Throughout most of the twentieth century, the public policy process was dominated by bureaucratic agencies (Orlansky, 2002). The appeal of this government-centric management model has faded over time due to social structural changes and economic development (Denhardt & Denhardt, 2003; Box, 2014). Public policies, programs, and services now involve a wider range of social issues and stakeholders.

Coproduction in the Public Management Literature

For the past decades, the “New Public Management (NPM)” initiatives have emerged to replace the traditional government-centric model of public management. Some of these initiatives were influenced by the business sector practices, such as quality assurance and performance management (Goertz & Gaventa, 2001). Other NPM-style initiatives were designed to reduce the size of government by contracting out certain public services and programs (Hood, 1991; Pollitt, 1991).

Nevertheless, these NPM initiatives share the same limitations as the traditional model. Government managers continue to influence citizens’ role in the NPM-oriented

public service delivery (Bovaird, 2007). Since the 1990s, the coproduction concept has attracted widespread attention among the American communitarians as an alternative approach to the business-oriented NPM ideas (Etzioni, 1995). Based on the coproduction concept, community development efforts are more effective when government authorities engage local citizens in meaningful ways (King & Cruickshank, 2002). Self-help groups, community-based associations, and social support networks began to emerge in the western countries (Lyons, 2006).

Also, a number of empirical works highlight the linkages between public service coproduction and social capital, which denotes “the set of trust, institutions, social norms, social networks, and organizations that shape the interaction of actors within a society and are an asset for the individual and collective production of well-being” (Stickel et al., 2009, p. 304). These works place emphasis on trust, reciprocity, and voluntarism among service users and providers as the resulting outcomes of public service coproduction (Putnam, 1995; Seligman, 1997; Moore, 2013). Apart from public service delivery, community development experts point out the increasing role of citizen groups in community visioning and strategic planning processes (Walzer & Sudhipongpracha, 2012). Thus, coproduction is not confined only to public service delivery and policy implementation, but also involves other phases of the public policy cycle (Bovaird, 2007). Public service coproduction can be classified into four distinct types (Sudhipongpracha & Wongpreedee, 2016):

- *Co-commissioned activities* include activities that involve planning, budget prioritization, and financial decision making (e.g., citizens’ agreement to user charges);
- *Co-designing* means citizen involvement in designing public service programs and activities through different channels, such as launching citizen satisfaction surveys, forming citizen advisory councils, and creating task forces that make recommendations on specific policy issues;

- *Co-delivery* can take two forms: co-managing and co-performing. The difference between the two forms is the degree of government involvement in service delivery. While co-performing has less government involvement than co-managing, both are still subject to government agencies’ rules and regulation; and
- *Co-assessment* includes co-monitoring and co-evaluation. One example is participatory rural appraisal (PRA), which is a collection of approaches that enable local residents to analyze and share their knowledge of living conditions in rural areas.

Despite much theoretical interest in coproduction, most research has focused on case studies in which the organizational and managerial aspects are explored (Joshi & Moore, 2004; Bovaird, 2007; Alford, 2009). Relatively few studies have been conducted on individual citizens’ coproduction behaviors and attitudes (Parrado et al., 2013). In the current stream of research on public management, coproduction is perceived as a response to shortcomings in government performance, especially public service delivery. A vast number of research works have demonstrated that government performance leads to citizen trust and satisfaction with public services (Vigoda & Yuval, 2004; Cowell et al., 2009; Van Ryzin, 2011). In this line of argument, government underperformance is the main driver of distrust and propels citizens to take an active role in coproducing services that suit their needs. However, not many studies have established causal or statistical links between trust in government and improvement in government performance through alternative service delivery approaches, such as coproduction (Vigoda & Yuval, 2004; Parrado et al., 2013).

Trust and Coproduction

Citizens’ perceptions of government trustworthiness have important implications for the public management discipline (Yang

& Holzer, 2006). Trust is generally defined as “the belief that others, through their action or inaction, will contribute to my/our well-being and refrain from inflicting damage upon me/us” (Offe, 1999, p. 47). This paper focuses on citizens’ trust in local government institutions, as well as their trust in other citizens. In this context, trust is operationalized as the extent to which citizens say they trust their local governments and other people. Even though this operationalization may sound simplistic for such a complex concept, most research works on trust use measures that are framed around the antecedents of trust (Fledderus, 2015). Taylor-Gooby (2008) argues that we should consider two bases on which people decide to trust or not to trust: a cognitive base and an affective base of trust. Taylor-Gooby further argues that the current NPM-style reforms have overemphasized the cognitive base of trust by relying on objective standards and Key Performance Indicators (KPIs), while ignoring the affective base that expresses itself through the interaction between government officials and citizens. Such interaction is central to the concept of coproduction (Fledderus, 2015).

Apart from the cognitive-affective distinction of trust, Grimmelikhuisen and colleagues (2013; 2014) offer a three-dimensional conceptual framework for measuring trust. This framework is predicated on the assumption that citizen trust depends on three characteristics of the government institutions: competence, benevolence, and honesty. Competence refers to citizens’ perception that governments have the skills and resources to implement policies and provide essential services (Heatherington, 1998). This competence dimension of trust is linked to government performance. Benevolence denotes a view that government agencies serve the public interests at heart (Levi & Stoker, 2000). The honesty dimension of trust reflects citizens’

perception that their governments do not attempt to hide information from the public (McKnight et al., 2002).

Public service coproduction is essential to the building of citizen trust (Fledderus et al. 2014). Coproduction activities have the potential to encourage both government professional staff and citizens to understand and respect each other’s goals and interests, thereby leading to citizens’ affective trust in government (Lewicki et al., 2006). This argument resonates with Needham (2008) who points out that coproduction “can be a therapeutic tool (building trust and communication between participants, allowing bureaucrats and citizens to explain their perspective and listen to others)” (p. 223).

In short, citizens’ coproduction of public services has a positive impact on the relationship between governments and their citizens, resulting in higher trust in local governments and their fellow citizens. This leads to the two fundamental hypotheses of his study:

- H1.* Citizens’ participation in coproduced public services will lead to an increase in citizens’ trust in local governments.
- H2.* Citizens’ participation in coproduced public services will lead to an increase in their generalized trust (trust in other citizens).

Coproduction “for All Seasons”?

Not all public service programs and policy sectors are conducive to coproduction (Parrado et al., 2013). Lowi (1964) argues that different types of policies (i.e., distributive, redistributive, regulatory) have differentiated effects on how policy decisions are made and implemented. Haas (2004) also points out that policy areas in which service providers are highly professionalized, such as healthcare, are

likely to be less conducive to coproduction other policy areas. Parrado and colleagues (2013) assess Haas' proposition by examining how three distinct policy areas—community safety, local environment, and public health—affect citizens' coproduction behaviors in five European countries. The research team concludes that highly professionalized services trigger less coproduction because health professionals are likely to be more reluctant to let citizens partake in the service coproduction.

This finding is consistent with past studies, which reveal that government officials' varying degrees of specialization determine how public services are designed (Dunston et al., 2009; Porter et al., 2010). In other words, health policy requires specialists with specialized knowledge in physical health and curative strategies. Workers in the community safety and local environmental policies have less specialized education and few professional qualifications to fulfil.

Since the highly specialized public services are likely to be dominated by professional staff, citizens' perception of local government trustworthiness in delivering those services may be different from the less specialized services. For instance, in the health policy area, citizens may feel uneasy about their limited role in influencing policy decisions and may become distrustful of their local governments. Having a voice in the design and delivery of public services—beyond a basic level of receiving instructions from government officials—is essential to developing cognitive and affective trust among citizens (Simmons, 2011; Brandsen & Helderma, 2012; Pestoff, 2012). Thus, we draw the following hypothesis:

H3. Citizens' participation in coproducing highly specialized public services

will lead to a decrease in their trust in local governments.

CONTEXT

Situated in the heart of Thailand's northeastern region, Khon Kaen province has the second largest number of local governments per 10,000 population in Thailand. Currently, there are 225 local government units in Khon Kaen, including one provincial administrative organization (PAOs), 53 municipalities, and 171 sub-district administrative organizations (SAOs).

To test our two hypotheses, two municipalities in Khon Kaen are used as case studies to assess the effects of citizens' coproduction behaviors on their trust in municipal governments. These two cases are chosen because each municipality has adopted a variety of public service coproduction programs in which municipal residents are encouraged to take an active role. Also, the two cases represent two different contexts of municipal government: urban and rural areas.

The Khon Kaen Metropolitan Municipality (KKMM) is a large urban municipality famous for its city forum, which has been an important venue for municipal residents to engage in the policy-making and budgetary processes for decades. In sharp contrast, the Nam-Phong Subdistrict Municipality is a rural local jurisdiction with a majority of residents working as rice farmers. In years past, however, citizens in both municipalities have been politically active in local government affairs.

Both the KKMM and Nam-Phong municipality first adopted coproduction for political and administrative reasons. With population exceeding 100,000 over the past decade, the KKMM has become administratively complex. The KKMM is currently divided into 93 precincts, each led by an elected community leader. More than a decade ago, the KKMM was split along the lines of power struggle between two local political groups. The feud came to an end with the two fractions' merger. To bolster this new alliance, the KKMM executives launched the "Small Municipalities within a Large Municipality"

program in 2005, including a variety of coproduction projects that allow community leaders and local residents to participate (Appendix A). The KKMM community members may make cash or in-kind contributions to the coproduction projects. For instance, each community leader is given the responsibility to collect garbage disposal fees within its jurisdictional boundary. Then, the KKMM officials collect the fees from each community leader. For road maintenance, local residents and their communities can take part in every procedure that does not require specialized knowledge in construction engineering. The KKMM is charged with providing sufficient resources and equipment for the maintenance projects.

In Nam-Phong municipality, public service production has proceeded in a smaller scale. With 4,984 population and 12 communities, Nam-Phong is a typical Thai rural locality with a serious revenue problem. In 2012, the Nam-Phong mayor launched his municipal service coproduction campaign modelled after the KKMM's "Small Municipalities within a Large Municipality" program. The motive behind this initiative was political: the mayor dismissed all his deputy mayors and political appointees prior to launching the coproduction program. To consolidate his mayoral authority, the Nam-Phong mayor adopted several coproduction initiatives to reach out to community leaders and ordinary citizens (Appendix A).

For example, the Nam-Phong municipality's road maintenance project allows citizens to work with the municipal public works department in repairing road shoulders and patching potholes. In this project, community leaders are given information on the unit costs of road construction and maintenance. Citizens in each community serve on a committee overseeing all road repairs. The Nam-Phong municipal government provides the concrete mixture and mixer, while citizens serve as road construction workers. Apart from providing construction materials and equipment, the Nam-Phong municipal government trains a group of selected citizens to serve as their communities' road construction supervisors.

METHOD

This study uses a quantitative method to examine the effect of public service coproduction on citizen trust toward local governments in two different municipalities in Northeast Thailand. The quantitative data came from a survey used by Parrado and colleagues (2013), which we modified to match the local government context in Thailand. A major modification was three key policy areas in which coproduction plays an important role in local governance. While the original questionnaire covered public safety, the environment, and health, our survey included coproduction activities in public works, public health, and local environmental management. The survey was conducted through face-to-face interviews in the two municipalities from October-November 2014 by the authors with the following numbers of respondents: 1,011 in the KKMM and 788 in Nam-Phong. These random samples were enhanced through quotas by socioeconomic parameters, such as gender, age, area of residence (urban or rural), and education.

SURVEY DATA AND MEASURES

Our dependent variable is citizens' trust in their respective municipal governments and in their fellow citizens. Trust in municipal governments was evaluated according to respondents' perceptions of the two municipal governments' benevolence, honest, and competence. Based on past research by Grimmelikhuisen and colleagues (2013), each perception dimension was measured using a five-item Likert scale, where 1 corresponds to strongly disagree and 5 strongly agree (See Appendix B for survey questions). Similarly, trust in other fellow citizens or generalized trust was measured using a five-item Likert scale. The Cronbach's alphas for the four dimensions of trust are 0.765 for benevolence, 0.817 for competence, 0.911 for honesty, and 0.886 for generalized trust.

These numbers reveal a high degree of internal validity for our trust variables.

Our main independent variable is citizens' participation in coproduction activities, which we divide into three policy areas as previously explained. In each of the three policy areas, the survey inquired about five representative coproduction activities and the extent to which respondents took part in these activities measured in a five-item Likert scale, where 1 equals *never* and 5 *frequently*. The five activities in each area were summed up to form an index. The Cronbach's alphas for the three policy areas are 0.871 for *public works*, 0.782 for *public health*, and 0.885 for *environmental management*.

For *public works*, the five activities are: (1) helping the municipal government build and maintain road shoulders, (2) working with neighbors and other community members on speed bump construction and maintenance, (3) working and helping the municipality with minor road construction, (4) taking part in the public service facility construction (e.g., community centers), and (5) helping the municipality in the river and canal dredging projects. For *public health*, the activities are: (1) changing to a healthy diet, (2) joining the municipality-sponsored healthy diet campaigns, (3) participating in physical exercise groups, (4) consuming alcoholic beverage in moderation and joining the campaigns for reduction in consumption of alcoholic beverage, and (5) serving on community health supervisory boards. For *environmental management*, the activities are: (1) helping the municipality collect garbage collection fee, (2) telling other people and neighbors not to drop garbage or let their pets foul the street, (3) trying to reuse and recycle your household garbage, (4) maintaining and beautifying the external part of your house, and (5) participating in a group or

organization that works to improve the environmental quality.

Prior to deploying the survey, the questionnaire was tested with a group of citizen representatives and local officials in each municipality. The survey attempted to cover a mix of coproduction behaviors that were motivated by self-interest, as well as those that were altruistic in nature. Though imperfect, these indices of coproduction offer a reasonable proxy measurement of the behavioural aspect of coproduction, as well as policy-relevant coproduction activities.

Also, to isolate the effects of coproduction on trust, this study employs common demographic background variables commonly used in public administration research, such as age, gender, income, and education.

RESULTS: DESCRIPTIVE STATISTICS

As seen in Table 1, citizens in the two municipal areas evaluated the three dimensions of trust in local governments differently. Nam-Phong municipality has higher levels of trust than the KKMM, especially in the competence area. Similarly, the Nam-Phong residents reported a higher level of generalized trust than their counterparts in Khon Kaen. The remaining variables in Table 1 are our independent variables or hypothesized determinants of citizen trust. For our main independent variable, the level of citizens' coproduction engagement in each policy area is higher in the KKMM, particularly in the environmental management area.

In addition, the survey measured various demographic background variables that, as discussed earlier, might influence citizen trust (Table 1). On average, our survey respondents from the two municipalities do not differ much in terms of their age and gender. However, differences between the

two areas come from income and education levels. Respondents from the KKMM show a markedly higher income level than the Nam-Phong citizens. This can be explained by the fact that Khon Kaen is a metropolitan area with extensive commercial and financial activities, while Nam-Phong is a rural area where agriculture is the main

source of income and employment. This urban-rural divide also expresses itself in the difference in education levels between Khon Kaen and Nam-Phong.

Table 1. Descriptive Statistics

Variables	Min.	Max.	Khon Kaen Municipality n = 1,011		Nam-Phong Municipality n = 788	
			M	SD	M	SD
Citizen Trust (Index of 5 items): 1 = strongly disagree, 5 = strongly agree						
Trust of local government benevolence	1.00	5.00	2.55	0.98	3.12	0.89
Trust of local government honesty	1.00	5.00	2.41	0.90	3.08	0.94
Trust of local government competence	1.00	5.00	2.97	0.91	3.21	0.80
Generalized trust (Trust in fellow citizens)	1.00	5.00	2.77	0.74	3.10	0.78
Coproduction behavior (Index of 5 activities): 1 = never does any, 5 = does all 5 always						
Public works	1.00	5.00	3.25	0.76	3.13	0.85
Public health	1.00	5.00	3.27	0.76	3.07	0.86
Environmental management	1.00	5.00	3.20	0.73	2.97	0.91
Demographic characteristics (Controls)						
Age	18	76	44.85	16.41	42.09	16.69
Average monthly income (In Thai Baht)	10,000	55,000	22,500	5,600	14,300	2,450
Gender (Male = 0, Female = 1)	0	1	0.52	0.50	0.54	0.50
Education (Not university educated = 0, University educated = 1)	0	1	0.59	0.49	0.53	0.50

RESULTS: REGRESSION ANALYSIS

Eight regression models were used to test our hypotheses—one regression for each dimension of citizen trust in each municipality. This was done to disentangle the complex relationship between each dimension of trust and public service coproduction. Since the survey includes relatively large samples ($n > 800$) for each municipality, we can construct the regression models separately by municipality and compare regression results across local contexts. All of the variables used in the regression analyses were standardized (Table 2). Variance inflation factors for the variables were below 3, suggesting that there is no multicollinearity problem in this study. The adjusted R^2 values range from 0.431 to 0.722, indicating the variables explain a substantial amount of variance in the corresponding dependent variable. Also, as the F-statistics show,

there are no specification errors in our regression models.

There are eight regression models in this study (Table 2). Models I-IV are for the KKMM, and Models V-VIII for the Nam-Phong municipality. Models I and V examine how respondents' engagement in coproduction activities in the two localities is related to their perceptions of the *benevolence* dimension of local government trustworthiness. Contrary to our third hypothesis, the only public service coproduction with a statistically significant positive relationship with citizen trust in local government benevolence is public health, which requires specialized knowledge. Among the control variables, only age in Model V has a statistically significant positive influence on citizens' perceptions of local government benevolence. This means that older citizens in the rural Nam-Phong

generally have more trust in their municipality's benevolence.

Models II and VI emphasize citizens' perceptions of local government honesty. In the two models, coproduction in the public works and environmental management areas was found to have a statistically significant negative influence on citizens'

perceptions. Public works coproduction was found to negatively affect citizen trust in the KKMM honesty. In the Nam-Phong municipality, environmental management coproduction has a statistically significant negative relationship with trust. Also, the education variable in Model II was statistically significant, indicating that

Table 2. Regression Results

Independent Variables	Khon Kaen Municipality				Nam-Phong Municipality			
	Model I Benevolence	Model II Honesty	Model III Competence	Model IV Generalized Trust	Model V Benevolence	Model VI Honesty	Model VII Competence	Model VIII Generalized Trust
Coproduction behaviour

F-statistic	91.871	102.342	89.117	94.562	86.383	95.455	111.434	100.342

Note: Standardized coefficient shown; standard errors reported in parentheses; significant coefficients ($p < 0.05$) shaded and in bold.

Khon Kaen citizens with university education reported less trust in their municipal government honesty.

Models III and VII focus on citizens' perceptions of local government competence. In both models, the three coproduction variables show no statistical significance. No variables included in this study were found to affect the Nam-Phong residents' trust in local government competence. However, age and education

are statistically significant in the KKMM model. This suggests that older Khon Kaen citizens hold negative perceptions of their municipality's competence, and that the Khon Kaen residents with university education have negative views of the KKMM's honesty.

In terms of generalized trust (Models IV and VIII), public service coproduction in public works and environmental management was found to positively influence citizens' trust in

their fellow citizens. The control variables that are statistically significant reveal contrasting social phenomena in the urban and rural areas of Northeast Thailand. In the urbanized Khon Kaen area, education plays an important role in citizens' generalized trust. In other words, urban citizens with university education appeared to have negative perceptions towards their fellow citizens. On the other hand, in the rural Nam-Phong municipality, age shows a statistically significant positive relationship with generalized trust, indicating that older residents hold more positive attitude towards other citizens.

DISCUSSION AND POLICY IMPLICATIONS

The central question in this research concerns the extent to which public service coproduction influences citizens' trust in local government and their fellow citizens. Using data from an original survey of citizens in two municipalities from Northeast Thailand, we have analyzed the relationship between trust and coproduction in three policy areas: public works, public health, and environmental management. Importantly, we have divided citizen trust into four distinct dimensions: competence, honesty, benevolence, and generalized trust. We found that public service coproduction does not lead to citizens' trust in local government competence. Further, when coproduction involves public works and environmental management projects, it actually decreases citizen perceptions of local government honesty. One respondent from Khon Kaen pointed out that "the more public works projects I take part in, the better I know about how ineffective my municipal government is." Meanwhile, one of the Nam-Phong residents argued that by asking citizens to take part in street and market cleaning, the municipal government reveals its inability to manage the municipal problems on its own. This resonates with the

results reported by Marschall (2004) who points out that coproduction in some policy areas seems to have a negative direct effect on citizens' perceptions of government performance.

However, coproduction of public health activities is positively associated with citizens' perceptions of local government benevolence. In other words, as citizens in two municipalities engaged in health-related projects, they became more convinced that their municipal governments tried to keep their best interests at heart. In their cross-national study by Parrado and colleagues (2013), many local health professionals were not reluctant to show that they know best what is good for citizens and that it is their duty to serve those who are dependent on them. This observation fits the situations in Khon Kaen, Nam-Phong, and other Thai local governments where government officials have been working closely with their citizens on health-related projects for many decades (Sudhipongpracha, 2015).

Moreover, coproduction of public works and environmental management also induces citizens' trust in their fellow citizens. Compared to public health, public works and environmental management activities require less organizational hierarchy and specialized knowledge. As Robertson and Tang (1995) indicate, less hierarchical activities are more likely to create a sense of reciprocity among citizens. This falls in line with Wilson (1994) who states that coproduction is compatible with a great power distance between professional service providers and service users (i.e., citizens).

In short, as Fledderus (2015) states, coproduction of public service delivery does not necessarily lead to more citizen trust in local government institutions and their fellow citizens. However, this has nothing to do with coproduction as a concept. While other studies (e.g., Hazenberg et al., 2014) point

at the way coproduction is organized and managed, this study implies that the nature of each policy area and each jurisdiction's political context that determine the effect of coproduction on trust. Importantly, this study provides empirical evidence that it is also important to pay attention to various dimensions of trust. Yet, even though we attempted to propose an alternative framework for measuring trust, this study is cross-sectional and cannot effectively explicate a cause-and-effect relationship between coproduction and trust. Longitudinal designs are recommended for future studies on coproduction and trust.

Finally, this research has thrown up a major challenge to the public sector in general: coproduction may not be appropriate for all policy areas. Yet, this does not mean that the public sector should hold back from engaging more citizens in public service delivery. Instead, it is important that local government agencies, as well as the national and regional agencies, obtain sufficient information on each locality's political culture and social problems before determining which local government projects should be coproduced. For instance, coproduction of road construction may be suitable for one municipality, but not for an adjacent cash-strapped city. It is also vital that government officials provide their citizens with enough information, technical knowledge, and resources before launching coproduction activities.

Appendix B

Measures of Citizens' Trust in Local Governments and Their Generalized Trust

Respondents were asked to rank each item 1-5 with 1 being "strongly disagree" and 5 "strongly agree."

Item	Honest	Benevolence	Competence	Generalized Trust
1	Generally, your local government keeps its promises.	Generally, your local government tries to help citizens.	Generally, your local government officials strictly adhere to their professional standards.	Generally, your neighbors and other citizens are reliable.
2	Generally, your local government is honest.	Generally, your local government keeps the best interest of citizens.	Generally, your local government works efficiently.	In times of your personal problems, your neighbors are helpful.
3	Generally, your local government is fair.	Generally, your local government cares about citizens' welfare.	Generally, your local government does a good job in carrying out its responsibilities.	Generally, your community leaders and other citizens are honest.
4	Generally, your local government is not corrupt.	In times of emergency, your local government has been understanding.	Generally, your local government officials are knowledgeable about local problems.	Generally, your neighbors and other citizens can be trusted.
5	Generally, your local government is sincere.	Your local government has made sacrifices for citizens in the past.	Generally, your local government addresses local problems in a timely manner.	Generally, you feel comfortable working with your neighbors and other citizens on community projects.

DISASTER RESILIENCY PRACTICES AMONG THE RESIDENTS OF SANTIAGO AND UPPER HINAPLANON, ILIGAN CITY

Iligan City

Abstract

This research deals with the disaster resiliency practices among the residents of Santiago and Upper Hinaplanon which are located in Iligan City, Mindanao, Philippines. These communities were badly hit by flash flooding during the past disaster called Sendong on December 17, 2011. Understanding disaster vulnerability is also linked with the concepts of awareness and preparedness to disasters, coping, and adaptive capacities of communities. Hence this research seeks to know the factors that make these communities susceptible to flooding; reasons why the respondents returned or continued residing in these areas despite the negative consequences of Sendong; their resiliency practices and shifts in attitude among them.

This is a descriptive research that utilized a triangulation method of data gathering: survey, key informant interview and actual observation. The communities' vulnerability to flooding are results of the following: houses were built along river banks and in low lying areas and poor drainage system. Resiliency practices are characterized into physical, procedural and social dimensions. Physically these practices involve reconstruction/rehabilitation of dwellings using strong materials and with strong foundation level; and improved drainage system. Procedurally, the community disaster risk, reduction and management plan was put in place. Socially, the residents organized themselves into monitoring teams, volunteer teams and participated in trainings and seminars about disaster preparedness, risk reduction, adaptation and resiliency building.

There was a positive shift in attitude among the respondents. They become vigilant and cooperative in addressing disaster risk. This study concludes that communities' awareness and capacity in addressing vulnerability is vital in bouncing back or building back better. Finally, it is strongly advanced that needs assessment be done first in these communities before any measure to address vulnerability be put in place.

Key words: Community, disaster, resiliency, risk and vulnerability

INTRODUCTION

Natural disasters are inevitable and part of the many challenges of human existence. They vary in type, magnitude, size, frequency, severity, location and their impacts (Council of Australian governments, 2016). Environmentalist believed that changing climate increases the severity of the future risks to natural disasters. So understanding these risks is vital in designing a better adaptive strategy and resiliency measures.

Building resilience must start with the analysis of the vulnerability contexts of communities. This includes the level of their development, processes, institutions and governance mechanisms. The causes of vulnerability to environmental stress and hazards are multi-dimensional. Poor education, lack of skills, technologies, organizations and lack of savings aggravate their vulnerability to disasters (Resiliency in Practice, 2016). This scenario is evident among less developed countries including Philippines.

As a country, Philippines is not only archipelagic in nature but located along a typhoon belt and lies within the “Pacific Ring of Fire” (Center for Environmental Geomatics, 2015). So knowledge of its risk to natural disasters is important. The United Nations 2005, Hyogo Framework for Action stated that:

The starting point for reducing disaster risk and for promoting a culture of disaster resilience lies in the knowledge of the hazards and the physical,

social, economic and environmental vulnerabilities to disasters that most societies face, and of the ways in which hazards and vulnerabilities are changing in the short and long term, followed by action taken on the basis of that knowledge.

The context of communities' vulnerability to specific type of hazards is imperative since vulnerability and resilience are related concepts. Both terms offer understanding of the ability of individuals, households and communities to deal with any disaster or shocks.

The choice of communities under study is based on the severity of losses on lives and properties of the past natural disaster called Sendong which occurred in the locality at dawn on December 17, 2011. In this catastrophic event thousands of people died, others were missing and some were injured. Sendong ravaged 21 out of the 44 barangays and affected over 45,000 individuals or almost 1/5th of the city's population. On top of this, 13,211 houses were partially damaged and about 3,945 totally washed out. This indicates the low level of disaster preparedness of the local government and the residents (Mamon et al, 2013).

In 2011, the United Nations University Institute for Environment and Human Security released a report regarding World Risk Index. In this report The Philippines ranks 3rd among the 173 countries surveyed by Institute of Hazard, Risk and Resilience.

However, despite the horrible consequences of flooding brought about by

typhoon Sendong in Iligan City, still there are families who returned to their place or continued living there in defiance of the policy of the government declaring these areas as “no build zones”. Ironically the number of residents has even increased. This gives a strong motivation of the researchers to conduct this inquiry.

Statement of the Problem

In general this inquiry aims to find out the disaster resiliency practices among the residents of Santiago and Upper Hinaplanon, Iligan city and the following specific questions give direction to this research:

1. What are the factors, which make these communities vulnerable to flooding?
2. Why did the respondents return/continue residing in these barangays despite the negative effects of Sendong?
3. What are the resiliencies practices undertaken by the respondents?, and
4. What shift in attitudes that developed among the respondents in the aftermath of Sendong?

Scope and Limitation of the Study

Due to time and financial constraints, this study is limited only to two barangays in Iligan City (Santiago and Upper Hinaplanon). For Barangay Santiago only two puroks were surveyed; puroks 7 and 13 while in barangay Upper Hinaplanon only puroks 3 and 7 were included. In addition, this study is limited only to the responses of the survivors of the disaster, the local officials particularly members of the barangay Disaster Risk Reduction and

Management Council and the officer of Iligan City Disaster Risk Reduction and Management Council. This research was undertaken in October 2015 to March 2016.

Significance of the Study

Environmental studies show that due to change in climate vulnerability to hazards of natural disasters continue to challenge significant development gains. In view of this premise, the following are the significant contributions to this research:

1. The results of this study may offer additional information on how communities that are exposed to natural hazards cope and adapt to the situation. This is important in identifying the resources in the community which could be used to strengthen resilience; and share this information to policy makers and other stakeholders in designing a coherent policy formulation on adaptation and resiliency building initiatives which are effective in the locality based on available resources and context.
2. The study contributes to addressing knowledge research gaps by offering additional literatures on vulnerability to natural hazards and disaster resiliency practices by communities.

Theoretical Underpinning of the Study

This research utilized the theory on **resilience** expounded by UK Department of International Development (DFID) and **building resilience** advocated by the

UNDP. DFID defines resilience as the “ability of countries, communities and households to manage change, by maintaining or transforming living standards in the face of shocks or stress without compromising their long term prospects”. According to UNDP, building resilience is “a transformative process of strengthening the capacity individuals, communities, institutions and countries to anticipate, prevent, recover, from and transform in the aftermath of shocks, stress and change (UNDP, 2013).

Measuring resilience to a particular context involves looking into the various elements of resilience like measuring vulnerability; resilience capacities to cope, adapt and transform in case of disaster. As applied in this research only the aspect of vulnerability to flooding of the communities under study and their resilience capacities to cope, adapt and transform better were focused.

Capacity for resilience is the core of resilience concept. Its components are: absorptive coping capacity, adaptive capacity and transformative capacity. Bene, et al (2012) provided a framework for a better understanding of the exact meaning of the term “strengthening resilience”. Coping capacity means the capacities to reduce negative consequences of disasters characterized by stability and persistence. On the one hand, adaptive capacity refers to the capacities to be flexible with long term strategies for societal change and incremental adjustment. On the other hand, transformative capacity is defined as the transformational response and change on the attitudes of the individuals, households, communities and even to states in coping with and responding to the effects of the disaster.

Furthermore, community resilience is viewed as a process. It links a network of adaptive capacities after a disaster (Frankenberger et al, 2012 as cited in Winderl, 2014). According to Gall (2013) as cited in Winderl (2014) sources or drivers of resilience may include physical, human, social, political, institutional, technical, economical, food and nutrition, poverty, environmental and ecological systems or dimensions. The physical dimension refers to critical infrastructure and communication system; the human dimension includes skills, knowledge, health and education; and the social dimension involves community networks, trust, civic engagement and norms.

As a source of resilience, the political system must come out with a sound disaster risk reduction management and adaptation plan while taking cognizance of the importance of institutionalizing the community's first responder and volunteer teams. Technically, early warning system and emergency plans must be put in place in the community as well.. Stable income and productivity, food security and adequate potable water must also be given priority in the preparation for achieving resilience during disasters. In this framework resilience is described as a “system” or a “cluster of systems”, a complex adaptive system sharing synergies, linkages and interactions and a range of activities, actors and processes (UNDP, 2013).

METHODOLOGY

Research Design

This is an exploratory and descriptive research that utilized a triangulation method of data gathering: survey, key informant technique and actual

observation. Hence there are 3 data gathering instruments used. For the survey the study utilized a structured questionnaire; for the key informant technique, interview guide and for the actual observation, an observation guide.

Research Setting

This inquiry was conducted in Barangays Santiago and Upper Hinaplanon, Iligan City which were grossly devastated during the flooding due to typhoon Sendong. Hence a discussion of the profile of Iligan City and the barangays under study are presented in this section of the paper.

Iligan city is a highly urbanized city located in the province of Lanao del Norte. The city was created on June 16, 1953 by virtue of Republic Act 525 otherwise known as the "Charter Creating the City of Iligan". The topography of Iligan City is characterized by a narrow coastal alluvial plain fronting Iligan Bay at the foot slopes of rolling hills and mountains. Over 12% of the city's land area has elevations of less than 100 meters above mean sea level, 21% are within 100 to 300 meters while the remaining areas of more than 65% are with elevations of 300 meters and above (Iligan City Executive Summary, no date).

The city is literally and geographically located at the crossroads of rich cultures- the Maranaos of Lanao del Sur; Higaonons of Bukidnon; and dominant Christian settlers and migrants. The City is proud of a peaceful coexistence of this varied cultural mix. Furthermore, the city has a land area of 813.37 square kilometers and more than 300,000 total population. Out of the 44 barangays in Iligan City, there are 26 barangays which are considered as flood prone and 13 of which are highly

vulnerability to flooding. These barangays are mostly found along the narrow alluvial plain fronting Iligan Bay or along the Mandulog and Tubod rivers.

Figure 1. Map of the Philippines

This Figure shows that Philippines is archipelagic and consists of 7107 islands which are scattered throughout the 3 big island groups: Luzon, Visayas and Mindanao where Iligan City is located.

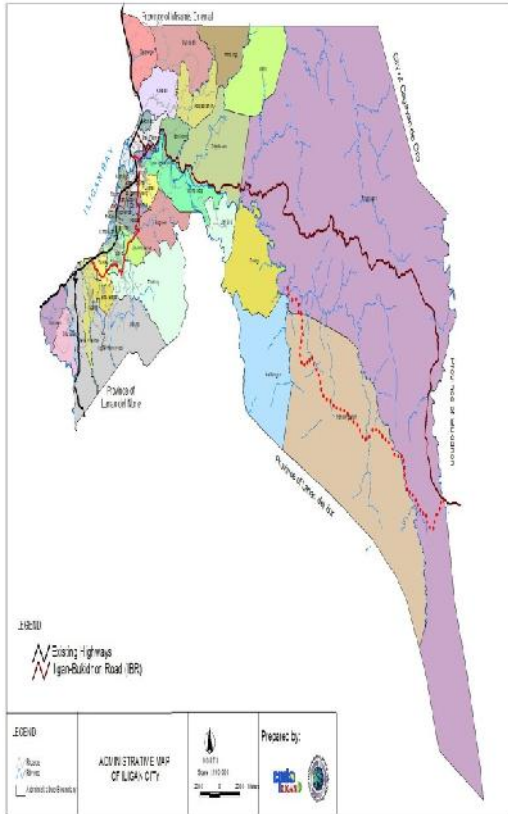

Figure 2. Map of Iligan City

The Figure illustrates the landscape of Iligan City. Only a little over 12 % of this is characterized as alluvial plain facing Iligan Bay at the foot gradients of undulating hills and mountains. It is also traversed by big rivers, Mandulog and Iligan.

Barangay Santiago

This barangay was created on November 8, 1985. Its total land area is 110.4 hectares and having a total population of 7953. This barangay is approximately 100 meters from the national highway and 2.8 kilometers from the city

center. The barangay is composed of 21 puroks all of which are vulnerable to flooding but this research focused only puroks 7 and 13 as they were severely devastated during typhoon Sendong.

Figure 3. Map of Barangay Santiago

This map shows that barangay Santiago is facing Iligan Bay and is near Mandulog River. Due to its plain terrain the coastal puroks are not only prone to flooding but to storm surge.

Barangay Upper Hinaplanon

This barangay was created on March 20, 1991. Its total land area is 190.9 hectares, with a total population of 6158. Upper Hinaplanon is approximately 400 meters from the national highway and 5.50 kilometers from the city center. The barangay is composed of 11 puroks and the most vulnerable puroks to flooding are puroks 3, 4, 7, 9 and 10. Geographically the barangay is situated near Mandulog River which is one of the biggest rivers in Iligan City and separating barangay Upper Hinaplanon and San Roque.

Figure 4. Map of Upper Hinaplanon

This Figure indicates the vulnerability of barangay Upper Hinaplanon to flooding since it is situated near Mandulog River.

Respondents of the Study and Sampling Procedure

The respondents of the study were the selected residents of Purok 7 and 13 in barangay Santiago and selected residents of puroks 3 and 7 of Upper Hinaplanon since these puroks were badly hit during the flooding. In selecting the sample, the research utilized purposive sampling method using the following criteria: 1. A resident of the barangay when the flooding happened; 2. A survivor of the disaster whose dwelling and other properties were either partially or totally destroyed; and 3. A person who returned or continued living in the place despite being declared by the local government as “no build zones”.

Only 10 samples per purok were taken as respondents of this paper. But there is a total of 46 participants who served as sources of vital information and data for this research because of the inclusion of 6 key informants who were interviewed. The key informants were barangay officials or committee members especially those who are tasked to implement the barangay disaster preparedness, reduction and

adaptation program and the officer of the City Disaster Risk Reduction and Management Council.

Research Instruments

Since the study utilized a triangulation method, 3 instruments were used in data gathering: questionnaire for the survey, interview guide for the key informant technique and actual observation guide for the observation.

Data gathering Procedure

This section presents the following steps in obtaining the necessary data for this inquiry:

1. A letter addressed to the barangay chairperson of each locality was sent asking permission to conduct the study;
2. When permission was granted, the questionnaire was drafted, pretested, finalized and distributed by the research assistants to the respondents. After the respondents answered the instruments they were retrieved right away;
3. The data obtained from the questionnaire were tabulated and analyzed according to the design of this inquiry;
4. The researchers did the actual interviewing of the key informants. Then the data were interpreted using narratives.
5. Finally, the researchers observed the research ethics in the conduct of the study.

They asked the participants their willingness to participate and explained to them the purpose of the study before starting the interview and giving out of questionnaire. This is to ensure their free prior informed consent;

6. They researchers ensured that the rights of the participants were respected.

Treatment and Analysis of Data

Quantitative data from the questionnaire were analyzed using descriptive statistics like frequency and percentage distribution. Then the qualitative data both from the questionnaire and the interview were categorized into common themes and were analyzed and presented in a form of narratives. In doing the narratives, the researchers intently listened to the stories of the informants and carefully jotted down their sharing and recounting of their respective experiences and their interpretations of these experiences during the interview.

This approach also involves not only listening to their narration of the event but also with careful noticing of their gestures and facial expression during the sharing. Some of these data were used to validate, enhance and substantiate the data obtained from the questionnaire.

DISCUSSION OF FINDINGS

1. Factors Explaining The Vulnerability Of Barangays Santiago And Upper Hinaplanon to Flooding

Table1. Factors Explaining the Vulnerability

of Santiago and Upper Hinaplanon to Flooding

Factors	F	Rank
1. Residences are near Mandulog River	40	100.00
2. Lacks adequate drainage system	31	77.50
3. Facing Iligan Bay	20	50.00
4. Flat and low-lying	20	50.00
4. Rising sea level	13	32.50

Multiple responses

Table 1 shows that 100 % of the respondents indicated that their residences are situated near Mandulog river which usually inundates during heavy rains and typhoons; 77.50 % of them revealed that their area lacks proper drainage system; 50% of them indicated that their place is facing Iligan Bay; another 50% of them revealed that their place is flat and low-lying; and 32.50 % of them indicated that they have observed a rising sea level as the cause of their vulnerability to flooding especially when torrential rains happened during a high tide.

Data obtained during the observation of the researchers to the place particularly in barangay Santiago confirmed that this place is facing Iligan Bay, near Mandulog River, it is a flat level land and their drainage system is not adequate and not properly maintained. These data are substantiated with the information provided by the officer of the Barangay Disaster Risk, Reduction and Management Council. He said that:

Kining among barangay nag-atubang sa Iligan Bay, busa kon kusog ang ulan sama adtong nahitabo sa Sendong nga miawas and

Mandulog River kay dool man pod mi niani unya naatol pa gyod nga high tide, kami tanan diri na lonopan gyod. Gawas pa, flat kaayo among lugar ug dili lang mi kuyaw sa lonop vulnerable pod mi sa storm surge. Nakita pod namo mga taga diri nga gasaka ang tubig dagat dool na gyod sa mga balay kon motaob. Matod pa sa mga eksperto nga miari diri gitawag kini nga "rise in sea level due to climate change". Makita nato sa loyo aning purok 7 baybay na. Sa una layo pa kaayo ang hunasan apan karon bisan kining mga titulado nga yuta naabot na sa dagat. Giingnan man gani mi nga i- relocate ang tibook nga barangay kay danger zone gyod siya. Apan sa pagkakaran lisod kaayo ang relocation kay wala silay kapanginabuhian didto. Sige lang saad saad pod ang gobyerno.

(Our barangay is facing Iligan Bay and near Mandulog River. So when there is heavy rain due to typhoon like what happened during Sendong, which also occurred simultaneously with a high tide, all of us here were flooded. Aside from this our place is flat or low-lying which made us more

vulnerable not only to flooding but storm surge as well. We also observed that there is a rise of sea level. Sea water reaches the houses even to titled lots during high tide. A situation which was never been seen before. There were experts who conducted their research here and they strongly suggested an aggressive relocation of the residents since this area is highly dangerous. But at present relocation is very difficult. There are no livelihood opportunities in the relocation sites and the government is just making a lot of promises).

In the case of Upper Hinaplanon, the barangay Chair confirmed that their barangay is near Mandulog River, hence it is vulnerable to flooding. She stated that, "dool man god mi sa Mandulog River busa kon kusog and ulan sama adto Sendong unya daghan pod namuyo dool gyod sa kilid sa suba kay quarry man sa balas ang kasagaran sa panginabuhian, ug daghan pod nga lugar namo nga medyo mubo and elevation, kuyaw gyod sa lonop". (Our place is near Mandulog River. Many of my constituents are residing near the bank of the river because their main livelihood is sand and gravel quarrying. Also many of our areas here are low-lying, hence we are prone to flooding).

The data show that the geographic location of the barangays under study is a major factor for their vulnerability or susceptibility to hydrological disaster.

2. Reasons Why Respondents Returned/Continued Residing in these Barangays Despite the Negative Consequences of Flooding During Sendong

Table 2. Reasons Why Respondents Returned/Continued Residing in these Barangays Despite the Negative Consequences of Flooding During Sendong

Reasons	F	%
1. Relocation site offered by the government is far so transportation cost is high	40	100.00
2. No livelihood opportunities in the relocation site	40	100.00
3. Our house and lot is under a loan contract from Home Development Mutual Fund - PAG-IBIG	10	25.00
4. Potable water in the relocation site is inadequate	9	22.50
5. Until now the promise of relocating us is not yet materialized by the government	16	40.00
6. Far from the school of our children	29	70.00

Multiple responses

It can be gleaned from Table 2 that two most obvious reasons for the respondents to continue living in their place

of residence despite the disastrous consequence of Sendong are: that the relocation site offered by the government is far so transportation cost is high and there are no livelihood opportunities in the relocation site. All of the respondents claimed this. Then 70 % of the respondents indicated that the relocation site is far from the school of their children; 40 % of them stated that until now the promise of giving them relocation is not yet materialized; 25 % of them revealed that their house and lot is under a loan contract from Home Development Mutual Fund - PAG-IBIG; and 22.50 % of them complained that potable water in the relocation site is inadequate.

