terms of backgrounds, the popularity of PA courses to students, faculties or schools which offer PA curriculums, number of credits, office hours, grades, and associations will be discussed. Then, it will be followed by a discussion of paradigms, theories, methodologies, innovations, and problems of PA curriculums and management.

Objective 1: To study and compare contexts of PA both in Thailand and Malaysia.

Laohavichien (1986: 1-55) states that in Thailand, Public Administration was used for the first time at Civil Service College of King Chulalongkorn since 1899 (117 years ago), just over ten years after Public Administration was introduced in America. When Chulalongkorn University was established in 1916, PA was included in the curriculum. In 1934 the faculty of Political Science at Thammasat University also included PA in their curriculum. In 1955, with the support from the US government, Thammasat University founded the faculty of Public Administration. National Institute of Development Administration (NIDA) followed in those footsteps and in 1966. In 1984 NIDA launched its PA doctoral curriculum, which was the first PA doctoral programme in Thailand. However, many well-established Thai High Education Institutions have concentrated on teaching and researching in Public Administration both in the bachelor’s degree level and master’s degree level but very few institutes offer a doctoral degree. Most PA doctoral curriculums have been offered just for about ten years. The evidence by Thongcharoen (2014) showed that the PA doctoral dissertations were published in 2005.

On the other hand, PA in Malaysia was founded much more recent in 1959 by the Faculty of Economics and

Administration (FEA), University of Malaya. In Malaysia, Political Science is more popular than PA, which is treated as a part or subset of Political Science. At the University of Mara, for example, PA is included in Administrative Sciences. Only at the University of Malaya, PA is considered as a degree title in Economic and Public Administration. In Thailand, PA is as popular as Political Science. Most Thai universities offer PA and Political Science curriculums in both undergraduate and postgraduate levels. Nowadays, a field of study which reflects “Interdisciplinary” and “Multi-useful” subjects tend to provide better career prospects to students only in the context of Thailand or Malaysia, but worldwide. A “universal” characteristic of Public Administration seems to serve this purpose. In Thailand, some universities such as Mahidol University and NIDA. only offer PA in graduate studies. This is what Sirirat Choonhaclay¹⁰ called specific to “specialization” and “professional” of PA. In the same way, Ahmad Atory Hussain confirmed that most universities in Malaysia offer PA curriculums in postgraduate levels with the same reason, except for the University of Mara, which offer PA at diploma and undergraduate levels.

While PA courses are available in most Thai universities, different institutions have come up with different names of PA institutes. The names range from a small unit of a **department** such as *Department of Political Science and Public Administration*, *Department of Social Sciences*, *Department of Political Science*, to a larger unit as Colleges such as *College of Local Administration (COLA)*, or a **faculty** such as *Faculty of Social Science*, *Faculty of Social Science and Humanities*, *Faculty of Humanities and Social Sciences*, *Faculty of Political Science*, *Faculty of Political*

Science and Public Administration, *Faculty of Public Administration*, *Faculty of Management Science*, *Faculty of Political Science and Law*, and a **school** such as *Graduate School of Public Administration*.

In Rajabhat Universities, PA is offered in both undergraduate and postgraduate levels (especially a master’s degree) under the Faculty of Humanities and Social Sciences. Many Rajabhat Universities now offer PA doctoral curriculums. For private universities in Thailand, it was found that most private universities have established PA curriculums in the Faculty of Political Science, but to the focus of the curriculum is towards PA rather than Political Science.

These were supportive of Thai PA doctoral curriculums and programs in Higher Education Institutions which really need to receive construction and development Thai PA knowledge increasingly by scholars now and then. Particularly, this study’s results will be an alternative source and important database to encourage them in the future.

Figure 1: Percentage of Thai PA doctoral dissertations between 1982 and 2012 (Thongcharoen, 2014)

¹⁰ Assoc.Prof.Dr., the Chairperson of the Doctor of Public Administration Program, lecturer of the Faculty of Social Sciences and Humanities, Mahidol University, Thailand.

Figure 1 illustrates the proportion of PA doctoral dissertations published in Thai universities between 1982 and 2012. The evidence shows that Ramkhamhaeng University (65%) published more than half of the doctoral dissertations while NIDA was the second highest (17%). Ramkhamhaeng University and NIDA have developed their curriculums specifically to Public Administration as a specialist subject. This school of thought has becoming more popular in Thai academic society whereas in many western countries it has been a practice for a long time. However, some well-established universities such as Chulalongkorn University and Thammasart University still see PA as part of Political Science as reflected in their doctoral curriculums where PA is part of Political Science doctoral dissertations.

In Malaysia, the study found that 23 public universities in Malaysia are government funded institutions and are governed as self-managed institutions. The funding will be given at least until 2020. Most public universities in Malaysia were set up by an executive order as per the provisions of the Universities and University Colleges Act 1971 apart from the University of Malaya and the MARA University of Technology, which were established by two separate enabling Acts of Parliament. Until recently, the Ministry of Higher Education was responsible for seven institutions bearing the title University College. These have since been upgraded to full universities and there are currently no public university colleges. Furthermore, the establishment of 500 private universities and university colleges were made possible with the passage of the Private Higher Educational Institutions Act 1996. Prior to that, private institutions of higher learning existed but were not authorized to confer their own degrees. Instead, they acted as preparatory institutions for students to undertake courses of instructions in preparation for externally conferred degrees

(Wikipedia_a). While Thailand has 160 universities nationwide, Malaysia has 523 universities (Wikipedia_b) in total, which are over 360 more than in Thailand.

Although having more number of universities, only a few universities in Malaysia such as University of Malaya (UM.), Universiti Utara Malaysia (UUM.), and University of Mara offer PA doctoral courses. All universities in Malaysia use "Doctor of Philosophy" (Ph.D) as a degree title for a doctorate study while in Thailand different names have been used such as Doctor of Philosophy in Political Science, Doctor of Public Administration (Public Policy & Public Management), Doctor of Public Administration, Doctor of Philosophy in Development Administration (International curriculum), Doctor of Political Science (Strategy and Security), Doctor of Political Science (Political Economy and Governance), Doctor of Philosophy (Management), Doctor of Philosophy (Public Administration).

Moreover, universities in Thailand offer two PA doctoral curriculums which are an "academic degree" and a "research degree". Some curriculums in Thailand also specify an academic major although most doctoral curriculums do not specify an academic major. In Malaysia most universities offer a doctoral "research degree" with no major. Ahmad Atory Hussain explained that in Malaysia, in accordance with doctoral curriculums in Europe, PA is seen as "specialization". At the University of Mara, however, the doctoral curriculum is designed using the American discipline and the degree is referred as "Studying and Teaching Doctoral of Public Administration by Research Degree" (Lawangkul, 2008: 101).