The data show that the distance of the relocation site to the city center where opportunities for making a living are available and the school of the children is considered by the survivors why they returned and continued living in their respective puroks despite the susceptibility of their location to hydrological hazards. In Santiago, these reasons are confirmed by the member of the Committee on Disaster Risk, Reduction and Management when he said that, “nag organize mi diri og kapunongan nga gitawag og Barangay Santiago Urban Poor and Livelihood Association (BASUPLA) tungod kay ang gobyerno dili mo engage sa individual survivors. Kini nga kapunongan maoy mohikay sa shelter plan para sa mga survivors sa Sendong diri sa Santiago. Apan hangtod karon wala pay konkreto nga plan kay naa man goy problema ang atong local leaders diri sa Iligan. (We organized BASUPLA which is tasked to draft the shelter plan for the survivors of Sendong since the government will not engage with individual survivors. But until now no concrete plans have been arrived at yet

because of the leadership crisis in Iligan City).

An informant from purok 13 barangay Santiago revealed, “Our house and lot here is under a mortgage contract with the Home Development Mutual Fund (HDMF) of PAG-IBIG who funded the project. Aside from this, the relocation site is far from our work place. Due to this reason, those dwellings which were partially damaged were repaired and occupied).

In the case of Upper Hinaplanon, the Chairperson of the barangay said that: “naay nag avail sa relocation didto sa Santa Elena ug ang uban didto sa Dues Caritas Village apan naa gyoy mibalik kay and ilang pangita is dependent on natural resources. Nag quarry sila sa sand and gravel. Ang uban nag rent nalang sila ug lote ug naghimo ug payag para lang makapadayon sa ilang panginabuhian nga naandan. Ang uban nag complain nga lisod pod ang imnonon nga tubig didto”. (Some were relocated at Santa Elena while others at Deus Caritas Village but there are still who returned here in Upper Hinaplanon because their livelihood is dependent on the extraction of natural resources as they quarry sand and gravel. Safe drinking water is also inadequate in the relocation area. Some rented a lot and made small huts just to continue with their usual occupation).

3. The Resiliency Practices of the Respondents

The resiliency practices of the respondents are described in terms of their preparation for the imminent danger of natural calamities, mitigation practices in case disasters happen again and adaptation to the consequences of the disasters.

These are also ramified further into physical, procedural and social dimensions of their practices both in the household and community levels.

3.1 Physical Dimension of Resiliency Practices Among the Respondents

The physical dimension of resiliency practices of the respondents refers to their efforts in improving and constructing structures or edifices that are intended to mitigate and withstand the consequences of disasters. This is illustrated in Table 3.

Table 3. Physical Dimension of the Respondents' Resiliency Practices

Practices	F	%
1. We maintained cleanliness of existing canals	35	87.50
2. We used stronger materials when repairing and or constructing houses and strengthened foundation levels of newly built dwellings	16	40.00
3. We constructed second floor for the barangay hall in Upper Hinaplanon	7	17.50
4. We constructed and enlarged drainage canals in Purok 6 Upper Hinaplanon	5	12.50

Multiple responses

Table 3 reveals that 87.50 of the respondents indicated that they maintained the cleanliness of existing canals; 40 % of them revealed that they used stronger

materials when repairing and or constructing houses and strengthened foundation levels of newly built dwellings; 17.50 % of them indicated that they constructed a second floor of the barangay hall; and 12.50 % of them stated that they constructed and enlarged drainage canals in Purok 6 Upper Hinaplanon.

However during the interview with informants from Upper Hinaplanon they said that these practices are not sufficient to be able to address their community's vulnerability to flooding. However they are hopeful that flood control measures undertaken by the government like riprapping of the riverbank that is prone to landslide and the construction of a new bridge that connects Upper Hinaplanon and San Roque would help.

In barangay Santiago another informant said that: "Naay dako nga dike nga gihimo diri sa DPWH, ug sa ibabaw niana ang boulevard". (The DPWH constructed a mega dike and at the same time a boulevard here").

The findings reveal that the residents were improving the quality of materials and foundation of their houses when they reconstructed or rehabilitated them, and made a two-story barangay hall in preparation for any impending flooding in the area. They also enlarged drainage canals and undertook regular maintenance of these structures in addressing the community's vulnerability to flooding. The residents were also hopeful that the construction of a mega dike in Santiago and riprapping of the bank of Mandulog River in Upper Hinaplanon by the national government may mitigate or solve their vulnerability to flooding. The results support the concept of Gall (2013) as cited in Winderl (2014) that physical dimension of resilience may include important

infrastructures. As illustrated in this study, they are the mega dike cum boulevard in Santiago and stone ripraps in Upper Hinaplanon.

Figure 5. Mega Dike in Barangay Santiago

This Figure shows a mega dike cum boulevard in barangay Santiago which is still under construction. The national government through the DPWH implements this project in coordination with the local government of Iligan City. This project is more or less 15 feet high, and its top is more or less 10 meters wide.

Figure 6. Riprapping of Mandulog River Bank

The Figure shows an on-going riprapping of Mandulog River bank which is prone to landslide during heavy rains.

3.2 Procedural Dimension of the Resiliency Practices Among the Respondents

The procedural dimension of resiliency practices are the ways and approaches undertaken by the respondents in preparing for an impending disaster, reduce its negative effects when they occur and adapt to their consequences. Table 4 gives the summary.

Table 4. Procedural Dimension of Resiliency Practices of the Respondents

Practices	F	%
1. Created the Barangay Disaster Risk Reduction and Management Council (BDRRMC)	40	100.00
2. Prepared evacuation kit	40	100.00
3. Attended disaster mapping orientation and seminar	7	17.50
4. Attended orientation about disaster preparedness	9	22.50
5. Members of the Warning and Communication Task Units roamed around the purok and used a mega phone to communicate about incoming typhoon	31	77.50
6. Monitored water level at Mandulog River during heavy rains	8	20.00
7. Identified evacuation centers	25	62.50
8. Posted a hazard map and evacuation plan	4	10.00

in conspicuous places in the barangay		
9. Identified pick-up points for evacuation	36	90.00
10. Listened to weather forecasts	40	100.00

Multiple responses

Table 4 illustrates that all of the respondents indicated that they created the BDRRMC in their respective barangays, prepared evacuation kit, and listened to weather forecasts. Then 90 % of them revealed that they identified pick-up points for evacuation; 77.50 % of them indicated that “members of the Warning and Communication Task Units roamed around the purok and used a mega phone to communicate about an incoming typhoon. Further, 62.50 % of them indicated that the community has identified the evacuation centers that are the elementary and Madrasah School for Upper Hinaplanon and the Integrated Bus and Jeepney Terminal (IBJT), MSU-IIT Gymnasium and Iligan City National High School for barangay Santiago. Some or 22.50 % of them revealed that they attended orientation about disaster preparedness; and 20 % of them said that they monitored water level at Mandulog River during heavy rains. A few of the respondents or 17.50 % of them indicated that they attended disaster mapping orientation and seminar and at the bottom of the list is 4 %, who revealed that evacuation plans were posted in conspicuous places in the barangay.

These data are confirmed by the informants during the interview. They said “natagam na mi sa nahitabo sa Sendong busa nag andam gyod mi ug mituman sa unsay mga pamaagi sa paglikay ug

pagbuntog sa epekto sa kalamidad”. Nag hazard mapping mi aron mahibaloan unsa ug asa mi padulong ug unsay mga lugar diri nga unang bahaon hangtod makaabot mi sa safe nga lugar”. (We learned our lessons during Sendong so we were making preparations by following the methods to reduce the effects of disaster and overcoming them. We undertook hazard mapping in order to determine as to which part of our community is easily flooded and evade the area until we arrive to a safe place).

In terms of doing the evacuation, an informant said that some friends and business persons in their area already assured the barangay officials their willingness to lend their trucks for the evacuation. On top of this, an officer from the Iligan City Disaster Risk Reduction and Management Office (ICDRMO) who during the interview said that the government installed an early warning device in Mandulog River at barangay Lanipao that he technically called Water Level Sensor. This device will produce a loud sound if the water of Mandulog River is already in a critical level. This in turn will cause the purok leader living near the area to inform the barangay officials for their actions. Then rain gauges were also installed in the hinterlands and hilly barangays of Iligan City particularly Rogongon, Digkilaan and Dulag. These devices will record the amount of rainfall and immediately transmit the data to the Philippine Atmospheric, Geophysical and Astronomical Administration (PAG-ASA). In turn, PAG ASA will process and consolidate the data and disseminate them to the public.

The data gathered confirmed that the residents of barangay Santiago, Upper Hinaplanon and the city government are already making efforts in preparing, and

adapting to the consequences of the effects of hydrological calamities. The findings relate to the literature on resilience by UNDP (2013) which stresses that disaster risk reduction management and adaptation plan, emergency plans, and early warning system are sources of resilience in the community.

Figure 7. Pick up and Evacuation Area in Barangay Santiago

The Figure shows the area where residents will go before trucks will pick them up to the evacuation centers. This area is an elevated portion of barangay Santiago and accessible by vehicles.

Figure 8. Barangay Santiago Hazard Map and Evacuation Plan

This Figure shows the hazard map of barangay Santiago. The color codes signifies that red means “high risk”, orange means “medium risk” and yellow means “low risk” areas. It is noticed that red areas are puroks facing Iligan Bay and near Mandulog River. This map was prepared, approved and funded by two universities namely: Australia National University and MSU-Iligan Institute of Technology, BDRRMO and Kagawad (Councilor) Karl Edward P. Abellana.

The evacuation plan indicates the number of puroks and their respective population as well as the identified evacuation centers which are the Integrated Bus and Jeepney Terminal (IBJT), MSU-IIT Gymnasium and Iligan City National High School. It also specifies the things to be brought by the evacuees.

3.3 Social Dimension of Resiliency Practices Among the Respondents

These are practices or strategies of the respondents that enhanced their human and social capital in addressing the negative impacts of disasters. This is shown in Table 5.

Table 5. Social Dimension of Resiliency Practices of the Respondents

Practices	F	%
1. Organized volunteer teams as responders	40	100.00
2. Mobilized all organizations in the barangays like the youth, women, religious, health workers and the business sector	15	37.50
3. Organized ERPAT or Empowerment and Reaffirmation of	5	12.50

Paternal Abilities Training		
4. Strengthened the Civic Volunteer Organizations in the barangay	31	77.50
5. Engaged with other stakeholders like the academe, NGOs and government agencies	5	12.50
6. Attended seminars on disaster preparedness, and hazard mapping	6	15.00

Multiple responses

Table 5 shows the social dimension of the resiliency practices and strategies disclosed by the respondents of which all of them indicated that they organized volunteer teams as responders. Further, 77.50 % of them indicated that they strengthened the Civic Volunteer Organizations (CVO) in the barangay; 37.50 % indicated that they mobilized all organizations in the barangays like the youth, women, religious, health workers and the business sector; 12.50 % indicated that they organized ERPAT or Empowerment and Reaffirmation of Paternal Abilities Training; and another 12.50 % of them disclosed that their community has engaged with other stakeholders like the academe, NGOs and government agencies.

The data emphasized that community organizations are utilized by the community in order to generate strength in preparing for incoming disasters and overcoming their effects. The findings relate to the theory of Gall (2013) as cited in Winderl (2014) who purport that resilience has a social dimension, which involves community networks, trust, civic engagement and

norms. Resilience is a collective responsibility hence networks and linkages, as social capital are vital elements.

4. Shift in Attitude Among the Respondents in the Aftermath of the Sendong

When the respondents were asked what shift in attitude they have developed after the tragic event caused by Sendong, they disclosed that they are now being vigilant on weather conditions. Prior to the occurrence of typhoon Sendong they ignored the reminders and reports of the mass media regarding the looming calamity. They believed that Iligan City is situated outside of the typhoon belt and therefore not vulnerable to meteorological and hydrological calamities. In recognition of the necessity to address natural disasters, they also indicated that they cooperated with the barangay officials regarding disaster preparedness. There was active participation of the residents on clean-up drive, dredging of canals and managements of solid waste. Likewise, they said that they are always prepared with their evacuation kits and cooperated quickly with barangay authorities for a pre-emptive evacuation like what they did when typhoon Pablo/Bopha struck some parts of Mindanao including Iligan City on December 5, 2012.

The data show that the respondents have developed a positive attitude towards addressing the effects of calamities. The lessons are clear among the respondents that preparedness and adaptation are crucial efforts to become resilient communities. Hence, the results support the idea of Bene, et al (2012) who maintained that resilience is transformational response and change on the attitudes of the individuals, households,

communities in coping with and responding to the effects of the disaster.

CONCLUSION

Barangays Santiago and Upper Hinaplanon are vulnerable to hydrological and meteorological hazards mainly because of their geographical location. Barangay Santiago lies on a flat terrain, is facing Iligan Bay and near Mandulog River. While Upper Hinaplanon although located on a higher elevation than the former, is located near Mandulog River that usually swells during heavy rainfall. However, the nuances of vulnerability are also understood in terms of its socio-economic dimension and not mainly on its geographic and environmental characteristics. Increase in population competing for basic social services in the area, environmental degradation and climate change may increase the frequency and magnitude of natural disasters in the future hence it is better to understand the risk patterns of these localities to be able to prepare for future risks.

Many families continue living in danger zones despite the “no build zone” policy and warnings done by the government. This condition is linked with poverty, poor education, lack of savings, poor skills and displacement due to development aggression and even conflict. True enough that Sendong survivors were offered relocation in safer grounds but the distance, lack of livelihood opportunities and inadequate social services like potable water and schools made them more marginalized and socio-economically vulnerable. These factors are indicators of the government’s failure to come out with a

sound relocation plan with corresponding safety net provisions. Besides, the growing number of families living in these areas indicates the absence of a proper land use plan and a strong political will to aggressively implement the “no build zone” policy. This study concludes that vulnerability and marginalization are two faces of the same coin of which the government is supposed to address in development planning. Obviously, human vulnerability is mostly concomitant with the community’s level and quality of development.

Natural disasters are inevitable part of human existence. Considering the country’s location in the Pacific Ring of Fire vulnerability to natural hazards is expected to increase especially as it is aggravated by the climate change phenomenon. Therefore, building community resilience is imperative. Resilience involves improving infrastructures, basic social services, livelihood, savings and social capital. Disaster resilient communities function well during stress; they are self-reliant, and with social and adaptive capacity. Disaster resiliency is a multi-stakeholders’ responsibility. It relies on good working relationship with the government for preparedness; the business sector as service providers; the academe for knowledge and trainings; volunteer groups, people’s organizations and NGOs as responders; and individuals who work together with the government using their skills, talents, and resources to become self-reliant and flexible.

The lessons gained by the respondents in the aftermath of Sendong gave them strong inclination in undertaking preparedness and adaptation efforts for resiliency. Hence, the result supports the

idea of Bene, et al (2012) who maintained that resilience is transformational response and change on the attitudes of the individuals, households, communities in coping with and responding to the effects of the disaster.

Recommendations

Based on the findings of this research, the following recommendations are advanced:

1. Train volunteers of the barangay on rescue, relief and documentation skills;
2. Update risk assessment data;
3. Improve communication system using the text brigade;
4. Improve basic social services like water and schools in the relocation sites;
5. Update comprehensive land use plan and integrate in it areas as future relocation sites.
6. Upgrade barangay disaster risk reduction and management plan and consider the updated risk assessment data;
7. Train relocated families on home - based industry and other income-generating jobs in the relocation sites;
8. Implement the “no build zone” policy; and
9. Implement “PAKGANG BAHA” such as the Rehabilitation Plan for Mandulog and Iligan Rivers to avert future flash flooding using the 5% calamity fund of Iligan City.

A Peace that Requires War: Tin Ears in the Deep South

Iain F. Cowie

iaincowie@yahoo.com

Faculty of Political Science

Thammasat University

Keywords: Conflict Resolution, communication, strategy, Thailand, regime of images

ABSTRACT

The routine for finding peace is to analyse the warring parties and 'deconstruct' their 'irrational' fairy-objects (religions, fears, monsters, legends), to explain the futile and ongoing conflict that is unresponsive to reasonable attempts at solutions. Rational-choice games are run and, finally, there is a moment to TRANSCEND¹. This overcomes the 'unnecessary' gap between their positions.

By contrast, to achieve peace, this article makes a series of claims, which amount to conjectures or axioms that demonstrate the narrowness of mainstream peace efforts, from peace projects to peace postcards to roundtable negotiations. A settlement for peace must resonate with the public; the public must be momentarily unified and turned from a lumpen 'mass' to an awakened 'public'; that the terms of peace can only be understood from the message manufactured by conflict; that Western ideas saturate the terms of

peace; that the peace-making is a broad field of agents and ideas.

A philosophy of conflict resolution is attempted, using a speculative Latourian-Hegelian framework². The article opens up consideration of a broad range of actors (actants) from songs sung to tropes of western thought-structures embedded in Conflict. The resolution to peace is understood as a communication between different modes: war (exemplified by Clausewitz-as-written³), politics (Dewey-as-written⁴), and the peace talks (Ramsbotham, 2010). Poor attempts at peace endeavours are sometimes 'wrong' abstractions from past efforts at communication. Indeed, the peace process itself becomes captured by the war, since it is all part of a communication. This is apparent in Thailand's Deep South. Similarly, the peace process is captured by Western thought-structures. Peace is ultimately determined by fragile networks of alliances. Some alliances create peace and some block peace. Sociability⁵-- the sheer networking of humans-- in itself does not bring about peace.

THE BACKGROUND

Going to war is difficult. A capability of coercive force requires a monopoly of control on a large force, and a favoured ideology that maintains discipline and ensures compliance with orders (Maleševi, 2010). Humans simply do not want to fight for a larger idea, contrary to the popular belief of sacrifices for the flag and the nation (Collins, 2009). A war-fighting organized force is a fragile entity. Arriving on the scene to bring about

¹ The capitals are apparently required in this model of Conflict Resolution of (Baronov & Galtung, 2004).

² For Bruno Latour, an ontological framework is offered up here: (Latour, *Reassembling the Social: An Introduction to Actor-Network-Theory*, 2005); for G. W. F. Hegel, an account of Hegel's sublation move of 'falling up' is presented here: (Kalkavage, 2007); for the Hegelian aspect of Latour, see: (Zammito, 2004).

³ Clausewitz tends to be more cited than read. The gap between the Clausewitz-as-read and Clausewitz-as-understood is presented here: (Cowie, *The Art of Strategic Agency*, 2013)

⁴ Dewey's original ideas have only recently started to regain popularity.

⁵ 'Asociality' is used in this article to mean here: without any aspects of the social; no networking; the 'Hobbes-as-written', as will be discussed below.

peace requires breaking up the network of ideas and materials that allow this fragile entity to operate. These actants⁶ can be 'made up': thoughts of the imagination, ideas of glorious successes long gone. This tends to be forgotten by the third party peacemakers' urge to be 'rational', 'coherent', 'reasonable'. When a hawk spies a mouse and dives it is *abstracting out from past experience in order to recreate success* today. In bringing in a trolley of peace ideas, the participants are abstracting out from successes before and presuming parallels and hard-won understandings of the human condition. This places great demands on hidden assumptions.

This article makes certain presumptions of the Deep South in Thailand. Peace is the goal⁷. Thailand is engaged⁸ with an Other⁹ to establish peace. The fighting in the Deep South is a political-war communication¹⁰. The peace terms can be established prior to or before the end of violence. The communication becomes clearer with the entry of peace negotiating 'perturbations'. These perturbations 'irritate' the stability of the conflict and bring past experiences, insights and unresolved errors in a 'baked'

abstraction of past peace-making successes. The embodied roles and processual forces overlap with the function of the fighting¹¹. The fighting for Thailand has surprisingly existential issues¹² that magnify the importance of the peace perturbations, converting their processual *steps into a goal in themselves*¹³. In this Latourian-Hegelian worldview¹⁴, everything is on the table; this is a world where a dream has as much reality as a soldier's boot. This ruthless ontological framework makes no claims of oppression¹⁵. There are always two choices: (forcibly) separate 'the objects'¹⁶ or put them together (coerce). This necessarily abstract introduction is loaded with provocations, but also is quite opaque without further elucidation. The Thai Deep South fighting and third party involvement offers up examples to relieve the article from abstraction.

'Thailand seeks peace in the Deep South'. This does not seem controversial as a claim. In fact, it packages up a number of assumptions. It dramatizes a singular metonymic agency called 'Thailand' that has the very human desire of peace; it imagines an uncontroversial vision of peace agreed upon by all

⁶ Latourian ontological language of major significance, from (Latour, Reassembling the Social-An Introduction to Actor-Network-Theory, 2005). It acts by 'mediation' and 'translation'.

⁷ The fight is over the notion of 'peace'. See (Luttwak, 1999). And the peace of a peace-story and the production of peace.

⁸ The name of the engagement determines the functions, goals and assessments of the parties, and who they and third parties are.

⁹ The number of parties is a point of issue.

¹⁰ In the Luhmann sense of functionally differentiated 'cells': (Moeller, 2006), and in a Clausewitzian sense, see (Cowie, The Art of Strategic Agency, 2013). For the interaction of the self-organizing functional system of Peace, and its communication with other systems (e.g. the war system, the political system), and the contrast with the heterogeneous *contents*, see: (Noe & Alroe, 2006).

¹¹ E.g. the fighting determines the roles, and not vice-versa; see (Cowie, The Art of Strategic Agency, 2013).

¹² *The object of peace* involves themselves: the subject. This frames the peace seeking as an act of self-consciousness. Since Thailand is the Subject dealing with itself as the Object, this effects (not 'affects') the Subject in the act of looking. That is, Thailand knows itself by the self-reflective question: 'Who am I?', and the necessary follow-up, 'What then should I do to be me?', the Heideggerian 'thrown-ness' of the disposition.

¹³ This complex point will be dealt with below.

¹⁴ This is a "heterogeneous network of interactions of human and non-human actors" within the peace production 'industry'. This covers everything from dreams, knowledge, firearms, guitar workshops and onwards. See (Noe & Alroe, 2006).

¹⁵ Luhmann lays out why the literature tends to be too quick to seek out an oppression: Luhmann, N. (2008). Beyond Barbarism. *Soziale Systeme*, 14(1).

¹⁶ This is speaking of ontological objects. Notably, there is no reductionism in a Latourian frame.

involved; it presumes peace to be something obtained as a prize from the end of war; it presumes an identity of selfsameness in the processes generating conflict and peace. The claim of peace, is the locus of conflict itself. The more delving that is done, the more troublesome the claim, until finally it resides as a mere and yet but also a *political* claim. But in a Latourian World, crucially, the political is not an area of hypocrisy and Machiavellian sociopaths, but an opportunity to forge a triumphant momentary union¹⁷. That is, stating the claim is 'political', is not itself a negative, as like this: "it's just politics".

THE MEANING OF PEACE

Peace Studies and Conflict Resolution Studies¹⁸ come from different backgrounds and bring different baggage with them. One thing they do have in common is the belief that the simple notion of peace as that which is not violence is outdated and ultimately dangerous. Any such peace ('unviolence'?) leaves a hidden layer of oppression and repression; some future rising against the dominant power or somehow a new awareness of their fickle position will force new demands for change that escalate to violence. Peace Studies and Conflict Resolution both speak of 'needs' that must be answered before there can be a 'true' peace. Even if they are wrong¹⁹, they set up what the militarily weaker party anticipates will be the bare minimum. The story is sold. The warring parties' needs are understood as mostly material *but also* immaterial psychological demands. This latter

'commonsense' view is like the wise man pointing at the moon only for the Westerner to look at the pointing finger; psychological demands--in a Latourian view--involve a senseless 'extraction' from reality into a Neverland of invisible urges, introjections, projections and complexes. Loaded into the peace search is a demand and preference for a Western ('modern') coded goal: only certain states are 'comprehensibly' peaceful.

CONFUSING PEACE WITH NAÏVE PEACE

There need be no moment of shared, joyous resolution to find a way to end the firing of guns. Every parent knows to separate their children in a fight. But if this is done in the national scale it blocks the parties from discovering their relational disposition, and so risks extending the fight. The solution to war is not to separate out the parties (binary) or to be more social (mimetic). It requires a precision in the calibration. *The social is precisely the most dangerous situation*. Buddhists sharing pavement space with Muslims is an opportunity for violence. Equally, every obstacle to methods of rule production, that is, methods of dispersing the social, increases the escalatory likelihood of violence (Strum & Latour, 1987). The 'social' and the 'partitioned' have had a rather too favourable press and need examination.

Hobbes' world of the State of Nature has ended up connected with Alfred Tennyson's description of nature as 'red in tooth and claw'²⁰. The State of Nature is conceived as the unsocial or the asocial: a State where violence can

¹⁷ This book presents a beautiful overview of Latour's re-engagement of a positive sense of the political, riffing off the insights of Dewey: (Harman, Bruno Latour: reassembling the political, 2015).

¹⁸ For the genealogy of their separate paths: (Richmond, 2008).

¹⁹ And Luttwak makes the argument against them (Luttwak, 1999).

²⁰ See his poem: 'In Memoriam A.H.H.'.

happen at any moment, because there is no 'social world' to keep things intact. Yet, revealingly, synonyms for the unsocial include 'unaroused', 'passionless', 'nonpartisan', all rather appealing attributes for an interlocutor looking for peace. As Primo Levi writes, "Society is not essentially a humanizing or moralizing device, and so-called immorality is not necessarily evidence of social pathology" (Rapport, 2003, p. 309).

Foucault took up this ambiguity in his legendary lectures at the Collège de France 1976 lectures (Foucault, 2003). To him, the threat of violence only arose out of roughly equal parties where the necessary performances of power had broken down or were misconstrued by the adversary, or where they failed to impress the adversary. In other words, where the *social* aspects (e.g. the theatricality of dominance) broke down or were never properly produced. The threat is not found between the powerful and weak, for then the weak will submit; the threat is in the borderline cases of roughly equal parity, each party concerned of their advantages over the Other, there is some engagement, but not enough to be at the interlocked social engagement of a community. Socialising forces both risk escalation and contrive de-escalation.

The awareness of the tipping point is the key. Or the management of the stage-managing of this tipping point. This point is masked by the naivety of the word 'social'. There are two functions absorbed in one phrase. In part it describes any interaction--it is social to say 'hello' or to *demand protection money* (!)--and partly

describes the forces that diminish interaction; Facebook is, without irony, described as a social network, yet it allows users to avoid synchronic interaction, and 'massage' (soothe) interaction into diachronic expressions; famously, the medium is the message *and the massage* (McLuhan & Fiore, 1967).

Interactions are perturbations, irritations. A television with an English commentary forces a *native* English speaker to listen to it; there is no escape, it arouses a perfect perturbation. The slightly imperfect language skills of a non-native speaker allows their thinking system to avoid 'contact' with the irritants of the TV commentary. A global village is not a happy place; it is full of abrasive messages. This village is a surveillance, a limiter on the manifestations of image. The media is a site of production of interaction rituals, games. These intensify the traditional Siamese investment in the surface, the image (Jackson, 2004), and face-saving (see below). Forcing sociality is not the right conclusion²¹ to draw by abstracting from past peace efforts²².

The function of technology is that of an 'ordinateur', to put order where there was not. The concern is to limit fights by minimizing the ambiguous states of differing power relations. The relations, through the work of technology, are clearly delineated and the parties agree effortlessly. All of this is dealt with by various technologies, from the walls of rooms, to the taxi apps of mobile phones. Contact with the Other is particularly delicate because the scripts for running the technologies are at odds or unknown.

²¹ But peace resolution is also about limiting the social bounds of a person. A baby's disposition to the world has no bounds, no limits; the baby will walk into fire and scream for access. The general education's forgotten function, far from opening the world to a person, is to restrict their ambitions, to remind them of the limits, to encourage their

humility. This urgency of humility ensures that an unending cycle of regresses from an original position of no suffering and no domination is halted.
²² See Latour's insights into baboon behaviour as a foundational insight into the balancing act of sociality and peace: (Strum & Latour, 1987).

It is not that the Other culture is 'unsocialized', it is that it is too social. The Other watches with a gaze of interest, searching for weakness. The roles played out depend on their interactions with this contact. If, for example, they were the past victim/loser then the role is set up already. They have a *socialized* disposition, even if not a happy one.

The victim/loser can only become the hero if the primordial scripts (thought-structures) are mined for alternatives. The current peace programmes fail to recognise the crucial aspect of these vital value differences between parties. The value differences are the 'Cosmositic' framework for dealing with unanticipated events²³. The script of a group are algorithmic praxis for minimizing conflict; electronic technology like Facebook are just an extension of this. The function of a peace programme is not to gloss over differences²⁴ as this is hopeless, but to allow the drama to work its way out. The peace programme has to provoke controversy, a dialogue must be instantiated between the 'moderates' (those willing to play out the role of victim and so on) and the radicals (those who see a threat of another Cosmos) *of the same side*. Value differences must emerge. Once they have emerged, the parties can engage with the serious task of finding agreement. If the differences are not radical value disagreements (See (Ramsbotham, 2010))-- as it is taken as an axiom in this article that they are almost impossible to deal with-- then they can be opened up to tools to limit the danger of sociality by technologies, tools, techniques of governance.

The Thai junta is the coercive force that obtains power by constructing a binary of the social and the Other. It generates peace-- a return to happiness-- by extreme 'asociality': no meetings, no talking, no campaigns, and no opposition. If it downplays the need for broad agreement across the social spectrum then it cannot come to peace²⁵. Yet it dresses up this 'negative peace' (asociality) with the bobbles and glitter of positive peace: joyous street parties and, revealingly for this article, the staged NGO peace gatherings. Surface sociality tied to intense foundations of asociality. The surface is preeminent.

THE POSSIBILITY OF PEACE

The Thai junta's posture is to gloss over the deeper needs. The Westerner ('modern') would offer up psychoanalytic descriptions of 'denial', 'introjection', or 'projection', looking at the Old Wise Man's pointed finger. The post-modernist position of no underlying cause is a world of simulacra. Indeed, Thailand exemplifies the land of Baudrillan (Baudrillard, 1994) simulacra. The image is more important than the underlying truth²⁶ as framed in the idea of the 'regime of images'. But we must not make the mistake of thinking that since the causes are ideas they are somehow not ontologically real. This paper seeks out precisely these types of causes as the bounds of the search for peace. That they lack material foundations does not make them false. They have an effect and affect others. There is no need to regress into the Old, Wise Man's mind.

²³ i.e. occurrences that are not anticipated by the social scripts of the group.

²⁴ This is the 'happy-clappy', 'kumbayah' peace talk tradition. This cannot work for the usual goal of 'positive peace'.

²⁵ E.g. "The central problem with the reconciliation discourse is its blindness to politics." (McCargo, 2011, p. 154). Politics is issue-formation in an area of controversy (Latour, 2003).

²⁶ As Jackson points out: (Jackson, 2004).

All that is, is before our eyes²⁷. Note though that the brute material reality, on occasion, bubbles up in the forms of indiscernible and disorderly moments that are mediated away in vast conspiracy theories (Askew, 2007, p. X), deflected by the dominant surface posturing²⁸. Conspiracy theories inform *the concerned listeners* that the conflict is not even a conflict with another, but a self-flagellation of Thailand *with itself*. That the war's purpose is to have a situation of war; there are no deep needs, no true contradictions. Thailand's very *metta* inevitably lets naughty boys have fun, but when they get a smack they will smile because their father has recognised their agency (by denying it), and reminded them of their good fortune in having such a benign (unifying) father. The politicians are allowed by the State (One Religion, One Monarch...) such freedom but sometimes the paternalism is too generous, the surface is re-disciplined (Jackson, 2004).

Peace Studies declares as an axiom in the language of 'TRANSCEND' (Baronov & Galtung, 2004) that the goal is a compromise on 'needs'. Looking for the authentic position behind the apparent motivations of the warring participants would be useful²⁹. But not because it reveals the real inner, core truth. The truth (truths) is all there out in the open; it is already deployed. The connections need to be made (Harman, 2009, p. 18) and they might be difficult to spot but they can be found. The reality is always absolutely deployed in the world. There is no dark heart/focus/core of a war that if it can be

²⁷ Obviously they can still be relevant as real 'things' to be considered in a Latourian World, but they are not the foundational 'unmoved mover'.

²⁸ This surface posturing, it is speculated here, is possible because its recipients, the Westerners, have, "...a set of simplistic and rarely challenged assumptions: Buddhism is a peaceful religion, Thailand is a tolerant country guided by the exercise of *metta* (loving kindness) and characterized by religious freedom, while Thais

found and uprooted it would clean away the various 'side-conflicts'; the festering hatreds within the villages, the irritation that the Buddhist Temple was built on a Muslim mosque's remains. And this is true of the *metaphor* of focus; the locus or pivot of central focus and influence was empty. There is no foundation³⁰.

THE DISTORTION OF PEACE

Psychology and--perhaps--psychoanalysis have a relevance not because of some underlying facticity but because of the allies they have: the NGOs that fund them, the government advisors that insist on them, those hired to implement them. If Maslow (Maslow, 1943) famously insists on certain 'needs', that insistence becomes greater as it comes *packaged as a real actant* (Latour, Reassembling the Social-An Introduction to Actor-Network-Theory, 2005) on the world. The peace discourse of playing guitars, visiting the 'enemies' homes only makes sense if *it allies with* the actants that make peace. However, what has happened is that it has become compartmentalized, industrialized into the wrong alliances, and it is this that makes it inauthentic. But there is no natural state. The peace talks are not breaking up a 'stable disharmony', there is always room for change; there is no hidden power that determines what can be. Everything is on the table. It is 'True' if it develops stability and durability. But the language games are not everything. They are part of the process of putting alliances together. But

enjoy harmonious relations with people of other religions" (McCargo, 2011, p. 17).

²⁹ This is also the underlying assumption of the famous 'Getting to Yes' book: (Fisher, Ury, & Patton, 2011).

³⁰ Contrast this with the preferences for conspiracies in Thai discourses. See (Askew, 2007, p. 13). They want to believe of some central importance in the awful consequences; things can't just happen in this worldview.

the parties to alliances are not only people. The very topic of psychology, even the topic of peace, is a potential ally. How these two potential allies interact-- without the slightest sound of human voices-- determines the stability and reality. The end result will be like the starting position: a compromise. Peace is always ungraspable. There are those that can shine a light on it that feel they have found its ways and tribulations. But the answer is never settled. Why was there peace in Northern Ireland? What was the moment that made the difference? It is the ongoing process that allows peace; that process, is a messy bricolage, full of betrayal³¹, cruel moves, and reverses, made by actants.

There are two ways to peace: *separate the actants* or *unify coercively*³² for peace. These two alternatives can be dressed up but there is no arousing chorus of 'Rise again, yes, you shall rise again / My dust'³³. This is a matter of tedious construction. Build obstacles or build bridges. This is not a matter of 'social construction'³⁴. These entities are built to 'translate' the differing modes: war mode and peace mode. The question is how to stop things fraying, how to keep peace on track. A peace that lasts a day is called a ceasefire. The problem with a peace festival-- ideally, a unifying actant-- is the extraordinary level of interest: it was laid open to peering and very cynical eyes. It could not do what it claimed to be doing. It was a bridge made of straw. Psychology or psychoanalysts can come in at this point to critique the instruments of peace-making; they are tools for re-engineering

the bridge. They attempt to make it more sophisticated, perhaps suggesting it uses concrete. The current problem is that the violence is stable. In the Deep South there are 'rules' to the violence to the extent they are now tropes: the schoolteachers on the way to class, the soldiers taken out by an overtaking open-topped vehicle, a small army camp overrun, an army camp inside a Buddhist temple. The psychoanalyst is an instrument for reading the inside of the bridge. There is so much white noise, so much distressing screams and anguish that it must be de-cluttered for uninvolved parties (the potential mediator) to grasp and conquer³⁵.

What will the parties do when confronted by the peace-making? They can accept it and follow. They can fail to appreciate it and not participate. They can try it themselves to see if it works, testing its premises, seeing the dirty corners. The person who desires peace must fix together as many durable notions and ideas into long networks of intensity and durability. They must involve themselves in a labour of abstraction to create a notion of peace-making. The peace-making setup is designed out of the world as it is found on the ground. The parties are already there, as are the buildings, the ideas, the impressions, it simply must come into existence by a certain view of the world.

The issue here is not what 'power' certain parties have, or what hidden 'motives'. The question is how the peace-making 'shows' become dominating. They must range across the landscape, be capable of capturing the heart of an issue,

³¹ This 'betrayal' etc. is not limited to humans despite the language.

³² 'Coercively' does not simply mean threats by an armed soldier; that is the worst coercion. This ontological coercion can refer to the coercion on substances to-- for a time-- assemble as a functioning microphone, chair, car and so on.

³³ Mahler's symphony no. 2.

³⁴ For a reasonable effort at attacking 'social construction', see (Hacking, 1999). Note the key here is to deny the implicit belief of social constructionists that the world is a 'false front' that hides its true manifestations.

³⁵ There is an irony in using war metaphysics to describe the ontological bricolage for an anti-war ontic fact.

and develop the capabilities of moving into action (Harman, 2009, p. 54). Peace-making involves an abstraction from past successes to an intense interest in succeeding again in the Deep South or in the West Bank: “an eagle abstracts by diving at any rabbit regardless of its unknown specific history”. This is simply how things relate. The peace-making ideas can be mobilized by moving from past sights into new sights, they can be stabilized by finding features that are durable (this has failed so far) and they can be combinable by linking up with the key relational aspects of the violence. The violence is a relationship. A lover is more likely to kill than a disinterested stranger.

Peace-making is a quasi-object. It lingers between the odd gap of an absolute material, brute reality and a human-constructed event (Harman, 2009, p. 62). There seems to be lots of symbolism and yet lots of lives lost: “we are children lost in a forest of symbolism” (Beck, 1998, p. 44). All efforts are on what it can do. Peace volunteers busily spread their idea of peace in a very material sense by insisting on violin recitals or dual gatherings of faith at peace festivals. They do not attempt to strengthen their idea in the networks of active actants. The idea despite its incompleteness and lack of provable successes is taken as fully constructed. It was boxed *and shipped out from the factory of ideas that it originated*, probably in Norway. The primary concern should be on rebuilding this box. It can only be strengthened if *it plays to believable notions within that polity*³⁶. Yet the place it seeks to have an effect is exactly the place where it is difficult to find a polity;

³⁶ McCargo (2011) points out that the NRC report was from the massive influence of Western ideas by a western-educated elite.

³⁷ See p.24 of (Latour, 2012).

³⁸ This article has left it ambiguous as to who are the ‘peace activists’, third parties and so on. They

the lack of a polity is what defines a war zone³⁷.

The peace activists³⁸ are convinced of a gap between their way of thinking and the ‘war activists’. The beliefs that they hold to be true are rational truths, and the beliefs of the Others are so often mere error. If the war parties claim religious grounds for their conflict, then the peace activists make the move that the parties are perceiving a projected power in religion-- Allah, Buddha-- which is actually nothing more than themselves. If the war parties, make the reverse claim, that the power is all with themselves, the peace activists will claim a false consciousness of the parties, or point to group psychology, or argue for genetic faults, or some other claim deemed ‘appropriate’ among Westerners. A sense of identity is an acceptable claim but tribal passion is not. This double-move of denial removes and erases the equivalent Western move, disguising the Western belief system. The rational Westerner is under the “naïve belief ... that ignorant people believe naively”. The Westerner peace activist has the war parties trapped: “if you proudly boast of your ability to create so freely, [we] will show you that invisible forces are manipulating you and making you their agent without your knowledge” (Latour, 2010, p. 12). Since the Westerner has constructed the frameworks for peace, the war parties are trapped into a demand to be ‘transcendentally’³⁹ Westernized, to recognize their sins of backwardness (un-Western) and to find peace by, and only by, ‘rationalizing’ their lives.

can range from Western academics to guitar-strumming activists. The only similarities are an interest in the conflict and a Western (Modern) view on life. See (Latour, 2010) for the meaning of Western (Moderns).

³⁹ See Galtung etc., (Baronov & Galtung, 2004).

THE COMMUNICATION OF PEACE

The war is part of the negotiation (Cowie, *The Art of Strategic Agency*, 2013). It is currently, the most active part. The Thai government is not speaking the right language in the war, since it still has not uncovered its goal or its limits. It does not know-- rather surprisingly-- it is engaged in a war.

Soldiers relish self-sacrifice and despise killing. Only with the local, micro-group dynamics can they be brought/bought to kill others (Maleševi, 2010). They must be compelled to be organized into a killing formation. This requires extraordinary coercive forces that are developed by sophisticated bureaucratization (Weber)⁴⁰. War is a relationship to the enemy, they seek each other out. There is a story-line of *organized coerciveness* against other organized coercive groups: an aggressive communication.

The war is the dialogue of peace. The campaigns for peace and the third party engagers are inside this dialogue. The absence of an official dialogue does not mean there is no dialogue. Each war strategist applies the technologies and ideas of his period to strategy (Bousquet, 2009, p. X): "Every age had its own kind of war, its own limiting conditions" (quoting Clausewitz). The German strategist Clausewitz applied notions of forces and centrifugal forces to create his magnum opus; in contrast, Frederik the Great had his clockwork army. With the admission of society into the spectacle, the non-linearity generated by feedback communicative loops, and the use of swarming techniques become central to today's

strategists⁴¹; the World today is a networked *society*, the global village.

Clausewitz in saying that "war is a mere continuation of policy by other means" (Vol. 1 Chap.1, Para. 24) is widely misunderstood. The normal inference is that war is simply an instrument of politics. But the point he makes-- made clear in earlier paragraphs that provide context-- war is the generator of the meaning of the politics; the political shape can only be known once the clarity, revealed by war, emerges. Thailand cannot know its commitment to the Deep South until war is *running*. That is to say, the *issue-formation* function of war because of its brute material reality, communicates a *meaning* of the issues to effected groups.

Communication is the function of war. In anything short of Total War (i.e. nuclear holocaust) the Other organized destructive force must learn of its own destruction. All the war aims are set upon creating this intent in the other side. Clausewitz understood the factors as dividing into the rational (the genius war leader), the irrational (the mob, the masses), and the non-rational (the public, the government branches). Sun Tzu (Tzu, 2011) brilliantly went one step further; he understood the need to avoid direct confrontations because of their unpredictability (he is simply deriving the problem of social perturbations unpredictability at a higher-scale), and instead concentrated on the methods of deception to achieve the victory without war. Or to frame this another way, he sought to get his way, by ensuring the social forces were manipulated away from interaction; that is, he saw the aspect of

⁴⁰ Levinas wrote: "Violence in nature thus refers to an existence precisely not limited by an other, an existence that maintains itself outside of the totality. But the exclusion of violence by beings susceptible of being integrated into a totality is not equivalent to peace. Totality absorbs the multiplicity of beings,

which peace implies. Only beings capable of war can rise to peace. War like peace presupposes beings structured otherwise than as parts of a totality" (Levinas, 1979, p. 222).

⁴¹ Such as John Boyd, who never wrote a book on the topic. See: (Osinga, 2007).

sociality that this article observed earlier, and that peace process rely upon, to find peace.

The insurgents in the Deep South tend to kill men, and not kill women or children. This is good not because it is morally good (it is far from clear that is morally good), but because it clearly functionally distinguishes⁴² their actions as war-like. They are not committing pogroms or enacting genocide on the local Buddhist population. They may be quite oblivious to this point, but they are, in fact, *enacting a narrative of themselves as fighting a war* (Dammann, 2003). They are using the *semantics of violence* with their actions. This semantics places them in a special sphere of communication. It is not merely the trivial point that a bomb is a message, it is that the message is limited to a special sphere of communication. This sphere is operated in the binary code of “organizational destroying of organized destroy capacity or not doing so” (Dammann, 2003, p. 297)⁴³. The Thai military fail to understand these semantics, even its own semantics, and so, cannot ‘communicate’.

They may not realise this, but they are not conducting a war; their semantics of action reveals this. They seek victory but that is not a unique code of warfare, since it is also used in sports, and it cannot be applied to unconventional wars. It cannot be friend/foe since they restrict their task to the attacking of *armed* foes,

and (inconsistently) position Muslim Thais as Thais (friendlies). The Other’s action is sometimes termed ‘banditry’ (Askew, 2007, p. 14). The Thai military display ambiguity in their tactical mindset, using ‘raids’, even ‘extermination’ (killing weaponless foes), not limiting the enemy to able bodied men, and occasional accusations of ‘sabotage’, a code transgression that disables claims to war or policing since sabotage is the vague political language of Stalin or Hitler. The Thai military do claim there to be jihadists, yet this term can be coded to mean the political rather than war. They are incapacitated in their peace desires as they are unable to construct what they are actually doing⁴⁴. The register of communication disables any ‘bridge’ of communication via violence or via overtures. This gap risks a value-conflict⁴⁵ as it ensures Thailand cannot even recognise the Other⁴⁶.

Thailand is still working out its position on the Deep South. The war is an act of reflection to find its own limits on the issue. Complaints that Thailand has no clear policy fail to understand that the discovery of the policy, the generation of strategy, is the (possibly ‘unknown’) strategy of the conflict. Thailand needs to “fight an insurgency” for a clearer communication. It must communicate *with itself* (from its own moderates to its own extremists). What is not captured in the concerns with the current ‘elite negotiations’ is how to enact negotiation

⁴² Using the ideas of functional differentiation by Luhmann: (Moeller, 2006). There is a link of Latour’s and Luhmann’s metaphysics that has only limited discussion in the literature currently. The Luhmann work is useful for systems and the Latour for describing the inner workings of those systems: (Zammito, 2004).

⁴³ And not a code of victory/defeat, as that is regularly used for sports events.

⁴⁴ They could re-engage in a policing/criminalizing strategy as the British government did in a tactical change under Thatcher. This possibly brought a new situation into being although ultimately peace

blossomed because of another change manifested in the release of all the jailed IRA.

⁴⁵ A radical disagreement: see (Ramsbotham, 2010) for the enormously serious and obstructive consequences. This is further expanded in Peter Sloterdijk’s sense of absolute value differences with almost unassailable distinctions, and contrast with the cosmopolitan World of Beck: (Latour, 2004)

⁴⁶ This is the Hegelian sense of the moment the Master will not even treat the Slave as deserving recognition. No recognition is a distinct value deficiency, even the context of ‘two sides’ is lacking.

that has any hope of success. This is ignored since it is left to the actual, official negotiation to give hope a chance⁴⁷.

To get peace, the multitude's voices (the public of Thailand) must be unified⁴⁸. And unified for a lengthy time period. An agreement must be formed (Latour, 2003), an issue must bubble to the surface and become the issue of concern. The mode of politics requires-- for a time-- the lie of a consensus⁴⁹ so that action can be taken. The people never have enough information on such broad issues so distant from their day to day concerns. Instead, they rely on a rational irrationalism (Caplan, 2011, pp. 94-141) to choose a politician to lead them. This politician in its idealized form is the demagogue. Without this communicative process, the issue cannot be said to be agreed upon. It is as if in the mode of science, a scientist performs an experiment in the lab and then fails to write a paper, fails to attend academic conferences to announce the results, fails to explain the issue to newspaper reporters. The issue must be *translated* to the public realm. It must be *mediated*. If not, it is not true.

The junta, despite all the expression of power in rifles and armoured personal carriers, is puny; these are the expressions of the weakest form of power: power without legitimacy (enforced asociality). With these, the junta has no negotiation position. It has no 'power' of a Deweyian political consensus. The need

for a truly transcendent solution to the Deep South, a reflection on values, is not currently a credible option. The junta is hoist on its own petard. Hence, and revealingly, a crucial condition by the insurgents was for Thailand "to put [...] the peace dialogue on the national agenda" (Ashayagachat, 2015). To make the peace agenda part of the country's agenda is a challenge enough to forestall the talks. This absurdity arises because the 'national agenda' is a *political* mode; the junta has no mediation strengths as its own discourse disallows any wavering from a narrow 'One religion, One monarch, One people'.

THE PEACE GAMES

The peace process⁵⁰ itself is part of this communicative mode of victory (Shirazi, 2011). The formal mechanisms of peace have inevitably become co-opted by the saturation of meaning in war (Biletzki, 2007). The peace projects⁵¹, the teaching programmes, seminars on peace, are vulnerable to the all-encompassing war. Their vulnerability stems from the 'industrialization' of them by Peace Studies and large government grants, this exposes them to a loss of authenticity⁵², and cynical manipulation by the forces of war. The danger is revealed in the way that an adversary in starting a war proclaims it is done in the name of peace. This is partly owing to the equivocation in the ambiguity of 'peace',

⁴⁷ The absurdity of the negotiation should become clear: it does not know what it is; what it does; what the other is; what the peace is.

⁴⁸ This is a hard path ahead, as long before the junta's 2014 debut: "There has been little public acknowledgement from the Thai state that the conflict in the South is essentially a political problem..." (McCargo, 2011, p. 11). This would shatter the 'regime of images'.

⁴⁹ This is part of Latour's reincarnation of Dewey: (Latour, 2003). Forming a political consensus virtually always requires a politician's little white lies.

⁵⁰ See (Cowie, (forthcoming)) for an analysis of the 'thought-structuring' of the third parties.

⁵¹ e.g. <http://asiafoundation.org/in-asia/2012/06/13/a-pathway-to-peace-for-thailands-restive-south/>

⁵² The structuring of peace with third party involvement already risks authenticity by the virtuous 'need' of the third party. See (Cowie, (forthcoming)).

but also because all prefer peace over war, but also understand war as possibly the best route to *their* peace. These complications allow cynicism to arise, peace becomes a tool of war. Education programmes such as singing for peace, or 'postcard peace' in the exhibitions for schoolchildren to attend, must recognize this inherent contradiction; if peace was such an unquestioned end, why is any education needed. Journalists can sense themselves manipulated in their reportage on war. Academia, enthralled to the postmodern rejection of a universal Cosmos, see that there is no final end (Gur-Ze'ev, 2001), there will always be another layer of conflict under the present conflict, all human relations being conflict of values⁵³. As each side develops formal dialogues between communities, these operate to give the impression of peace, but are so mechanized that the 'dialogue' lacks the authentic touch⁵⁴; it operates as its opposite: to close down conversation, to end sociality. Dialogue dangerously implies value commonality as it simplifies to the level of mere conversation the conflict between parties. The only position left for true peacemakers is to oppose peace measures; the peaceniks become opposed to peace events.

The mechanization of the peace industry is the turning of the complicated⁵⁵ to the complex. Instead of being confronted with many constantly changing variables that risk confrontation, the parties are provided with a complex-- and

therefore unchallenging and straightforward-- path to the peace script. The intent by the peacemakers was to reveal the concealed psychological motives in the parties awkward fumbling for peace. The peace industry is to encourage openness. Yet the removal of the social obstacles--the complications of unorganized contingencies--encourages the disguising of psychological motives⁵⁶. Both parties are offered--and readily accept--the roles of Parent and Parent (in the Transactional Analysis model; see (Campos, 2014)). They do not have to engage with what 'frustrates' or 'winds them up' since the peace machinations are actually running the drama without the role-generating obstacles⁵⁷. The peace industry is socializing obstruction; the analogue of the simple 'block' or 'report' button on Twitter.

The 'need' to be resolved is not a material item or a structural alteration, it is a psychological victory. Airing the psychological motivations to play out roles risks a mimetic escalation⁵⁸. Only if those roles become humiliating to play can they end. Yet the peace industry takes the roles *very seriously*. The habits need to be made explicit rather than encouraged or enabled (Farneti, 2009). The peace event must require a costly signal to signify a change in the parties' intentions (Long & Brecke, 2003, p. X): an event that announces their intent to change. This event will be costly because it implicitly denounces their normal roles; Thailand

⁵³ A story that every husband and wife knows to be true.

⁵⁴ See (Boorstin D. J., 2012) for the earliest account of the collision of authenticity and postmodernity.

⁵⁵ Imagine a baboon trying to get their back scratched: that is complicated. Imagine a human using an app to hire a taxi: that is complex (a tough goal, simplified by a very *complicated* assemblage).

⁵⁶ Both parties are offered--and readily accept--the roles of Parent and Parent (in the Transactional Analysis model; see (Campos, 2014)). The hyper-reductionist 'TA' Berne model serves as a good metaphor as any for what is processed here as a

dialectical wavering that leads to a new construction of facts. It is equally possible to point to Carl Jung's archetypes. These riff off essential features of the human condition.

⁵⁷ If a Thai army manoeuvre is to make life difficult for the Muslims in Pattani by demanding bureaucratic arrangements are settled on a holy day, this requires and enables the role of Child by the Muslim locals. The demands for peace by the Thai army allow it to take on its favoured role of parent.

⁵⁸ The role of Child/Oppressed is deeply appealing, just as the role of Parent is deeply appealing.

becomes a peace partner to the Muslim insurgents.

The peace industry displays an inauthenticity to participants as it fails to recognise the parties' particularistic positions. It, for example, recognises one side as Muslims and claims to 'respect' their faith but only by simultaneously denying its force. The peace activists--as 'good' Westerners (moderns)-- divide the world into the mechanistic facts of nature (the need for food, the need for shelter) and the fabricated social world needs (identity, rights). The fabricated social world is then further divided into legitimate beliefs (universal truths of fact-objects)⁵⁹ and falsehoods (fairy-objects). In one further move, when denouncing the belief in 'radical' (in the Sartrean sense) of freedom, they turn back to belief-objects (i.e. fetish-production of object powers) of, for example, psychoanalysts or psychology or evolutionary psychology or sociology or Peace Studies in which they truly trust⁶⁰. The parties are fighting themselves and a peace apparatus that incapacitates them from achieving peace, by denying 'fairy-object' needs.

THE THAI (TAO?) OF PEACE: ACTION BY INACTION

Oddly, the apologies of the Thai pop star (Charuvastra, 2016) Padung Songsaeng, is an expression and evidence of the forces that guide and derail peace in the Deep South. His sin was not in doing sinful acts in Pattaya, for that occurs every night, but in communicating this rupture of the symbolic with the brute reality, In the Thai thought-structure there was no hypocrisy

when the po-faced municipal authorities claimed, "[t]his has damaged the image of Pattaya". To the Westerner, groomed on a separation of public from private, there was naked hypocrisy.

The peace sought is of the most basic sort: the opposite of chronic, visible violence (Luttwak, 1999). Despite this being an old idea of peace, roundly rejected in Peace Studies and Conflict Resolution Studies, it appeals to the Thai mode of power as performing the 'front' (Goffman, 1978) of peace and happiness, and leaving the interminable conflicts hidden in the background. Thais want "peace and stability" (negative peace?) and the BRN⁶¹ wants "peace and freedom" (positive peace?) (Ashayagachat, 2015). Foreign volunteers join in by efforts to encourage 'peace' and to mediate differences.

The junta is not ignorant of the South. The Thai army has seemingly made an enterprise of its dealings with the South. The army has obtained many 'toys' and extracted extraordinary expenditure increases at least partly because of violence in the Deep South. Its 'face' is to enact a rational disposition towards the conflict. This is in line with the Thai norm of 'regime of images' (Jackson, 2004), the 'love of the disciplined surface', 'overinvestment in appearances', and contrary to a Westerner's expectations of 'common sense'.

The Thai State behaves uniquely to protect the sensitive images of Thainess. The junta, owing to their rightwing and royalist stance, hold the most extreme version of this. Face-saving is of major concern, and this is wrapped with maladaptive schemas, self-defining

⁵⁹ In Latour's language: (Latour, On the modern cult of the factish gods, 2010), particularly Ch. 1.

⁶⁰ This complex twist produces what Latour calls 'factish', but is better written as '*faictish*' to

emphasis the convergence of fairy qualities with factual qualities.

⁶¹ Barisan Revolusi Nasional.

memories, and a narrative incoherence of Thai-ness with myths and fairy tales with few variations or possibilities. Since the organization of violence is a communication to oneself and to the Other, these foundational incoherencies hold enormous problems for what is ultimately a question of communication and sociability. Thailand, in its mind, assumes a stronger patrimonial role of 'Parent'⁶². This role results in a response from the Other, at times assuming the 'Child' role.

The junta's response since the coup has been to stifle broad commentary, i.e. to block the social. It has continued and apparently intensified peace talks at the highest level, i.e. to emphasize an appearance of the rational; and, simultaneously locked out discussions among the public by closing down local radio stations. This has the ontological effect in the political sphere of converting/translating 'the public' to 'the masses'. The conversion of the masses into a united public is the key step in the Dewey move to enable national unity and agreement on the issue. It also ensures tension as it escalates a topic to a political topic. This technique works to dampen interaction and bring a naïve peace, but it fails to allow the issue to develop a political stance, created in the Clausewitzian strategic theatre/ performance/ drama of war.

THE THAI VERSION OF NEGOTIATING

The orthodoxy of the literature on negotiation requires following 'interests', and not 'positions'. The Thai interest *is* a position. The norms for dealing with Truth (with a capital 'T') is always to deprioritize it vis-à-vis the norms of conformity and

stability. In walking into a negotiation for a war, the Thai representatives' goal of 'peace' in terms of law and order⁶³ is also their position, their posturing. They have propagated their own ideas of themselves to the extent that they now see their own ideas as traditions. These invented traditions were performed to assure submission to a new order of the French and British Empires. Thailand lacks the vocabulary of 'needs', such as self-determinism, individual rights, because this conversation has never emerged in a country that never needed mass nationalist movements. It also lacks the means to note this lack; there has been no legitimate public discourse to be critical of the Thai past (Jackson, 2004, p. 246).

This subjection of self to image has the odd effect of making the truly authentic stance as that of the false front; there is no backstage area of true Thai-ness that may be engaged by careful diplomatic negotiations. The negotiations themselves are part of the continuation, production and transmission of Thai stability: "...Thailand's deep south is... [a] realistic dress rehearsal[...] for the larger crisis that many fear could surround the impending royal succession." (McCargo, 2011, p. 13). The moves in the negotiation are to deploy an 'interest' in a wider conflict-- Thai legitimacy-- producing the goal in the Deep South negotiations as a 'positional disposition'. Since there is this "preoccupation with surface effects" (Placeholder1p. 221), so the public pronouncements prior to the negotiations will be the interests, and any tactical repertoire will be uttered within the secretive negotiation lair: "NRC members tried vainly to explain that 'working

⁶² This neatly matches up with the TA model of (Berne, 2010).

⁶³ I.e. the English Law sense of 'breach of the peace'.

language' [in the NRC report⁶⁴] was not the same thing as an 'official language', but this distinction was lost on many Thais, for whom any such change would represent a national loss of face" (McCargo, 2011, pp. 80-81).

In walking into the negotiation, and controlling who appears on the other side, the Thai government control the aesthetic performance of power⁶⁵. Since the control of the dramatic performance-- the 'regime of ideas' (Jackson, 2004, p. 225)-- is the priority, the actual negotiation is unimportant⁶⁶. The regime of ideas are constantly presented to the public: General Prayuth sang his own song, Thai schools celebrate with rote ceremonies, Thai troops conduct reconciliation singing and dancing displays, and roads are named after suitable parties. The truth or justification of the Thai position is the conjunction with this tyranny of ideas, as there is a "dissociation of images from notions of an underlying reality" (Jackson, 2004, p. 227). The harvesting of these ideas, and the further cultivation of them is the State's priority.

The Thai State *wants* to hear conspiracy theories: the grander, the better. Politicized intelligence is required; it is the intelligence⁶⁷ that resonates and fulfils the role of truth (Askew, 2007, p. 11). This intelligence is not designed for the 'rest of the world'. The regime of images is not only for the Other but for self. The image is the depth; it is the structure, the Thailand-for-self-in-itself; the image constitutes the totality. The being-at-war (the negotiating posture of the process) is the strategy of disciplining the surface. But this strategy crucially

constitutes itself. It reflects in itself to change, (re)constitute itself. The Thai State accepts the conspiracy theories that emerge from its own conception of self.

The war process is a becoming. It constantly reveals the inaccuracy of itself (Thailand-in-itself). These perturbations, bumps on the otherwise placid surface are sublated to a new, higher form of Thai in a process of 'falling up'. This new form, as part of its own vision of its self, desires any change in form; it negates itself. Yet the Thai State's disposition, its Thainess is changed. These are, then, the subtle shifts in the Thai position. These shifts are beyond meta-strategies of the State (if the Thai state can claim even a strategic position). Yet there is a communication, a limit.

CONCLUSION

Thailand is not communicating successfully. It is singing in the wrong register with a tin ear. Peace requires more than achieving no direct violence. Third parties bring their own modern errors that complicate. The choices ahead are *political* mores of *social* formation that *obstruct* or *bridge*. Thailand is uniquely disadvantaged by its past and its present. The long obsession with the disciplined surface and the junta's view of peace represent an extraordinary challenge. The current, favoured negotiating 'interest' (in the Ury-ian sense (Fisher, Ury, & Patton, 2011)) for Thailand is a 'position'. So long as Thailand's interest is disorder there cannot be peace.

⁶⁴ The National Reconciliation Commission was established in March 2005.

⁶⁵ "...dialogue with militants was preferred over 'negotiations'" [of the NRC report] (McCargo, 2011, p. 78)

⁶⁶ "The present over-centralized governance arrangements in Thailand have become inextricably bound up with the history and prestige of the Chakri dynasty" (McCargo, 2011, p. 15)

⁶⁷ It is redundant to point out this is an oxymoron.

Abstract

Promoting integrity culture through socialization would be an effective way to solve the moral crisis in Thailand, especially in local government. The study aimed at examining problems concerning integrity, proposing measures to strengthen integrity, and recommending a strategic plan to improve integrity in local sectors through socialization. The study used qualitative methodology in order to review the concept of integrity and explore socialization and integrity-building measures from various countries. Primary data was gathered through focus groups and interviews with key informants, and analyzed by content analysis. A strategic plan was synthesized through group discussion. The result showed that there are abuses of integrity principles in local government, such as conflict of interest, lack of concern for public interest, ineffective law enforcement, and lack of concern for local tradition. To decrease these problems, substantial mechanisms have been made into five strategies: 1) increasing information accessibility and people's participation; 2) collecting wisdom and strengthening integrity in local government; 3) promoting good governance in administration; 4) enforcing law effectively; and 5) reforming the decentralization framework and the service system in local administrations. Government is required to represent its own political will through a concrete idea of integrity and decentralize central government's power into local area. At the same time, local organizations should push themselves to be as a role model of integrity in local area. For further action, the strategy and indicators were used as a tool and standard for mobilizing integrity. Following up and evaluating the result frequently would allow the plan to proceed smoothly and effectively and eventually achieve the goal of instilling Thai society with integrity.

Keywords: Integrity, Socialization, Local Organization, Strategy

Introduction

Integrity refers to being honest, acting directly, doing everything in the right way, and holding on to rightness. So, integrity is an important value to build good governance in any organization. Both private and public agencies should foster integrity so that good governance can be practiced in their organization. Also, some specialists in Thailand say leaders should have integrity, be righteous, do everything directly, and follow the laws and constitution strictly (Veeravit Gongsakdi, 2012).

At the same time, socialization is the process of inheriting and disseminating norms for members in society acting with each other, learning from other personality and groups to live in society appropriately. Socialization can also mean a learning process on culture and sub culture of people in society. In addition, it means behavior and action which are changed because of each people's status and role.

It can be said that socialization seems like the way to make people in society have integrity. Integrity can be a value, behavior, and desired moral for society. Ideally, every sector would like to see integrity at both individual and organizational level. Integrity brings transparency that helps reduce corruption, which is a severe problem in Thailand.

Thailand has mechanisms to combat corruption, such as legislative procedure, code of ethics, professional ethics, political oversight, moral monitoring, and specific institutions. However,

these anti-corruption measures have not been very effective, and Thailand's rating on Transparency International's Corruption Perception Index has never been better than the global average between 1993 and now.

It is time to focus on mental development and integrity among people in Thai society at all level, which requires monitoring measures. In term of socialization, all sectors are the key vehicle to mobilize integrity. The government sector can play an important role by support alliances to establish an integrity standard. Moreover, political will and national policy should be clear, continuous, and link to local level.

National Integrity Plan 2012 – 2016 (Moral Promotion Center, 2015) has addressed promotion of integrity in main institutions, creation of integrity culture, and building of integrity ethics. The plan is mobilized by empowered networks and transparency management. So, local organizations are one of the main actors for building integrity culture, especially at local community level. As the state organization that does work relevant to community living and is located close to communities, local organizations can be important in mobilizing integrity culture.

Objective

1. To study integrity problems in local organizations
2. To propose measures for resolving integrity problems in local organizations

3. To recommend a strategic plan for promoting integrity by socialization in local organizations

Concepts and theories

Integrity as democratic culture

In 2009, Thanin Kraivichien explained the meaning of “integrity” in the book titled *Khunnathamma Lae Jariyathamma Samrhab Bhu Borhihan (Moral and Ethical Principles for Executives)*. He said that the word integrity is derived from the Latin word *integer*, which means whole, complete, or full. Analyzing the meaning deeply, one can conclude that a complete human should have integrity in their mind. Someone who includes integrity in their moral identity is one who holds on to righteousness, is emphatic and reliable, and is a complete human (Quoted in Veeravit Gongsakdi, 2012).

A study by Lennick & Kiel (2005) about effect of morals asserted that integrity can be a value, principle, norm, and standard to control humans' actions and decisions. They say everybody has beliefs, values, and norms that control their actions. At the same time, integrity can be an action or determination of people that they demonstrate under their belief, value, and norm. So, to build integrity from local to national level, one must pave the way by enabling integrity in society. As Pope (1996) suggests, to achieve integrity society the public should have more concern and all sectors should collaborate together on integrity building. That can also lead

society to rule of law, well-being, and sustainable development (Pope, 1996).

Socialization in local organization sector

Generally, socialization consists of three main concepts. Firstly, socialization is inheritance from one generation to the next. Secondly, socialization is a process to control humans' natural motivation. Humans' motivation will be modulated by socialization so that their behaviors change and receive acceptance from society. Thirdly, socialization is preparing people to perform their role in society. In conclusion, socialization is people's formal and informal learning to develop their personality according to social need.

Local governmental agencies' works and services can cover almost communities. In 2015, numbers of local governmental organizations in Thailand were at 7,853 persons (Department of Local Administration, 2015). These organizations are composed of executives, councilors, officials, and employees to deliver their service. So, a local administration is a suitable unit to mobilize integrity culture. Local organizations do various works. They can serve as a role model for integrity and transparency, coordinate with families and educational institutions, and work with religious institutions. These are strengths of local organization to mobilize socialization. Local organizations could mobilize integrity through socialization by promoting good leaders, praising good persons, teaching and learning by various media, opening forums to discuss and express related idea on improving integrity, inserting integrity and ethical

principles in any activities. Also, all groups of organizations should create, hold, practice, and monitor on their code of ethic strictly (King Prajadhipok's Institute, 2014).

Existing measures in foreign countries

Nine countries were studied to identify mechanisms, laws, socialization, and measures for promoting morals, ethics, and integrity.

1. European countries: Norway, Sweden, Denmark, Finland, Germany, and France. European countries are outstanding on educational policy, political will, continuous policy implementation, aiming at knowledge building with promotion of morality and ethics, instilling self-discipline and responsibility, strong linkages between local organizations and communities, and full involvement of parents in their children's morality-building process.

Most of local organizations in European countries are assured with independent principle. The organizations can fully respond to any directives from central administration with transparency, information disclosure, and accessibility. So, those countries can improve people's involvement in every level of participation such as participation in legislation and oversight. Most countries have issued laws on anti-corruption. Moreover, they have independent organizations or courts to deliberate and impose punishments in corruption cases.

Local administration oversight law provides mechanisms to monitor local administration

executives from the time they take up their positions until they leave. Some laws allow for executives to be withdrawn or recalled from their positions. Laws on people's participation describe the rights of people vis-à-vis local administration. People can check and balance the state and monitor the work of local officials using official information law. In many places, people can pursue accusations of discrimination or wrongful action by local government through an ombudsman. Finance and accounting of local organization will be overseen too. All mechanisms are effective and can truly punish offenders. Moreover, social sanctions are also an effective support system. Thus offenders are discovered and punished by law and society.

2. Asian countries: South Korea, India, and Indonesia. Three Asian countries are difference on socialization and integrity-building system. India is a secular state that does not designate a state religion in its constitution. There are limit on teaching religion in school. However, family is very important in India, and most moral cultivation is done by the family.

In Indonesia, ethical and moral religions are implanted by family and educational institution. An organization named "KPK" works with the anti-corruption agency. The city of Lebak has established a committee that examines any claims from people. In Yogyakarta, they appoint a local ombudsman directed by the local organization. Also, they have also organized an e-government system to support transparency and good governance.

For South Korea, the leaders are role models in having morals and acting strictly according to the law. Breaking rules and laws is wrong and it cannot be accepted by society. Because they feel ashamed when something wrong, the Korean people response with wrong output even it is not from their action directly. For example, executive resign from a board position to show responsibility in case of inaccurate works. Local organization in South Korea establish E-government (the use of information and communication technologies to improve the activities of public sector organizations), enact laws to protect whistleblowers, to impose cooling-off periods during which former office-holders cannot work in fields related to their old positions, and to require office holders to disclose their assets and debts. Socialization takes place at family level and school. South Korea also has direct and indirect morals and ethics curricula to cultivate integrity in their children (King Prajadhipok's Institute, 2014).

Methodology

Literature review

Three sets of information were reviewed. First, researchers reviewed concepts and regarded studies about morals, ethics, and integrity. Second, the study explored mechanisms, laws, socialization, and measures in nine countries from Europe (Norway, Sweden, Denmark, Finland, Germany, and France) and Asia (South Korea, India, and Indonesia). Third, Thailand's context was studied in terms of relevant laws, protection measures, and mechanisms for promoting integrity.

Primary data collection through participatory workshops and interviews

Researchers made a list of target groups and subjects to participate in a workshop. In the workshop, participants registered their opinions by writing on cards and explaining their thoughts. The card technique was a time-efficient method for collecting participants' opinions. Researchers acted as facilitators to gather and group data in the workshop. The main issues addressed in the workshop were 1) desired characteristics of local organization, 2) integrity problems in local administration, and 3) the ways to reduce the problems. Moreover, researchers interviewed key informants regarding integrity failings in local government and possible solutions to these problems.

Target groups

The period of study was two years from August 2012 to July 2014. Forums were held in five provinces representing various target regions: Chiang Mai (Northern), Chainat (Central), Buriram (Northeastern), Nakhon Si Thammarat (Southern), and Bangkok. Each forum had 35 – 70 participants drawn from seven target groups: local organization representatives, community leaders, state officials, general citizens, scholars, the media, and the business sector. The total number of participants in all five workshops was 303 persons. In addition, the researchers interview with eight key informants who were executives in local organizations, high-ranking officials in local government, and representatives from relevant government agencies.

Data analysis

The study relied on qualitative methods. Secondary data were reviewed from various documents. Primary data were collected by card technique, participatory workshop, and interview. All information and data were analyzed by content analysis. Also, researchers developed a strategy plan through focus group discussions.

Results

Desired characteristics of local organizations

The participants wanted to see local organizations as following.

- 1) Local organization should work with good governance, transparency, and accountability. Local organizations should be open to people's participation, do worthwhile budgeting, and adhere to the rule of law.
- 2) Local organization leaders should pursue the public interest more than self-interest.
- 3) Local organization leaders and officials should demonstrate their attributes in term of quality and moral. For example, the leaders and officials should be smart, clever, responsive, and work with morality.
- 4) Local organizations should be key actor for national development, be a model on democracy regarding budget distribution and equal administration.
- 5) Code of ethics for local organization should be promoted and enforced effectively.
- 6) People should know about their duty and act as good citizens. Also, people in the local area really involve in community development.

- 7) Business sector should support budget, knowledge, and information in local organizations regarding corruption protection and resolution.

Integrity problems in local organizations

- 1) There is not enough implementing good governance practices in administrative processes such as law enforcement, service delivery, budgeting, information disclosure, people's participation, and auctions.
- 2) Executives, councilors, and officials do not have vision and have little experience in administration, and lack understanding of local government work. Consequently, their work are not sufficiently directed at furthering the public interest.
- 3) The way to earn positions in local organizations is wrong, such as paying money to voters for winning election, or paying money to secure the position. Once in office the officials engage in corruption to recover their money, and they have conflicts of interest.
- 4) There are problems concerning law enforcement and law implementation. Officials and staff cannot work according to the law directly. Some laws are out of date and not practical. For instance, the law on establishing a very small local organization should be reviewed and amended so that there will decrease numbers of the very small local organizations. Most of very small local organizations are incompetent local organizations. Then, central government can save budget. Lastly, budget will be distributed properly and worthily to develop a ready local government.

5) A lack of linkage between culture of traditional community and administration that caused little concern about morality and integrity. People paid little attention to conserving their own tradition that can develop community to integrity society.

Resolutions

Participants and informants provided their opinions on the way to solve problems and promote integrity in local administration. Firstly, they proposed that local organizations should work with good governance. Then, local executives, officials, and people should be trained to give them more knowledge and understanding about citizenship, politics, local administration, and integrity. Next, everyone in society should remind themselves that corruption is disgusting action and there must be more serious anti-corruption mechanisms. Lastly, local organizations should be promoted to act as real local government and to be a role model of integrity. Most details of these findings were developed as an integrity strategic plan in the next section.

Conclusion and strategic plan

In terms of governance, local government is established to decentralize power from central government. Decentralized power should benefit from the promotion and building of integrity culture by various means, especially socialization. To achieve the goal, it is not enough for local organizations to act alone. National leaders should declare their political will to promote integrity in public administration from

national to local level. Networks and collaboration between relevant sectors will be a strong mechanism to drive integrity by socialization. Various participatory channels should open for people in the process of decision making and proceeding projects. Executives, councilors, and officials could be trained to improve their knowledge and understanding on local administrative work. Lastly, public pressure and social sanctions could help reinforce and socialize people's behavior to encourage integrity.

In Thailand, under the Integrity Development Plan 2012 – 2016, National Moral Assembly is collaborated by governmental agencies, the private sector, and the people. In the private sector, the Anti-Corruption Organization has emerged to campaign on prevention of corruption in all sectors, encourage society to have more transparency, and initiate reliable procurement by signing moral agreement between governmental agency and private sectors called Integrity Pact. All these initiatives might serve as social capital to enable progress in establishing integrity culture in local government.

Based on focus group discussion, researchers drafted a “Strategic Plan and Indicators of Integrity for Local Organizations”. The proposed vision is that “Thailand local government is a role model of democracy; administration with good governance, ethics, morality, integrity, transparency, and equitability, where executives and officials work with responsibility and primary concern for the public interest”. The plan is

composed of five strategies: 1) information accessibility and people's participation; 2) collecting all wisdom and strengthening integrity in local government; 3) promoting good governance administration; 4) enforcing law effectively; and 5) reforming decentralization structure and service system in local organizations. Details are shown in the following tables.

Table 1. First Strategy: Information Accessibility and People's Participation

Objectives	Measures	Key success indicators
1. To encourage recognition about integrity problem in all sectors and enable them to participate in decision-making	1 .1 Promote information disclosure with transparent working system that all sectors can approach easily such as E-Government.	1) All local organizations have databases and publicize their work via community and electronic media. 2) Meeting reports are open to the public on websites and community boards. There also have a way to gather comments from people.
2. To establish informative accessibility and participatory mechanisms	2.1 Promote recognition on integrity problem in all sectors and enable them to participate, express their opinions, and make decisions based on information, which is to be widely available.	3) All local organizations and other relevant agencies publicize work or information about integrity through various media using simple words or community language.
	2.2 Promote making performance reports, publicizing work to the public, and opening for all sectors' comments.	4) Target groups can access information everywhere and in various languages to enable all groups of people to understand information easily.
	2.3 Publicize through various media to make all target groups understand integrity and overseeing participation.	5) Target groups receive integrity handbook and are trained about integrity enhancement.
	2.4 Produce integrity handbook and train to disseminate integrity improvement for all sectors.	
	2.5 Provide media resources that suit with each local area. For example, radio station broadcast integrity knowledge in local language. Local television stations produce an integrity TV program that link with their local culture.	
	2.6 Make plans or projects that encourage community, academics, businesses, and media to be involved in projects according to community needs.	

Table 2. Second Strategy: Local Wisdom Collection and Strengthening Integrity in Local Government

Objectives	Measures	Key success indicators
1. To collect data and wisdom about local organizations	1.1 Collect local organization data, local wisdom, and make information of local organization duties, authority, budget, participatory activities of people in local administration.	1) There are information system and knowledge about local administration for executive, councilors, and local officials. 2) Information packages about local administration should be provided for people. 3) Database of local knowledge and integrity are collected at local organization.
	1.2 Make work procedure guidelines for executives, councilors, and officials.	1) There are work procedures for executives, councilors, and local officials in every local organization. 2) There are handbooks for work checking and monitoring of local administration produced for the public.
2 . To develop a learning process and people's potential in local organization	1 .3 Explore and create new activities about promoting integrity for local organization also record those activities to be an innovative practice.	1) There are process to manage data and information about innovative activities such as database or making electronic media, toolkit, and books.
	1 .4 Research and build a morality model for local governments drawing on case studies, teaching, local scholars, religion, and leaders.	1) There are specific databases on morality case studies in specific communities. 2) There are integrity practice guidelines for specific local areas.
	1 .5 Search for role models who possess morality, ethics, and integrity.	1) There are role models in each local community.
2 . To develop a learning process and people's potential in local organization	2.1 Establish a subject about morality and integrity in the education curriculum at every level.	1) There are curriculum about morality, ethics, and integrity in academic institutions.
	2.2 Establish an education curriculum to improve performance of executives and the people.	1) There are appropriate training modules or curriculum for specific groups.

Objectives	Measures	Key success indicators
	2.3 Organize morality classes in schools by presenting or inviting local role models to show their work and experience.	1) There are local curriculums about integrity or morality. 2) There is dissemination of integrity role models through media and persons.
	2.4 Set up “integrity corners” in places like libraries and local organization offices to publicize knowledge about integrity, local administration, and people’s rights to participation.	1) Every local organization sets up an integrity corner in their office that people can access easily.
	2.5 Publicize existence information and information channels widely about morality via community radio, wire broadcasting, or community billboards.	1) Information is broadcasted through local media continuously.
	2 . 6 Study and develop integrity standards for local communities in collaboration with academics, people, government agencies, local bodies, media, religious leaders, and business sectors in those areas.	1) There are integrity standards for local communities and every sector in each local area accepts the standard. 2) There are toolkits for morality and integrity building for local communities.
	2.7 Build process or mindset for people to elect their local representatives based on role, behavior, morality, and integrity.	1) There are guidelines to elect local politicians consisting of local politician’s role and selection criteria related to integrity.
3 . To contribute integrity value and volunteer mind	3.1 Organize morality events and invite local members to be involved in religious ceremonies and act rightly according to religious principles.	1) Local governments organize public events to promote people’s integrity.
	3 . 2 Organize events for presenting awards to integrity role models in order to highlight the importance of integrity.	1) Local governments organize awards events for integrity role models annually and there are increasing of persons who are role model every year.

Objectives	Measures	Key success indicators
	3.3 Hold events, organized by the Local Administration Department, academics, and civil society, for presenting awards to local organizations that are role models of integrity and innovative practice to highlight the importance of integrity.	1) There are awards for innovative local organizations.
	3 . 4 Organize forums to share knowledge and experience among good practice local organizations.	1) There are lessons learned from good practice local organizations.
	3.5 Organize volunteer events in local communities, doing activities like sorting rubbish, cleaning religious buildings, conserving common resources, planting trees, or volunteering to take care of the elderly.	1) Local governments organize volunteer activities continuously and the number of participants increases every year.
	3.6 Publicize integrity activities and set up campaigns to encourage community members to be involved in the activities.	1) Local organizations broadcast integrity events continuously via electronic media.

Table 3. Third Strategy: Promoting Good Governance Administration

Objectives	Measures	Key success indicators
<p>1. To enable transparency in local administration</p>	<p><u>Transparency</u></p> <p>1.1 Promote developing computer programs to serve transparency and reduce corruption such as e-bidding or e-auction programs.</p> <p>1.2 Make meeting reports, publicize them, and open them for comment from the public.</p> <p>1.3 Establish an “Integrity Pact” or morality agreement between local organizations, the business sector, and people.</p>	<p><u>Transparency</u></p> <p>1) There are basic computer programs implemented in working processes. Local organizations publicize their work and information on websites.</p> <p>2) Local organizations provide and publicize meeting reports, and open channels for public comment.</p> <p>3) All local organizations make “Integrity Pacts” with other sectors in any collaboration or risk projects.</p>
<p>2 . To gain highest value and benefit from local administration</p>	<p><u>Worthiness</u></p> <p>2.1 Organize hearing forums to gather information about people’s needs and responses to community problems.</p> <p>2 .2 Encourage local organizations to create integrity innovation.</p>	<p><u>Worthiness</u></p> <p>1) All local organizations hold community forums or activities to make local development plan.</p> <p>2) Local organizations do projects to promote innovative practice on integrity.</p>
<p>3 . To oversee local administration substantially</p>	<p><u>Oversight</u></p> <p>3.1 Issue a law to examine local organization accounting, finance, and leaders’ revenues.</p> <p>3.2 Promote people’s participation in the budgeting process and the budget oversight committee involving people from all sectors.</p> <p>3.3 Appoint internal and external auditors for balance of power between executives, councilors, and officials.</p> <p>3.4 Establish mechanisms of protection for complainer in case of corruption in local organization.</p>	<p><u>Oversight</u></p> <p>1) There is law enforcement on accounting and examination of local government revenue.</p> <p>2) Local organizations set up Budget Oversight Committees with members who comes from all sectors, with representation of all genders and disadvantage persons.</p> <p>3) Local organizations establish complaint mechanisms like complaint boxes, complaint units, and complaint cards, that can be accessed easily by disadvantaged persons.</p> <p>4) People set groups like People’s Watch that are composed of members from all sectors including disadvantaged persons to monitor local budgeting.</p>

Objectives	Measures	Key success indicators
3.1 To encourage local organizations to improve their work in terms of effectiveness and transparency	3.1 .1 Survey people's opinions regarding trust in their local organizations and related agencies, satisfaction with local government service, and corruption and bribery among local officials.	1) There is information based on surveys of people's opinions about trust, satisfaction, and corruption in local organizations.
	3.1 .2 Make performance report of local organization and publicize it widely, as well as gather people's comments to improve local administration.	1) There is an annual local government report publicized through local media or on a community billboard.
3.2 To enable effective monitoring system by people participation.	3.2.1 Establish Youth Councils to learn about local administration, make suggestions concerning local planning and administration, and oversee work of local organizations.	1) There are youth volunteer networks in communities to monitor work of local organizations. 2) Youth networks do volunteer work for their communities and society.
	3.2 .2 Set up a group called Local Integrity Watch to observe, monitor, remind, and communicate with the public in forcing and taking social sanctions.	1) There are social sanction mechanisms to punish offenders. 2) There is an integrity standard that all sectors agree to and accept. 3) There are civil society groups to monitor local organizations' work.
3.3 To decrease opportunity for corruption.	3.3.1 Oversee local administration by means of independent organizations that are composed of members from all sectors to be involved in work processes especially budgeting.	1) There are oversight committees from various sectors in local areas.
	3.3.2 Evaluate integrity level and prepare an Integrity Report Card for people to suggest their views using cards or questionnaires.	1) There are widely publicized evaluation reports about integrity level.
	3.3.3 Publicize and open information on local administration for people and provide various channels to contact with local organizations in accordance with the good governance concept.	1) There are continuous broadcasting and disclosure of information.

Objectives	Measures	Key success indicators
4. To cultivate consciousness and responsibility in local government's administration	<u>Responsibility</u> 4.1 Develop a code of ethics for local politicians and declare it to the public. 4.2 Make guidelines or work procedures in accordance with integrity. 4.3 Make a Local Governance Index, Local Integrity Indicators, Local Performance Assessments, or Local Self-Assessment.	<u>Responsibility</u> 1) Local organizations declare their codes of ethics to the public. 2) There is training to increase consciousness and responsibility for executives, politicians, and officials.

Table 4. Forth Strategy: Effective Law Enforcement

Objectives	Measures	Key success indicators
<p>1. To enforce laws relating to corruption prevention effectively</p>	<p>1.1 Enforce the law effectively, especially laws on information disclosure in accordance with the principle of open information about local organization plans, projects, programs, services, and budgets.</p>	<p>1) Local organizations provide 24-hour E-Local Government access to information and databases to facilitate people's access.</p>
	<p>1.2 Increase measures and strengthen monitoring mechanisms concerning corruption and conflict of interest among councilors and executives in case of involving in contract parties with local organization, working at a position in another government organization, and receiving money or gifts in exchange for some benefit.</p>	<p>2) Local organizations enable access to information in various media such as local office boards, bulletins, pamphlets, videos, etc. that can be accessed by all groups of people.</p> <p>3) There are rules relating to people's participation in oversight and punishment in cases of conflict of interest involving executives, councilors, and officials.</p> <p>4) People organize a group to be part of a network for monitoring conflict of interest.</p> <p>5) Local government and related agencies issue a handbook about participatory law and oversight of local government by the people.</p> <p>6) There are mechanisms to promote and protect whistleblowers.</p>
<p>2. To create mechanisms and oversight measures in accordance with laws on conflict of interest</p>	<p>1.3 Promote knowledge and understanding among people and officials to know and be concerned with rule of law, including encouraging people to respect and follow the law.</p>	
	<p>1.4 Build mechanisms to empower people's participation, like a handbook on participation and law, and develop laws and mechanisms to protect whistleblowers from unjust criminal proceeding and harassment.</p>	

Objectives	Measures	Key success indicators
<p>3. To make transparent and fair process to be councilors or local organization executive.</p>	<p>3.1 Improve mechanisms and measures to local councilors' election spending through people's participation in case of spending money too much on election campaign.</p> <p>3.2 Promote people's performance and participation to have the public involved in the selection or recruiting processes for the election of councilors and local organization executives.</p>	<p>1) Laws on election spending and campaigning are amended.</p> <p>2) Relevant agencies issue handbooks for people's participation in accounting and expense oversight in local election campaigns.</p>

Table 5. Fifth Strategy: Decentralization Structure Reform and Service System Improvement in Local Organizations

Objectives	Measures	Key success indicators
1. To promote local organization work properly according to good governance and decentralization principles	1.1 Increase local organizations' authority to provide public facilities and services, with the central and regional governments acting as supporters of local government.	1) There are law amendments to reform decentralization. 2) An evaluation board is appointed to assess performance of local executives every term.
	1 . 2 Assess local organizations' performance by means of an Evaluation Board that consists of representatives from the Department of Local Development, academics, civil society, and local media. The result of evaluation should link with a subsidiary budget from the central government.	
2. To support local organizations to make ultimate goal from people's needs and work on specific tasks for their people.	2 . 1 Create friendly communication channels for people to communicate with local organizations, communities, and other people, and to publicize decisions on projects and work progress.	1) Local organizations have E- Database Online and are widely open for people's involvement in in terms of annual plans, projects, activities, budgets, contract parties, and performance.
	2.2 Organize hearings or public forums to collect people's opinions on plans, projects, and activities that might have an effect widely on communities and people's living.	2) Media organizations broadcast relevant information in various ways such as printing media, pamphlets, cartoons, bills, and voice media for people.
		3) All executive and council meetings are broadcast through local media. 4) Local organizations organize events to meet people in communities the first Friday of every month to serve as a channel for direct meetings between executives and the people

Objectives	Measures	Key success indicators
		<p>to create opportunities to address community problems and express people’s opinions. Also, record or report of the meetings should be kept and publicized.</p> <p>5) There are announcements to communicate and provide information about making the annual plan, and at least 70 percent of the people in each area participate in the planning process.</p> <p>6) Local governments organize public forums to provide information and solicit opinions from people and use the opinions to make decisions in cases where there could be bad effect on the community and the people.</p> <p>7) At least 60 percent of citizens are involved in public forums.</p>
<p>3. To create systems and mechanisms on legal oversight and social sanction by linking with communities and the people.</p>	<p>3.1 Have an Independent Monitoring Committee composed of representatives from civil society, NGOs, the business sector, media, professional organizations, and youth to monitor local organizations’ work and relay information to the public.</p> <p>3.2 Have an Independent Local Audit Agency to check the local organization’s work and progress on projects, plans, and activities using Integrity Networks, Integrity Pacts, and Local Ombudsmen.</p>	<p>1) Local laws on duty and authority of Independent Monitoring Committees are issued.</p> <p>2) Local organizations appoint Independent Monitoring Committees after local election. The goal is set at 30% of all local organizations within three year and 50% of all local organizations within six year.</p> <p>3) Department of Local Development pushes issuing laws relating to establishment of Independent Local Audit Agency.</p> <p>4) There is coordination and establishment of an Integrity Network, Integrity Pact, and Local Ombudsmen.</p> <p>5) There are compliant channels through information networks called E-Petitions and the data are linked to local executives, the Department of Local Development, and the Independent Local Audit Agency.</p>

Objectives	Measures	Key success indicators
4. To make more responsible local organizations that satisfy the people.	4.1 Have a service unit that works as a One Stop Service to receive complaints, hear people's needs, and forward cases to responsible units for further action.	1) Local organizations set up One Stop Service units using modern equipment in their work. 2) Local organizations set up various channels to receive peoples' opinions that are easily accessed by people of various gender, age, and status. 3) Local organizations broadcast people's opinions to the public to enable people to monitor their representative's work and keep that information for deciding in the next election.
	4 . 2 Provide channels to gather comments, opinions, and satisfaction assessments on each unit's service. Local organizations do a performance report to use it as a tool for annual performance evaluations. Related data to do the report can be collected by means of questionnaires or complaint box.	