In terms of *number of credits of the course*, in Thailand, PA doctoral curriculums are designed to have courses/ modules awarding a range of credits between 48-72 credits for 3-5 years. Most Thai doctoral curriculums have 60 credits while PA

International curriculums offered by NIDA and Khon Kaen University are 48 credits for a “research degree”. In contrast, most universities in Malaysia do not offer courses/ modules and, therefore, no credits are awarded. Ph.D students need to write a dissertation with an approximate length of 350 pages within 5-10 semesters, which is equivalent to 2 years for a full time student, and 5 years for a part time student.

Regarding to **office hours**, most Thai universities also provide academic services 7 days a week. Meanwhile, Koravidh Khoklang, a Ph.D student at UUM explained that universities in Malaysia are closed at weekends. The seven-day-academic services in Thailand could be seen as a blossom of NPM paradigm of the modern era. At the same time, this could reflect the influence of capitalism in Thai society to academic environment where longer working hours result in being able to provide the services to more consumers. Hence, more income can be made. On the other hand, Malaysia seems to continue treating education as a public service where welfare of the staff is highly considered.

In terms of **class grades**, as many curriculums in Thailand offer courses or modules, class grades are provided as part of course assessment. Two types of grading systems are used in Thailand. For the postgraduate level at Thammasat University, and NIDA, six grades are given; A, A-, B+, B, B-, and C. Students who receive a grade of lower than a B are considered underachievers. Secondly, the four grades system is also used in other universities for postgraduate study. It is composed of A, B+, B, and C. Students who receive a grade lower than B are considered underachievers. Almost all Thai universities use this system. In addition, to receive an A, students need to score more than 80%, or 85%, or 90%, depending on each lecturer and each institution. There is no written agreed standard across universities. Meanwhile in Malaysia as the

doctoral degree is a “research degree”, there is no coursework and no course assessment, except for the University of Mara, which provides “academic degrees” which give the grades for course assessment. Watcharee Ruairuen¹¹ suggested that the American education system has been adopted in the curriculum design at the University of Mara. Regarding the grading system at the University of Mara, to get an A, postgraduate students need to have the scores of more than 90%. This practice is applied to all subjects, as Sakkarin Nonthapot and Ahmad Atory Hussain explained.

Most students at the doctorate level are known to be very high achievers. Therefore, their academic performance is also generally high. When the grading system is used for academic assessment, the scores can be clustered together in a distribution. Therefore, the six grades system which is used at Thammasat University and NIDA can be a sensitive matter in order to justify “equity” and “legitimacy” for their Ph.D students.

“Thai Public Policy: Emerge, Evolution, and State of Knowledge” by Yavaprapas and Whangmahaporn (2012a) stated that nowadays PA curriculums in Thailand put more emphasis on “Public Policy” and “Policy Process” than other subfields. The concepts of “governance” and “e-government” in the public organizations and local governments have recently been introduced and included in the curriculums. In Malaysia, Ahmad Atory Hussain said that Malaysia PA as Universiti Kebangsaan Malaysia (UKM) has tailored towards “Public Servant”, which is a part of New Public Service (NPS), the mini paradigm of New Public Management (NPM). Ahmad Atory Hussain concluded that in his opinion “Shift” and “Change” in

¹¹ Ph.D candidate, Natural Resources and Sustainability, The School of Natural Resources and Extension, The university of Alaska Fairbanks, USA

Politics and Administration both Thailand and Malaysia depends greatly on the direction of the global society.

Finally, regarding PA professional **associations**, In Thailand, academic conferences in Political Science and Public Administration of Thailand have been held annually since 2000. The conferences are funded by National Research Council of Thailand (NRCT) in coordination with faculties of Political Science from academic institutions with mutual interests. “ *Public Administration Association of Thailand (PAAT)* ” was established in 2011, with Supachai Yavaprapas¹² being appointed as the first and the current president of PAAT.

In Malaysia, “*Malaysian Association of Management and Administration (MASMA)* ” was established by the government in 1990. However, very little achievement has been displayed. It can be said that professional associations for PA in Thailand and Malaysia have not been yet well-established to promote teaching and practice of public administration to serve the stakeholders and to advance the society as well as to work together to develop the ASEAN PA curriculum.

With respect of “School of Thoughts” , or “Think Tanks” , the article “*The Thai School of Thoughts: A Primarily Evaluations and The case of The Political Economy School on the Community’s History and Culture*” (Suttawet, 2001a: 34) showed that in 2001 there are approximately 20 School of Thoughts in Thailand. They have a duty to support body of knowledge, facts or truths and to advise stakeholders by describing, explaining and predicting towards events, situations, and phenomena in various societies and the world. Most of the schools of thoughts in Thailand concern Politics and Governments such as “*Thai Law*”, “*Power of the land (Pa-Lung-Pan-Din)*” by King Bhumibol, “*Moral*

¹² Prof.Dr., The Faculty of Political Science, Chulalongkorn University,

and Political Science” by Pridi Banomyong, “*Evolution of Thai Labor Relations*” by Chokchai Suttawet, “*Local Historianism*” by Nidhi Eoseewong, “*Political Economy*” by The Faculty of Economics, Chulalongkorn University (Suttawet, 2001b: 45-62) .In Malaysia, Ahmad Atory Hussain pointed out that there is only one School of Thought in Malaysia, which is the Malaysian Administrative Modernization and Manpower Planning Unit (MAMPU). It is a public organization whose obligation is to provide research results and reports to the Malaysia governmental bodies.

Objective 2: To study and compare paradigms, theories, methodologies, and innovations of PA both in Thailand and Malaysia.

In this section, academic **Paradigms**¹³, in Thailand and Malaysia will be discussed. Public Administration in Thailand is more than 100 years old. The study of Yavaprapas and Whangmahaporn (2012b: 3) divided the PA paradigm in Thailand into six periods; 1) before 1957: PA knowledge had risen in Thailand 2) 1957-1967: National Institute of Development Administration (NIDA) was established 3) 1968-1977: Public Administration was germinated and prospered 4) 1978-1987: A new part time weekend and evening delivery curriculum in Master of Public Administration was set up 5) 1988-1997: Public Administration flourished and bloomed 6) 1998- present (2012) : Public Administration has grown

¹³ Paradigm is popular for most scholars in several fields. It was introduced by Thomas S. Kuhn, the first pioneer paradigm in “*The Structure of Scientific Revolutions*” (Kuhn, 1962). He explained that “*paradigm relates closely to normal science (p.10), as the constellation of group commitments (p.181), as shared examples (p.187); law, theory, application, instrumentation, models which coherent traditions of scientific research (p.10)*”. Ahmad Atory Hussain said that normally when most scholars use the term “Paradigm” , they look at “Shift” and “Change”.

and expanded in the Public Policy context. It is interesting to note that the true advancement in PA curriculums in Thailand was marked after a new part time weekend and evening delivery curriculum in Master of Public Administration was set up. This could be because the curriculum did not restrict to full-time education only and it allowed more people who were already in work to access further education. At present, most Higher Education Institutions also provide Public Administration in both undergraduate and postgraduate levels.