Recommendations

Policy recommendations

To achieve the goal of integrity society, it is not enough for local organizations to act alone. They need the following strong action from the national level.

1) National leaders should take strong action on decentralization, such as reviewing and issuing relevant law on decentralization. They should review and monitor local organization performance to restructure the authority relationship between central, regional, and local administration. The central government should control and evaluate local organization performance with good governance principle and link to subsidiary budget distribution.

2) National leaders should declare and take strong action on building an integrity standard in society through socialization. This might lead to wide promotion of integrity role models and social communication to accept integrity behavior.

3) National leaders should have political will and strong action to develop a learning system on democracy. People should have an enhanced right to freely elect smart and ethical local representatives freely. Also, there should set an appropriate level and methods of people's participation in overseeing their representative's ethics and work.

4) There have to be development of public pressure and social sanctions including an awards system.

5) Inspiration and trust in people's participation through good governance principle must be built by establishing simplified information channels, administrating as E-Government, satisfying people with E-Service, working transparently with E-Procurement and E-Auction to reduce discretion and corruption, and enabling a whistleblower system.

Practical recommendations for local administration

1) There should be development of local organizations' potential so that local executives, councilors, and officials gain knowledge and understanding about local organizations' authority. Development should be managed under the law, good governance, and code of ethics. Development should be coordinated by Local Personnel Development Institution, Bangkok's Official Development Institute, and relevant agencies.

2) The monitoring mechanisms should perform in creative ways such as developing alliance networks for integrity, improving integrity, and devising a transparency assessment system. Assessment should link to budget distribution from central government. More monitoring systems should be created and implemented, such as Independent Monitoring Committee, Local Ombudsmen, Local Youth Council, Local Integrity Watch, and Integrity Report Cards.

Lastly, for further action, the strategy and indicators should be used as a tool and standard for creating and building integrity among and within local administrations. Evaluating and

following up the results frequently would allow the program to proceed smoothly and effectively and eventually achieve the goal of instilling honesty and integrity in Thai society.

CONFLICT BETWEEN SOCIETIES AND COMPANIES IN THE CONTEXT OF OWNERSHIP

Agustiyara

ABSTRACT

The research aims to describe the agrarian conflict in Central Borneo and to analyze the agrarian conflict resolution practices in an appropriate way. Agrarian conflict in Central Borneo caused by various factors, First, inequality spatial planning of forestry and overlapping of ownership. Second, the expansion of oil palm plantation is increasing every year, and the government ambition to make oil palm plantation as the main commodity in Central Borneo. Every year there are so many conflicts, but in this research divided into four types, the conflict between community and company, community and community, company and state, and community and state. Conflict over the land and natural resource often occur where there is overlapping resource interest among groups, communities, and state. Therefore, the hypothesis is discussed by reference to find the sustainability way of oil palm plantation regarding the environment, social, and culture aspect. Second, the expansion of oil palm plantation without damaging forest zone, and third, to strengthen the spatial planning of forestry, operational regulation to support and protect land ownership.

Keywords: Agrarian Conflict, Ownership, Conflict Resolution.

INTRODUCTION

Conflict over the land and natural resources issues are often found among various factors. They may include: members of households, families, clans or ethnic groups, community, governments, and investors or corporations (UNDP, 2012). The agrarian conflict that occurs in current situation, no definite formulation to solve agrarian conflict in Indonesia, although the government announced that the government has found and resolve the conflicts, many conflicts that occur as a result of state political policy (Zweynert, 2015). The conflict over land in Indonesia usually arises between indigenous communities, industries and the state (Ruwiastuti,1997). Land tenure arrangements have undoubtedly influenced the way in which natural resources are controlled by the state and indigenous communities in Indonesia (Deddy, 2006). The term of land tenure means to set the rights which include the right to access, right to use, right to manage, exclusion, and divert, access refers to the right to enter certain areas. Usage or utilization means the right to obtain resources from the forest, (Schlager & Otsrom, 1992). The explanation indicates that research on agrarian and conflict analysis is necessary to

determine the cause of the agrarian conflicts that occurs.

The conflict caused by the states right to control unilaterally and land community control. State land is claimed to caused the protracted conflicts. Massive plantation conflict occurred and the Government's ambition to make palm oil plantation as the leading commodities (HUMA, 2013). The increasing of agrarian conflicts required the agrarian reform, conflicts caused by inequality of ownership, control and management of agrarian resources or inequality of the agrarian structure. Land access is regulated through a system of land ownership. Land tenure is a legal aspect or relations between indigenous people as individuals or groups associated with the land (Galudra, et al., Manual Penilaian Cepat Konflik Pertanahan, 2013).

According to the Center for International Forestry Research (CIFOR) 2015, states that Indonesia needs to have a conflict resolution, in resolving land conflicts between local communities and companies. Therefore, the business development that utilizes the large land plantations has great potential overlap to the residents and forest area. Palm oil plantation which is conducted by some companies in Central Borneo, such as PT SGM (Sawit Graha Manunggal) is part of big scale company of Bumi Borneo Prima (AEP Indonesia-Anglo Eastern Plantations) is the members of RSPO in Central Borneo. With the increasing the numbers of land conversion and land needs by the company will cause of land tenure conflict between community and company.

The conflict cases between communities and companies are increased annually, Agrarian disputes cause the loss of social welfare, property and live hoods. The dispute also interferes the performance of government and industrial efforts, especially in local government.

Source: Database HuMa, 2012 and BPHN 2015

Central Borneo has 72 conflict cases in 2014, it is become the highest numbers of agrarian conflicts during that years. Agrarian conflict that occurred in Sumatra and Borneo is one expansion result of Palm oil industry, one of the main factors of conflict is indigenous land disputes between local people and the industry owners in the local customs area (HUMAWIN, 2013). The rapid expansion of palm oil in Central Borneo can contribute to deforestation, peat degradation, biodiversity damage, burning and slash of forest area. Palm oil became the major contribute in economic growth for regional government income. In 2012, roughly 11 million hectares were planted for palm oil plantation (CIFOR, 2015). Most of the palm

oil was in Sumatra (64%) of palm oil plantation and followed by Borneo with (31%) of palm oil plantation.

The unsustainable expansion of palm oil plantation damaged forest area, wildlife and environment. Most of the palm oil industry had land dispute with land communities. The high numbers of conflict that occurs in Central Borneo is the reason of researchers to choose Central Borneo as a research area in 2015, there are three reasons why the research on agrarian conflicts in this study becomes important which are: *first*, the increasing of agrarian conflict cases in various years. *Second*, Central Borneo is the highest numbers of agrarian conflicts. *Third*, conflict resolution between community and company. Therefore, this research will discuss about how the settlement of conflicts in Central Borneo could be completed in case of conflict resolution between Communities and companies.

THEORITICAL FRAMEWORK

Concept of Land Tenure and Ownership

Land tenure is a right to organize usage patterns or divert resources. In regard to common-pool resources, collective-choice property rights include management, exclusion, and alienation, (Schlager & Ostrom, 1992), they defined as follows:

Management	The right to regulate internal use patterns and transform the resource by making improvements.
Exclusion	The right to determine who will have an access right, and how that right may be transferred.
Alienation	The right to sell or lease either or both of the above collective choice rights.

Sources: Schlager and Ostrom (1992)

According to Shlager & Ostrom (1992), they divide rights as follow: *First*, right of access is the right to enter a particular area. *Second*, right of withdrawal is right to uses of natural resources such as for fishing, harvesting fruit, water, slash, etc. *Third*, right of management is right to regulate the utilization of resources for the purpose in increasing production. *Forth*, rights of exclusion is the rights to refuse a person to gain access in utilize resources and make the rules of assignment to other people, institutions and other groups (Wunder, 2009). *Fifth*, right of alienation is right to sell or lease.

According to Larson (2013) rights is about de jure and de facto concept, de jure is the rules created and protected by the state (for example, proof of ownership which registered, concessions, contracts and regulations on forestry). De facto is the interaction patterns that are defined outside the scope of formal law. This includes customary rights, a set of rules and regulations

of society, and enforced by society, and which may be recognized or not by the state.

Management means the right to regulate their own usage patterns or divert resources. Management is divided into three terms of authority to make decisions, namely, (1) Determine how resources should be protected and used (rule-making). (2) define how to monitor and enforce compliance, and (3) resolve the dispute, (Agarwal & Ostrom (2008). According to Tchikangwa (2001), he divide into: (1) establish/protect the boundary, (2) formulate/implement the rules and regulations, (3) monitoring compliance, (4) resolve the dispute, (5) leading, and (6) estreat/sanction.

1. Private Rights

According to Larson state that private right is land that the proof of ownership held by individuals or companies (Larson, 2013). Private right is hereditary rights, land that is owned and authorized to uses for an indefinite period (Harsono, 2003). Property rights according to article 20 paragraph (1) UUPA is hereditary rights, wholly and the strongest of the land that can be owned by the people.

2. Customary Right

The participation of local communities in the resource management, for example has the autonomy to make local rules, shows towards better outcomes for biodiversity and livelihoods (Ostrom & Nagendra, 2006). According to Harsono (in Santoso, 2012), a customary right is a series of authority and obligation of

indigenous peoples, related to land located within the territory. According to Fitzpatrick in his research about best practice model for the legal recognition of customary tenure, to identify of tenure security allows a typological framework for developing legal responses to customary tenure. State legal intervention in a customary land system should be determined by reference to the nature and causes of any tenure insecurity (Fitzpatrick, 2005).

3. Common Right

Common right is based on agreement and Laws. It is said common property (*medeeigendom*) because there are some owners or a similar object (Angus, 2008). Common right system is contained in the official land including state land or private property (McKean, 2000). According to article 28 of Law No. 5 of 1960 about agrarian issues (UUPA), Common right (HGU) are special rights to use land that is not his own, the land is regulate directly by State for the agriculture, fisheries and livestock.

Based on understanding the definition of land tenure can be concluded that land Tenure refers to the contents are the nature of rights and security of rights which manage the natural resources that refers to the social relations and institutions which is regulating the access and land tenure, with using the opinion of (Schlager & Ostrom, 1992).

Concept of Agrarian conflicts (Societies and companies)

Agrarian conflict as stated by Christodoulou is "Agrarian reform is the offspring of agrarian conflict" (Christodoulou in Wirandi, 2000). Agrarian reform is the agrarian conflict that it come up from the reformation of the ownership or land control and known as the "land reform" which is develop into "agrarian reform" is a response toward the conflict situation on land issues.

According to Herrera & Passano (2006) state that divided into three types of conflicts causes of land ownership, the main of the conflict caused by, *First, The influence of politics*, almost every conflict occurs on land ownership. The potential to become a conflict when there is big changes over land tenure (which are really happening or presumed exits) land tenure. *Second, Legal aspect*, the main problem is that some actors do not know the legal rights, unknowing about the legal framework that governs access to some areas and utilize of natural resources in a manner opposite to each other. The organizations on the legal authority to set the same area can also cause the land tenure conflicts. *Third, Economic factors*, Land is a source of income and be a natural resource for plantation.

In conclusion, conflict may occur among individuals in organization, institutions, community, and society or among nations. It's considered to be endemic to all social relations and could be understood as a conflict about legitimacy and authority in any organization, roles and positions.

RESEARCH METHODS

Qualitative method is the main method in this research which used to carry out and analyze the data. Qualitative research involves the studied use and collection of a variety of empirical materials case study, personal experience, observation and describes the problematic moments, (Denzim, 2000). The research conducted is included the category of library research. Moreover the Data collection technique used by collecting various journal articles, documents, books that related to agrarian conflict over natural resources between community and company. It is useful to examine the ownership over the land, reflects an attempt to secure an in depth understanding of the land tenure phenomenon in question, (Flick, 2002). In this research, the researchers used explanatory qualitative research, focused on analyzes the agrarian conflict in Central Borneo. The problems of this research were related to the conflict between societies and companies in the context of ownership that occur in Central Borneo. In order to describe the issue, this research will utilize the secondary data and analysis the conflict resolution between society and company based on best practice. Data collection is done by describing the data to understand what is happening based on the data that has been presented (Bogdan & Taylor, 2007). The conclusion from the entire data of each variable by comparing the data obtained from the various sources to see the possible variations that occurs, based on findings could be conclude become the conclusions.

This research located in Central Borneo in the case of agrarian conflicts that occurs between community and the company. The reason for choosing this location of Central Borneo is one of the highest expansion areas for palm oil plantation and the numbers of agrarian conflict cases.

RESULT AND ANALYSIS

Agrarian Conflict Analysis in Central Borneo

Indonesia has recently become the biggest producer of palm oil in the world, with over six million hectares of palm oil plantations that can produce over 17 million tons of crude palm oil (CPO) (Pye, 2013). The demand of palm oil in the global market has encouraged the Indonesia government to stimulate the expansion of palm oil plantation, many facilities and incentives have been given to private investor to invest the palm oil sectors. While the policies that protect local communities and environment are lacking (Dewi, 2013). They cover more than seven million hectares and are managed by more than 600 companies and one million small farmers.

Historically, the entering of companies began from Mega Palm Oil Projects and new focus of development plants after the fall of Soeharto era in 1998. The area had been allocated to military controlled logging concessions, reflecting both the importance of the timber industry and security concerns. The first plans to develop the area with palm oil were drawn up under Megawati in West

Borneo for the expansion area. Under Susilo Bambang Yudoyono era, Central Borneo is an expansion area as palm oil corridor. The expansion of plantations occurs in large scale which reached five million hectares per year globally (FAO, 2010).

Master plan acceleration and expansion of Indonesia's economic development (MP3EI) 2011-2025 assert that, the economic corridors designed to produce a specific global commodity. Forestry and mining became the main establishment of the three fundamental problems that is the damage of the environment, the distribution of land tenure and natural resources are lame. The cause of agrarian conflicts, there are some differences of the actors before and after reformation era that involved in agrarian conflict as described below:

	Agrarian Conflict	
	Before Reformation Era	Reformation Era
The actors who involved	Central Government National Cooperation Military Community NGO (1990)	Central Government and local government Military National Cooperation Community NGO International Agency
Pattern	Centralistic, Central government as absolute controller	Spread and central government and local government as facilitators

Sources: Compiled From Various Sources

The entry of large scale companies has been shown since 1967, the first time,

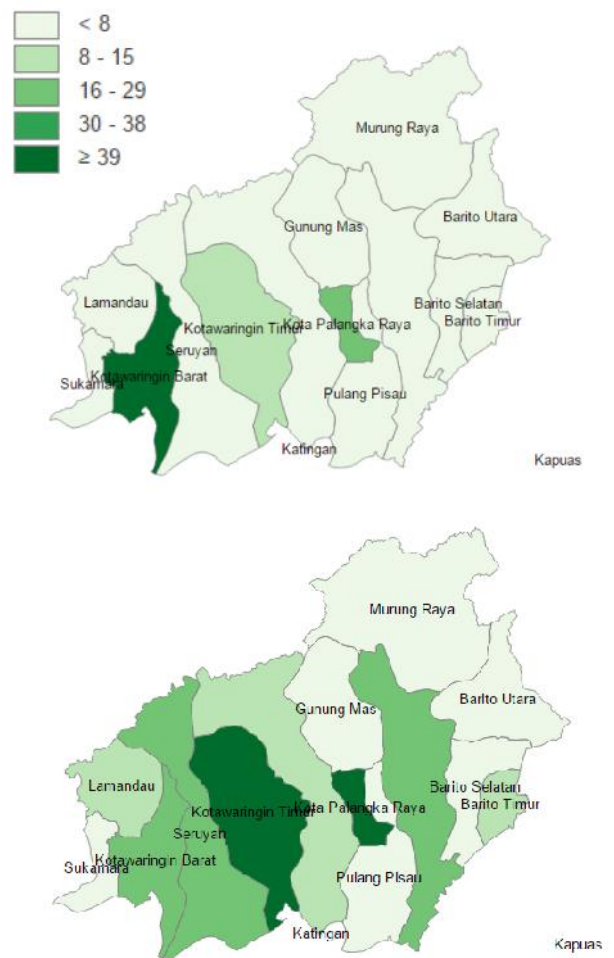

Indonesia invite foreign investors to start exploiting global scale of agrarian resources that exist in Indonesia (Mulyani, 2014). The corporation of palm oil plantation in Central Borneo began in 1992, its extent to increase palm oil plantation area. Based on the establishment of regional regulation No. 3 of 1993 about spatial plan in Central Borneo, The expansion of palm oil plantation even in peat lands area is conduct with large scale company and tends to be uncontrolled by the government. In the social perspective, Central Borneo has turned into a potential agrarian conflict region, such as the conflict with plantation corporations. The consequence of the palm oil expansion is the increasing the agrarian conflict over natural resources.

The widespread expansion of monoculture plantations such as palm oil in Borneo make reduces forest area drastically (Widiyanto within BHUMI, 2012). The development of palm oil plantation sector investment alleged to strengthen the pressure on land needs and the most vulnerable area is the forests. A massive plantation conflict that occurs indirectly triggered by the governments ambition to make palm oil as main commodities in Indonesia especially in Central Borneo.

The changing distribution of companies during last 10 years has increased rapidly. In one hand, the changing shows that the growths of companies are important for economic development in the local government, it could provide job opportunity to the local community and provides the income resource for local government. In the other hand,

because of the growth of palm oil company is expansive with conduct land grabbing for land needs, it is caused by increased investor in palm oil plantations and the consequences of the increase of palm oil companies are the number of agrarian conflicts.

The distribution of companies in Central Borneo, 2003 to 2013

Sources: Badan Pusat Statistik, 2013

The comparison between the number of companies and the number of conflict cases in Central Borneo during certain years.

Sources: Compiled From Various Sources

Source: Database HuMa, 2012

In 2008, the growing number of companies and land expansion followed by the agrarian conflict in Central Borneo has increase until 2009. The agrarian conflict in 2010 was the most conflict Central Borneo,

but the increasing number of land expansion and the highest number of companies in 2010 was not followed by the number of agrarian conflict in Central Borneo. In 2010 the numbers of agrarian conflict has decreased from previous years, its caused by, *first*, in 2010 the President of Susilo Bambang Yudhoyono has appointed the Central Borneo Province to become pilot province of REED+ programs. The aim is to reduce emission from deforestation and forest degradation sectors and land use. *Second*, the Governor of Central Borneo has announced that the province has conducted moratorium policies to reduce deforestation. The moratorium made by the governor to address the issue of overlapping permits. According to WALHI of Central Borneo noted that, even though the moratorium has been issued by the government is still being conducted the land permits for land expansion by cooperation which issued by Regents. Meanwhile, the agrarian conflict in 2011 to 2013 continually increasing, the implementation of REED+ is still questioned, whether then implementation will reduce the conflict or the increasing numbers of conflict.

Each year's there are so many conflicts, but this conflict will divided into several part, *the first*, conflict between community with community, *the second*, community with company, *the third*, company with state, *and forth*, community with state. the conflict between community with community In Central Borneo, several conflicts affecting local communities and related to palm oil plantation have been reported about human right violation and land grabbing, in 2010 to

2014 Central Borneo was the most province of conflicts were found (KPA, 2014), the cause of conflict between community with community caused by the conflict of the customary village boundaries or the conflict over resources.

The cause conflict between community and company, *first*, Low wages and debts for palm oil plantation, The compensations paid by the company to the local communities are often very low and their promises not completely fulfilled, which can trigger further conflicts, *Second*, the majority of oil palm plantations are held by private companies gaining access to the land through the government, Private investors gain use rights to land (HGU: *Hak Guna Usaha* or exploitation and utilization right) through local and central governments that issue plantation permits, in practice these lands are often used and controlled by local people who claim customary land rights that are not fully recognized by the State (Clerc, 2008). *Third*, the past to grant customary lands of private investors without consideration for the local communities, palm oil plantation is established by private companies on customary lands, lands are actually used and controlled by local communities. *Forth*, claims of customary conflict over forest area, the high frequency which involved the companies have conflict of plantation and mining sectors. Perhaps almost all natural resources and agrarian conflict based on overlapping claims.

The conflict between companies with state caused by, *first*, less transparency of the local government related to business permits.

Second, less transparency of information and documents required related local government policies in term of land permits, including environmental impact analysis and conflict resolution associated with the palm oil plantations. *Third*, the company ignored the obligations contained in the legislation of the palm oil plantation, the permits requirements which given by the government such as, location permits, plantation permits and land use permits.

The conflict between communities with state caused by, *first*, Plantation area of palm oil for society not appropriate yet with the regulation, the community right of land tenure has not resolved properly in term of ownership. The conflict between communities with state mostly occurs in term of the boundary of forest use planning (Yuliana, etc al., 2004). The right and land use plan mainly related to conservation area such as National Park. *Second*, conflict occurs because of the Government continues to push high economic growth, either by expansion of palm oil plantation, its often claimed over community land or conservation of forest as palm oil commodities. Besides the expansion of palm oil plantation by companies, conflict also occurs over customary lands are not recognized by the state. *Third*, inconsistent governments about the regulation, to improve the natural resources management aspect such as, land tenure, forest spatial plan, forest management and forest use plan. *Forth*, interest factors, where the public has an interest to use and manage the land, while the forestry department has interest to maintain and manage the state forest. *Five*, The

conflicts related to plantations, forestry and mining (KPA, 2013). In the context of forestry, the conflict issues related to the ownership of rights in forest areas, conflicts arise because licenses without considering local conditions, resulting in indigenous people or the local community which losing their rights, generally, have not been formally certified (Mizan, 2013).

Palm oil ownership of Companies and Smallholders as Comparison to others Province 2008 to 2013

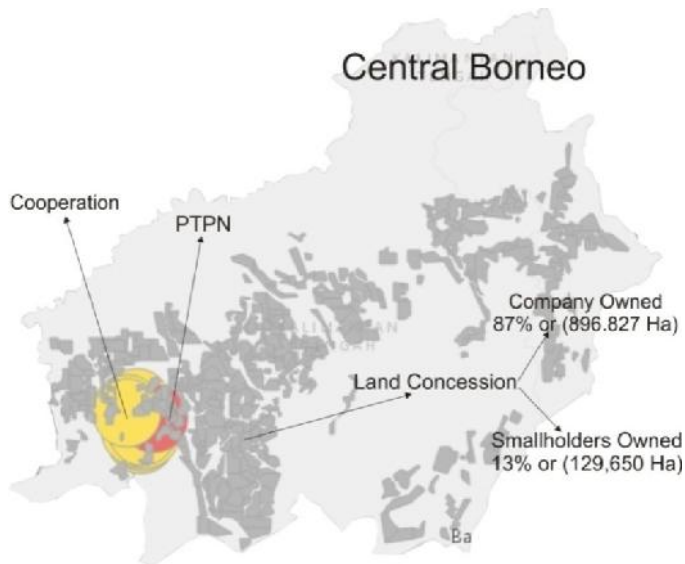

Source: CIFOR, 2015

Lot of peoples are enter in the dynamics of palm oil, whether as investors, workers, smallholders and former landholders (World Growth, 2011). The increasing numbers of smallholders and companies extent to increase palm oil plantation area. There has been booming of plantation in 2010 with dominated by big scale company rather than smallholders in Central Borneo, many of farmers would like to plant of palm oil plantation, but they

need access to the roads, mills, high quality planting materials, capital or credit, and land, its caused lot of people becomes workers in the company rather than individual smallholders in Central Borneo. Based on data shows that the increasing numbers of companies in Central Borneo significantly during 2008 to 2013 with 87% palm oil plantation which owned by company, the smallholders only 13% of palm oil plantation which owned by independent smallholders. As comparison to others region such as North Sumatra and Riau, palm oil plantation in North Sumatra with dominated by big company scale with 66% owned by company and 34% with owned by independent smallholders. Palm oil plantation in Riau Province as comparison to Central Borneo has differences of the increasing number of palm oil plantation with dominated by independent smallholders with 60% rather than owned by company only 40% of palm oil plantation or around 70%-80% of the concession of land managed by smallholders during last ten years in Riau Province. The increasing numbers of company in Central Borneo could not avoid from land conflicts are the most prominent issues raised in Central Borneo. The cause of the increasing numbers of palm oil plantation which dominated by company is the government has commitment to increase economic growth by giving the permits for palm oil plantation in Central Borneo, and the area was under big scale company plantation which run by the government or private cooperation. Central Borneo was the main region of expansion with dominated by company plantation.

MAPPING AGRARIAN CONFLICT BETWEEN COMMUNITY AND COMPANY

Sources: Based on Analysis and WWF (World Watch Forest), 2015

Land concession in Central Borneo are planned for palm oil plantation and the most concession conducted by the big scale companies, social conflict, including land rights and resources conflict is often associated with palm oil plantation expansion. Palm oil expansion is often over customary land and community land which lead to the conflicts. The larger of land expansion is company rather than the smallholders. Smallholders who retain control of their own land also retain control over their lives and livelihoods (Murray li in CIFOR, 2015).

The growing of companies/cooperation roles in all sector in the society show that shifting the role of the state. The involvement in agrarian conflict and natural resources, the

company becomes the most actors in the agrarian conflict. From the description of the parties involved in agrarian conflicts and natural resources above, the company becomes the party most often the actors the conflict.

Conflicts over natural resources and agrarian in general caused by two things, *First*, the inequality of land tenure (overlapping of land tenure), Countries and corporations that have control over the land that is dominant rather than the control of society in rural areas who lives in under poverty line.

CONFLICT RESOLUTION

The conflict resolution mechanism has been established through Governor's Decision No. 188.44/108/2012 concerning a mechanism to prevent, handle and resolve conflicts related to plantation businesses. Land conflicts and causes have been identified (Earth Innovation Institute, 2015). Based on Central Borneo Governor Decree No. 188.44 / 335/2010 about the teams Formation to Prevent, Control, Management and Business Interruption for Plantation in Central Borneo province.

Dispute resolution mechanisms developed by the Regional Government, both the Provincial Government and District Government (in this case is the Kapuas district), (Zakaria, etc al, within Kemitraan Partnership, 2015) dispute settlement mechanisms of agencies, Such as the Department of Plantations, and the Dispute

Settlement Mechanism by regional office of national land agency (BPN).

Governor regulates the indigenous land and community's rights on land and provincial level regulation on sustainable palm oil as follow: *first*, the rights of local communities, especially for customary or traditional land claims. *Second*, Responsibility of the company to comprehend the indigenous land claims and invests in job creation locally, supports for small farmers, and builds diverse local economy.

There are several technical issues currently preventing the recognition of rural land tenure are:

Clear evidence, such as a map, will be required to obtain formal recognition of land. With the competing claims over land, formal evidence is preferred by judges when the contested land claim is filed in the court. The National Land Agency (2012) reported that more than 80 percent of the land claims of rural people in Central Borneo have not been delineated and demarcated. Moreover, the regulations and programs to certify land are only carried out by the National Land Agency and some donors. Since the regulations and programs are aimed to cover nationally. Local people often are not aware of the opportunity which provided by the regulations such as the agrarian Law and Governor Regulation No. 13/2009, for example, local residents in Supang and Tanggiran villages (Kapas District) and Tumbang Koling village (Kotawaringin Timur District) do not realize that they can claim their individual rights.

Developing a map of traditional or customary land tenure, however, its challenging, the boundaries of customary claims between individuals or groups are usually marked by natural features such as a stone, tress, a river or certain plants. As communities are no longer ethnically homogeneous, the natural boundaries are no longer effective. The consultant company that won the bid for executing the national program on land certification does not understand the complexities of land tenure claims in Central Borneo.

The research institutes such as the Centre for International Forestry Research (CIFOR) have used community mapping techniques to document and facilitate local conflict resolution mechanisms. The CIFOR primarily became involved in this initiative because it sought to document local conflict resolution mechanisms and to involve the local community in the regional land-use planning process.

CONCLUSION

The increasing of agrarian conflicts between community and company that occurred in Central Borneo, it's caused by several sectors, forestry conflicts, Plantation conflict and Mining Conflicts, with 87% palm oil plantation owned by company, and smallholders only 13% of palm oil plantation owned by independent smallholders. The agrarian conflict in Central Borneo is caused by inequality of ownership (overlapping of ownership), spatial planning of forestry area and inequality of agrarian resources

management. The agrarian conflict that occurred in Central Borneo is one of expansion result of palm oil plantation.

The expansion of palm oil plantation even in peat lands area is conduct with large scale company and tends to be out of control by the government. There has been booming of plantation in 2010 with dominated by big scale company rather than smallholders in Central Borneo. The implementation of REED+ in Central Borneo has different implication of palm oil plantation particularly forest area and mainly as critical factor in Central Borneo Province.

Furthermore, the government of Central Borneo Province roles in order to held the conflict resolution between community and company, The procedure for land settlement and post conflict resolution are, *first*, Extension of management area between community and company, Accelerate the conflict settlement process and prevent the rise of new conflicts, *Second*, Improved land use practices and legal framework and practices of spatial planning and forest arrangements, *Third*, Improved transparency and regulatory changes, *Forth*, conflict resolution through the courts and mediation and *Five*, Community involvement in the decision making process through Musrenbang and socialization forum.

Review public policies on flood management in Thailand during 1942-2012

Nipapan Jensantikul
Chokchai Suttawet

Nakhon Pathom Rajabhat University
Mahidol University

Abstract

The objective of this article is to review the public policies of flood management in Thailand from 1942 to 2012. This study is a qualitative study comprising a literature review and content analysis. The results of the study showed that public policies before 2011 emphasized economic and structural development, employment, safety, security and air defenses. There was no specific government authority directly in charge of disaster management. In 2011, public policies were set up for water management at the country level. Surface water and groundwater were efficiently managed and controlled with sufficient water provided to the public. All 25 water sources were efficiently managed under the concept of 2P2R. After 2011, public policies focused on water management at the country level with the concept of 2P2R (Prevention / Preparation / Response / Recovery). There was a specific government authority directly in charge of flood prevention and mitigation. All relevant authorities should exchange information.

Key Words: public policies, flood management, Thailand

Introduction

Disaster refers to an event that occurs naturally in an area, causing loss of life and property, affecting the environment and people's ways of life, causing an imbalance in the ecological system. It is an unusual condition in the environment caused by natural or manmade changes that can cause damage and negative effects upon the environment and people's health. Disasters may occur rapidly and cause sudden damage or it may take some time before their full effect is really felt and this may cause long term damage, depending on the nature of the disaster (Suwan, 2005: 615-631). Whichever the case, a disaster can lead to a state of emergency.

In the case of Thailand, there have been many severe natural disasters, especially floods, resulting in the loss of several billion USD (Learning Information System of Flood, 2012).

In 2011, Thailand suffered its worst floods in more than half a century. Caused by excessive and continuous rainfall from successive, powerful monsoons and subsequent, numerous dam breaches, the floods inundated more than six million hectares of land in 66 of the country's 77 provinces, and affected more than 13 million people from July through December 2011 (The World Bank, 2012: i).

Concerning disaster management in Thailand, there are still some problems about the data system, alarm system and responses to disasters as can be evidenced by the tsunami in six provinces in the south. The coordination of work between central government, provincial and local authorities is weak. Additionally, there are some other problems such as lack of knowledge and experience in rescuing people affected by the disaster, and the lack of prompt and accurate risk analysis. This results in misinterpretation as to the risks of disaster, causing slow response and

inappropriate management (Kamolvej, 2009: 343). Therefore, the authority in charge needs to work closely with not only other government authorities but also the private sector and communities. Since the affected areas of disaster are getting larger, there needs to be more authorities working on this issue in order to respond in a timely manner and to efficiently manage the disaster (Kamolvej, 2009: 358; Raungratanaamporn *et al.*, 2014: 658).

According to the above-mentioned problems, a study on the development and trends in flood management in Thailand needs to be conducted in order to identify the ways the disaster has been managed from 1942 to 2012 according to the public policies related to this issue. Flood management in Thailand is reviewed and analyzed in order to find appropriate policy for disaster management.

Objectives of the Study and Methodology

The objective of this article is to review the public policies of flood management in Thailand from 1942 to 2012.

This study is a qualitative study reviewing the related literature and context review, which consists of historical documents, laws, proclamations, acts, rules and regulations related to public policies and management in response to natural disasters focusing on floods from 1942 to 2012.

The data were then interpreted and categorized into the following three periods as related to flooding incidents: before 2011, floods in 2011 and floods after 2011. The reason for selecting the floods in 2011 was used as the criteria to determine the period of this study, due to the massive flooding that affected much of the country's economy and society and the impact of the change in the nature of management in order

to understand the relationship among the public policies, stakeholders and policy environment (Dunn, 1994: 70-71).

The study was analyzed using content analysis. The data were divided into different types, organized, defined and the components classified to find relationships among them. The content analysis was done in five stages: data processing, data presentation, summary, interpretation and data checking (Podhisita, 2011: 337), using triangular check.

Government Policy

The government policy collected and synthesized by the researcher from related research and document from Disaster Prevention and Mitigation Department, Ministry of Mineral resources, Thai Meteorological Department, Land Development Department, Department of Water Resources, Royal Irrigation Department and Department of Public Works and Town & Country Planning, which summarized as follows:

From 1980 to 1991, the soldiers were key persons in educating the public about disaster prevention. In 1997, PM Chuan Leekpai and the government announced in the Official Announcement: No. 2 Security Policy Section 2.4: To promote and support all knowledge and skill of the army special of engineering, science and technology, medical, nurse and discipline to develop and join of solving and economic plan and to produce the shortage positions for public health, the discipline in social, relieve public disaster in life and property, treatment resource, problem solving environment and coordination of private in other problems mentioned in the collaboration between government and private sector.

In 1996, there was a campaign to educate the public about disaster prevention, with support from the military in evacuation and

disaster mitigation. Department of Public Works and Town & Country Planning was assigned to be in charge of flood prevention in cities.

In 1997, the government of PM Chuan Leekpai supported the military development in the areas of engineering, sciences and technology, medicines, nursing so that it could play an important role in social and economic development. There was cooperation among public and private sectors in the areas of public health care, social security, safety, disaster mitigation, natural resources reservation, environmental protection, etc.

Based on the Cabinet Resolution dated February 29, 2000, the Department of Public Works and Town & Country Planning under the Ministry of Interior was assigned to build up constructions to prevent floods in 9 areas under the ten-year-plan, and to survey and design flood prevention system in the cities in 88 areas of 49 provinces under the five-year-plan.

Based on the Cabinet Resolution dated June 24, 2003, the Department of Public Works and Town & Country Planning was assigned to evaluate the implementation of flood prevention plans and to design the construction of flood prevention system in city areas of Samut Sakhon Province.

In 2004, the concept of community-based disaster risk management was implemented. Under this concept, several new projects were introduced such as "Mr. Warning" and "One Tambon One Search and Rescue Team (OTOS)"

In 2005, PM Pol. Lt. Col Thaksin Shinawatra government announced the policy No. 4 to manage natural resource and environment that the government would protect water resources from upstream to downstream, to support the community in the construction of the dike called maew (name of a hill tribe) dike to

delay flood water based on the King's projects which had main objectives to allow all people to fully make use of the biodiversity.

The government would invest in the sustainable water resource development from upstream, midstream to downstream so that people in every area can make use of it. The government shall also restore soil by stopping villagers from burning rice fields as it destroyed fertility of the soil. Chemicals use should be decreased or stopped. Faek (a special kind of grass) should be planted to cover the surface of the soil. Warning system should be well developed to reduce damages caused by disasters such as floods, droughts, earthquake and changes in atmosphere. Since then, the successive governments have followed this plan to prevent and reduce damages from disasters.

In 2008, PM Samak Sundaravej developed the natural disaster warning information such as flood, drought, tsunami and climate change and continued reduce the effect of people's suffer from disaster.

This point of view, the former government expedited the economics structure development plan to accelerate more than others but seldom disaster happen then private sectors, people and others were less interested in natural disaster. Sooner the climate and the world morphology changed made more problems of natural disaster as a few incident become more difficult to access sizable lost and damages only the first figure from former government stressed the responsible to the army role, then in 2007, defined the main responsible of Disaster Prevention and Mitigation Department and considered other private sectors came to join this role in 1997 of coordination with the government that reflexing involvement of each level and work styles that changed from only

government management into the cooperation between private sectors and government.

In 2011, based on the policies related to land management, environmental protection and natural resource management, the integrated water management system was used for efficient water management of the underground water and surface water in the 25 water basins of Thailand (based on the concept of 2P2R).

Based on the Prime Minister Office's order No. 193/2011, the Flood Relief Operations Center was established to be head office for disaster mitigation including evacuation, warning, providing foods and necessities to those affected by floods, watch climate changes, inform the public and manage all related works.

Based on the Prime Minister's order No. 17/2011, there were guidelines for problem solving in the areas seriously affected by the disaster (based on Section 31 of the Disaster Prevention and Mitigation Act 2007).

Based on the Prime Minister's order No. 20/2011, Royal Irrigation Department released water from eastern part of Rapeepat Canal to the Gulf of Thailand. Ridges of the following canals were raised so that they can contain more water: western part of Rapeepat Canal, Rangsit Prayoonsak Canal and lower part of Hok Wa Canal. After the crops had been harvested, Northern and Southern areas of Rangsit field were used to slow down the flow. 37 flow thrusters were equipped in Nakhonchaisri District, Nakhon Pathom Province and 14 flow thrusters were equipped in the irrigation areas of Samut Sakhon.

Based on the Prime Minister Office's order No. 253/2011, the Strategic Committee for Water Resources Management (SCWRM) was set up, according to Prime Minister Office's Regulation on Strategic Committee for Water Resources Management 2011.

In 2012, PM Yingluck Shinawatra assigned the Department of Public Works and Town & Country Planning to build ridges along southern part of Rangsit Prayoosak Canal, from Chulalongkorn Gate to Pak Klong Banmai Gate near Chao Phraya River) Royal Thai Government, n.d; Ministry of Industry, 2007; Rakkwamsuk and Worawattanasakul,2012: 5; Jentsantikul & Suttawet, 2014: 103).

When considering Thailand's contexts and theories that are related to politics and administration, Sementelli (2007: 499) explained regarding 4 theories that are related to disaster management, which are: theory of decision, theory of administration, economic theory and sociological theory. Such theories demonstrate that, in emergency situations, limitations in terms of decision due to incomplete information, lack of ability to anticipate and impossibility to comprehend every approach of practice as well as the democratic form of governance with representatives may cause politicians who are voted to become the representatives of such areas to have conflicts of interest) Simon 1976 cited in Bowornwattana 1998: 113(. The major elements of the formation of conflicts of interest are: (1(the fact that government officials have personal interests; (2(the official duties and responsibilities according to government positions or public positions for the practices which correspond to professional standards or standard of conducts that must be neutral; and (3) the intervention of forethought (Wannathepsakun, 2012: 121). Such reasons cause politics and administration to become inseparable, which leads to conflicts of interest (Wilson 1973 cited in Bowornwattana, 1998: 16-17). Thus, to reduce such problem, the administrative concepts should be separated from politics. Intervention must be lessened for efficient administration. At the same

time, the allocation of limited resources must be done thoroughly and fairly to reduce conflicts and distribution problems among victims. However, the sociological theory is the one that enables us to see the important things which are acquired from the learning of the past and which could lead to the improvement of policies and working processes that are increasingly uncertain. Working without enough understanding causes the management of situations to be inefficient (Williams, 2008: 1115-1117).

Result of the Study

The results were also divided according to the following periods:

1. Public policies before 2011

Geographically, Thailand is divided into six parts. The northern part consists of high mountains and plateaus. The northeastern part covers 170,000 square kilometers (one-third of the whole country). Most areas of the central region comprise lowlands with rich soil, while most of the eastern region is connected to the sea, with mountains and small hills. The west comprises ranges and plains along the valleys. Both sides of the southern part are next to the sea, with the Gulf of Thailand in the east and the Andaman Sea in the west (Chaiprajong, 2005: 16-17).

From the past to the present, there has been no master plan for the management of water resources. No primary agency is directly responsible. For example, economic and social development in the last five years (2006-2011) has shown that the country has no specific water management policy, but rather economic policies and those relating to the land, natural resources and the environment. Policy implementation is not as successful as it should be and water issues cannot be entirely solved. Meanwhile, research studies from the past to the present have not

resolved the issue of water management in an efficient way. Because most research has focused on the quantitative management of water resources (such as the allocation of water to various aspects of human need), water resources have not been fully integrated in operation from all sectors of society. As a result, water resources (surface water, ground water, and sea) in most parts of the country are in decline or are likely to decline. If this problem is not dealt with in a systematic correction, it may affect the consumers of the country in the near future. (Aquatic Ecology and Mathematical Modeling Center, Sea Water Section, 2012: 2) A disaster situation happens in Thailand and creates loss of life and property of citizens. Seven years ago (2002 - 2007) the possibility of flooding in Thailand was found to be likelier, with the problem occurring more regularly (National Committee of Disaster Prevention and Mitigation 2009: 2) despite the efforts of all agencies in fixing the problem, the management continued to focus on specific problems. Through the lack of care in the community concerning the upstream and downstream impact (Supharatid, n.d: 4), the management of current disasters has defined management framework.

Laws related to disaster management included the Civil Law on Disaster Prevention Act 1979, which focused on the duties of civil society on disaster prevention. The main content of this Act focused on the hierarchy of the authority so the disaster was managed in the same direction. This kind of management was applicable at that time as the disaster was not complicated and could be controlled by one public authority (Singhasem, 2011: 178-179).

In this period the government was the most reliable actor to educate people followed Strategic National Action Plan on Disaster Risk

reduction and traditional approach) McEntire 2007; Raungratanaamporn *et al*, 2014: 658).

Flood management by the government was not proactive. Since most disasters did not affect large areas, the responses from the government mostly concerned rehabilitation. Moreover, most disasters occurring before 2002 were natural disasters such as floods, landslides, and mudslides. At that time, the Royal Irrigation Department was the sole government authority in charge of disaster management. However, there were changes after government reform in 2002. The roles and duties of the departments in charge of water management were not integrated. Hence, water management was not done in an integrated, cooperative way. In addition, before 2007, there were many laws related to water management (Tingsanchali *et al*, 2003).

2. Public policies in 2011

During the year 2011, public policies were set up for water management at the country level. Surface water and groundwater were efficiently managed and controlled with sufficient water provided to the public. All 25 water sources were efficiently managed under the concept of 2P2R. In this year, there was a large flood which affected many parts of Bangkok and many provinces. After the flood, several factors were analyzed: the laws, the nature of the disaster, and the policies and disaster management of the public sector. Concerning the nature of the disaster, in that year there were five tropical cyclones which affected large areas. In terms of the law, there was the Disaster Prevention and Mitigation Act 2007. According to this act, the Department of Disaster Prevention and Mitigation is the main government authority directly in charge of disaster management in Thailand. The missions of the department include: setting up policies and

guidelines on disaster management and, with cooperation of related authorities, setting up a five-year master plan for disaster prevention and mitigation, and the evacuation and rehabilitation of those affected by floods, windstorms and mudslides. This five-year master plan shall be used as guidelines for flood management. According to this plan, the Department of Disaster Prevention and Mitigation is the main authority in charge of the activities and cooperation, and to set up the action plan and budget for 2010-2014 under the master plan so that all relevant authorities can follow (Singhasem, 2011: 178-179).

The ways the government managed the disaster in 2011 were not completely in accordance with the Disaster Prevention and Mitigation Act 2007 (Wungaeo, 2012). As a result, disaster management was slow and not done in a timely manner. Moreover, the authorities working on this issue did not follow the same direction, causing confusion and problems such as conflicts among individuals, and conflicts between central government and Members of Parliament (MP) in the provinces. Disaster management was done separately. Good decisions were almost impossible due to unclear communication and unreliable information. Another problem was that there was no public awareness on the issue. Moreover, the Department of Disaster Prevention and Mitigation was in charge of all 14 types of disaster while there was neither enough manpower nor resources.

Example situation in 2011

Kabir et al. (2011) explained this action of government to response the flood in 2011 as follows:

1) The Government also set up a National Committee to prepare a comprehensive

strategy for the country's rehabilitation to make Thailand better, safer and stronger.

2) The strategy is separated into three parallel phases, namely, the 3R's – Rescue, Restore and Rebuild. Immediate relief and rescue efforts include receiving donations, distributing relief assistance, providing medical care and temporary shelters and dispatching support personnel to the fields.

3) RTG also launched a financial package of THB 325 billion (USD10.3 billion) to assist people and business sectors affected by the floods.

In addition, Plans also put in place to provide skills training and financial support for the estimated 660,000 workers who were not be able to resume work as workplaces have been halted.

Shortly after the water receded, the Government started assessing damages and processing compensation under the THB 5,000 scheme for majority of the Government.

In addition, Panitchpakdi (2013: 5) summarized the key actors from government as follows:

1) Disaster Response and Mitigation Department, Ministry of Interior

2) Royal Irrigation Department, Ministry of Agriculture and Cooperatives

3) Ministry of Social Development and Human Security

4) Meteorological Department, Ministry of Information and Communications Technology

5) Military units (Army, Navy)

6) Special committees at the Office of the Prime Minister Level for major disasters

7) Ministry of Foreign Affairs

3. Public policies after 2011

The policies after 2011 focused on water management at the country level. Surface water

and groundwater were efficiently managed and controlled with sufficient provision of water to the public. All 25 water sources were efficiently managed under the concept of 2P2R (Prevention / Preparation / Response / Recovery). Upstream, midstream and downstream water sources were also efficiently managed.

After 2011, there was a specific government authority directly in charge of flood prevention and mitigation. All relevant authorities should exchange information. The Office of The National Water and Flood Management Policy is now in charge of information sharing with the Hydro and Agro Informatics Institute in order to utilize the information for making proper decisions regarding flood management and disseminating the information to the relevant authorities and to the public. The response to the disaster focuses on the preparedness and prevention. However, during the three above-mentioned periods, disaster management came from central authority as a single command.

Central government should play a key role in making strategic plan on flood management and set up guidelines for the stakeholders to follow. Even with political changes, flood management should be done continuously. Moreover, flood management should be done with consideration on the different characteristics of the communities. Some communities are located in the areas that are affected by rain while some are located in the areas affected by high tides. Therefore, the floods in different areas need different management strategies. The provinces and districts are key mechanisms in local administration on flood management. They are coordinators of central government and local authorities i.e. Provincial Administrative Organizations (PAO), Tambon Administration Organizations (TAO), Pattaya City Administration

and Bangkok Municipality Administration. The local authorities should have information about their own communities especially in the areas at risk of floods. Some areas in the communities have been changed, resulting in more challenges in flood management.

For example, some areas that used to be floodways were changed to be industrial areas, while some areas were changed to be houses or business areas. Some constructions in these areas blocked floodways, causing serious floods which are more difficult to manage. Private sectors also play an important role in flood management in the communities. They provide technical support, budget and other kinds of resources. The cooperation between private sectors and local authorities is necessary especially in emergency because the support from central government may not be provided in a timely manner due to bureaucratic ways of work.

During the 19th ASEAN Summit, there was the signing of an agreement to launch the ASEAN Coordinating Centre for Humanitarian Assistance: AHA Center in Jakarta, Indonesia to coordinate help among ASEAN member countries and assistance from outside the region in the case of disasters. Moreover, Thailand initiated the issuing of the statement of the ASEAN Leaders' Statement on Cooperation in Flood Prevention, Mitigation, Relief, Recovery and Rehabilitation. It was the first time that ASEAN clearly determined cooperation in terms of water management as well as reconstruction and restoration after disasters.

In addition, ASEAN gained cooperation from APG, a civil society organization which is the co-working group of seven international non-governmental organizations with the main objective to strengthen the work mechanisms between civil society and ASEAN for the development of countries in this region in various

aspects)ASEAN Department 2012: 023(. When considering the assistance at international level, it was discovered that, in 2011, countries worldwide offered help mainly in the stage of response and restoration.

Summary

The evolution of the public policies on flood management in Thailand can be summarized as follows: in 1942-2010, flood management by the government was not proactive. The management focused on rehabilitation after the floods. In 2011, due to the large flood, the government policies concerning flood management were changed to be more proactive. Disaster preparedness and prevention were given higher priorities. Hierarchy work was identified as a weak point of flood management according to the Disaster Prevention and Mitigation Act 2007. However, after the floods in 2011, a disaster management network was set up in several areas, with the cooperation of organizations/agencies from the government and private sectors and civil society at the international, national, provincial and local level. There was higher public awareness and cooperation from civil society and academic institutes. In 2011-2012, public policies and management were changed based on the lessons learned from the floods in 2011. A database on floods was developed and improved. The Office of the National Water and Flood Management Policy and Hydro and Agro Informatics Institute are the main authorities in charge of information gathering and information exchange among relevant authorities. They are also in charge of disseminating information to the public. In conclusion, since 2011, the flood management process has become more systematic, with the cooperation of the relevant authorities at all levels.

Discussion

1. Public policies before 2011

Public policies before 2011 emphasized economic and structural development, employment, safety, security and air defenses. There was no specific government authority directly in charge of disaster management. At that time, disaster management was not implemented proactively. The disasters occurring in this period were not serious and did not affect large areas. The result of the study is in accordance with "An Integrated Approach to Natural Disaster Management Public Project Management and its Critical Success Factors" by Moe & Pathranarakul)2006: 396, 410(which found that there were no master plans on disaster management in Thailand, no proactive activities (disaster forecasts, alarm systems), no specific authority in charge, a slow decision making process from the central government, unclear administration lines, slow response to disaster, slow mitigation process, transportation problems, no cooperation among relevant authorities/organizations at different levels, no participation from local authorities and non-international government (Kamolvej 2009; Wungaeo 2012).

2. Public policies in 2011

As regards public policies in 2011, there were clear public policies on flood management. Surface water and groundwater were efficiently managed. However, the government did not follow flood management in accordance with the Disaster Prevention and Mitigation Act 2007. As a result, disaster management was slow and confusing, and the authorities working on this issue did not follow the same direction. This is in accordance with the "Study on the Administration of Disaster Prevention and Mitigation Network: Case Study of Bangkok" by Anantanakorn (2005).

The study revealed that, in the case of disaster, the private sector and civil society usually reach the affected areas before the government sector. However, there were several problems in their work such as the conflicts among different organizations, low standards of work and exploitation of the victims. To solve these problems, the government should monitor the disaster management of civil society and set up guidelines and standards for them to follow. Another study on the “Social Network Cooperation in Flood Prevention in the Lower Ping River Basin” by Phromlert (2005) also revealed that there was a gap in work among the government and private sector and civil society, and also a gap in the work between district administration and municipal administration (Wungaeo, 2012).

3. Public policies after 2011

In this period, public policies on flood management continued to focus on the management of surface water and groundwater. After 2011, a specific government authority was made directly in charge of disaster prevention and mitigation. All relevant authorities were required to share information. The communities affected by the floods are also expected to participate more in flood management. “The Role of Community in Disaster Response: Conceptual Models” by Patterson et al. (2010: 127) also revealed that the role of the community is important in the whole process of disaster management starting from preparedness to response to rehabilitation. Relevant organizations should share common beliefs and goals in setting up the direction of the disaster management (Sabatier, 1988: 141; Dempwolf and Lyles, 2012; Reid and Smith, 2009; Macdonald, 2012; Wasserman and Faust, 1994).

Suggestions

1. In the process of policy setting, there should be participation among all stakeholders as it is necessary to get input from the people in the communities such as a community map, the areas that are usually affected by floods, the population and population density in the community, information about city plans, and management of irrigation dams, etc. These kinds of information are useful for policy setting and the decision making process for disaster prevention and mitigation and for the cooperation of all stakeholders at the international, national, provincial and local levels.

2. There should be a mechanism to raise public awareness on safety such as providing a handbook that explains the risks and severity of the disaster. The handbook should use simple, easy-to-understand language and should be available in various languages.

3. Good relationships among stakeholders should be promoted at the international, national, provincial and local levels so that they can build trust and follow the same directions in disaster management. This shall be acquired through drills and practices according to the plans because, through drills and practices, we can identify the weak points of the plans and challenges in implementation.

Abstract

Welfare is a right that should be enjoyed by every citizen or every local community. Polewali Mandar an area has a variety of potential resources can be managed and used sustainably to support the improvement of people's welfare. Therefore, this research article aims to analyze and explain snapshot views from the public welfare indicators of the Human Development Index (HDI). The method used is descriptive-developmental ex post Facto. Secondary data obtained through documents, both from the Central Bureau of Statistics (BPS), Regional Development Planning Board (BAPPEDA), and the regional work units (SKPD) Polewali Mandar, as well as scientific publications. Data was analyzed by descriptive quantitative-qualitative. The result of the analysis is based Human Development Index (HDI) public welfare in Polewali Mandar showed an increase on three areas of development are analyzed. In the field of education seen their equity and expanding access to education; improving the quality, relevance and competitiveness of education; and strengthening governance, accountability, and public image of education. In the health sector there is an increasing level of health seen from the aspect of mortality, morbidity and nutritional status of the community. Similarly, in the economic field to create a decent life viewed from the contribution of public purchasing power is reflected in the GDP, and contributions every year tends to increase, in terms of the basic sectors, namely trade, hotels and restaurants, electricity, gas and water utilities, as well as agriculture.

Keywords: Welfare Society, Human Development Index.

INTRODUCTION

Welfare is a right that should be enjoyed by every citizen or every local community, state or nation. Therefore, the State has an obligation to promote, provide, or provide welfare to the public as governance objectives, development, empowerment, and public service. Similarly, Indonesia as an independent country, since its inception has been committed to the welfare of the people, as expressed in the Creation of the Constitution of 1945 paragraph 4 of that ... "Then instead of it to form a government of Indonesia which protect all the people of Indonesia and the entire homeland of Indonesia and to promote the general welfare, educating the nation and participate in the establishment of world order based on freedom, lasting peace and social justice".

In fact, changes in the system of government Indonesia centralized (New Order Era) to a decentralized system (Reformation Era) has so far not fully capable of prospering society.

It was marked by the high percentage of poor people or groups of people who live in substandard underprivileged. Nonetheless, the Central Bureau of Statistics (BPS) and report Haryanto (2012) states, in 2012, poverty has decreased from the previous year to 0.89 million, accounting for 12.49 percent down to 11.96 per cent of the the population of Indonesia.

Observing the data of poor people in Indonesia, it can be stated that the determinant factor for poverty not only in terms of government performance that can not afford the welfare of society, but also because there are other factors that cause this to happen. According Minarta et al. (2009: 232) that poverty is caused by the financial crisis is multi-dimensional, thus lowering the performance of the Indonesian economy. Therefore, the government seeks to tackle poverty with a variety of public policy. The impact of the policy is also apparently not able to overcome various problems that hinder the achievement of public welfare expectations. Even on the implementation of the policy, allegedly in some cases not effective because there are a number of underprivileged people who just do not get help, whereas the target for the poor.

Nonetheless, there is always optimism and step forward the government to continue working to alleviate poverty, among others, realized through program policies are formulated and implemented, such as the Direct Aid Program (BLT), or programs providing assistance consumptive to less fortunate people and program support productive, but the policy / program is apparently not been able to overcome the problem of poverty that exist. In fact, the implementation of these policies often would lead to new problems, such as the poor unfortunate, injuries, fainting, and even death at the time of the distribution BLT, because of overcrowding when the queue waiting for food rations. In other situations, there is the village chief who protested by citizens, because it is considered unfair determine the poor, so the poor people who did not get the BLT, and many other cases. That phenomenon shows how the state has not been able to function optimally for the welfare of the people.

When observed various problems faced by the people it is known that a number of indicators that can give an idea phenomenon occurs. One indicator is the economic growth of each region, as enshrined in the Gross Domestic Product, abbreviated GDP (read: Ismail, Akib and Jasruddin, 2015). GDP is a series of indicators that show the rate of growth and economic development of the region, including in Polewali Mandar West Sulawesi province.

Polewali Mandar an area has a community with the highest poverty rate in West Sulawesi. In 2008 to 2012, the poverty rate in Polewali Mandar still showed the highest rate, when compared with the level of poverty in other districts in West Sulawesi. While poverty each year has decreased, but the decrease is not significant, compared with other regions in the province of West Sulawesi, and in Indonesia (Central Bureau of Statistics, 2013). Along with the poverty phenomenon, the article results of this study to analyze and explain welfare community based on human development index (HDI) in Polewali Mandar.

LITERATURE REVIEW

Achievement levels of well-being is an orientation program every country in carrying out development. The experts, among others, Spicker (1995); Midgley, Tracy and Livermore (2000); and Thompson (2005) agree that the concept of welfare has four (4) basic meaning, namely as: 1) a good situation; 2) social services; 3) social benefits; and 4) planned process carried out by individuals, social institutions, communities and government agencies to improve the quality of life through the provision of social services and social security benefits. Based on these descriptions, Rofieq (2011: 103) states that "the welfare state" refers to a development model that is focused on improving the welfare of the community through the provision of a more important role to the state in providing social services to its citizens.

Based on the views of these experts, it is understood that the public welfare is one of the key objectives of each region, including Polewali Mandar. The level of welfare is assessed from three focus: Focus welfare and economic equality, the focus of social welfare; as well as the focus of cultural arts and sports. In this paper, the focus is the welfare

include development indicators contained in the Human Development Index (HDI). In other words, the welfare of the community based on HDI.

Human Development Index (HDI) is an ideal proxy for measuring the performance of a local government (Niswati, Mano, and Akib, 2015) in an effort to the welfare of society. The index is an overview of local government performance in three main areas, namely education, health and economic (Fadel, 2009; Law No. 25 of 2009; Dwiyanto, 2011; Risma, Mano, Akib, 2015). The performance of local governments in these three areas is none other than the performance of the public service or non-financial performance.

The Human Development Index is a picture of human development achievements are measured by progress in three areas, namely the economy, education, and health. Furthermore, HDI is measured on four components, namely longevity or life expectancy, literacy / literacy rate and the average years of schooling, as well as the purchasing power, namely the ability access the resources required to achieve the standard of living. HDI value of a country or region shows how much of a country or region has reached the target set, namely life expectancy of 85 years, education / elementary school (SD) for all levels of society (without exception), and the level of expenditure and consumption have reached decent standard of living. Therefore, the closer the HDI value of a country / region to 100, the closer or the right way to do to achieve their goals.

Education and health is part of the indicators in the Millenium Development Goals (MDGs). Millennium development goals is an ambitious agenda for reducing poverty and improving lives agreed by world leaders in order to implement the concept of sustainable development. Indonesia is one country that helped approve the millennium targets in 2015. In the health sector, the MDG goals and targets is to reduce child mortality by goals / targets reduced by two thirds the mortality rate among children, improve maternal health by reducing the target three-quarters the ratio of maternal mortality, combating HIV / AIDS, malaria and other diseases by inhibiting the target and begin to reverse the spread of HIV / AIDS. Furthermore, the economic field is the "ultimate weapon" to fix the joints of the main order of society. There are a variety of economic development strategies that have been carried out by the Indonesian government. In the reform era, the government implements economic development strategy that focusing aspect of "justice, then growth" strategy, known as "Equity to/ with Growth" (Hakim, 2003). The development concept is in line with the concept of people's economy, so that through the Law on Local Government expected the concept can be applied consistently and sustainably. Each region is expected to take the right decisions in order to increase people's ability to manage and use financial and economic resources owned, as well as trying to empower the economic activities of the people in the region.

RESEARCH METHODS

The method used is descriptive quantitative-qualitative *ex post Facto* to identify, analyze and explain the level of welfare community based on indicators of HDI in Polewali Mandar West Sulawesi province. Secondary data obtained through documents from the office of Regional Development Planning Board (Bappeda) and the regional work units (SKPD) Polewali Mandar, the Central Bureau of Statistics (BPS), and from documents provided by the informant / respondent (individuals representing the regional work units), including the data and information obtained from scientific publications or research reports on services / agencies, as well as from other sources of official and reliable. Data was analyzed by descriptive qualitative-quantitative (See the research report Akib et al., 2009a).

ANALYSIS RESULTS AND DISCUSSION

The article describes the results of this study snapshot views from the public welfare indicators of the Human Development Index (HDI). The assumption is that HDI is an ideal proxy for measuring the performance of local governments, including in Polewali Mandar West Sulawesi province. Similarly, it is assumed that the HDI is an indicator of the welfare of society. Therefore, the welfare of the community-based HDI analyzed in Polewali Mandar

include education, health, and economic (decent living). The results are presented systematically as follows.

Education. Education is one of the indicators of the HDI are very instrumental in improving the quality of human resources (HR) in Polewali Mandar. The indicators in the education sector is the average length of the school and the literacy rate. The status of education in Polewali Mandar, according to BPS 2014 is still relatively low. Furthermore, judging from the average length of the school both in the national and provincial level is still relatively low. Similarly, the average length of school in Polewali Mandar showed improvement, although still lower than the national average, namely by a margin of 0.79 point, likewise when compared with the achievements of the district in West Sulawesi.

The adult literacy rate has increased significantly, which is an indicator that describes the number of population aged 15 years and over who can read and write and understand simple sentences in everyday life. At the county level, the highest literacy rate is Majene, whereas the lowest was Polewali Mandar. The low average length of school and the literacy rate related to the educational facilities available (BPS of Polewali Mandar, 2014). Therefore, it will be analyzed indicators of education based on the three pillars of education development policies, namely: 1) equity and expand access to education, 2) improving the quality, relevance and competitiveness of education, and 3) strengthening governance, accountability, and public image of education.

Gross Enrolment Ratio (GER) who has contributed most is the level of Primary Schools / Madrasah Ibtidayah (SD / MI), with the achievements of 125.20 percent. Thus, SD / MI has a better performance when compared with the Junir High School or Madrasah Tsanawiah (SMP / MTs), because Polewali Mandar number of children attending primary at most compared to other school levels. While, APK / APM SMP / MTs is the smallest that is 97.87 per cent, while the level of Seniir High School or Madrasah Aliah (SMA / MA) has the highest contribution compared with other levels. The number of continuing study rates (AM) Junior and sehir high school as a result of public awareness of the importance of education for the future of their children. In addition, there are also students who continue their education beyond Polewali Mandar.

To be able to see the quality of education used some measures, namely: 1) the percentage of decent teacher (% GL) views of human resource education, 2) infrastructure owned. The percentage of good classrooms (RKB%) and the percentage of libraries (% Perpus) that support teaching and learning. Ideally, %GL, RKB% and %Perpus is 100 percent, meaning that all schools have good classrooms and has a library. Conditions are getting close to 100 means the better.

The quality of education can also be viewed and internal students themselves, the number of graduates (AL), the repetition rate (AU), and dropout rates (AL). Just as %GL and infrastructure, then ideally AL is 100 percent, meaning all students pass the highest level of all, and the closer to 100 percent better. Instead, the AU and the APS ideally is 0 percent, meaning there is no repeat of students and dropouts.

GL Score was highest in high school level is 94.27 percent. While the conditions at the primary level is very small due to the increasing diploma teachers from Diploma-II degree. In the framework of compulsory education nine years hence %RKB at the lowest level is 63.35 percent of elementary school, junior high school next to the achievement of the lowest 81.48, while the highest are at the greatest level of SM (94.27 percent). To that end, the priority initiatives should be done at the elementary level for the program compulsory 9 year basic education can be achieved.

In order to improve quality at the primary level, provide library. Data show that the SD had a library of 46.91 percent. Seen that libraries in Polewali Mandar still minimal. It is based on existing data that Level SMA library is only 42.37 percent ownership. Conditions at the junior level slightly larger than the SMA level, namely 45.45 percent.

Figures graduates (AL), the largest occurred in BC level is 53.35 percent and the smallest at the junior level is 27.57 per cent. The same thing for the AU level SM is the largest (0.58 percent), while AU primary level is 4.93 percent. AU magnitude elementary level is due to the importance of students still in school to learn to read and write, so there

will be literate. Conversely, for the junior high level APS showed the greatest value (0.21 percent) compared to the SMA level of 0.08 percent.

Efficiency. To view the internal efficiency of education, the coefficient of efficiency (KE), "last number" (AB), the average length of study (RLB), and the input of graduates (TML). Ideally, to KE and AB is 100 percent, meaning there are no students who repeat and drop out of school, so the cohort of 1,000 students will take place graduates of 1000. Thus, when the KE and AD perilously close to a value of 100, then the condition of school more efficient. RLB and TML should the primary level is 6 years for elementary level has six levels and when the level rises every year within six years of primary school student will graduate. For Junior and senior high school (SMP/SMA), RLB and ideal TML is 3 years, since junior and SMA has 3 levels. Thus, when the RLB and TML closer to 6 or 3 years, then the condition of school more efficient.

There are 4 types of indicators of internal efficiency of education. Internal efficiency can only be applied to schools that have a system level, ie elementary, middle and SM. For KE, the elementary level (93.20 percent) were the most efficient, because it has a value close to 100 percent. For SMP and SMA respectively, ie 80.17 percent and 86.28 percent. Although the value of KE level of SMA and SMP smallest, but it turns AB elementary level is no different from other education higher, ie 9.95 percent respectively (elementary level), 7.71 percent (junior level), and 6, 02 percent (level SMA). This means there is no difference in the students hang on the three levels of education.

To RLB primary level there is no significant difference between the three levels of education, namely respectively 6.10 (elementary level), 3.03 (junior level) and 3.02 (senior level). RLB elementary level exceeds 6 years (6.10 years) for students graduating is not timely due to the students who repeat, so there are some students who graduate within 6 years, 7 years old and 8 years old, as well as at the level of SMA and SMP. Thus, there is no difference in the efficiency level between junior/SMP and SMA. To TML primary level was also no significant difference between the three levels of education, namely respectively 6.23 (elementary level), 3.13 (junior level) and 3.12 (senior level).

The third success of the education indicators used to assess the development of education programs. While the equalization indicators used to assess the distribution of education that can be achieved. Quality indicators used to assess the quality of education achieved and the efficiency indicators used to assess the internal efficiency of education. Thus, to produce education with equity, quality and efficiency, each indicator are given different weights, as adapted to the measurement of the most important or the most influence.

Equitable educational value is the sum of five (5) indicators equalization after being given due weight. The value of quality education is the summation of four (4) quality indicators (% GL, RKB%, % Perpus, and AL) by two (2) indicators AU and APS, since both indicators are considered negative or reducing the quality of after being given due weight. Efficient educational value is the sum of four (4) internal efficiency indicators after being given due weight. Each type of indicator is determined to have a degree or the same interests, so it can be summed into one value. Thus, the value of the success of the education program is the total value of equity, quality, and efficiency, then divided by three (3). Except for the kindergarten level because it can not be calculated efficiency indicators, the value of education program's success is the sum of the value of equity and quality, then divided by two (2). The maximum value for each indicator and the success of the development program of education is 100, except in certain cases can occur more than 100.

Indicators of education more equitable, more quality, and more efficient can be seen from the value of the sum of the four levels of education, where education is more evenly exist at primary school level is indicated by the highest value, ie 101.34. Conditions equalization at the junior level better than the SMA level is 91.71. Qualification to the most excellent is the level of SMA with the value 66.92 and still under 100. It is also reasonable for the level of SMA better location, area of the city, within easy reach, and the infrastructure is quite favorable than elementary level whose location they last which are difficult to reach.

According to the location, which is distant elementary level and sometimes difficult to reach or in remote areas, it is natural for the most elementary level inferior to the value of 50.52.

Table 2
The achievements of the value of Polewali Mandar,
Academic Year 2012-2013

NO	INDICATORS	EDUCATION			
		EQUALLY	QUALIFIED	EFFICIENT	SUCCESSFUL
1	SD + MI	101,34	50,52	79,05	76,97
2	SMP + MTs	87,97	55,15	80,37	74,50
3	SMA + MA	91,71	66,92	80,33	79,65
AVERAGE		93,67	57,53	79,92	77,04

Source: The processed data from the Department of Education, 2015.

The most favorable conditions is an efficient education and third level of education turned out to be almost everything close to the value of 100, then approached efficient. Efficiency at the junior level at 80.37, SMA levels of 80.33 and 79.05 at the elementary level. Seeing the achievement or success of a number of indicators for each level of education, it can be said that the level of performance or success SMA has the most superior (79.65) when compared to the primary level (76.97) and junior (74.50). Therefore, the performance level of SMA superior to primary and secondary education. SMA most superior level performance for region SMA rate more favorable when compared with other education purposes.

When each indicator averaged to any development strategy of education, the education of equitable highest occupied portion, namely 93.63, while the lowest quality education, namely 57.53. Therefore, in order to be successful education needs to be improved in efficiency, because it only reached 79.92 and quality improvement, which only reached 57.53, whereas equitable education in order to be maintained and improved.

Health. Indicators used in the field of health is life expectancy. Life expectancy is a number that reflects the average years of life lived by someone since they were born. The indicator will be higher if their health status is good.

Graph 1.
Life expectancy compared Polewali Mandar
with the achievements of West Sulawesi province Years 2008-2013

Source: BPS, Processed Data, 2015.

Percentage of life expectancy at the level of West Sulawesi and Polewali Mandar level has increased. However, seen from a comparison of the current year to the previous year (2008 to 2013) became increasingly more volatile, whereas in Polewali Mandar decreased. Then, seen from the comparison of life expectancy districts in West Sulawesi province, that the districts most low-level achievement is Polewali Mandar, while the highest level of achievement is Mamasa.

To support the required increase in life expectancy indicators are interlinked with each other, the situation Mortality, Morbidity, and Community Nutrition Status. The mortality rate is an indicator of health status, where high mortality rates show a low degree of public health, otherwise a low mortality rate shows a high degree of health.

The increase in the infant mortality rate (IMR) in the district in West Sulawesi province in 2009 until 2013 is very varied. In 2010 all counties experienced a decline of IMR. Whereas in 2011 the inverse of the previous year, the IMR has increased significantly, including in Polewali Mandar. Judging from the IMR contribution to Polewali Mandar is highest. There are several factors that affect infant mortality, among others, accessibility or availability of health facilities, improvement of health services of skilled medical personnel, and people's willingness to change traditional patterns of behavior to the norms of modern life in the health field.

The maternal mortality rate (MMR) maternal indicates the success of efforts to improve public nutrition and maternal health efforts and public participation in the use of health services by the facilities and competent personnel. Childbirth is not done by a competent medical personnel will result in neo-natal mortality, as well as possibility if pregnant women do not conduct regular inspections. The availability of health infrastructure may also result in

the neo-natal deaths. In Polewali Mandar, MMR is still high, yet lowest among districts in West Sulawesi, namely from 2011 to 2013 has decreased (Health Office Polewali, 2014). This happens because the cross-sectoral cooperation that seeks as much as possible to reduce MMR below the national target. The cause of MMR is bleeding, hypertension, and other factors.

Morbidity. One indicator of the increase in mortality is due to the presence of some diseases that are still frequently attack or infectious or non-infectious in society. Based on the report Recording System and Integrated Services Puskesmas (SP2TP) during 2012 and 2013 obtained the top ten results of existing disease, which Gastritis ranks first as a common disease at the health center. In 2014, data showed ten largest existing disease at the health center, which ranks first ISPA which is a disease most commonly found in health centers.

Graph 2
Ten biggest disease in the district health center
Polewali Mandar 2014

Source: Report of STP health office Polman 2014

In 2014, a prominent characteristic of the disease is still around 61.64 percent dominated by non-communicable diseases such as: gastritis, hypertension, dyspepsia, diabetes mellitus (DM), ear infection, myalgia and 'deer accident and force. Meanwhile, infectious disease or infection is respiratory infections, skin diseases and allergies Febris approximately 38.36 per cent. Lifestyle, habits and irregular eating patterns is a trigger factor high morbidity rate due to non-communicable diseases. It is the same as the previous year in which morbidity is dominated by non-communicable diseases. Despite the accident and forced Ruda is a tenth of the prominent characteristics of the disease, but actually these diseases also need to be taken seriously interested parties to resolve it.

The nutritional status of a person is also very closely related to health problems in general, since it could directly worsen the infection can also cause health problems individually. Based on the monitoring of nutritional status Toddlers in 2009 obtained information that the nutritional status of approximately 16.2 percent and malnutrition by 1.2 percent. To more clearly based on the results of monitoring the nutritional status nutritional status of children from years 2006-2012 can be shown below.

Graph 3
Nutritional status of children Polewali Mandar
Year Period 2006-2014

Source: Nutrition Program report in 2006-2014

Polewali Mandar is still the region with the very weight status in matters of Community Nutrition. In 2014 the number of cases of malnutrition were found in 75 cases and all of them received treatment (100 percent).

Economics. One Polewali Mandar government's efforts to improve the quality of human development in the region is to provide equal access to citizens to take advantage of the resources needed in order to work (trying) to live a decent (BPS Polewali, 2013). Humans (people) can live well at the time were able to obtain something that is required to have a decent income anyway. The greater the income, the greater the amount of goods and services available to support the creation of a decent life.

One component of HDI concern is the ability of purchasing power. Purchasing power explain how large amount of goods and services able to be purchased by the public with the amount of money spent on consumption. To ensure comparability both over time and between regions, the purchasing power of a particular commodity is measured by the public. According to the United Nations Development Product (UNDP), to measure the purchasing power of the population can use the GDP (Gross Domestic Product) capita adjusted real (adjusted real GDP per capita), but due to data limitations, the calculation of the index purchasing power of people is done by using spending per capita adjusted real (Ismail, Akib, Jasruddin, 2015).

Data growth in real spending per capita in Polewali Mandar show that, from the year 2008-2013 has increased significantly. While household spending relatively good society. According Susenas 2013, that portion of the population to food expenditures amounted to 54.63 percent, better than the share of expenditure on food in West Sulawesi province level is only reached 52.41 percent.

Labor force participation rate (LFPR) Polewali Mandar-year 2013 to decline, reaching only 65.73. Whereas in 2011 LFPR reached 72.10. This is because they are not active in economic activity is their school, household work, retired or doing other activities. Because not all absorbed in the world of work, the result unemployment. In 2013 the open unemployment rate in Polewali Mandar reached 3.23 percent. Of the 100 residents who fall into the category of the labor force, there are 3 of them are unemployed.

Judging from the aspect of employment of the population, a large part of the population in Polewali Mandar working in the agricultural sector. It can be seen from the contribution of the GDP every year, where the role of the agricultural sector or the highest contribution rate, when compared with other sectors. Furthermore, other sectors that play a role are: 1) trade, hotels and restaurants, 2) the services sector, 3) financial sector, leasing

and business services, 4) Transport and Transportation, 5) Manufacture and Processing, 6) Buildings, 7) of electricity, gas and water supply, and 8) mining and quarrying.

Economic activity in Polewali Mandar showed relatively rapid growth, although the growth in each year have a fluctuating condition. By sector of economic growth, the visible presence of the base sector or sectors that were most responsible when compared with other sectors. Of the nine major sectors (see the GDP Polewali Mandar, in Ismail, Akib, Jasruddin, 2015) only three (3) sectors that are at the base sector. The basic sector whose role is trade, hotels and restaurants, then electricity, gas and water supply, and the next is the agricultural sector. The aspects of the development trend will have a positive impact on poverty reduction, where the trend of poverty in Polewali Mandar every year decline.

Based on the results of the analysis, appear to have a positive contribution to the economic development of HDI improvement in Polewali Mandar, as well as a major indicator of the welfare of society. In other words, visible public welfare snapshot-based HDI in Polewali Mandar.

CONCLUSIONS AND RECOMMENDATIONS

Based on the description and discussion of the results of the analysis can be concluded as follows:

1. The field of education shows that the average rate of the old school and literacy in Polewali Mandar each year has increased. However, when compared with districts in West Sulawesi province, then Polewali Mandar an area that is the lowest level of contribution. The low average rate of old-school looks through a weakness in the input, process and output of education are still relatively low. Educational aspects assessed were: 1) equity and expanding access to education, 2) improving the quality, relevance and competitiveness of education, and 3) strengthening good governance, accountability, and public image of education.
2. The health field indicate that the indicator of life expectancy in Polewali Mandar lowest compared to other districts in West Sulawesi province, whereas the contribution of the number of hospitals and health facilities is the most complete. Aspects of supporting that describes the degree of public health in Polewali Mandar are: a) Mortality situation, b) Morbidity and c) Nutritional Status. The level of achievement of these aspects are very high.
3. Economic Affairs show that the creation of a decent life based on the purchasing power, as is evident in the GDP in Polewali Mandar, its contribution each year has increased, although the development trend of previous years fluctuated and in 2013 experienced a significant decline. Indicators GRDP Polewali Mandar most plays are trade, hotels and restaurants, then electricity, gas and water, and the last is the agricultural sector. The agricultural sector in 2013 is no longer a sector basis in Polewali Mandar.

Based on the conclusion, made several policy recommendations as follows:

1. In the field of education, need to be done: a) strengthening / revitalization institutional function on an ongoing basis to build synergy actor role in implementing programs and policies in the field of education, as well as more active action for the vision-mission and objectives to be achieved in the strategic plan service provision based education performance in Polewali Mandar can be achieved in an efficient, effective, and quality, b) development of education aimed at improving the quantity and quality of education facilities, improvement of the quality of learning, improvement of education management, and development of school education by encouraging community participation and cooperation / partnership with business and industry, c) Facilitate the accessibility of education for all the people of the remote, outer, and backward (rural) to reduce the number of illiterates and literacy rates are increasing (letter), especially for those aged 15 years and over.
2. In the field of health, needs to be directed and developed: a) support from the government in improving the quality of basic health services to citizens, such as: provision of human resources medical and paramedical personnel are professional, b) the support of the government in revitalizing the functioning and the role of each puskesmas

- (health care unit forefront) in cooperation with the community in tackling health issues, c) needs to be synergy functions and roles of the actors, the government together with the private sector and communities in providing and improving the quality of health services.
3. In the economic field, should be directed to: a) economic actors with the community effort to develop the business / creative economy supported by the local government through the (instrument) policy, by giving space / opportunity for the public to work and strive in the secondary sector and tertiary, so that the potential of available resources utilized and marketable as a source of revenue to improve its purchasing power, b) facilitate public access to conduct productive business activities in various sectors of economic activity, both the base sector and other economic sectors in favor of increasing the GDP, c) build synergistic cooperation (collaborative partnerships) between government, private, public and press in turn accelerate economic development based on local competencies in Polewali Mandar Regency.

Career Mobility and Gender: A Descriptive Study of Selected DepEd Teachers in Iligan City

Manolita B. Olores – Regalado

manolita.regalado@g.msuiit.edu.ph

Dept. of History, College of Arts and Social Sciences
Mindanao State University-Iligan Institute of Technology
Iligan City, Philippines 9200

ABSTRACT

Census finding discloses that in the Philippines, teaching is a woman-dominated profession. There are more female school teachers than male, both in the public elementary and secondary schools. Though teaching is a female-dominated profession, the highest occupational ranks and the highest paying positions are still occupied by male administrators.

The study is an attempt to investigate if gender is a factor in the career mobility of the DepEd teachers in Iligan city. A total of fifty-seven male and female respondents in the elementary and secondary levels were included in the study.

The study shows that the male respondents occupy higher ranks than the female respondents. Interview data reveals that economic reasons, family responsibilities and childcare are the topmost priorities of the female respondents. Furthermore, women in the study are more constrained than men in pursuing a post – graduate degree. The burden of being a wife, a mother, and a career woman are among the factors that hinder married female respondents in their career mobility. It is also found out that certain physical attributes and qualities explain why women are considered less suitable and desirable for a certain task or assignments.

Findings also indicate that female respondents have generally less traditional views than the male respondents toward gender roles. Likewise, the idea that men and women have definite biological and personality characteristics is evident in the study. This leads to sex-role stereotyping which deters their career mobility. The study also confirms that *palakasan* and *padrino* system still holds true in the Department of Education (DepEd) in Iligan City.

Key words: Gender, Career Mobility, Teaching Profession, Traditional Roles, Gender Role Performance, Administrative Positions, DepEd, *padrino*, *palakasan*

Introduction

Education is a very potent factor in the advent of modernization. It opens doors and offers more opportunities for men and women in Philippine society. It gives women more access to paid work and economic securities. Education also makes women realize that they are no longer bound by norms and practices that severely restrict their mobility and career options in life. With sufficient education, women want equality in all things. They want to achieve and develop their capabilities. They want to show to the world that they can be equal to their male colleagues.

Filipino women today are highly visible in the bureaucracy both in the private and public sector. Women in the Philippines now find themselves in almost all professions and social positions. According to a report of the World Economic Forum (WEF), sixty-nine (69%) percent of firms in Southeast Asia are at least partially owned by women, the highest rate in any country. The Philippines ranks second in women's ability to reach corporate leadership position all over the world (Holtz, 2014).

According to the Global Gender Gap Report (2014) for the World Economic Forum (WEF), the gender gap for economic participation and opportunity now stands at sixty percent (60%) worldwide, having increased by four percent (4%) from fifty six percent (56%) in 2004 when the forum first started measuring it. Ooredoo which is one of the partners of the World Economic Forum says that Nordic Nations remain the most gendered-equal societies in the world. In Asia and the Pacific, the Philippines remains the highest-ranked gendered-equal country, followed by New Zealand and Australia (Accessed on March 15, 2015).

In the Philippines, in terms of statistics the percentage of licensed professional women is 63.7%, as opposed to licensed professional men at 36.3%. Teachers accounted for the highest percentage at 44%, with teaching considered a female dominated profession. Furthermore, among those with academic degrees, 56.2% were females and 43.8% males. Similarly, among those with post baccalaureate courses, women outnumbered male at 56.3 % than males at 43.7%. Census findings show that more women are enrolled in education courses and there are more female teachers. Data revealed also that in school year 2008-2009, 89.58% of the public elementary school teachers are female; only 10.42% of the population, however, are male teachers. Likewise, in public secondary schools, 77.06% are females while only 22.94% are male teachers (Webmaster, 2014).

In spite of the on-going changes in Philippines society, only few women were able to hurdle to the top. Even in a female dominated position such as education, the highest occupational ranks and highest paid positions are still occupied by male administrators. According to CHED Chairperson Patricia Licuanan, the Filipino women's gain in higher education do not necessarily translate to social and economic advancement, as the work force continues to be dominated by men (Quismundo, 2012).

With high educational qualification as prerequisite to career advancement, women have indeed, opened up for themselves to a wide array of professional choices and work arrangements. The question of where women should be, however, is far from settled.

Objectives of the Study:

The purpose of this study is to investigate if gender relations is a factor in the career mobility of selected DepEd teachers in Iligan City. It also analyzes the effects or influence of the following factors in the pace and extent of their career mobility like;

1. respondents' career background, in terms of their educational attainment, sex, age, civil status, work experience, length of service, position/rank and school location currently serving;
2. the role and influence of their parents/members of the family in their career choice;
3. respondents' perception and attitudes about traditional and non-traditional gender roles and;

4. respondents' attitude towards gender role performance.

Methodology:

The sampling was purposive in nature. Fifty-seven (57) elementary and secondary teachers of the Department of Education in Iligan City are the respondents in this study. To obtain the necessary data, an open-ended questionnaire was administered personally. The same questionnaire also served as guide for an interview session with the respondents. In the conduct of the interview, the objectives of the study were explained to the respondents. A descriptive method including percentage distribution was used for the presentation and analysis of the study.

Findings

A. Profile of Respondents

A Total of fifty-seven (57) DepEd school teachers in Iligan City were included in this study; 24 males and 33 females. Of the total number of respondents there are 13 males coming from the elementary level and 11 from the secondary. Whereas, there are 18 female elementary teachers and 15 from the secondary level. The uneven number of male and female respondents suggests that there are more female public school teachers in the country as compared to male. DepEd records showed that 423,549 or 86.3% of 491,338 teachers in the public elementary and high schools all over the country are women. Male teachers, on the other hand, totaled 67,789 – 36,658 are in the primary level and the remaining (31, 436) are in the secondary level – or 13.7 % of the total, as furnished to the Philippine Daily Inquirer in Esplanada's article (June 28, 2009).

Table 1 shows that majority of the respondents are married representing 79% of the total sample.

Table 1. Gender and Civil Status of Respondents

Civil Status	Male		Female		Total	
	No.	%	No.	%	No.	%
Single	5	20.8	7	21.2	12	21.0
Married	19	79.2	26	78.8	45	79.0
Total	24	100.0	33	100.0	57	100.0

Table 2 shows that the respondent age are clustered around the 31 – 50 age groups. Male respondents have a higher percentage at 87.5% as compared to female (60.6%). Male respondents are slightly older than the female respondents at 41.13 average age as compared to the female average age of 40.3.