On the other hand, Ahmad Atory Hussain explained that Politics and Administration in Malaysia shifted the first time in 1980 when civil servants reformed functions of Administration using PA strategies in the Development Centre. In the recent years, the Administrative Reform have also included e-government and New Public Service (NPS) under New Public Management (NPM). In academic context, there are changing and shifting from New Public Administration (NPA) to "NPM". Universiti Utara Malaysia outweighs PA to "management" more than "administration" by changing the term from "NPA" to "NPM", which corresponds with to the economic policy as Koravidh Kohklang, Ph.D student in Public Management, College of Law, Government and International Studies (COLGIS) has agreed. In the University of Mara, NPA was renamed "Administrative Sciences" in order to make the Public Sector in Malaysia become more systematic through the "Scientific Management" allowing more transparency and welcoming the private sector to participate more in the governmental activities.

Concerning the **Theories** used in PA, the information from Ahmad Atory Hussain, and Ketsuwan (2011a) pointed out that the theories used in Thai PA doctoral dissertations and in Malaysia as well as other countries were combined from other sciences and disciplines such as Political Science, Economics, and

Management Sciences or as referred to as "Interdisciplinary". This cross boundaries knowledge allows researchers to identify new needs and perspectives to tackle diverse and complex social problems. The interdisciplinary disciplines are considered a strength of PA education. **Methodologies** are related to paradigms and theories. "Mixed Methods" are a popular stream in research of social sciences. An investigation of doctoral dissertation found that "qualitative research", "documentary research", and "field research" were used in three doctoral dissertations as research methodologies. While "quantitative research" was not employed in the three dissertations; Kongritrajun (2007b), Leelakitpaisarn (2009b), and Nilthongkum (2010b) in Thongcharoen's dissertation.

However, research methodologies depend on a particular research topic. Ahmad Atory Hussain commented that if a Ph.D student does not have enough knowledge of research methodologies, their advisors will normally suggest they take some non-credit courses in research methodology especially "statistics" and "advanced research".

Regarding **Innovations**, Thongcharoen (2014) defined "innovation" as "new life", closely with "change", new or the introduction of idea, method, product, invention, action, activity, process, new order things. Particularly, innovations have more influence to support construction and development of PA knowledge in the study. It is found that both Thailand and Malaysia consider E-governments such as computer programs for analyzing data in quantitative research, and social networks; email, Facebook, and line application as innovation. These applications are used for contacting with stakeholders such as researchers, interviewers, interviewees, advisors, and PA experts.

Thailand has an efficient and effective Database called Thai Library Integrated System (ThaiLIS) ¹⁴for serving *scholars, students, and academic staffs* to search and download research studies, thesis/ dissertations, and articles with no charges. The system is easy to access. Students can just provide their Identity Card number to download a full version of the article. Students can access the data and information about thesis/dissertations from any location. There is no need to access a library building anymore. It does not only save time, and money for students, but is also environmentally friendly by reducing the amount of paper the use of electricity, and congestions on the roads. In the past, most databases relating to PA curriculums on the internet were catered to undergraduate and master's degree studies. It was very rare to find a database for doctoral degree studies. Therefore, the dissertation results by Thongcharoen (2014) could also be treated as a " Pioneer Database" of Thai PA doctoral dissertations and curriculums in the past 30 years. This database is valuable for stakeholders as scholars, students, director of PA curriculums, and various of universities in the blossom era of Thai PA as refereed in "*Thai Public Policy: Emerge, Evolution, and State of Knowledge*" by Yavaprapas and Whangmahaporn (2012c: 3).

On the other hand, Ahmad Atory Hussain and Zaini Bin Abu Barkar stated that there is no evidence of databases of PA Most universities still rely on the libraries as an information centre to access academic works such as journals, theses or dissertations.

Objective 3: To study and compare problems and solutions of PA curriculums and management both in Thailand and Malaysia.

Two major problems concerning PA doctoral curriculum in Thailand are; *firstly*, a lack of students and scholars who are interested in PA curriculums. From about a survey on PA curriculums in a doctoral dissertation by Thongcharoen (2014), the study found that only 3 titles or 2% from 155 titles of Thai doctoral dissertations between 1982-2012, were related to PA They were published in 2007, 2009 and 2010. This shows that only few Ph.D students are interested in PA curriculums. *Secondly*, the quality and quantity of Ph.D. students impose a great concern to Thai education. In the past ten years, more and more PA doctoral programmes have been offered not only by public universities, but also autonomous universities and private universities. The boom of doctoral programmes was a result of the success of PA undergraduate and master's degree programmes, as cited in Yavaprapas and Whangmahaporn (2012d:3).

Rajabhat Universities, which are new universities changing their status from being a group of colleges of education, to institutes of education and being granted a university status in 2004, also offer PA doctoral programmes. Bowornwathana (2008:84-85) gave the following 7 suggestions to construct International Thai PA scholars;

- 1) *They should write academic and research articles to publish in international journals*
- 2) *They should participate in academic activities in other countries*
- 3) *They need to have outstanding knowledge and capacity to become a visiting lecturer in a renowned university*
- 4) *They should stay up to date with progress in academic work*
- 5) *They should ensure that their academic work meets international standards as required*
- 6) *They should ensure that the quality of doctoral students in Thai universities is outstanding*
- 7) *They*

¹⁴ ThaiLIS-Thai Library Integrated System, supporting by Office of the Higher Education Commission, coordinated with King Mongkut's University of Technology Thonburi.

should understand the difference between the academic world and practical experience.