Table 2. Age Distribution of Respondents

Age	Male		Female		Total	
	No.	%	No.	%	No.	%
21 - 30	2	8.3	8	24.3	10	17.6
31 - 40	8	33.3	10	30.3	18	31.6
41 - 50	13	54.2	10	30.3	23	40.3
51 - 60	1	4.2	5	15.1	6	10.5
Total	24	100.0	33	100.0	57	100.0

Average Age:

Male - 41.3

Female - 40.30

Table 3 shows respondent distribution in their length of service with the DepEd. What is striking in the findings, however, is that average age is not proportional to the respondent's length of service. This suggests that most of the respondents are still new in the service as public school teachers. It was found out that majority of them were former private school teachers prior to their entry to the public school. When interviewed, 5 of the male respondents were from the corporate world before their teaching careers. Three were employees of the National Steel Corporation, 1 a former bank employee and another one from a chemical company in Iligan that has since closed. The rest of the males are former private school teachers. This is also true with the majority of the females. Respondents admitted that their previous service in private schools is a plus factor why they were hired in the DepEd. Accordingly, being in the (DepEd) is already a promotion on their part, because the salary they receive is much higher and the workload is comparatively lighter. As reported by the

Philippine Universities and College Guide, teaching in a public school gives more security of employment than teaching private schools. One becomes an employee of the government, thus entitling him/her to security of tenure. When it comes to salary, the public school system offers more benefits, except for larger private schools.

Table 3. Respondents Length of service

Years in Service	Male		Female		Total	
	No.	%	No.	%	No.	%
1 - 5	5	20.8	10	30.3	15	26.3
6 - 10	12	50.0	10	30.3	22	38.6
11 - 15	3	12.5	2	6.1	5	8.8
16 - 20	3	12.5	6	18.2	9	15.8
21 - 25	-	-	4	12.1	4	7.0
31 - 35	1	4.2	1	3.0	2	3.5
Total	24	100.0	33	100.0	57	100.0

Average length of Service:

Male - 9.7

Female - 11.8

A total of 26 respondents are assigned in the barrio/hinterland schools; this is because they are still new in the service. Others were re-assigned as head teachers or school-in-charge even if they occupy lower ranks. Interviewed respondents from the city's coastal schools disclosed that they were formerly assigned in faraway barangays for almost three years (the shortest duration) prior to their city assignment.

Table 4. Current Position/Rank of Respondents

Position/Rank	Male		Female		Total	
	No.	%	No.	%	No.	%
Teacher 1	13	54.3	22	66.7	35	61.4
Teacher 2	4	16.7	4	12.1	8	14.0
Teacher 3	3	12.5	6	18.2	9	15.8
Head Teacher 1	1	4.1	-	-	1	1.8
Master Teacher 1	2	8.3	1	3.0	3	5.2
Principal 1	1	4.1	-	-	1	1.8
Total	24	100.0	33	100.0	57	100.0

Table 5. Respondents' Educational Attainment

Education	Male		Female		Total	
	No.	%	No.	%	No.	%
Bachelors w/ MA units	10	41.8	20	60.6	30	52.6
MA (CAR)	5	20.8	5	15.1	10	17.6
Master's degree holder	7	29.2	8	24.3	15	26.3
Ph.D holder	2	8.2	-	-	2	3.5
Total	24	100.0	33	100.0	57	100.0

Findings also reveal that males (58.2 %) possess higher educational qualification (at least Completed Academic Requirements for MA; or Master's degree or a PhD holder) as compared to females (39.4 %). Table 4 shows males occupying higher ranks than those of their female counterparts. This can be attributed to their higher educational attainment. It means that educational preparation is necessary and an advantage for occupying higher ranks and even administrative positions. Formal education, according to Jocano (1988), is the surest way to acquire a well-paying job in the future and consequently, better status and wealth. Mahtab (2011) stressed also that

education is widely recognized as a gateway and an opportunity to better economic security and opportunity.

Table 6. Percentage Distribution of respondents Rate of Promotion

Rate of Promotion	Male		Female		Total	
	No.	%	No.	%	No.	%
Slow	17	70.8	28	84.8	45	79.0
Fast	7	29.2	5	15.2	12	29.0
Total	24	100.0	33	100.0	57	100.0

When asked to rate their pace of promotion, both male and female respondents considered their promotion slow (Table 5). In fact, one respondent answered that she was never promoted in her 34 years of service in the public schools. Only 7 (29.2 %) of the male and 5 (15.2 %) of the female considered their promotion fast. The findings are understandable since available items in the Department of Education (DepEd) are relatively few. This study further identifies that promotions are rare in the DepEd. And if there are promotions it is usually kept to the barest minimum. The present economic condition in the country heightens the problem of the availability of more slots (items)/ or additional budget for re-ranking and promotion in the Department.

As reported by the Philippine Education Sector Assessment 2011 Executive Summary (July 2011), investments in our education sector are less compared with other countries in Southeast Asia. Although the Philippine government has been allocating the largest share of the national budget to education, the country continues to have the lowest percentage in terms of allocation for education, as a ratio to the country's Gross Domestic Product. As a result, the quality of basic education has greatly deteriorated. The country ranks among the poorest performers in East Asia and the rest of the world in terms of quality standards.

When interviewed the following reasons surfaced why their pace of promotion is slow:

1. No vacant or available item/position

"This is inherent in the system. Position and evaluation are rare or seldom because of the absence or slow release of items."(According to one male and three female respondents).They further added that the huge personnel population of the DepEd is a cause for the delay and slow promotion because many are vying for few items especially in the Master Teacher rank."

2. Loss of interest

- A. "I am not interested because there are many requirements no time to reconstruct my credentials."(According to two male and three female respondents).
- B. "I did not apply or attempt to because it is useless, I am still new in the service." (in an interview with a female respondent)
- C. "I tried submitting all my credentials but until now nothing happened **gikapoy na ko og hulat** (I am tired of waiting), it's a waste of time and effort." (as lamented by five of the females respondents)

3. Not able to meet criteria for promotion

- A. "I have not completed my MA." (one male and eight female respondents). When asked why, one of the female respondents stated health reasons "I could not cope with the demands of paper works." The three female respondents could not afford the tuition fees because they have no extra budget for it, especially the thesis writing pace.
- B. "I was not promoted because I did not accept my transfer to another school." (male respondent)
- C. "I had less number of training/seminars attended." (three male and one female respondents)

4. Padrino/Palakasan system

"I am not influential with the promotion staff. I have no connection with the higher officials and most especially I always abhor this kind of promotion because I prefer to be promoted through merit system. I finished my MA several years ago but even now I am nailed in my Teacher 2 rank."(In an interview with a female respondent)

5. Favoritism/subjectivity in evaluating performance

"The teacher 2 item was not given to me because of a senior teacher in our school who is not a Master's degree holder. Instead the item was given to her by our principal

because she will be retiring soon.” (As disclosed by a female respondent during an interview)

For those who considered their promotion fast, they attributed it to their educational qualifications, length of service, number of trainings and seminars attended. Of the mentioned respondents, two male and one female added that they have connections who helped them expedite their promotion. Because of the desire to upgrade their present situation, Andres (1985:5) mentioned that the **lusot** or **lagay** system is rampant when it comes to processing papers for promotions. It cannot be denied that many Filipinos get employed or promoted because of the **lagay** or **pakikisama** system. Getting a job or promotion in the Philippines is not always a question of skills and capabilities. In some instances, it becomes a question of how much you are willing to pay for the position. He who gives the highest “grease” money or **lagay** gets the job or promotion. And those who have less money resort to the **pakikisama** or **palakasan** system. With the latter, all the aspirant has to do is to approach an influential person (someone who is rich, in high position or politically powerful or better still, someone who has all three) he knows very well to recommend him to the recruiting or promoting officer. Nevertheless, respondents still believe that educational attainment, trainings and seminars are usually held to improve the teaching competencies and career advancement of teachers (see Table 15).

When asked who influenced them in their choice of career and profession, findings reveal that the traditional role of parents as the financier of a child’s education greatly influenced the choice of career and profession. It shows that 54.2 % of the male and 60.6 % of the female respondents have been influenced by their father and mother in their choice of careers. Others say that they were influenced by their sisters, brothers, aunts and uncles in their career choice. This is because in Philippine culture, according to Zaide (2010:64), the family was the basis of society in ancient Philippines. Family ties then as they are today, were close and strong. This notion was also pointed out by Agoncillo (1990:7) that Filipino parents exercise almost absolute power on their children. Furthermore, Agoncillo added that it is unthinkable for a Filipino to do something important without consulting his parents.

The findings further suggest that this is a consequence of the closer relationship of the child to his/her family and conventional roles of the parents in the child’s needs including education. Or it can be said also that due to their (respondents) gratitude to the parents and the belief that it is the parents who support their studies and needs, children are obliged to follow the advice of their parents in choosing a career or a profession. Jocano (2007) totally supports the importance of family to the Filipinos. He added that the family constitutes the core unit of the Filipino social system and the central concern of every Filipinos is the welfare of the family since it is the only secure place in this fragile world of social realities. And it is therefore a source of economic, social and psychological support for all its members.

In an interview with the respondents, the following reasons were identified as motivators in taking up teaching as a profession.

1. **Economic pressures**

- A. “My brother advised me to take up education and become a teacher because teaching is more stable in terms of income. Companies retrench employees from time to time but schools always hire teacher.” (according to a male respondent)
- B. “I worked before in a bank but it closed shop so I became jobless and took up Education units, besides I have relatives who are teachers occupying administrative positions. I believed they could help me, which certainly materialized (a male respondent)
- C. “Being a farmer’s son, I was encouraged to take up teaching because this is the most affordable profession.” (as said by a male respondent)
- D. “During my high school days I was a working student of my English teacher so she advised me to take up education and promised to help pay my tuition.” (female Respondent)
- E. “My parents could not afford a nursing course. Teaching was a very respectable and popular job in our barrio.” (female respondent)

2. **Employment purposes**

- A. “I was encouraged to take up teaching because male teachers are few and hope to be employed immediately.” (male respondent) “My mother was a teacher, I hope that I can occupy her item when she retires (from a male and female respondent)
- B. “I want to take up criminology but my height does not qualify me to but my father said that it’s a dangerous job, so I ended in teaching.” (lamented by a female respondent)

- C. "I decided to take up BSEED because I realized that in terms of employment opportunities this course offers greater choices. Even in the remotest barrio, you can be employed as long as there is primary school (female respondent)
3. **Role playing activities**
- A. "I loved gathering my playmates and I acted as the teacher during our play (classroom scene)." (as revealed by a male and two female respondents)
- B. "I joined a catechism class in my high school days wherein I was assigned to teach to a grade one class." (female respondent)
- C. "I was always assigned to check our test papers and most of the time write our lessons in the board to be copied by my classmates. Xerox or photocopying machines was not popular in our time (female respondent)
4. **Motivation by teachers**
- A. My church's Sunday school teacher assigned me to teach the young kids in our church, I loved children... I am delighted by them." (female respondent)
- B. I idolized my teacher and said that someday I will become like her."(from a female Respondent).
- C. My Math teacher (a born again Christian) inspired me to take up teaching instead of an engineering course. He said that teaching is a missionary work and the noblest profession." (from a male respondent).
5. **Peer encouragement**
- A. "My friend and I have the same NCEE result; she took up education since she is my best friend, thus, was the reason why I ended in teaching." (female respondent)
- B. "I was the chairman of a student organization during my high school years and earned much popularity and experience. My friend told me that I would become a good teacher so I took up a teaching course." (male respondent)

The respondents who chose teaching because they love children and other laudable reasons should be appreciated for their noble intentions. Unfortunately, some of the respondents entered the profession with the wrong reasons. They got into teaching because preparation in college is less expensive and easier compared to other courses. The education courses are the most secure and most stable jobs and a stepping stone to an administrative position. Majority of them said that teaching is not their first choice of career but were only forced or dictated by their parents and siblings. One traditional Filipino value pointed by Jocano, as cited by Manauat in her study, is **pakikialam** or meddling to be informed with what is happening with their loved ones and in their personal affairs.

On the other hand, family background such as parents' occupation and income as an index of one's socio-economic status also serves as a related factor influencing the respondent's first steps towards obtaining an occupation or employment or one's choice of career.

B. Perceptions and Attitudes about Traditional and Non-Traditional Gender Roles

This section discusses the attitudes, opinions and beliefs of respondents about gender and occupational roles. At the same time, this also identifies how men and women are judged by different standards, which gives rise to stereotypes about appropriate roles and occupations for both men and women.

1. Role Expectations

A large number of male respondents 17 out of 24 or 70.8% said that household chores are joint activities of both husband and wife. The response of the male respondent conforms with the survey conducted in the US in 2007 as cited by the National Healthy Marriage Resource Center that majority of the husbands in the survey believed that spouses should take care of a greater share of the housework when their wives are employed. The same study found that women, even if they are employed full time, perform the bulk of routine housework and childcare. This further affirms the findings in this study that only 9 out 33 female respondents or 27.3 % said their husbands help them in the daily tasks in the home but the bulk of the workload falls on their shoulders. Fifteen (15) or 45.5% female responded that they are the one who usually do the task at home. The findings conforms with Branch in her article in Duke Journal of Gender Law and Policy that although it may be true that more women than men would prefer to care for the home and family, even in the absence of cultural pressure, not all women desires such a role which is also true in the findings of the study see Tables 7 and 8. While 21 % of the total respondents (5 male and 7 female) said their mother and members of the family are in-charge of the household chores because they are single. Out of the 33

female respondents only five or 8.8 % revealed that their husbands are the primary caretakers of the home because they are jobless or self-employed. The rest of the respondent answered that their in-laws help them.

The findings suggest that despite changes taking place in the Philippines, the wife's role expectation have remained basically the same as in previous generations where the wife is really a housewife. This implies that the employment of the wife does not change the pattern even among educated individuals. As pointed out by the Encyclopedia of Children's Health , on the home front, married working mothers, even those husbands espoused towards an egalitarian philosophy, still find themselves saddled with most of the housework and childcare responsibilities. It cited the book of Arlie Hochschild "The Second Shift" that the task performed most often by men, such as repairs and home maintenance chores, can often be done at their conveniences, as opposed to women's duties, such as cooking which must be done on a daily bases and at specific times, giving women less control over their schedules. Looking back at Table 5 where female teachers occupies lower ranks and their lower educational qualification as shown in Table 4 suggests that household and family responsibilities attributed for the findings.

According the Shakeshaft, women are still responsible for the majority of child-care and homemaking. She added that women's responsibilities for family life slows their progress because of both external expectations and internal accommodations. Furthermore she said that these responsibilities inhibit the ability of women to perform their jobs as school managers, and such responsibilities make women undesirable candidates for administrative positions, which is also the findings of this study. (See also tables 11, 12 and 13 for more supporting evidences.)

Thuo Karanja J.K enumerated some barriers to women in educational leadership. 1. Culture and socialization structure where society is highly patriarchal. 2. Workload expectation for educational leaders and parenting expectation for women. 3. Male dominance in educational leadership is also seen as barrier as men are likely to use this leverage to perpetuate the status quo by recruitment of male with same leadership dispositions, attitudes and philosophies. 4. Internal barriers include women's own decision not to apply for promotion, fear of failure and competitiveness.

Findings of the study reveal also that majority of the respondents (14 or 58.3% male and 28 or 84.8 % female) do not have any house help. This is because hired help are almost out of the question since they entail extra maintenance costs, which are beyond the resources of the household. The fact remains that teachers in the Philippines basically thrive on a hand-to-mouth existence.

It is no wonder why majority of the male respondent answered that household chores is a joint activity of both husband and wife. Or maybe the male respondents tend to agree with Fisher (2011:139) that men and women are like two feet- they need each other to get ahead and the world is changing in ways that can profit from women's skills as well as those of men. On the other hand, the study also implies that housekeeping takes up so much time of the female respondents suggesting lesser time is devoted to professional growth like taking a post degree courses. This also corroborates with the article written by Mylene Hega, the secretary general of MAKALAYA, a women workers network (March 2003) women's larger responsibility and the family impedes to use their educational training and skills and even pursue it because of remunerative work.

Table 7. The rightful place of a woman is in the home to take care of the Children and Husband

	Male		Female		total	
	No.	%	No.	%	No.	%
Yes	4	16.7	5	15.2	9	15.8
No	20	83.3	28	84.8	48	84.2
Total	24	100.0	33	100.0	57	100.0

Table 8. Women who stay at home with the children are better mothers than those who work outside the home

	Male		Female		Total	
	No.	%	No.	%	No.	%
Yes	10	41.7	7	21.2	17	29,8
No	14	58.3	26	78.8	40	70.2
Total	24	100.0	33	100.0	57	100.0

Tables 7 and 8 display statements pertaining to the traditional roles of women as wife, homemakers and mothers, majority of the respondents believed that the role of women is changing. The children are better off if a mother stays at home and doesn't have a job is no longer viable today. While it is true that some of the respondents still cling to the stereotyped notion of the rightful place of a woman (based on their responses where a handful of them agree to the statements). Karambaya and Reilly (1992) said that society nowadays has made conscious effort to talk about the importance of equal opportunity, to eliminate overt discrimination, and to raise social consciousness about women. Lacar (1991) added that the non-traditional lifestyle is more acceptable now than they were before. The findings of the study also supports the statement of Cohen (2013) that the number of employed mothers have increased dramatically since the 1960s and especially in recent years, as more families require two incomes to support the needs of their family in a declining economy.

2. Gender Preferences

Table 9. Percentage Distribution of respondents as whether they have been bypassed for promotion or further training because of their sex

	Male		Female		total	
	No.	%	No.	%	No.	%
Yes	4	16.7	1	3.0	5	8.8
No	19	79.2	31	94.0	50	87.7
Undecided	1	4.1	1	3.0	2	3.5
Total	24	100.0	33	100.0	57	100.0

As gleaned from Table 9, majority of the male (79.2 %) and female (94 %) were not bypassed of a promotion or further training because of their sex. However, 16.7 % of the respondents (4 male and 1 female) said yes. When asked to describe or specify the incident the lone female respondent said “**grabe gyod** (it's too much) I was qualified but the item was given to my contender who possesses no educational qualification **dili gani kabalo mo- Iningles** (don't know how to speak good English). The rank/item was given to her because she is a close relative of our supervisor. I feel betrayed and bypassed. I wrote a letter of complaint but nothing happened. **Sa ako kalagot na mild stroke gud ko** (because of my anger I suffer a mild stroke), too much **palakasan** in the public school.”

Only one response is related to gender as disclosed by a male respondent “**lalaki man gud ko di ko close sa ako principal nga babae, gihatag niya ang item sa babae nako nga co-teacher** (I am male and not close to our lady principal, she gave the item to my female co-teacher).” Findings of the study suggest as agreed by the majority of the respondents that sex related cases is not a deterrent for promotion.

Table 10. Percentage distribution of the respondents' choice for a teaching position if limited to male/female candidate

Preference	Male		Female		Total	
	No.	%	No.	%	No.	%
Male	18	75.0	13	39.4	31	54.4
Female	2	8.3	15	45.5	17	29.8
Undecided	4	16.7	5	15.1	9	15.8
Total	24	100.0	33	100.0	57	100.0

In Table 10, male respondents (75 %) prefer male rather than female applicants/candidates for a teaching position. Only 8.3% of the male chose female. While a large number of the female respondents (45.5 %) tend to favor persons of the same sex in the teaching position it is difficult to conclude because 15.1 percent of them were undecided.

The male respondents' reasons for choosing male as a teacher are as follows; first male respondents have a desire to increase the male population of teachers (half of them gave that reason). As elaborated by one male respondent:

“Male teachers are fast diminishing we want to put in more men to increase the male teacher population. It is also a way of attracting more males to enter into the teaching profession.”

Second, the idea that male sex is superior was expressed by four of the male respondents.

. . . “Male can be moved anywhere without any **“kuskus balungos”** (complaints). Men are more work-oriented, they do not complain and they can adapt easily to any situation and conditions. They are well-rounded, can do heavy jobs. We need them for electrical and carpentry woks. They can be assigned in the hinterland schools. And most especially we need more Boys Scout Masters or coordinators and sport coaches.”

Third, the cultural concept of sex-role stereotyping is very strong. This is evident in an interview with three of the male respondents

“Men are less in personal necessities, not always absent because of menstrual cramps and other biological and health reasons. Males could not be pregnant and they don’t have maternity leaves. Women are too **“mahinhin”** (slow footed), and too moody if they are pregnant which would affect their teaching competencies. If I have to choose between a male and a female applicant, I would give the position and item to the male applicant because he is the head of the family and really needs the job.”

Furthermore, they added that males are good teachers because they talk less, have more output and a very good disciplinarian. On the other hand, the two males who chose a female applicant want to promote equality in the teaching profession. At the same time, women are more dedicated to their work, unlike men who are always **“bulakbol”** (gallivanting).

For the undecided male respondents, they reason out that the choice must be situation-based vacant station; problems and conditions will be taken into consideration and the acceptability of the person to the teachers and the community.

Among the female respondents, they prefer males because:

1. They can be assigned to faraway places (schools) especially in a locality where transportation is difficult. They can still survive if the vacant position is in the hinterland.
2. They are easy to approach and can be convinced to do things the way you like it.
3. They are active, energetic, task-oriented and are supportive of school projects, especially in the physical improvement of the school. They can carry heavy or manual work compared to women teachers.
4. They don’t have menstruations; no mood swings and no biological excuses.

The female respondents who chose a female teacher cited the following reasons:

1. Females are more responsible, diligent, resourceful , more serious and committed to their work.
2. They are motherly and very patient with their students.
3. It is easy to establish a good and harmonious relationship with the same sex.
4. Females are manageable, obedient, innovative and creative. They are also noted for their honesty and reliability.

However, one undecided female respondent gave the following reasons:

“There are so many things to consider before making a choice. I will choose the one who has a good attitude and behavior. I will select the one who is most qualified and has leadership potentials. I do not consider gender as a criterion in the selection provided that one will meet the qualities. Gender does not matter; it is the performance that counts much.”

Table 11. Percentage distribution of respondents’ choice of superiors (immediate boss)

Preference	Male		Female		Total	
	No.	%	No.	%	No.	%
Male	13	54.2	9	27.3	22	38.6
Female	3	12.5	10	30.3	13	22.8
Undecided	8	33.3	14	42.4	22	38.6
Total	24	100.0	33	100.0	57	100.0

Looking at the findings in Table 11, responses for this statement is a “tug-of-war” for both male and female respondents, particularly those who prefer a male boss (38.6 %) and the undecided

respondents (38.6 %). Only 3 or 12.5 % of the male and 10 or 30.3 % of the female respondents prefer a lady boss. When asked why they prefer a male boss, male respondents say:

1. A male boss is always firm and consistent in their decision-making. (according to five respondents)
2. They are approachable and not so strict and has a better understanding of the complexities of interpersonal relationships, e.g. less prone to intrigues and “**tsismis**” (gossips) and do not talk a lot. (Two respondents)
3. Not emotional, more calm and has restraint (one respondent)
4. A male boss can easily understand their problems and shortcomings because they belong to the same sex. They could discuss things and other important matters anywhere. (three respondents)
5. They are strong in mind and in deeds, speaks his mind without the dictates of others and not fickle-minded.(one respondent)
6. And lastly one male respondent said that the attributes of being “sure-fire” appears more potent on a male boss.

On the other hand, female respondents identify the following reasons for their preference of a male boss.

1. A male boss is not as meticulous unlike a female boss, who means a program or project can be easily pushed through because they are practical. A female boss is so meticulous to the extent of going into the smallest details which is irrelevant and time consuming. (one respondent)
2. Working relationship with a male boss is smooth and harmonious because they do not entertain gossips; do not talk too much; easy to deal with and will listen to suggestions. (two respondents)
3. A male boss is consistent and firm in his decisions; have the guts to insist on his decisions; have the stability in making decisions. Most of all they don't play favorites (favoritism). (three respondent)
4. Unlike the woman boss who is very strict and not very “**kuti**” (stringent) male bosses are more understanding. They don't nitpick and are less bossy. (three respondents).

The male respondent who chose a female boss answered that female boss is sensitive and very particular in the academic and physical aspect of the school which is necessary in education. They said that they could easily communicate with a female boss. Majority of the respondents said that their responses are based on their experiences working with a male and female school administrator.

The case of the Deped teachers is not isolated. A recent study published by the National Academy of Sciences conducted by business-school professors from Columbia University, Northwestern University and the University of Chicago, in an article published by Will Yacowicz on March 18, 2014, found out that when equally qualified male and female candidates apply for a job, the managers of both sexes are twice as likely to hire men than women.

The findings support the contention of Sto. Tomas (1991), former chairperson of the Civil Service Commission, that a lady boss is even a worst administrator especially in decision-making. She further explains that a woman gets to the top by working usually as hard as her male counterparts and, once she gets there, she expects her fellow women to go through the same route. No wonder that both male and female respondents answered that a woman boss are strict, bossy and overly meticulous.

C. Attitudes Towards Gender Role Performance

Taking care of babies is not necessarily a mother's job. However biological function has dictated it and the family has continued it. Thus it is acquired by force of tradition. Similarly, no law in nature requires the father to be the principal provider. Necessity forced it on him (Mendez et.al, 1984:13).

It is neither an economic nor a biological imperative that women be chiefly responsible for childcare. Nevertheless, this responsibility has been an integral part of the role of female in all known societies; no society has ever assigned this role chiefly to males (Saxton, 1996:312).

The Philippines, as a patriarchal society, commonly believes that men and women have different roles to play. This patriarchy, according to Sobritchea (1992), is deeply entrenched in all its social, political and economic institution and the appropriate roles played by men and women had been embedded in the cultural construction of masculinity and femininity. In turn, this, according to her, has

greatly emphasized the significance and value of men's work over women's work which is often relegated with lesser weight and importance.

Evans (1994) compares sex role stereotyping to shame. She said that society's shame is not only rooted in the "dysfunctional" family. It is reinforced by our position in a "dysfunctional" society that historically has considered women less worthy of men. Womanhood is the weaker sex is maybe a lie, but it's no joke. Society's view of women seems to be predicted on the following myths: 1. Women are naturally passive and submissive. 2. Women aren't capable of making decisions. 3. Women are too emotional and thus too often ruled by their feelings. 4. Women don't think logically.

The study identifies that sex role stereotyping is very strong in the Philippines as reflected in the results. The idea that men are strong, firm, risk-takers, decisive, logical and women as emotional, talkative, indecisive, and weak is very evident in the perceptions and attitudes of the respondents towards gender. As shown in Tables 12, 13 and 14 where a large number of the male respondents tend to favor the statements while almost all of the females displayed a high degree of disagreement. Males claim of strength and ability to be too limited and that physical risk is too great for a female administrator to handle. The trend of the study displayed management/ administration as a stereotyped masculine area and many men still regard the male sexes as better administrators.

Table 12. Women administrators are less assertive and more passive than male administrators and most of the time is usually weak and indecisive

	Male		Female		Total	
	No.	%	No.	%	No.	%
Yes	19	79.2	3	9.1	22	38.6
No	5	20.8	30	90.9	35	61.4
Total	24	100.0	33	100.0	57	100.0

Table 13. In every field, even in professions where women are the majority, it is the men who are administrator because they think logically

	Male		Female		Total	
	No.	%	No.	%	No.	%
Yes	14	58.3	6	18.2	20	35.1
No	10	41.7	27	81.8	37	64.9
total	24	100.0	57	100.0	57	100.0

Table 14. The table below shows the percentage distribution of respondents' response if they are less likely to accept directives and evaluation from a woman boss

	Male		Female		Total	
	No.	%	No.	%	No.	%
Yes	9	37.5	10	30.3	19	33.4
No	11	45.8	19	57.6	30	52.6
Undecided	4	16.7	4	12.1	8	14.0
Total	24	100.0	33	100.0	57	100.0

Table 15, reveals that educational attainment and hard work count much in the career mobility and advancement of the respondents. The gender issue, however, was cast aside. A high level of agreement was expressed by the respondents. In the study of Mai Shoua Khong (2010) among married Hmong American women shows that in Laos, education and employment were restricted to sons who were more valued than daughters. Education nowadays serves as a way to free the minds of the Hmong women and to explore many opportunities. Education to them became a great resource that opened doors and introduced possibilities that perhaps would be otherwise closed and soon forgotten because of family responsibilities. Mahtab (2011) also stressed that investing in human capital through education is one of the most effective means of reducing poverty and a way to encourage sustainable development.

Table 15. Education and hard work are means of social mobility and advancement not gender

	Male		Female		Total	
	No.	%	No.	%	No.	%
Yes	19	79.2	30	90.9	49	86.0
No	5	20.8	3	9.1	8	14.0
Total	24	100.0	33	100.0	57	100.0

Conclusion

The study described and analyzed the effects or influence of the pace and extent of the career mobility of fifty seven (57) male and female teachers in DepEd, Iligan city. The presentation of data is basically descriptive. The collection of data was done through the use of an open questionnaire and interview schedules.

The following were the major findings of the study. Male respondents occupy higher ranks than females. This is because the former have higher educational qualification compared to the latter. As to their age the respondents are concentrated in the 31-50 age bracket. Based on their average age, women are younger than the men. Their average length of service is not proportional to their average age. This is because majority of them were first employed as private school teachers, while others worked in companies.

The findings tend to suggest that the respondent's income is far from the ideal even if combined with that of the spouse. Given this situation, majority of the married respondents claimed that they don't hire any house help. As a result the sole responsibility of taking care of the home and children falls in the hands of the wife even if she is also busy with her teaching task. Though male respondents help in the household chores, interview data shows that economic reasons and family responsibilities constrain women from pursuing a post-graduate course. The burdens of being a wife, a mother, a homemaker and a career woman are obstacles faced by the married female respondents.

Majority of the respondents were influenced by their family (mostly parents) in their choice of career. They added that teaching is not their first career option but were only forced to because of the economic status of the parents.

Study also reveals that the traditional notion that males are superior to women in many aspect of life, still colors the consciousness of the respondents. Women are considered less desirable because of some physical limitation and behavioral traits. Although there are indication that some are gender sensitive, the majority (more on the male respondents) still continue to favor the males in the recruitment of teachers; the same with the choice of immediate boss and other gender statements that were asked.

Female respondents have generally less traditional views than males toward gender roles. Perhaps this might be due in part to the women's growing awareness of sex-role stereotypes and their struggle for gender-equality in everyday life. The continued preference for male and the desire to increase/attract male teachers in the profession are facts that cannot be denied in this study.

Although certain positive changes had occurred today in our society, this study found out that the unusual manner of attaining higher ranks is still based on the traditional mechanism of promotion -- the patronage, padrino and palakasan systems. Interview data indicate that some respondents been victims of these bad practices.

Furthermore, findings also reveal that even in an area dominated by women such as DepEd, traditional norms and practices that pose as stumbling block to women still exists. It can be presumed that the same thing happens more so in a male dominated institutions.

**INFLUENCE OF MOTIVATION, COMPETENCE AND COMPENSATION
TO PERFORMANCE
(Case Study On Investment Board and Integrated Licensing
West Java Province)**

By: Marthalina¹

ABSTRACT

The research aims to determine how much influence the motivation, competence and compensation to the performance of civil servants in the Investment Board and Integrated Licensing of West Java Province.

The sample used in this research is a level III civil servants who numbered 68 people. The techniques used in this sampling is to use sampling with sampling nonprobability saturated. Statistical methods of data analysis using Equation Model (SEM) which produced a model independent variable influence to variable dependen through the relationship between dimensions.

The result is a model of the influence of motivation, competency and compensation are each affects the performance of individuals with moderate effect, partially affect the performance of individuals with strong influences and jointly affect individual performance with a very strong influence.

Based on the analysis results of this research concluded that (1) motivation, competency and compensation provide positive and significant impact on the performance of individuals with moderate and strong dominant category. (2) motivation, competence and partial compensation provide positive and significant impact on the performance of the individual with the dominant category is very strong and powerful. (3) motivation, competency and compensation jointly provide positive and significant impact on the performance of individuals with very strong category. (4) Efforts to improve the performance of civil servants in category III Investment Board and Integrated Licensing of West Java province is to increase the motivation, competence and compensation together from each civil servant.

Keywords: motivation, competencies, compensation, performance of individual

I. INTRODUCTION

1.1 Background

One task of the government is the implementation of good public services. Licensing is a form of public service that is essential in governance. In the service function, civil servants and the public will interact directly and in the process the public can directly feel and assess how the performance of the civil service and government officials. In the implementation of governmental functions, permitting an indicator to assess whether a government has reached a state of "good government" or not.

Licensing is the bureaucracy is one of the problems that constrain the third after education and health in West Java. This was stated in RKPD West Java province in 2015 that the third point focuses on the increased competitiveness of labor, industry and access to regional economic growth. Having regard to the conditions of global and national economic development in RKPD West Java province in 2015, a scenario of economic growth in West Java is projected to grow in the range of 6.2 to 6.8 percent with inflation in the range of 6.3 to 7.3 percent.

The poverty rate will gradually decline predicted and in the range from 6.8 to 5.9 percent. In line with the poverty rate, unemployment rate will also have a downward trend in the range of 8.0 to 7.5 percent. Quoted from the site www.kemitraan.co.id, the positive conditions that will occur in West Java is supported by index hospitality investment in the first rank with a value of 9.33 (scale of 1-10) among all provinces in Indonesia with the rate of economic growth per capita 9.75 percent.

Based on BPS data of West Java province in the period 2012-2013, a significant decrease in the number of workers in agriculture and at the same time an increasing number of workers in the field of industry and services. For the number of workers in trade and other relatively stable. This means that there has been increased employment in the industrial and service sectors that has displaced people in West Java jobs that previously the majority are farmers now shifted to workers in industry and services.

This condition is inversely proportional to economic equality in West Java which is inseparable from the development of economic growth, inflation, the GDP per capita, and the Gini index. Based on BPS data of West Java province in February 2014, the pace of economic growth in West Java in the period 2012-2013 decreased by 0.15%, followed by rising inflation as a result of rising fuel prices. This condition requires the government to think an extra order of competition need to be coupled with the ease of investment and licensing services that people's income increases.

Positive conditions this would not be fully in line with the expectations of society and the business world that still complain about the service process of licensing by the government who do not have the clarity of procedures, complicated, non-transparent, the process time of uncertainty and high costs to be incurred primarily related to costs is not official.

Chairman of the Indonesian Young Entrepreneurs Association (HIPMI), West Java, Yedi Naidoo through newspapers Media Mind argues to this day the regional government still has to improve related rules and implementation concerning the establishment of a business license, the lack of incentives for entrepreneurs, and lack of socialization certification for MSMEs and labor. Yedi explained, based on the facts on the ground, the establishment of a business license is still relatively complicated and convoluted. In addition, the cost was not small. Not to mention, their extortion practices that are still happening today. Taxation policy 1 percent of the turnover of newly assigned rendered ineffective if it is not accompanied by the addition of incentives for businesses.

This situation was ironic when seen with the high potential area of West Java as the most friendly investment and economic growth exceeded the national average it is inversely proportional to the quality of public services caused by lack of budget allocation. Services considered to address the problem has not been optimal, West Java Provincial Government on 3 November 2014 has made changes and downsizing at some of the regional organization structure (OPD), which is one form of optimization of performance in the Provincial Government of West Java. Structural changes in the Agency Licensing Services Integrated (BPPT) and the Coordinating Board of Investment (BKPM) to Board of Investment and Integrated Licensing (BPMPT) West Java, which is based on the publication of the Regional Regulation No. 4 of 2014 which civil servants are expected to work better and professional.

Changes in the structure of the WTO into a Board of Investment and Integrated Licensing of West Java Province is evidence of the seriousness of the West Java Provincial Government in addressing important and strategic role BPMPT function as the starting gate to investment and economic growth through the business world. Based on the data the authors obtained in court on March 24, 2015, the number of civil servants at the Board of Investment and Integrated Licensing of West Java province about 132 (one hundred and thirty-two) which consists of 15 (fifteen) PNS group IV, 82 (eighty-two) level III civil servants, and 35 (thirty-five) level III civil servants. In this study the authors were interested in seeing the influence of motivation, level of competence and compensation for civil servants in category III.

This research refers to Max Weber's theory cited by (Giddens, 1986) which defines social stratification as a classification of persons belonging to a particular social system into layers. PNS group III can be categorized as a middle class which is quantitatively more than any other class of civil servants so that from the side of the opportunity has great potential to continue to develop a career and competence within an organization. PNS performance within an organization can be improved in several ways, for example through education, training, provision of adequate compensation, creating a positive work environment, welfare provision and the provision of a good motivation. Through these processes PNS expected to further maximize the responsibility for their work because it already be equipped by education and training related to the implementation of the work.

In addition to providing motivation and increased competence, one form of business establishments who excel in retaining employees is to provide welfare through appropriate compensation for employees. The provision of this compensation will create peace, morale, dedication and loyal attitude towards the agency will ensure the achievement of goals or objectives predetermined agencies.

Award motivation is basically the rights of employees and the obligation of institutions to support the contribution of employees to improve performance and achieve the intended purpose. Based on the information that the author got from Head of Sub Division Officer and the Public Investment Board and Integrated Licensing of West Java Province Capital Dra.Teti Rachmawati, MAB on March 24, 2015, turned out to be a common problem on the employees are behaving work and work performance of civil servants. Still found civil servants who present late without permission, go home early without permission, do not come to work without a permit, and no duty or official orders and subject to disciplinary punishment in PP 53 in 2010.

Motivation to work has contributed in fulfilling the needs of individual civil servants, if an employee has a good motivation in carrying out its duties, the achievement of the targets would be a good employee. Based on information obtained from several employees who were interviewed by investigators between Mr. Erik Diyan Nurdiyansyah, S. STP as the staff at Sub Division Officer and General and Mrs. Artanti Kusumaningsih, S.E. as the staff at Sub Division of Finance Investment and Integrated Licensing of West Java province on March 24, 2015 said that there are still some employees whose performance declines as influenced by the lack of motivation, including the problem of physiological needs which include salaries are insufficient. This is because the need is more and more while the salaries and benefits paid still cannot compensate for the daily needs of employees. Lack of respect for the employees according to the information that researchers can still

hampered by the lack of recognition given by the leadership to employees. This can be seen by the employees there are some people who are less active or do not care to give an opinion or feedback when meetings or activities.

It is then used as an excuse for researchers to take a title of research confirming that affect the performance of work motivation. From this statement is reinforced by the opinion of Victor Vroom in the book (Winardi, 2004) which states that:

“the relationship between the motivation of a person doing an activity with a performance that will be obtained, that is, if motivation is low do not expect the results of work (performance) would be good. when motivation is low, then the performance of the employees will shrink as if their ability is low.

Referring to the above theory, the motivation is something that is needed by an employee, the higher the motivation to work it will create morale will be better and will result in the increase of performance will be given by the employee to the institution where they work. Based on information provided by the Head of Sub Division Officer and the Public Investment Board and Integrated Licensing province of West Java Province Dra. Teti Rachmawati, MAB on March 24, 2015, one of the problems why employee performance decline this is due to a problem with the skills, achievement of employment and attendance or punctuality at work.

This means there are employees who do not adhere to the rules applied by the Agency for Investment and Integrated Licensing of West Java Province. On the other hand the performance of employees rated as slow in carrying out the task due to the awareness and the level of competence of employees of the main functions is not optimal and the implementation of IBK (Instrument Performance-Based) for employees is still not implemented properly because the assessment instrument IBK handed over to the employee concerned so that the amount of the pieces do not fit.

Improved performance of civil servants has made various efforts by the government and one of them made a payroll system that is linked to performance appraisal system is expected to improve the performance of civil servants and cut the clay levies practices developed in the community. The Commission states that the Local Government Ombudsman is an institution or a government institution most committed illicit payments to public practice. Illegal charges to be highly developed due to the absence of strict sanctions and internal controls are weak. According to the Ombudsman Commissioner Budi Santoso that the regional government is in the first as a state agency or institution most committed

extortion. It was based on public and Ombudsman investigations conducted in the first half of 2013 were published on the site www.sinarharapan.co.id.

Members of the Commission II DPR Yasona H Laoly found illegal charges that occur due to mental problems and bureaucracy are most common in the area. In response to rampant illegal levies that still exist in society, the West Java provincial government has tried to create governance and regional economic development better to achieving the vision and mission through bureaucratic reform program.

The implementation of the remuneration policy in West Java province has been conducted since 2010, which is stipulated in West Java Governor No. 119 of 2009 on Guidelines Performance Measurement In Granting Additional Income For civil servants and civil servant in the Environment Government of the Province of West Java Governor Regulation is a follow up of the policy minister in the form of a Circular Letter of the Minister of State Apparatus Empowerment Number: SE / 28 / M.PAN / 10/2004 dated October 10, 2004 concerning Settlement of Civil Servants.

Differences in the cost of standard employee benefits large enough lead to reduced levels of inter-group happens to employee welfare. Perceived weakness associated with providing these benefits is the amount of allowances both structural and functional is relatively larger than the amount of their basic salary received. According to Rusli, this phenomenon shows that the award given to the performance and competence of the employees are still lacking. Therefore do not be surprised if many civil servants see more oriented to the pursuit of office rather than showing work performance and increase competence.

The unmet needs minimal civil life will have an impact on the activities of counter produkris in the form of additional income either in hours or after work hours. Even sometimes these conditions gave rise to the practice of bribery, collusion and corruption, which of course makes the performance of civil servants slumped and became in the public eye. It happens almost every government agencies at both central and local, either province, the city and district.

Gratification Director of the Corruption Eradication Commission (KPK) Supradiono Giri stated remuneration for civil servants (PNS) is required in order to prevent corruption. According to the Commission www.solopos.com sites prove a better salary then the efficiency and performance of civil servants also becomes better.

According to (Edwin B. Flippo, 2007) Improved well-being do such as through the provision of benefits, bonuses, facilitation work, lifting positions. Additionally (Hani Handoko, 2003) argues that welfare is compensated with the intent to provide fringe benefits to

employees for the execution of the work and to motivate them to achieve the desired performance. Jensen and Mecling in the book (Harianja, 2002): allowances or incentives are used to encourage employees to improve the quality and quantity of work. The allowance beneficial for both employers and employees. If the benefits received are not associated with job performance, but is private, then they will feel injustice that can lead to dissatisfaction which in turn can influence behavior, such as absenteeism and decreased work performance ".

Viewed from a variety of the above problems, it can be understood that the performance of civil servants is an accumulation of various supporting elements such as motivation, the level of competence and compensation policy. Based on this background, the researchers interested in conducting research.

1.2 Problems

Issues to be raised in this paper is the issue of public services that are common between the government, private sector, and the community is that of how the performance of civil servants in providing public services to the community. In this study the authors wanted to know about how much influence the motivation, competence and compensation jointly to the performance of civil servants in the Investment Board and Integrated Licensing of West Java province and how the efforts of the Government of West Java province in order to improve the performance of civil servants at the Board of Investment and Licensing integrated West Java Province.

II. RESEARCH METHODS

Based on research purposes, according to (Sugiono, 2012) this type of research is an explanatory research is research that tries to explain why a phenomenon or a social phenomenon may occur. This research often linking the phenomenon to other phenomena. This study aims to connect the patterns are different, but have relevance as well as produce a pattern of relationships cause - effect. According to (Bambang and Lina, 2010) states that in an explanatory research, has actually contained explorative and descriptive research.