Some Thai Higher Education Institutions offer doctoral curriculums specifically for politicians who would like to use education to advance in their careers. This practice gives a lot of Thai scholars anxiety about the quality of education those institutions provide. It could also affect the demand and supply of Ph.D scholars, and Human Resources Management (HRM) in the long term. The educational institutions may end up manufacturing a lot of Ph.D. scholars with low quality of knowledge. The quality control from Thai Higher Education institutions and the doctoral programme board of committee is urgently required to make sure that the demand and supply of PA doctoral programme will not overshadow the quality of education. In Malaysia, Ahmad Atory Hussain explained that there are many problems in Administration. *Firstly*, Centre of Politics and Administrates in Malaysia is still Political Science, not PA *Secondly*, there are enough PA lecturers but lack of civil servants who are interested to study PA in a doctoral degree, leading to a much less number of Ph.D students than MPA students. *Thirdly*, PA is an applied social sciences which does not have its own theories. So far, PA has combined major theories from other sciences as “Interdisciplinary” such as Political Science, Management Sciences, Law, Psychology, Sociology, and Anthropology as referred by Ketsuwan (2011b:296). *Finally*, Political Science has more influence in academia than PA, according to Malaysian scholars and administrators, PA should just be a discipline under Political Science.

CONCLUSIONS AND SUGGESTIONS

Chokchai Suttawet¹⁵ concluded that PA curriculums cover all PA sub-fields and matters; *background, subfields, faculties, grades, degree levels, degree’s name, number of students, credits, full time and part time, languages, coursework, and other conditions.*

The results of the interview revealed that in Malaysia, Public Administration was just placed under a big umbrella of Political Science because in higher education in Malaysia Public Administration is seen, as Woodrow Wilson referred to in his article, in the role and status of “implementation” while Malaysia scholars view Political Science as “science” although Public Administration was dichotomy from Political Science since the first paradigm by Nicholas Henry.

On the other hand, in Thailand, Public Administration is a popular curriculum that has been included in most higher education institutions. Although Malaysia is equipped with plenty of universities both local universities and the leading ones, only a few universities have started their PA doctoral degrees such as University of Malaya (UM.), Universiti Utara Malaysia (UUM.), and University of Mara. All universities in Malaysia provide a doctoral degree in “Doctor of Philosophy” (Ph.D.) while in Thailand various doctorate titles are awarded. In addition, Ahmad Atory Hussain confirmed that the education plan in Malaysia covers a long period of 20 years whereas in Thailand a long-term education plan has never been set up. Particularly, Mahadi Mohamad, the former prime minister of Malaysia, expressed his wish in vision 2020 to see Malaysia becoming a developed country within 2020 as cited in AEC Insight episode 61 and 62 by Kasemsant Weerakul. The statistics from

¹⁵ Dr., the Chairperson of the Master Degrees Programs in Public Administration, lecturer of the Faculty of Social Sciences and Humanities, Mahidol University, Thailand.

various sources also pointed that Malaysia will reach their goal in 2018, following the effective policy “1Malaysia, People First, Performance Now” by Najib Razak, Malaysia’s prime minister. On the contrary, Thailand is undergoing extensive national reforms in 11 governmental functions including education and the ASEAN community is waiting to see which direction Thailand is taking after the reforms.

Mohammad Zaini Bin Abu Bakar suggested that in order to develop the body of knowledge, including studying and teaching management with “efficiency” and “effectiveness” within NPM paradigm and theories in Knowledge Based Society (KBS), a cooperation between Higher Education Institutions, Associations, school of thoughts and think tanks is needed to integrate PA in a regional contexts. The idea of “without boundaries” of different countries and regions such as ASEAN, ASIA, Europe and America has become more common in the modern world of globalization. Academic cooperation among education institutions within the same geographical and political region and across regions will strengthen the body of knowledge in PA.

This article has attempted to investigate and compare information regarding PA in only Thailand and its neighbouring country, Malaysia. However, a broader investigation of other ASEAN countries is also needed. Ahmad Atory Hussian suggested that it is possible to study and compare PA curriculums in 10 countries in the ASEAN community, including ASEAN plus three¹⁶ and ASEAN plus six¹⁷. If the PA curriculum comparison is to be investigated throughout the ASEAN region, the contexts of the countries will have to be taken into account. Singapore,

for example, is a much smaller country compared to the rest in the region and has a very different political and public management. Furthermore, in the future, PA leaders such as governments, scholars and administrators should put forward the idea of ASEAN PA association to strengthen the universal concept of PA as “without boundaries” in the globalization following to the ASEAN slogan “One Vision, One Identity, One Community”, as well as collaboration with PA associations in other regions such as in America and Europe.

THE CHANGING ROLE OF EU POLICY IN THE ARAB SPRING

Ms. Arunrat Jinda
Lecturer, Department of Public Administration,
Valaya Alongkorn Rajabhat University under the Royal Patronage, Pathum Thani, Thailand.
E-mail: arunrat@vru.ac.th

Abstract

Many countries in The New World Order have experienced rising social issues in their countries such as crimes, poverty, unemployment, and human rights. Social inequality has especially become the main driver for a revolution in terms of demonstrations and protests in the Arab world. This revolutionary movement is called “The Arab Spring”. The Arab Spring phenomenon is a series of revolution which occurs in the Middle East and North Africa regions. It has begun with the successful protests in Tunisia. The continuous wave of revolutionary disorders has emerged in Egypt, Jordan, Algeria and Yemen, as well as spread to other surrounding countries, according to the “Theory of Dominoes”. Not only the uncertain situation in the whole the Arab world is highly probable, but also the significant causes of conflicts and issues have differently arisen among these countries. Due to the expansion of its impacts on national stability and security in the neighboring countries and regions including Europe, the European Union (EU) is very concerned with these conflicts in the Arab world that result in demonstrations and protests. Moreover, the EU has taken part in aiding and helping those countries. The EU should definitely offer cooperative partnerships to support and stimulate democratic development and the general welfare of the citizens in the Arab countries. In other words, the aid should directly support their own dependence in developing political, social, and economic transformations.

In order to optimize expected outcomes, this article will focus on the European Union’s responses to the Arab Spring, as a reaction to the changing policies and measurements of Arab countries in solving conflicts. The EU’s policy consists of political and economic supports, development of people-to-people contacts, and enhancing regional cooperation in the international relations.

Key Words: Arab Spring, European Union, Policy

“The European Union was the first to offer a serious response to the Arab Spring. This new set of decisions is the result of the new and ambitious European Neighborhood Policy launched in May and it confirms that the EU has made it one of its main priorities to support “deep” and sustainable democracy, but also economic recovery, in North Africa and the Middle East.”

(Catherine Ashton, 2013, p.2)

I. INTRODUCTION

For more than two decades, the European Union has played a pivotal role in the Mediterranean and North Africa by using the EU's soft power and its deep social, political and economic since 1995, the EU promoted the vision of an open and integrated Mediterranean region that it was organically tied to and politically oriented towards the EU's southern neighbourhood. When the Arab Spring uprisings of 2011 effectively drew an end to this relationship. It seem to be that over potential instability and less amenable governments taking office, political change in the Mediterranean and North Africa is good news for Europe countries because of the EU's role as a regional power and reference point in a changing region into question. Not only has the EU's image been considerably tainted by its long-standing relationship with autocratic Arab rulers, but it also no longer provides the only model for the proto-democratic states of the southern Mediterranean (Timo Behr, 2013, p.1).

Moreover, EU created the new institutions for stimulating the governments of the countries in the Mediterranean and North Africa which have chosen to embark on a path of democratization and modernization for solving conflicts in this region, such as terrorism, emigration, socio-economic upheaval by starting with the outstanding in Tunisia and Egypt (European Commission, 2013, p.1). So EU is the mainly organization to considered and specified policies for solving this situation including; to stimulate sustainable economic growth is therefore crucial to the promotion of democratic institutions, provided that the countries of the region contribute to the promotion of a friendly environment for investment, political stability and human rights.

The EU has displayed a wide-range of different tools, from military might to humanitarian aid, from targeted sanctions to

measures in the management of migration, and some rethinking of the longer term programmatic policies. It has also demonstrated some flexibility in using different policy and institutional formats by strengthening existing policies and using multilateral frameworks with other countries or organization, from NATO to the UN and the Middle East Quartet and it has cooperated with the African Union, the Arab League, the Organization of the Islamic Conference in the Cairo Group, as well as the international organizations on the ground (Rosa Balfour, 2011, p.22).

The EU is forced to rethink their foreign policy attitudes towards their neighbors in the Mediterranean. National politicians challenge the European Union to modify its approach towards "a changing neighbourhood" (Christian Koch, 2011, p, p.3)., as phrased by the latest European Commission report. However, very little is actually presented and explained to the wider European public about the initiatives and actions undertaken by European institutional actors and the drastic need for a change of paradigm in the EU's foreign policy and the role of EU in the Arab Spring.

This paper focuses on the importance of EU's foreign policy towards North Africa and the Mediterranean after Arab Spring, the rethinking of EU's Policy consists of political and economic supports, development of people-to-people contacts, and enhancing regional cooperation in the international relations and the analysis of EU and Arab countries's relationship in the future.

II. BACKGROUND

The approved protests that expanded through North Africa and the Mediterranean since early 2011 have changed relations between the EU's southern neighbourhood and the Arab countries including; Tunisia and Egypt had provided about peaceful

revolutions in democracy. Jordan and Morocco have initiated a process of managed democratic reforms. Libya and Syria provided civil wars.

Accordingly, there are the reasons why many countries and organizations have the need to have a role in the Arab Spring. Firstly, the Mediterranean and North Africa is the region's primary role on the international community. Secondly, economic growth and social security matters and international organizations like national interests of this area such as NATO; military and security resources. The EU as a region is, therefore, affects the neighborhood, so EU policies focused on politics, economy and social including; the Euro-Mediterranean Partnership Programme (EMP), the European Neighbourhood policy in the Mediterranean (ENP); the Union for the Mediterranean (UfM); EU engagement in the moribund Middle East peace process (MEPP), and Regional Security for controlling immigration (Rosemary Hollis, 2012, p.82).

2.1 THE BEGINNING OF THE ARAB WORLD IN TRANSITION.

The Arab Spring is a series of revolutionary revolts in Middle East and North Africa. It began with protests on December 18, 2010 in Tunisia after self-immolation of the Tunisian dealer in Mohammed Buazizi's vegetables in protest at police corruption and ill treatment. With success of protests in Tunisia the wave of disorders struck Egypt, Jordan, Algeria and Yemen, and then extended and on other countries as the theory of dominoes (Vidio, Lorenzo, 2013, p.57).

It because protests divided methods mainly of civil resistance in the long campaigns involving strikes, demonstrations goes, and meetings, just as effective use of social mass media to organize, report, and to lift understanding in the face of the state

attempts the Internet like the censorships and repressions.

The Arab countries has a protest on different forms, for example, there were revolutions in Tunisia, Egypt, Libya, and Yemen; civil revolts burst in Bahrain and Syria; the main protests flashed in Algeria, Iraq, Jordan, Kuwait, Morocco, and Sudan. The matter is that the domestic policy of each country differs, thus, use of a compromise and grace to suppression of concentration differs in each country but many demonstrations were met by violent reaction of the authorities, and also pro-government rebels and counter-protesters. The main slogan of demonstrators in the Arab world I was "The people want fall of the regime" (European Commission, 2013, p.17).

Thus, the Arab Spring as a departure from extremism in the field of Non-ideological movements for democracy and economic prosperity that shows the movement of people through the eyes of the West and the EU as neighboring region focuses on freedom and democracy counters tendencies toward political violence and economic growth.

2.2 NEIGHBORLY RELATIONS BEFORE THE ARAB SPRING: THE OLD PARADIGMS.

The clearly relationship between the EU and Arab countries started in 1958, when the Treaty of Rome came into force, European countries including; West Germany, France, Italy, Belgium, Luxembourg and the Netherlands for signed the founding members of the European Coal and Steel Community (ECSC) became the European Economic Community (EEC). The establishment of the EEC, which created a customs union among these states, posed, among some questions, how to maintain mutually beneficial economic relations with their neighbours to the south of the Mediterranean.

When the end of the Cold War in 1991, EU also brought about renewed activism on the part of the EU to engage its eastern and southern neighbours in termed as the Renewed Mediterranean Policy (RMP) of 1991-1995 for increasing the funds committed by the EU for the Mediterranean region and distributed funds through public-private cooperation, more decentralized partnership and the promotion of multilateral networks (Vera Knoops, 2011, p.4).

In addition, the EU's attitude towards its southern neighbours was mainly framed by the Euro-Mediterranean Partnership since 1995. All bilateral association agreement between the EU and Mediterranean countries have included a human rights and democratic principles. The attitude of several Mediterranean EU states: support for dictator and economic interests (Helene Pfeil, 2011, p.3). On the other hands, the deepening of economic and political relationships was never really made conditional upon progress in human rights with Arab countries.

Therefore, in the recent the EU has been promoting and justifying its policies by using "shared prosperity" all the countries of the Mediterranean (Rosemary Hollis, 2011, p.1). Further areas of engagement are fundamental freedoms, constitutional reform, reform of the judiciary and the fight against corruption.

2.3 IMPACT ON EU-ARAB COUNTRIES RELATIONS.

The relationship when the former passed on to the present. Impact of the Arab Spring had resulted in a change in the structure of the policy, which the EU will find it difficult to formulate an effective foreign policy strategy including; the End of Neoliberal Paradigm in Egypt and Tunisia., Fragmentation of Civil Society in many countries, so the EU's focus on western-style civil society organizations (CSOs) will

have to adapt in society., Dominance of Political Islam in the Southern Mediterranean. The Rise of Nationalism in Egypt and a polarized Region has become increasingly spread as a result of recent events.