Placement theory (Creswell, 2010) in quantitative research uses theory at the beginning of the study proposal. Because the goal is to test or verify a theory by testing the formulation of the problem and hypotheses derived from the study of the theory is taken. According to (Sugiono, 2012) hypothesis in this study using associative hypothesis, namely

temporary answer to the formula associative problem, which question the relationship between two or more variables.

Researchers will analyze the data which is the primary data gathered from the questionnaire answers, the questionnaire is the result of the answers by the respondents. Respondents in this study is a level III civil servants at the Board of Investment and Integrated Licensing of West Java Province who were sixty-eight (68) persons. Researchers will be analyzed and processed by means of SEM (Structural Equation Modeling).

III. LITERATURE REVIEW

a. MOTIVATION

Is the famous theory of motivation theory of Maslow in (Mangkunagara, 2010) which is seen as a pioneer of the theory of motivation. The theory of motivation developed in the 1940s was essentially revolves around the notion that humans have five levels or hierarchy of needs. Is as follows:

1. Theory of Needs

- a) The need is defined as a discrepancy or contradiction between the reality experienced by the impulse that is inside.
- b) Abraham Maslow's hierarchy of human needs above reveals physiological needs (basic need), security and comfort (safety and security), ownership (belongingness), self-esteem (esteem), and self-actualization (actualization).

2. Maslow's Hierarchy of Needs

- a) The need for physiological, namely the need to eat, drink, physical protection, breathing, sexual. This requirement is a requirement lowest level or the most basic needs.
- b) The need for a sense of security, namely the need for protection from threats, dangers, conflicts, and the environment.
- c) The need to feel ownership, namely the need to be accepted by the group, affiliated, interact, and the need to love and be loved.
- d) The need for self-esteem, which needs to be respected and appreciated by others.
- e) The need to actualize themselves, namely the need to use the abilities, skills and potential. The need to argue and express ideas, assessment and critique of something.

b. COMPETENCE

According to (Wibowo, 2011) states that:

competence is an ability to execute and do a job or task that is based on the skills and knowledge as well as supported by work attitude adopted by the job. Competence in relation to the effectiveness of the organization will determine how efforts to accomplish the goals of the organization concerned. As a guideline in the operationalization of the variable employee competence, there is a theoretical view of the characteristics of competence put forward by Spencer cited (Wibowo, 2011), namely:

1. The motive is something that consistently thinks or wants the person who caused the action.
2. Nature is the physical character and consistent responses to situations or information.
3. The concept itself is covered attitudes, values, or self-image.
4. Knowledge is information that people have in their specific field.
5. Skills is the ability to do certain physical or mental tasks.

c. COMPENSATION

According to (Handoko, 1993) the amount of compensation reflects the size of their work among the employees themselves, their families and communities. While compensation according to Keith (Kadarisman, 2012) given organization exists in the form of money unisex nonmonetary.

Compensation under (Handoko, 2001) is a stimulus for the employee to achieve a certain level of performance as well as a builder and maintainer expectations of employees who are stimuli that are offered to employees to perform work pursuant to or higher than the standards that have been set. If employees view their compensation is inadequate then the achievement, motivation and job satisfaction they can drop dramatically. Therefore, the compensation program is very important to be considered seriously because compensation can improve or degrade performance, job satisfaction, and employee motivation. According to Dessler cited by (Lies, 2009) compensation has three components as follows:

1. Payment of money directly (direct financial payment) in the form of wages, incentive or bonus / commission.
2. Payment indirectly (indirect payment) in the form of benefits and insurance.
3. The non-financial rewards (non-financial rewards), such as flexible work hours and prestigious offices

Some local governments provide benefits solely on a cash basis that are equally regardless of how the performance of the individual. This has caused not achieving optimum

performance level for a number of employees as regards good or bad performance benefits received money remains the same.

d. PERFORMANCE

Performance by (Marwansyah, 2012) is a person's achievement or performance with respect to the tasks assigned to him. There are three levels of performance by (Sudarmanto, 2009), namely:

1. The performance of the organization; the achievement of results (outcomes) at the level of the organization or unit of analysis. Performance at the organizational level is associated with organizational objectives, organizational design, and management of the organization.
2. The performance of the process; a performance on stage in the process to produce a product or service. Performance in this process is influenced by the purpose of the process, process design, and process management.
3. Individual performance / work; an achievement or effectiveness of the employee or employment levels. Performance at this level is influenced by the purpose of the work, design work..

The performance of an employee or an employee in an organization or institution work, influenced by several factors, both internal factors, namely from the employees themselves as well as external factors, namely on the environment or the work organization itself.

Performance (Performance) by (Sudarmanto, 2009) is the output of work invaluable required by workplace organization invaluable to consist of work, work behavior, and personal qualities to do with the work in general, the dimensions of the performance can be grouped into three types , ie work, work behavior, and personal qualities associated with the job " .

Wirawan states that there are three dimensions of performance are:

1. Work Results

According to Dawn and Heru (2010: 139-140) "The performance criteria based on the results of the work is focused on what has been achieved or generated, rather than how something is accomplished or produced". The results of one's work according Sedarmayanti workers (2011: 259-260) is a management process or an organization as a whole, where the results of the work have to be shown the evidence is concrete and measurable "

2. Work Behavior

According to Dawn and Heru (2010: 139-140) "The performance criteria based on work behavior is focused on how the work is carried out, and it is vital for jobs that require inter-personal relationships". Work behaviors according Sedarmayanti (2011: 259-260) is related to the execution of the work, work performance, efficient execution of the work. "

3. The personal nature of that has to do with work

According to Dawn and Heru (2010: 139-140) This criterion focuses on an employee's personal characteristics, such as loyalty, reliability, communication skills, and leadership skills. The properties are often assessed during the appraisal process. These criteria focus on the types of on how a person, not what was accomplished or not accomplished person in his job.

table 3.1

Variable Operational Definition Motivation, Competence, Compensation and Individual Performance

Variable	Subvariable	Indicators
1	2	3
MOTIVATION (X1) Maslow (1943)	1. Basic need	1. The necessities of life.
		2. A guarantee of treatment and health
		3. Want to flourish
	2. Safety and security	1. The right as a human being
		2. Fear of being fired from a job
		3. Security and safety
	3. Belongingness	1. A good leader
		2. The treatment of undifferentiated
		3. A harmonious relationship
	4. Esteem	1. The promotion and class
		2. Provision of appropriate bonus
		3. Providing a decent salary
	5. Actualization	1. Getting the opportunity to be able to show the ability and creativity in public
		2. Getting awards and recognition
		3. Improving the competence of self
COMPETENTION (X2) Wibowo (2011:325-326)	1. Motif	1. Satisfaction with salary
		2. Satisfaction with the work atmosphere
		3. Benefits area
		4. Allowances overtime
	2. Innate	1. Consistent duties
		2. Consistent obey the rules

Variable	Subvariable	Indicators	
1	2	3	
	3. Self Concept	3. Loyal to the leader	
		1. Be honest in word and action	
		2. Attitude in providing services	
	4. Knowledge	3. Attitude in the mix	
		1. Formal Education	
		2. Education expertise	
		3. Training of the field of the task at hand	
	5. Skills	4. Training internally	
		1. The initiative in carrying out the task	
		2. Creative problem solving	
	COMPENSATION (X3) Gary Dessler (2003)	1. Direct	3. The error rate duty
			1. Salaries
2. Indirect with Job		2. The incentive / bonus / commission	
		1. Allowances	
3. Reward Nonfinancial		2. Insurance	
		1. Flexible working hours	
INDIVIDUAL PERFORMANCE (Y) Wirawan (2012)	1. Work Results	2. Office of Prestigious	
		1. Quantity results	
		2. Quality of results	
		3. Accuracy in carrying out the work	
		4. The speed in carrying out the work	
	2. Work Behavior	5. The number of workplace accidents or errors employee to do the job.	
		1. Friendly to customers	
		2. Discipline of work	
		3. Accuracy in work	
		4. Professionalism	
		5. Cooperation	
	3. Personal nature of the existing relationship	6. Leadership in teamwork	
		1. Knowledge	
		2. Skills	
		3. Honesty	
		4. Cleanliness	
		5. Initiatives	
		6. Craft	
7. Patience			
8. Attitude to work			
9. Morale			

IV. ANALYSIS OF RESULTS AND DISCUSSION

Effect of Motivation (X1), Competence Employees (X2) and compensation (X3) Against Individual Performance (Y)

4.1. Assessment Model FIT

Rate fit model aims to assess whether the data collected in the form of the questionnaire was appropriate or suitable model. Based on the SEM analysis output using the software LISREL 8:54 for windows obtained values are used as references in testing the model as a whole. Those values are a measure of whether a categorized models have a relationship or not. In a fit model will be known how the relationship between the dimensions of the independent variable and how the influence of the independent variable to variable dipenden. The results were as follows

Tabel 4.1
Indikator Goodness Of Fit (GOF)

Fit Measure	standard Relationships	Research result	level of Compliance
χ^2/df	0 χ^2/df 2	1.340	Fit
RMSEA	0 RMSEA .008	0.071	Fit
Confidence Interval (CI)	close to RMSEA, left boundary of CI= 0.00	(0.034 ; 0.10)	Fit
NFI	0.90 NFI 1.00	0.96	Fit
NNFI	0.90 NNFI 1.00	0.98	Fit
CFI	0.90 CFI 1.00	0.98	Fit
GFI	0.90 CFI 1.00	0.77	Not fit

Sumber: *Structural Equation Modeling dengan Lisrel 8.8 (wijayanto, 2008)*

Based on Table 4.1 it can be seen that the size of the GOF that has been studied, gained 6 GOF appropriate indicators. Value Chi-Square / Degrees of Freedom (χ^2 / df) which is the ratio between the value of chi-square with degrees of freedom (χ^2 / df) is 1.340, so it can be concluded that by relying on the complexity of the model, then the level of concordance model can be said to be appropriate

Value Root Mean Square Error of Approximation (RMSEA), on the model of this study was 0071. It identifies that the appropriate level of fitness model, while the CI also indicates that the value of RMSEA has good accuracy and identify that the appropriate level according to the model, then NFI, and CFI NNFI have the appropriate level of fitness and GFI have a level of conformity that were not appropriate.

Based on the coefficient values above which meet the requirements of the suitability of a model, it can be concluded that in general the model obtained in this study have a good level of Conformity.

Chi-square = 131.36, *df* = 89, *p-value* = 0.01381, *RMSEA* = 0.071

Source : Output of research data LISREL 8:54 version for windows

Figure 4.1

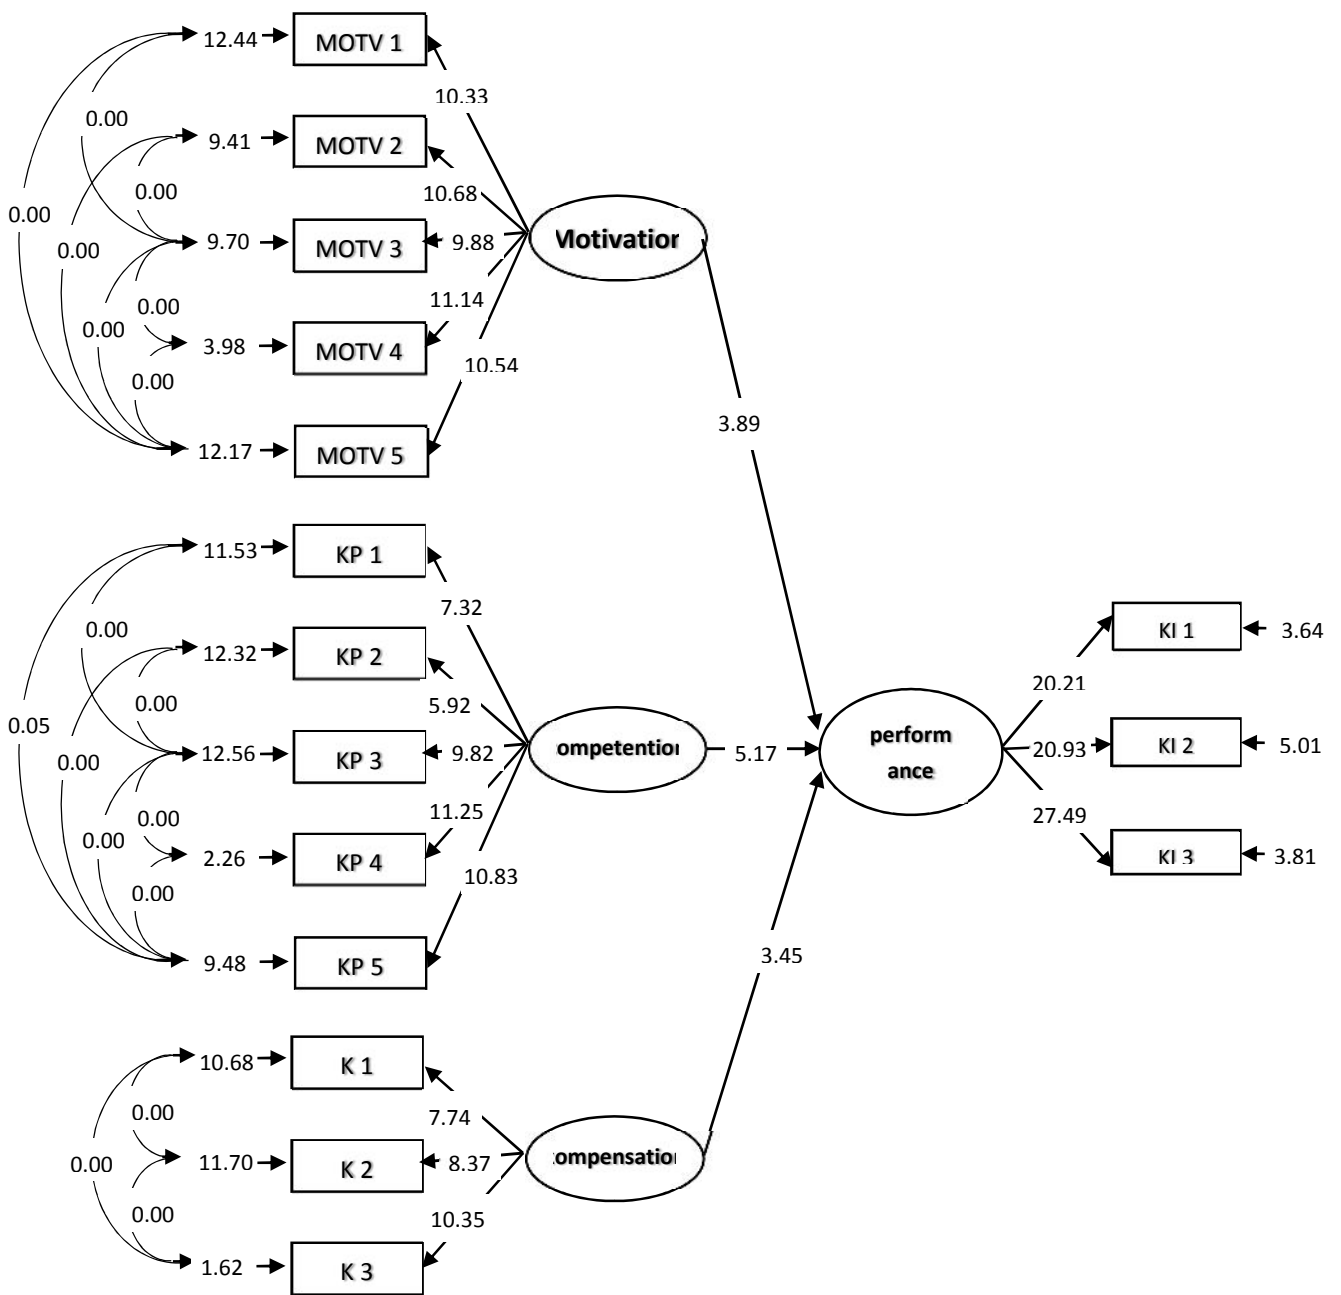

Model Research influence of motivation (X1), Competence (X2) and compensation (X3) jointly against Individual Performance (Y) Based on Standard Solution

Based on Figure 4.1 it can be seen that the influence of motivation (X1), Competence (X2) and compensation (X3) jointly against Individual Performance (Y) has a validity value of 0:24 for the variable motivation (X1) to Individual Performance (Y),

amounting to 0:47 to variable Competence (X2) on the Individual performance (Y) and 0.29 for the variable compensation (X3) on Individual performance (Y). If the independent variable (motivation (X1), Competence (X2) and compensation (X3)) affects variable dipenden (Individual Performance (Y)) has a maximum value is 1:00 then 0:24 influenced by variables motivation (X1), 0:47 influenced by variables Competence (X2) and 0:29 influenced by variable compensation (X3). The motivation variable (X1), Competence (X2) and compensation (X3) significantly valid and reliable influencing variables Individual Performance (Y).

Variable motivation (X1) can be determined that the dimensions of self-esteem has a value of relationship models the highest rate of the variable motivation (X1) which directly affects variable Individual Performance (Y) with the value of the relationship models of 0.98 and variable Competence (X2) can be determined that the dimensions knowledge has the highest value of relationship models to variable Competence (X2) that directly affect individual performance variable (Y) with grades of 0.99 model relationships. While in the variable compensation (X3) can be determined that the dimensions of non-financial rewards have the strongest relationship value models to variable compensation (X3) that directly affect individual performance variable (Y) with the value of each model relationship 0.97. Another dimension value model relationships are weaker when compared with the amount of other dimensions in the variable motivation (X1), Competence (X2) and compensation (X3). Based on the above results can be seen that the performance of individual civil servants in category III Investment Board and Integrated Licensing of West Java province in general is influenced by motivation variable (X1), Competence (X2) and variable compensation (X3)

The results of the above study shows that in doing a job, level III civil servants in the Board of Investment and Licensing unified West Java Province considered that variable compensation is as the most dominant variable affecting the level of performance of a person with knowledge is as the largest capital for someone to be able to work with professional and better provide services to the community.

Chi-square = 131.36, df = 89, p-value = 0.01381, RMSEA = 0.071

Source : Output research data LISREL versi 8.54 for windows

Figure 4.2

Model Research influence of motivation (X1), Competence (X2) and compensation (X3) jointly against Individual Performance (Y) Based on the T-Value

Based on Figure 4.2 it can be seen that the Competence motivation (X1), Competence (X2) and compensation (X3) influence the Individual Performance (Y) together with the value of the t-value of 3.89 for the variable motivation (X1) to variable Individual

Performance (Y), 5:17 to variable Competence (X2) to variable Individual performance (Y) and 3:45 for variable compensation (X3) to variable Individual performance (Y). Third t-value is greater than t-table value is 1,996, which means that all of the indicators of each dimension of the variable motivation (X1), Competence (X2) and compensation (X3) can be said to be valid because the value of the t-value is greater of t-table (1.996) at the 5% significance level.

4.2. Structural test

The goal in assessing the structural model is to ascertain whether the effects hypothesized in model conceptualization idukung by empirical data obtained through the survey. This structural test can be seen in the Multiple Linear Regression equations Structural Equations at 8:54 LISREL output for windows. The results were as follows:

structural Equations

$$KI = \text{Motivation} + 0:28 \quad 0:47 \quad 0:29 \quad * \quad * \quad KP + K, \text{ Errorvar.} = 0.059, R^2 = 0.94$$

$$(0,072) \quad (0,091) \quad (0,083) \quad (0,015)$$

$$3.89 \quad 5.17 \quad 3.45 \quad 3.92$$

Tabel 4.2

Results Effect of motivation (X1), Competence (X2) and Compensation (X3) Against Individual Performance (Y)

Ha	Eksogen Variabel	Endogen Variabel	Estimates	T-value	conclusion
H ₇	motivation	Individual Performance	0.28	3.89	fit
	Competence		0.47	5.17	fit
	Compensation		0.29	3.45	fit

< 0.10, t – values > 1.668

< 0.05, t – values > 1.996

< 0.01, t – values > 2.652

source: Output research data LISREL versi 8.54 for windows

Based on Table 4.2 it can be seen that the value estimates or value of the relationship model of the variable motivation (X1), Competence (X2) and compensation (X3) to variable Individual Performance (Y) have a relationship model is very appropriate for all of the indicators of each dimension of the variable motivation (X1), Competence (X2) and compensation (X3) valid or factor loading value 0.28 for motivation variable (X1), 0:47 to

variable Competence (X2) and 0:29 for variable compensation (X3) which, when added up all three are worth more dari 1.00 meaning greater than 0.50 and the value of the t-value greater than t-table (1.996) at the 5% significance level.

Tabel 4.3
Value Regression Equations Motivation (X1), Competence (X2) and compensation (X3) on Performance (Y)

Squared Multiple Correlation for	R ²
Performance	0.94

source : Output research data LISREL versi 8.54 for windows

Based on Table 4.3 it can be seen that the value estimates value the coefficient of determination R² or above is 0.94, which means that 94.0% variance Individual Performance (Y) explained or influenced jointly by the motivation variable (X1), Competence (X2) and compensation (X3), while the remaining 6.0% is explained by factors other than motivation (X1), Competence (X2) and compensation (X3). This suggests that the motivation variable (X1), Competence (X2) and compensation (X3) together have a very strong influence on individual performance variable (Y).

The above research has proven that all the research hypothesis is accepted. This proves that the validity and reliability studies have been consistent and theories used in the study and be in accordance with the facts on the ground. This research has also produced a fact that the independent variable for example motivation, competence or competence can only affect the variable dipenden ie individual performance level III civil servants with influences that are or tend to be weak. To combine two or three independent variables that can affect the value of variable dipenden stronger.

4.3 EFFORTS IN IMPROVING PERFORMANCE OF CIVIL SERVANTS IN THE INVESTMENT BOARD AND INTEGRATED LICENSING

Based on the research described in the previous section, the following is a summary of the research results that can represent simply how the conditions of motivation, competency and compensation that affect the level of performance level III civil servants in the Investment Board and Integrated Licensing province of West Java which is then to strategic steps could be taken in order to improve the performance of civil servants in Group

III to provide professional service to the community. Summary results of this study as well as a response from the working hypothesis and the null hypothesis of the study as follows:

1. The governing board awarded both orally and in writing to the civil servants who are considered outstanding and have the opportunity to improve compensation and responsibilities in the work. This effort is taken based on the results of research that motivation is most needed by PNS group III in the Board of Investment and Integrated Licensing of West Java province is a self-esteem that the fourth level in the pyramid needs Maslow in (Mangkunagara, 2010) in addition to giving awards, head of the organization can provide trust and motivation to level III civil servants to be able to actualize themselves in developing the idea, the opportunity turns of thought and creativity in completing the task.
2. The governing board shall provide opportunities and support both morally and in the form of facilities for the spare time of level III civil servants who seek to improve their competence through continuing education pathways such as undergraduate, postgraduate and undergraduate level to the three that are considered appropriate to the needs or expertise in the field current job. In addition to providing opportunities and support through education, leaders of organizations can also provide an opportunity for civil servants to participate in training to improve the skills and knowledge corresponding to the needs in the field of work. This effort is taken based on the results of research that to improve the performance of civil servants Group III in the Board of Investment and Integrated Licensing of West Java province, PNS group III assumed need to increase knowledge that can be achieved through education and training are considered in accordance with the field work in order to build competence.
3. The governing board and all civil servants in the Board of Investment and Integrated Licensing of West Java province should be able to cooperate well create a comfortable working environment and conducive and maintain the good name of the organization in good standing in the eyes of society and fellow SKPD in West Java province. This effort is taken based on research results indicate that non-financial rewards such as flexible working hours or flexible and conducive working conditions and compensation are considered prestigious is the highest value for the level III civil servants at the Board of Investment and Integrated Licensing of West Java Province.
4. Increase significantly the performance of individuals can be done by providing the motivation, the opportunity competent and compensation together. This was done in view of the importance of providing the motivation, the opportunity competence and provision of appropriate compensation to improve individual performance level III civil

servants, if the leadership only provide motivation alone without giving competence or provide motivation without compensating the individual performance level III civil servants in the Investment Board Integrated Licensing and West Java province likely will not increase.

V. CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusion

Variables Motivation, Competence and Compensation jointly provide positive and significant impact on the performance of civil servants Individual Group III on Investment Board and Integrated Licensing of West Java province with a very strong category.

5.2 Recommendations

Once the researchers conducted an analysis of the influence motivation, competence and Compensation for Performance of Civil Servants in the Board of Investment and Integrated Licensing of West Java province, making observations and collecting data and facts are factual in the field, it can be given suggestions to drive the performance of civil servants as follows :

1. The governing board shall give an example of the value of good leadership to all civil servants in the Investment Board and Integrated Licensing of West Java province to provide motivation to civil servants in the organization and provide opportunities for civil servants who want to increase personal awareness of knowledge and skills through education path;
2. Continuous improvement organization system to proactively keep abreast of the needs and dynamics of the community, especially related to the need for public business licensing and investment from both local and foreign investors;
3. Plan with mature strategic agenda of activities and achievements of the organization so that implementation can walk right on target which is accompanied by close supervision so that it becomes an organizational system that is more dynamic in accordance with the needs and functions of public service and not a rigid organizational change;

4. Increase the number of users at once personal or energy utilization of information technology in the public service for a wide range of advice and other infrastructure supporting the effectiveness and efficiency of public services to the community so that the implementation of the service in the form paper office lest such electronic filing system, sms gateway and groove inspection file online can be accomplished more optimal.
5. Optimizing disciplinary apparatus through an orderly apple in the morning with the adoption of the culture of shame came late by way of a boss or leader sets the example came earlier than subordinates.

Improving the Academic Performance of Students in the Fiscal and Financial Management Course at Nakhon Pathom Rajabhat University

Thidarat Suebyart
Faculty of Humanities and Social Science
Nakhon Pathom Rajabhat University
E-mail: Chanokchone_b@hotmail.com

Abstract

After a new curriculum was officially implemented by the Public Administration Program at Nakhon Pathom Rajabhat University (NPRU) in 2012, there were many changes made, including in the Fiscal and Financial Management subject. This course in the old curriculum was studied by the third year students when they already had basic knowledge about economics, so they could understand fiscal and financial concepts fairly easily. The purpose of this study was to answer the following questions: 1) How does from the performance of second year students differ from third year students? 2) What are the factors that support the successful study of Fiscal and Financial Management? 3) How can the instructor improve the academic performance of second year students studying Fiscal and Financial Management in the

future? This study utilized the concepts of action research to collect both quantitative data (from test results) and qualitative data (from focus groups) from 380 students in the second year and the third year of the Public Administration Program at NPRU. Results showed that the second year performance was lower than the third year as a result of a combination of factors. However, even the performance of the third year students was impacted by large class sizes and other negative factors and became a focus for improvement. In addition, it was shown that basic factors such as student motivation, a productive classroom environment, and responsible study habits are necessary for students to understand this rather challenging subject. These factors were focused on, by the students and the instructor, in the second half of the term. As a result of quite low midterm

passing rates and focus group feedback, the instructor made significant, student-centered changes in the second half of the term. Preliminary results from the final exam indicate that the changes made by the students and by the instructor in the second half of the term were successful.

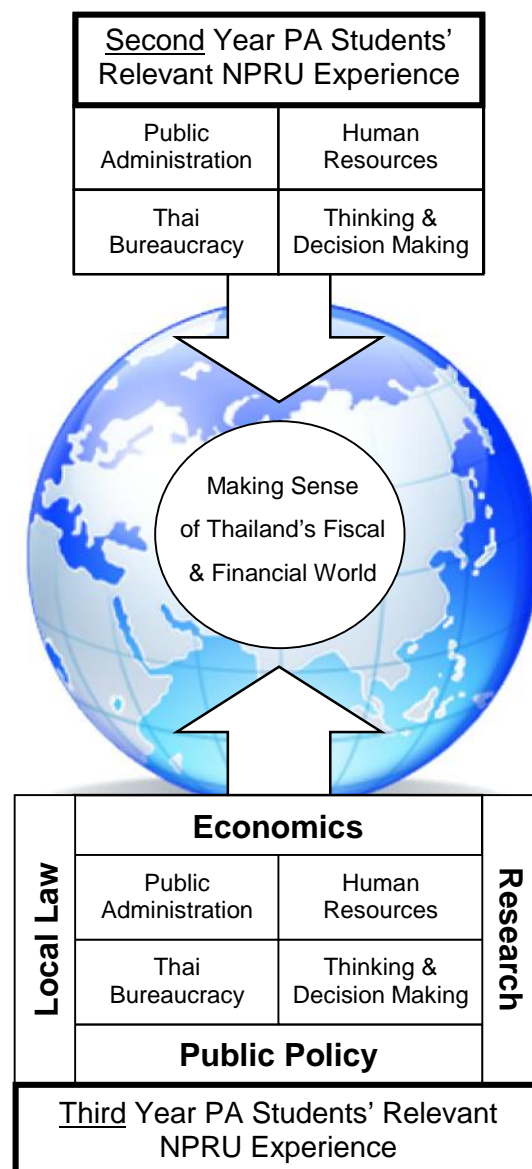

Keywords: Curriculum, Public Administration, Fiscal and Financial Management

Introduction

Nowadays, education is more important for Thai people because Thailand is developing and better jobs are available. In addition, Thailand joined the ASEAN Economic Community (AEC) in 2015 so there are more opportunities and challenges for Thai people. For students who are graduating, there is more competition for good jobs. To help students be successful in the AEC, many Thai universities are trying to develop their curriculums including Nakhon Pathom Rajabhat University. In 2012, the Public Administration Program revised its curriculum so that students can have on-the-job training for their entire fourth year.

As a result, the timing of many courses had to be changed and condensed. One of these courses is Fiscal and Financial Management. This subject is concerned with fiscal policy, monetary policy, taxation, expenditure, public debt, and government policies for development. Public Administration (PA) students must know about these topics so that they can be effective in government jobs in the future. Students at other Thai universities. Other universities must also study this subject in the third year. This course in the old curriculum was studied by the third year students when they already had basic knowledge about economics, so they could understand fiscal and financial concepts fairly easily. However, in the new curriculum, second year students have to study this course before they study economics, so it is difficult for them to understand basic concepts like supply and demand. In the first term of 2013, there was an overlap between the old curriculum and the new curriculum, so both second and third year students had to study Fiscal and Financial Management in the same term

with the same instructor. This created additional challenges because the large number of students studying the subject in the same term required joining smaller student groups to create much larger class sizes than usual, up to 94 students in one class. I was concerned about students' comprehension, motivation, and performance and, as a result, decided to undertake this research. The purpose of this study was to answer the following questions: 1) How does the performance of second year students differ from third year students? 2) What are the factors that support the successful study of Fiscal and Financial Management? 3) How can the instructor improve the performance of second year students studying Fiscal and Financial Management in the future?

*Figure 1.1: Making sense of Thailand's fiscal and financial world - a comparison of the different perspectives of second and third year Public Administration students due to the differences in relevant NPRU experience. Adapted from *Comprehension and Learning: a conceptual framework for teachers* (pp. 1-12), by F. Smith, 1975, New York: Holt, Rinehart and Winston.*

Figure 1.1 is a diagrammatic representation of the impact students' prior university experience has on how they make sense of the world, specifically Thailand's fiscal and financial world, and it highlights why the second and third year students have different perspectives in relation to this course.

Third year students who were studying Fiscal and Financial Management had a reasonable amount of prior knowledge. They had more experience with other subjects, including Economics, Public Policy, Local Law, and Research, so they could interpret and understand the new concepts more easily. Unfortunately, the second year students had much less prior knowledge and less experience, so they struggled to make sense of the financial world of Thailand, specifically as it relates to fiscal management for effective public administration. While I could try to increase their background knowledge, I could not create a year's worth of experience for the second year students.

Literature Review

According to Lin S. Norton (2009), there are two main classifications commonly used for concepts of teaching: information transmission and support of students' learning. The first is where instructors consider themselves to be knowledgeable about their subjects, and they transmit what they know to their students. This can also be considered content-oriented or teacher-centered. In contrast, the second type of teaching has the instructors as facilitators rather than transmitters. They support the process of active students determining meaning and acquiring knowledge themselves rather than simply receiving it from instructors. Learning-orientated and student-centered are other terms for this process of learning support.

These concepts are related to how the Fiscal and Financial Management subject is taught. I use both teacher-centered and student-centered methods for this subject. When I transmit the background information about the economy of Thailand, I teach by using PowerPoint slides, followed by some exercises for the students after finishing each

chapter. However, in 2013, in the second half of the first term, I focused more on giving case studies for students to discuss in groups in the class in a learning-oriented process (see Figure 1.4 in the Conclusion).

I initially avoided case studies in this term due to the second year students and the change in the curriculum. Case studies are more difficult for second year students for two reasons. The first reason is that they lack the basic knowledge about general economics so I must spend more time in the information transmission stage. This, in turn, allows less time for student-centered activities. The second reason is that they are less able to participate in these discussions because they do not understand the subject as well as the third year students and also do not have other related background knowledge that the third year students have already acquired. Overall, this is detrimental to the second year students' motivation because simply receiving information from me is less enjoyable than the student-centered activities. This reduced motivation makes them less likely to pay attention, which also reduces their understanding

of the subject. In contrast, the third year students can more actively participate in the discussions and understand the key concepts for use in their future careers.

Motivation is critical to the learning process. Without motivation, it is very difficult for students to learn. There are four factors that can affect the motivation of students according to Keller (1983): relevance, interest, expectation, and satisfaction. Student's motivation can be increased if they consider the work to be relevant or if they are interested in it. Likewise, if they expect to succeed and/or feel satisfaction in their achievement, it can be motivating. Unfortunately, students can also be demotivated if they have problems with the work, if it is too hard, if they cannot meet the expectations, or if they have had a bad experience before.

These factors are of concern in relation to my students. In terms of relevance, I can explain to second year students how fiscal and financial management is very relevant to their future work. However, because they have not had any work experience, it may be

difficult for them to imagine and it is not very motivating. It is a little more motivating for third year students, who are about to start their first internships in a government office or business, as they can see more directly how knowledge from this subject will help them in their jobs. In addition, if the class is too difficult for second year students, it may de-motivate them because they do not expect to succeed. Students who received low scores on the first test (a large majority) may also have been de-motivated because they did not feel satisfied with their performance. Finally, my ability to make the class interesting with extra activities was limited by the large class sizes and the time needed to teach extra background information to the second year students. Therefore, student motivation was a big challenge in the first term of 2013 and this research study was able to directly impact the learning experience of my students.

Frank Smith (1975) said that students try to make sense of the world by relating all of their experience to the theory of the world in their heads, which is what they have been developing and testing since they were born.

This theory is what students bring with them to school: their expectations, their attitudes, and their beliefs. When they want to make sense of what they are learning, they will use this prior knowledge because it is their foundation for learning. As they continue to learn, they will integrate the new experience with the old and their foundations will grow. However, just as the summary of their experience allows them to interpret new events, a lack of experience might distort the process and interfere with comprehension and learning.

Research Methods

1. The study and related research:

1) This study focused on quantitative and qualitative data from 203 second year and 177 third year students in the Public Administration Program at Nakhon Pathom Rajabhat University studying Fiscal and Financial Management.

2) Concepts from action research were used in order to deal with a problematic situation and improve student learning.

2. Research tools:

Test #1	Number of students	Max (out of 5)	Min	Arithmetic mean	Comparison of mean scores	Percentage difference
Second year	203	4.0	0	1.83		
Third year	177	4.5	0	2.22	+ 0.39	+ 21%

The research was done in two stages. In the first stage, the scores on the Fiscal and Financial Management test #1 and the midterm examination were used to compare the performance of second and third year students. I used the first test and the midterm examination in order to be able to make any necessary changes in the second half of the term to improve the learning process and increase the achievement of the students. The scores on the final examination were used in the second stage of the research to assess the effectiveness of the changes made in the second half of the term.

3. Information collection methods:

There were three methods of data collection: compiling test results; gathering student input from focus groups in class; and observing the second and third year students in the classroom while studying Fiscal and Financial Management in the first term of 2013.

Quantitative Research Results

Test #1, the midterm examination and final examination results were analyzed to find the maximum, minimum, and mean scores. They were also compared to show the difference in performance between the second and third year students. The midterm and final were additionally categorized to show the percent correct and equivalent grade ranges. Finally, the midterm and final results were graphed to show a clearer picture of overall results.

Table 1.1: Scores of the second and third year Public Administration Program students on the Fiscal and Financial Management test #1

Table 1.1 shows the total results for test #1 taken by five groups of second year students and five groups of third year students. When I evaluated these results, two important points were clear.

First, the mean scores for both second year and third year were below the passing score of 2.5 (50% of 5). This was, of course, a matter of concern. Test #1 was taken after the students finished the first two chapters. The questions were about fiscal and financial management in terms of the basics of public finance and how the government can manage the budget to give welfare to the people. If the students could not pass Test #1, they had failed to grasp the basics of the course.

Secondly, the performance of the third year students was better than the second year students in terms of both the maximum and the mean. The mean score of the third year students was 21% higher than the mean score of the second year students. This is a significant difference though not unexpected, considering the difference in the knowledge base between the two years.

Table 1.2: Scores of the second and third year Public Administration Program students on the Fiscal and Financial Management midterm

Midterm	Number of students	Max (out of 35)	Min	Arithmetic mean	Comparison of mean scores	Percentage difference
Second year	203	25.5	6.5	16.03		
Third year	177	27.0	6.5	16.88	+ 0.85	+ 5%

Table 1.2 shows the total results for the midterm taken by five groups of second year students and five groups of third year students. Like test #1, the mean scores for both groups were below the passing score of 17.5 (50% of 35). Again, the performance of the third year students was better than the second year students, though the difference was much smaller at only 5%. Because the midterm was a much more significant test and the scores were quite low, I carried out additional analyses of the results.

Table 1.3: Scores of the second year Public Administration Program students on the Fiscal and Financial Management midterm categorized by range

Midterm scores	Percentage correct	Equivalent grade range	Number of third year students (out of 177)	Percentage of third year students
31.5 - 35.0	90 - 100%	A	0	0%
28.0 - 31.0	80 - 89%	A	0	0%
24.5 - 27.5	70 - 79%	B - B+	7	4%
21.0 - 24.0	60 - 69%	C - C+	23	13%
17.5 - 20.5	50 - 59%	D - D+	48	27%
0 - 17.0	Below 50%	E	99	56%

according to percentage correct and equivalent grade

In Table 1.3, the ranges of midterm scores, percentage correct and the equivalent grades can be seen. Importantly, the table also shows the number and percentage of second year students who achieved those ranges. It was very troubling to see that only a total of 11% achieved a C or higher, while 29% received a D or D+. Even more disturbing was the fact that 60% of second year students failed the midterm.

Table 1.4: Scores of the third year Public Administration Program students on the Fiscal and Financial Management midterm categorized by range according to percentage correct and equivalent grade

Table 1.4 shows the same ranges as Table 1.3 but with the

Midterm scores	Percentage correct	Equivalent grade range	Number of second year students (out of 203)	Percentage of second year students
31.5 - 35.0	90 - 100%	A	0	0%
28.0 - 31.0	80 - 89%	A	0	0%
24.5 - 27.5	70 - 79%	B - B+	4	2%
21.0 - 24.0	60 - 69%	C - C+	18	9%
17.5 - 20.5	50 - 59%	D - D+	59	29%
0 - 17.0	Below 50%	E	121	60%

numbers and percentages for the third year students. Their performance was slightly better, with a total of 17% achieving a C or higher. However, 27% still earned a D or D+ and a majority, 56% of third year students, also failed the midterm.

Table 1.5: Comparison of the percentage of second and third year Public Administration Program students achieving percentage correct ranges on the Fiscal and Financial Management midterm

On the positive side, the differences between the second and third year students were smaller than on test #1. This could indicate that second year students were starting to build their understanding of the subject. In addition, more third year students earned grades of B, B+, C, or C+ on the midterm and fewer third year students received grades of D, D+, or E in comparison with second year students. However, the scores were still poor, so I analyzed them further to get a clearer picture.

Percentage correct	Equivalent grade range	Percent of second year students	Percent of third year students	Percentage difference
90 - 100%	A	0%	0%	-
80 - 89%	A	0%	0%	-
70 - 79%	B - B+	2%	4%	+2%
60 - 69%	C - C+	9%	13%	+4%
50 - 59%	D - D+	29%	27%	-2%
Below 50%	E	60%	56%	-4%

Figure 1.2: Midterm examination scores achieved by second year students analyzed by percentage with failing scores highlighted

In Figure 1.2, the graph shows the percentage of second year students achieving scores ranging from 6.5 to 25.5. When the failing scores are evaluated more closely, it can be seen that most of the failing students received 13-15.5 points. A student with 13 points would need to improve their performance by 35% to earn 4.5 additional points and a passing grade which might be difficult to do. On the positive side, the majority of the scores were not at the bottom of the range.

Figure 1.3: Midterm examination scores achieved by third year students analyzed by percentage with failing scores highlighted

Figure 1.2 can be compared to the third year students' scores and percentages in Figure 1.3. Percentages were used in these two graphs rather than the number of students to make comparisons easier (203 second year students versus 177 third year students). It can be seen that a higher percentage of third year students were close to passing with 15.5-17 points. A student with a score of 15.5 would only need two additional points, or a 13% improvement, to pass the test. Therefore, although 56% of the third year students failed the midterm, almost 24% were within two points of passing.

Qualitative Research

Qualitative Research Methods

After seeing the low scores on the first test and the midterm exam, I decided to organize focus groups to understand the students' challenges and brainstorm with them about ways to help them improve for the

second half of the term. I also wanted to know the factors that support the successful study of Fiscal and Financial Management from the perspective of the students, especially from the students who did better on the exams. My goal was to find new ways to motivate and teach the students so they could understand the subject better in the second half of the term and have a better chance of passing the course. In addition, my intention was to be student-centered by encouraging students to analyze their own performance and results and directly participate in the problem-solving process.

I wanted to involve all students in this process rather than just taking a representative sample of students. Therefore, I conducted the focus groups with each section. As previously mentioned, the class sizes were large so, in each class, I separated the students into three groups. I was teaching a total of six sections which meant I spoke to a total of 18 focus groups. I also decided to talk to them during class time as their time outside of class was limited and it was too difficult to coordinate

everyone's schedules to arrange another time.

The criterion for separating the groups was the combined score of test #1 and the midterm which was a total of 40 points. The three groups were those with the highest scores (over 25 points), the middle scores (20-25 points), and the lowest scores (less than 20 points). I wanted to see if students with similar scores had similar learning strategies and ideas for improvement. I believe that the behavior of the students, both inside and outside the classroom, affects performance and test scores. Therefore, I was interested in what they did in class, after class, and at home in their free time that affected their understanding of this subject.

In order to gather this information, I spoke with each group for 30 minutes. The other groups also listened as I spoke with each group so they could learn from each other and share ideas. The questions that I asked them to consider and discuss were about past behavior as well as brainstorming for future improvement.

Past Behavior Questions:

- How has their classroom behavior affected their understanding of the subject?
- When did they read the course textbook after class?
- How did they study for the exams?
- How much time did they study outside class?
- Why are their scores low or lower than they would like them to be?

Brainstorming for Future Improvement:

- How can they change their classroom behavior to improve their understanding and performance in this course?
- How can they increase their understanding of this subject outside of class?
- How can they study more effectively and get higher scores?
- What can the instructor do to motivate them and support their learning process?

I made notes during and after the focus group discussions

of students' comments. Later, I compiled the data from the six sections; analyzed the feedback from the highest, middle, and lowest groups; summarized the main ideas; compared the second and third year students' responses; and drew conclusions.

Qualitative Research Results

The following is a summary of the main ideas from the focus groups.