Therefore, The EU will need to factor in all of these developments through many policies for supporting political transition, supporting economic transition, Development of people-to-people contacts and enhancing regional cooperation. (Rosemary Hollis, 2012, p.34).

III. EU'S RESPONSE TO THE ARAB SPRING: THE MULTILATERAL POLICY.

The main events of the Arab Spring has caused the EU to pay attention and want to have a role with the region. There are many collaborations together, However the EU's reaction was everything but visible and cohesive like the image of "soft power" or "normative power". (Helene Pfeil, 2011, p.2). It means that the EU was quick to respond to the events of the Arab Spring. Since the beginning of 2011 including; The Humanitarian Implementation Plan in the field of funding and civil society and the EU High Representative for Foreign Affairs and Security Policy in 2011 in Tunisia, Libya and Egypt.

The EU plays a role in the Arab world for improving the relations with these countries. Also the EU has to concentrate on this area as it is the next area of the European Union, thus, it important from the point of view of security and geopolitics. EU has targeted to complete in relation to this matter. If transitions of North Africa and the Mediterranean to democracy succeed that can be the EU so easily to receive the benefits; Firstly, economically if open and dynamic societies replace the closed worlds of dictators. The EU can easier cooperate within trade; Secondly, strategically from the point of view of the regional relations of the

solution of problems or dumping with these countries.

Therefore the purpose of the EU in this region it is possible to be considered as development of the relation to the best conditions. The EU wants that the Arab countries had positive relation especially, when revolution and protests of success and a political regime were changed.

The recent time the EU's policies towards the region and criticized some of the existing multilateral policy tools available, such as the European Neighborhood Policy (ENP), the Union for the Mediterranean (UfM), and its predecessor, the Euro-Mediterranean Partnership (EMP). Almost all studies offer a variety of ideas on the future course of, above all, the ENP and the UfM: in fact, the "Partnership for Democracy and Shared Prosperity with the Southern Mediterranean," recently adopted by the European Commission and the European Council, absorbed some of these recommendations. (Tobia Schumacher, 2011, p.108) and the signed of Joint Communication entitle "A partnership for democracy and shared prosperity with the Southern Mediterranean" and "A new response to a changing Neighbourhood" All this policies provides the Arab countries that the broader multilateral framework of such relations.

3.1 THE EU POLICIES FOR PRECEDING THE ARAB SPRING UPRISINGS: THE TOOLS BOX'S EU.

As mentioned above, the impact of the Arab Spring countries in North Africa and The Mediterranean EU has set a policy to be able to play a role in the incident have been increasingly using a "tool" to create intimacy. It can be divided into four or dimension or the four pillars; 1) Refined conditionality 2) Greater differentiation among countries 3). The new tools to support democracy-building 4) using

stronger focus on sustainable social – economy. (Rosemary Hollis, 2012, p.89).

EU support to stimulate economic growth is therefore crucial to the promotion of democratic institutions, provided that the countries of the region contribute to the promotion of a friendly environment for investment, jobs and growth. It should be Underlined that economics has a deep connection with politics (European Commission, 2013, p.1).

3.2 SUPPORT FOR ECONOMIC TRANSITION: THE "THREE Ms": MONEY, MARKET ACCESS AND MOBILITY.

EU support focus on the new approach for delivery the resources and incentives that can encourage sustainable change. (Tlmo Behr, 2011, p.10) including;

3.2.1 MONEY

In May, 2011 the EU undertook to make available to €1,2 billion from above €5,7 billion already planned for support of a grant of the neighbor during the period 2011-2013. Besides, the new package of support of a grant of area includes: Support of Partnership, Reforming and Comprehensive Growth (SPRING) the program bears the budget of €350 million in additional funds on 2011 and 2012; creation of the Fund of Civil Society (FCS) for the neighbor with the full budget of €26,4 million on 2011; Distribution of nearly €30 million through grants Erasmus Mandusa in 2011 – 2012 academic year, is certain for the southern countries to finance grants for students and teaching structure from the area wishing to spend part of their researches, research or the period of training in the EU (Tlmo Behr, 2011, p.12).

3.2.2 MOBILITY

Mobility in the EU will be facilitated for citizens of the countries - partners, in particular: main expansion of university grants and exchanges. Funds for the program were also increased to support modernization of the higher education in the southern Mediterranean and to expand cooperation with EU universities in 2012 and in 2013; and start of "associations of mobility", including the help of the visa and agreement on repeated access. Dialogues have already been launched with Tunisia and Morocco and we hope to start others shortly.

3.2.3 MARKET

EU single market will be the main objectives of the improved access to the market just as progressive integration of economic systems of these partners to the EU uniform market will be main goals of future negotiations of profound and comprehensive free trade zones (DCFTAs). In comparison with the current trade relations between the EU and these countries, DCFTAs will go out of removal only of tariffs to capture all regulating problems relating to trade such as protection of investments and government procurement.

3.3 THE EUROPEAN NEIGHBORHOOD POLICY (ENP).

The ENP - The Arab Spring made this fundamental intuition and all too evident imperative, summed up in what has since then become the slogan: "More for more." and EU recognizes the need to offer more benefits to the neighbours for developing the sustainable stability policy in the Arab countries.

Commission president Jose Manuel Barroso announced in 2011 about ENP that *"I think it is our duty to say to the Arab people that we are on their side!, I want to specifically say this to the young Arabs that*

are now fighting for freedom and democracy: We are on your side. (Barroso Jose Manuel, 2011, p.32).

The EU to press more for political reform in the south, with some countries moving towards democracy in Tunisia, Egypt, others setting reform in Morocco, others risking a fall into authoritarian adjustment in Algeria etc,. So, the ENP is the policy which, complicating further the search for a workable multilateral framework.

IV. RETHINKING THE ROLE OF EU POLICY: THE NEW PACKAGE; A CHANGING NEIGHBOURHOOD.

When the Arab Spring woke up in 2010, EU countries are forced to rethink their foreign policy attitudes towards their neighbors in the Mediterranean. Divide into The four decisions come in response to actions outlined in the Commission's recent Communication entitled "A new response to a changing neighbourhood" because the many politicians considered that the Arab Spring is the challenges for the EU.

4.1 POLITICS

The European Commission declared a Communication entitled "Increasing the impact of EU Development Policy: an Agenda for Change" that policy focus on good governance, human rights, democracy and the rule of law after events of the Arab Spring. (EuroprAid, 2011, p.2)

The political policy of the EU has since appeared clearly since the first seven months of the Arab Spring, starting with the self-immolation of Mohammed Bouazizi in the Tunisian town of Sidi Bouzid on December 17, 2010, the EU clearly revealed itself as both actor and spectator by resorting to both activism and passivism in a seemingly erratic fashion. Against this background and based on the EU's recently adopted Partnership for Democracy and Shared Prosperity with the Southern

Mediterranean, this article aims at understanding this dualism more precisely and shedding some light on the EU's rather anachronistic foreign policy behavior in the Middle East and North Africa (MENA) in recent months.

Figure 1: The protest during Arab spring

Assessing the status of the protest during Arab spring		
Country	Death toll	Situation
Tunisie	338	gouvernement overthrown
Egypt.	4300	government overthrown / ongoing crisis
Yemen	2000	government overthrown / ongoing crisis
Lybia	25000-30000	government overthrown / ongoing civil war
Syria	More 190000	ongoing civil war

The statistics during the Arab Spring events in the country have considered various scenarios for the defense including; support the democratic transitions and communicate with Arab countries by using the continually to support civil society both through differentiated bilateral support in each country and through the reinvigoration of existing Euro-Mediterranean forum.

Moreover, the EU must map out what kind of 'governance model' is envisages for its relations with the MENA through the EMP, the EU purported to create a collective security community based on shared decision-making and deeply integrated policy structures across all realms. In practice, European governments themselves limited the depth of such dynamics (Barroso Jose Mamuel, 2011, p.38).

This is the best way forward is likely to be eclectic. The EU should opt for a more selective and lighter-touch use of the Euro-Mediterranean governance model, combining this with a more pro-reform and agile engagement at the level of high-politics.

4.2 ECONOMICS

The EU has clearly changed is the preparation of the project to support and assist the Arab countries in the direction of the economy. Since the Arab Spring, the event ended, the unemployment rate among working age is higher and the investment of private sectors less. The policy of the EU is supporting for Partnership, Reform and Inclusive Growth under the named The SPRING programme is the new policy for providing support for the Southern Neighborhood countries for democratic transformation, institution building and economic growth in the uprising of the Arab Spring. This policy will be tailored to the needs of each country. The total value of this is €350 million to cover the years 2011 and 2012 (Tlmo Behr, 2011, p.18).

In addition, the EU adapts a more rigorous conditionality principle in the Economic Policy named "more funds for more reform" (Helene Pfeil, 2011, p.4) and established Non-governmental organization (NGOs) in eschewing any focus on interests. At the other extreme, they still betray a reflex of exclusion and control that is devoid of longer-term rationale.

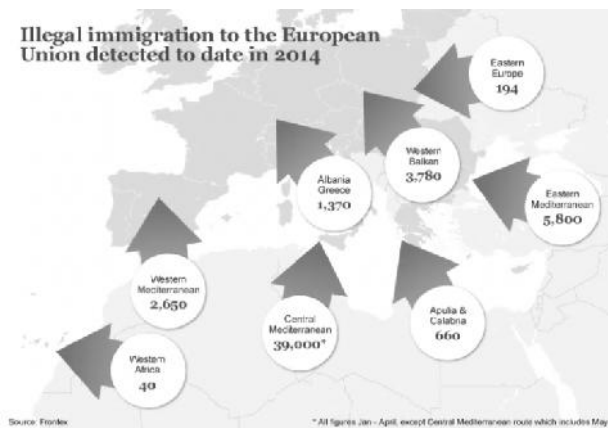

4.3 SOCIAL

The social dimension of the EU, there has been talk at the conference of Commission launched in 2011 on migration, mobility and security aimed at agreeing mobility partnerships with many countries in the Mediterranean especially; the EU's new partnership offers southern Mediterranean government's closer political cooperation provided the latter achieve progress

“towards higher standards of human rights and governance”. (Timo Behr, 2011, p.29).

The EU’s migration policy responds to the Arab Spring when the uprisings on this situation produced a highly insecure event in the North Africa and increased cross-border movements in 2011.

Figure 2: The illegal immigration to Europe in 2014.

Source: Barrett, D. (2014). Home Affairs Correspondent.

More than 1 million individuals left Libyan territory in the spring and summer of 2011, of which around 400,000 were Libyans seeking safety abroad and approximately 700,000 were foreign nationals. A substantial proportion of the outflow from Libya was received by Tunisia and Egypt. (Carrera, Den Hertog and Parkin, 2012, p.4).

For this reason, it is the main reason that causes more unemployment, so a special measure designed to support poorer areas in Tunisia in the after the Arab Spring.

Moreover, the rethink human mobility; The Tempus programme, about funds partnerships between higher education institutions in the EU and MENA countries the EU created the scholarship named “The Erasmus Mundus programme” that policy will support students between the

EU and neighboring countries by creating possibilities for student and academic staff mobility and exchange of knowledge and skills. The EU the Neighbourhood Civil Society Facility, provide to strengthen the capacity of civil society to promote reform and increase public accountability in Arab countries.

Therefore, the relationship between the EU and its Southern neighbours will be upgraded if the conditionality is more rigorously implemented than in the past.

V. EU-ARAB COUNTRIES: THE RELATIONSHIP AND FUTURE PROSPECT

The changing role of the EU has changed in terms of politics, economy and society, so the EU is planning policy with the Arab countries.

The EU created a geostrategic vision for where it wants the region to be in the next 10 or 20 years, which problems need to be overcome and where Europe should be able to work with new regimes on broader global questions.

The EU plans to do negotiations of profound and comprehensive free trade zones (DCFTAs) which will be offered only those countries which move "deep democracy" while contracts on cooperation will remain in a place for those countries which remain not persons interested to reform. In December, 2011 Ministers of Foreign Affairs of the EU agreed to begin negotiations concerning DCFTAs with Tunisia, Egypt, Morocco and Jordan. (Timo Behr, 2013, p.7)

Moreover, the new forms of positive convention have to be applied to the countries which were exposed to radical change, such as Tunisia, or made the biggest efforts in reform from above, for example Morocco. Unlike last business relations of the EU with authoritative governors or with the relations with the

countries such as Algeria, now the EU demands reform.

However, the EU wasn't faultless, especially, when member states are necessary to remove protectionist barriers, to spend more resources for the Arab countries, or to expand shares of immigrants allowed to enter Europe from this region. The irony of the concept "Is more for more" - that neither the High Representative, nor the Commission aren't responsible for delivery of these incentives - all three areas in which the member states making the decision. (Timo Behr, 2013, p.9)

Even, incentives were put, but not all countries will find them interest. The countries of power exporters, such as Algeria and Libya, had a limited obligation with the EU, also because of unattractiveness of that is offered. Trade relations are inclined in favor of these countries which are only net - export of area to the EU. Really, all review of EPS doesn't address to a question of how to have impact on the countries which are uninterested in stronger relations with the EU. It belongs to Syria and other countries in the region, where the European influence – weaker and internal complex of policy. And the recent events in Tunisia, Egypt and Morocco have undoubtedly increased the room for maneuver of civil society actors in the three countries.

VI. CONCLUSION

Although the Arab Spring, the current will continue to affect many countries, including international organizations, the EU and therefore the need to change their roles and policies that apply to the Arab countries.

The EU has to change, as this new system will find the application in political practice. At the level of the EU, one key problem concerns system of creation of foreign policy of the EU which is necessary on the member states providing incentives

and cutting their national policy in relation to area with diplomacy of the EU.

In addition, the EU crate policy the more money, the markets and mobility a member of equation, but doesn't make the answer to such potentially historical events. the EU could agree about several common political goals, it continues to refuse to throw its economic weight around to reach them. Besides, appeal of the EU and influence in the region change extremely between the countries. Against global decrease in Europe, change dynamics of the power in the region with other actors trying to get more important role, such as Turkey, Saudi Arabia, Qatar, and other global countries, such as China and Japan providing economic relations.

Besides, the EU has to recognize that the way by which economic liberalization was caused within last decade, fed a lot of social discontent. The key to social stability that creation of workplaces and reduction of movement, otherwise, by the EU needs to take a particular advantage of opportunity to put forward area out of the dominated investor of management of the energy sector who fed both economic and political pathologies.

The EU has the main policy for responding to the Arab Spring; firstly, Support for political transition by focusing on democracy and developed civil society, secondly, Support for economic transition by using SPRING programme, economic development, thirdly,. the development of people-to-people contacts and enhancing regional cooperation.

The EU will continue to seek government and official level cooperation on counterterrorism and migration control strategies which use the law to manage space and people in the interests of European security, not Arab civil society. (Rosemary Hollis, 2012, p.94).

At the end though the EU is wanted a hiding place of politically correct conversation, which “we only here to listen and help”, but still have to recognize that the local answer to it can be, “hold your distance”, but at the same time complain of a lack of the European money and access of labor market.

There is no clear answer to these dilemmas. But they really offer that one priority consisted in anew to think over type of the relations between these two parties, and not only forms, methods and tools to carry out political convention. More equal relations could be the first step, and understanding of national “advantage” which moved so many to North Africa and the Middle East to get rid of their constant leaders. Interdependence, but not the convention based on asymmetry of the power, and the link to the universal principles, but not on standards of democracy does lawful to support them abroad, despite charges of double standards that the EU often faces. And identification of common interests and problems which respond to requirements of people in this region, can be in the way to establish new dialogue with the changing Arab world.

Abstract

Public service coproduction is believed to foster trust among citizens, but little empirical work is devoted to this assumption. This study fills the empirical gap by using data from an original survey of citizens ($n = 1,799$) in two municipalities in Northeast Thailand to examine the relationship between coproduction and trust in three policy areas: public works, public health, and environmental management. Our results suggest that coproduction does not necessarily induce citizen trust in all policy areas. In fact, coproduction of public works and environmental management were found to negatively affect citizen trust in local government. On the contrary, coproduction of public health activities, which require specialized knowledge in physical health, was associated with more trust in local government. Overall, coproduction in public works and environmental management increases citizens' generalized trust in other citizens. This article concludes with a discussion of these findings, methodological limitations, and policy implications.

Key Words: Coproduction, Local Government, Thailand, Trust in Government

INTRODUCTION

Governments around the world are currently under fiscal stress. Prolonged economic stagnation caused by a series of financial and political crises has serious repercussions for local government finances. In light of these economic and fiscal pressures, the contemporary public management field emphasizes a variety of alternative public service approaches to promote citizen participation (Fledderus, 2015). Salient features of these alternative public service approaches include inter-agency collaboration, public-private partnerships, decentralization, and an

increased role for users as co-producers in public service delivery (Lindsey et al. 2014).

Citizen coproduction of public services has in recent years evolved into an important tool of local public service delivery in North America and elsewhere in the Western hemisphere (Lyons, 2006). Many programs formerly carried out through the Weberian bureaucratic hierarchy are now coproduced by local government agencies and their citizens (Pestoff, 2012). Also, coproduction has important implications for representative democracy (Bovaird, 2007). The concept places citizens and communities at the center of government decision making, causing a fundamental

shift in the ways that government officials interact with their constituents (Sudhipongpracha & Wongpreedee, 2016).

However, there are a variety of definitions and forms of public service coproduction. Ostrom (1996) and Ramirez (1999) broadly define coproduction as an approach to partnership in public service production between individuals or actors who belong to different sectors. For Bovaird (2007, p. 847), coproduction is defined as “the provision of services through regular, long-term relationships between professionalized service providers (in any sector) and service users or other members of the community.” These relationships can be supported by direct public subsidy, tax exemptions, direct government transfers, or in-kind contributions (Pestoff, 2012).

The concept of coproduction has received extensive scholarly attention (Bifulco & Ladd, 2006; Aiken & Bode, 2009; Alford 2009; Verschuere et al., 2012). Yet, little prior research is devoted to the effects of coproduction on citizen trust and attitude towards government institutions (Verschuere et al., 2012; Fledderus, 2015). Furthermore, the existing empirical works This article attempts to bridge this research gap by examining the normative claim that trust in government is fostered when users are involved as coproducers of public services (Calabro, 2012; Fledderus et al., 2014).

In this study, we used a survey questionnaire previously used by Parrado and colleagues (2013) to collect data from two municipalities in Khon Kaen province—one of the three largest provinces in Northeast Thailand. The original questionnaire was modified to focus on three policy areas in which coproduction has been purportedly used in Thai local governments: road construction, local environment, and health. Our analysis attempted to construct measures of citizen coproduction behaviour and to account for variation in coproduction behaviors and trust in each policy area by considering individual and contextual factors identified in previous research. Alongside this explanatory analysis based on individual predictors, face-to-face

interviews and focus groups with citizens and local officials were also used to show how public service coproduction has changed the relationships between citizens and their local government officials.

This article begins with a review of coproduction theory and relevant research works. It then describes two municipalities from Northeast Thailand, as well as the data from our survey, including measures of coproduction behaviour and degrees of citizen trust in local government. Next, we present our statistical findings and a summary of qualitative evidence from the interviews and focus groups. This article culminates in interpretations, methodological limitations, and potential policy implications from our research for managing coproduction activities in a way that enhances citizen trust in government institutions.