Student Motivators

- Third year students were going to have their first internships at the end of the term, working in a government office or other business for 100 hours during the break before the second term. Therefore, they were more motivated to increase the knowledge that could help them in their internships.
- Second year students with low grade point averages were afraid of getting a grade of D in this course and having to leave the university. At the end of their second year, they cannot continue studying if their

GPA is lower than 1.8. This motivated them to improve their performance in the second half of the term.

Negative Effects on Student Motivation (both second and third year)

- Large class sizes negatively affected student motivation because of limited teacher-student time, limited activities, and increased noise. The largest section had 94 students.
- Students disliked studying with combined groups. For example, 54/69 had to study with 54/72. The groups were different levels, for example, 56% of 54/69 students passed the midterm versus only 29% of 54/72 students. They also had different overall characteristics and classroom behavior so they did not always study effectively together.
- The schedule of some sections could have a negative effect on student motivation. Two of the sections studied late in the day, from 15:40 to 17:20. Students were tired at the end of the day and some were worried about being able to get public transportation home. These factors reduced their attention in class. In addition, another section studied on Monday morning from 8:30 to 11:20. Many students went home to stay with their families on the weekend and their homes were sometimes quite far from the university. They were often late to class on Monday morning because of transportation delays and traffic congestion. When they were late to class, they missed the introduction and background explanation of the chapter and, consequently, struggled to understand the remainder of the material.
- The second year students also had limited time outside of class because they were

studying many subjects. They had eight subjects which meant they had less time and energy for this subject. In contrast, the third year students only had five subjects so they could spend more time studying outside class.

Third Year Factors for Successful Study

- Successful third year students prepared for examinations by reviewing in small groups in the library and doing the exercises in the book for each chapter.
- The third year students could understand the course relatively well because they had already studied Economics.
- From the instructor's classroom observations: Overall, the third year students paid attention better in class than the second year.

Third Year Challenges

- Their scores were lower because they did not have enough time to

study. They had to participate in many activities in the Public Administration Program (Democracy Exhibition, ASEAN parade, and freshman orientation) so some of them did not have enough time to do exercises and other class work.

Second Year Challenges and Ineffective Learning Strategies

- They had not studied Economics yet, so they could not understand Fiscal and Financial Management concepts very well.
- They did not have other basic knowledge related to the course.
- For examinations, many second year students did not read the recommended additional materials related to the course that would increase their background knowledge, like newspapers, economic textbooks, public policy books, and so on.

Challenges for Both Second and Third Year Students

- Most students did not read enough books for the examinations.
- They did not do the assigned exercises because the instructor did not check the assignments and did not give any points for them.
- In the first term of 2013, students had to take many midterm exams on the same day so they did not have enough time to study for each subject, including Fiscal and Financial Management.
- Some students only studied right before the midterm exam in front of the exam room.
- Students felt they did not have enough time to finish the midterm exam. This term, I changed the format of the test because of the large number of students. Last term, there were 40 multiple choice items, with five choices for each item, and one essay question. This term, there were 70 multiple choice items, with five choices

for each item. Students had one hour to complete the test. The feedback received was that students thought they could get higher scores on the exam if they had more time.

Comments from Highest, Middle, and Lowest Scoring Groups

- Highest scoring groups: Some students reviewed notes and read books before going to bed before the examinations. Other students did more exercises and participated in tutorials with their friends.
- Middle scoring groups: They read fewer books for the examinations and did not do the exercises for each chapter.
- Lowest scoring groups: They did not read books for the examinations and did not pay attention in class. Some students played games on their phones or talked with friends during class.

How can they change their classroom behavior to improve their understanding and performance in this course?

- Pay better attention in class.
- Do not talk with friends or play on their phones.

How can they increase their understanding of this subject outside of class?

- Study more at home.
- Do the chapter exercises.
- Tutor with friends.

How can they study more effectively and get higher scores?

- Do exercises to help them review each chapter and understand the topics.
- Prefer group work in class and out, rather than individual work, so they can share ideas and help each other.
- Do case studies in groups so they can understand better by working together instead of having more lectures.
- Would like higher scoring students to tutor lower scoring students.

What can the instructor do to motivate them and support their learning process?

- Speak more slowly and explain each chapter more.
- Give more examples in the class for each chapter.
- Give a worksheet for students to do before studying the next chapter.
- Give points for completing the exercises to motivate and reward the students
- Give more time for exams and reduce the number of choices per item from five to four.
- Take the students to see public sector management firsthand, such as by visiting a municipality.
Unfortunately, this term we could not go outside the class because of the large class sizes.

Conclusion

The purpose of this study was threefold. My goal was to answer the following questions and, in the process, ideally

improve the course results for all students. For the first question, “How does the performance of second year students differ from third year students?” the answer could be found from both the test scores and the academic behavior of the students. The second year performance was lower than the third year as a result of a combination of factors: their limited background knowledge; their higher workload of eight subjects and, therefore, their more limited free time to study; their reduced attention in class; and, in general, their poorer study habits. However, even the performance of the third year students was impacted by large class sizes and other negative factors and became a focus for improvement.

In terms of the second question, “What are the factors that support the successful study of Fiscal and Financial Management?” the answers were gathered from student brainstorming and feedback as well as the consideration of the instructor. Basic factors such as student motivation, a productive classroom environment, and responsible study habits are necessary for students to understand this rather

challenging subject. These factors were focused on, by the students and the instructor, in the second half of the term.

For the final question, “How can the instructor improve the performance of second year students studying Fiscal and Financial Management in the future?” I thought about the students’ feedback carefully, focusing on student-centered group activities in class to increase students’ understanding, and instituted the following changes in the second half of the term.

To reinforce important concepts and serve as examples from the chapters as requested by the students, I gave case studies with group work to the students so that they could share knowledge with their classmates and work out their own answers. Some groups were then chosen to present their results in front of the class for everyone to consider and discuss. The case studies were quite successful in engaging the students, increasing attention in class, and deepening their understanding of the topics. The positive cycle can be seen in Figure 1.4 below.

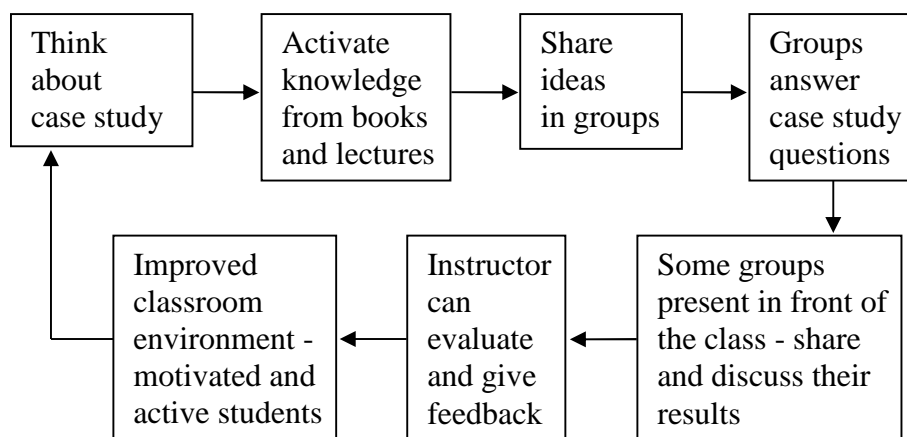

Figure 1.4: Positive cycle of student-centered case studies with group work

I also gave more economic background as well as the current news about the economy of Thailand. Then the students participated with group work in class to exchange ideas. To increase student motivation, I gave extra points when students could answer questions in class. Moreover, they could get rewards when they got the highest score in the class on an assignment.

As students requested, in the second half of the term I spoke more slowly and explained each chapter more. Before the midterm exam, I spoke more quickly because I was trying to cover all of the material plus have time for extra explanations for the second year students and manage the large class sizes. I taught chapters 1 to 5 and

reviewed the exercises with students after finishing each chapter.

After the midterm exam, I used five new strategies to increase students' understanding. I had students: 1) do more exercises after finishing each chapter and for which they were given points; 2) do a group report about public finance; 3) review each chapter in class with me before studying the next chapter; 4) complete writing assignments in class after finishing chapters; and 5) write conclusions about each chapter in their notebooks. After I used the new strategies, students understood the concepts better than in the past. They can adapt and share knowledge with their classmates. I was also stricter in terms of classroom behavior in order to improve the learning environment for all students. Finally, I gave 90 minutes for the final exam, which is 30 minutes more than the 60

minutes for the midterm, and the number of choices for each exam item was reduced to four instead of five.

Some negative factors were identified in the qualitative research that were outside of the instructor's control, such as large class sizes, combining of groups, number of subjects being studied, exam schedules, and so on. Unfortunately, no changes could be made for these issues in this term, though they should be considered for future terms.

From the quantitative and qualitative results, I was able to conclude that both second and third year students needed significant improvement in their performance, supported by their own efforts as well as mine. However, the second year students would need much more effort in the second half of the term to pass the course.

Suggestions

1. We should study using student-centered methods in the class to share ideas together and motivate the students more.
2. Instructor should invite a mayor or other government officers to give firsthand

knowledge and real world experience to students. This could help motivate students and help them understand the importance of the subject.

3. Students should read or watch the news before studying this subject so they will understand the Thai economic situation and government policies better.
4. In their second year, students should study Economics in the first term and Fiscal and Financial Management in the second term. If they study Economics first, they can understand Fiscal and Financial Management better in the following term.
5. When changes are made to a curriculum, it would be helpful to have input from instructors who teach the subjects. Subsequently, the curriculum should be evaluated for effectiveness by students and teachers and it would be beneficial to correct any problems. The curriculum could also be evaluated by recent graduates who can give feedback on the important

things that they learned that they use in their jobs or areas where their education was lacking.

6. Class size should be considered carefully, especially for more difficult subjects. If the class size is too large, the time for individual teacher-student or even teacher-group interaction is limited. It can also reduce the types of activities that can be done in class or outside class. This has a detrimental impact on student motivation, learning, and performance as can be seen in the lower scores of the third year students this term. Their performance has been worse than students in previous years, most likely due to the large class sizes.
7. The number of subjects that students are studying should be considered by all teachers when assigning homework and other assignments.

Abstracts

“Koperasi” and small business is a business that can survive from the monetary crisis, yet there are also “Koperasi” that are not able to survive in the crisis, so they could no longer active. Thus we need a strategy to strengthen the capacity building of “Koperasi”, so that “Koperasi” could develop their business. The research objective was to determine how to strengthen the capacity building of “ Koperasi Wanita Al-Firdaus” Village Damarsi Buduran subdistrict of Sidoarjo.

The method employed in this research is descriptive qualitative. The data used primary, secondary data and source data from informants. Techniques of data collection using interviews, observation and documentation. Analysis of the data with data reduction, data presentation, and conclusion. The validity of the data include credibility, transferability; dependability; confirmability focus of the research is human resource development, strengthening organizational and institutional reforms.

The results of research on the development of human resources find that the training done by the Department of Cooperatives is good enough, but there has been no regeneration of the board. Strengthening the organization include organizational network communication and incentive systems has made the effort to strengthen the organization. Changes in policies or regulations to support institutional strengthening. the Institutional strengthening efforts have been done by “Koperasi Wanita Al Firdaus”, however attention because it has not regeneration stewardship.

Keywords : Capacity Building, organizational development

INTRODUCTION

Indonesian economic system known to exist three main pillars that support the economy. The three pillars that include State-Owned Enterprises (BUMN), Private Owned Enterprises (BUMS), and Koperasi. Koperasi is synonymous with populist economic system is believed to be an alternative to resolve the social problems of the Indonesian economy.

Koperasi as people’s economic movement based on the principle of “kinship and mutual assistance”. Principle of mutual assistance is the reflection of humans as social beings, who always need other people to meet their needs.

Koperasi as one of the nation’s economic actors have different characteristics compared with other economic actors. Characteristic that distinguishes it is the Koperasi built based on the principle of kinship, meaning that Koperasi have an accent like a family in its implementation. Not profit or expected benefits but the main members of the Koperasi prosperity. Koperasi as a cornerstone of the economy of Indonesia which consists of individuals or legal entities with the bases Koperasi activities based on the principle of cooperation as well as people’s economic movement based on family principles.

Its development, Koperasi in Indonesia is considered quite fast, but many Koperasi are not able to survive so it is not active. There are several factors that cause Koperasi are not able to survive, for example, the lack of expertise in managing the Koperasi, the level of participation of members, the Koperasi venture capital is relatively low, and increased competition from enterprises or other financial institution. The following data is the development of Koperasi in Indonesia:

Table 1. The number of Koperasi in East Java per October 31

NO	Years	Aktive Cop.	Non-Active Cop	Total
1.	2012	25.462	3.710	29.172
2.	2013	26.802	3.710	30.512
3.	2014	27.044	3.177	30.221

Source: *Dinas Koperasi dan UKM East Java 2015*

The table shows, the growth of Koperasi ranged from 15% to 20%. But the Koperasi that includes inactive Koperasi category is also quite large, it should be a concern of the government. Some of the results of case studies on Koperasi shows that the presence of Koperasi is not only benefit the members of the Koperasi but has also been instrumental in employment and provide a level of prosperity.

Women's Koperasi is the most appropriate forum for women entrepreneurs commonly called productive groups in improving its business (Harsosumarto, 2007: 8). The existence and development of women's Koperasi in Indonesia has attracted the attention of government, because the Koperasi shows the development of good performance, in terms of organization and effort.

Women's Koperasi have become an integral part of the economic life of the community, developing into a container in

supporting the local economy and has been instrumental as well as employment which gives a better level of welfare for the community where the Koperasi is located.

East Java Provincial Government has great expectations in the construction sector of the economy of Koperasi and UMKM, it is proved by the program in the form of funding from the Regional Budget (APBD) amounting to Rp. 25,000,000 (Twenty Five Million) earmarked for achievement KOPWAN, KOPWAN as providing motivation to develop.

Women's Koperasi (KOPWAN) assessed more rapidly and consistently in implementing the principles and values of Koperasi. This can be observed in terms of quantity as the increase in the number of members, business volume and an increase in the SHU. Meanwhile, if viewed from the quality of management, women's Koperasi is more consistent and have a positive impact on improving the welfare of the family. The role of KOPWAN in the empowerment of women, among others, provide training, business consulting, skills improvement both in terms of technical businesses such as organization, management, administration or accounting business, and enhance the quality of products, access to productive resources, market information, business opportunities, also increase in education, health, increase women's awareness of their rights in the workplace as well as family, social, legal, and political. Women's Koperasi generally have activities oriented to meeting the needs and solving problems both consumptive women, the productive and reproductive health.

One of the Women's Koperasi that is developing is a Women's Koperasi "Al-Firdaus" established in 2009. The Koperasi is located in the Damarsih Village Buduran District of Sidoarjo regency by the number of initial members of 25 people, which now has

approximately as many as 158 members. During the period of its activity the Koperasi has been awarded two consecutive relief obtained from East Java provincial budget in 2010 and 2013.

The Koperasi has developed enough in quantity and quality for an increasing number of members, business volume and an increase in the SHU (Business Profits). Koperasi provides access to finance for women, especially for women who have a business. This Koperasi operational activity of implementing a system of "Joint liability" since 2010. "Joint liability" system is a member of the Koperasi form groups, consisting of 15 members and a maximum 30 members, it serves as an internal control structure in order to timely loan repayment for a loan individuals in the group are borne by all group members.

Need optimization efforts in order to improve the ability of Koperasi institutions that are expected to have an impact on the member's welfare. Many options can be used in efforts to strengthen the Koperasi institutions, one of which is to improve the institutional capacity of Koperasi through capacity building strategy. In general, the concept of capacity building can be defined as the process of building the capacity of individuals, groups or organizations that are reflected through the development of abilities, skills, potential and talent and mastery of the competencies so that the organization can survive and be able to overcome the challenges of change.

Grindle (1997: 12) explains: "*Capacity building is intended to encompass a variety of strategies that have to with increasing the efficiency, effectiveness, and responsiveness of governance performance.* Institutional capacity building can be seen from several ways, according to Grindle there are three dimensions that can be seen through *capacity building* strategies are: 1.

dimensions of human resources development, 2. dimensions of strengthening organization, 3. institutional reform.

Described by Grindle, in the context of human resource development, attention is given to the procurement or provision of professional and technical personnel. The activities carried out include education and training (training), salaries/wages, working conditions and environment settings and proper recruitment system. In connection with the strengthening of the organization, the center of attention is paid to the management system to improve the performance of the functions and tasks of the existing and setting microstructure. An activity to do is arrange the incentive system, the utilization of existing personnel, leadership, communication and managerial structures. And with regard to institutional reform, need to be given attention to changes in the system and the institutions that exist, as well as the influence of the macro-structure. In this context, the activity needs to be done is to change the rules of economic and political system that no policy changes and the rule of law, and reform the institutional system that can drive the market and the development of civil society. Based on some of the understanding that the development of capacity in an organization can be considered as a destination and can also be considered as a process. As a destination, for example: strengthening the quality of a decision within an organization and their involvement in the process, such as clarity of objectives of an organization. The focus is on the organization's mission, the analysis of external factors, structure and activity. Therefore, the criteria relates to the effectiveness of the mission that has been assigned to the right which has been met. Thus, the core organizational capacity development is a goal is the achievement of the organization's mission.

While the development of organizational capacity as the process is a process of adjustment to the organizational changes and improvements to the internal system of organization that enables organizations to face challenges with the based support organizational resources so that the organization can live sustainably. By using the strengthening of institutional capacity, it is expected the organization or body that can implement institutional strengthening. While in KOPWAN "Al-Firdaus" which is expected to have an impact on the welfare of members and the first expected to contribute to the economy in Indonesia.

Based on the background of the problems described above, it can be formulated research problem formulation is as follows: "How is Strategies of Strengthening Institutional Capacity of Women's Koperasi Al-Firdaus Damarsi village Buduran subdistrict of Sidoarjo regency?"

LITERATURE REVIEW

Management strategies can be defined as the art and science in formulating, implementing, and evaluating the cross-functional decision – making which enables an organization to achieve its objectives (David, 2006: 5)., Glueck and Jauch (2007: 75) explains, management strategies are a number of decisions and actions that lead to the formulation of a strategy or a number of effective strategies to achieve the target changes.

The strategy has three important roles in filling management purposes (Grant, in Rangkuti, 1999: 21), namely: 1) strategy as a decision support strategy as an element to achieve success. The strategy is a form or theme that gives unity relationship between the decisions taken by individuals or organizations. 2) strategies as a means of coordination and communication One of the important role

the strategy as a means of coordination and communication is to give equality of direction for the company 3) Strategy as a target concept of the strategy will be combined with the mission and vision to determine where the company is in the future. Goal setting is not only done to provide direction for the preparation of the strategy, but also to shape the aspirations for the company. Thus, the strategy can also serve as the company's target.

Koperasi

Koperasi etymologically derived from the word cooperation, consists of word *co* means together and *operation* means working or trying to. So cooperation means working together or joint venture for mutual interest. Koperasi generally understood as an association of people who voluntarily unite to fight for the improvement of their economic welfare, through the establishment of a democratically controlled enterprise.

According to Hatta in Revrisond Baswir (2000: 2). Koperasi is an association of people, usually have the limited economic capacity, which through a form of business organization supervised democratically, each contributing an equivalent to the necessary capital, and are willing to bear the risks and receive the rewards are well worth the effort they did.

The definition of Koperasi in Indonesia is contained in Law No. 25 of 1992 on Koperasi which states that the Koperasi is a business entity consisting of persons or legal entities with the bases Koperasi activities based on Koperasi principles, as well as people's economic movement based on the principle of kinship. A significant element of Koperasi, namely: 1) the Koperasi is a business entity, 2) Koperasi can be established by a person or legal entity Koperasi as well as Koperasi members concerned. 3) Koperasi is managed by the Koperasi

principles. 4) The Koperasi is managed based on the principle of kinship.

The purpose of Koperasi, as stipulated in Article 3 of Law No. 25/1992 on Koperasi, which is to promote the welfare of members in particular and society in general as well as help build national economic order in order to realize an advanced society, equitable, and prosperous based on Pancasila and the Constitution of 1945. Based on these descriptions can be concluded that the purpose of the Koperasi are: 1) To promote the welfare of members of Koperasi, 2) To promote the welfare of the community, 3) Establish national economic order.

Capacity Building

In theoretical studies about public management, capacity development is one of the basic concepts developed rapidly since the early 1990s, especially in line with the formulation of the carrying capacity (*resource*), both environmental degradation, inefficiency and ineffectiveness of development and its kind. *Capacity building* provides a good hope in particular within the framework of realizing the goal of governance, namely in order to increase the effectiveness and efficiency of public management toward the realization of the objectives expected before serving theoretical studies on *capacity building* in advance elaborated understanding of *capacity* or capacity itself.

Capacity building has the characteristics of a dynamic and continuous and covers a long period. *Capacity building* is defined as an internal process, but can be stimulated by external actors. *Capacity building* should ideally be *demand driven*. External parties should be a *catalyst* and *supplementary*, as well as focusing on capacity building that exist and provide support to the methodology. While implementation should be

incremental and modular. When there is capacity at various levels, capacity building becomes multidimensional, and can be described as components, levels, strategies, and interventions (Milen 2001). Because it is not singular and dynamic, there is not one single answer how to increase capacity (Imawan, et.al, 2006). Further understanding of the capacity was also raised by Brown were cited by GTZ (2003: 9)

that: *“What Exactly is “Capacity” and how can it be measured? There is a multitude of concepts and definition about what exactly “Capacity” is Usually they are refer to the abilities of individuals or organizations to perform functions and to achieve stated objective. However, capacity means more than technical competence, or the availability of sufficient financial or material resources. The capacity concept includes how such “inputs” area being applied and used to produce certain out-puts, results and outcomes, may authors see capacity as something that is dynamic, multidimensional, and directly or indirectly influenced by contextual factors”*

Actually, what is meant by capacity and how its capacity can be measured? There are a lot of concepts and definitions of what is called the capacity are in fact. In general, they all refer to the ability of individuals and organizations in demonstrating the functions and how they achieve its intended purpose. However capacity meant something more than just competency is technical, or only the financial capacity shortly inadequate resources and other materials. The concept of capacity includes the like-where inputs are applied and used to produce the outputs, results and earnings. Ordinary also many writers see the *bahwa* capacity as something dynamic, multidimensional, and directly or indirectly influenced by contextual factors.

That definition underlines that capacity is very complex, not just focusing on the ability or technical competence but also about how to use or apply the source as "input" as qualified output. Further explained that: "*Capacity is the ability of an individual, an organization or a system to perform functions and to meet objectives effectively and efficiently. This should be based on a continuing review of the framework conditions and a dynamic adjustment of functions and objectives*". Capacity is the ability of an individual, organization or system in carrying out the functions and achieves goals effectively and efficiently. It should be based the ongoing review to various framework conditions, the dynamic adjustment of the various framework conditions, dynamic adjustment of the various functions and purposes. (GTZ, 2005: 11).

Grindle (1997: 12) explains that: "*Capacity building is intended to encompass a variety of strategies that have to with increasing the efficiency, effectiveness, and responsiveness of governance performance* (capacity development is an effort that is intended to develop a variety of strategies for improving efficiency, effectiveness, and responsiveness of government performance). Meanwhile, According Marison (2001: 42), see *capacity building* as a process for doing something, or a series of movements, changes in multi level within individuals, groups, organizations and systems in order to strengthen the adaptability of individuals and organizations so as to responsive to changes in the existing environment. According to Milen (2001: 142) *Capacity Building* viewed as a special task for the special tasks related to actors within an organization or system at any given time

In the capacity building has dimension, focus and types of activity. Dimensions, focus and type of these activities according to Grindle (1997: 1-

28), and Bappenas (2007) are: (1) the dimensions of human development, with a focus: professional personnel and technical capabilities as well as the types of activities such as: training, practice immediately, climatic conditions of employment and recruitment, (2) the dimensions of strengthening the organization, with a focus on: governance management to improve the success of the role and functions, as well as the types of activities such as incentive systems, equipment personnel, leadership, organizational culture, communication, managerial structure, and (3) institutional reform, with a focus on: institutional and systems as well as macro-structure, the types of activities: rules of economic and political, policy and regulatory changes, and constitutional reform. Correspondingly, Grindle (1997: 1-28) stated that if the capacity building into a series of strategies aimed at improving the efficiency, effectiveness and responsiveness, then the capacity building should focus on dimensions: (1) the development of human resources, (2) the strengthening of the organization, and (3) institutional reform.

Human resource development, attention is given to the procurement or provision of professional and technical personnel. The activities carried out include education and training (training), salaries/wages, working conditions and environment settings and proper recruitment system. In connection with the strengthening of the organization, the center of attention is paid to the management system to improve the performance of the functions and tasks of the existing and setting microstructure. Activities to do are arrange the incentive system, the utilization of existing personnel, leadership, communication and managerial structures. Institutional reforms need to be given attention to changes in the system and the institutions that exist,

as well as the influence of the macro-structure. In this context the activities that need to be done is to change the rules of economic and political system that no policy changes and the rule of law, as well as systems reforms institutional that can drive the market and the development of civil society (Grindle, 1997; Depdagri-Bappenas, 2000; Imbaruddin 2005; Soeprapto, 2007).

Dimensions and Capacity Development Focus

Capacity development is generally defined as an increase in the ability or competence of individuals, groups and organizations which include many components, resulting in the development of capacity, there are several dimensions and focus. Dimensions and focus are part an ongoing dynamic process. The dimensions and capacity development focus by (Soeprapto, 2003: 14) There are three levels, namely: 1) Rankings Individual, such as potential individuals, individual skills, work grouping and motivations of individual jobs within the organization; 2) Depth organizations, such as organizational structure, procedures and mechanisms work, decision-making processes within the organization, facilities and infrastructure arrangements, relationships and organizational networks; 3) Level System, such as the framework relate with regulations, policies and basic conditions that support the achievement of specific policy objectivity.

Capacity building has its own way to running activity that allows the development in an individual capacity, systems, or organizations, where such activities consist of some of the common steps. The stages or phases according Gandara (2008: 18) are: 1. Preparation Phase 2. Analysis Phase, 3. Planning Phase 4. Implementation phase. 5. Evaluation Phase.

RESEARCH METHODS

Types of research, including qualitative descriptive study with the intention to obtain a comprehensive overview and in-depth development model based Women's Koperasi *capacity building*. Theoretically, according to Denzin and Lincoln in Moleong (2011: 5) Qualitative research is research that uses natural background, with the intention of interpreting phenomena and done by involving a variety of methods.

The research location in the village Damarsi, Buduran sub-district, Sidoarjo regency at the Institute for Women's Koperasi Al-Firdaus. Researchers are interested in studying how Koperasi Wanita Al-Firdaus develop institutional capacity. The choice of location is done with consideration that KOPWAN Al-Firdaus is a Koperasi woman who has several times received a grant from the Governor of East Java. 2013 Women's Koperasi Al-Firdaus included in the category "HEALTHY".

The focus of research is the dimension, the focus and the type of the activity according to *Grindle (1997: 1-28)*, and are: (1) the dimensions of human development, with a focus: professional personnel and technical capabilities as well as the types of activities such as: training, direct practice, condition work climate, and recruitment, (2) the dimensions of strengthening the organization, with a focus on: governance management to improve the success of the role and functions, as well as the types of activities such as incentive systems, equipment personnel, leadership, organizational culture, communication, managerial structure, and (3) institutional reform, with a focus on: institutional and systems as well as macro-structure, the types of activities: rules of economic and political, policy and regulatory changes, and constitutional reform.

Withdrawal informants technique in this study with the sampling method is *purposive sample* is informant drawn with consideration of the intended person will know and be able to provide necessary information in the study. *Purposive sample* is a sampling technique with a certain considerations (Sugiyono, 2009: 85).

The key informant was the Chairman of KOPWAN AI-Firdaus: Hj. l'anatus Sholihah; KOPWAN Secretariat and members of KOPWAN AI-Firdaus. Documents related to the research focus among other Statutes and Bylaws KOPWAN AI-Firdaus, Annual Report KOPWAN AI-Firdaus, the Work Plan of KOPWAN AI-Firdaus, regulations set KOPWAN AI-Firdaus and photos of activities.

Data Collection Techniques, hereinafter described by Sugiyono (2009: 225) that the collection of data can be obtained from the observation, interviews, documentation, and joint/triangulation. In this study, researchers used data collection techniques by observation, documentation, and interviews.

Data Analysis Techniques, according to Bogdan and Biklen in Moleong (2011: 248) data analysis is the effort made by working with the data, organize data, sifting sort them into units that can be managed, synthesizing it, search and find patterns, identifying what is important and what is learned, and decide what can be told to others. So in this study in accordance with the form of data analysis methods of Miles and Huberman.

Data analysis methods used in researching the institutional capacity of KOPWAN AI-Firdaus is a method developed by Miles and Huberman (2014: 8). Where qualitative data analysis is done in several stages: Condensation Data (*Data condensation*), Presentation of data (*Data display*), inference or verification (*Conclusion drawing or verification*).

RESULTS & DISCUSSIONS

Based on the findings in the field of research done on the site as well as documentation of the photo documents owned by KOPWAN AI-Firdaus Damarsi Village Buduran District of Sidoarjo, relates to objects, focus and objectives of research studies and techniques of interviews with key persons and informants.

1. Human Resources Development (HRD)

Human resources development for employees is a process of learning and practicing a systematic way to improve their competence and their performance on the job now and prepare for roles and responsibilities that will come (Ruky, 2006: 227). Institutional capacity development in KOPWAN AI-Firdaus through the development of human resources is quite good, there are accounting and accountancy training conducted by the Dinas Koperasi. Training aims to increase the ability of KOPWAN especially the ability of existing human resources. Training is able to deliver good results in the management of the Koperasi.

According Ruky (2006: 227) the purpose of development is to improve the level of effectiveness of employee performance in achieving the result set. Personality development is the development of knowledge, skills development, changing attitude. Human Resources Development aim to improve the quality of professionalism and skills of civil servants in carrying out its duties and functions optimally. By developing employee skills intended as any attempt of the leadership to increase the job skills of each employee so that in carrying out its duties more efficiently and productively. Therefore, organizations need to continue to develop human resources, due to investment in human resource development is the expenditure aimed at

improving productive capacity of human beings.

One manifestation of human resource development is could be training, training is one kind of learning process to acquire and improve skills outside the education system prevailing in a relatively short time and with a method that is more about practice than theory (Sastradipoera, 2002: 46) , In accounting training provided by the Dinas Koperasi, trainees are taught how to keep the books in the correct format, they will be taught until they understand exactly how to do the bookkeeping.

Training helps employees understand a practical knowledge, to enhance the skills, skills, attitudes needed by the organization in order to achieve objectives. In addition to human resource development training to do with regeneration or replacement trustee. With the regeneration it is expected that the change towards a more modern and advanced. Because regeneration is expected to provide encouragement and new shades to keeps the organization running. Although considered quite trivial but regeneration impact of the extraordinary survival of the organization.

However, circumstances are very necessary so the attention is on the development of human resources through the regeneration or replacement of management is in KOPWAN Al-Firdaus. During this KOPWAN standing has never been a change of the board at all. Although the organization is considered trivial regeneration is needed, it is necessary even if just to relieve boredom or renew a state in KOPWAN.

Substitution of administrators at KOPWAN Al-Firdaus hindered by the absence of cadres willing to become administrators or supervisors. They considered the caretaker or superintendent of Koperasi is very tiring but did not provide results comparable to

the work being done. The fact that even things like this to worry about, the presence of Al-Firdaus KOPWAN is threatened with bankruptcy, because of the absence of members and others who want to be the successor cadre of administrators or supervisors of Koperasi. Implementation of regeneration usually have general guidelines for how the processes and mechanisms of electoral administrators and supervisors. These guidelines must already be included in the Statutes and Bylaws or special regulations of each Koperasi. These guidelines must not conflict with the values of the Koperasi, good common values, democratic values and the independence or the value of helping yourself and helping others.

The results appear institutional capacity development in KOPWAN Al-Firdaus through human resource development has been good enough in the field of training, there is training conducted by the Department of Koperasi. In terms of KOPWAN recruitment system provide facilities for prospective new members who wish to join the Koperasi. While the development of human resources through the regeneration of the board or superintendent during this KOPWAN standing had never been there.

1. Strengthening the Organization

Organizations must continue to establish itself in the framework of the institutional strengthening. so as to support the achievement of organizational goals. The organizational system must be built in order to ensure that every activity and process is done in the right way. Organizations must continue to develop nets in order to improve the strength of the organization.

Strengthening Women's organizations in the Koperasi Al-Firdaus is done with a form: the communication network of organizations and incentives

include salary / bonus for administrators or members. In the communication network of organizations definitely need other organizations to interact and to develop the organization, as well as KOPWAN AI-Firdaus also have a network of communication with other organizations, one of which is with the Dinas Koperasi Sidoarjo. KOPWAN AI-Firdaus interaction with the Department of Koperasi to report financial activity KOPWAN each month with the format which has been granted in accordance with the Dinas Koperasi.

Form of interaction carried out by AI-Firdaus KOPWAN is consistent with the theory of communication expressed by Claude E. Shannon and Warren Weaver (1949) in the book "The Mathematical Theory of Communication", as quoted by Wiryanto says, "Communication is a form of human interaction mutually influence one another, intentionally or unintentionally, and not limited to the form of verbal communication, but also in terms of facial expressions, painting, art and technology." (Wiryanto, 2004: 7). From the definition and understanding of communication that have been raised, it is clear that human communication can only occur if someone who conveys the message to others with a specific purpose, meaning communication can only occur when they are supported by their components or elements of communication which are the source, message, media, receiver and effect. This is consistent with KOPWAN doing delivering messages to the Department of Koperasi to the shape in the form of a monthly report KOPWAN AI-Firdaus. The communications network is defined as the exchange of messages through a certain path. The communications network of this organization can be considered as an exchange of messages through a particular path within an organization.

There are several views of the many elements that support communication

occurs and the establishment of effective communication. an outline of the communication has been amply supported by the three main elements that the source, the message and the recipient, while there is also the added feedback and environment in addition to the three elements that have been mentioned. Communication occurs in KOPWAN AI-Firdaus occur both internally and external to the organization. So we call it the organization as a communication network.

Communication happens already meets some of the elements of communication such is the source, the message and the recipient. Sources are KOPWAN AI-Firdaus, the message in the form of monthly reporting KOPWAN AI-Firdaus, while the receiver is Dinas Koperasi Kabupaten Sidoarjo.

Communications made by KOPWAN AI-Firdaus has been running well since this is in accordance with the functions of communication, according to Effendy (1993; 35), he argued that the communication functions are: 1) Inform (to inform) has done KOPWAN provide information as outlined in the form of monthly financial reports to the Department of Koperasi in accordance with the format specified by the Dinas Koperasi related. 2) Educate (to educate) is KOPWAN can present the report to the Office of Koperasi so that the Department of Koperasi to get information from KOPWAN AI-Firdaus financial situation in KOPWAN AI-Firdaus. 3) Entertaining (to entertain) is a useful addition communication to convey communication, education and influencing also serves to convey entertainment or entertain others. 4) Affects (to influence) is affecting the function of each individual communication, of course, trying to influence each other's way of thinking communicant and further seeks to change attitudes and behavior communicant in accordance with what is expected. (Effendy, 1993: 36).

While communication purposes intended by KOPWAN AI-Firdaus according to the researcher's analysis is in conformity with the purpose of the communication itself, it is as stated by Effendy declared communication has the following objectives: 1) Attitude change, 2) Opinion change, 3) behavior change, 4) social change.

There is a strengthening of the organization through incentives in KOPWAN AI-Firdaus with provisions that have been set on the AD/ART KOPWAN AI-Firdaus. Heidjrachman and Husnan (1992: 161) say that the incentive remuneration is intended to provide a different wage or salary. So the two employees who have the same office can receive different wages due to different performance. But this theory does not correspond to the existing situation in KOPWAN AI-Firdaus. The incentive system in KOPWAN AI-Firdaus performed with the following conditions, the distribution of 50% of SHU returned to members, and 50% for compulsory savings, principal, and others. In addition there penyisian Rp. 450.000, - (Four Hundred Thousand) each month are distributed to the board and chairman of the joint responsibility of 7 (seven) people who shared each year end.

Sarwoto (1983: 144) The incentives are as a means of motivation can be given stimulants or driving restrictions given by accident to a worker that arise within them a greater passion for achievement for the organization. This is consistent with the purpose of the incentive given to the board and chairman of the joint responsibility KOPWAN AI-Firdaus to provide motivation to arise the spirit to work and contribute to the organization where he worked.

Incentives are basically a form of compensation given to employees whose number depends on the results achieved in the form of financial and non financially. It is intended to encourage employees to

work harder and better so that achievement can be increased, which in turn the company's goals can be achieved.

Incentives as a means of motivation that encourage employees to work with an optimal capacity, which is intended as an extra income outside the salary or wages that have been determined. The incentive is intended to meet the needs of employees and their families. Term incentive system is generally used to describe plans for the payments of wages are linked directly or indirectly with the varying standards of employee performance or profitability of the organization.

Compensation and incentives have a very close relationship, which is a component of incentive compensation and both were very decisive in achieving the goals and objectives of the organization as a whole. Incentives can be formulated as an adequate remuneration to the employee whose performance exceeds the standards set. Incentives are a motivating factor for employees to work better so that employee performance can be improved. In the opinion of the experts of the above can the authors conclude, that incentive is a boost to a person in order to work properly and be more able to reach the level of higher performance so that it can raise morale and motivation of an employee, so someone can function well if in him there is motivation, the problem is how also create morale and motivation, because even if the motivation is formed if not accompanied by his passion then still the employee will not work as expected. In principle the provision of incentives for both parties. KOPWAN AI-Firdaus has only external relations with the Dinas Koperasi, and even then only ranging about financial reporting alone. The incentive system KOPWAN AI-Firdaus has its own incentive

systems and rules already are in AD/ART have been made by mutual agreement.

2. Institutional Reform

Reform institutions in KOPWAN AI-Firdaus include changes in policy or regulations, policies are actions or activities that intentionally done or not done by a person, group or government in which there are elements of the decision takes the form of elections among the various alternatives there are for achieve the intent and purpose. Policies or rules that exist in KOPWAN AI-Firdaus stated in the AD / ART, the process of the formation of AD/ART through a series of processes that require a lot of consideration and opinion, this is in accordance with the opinion of Federick (2008: 7) which defines the policy as a series of actions/the proposed activities of a person, group or government in a particular environment where there are obstacles (difficulties) and opportunities for the implementation of the policy proposals in order to achieve certain goals. This argument also shows that policy ideas involve behavior that has the intent and purpose is an important part of the definition of policies, however, because the policy should indicate what is actually done rather than what is being proposed in some activities on a problem.

The existence of policies or rules that there is certainly not always relevant, MKA is need for changes if needed to replace or add to an existing policy, in order to achieve all the objectives of the organization. In a change of policy in which there are elements of the decision in the form of election efforts among the various alternatives that exist to achieve the intent and purpose. During the operation of KOPWAN AI-Firdaus changes in policy or regulation has been done several times, change is because of various reasons and is likely to be decided. For changes in policy or

regulations in KOPWAN AI-Firdaus, who has recently done is regulations on exit / entry of members. Stated that "members who have declared themselves out of Koperasi then the concerned members cannot get back into a member of the Koperasi". The regulation is a decision of a joint agreement KOPWAN members and administrators.

Decision (*decision*) is the result of making a choice among several alternatives, while the term decision-making (decision making) refers to the process that occurs until a decision was reached. The decisions that may involve public purposes, may also involve policies to achieve that goal. In this case KOPWAN AI-Firdaus gives it the rule to achieve the objectives and purposes of the organization.

Based on the discussion of AI-Firdaus KOPWAN no rules contained in the AD/ART KOPWAN AI-Firdaus, which contains the rules and provisions which have been agreed. AD/ART set the rules of economics, politics KOPWAN AI-Firdaus. Rules of the game with in democracy processing with the principle of kinship. Although considered a social organization, KOPWAN AI-Firdaus still adopt and follow the economic principles it includes KOPWAN key to success in managing the AI-Firdaus Koperasi.KOPWAN AI-Firdaus also made policy changes aimed to keep KOPWAN continuity.

CONCLUSION AND SUGGESTION

Strengthening the institutional capacity of women's Koperasi of AI-Firdaus Damarsi village Buduran District of Sidoarjo Among them is: Human Resource Development, Strengthening Organization and Institutional Reform.

Institutional capacity development in KOPWAN AI-Firdaus through human resource development has been good enough in the field of training, there are

some times training conducted by the Dinas Koperasi, but on the development of human resources through the regeneration of the board or supervisor during KOPWAN's standing has never been a change of the board at all. It is necessary to get attention because it may threaten the survival of KOPWAN.

In terms of organizational strengthening of communication network covering the organization and incentive system then KOPWAN AI-Firdaus has made a series of efforts to strengthen their organization but the number is very small incentive. While in the communication network of organizations KOPWAN AI-Firdaus perform external communication with the Dinas Koperasi

In the AI-Firdaus KOPWAN there is a rules contained in the AD/ART KOPWAN AI-Firdaus, which contains the rules and provisions which have been agreed. KOPWAN AI-Firdaus also change policies or rules. So that the change in policy or regulatory change is expected keterlangsungan KOPWAN will be run in accordance with what is expected.

JOURNALISTIC WRITING SKILLS OF THE PUBLIC SECONDARY STUDENTS IN ILOCOS SUR

Jocelyn L. Absolor
jocelynabsolor@gmail.com
Ilocos Sur Polytechnic State College

Abstract

This study was undertaken to assess the level of journalism skills of the students of public secondary schools in the province of Ilocos Sur. Specifically, it aimed to determine the following: a) the profile of the respondents in terms of age, sex, year level, religion, type of elementary school graduated from, presence of elementary school publication, membership in an organization/s, parents' educational attainment, position in the editorial board, attendance in journalism seminars/trainings and awards received as a publication staffer; b) the significant difference between the levels of journalism skills of the different groups of respondents; c) the predictors that affect the level of their journalism skills; d) the weaknesses of the respondents in editorial writing, news writing and feature writing.

Descriptive-correlational research design was utilized with a questionnaire as the instrument of gathering pertinent data. It consists of two (2) parts: Part I, elicited information on the profile of the respondents; and Part II – are the topics that were developed by the respondents in writing editorial article, news article and feature article respectively.

Findings reveal that most of the respondents are female, 14-16 years old, Roman Catholic, graduates of public elementary schools with school publication, have attended institutional journalism seminar/training, recipients of institutional award. The respondents' level of journalism skills along news writing and editorial writing is "Poor" and their level in feature writing is "Very Good." Membership in sports organization and type of elementary school graduated from showed significant effects on the journalism skills of the respondents. Their grammar errors are mostly in subject and verb agreement. The use of transition words was very poor. There are prepositions that were inappropriately used in the sentences. Spelling was also a problem in their articles.

With these results, the publication advisers with the support of the administration should provide seminars, lectures or even training-workshop on journalism. The publication adviser should provide student-journalists more trainings and workshops in newswriting and editorial writing to further enhance the skills of the publication staff in these two genres.

Key Words: Journalism skills, editorial, news and feature

INTRODUCTION

The students play a vital role and are considered as the best human resource in a

school publication. Without them a school publication will not succeed. The best way to improve the school publication to attain

quality paper is to select publication staffers who are committed, dedicated, sincere, and a prolific writer. It is believed that writing demands a great deal of skills and conventions such as writing readiness and grammatical rules for the students to become proficient and effective writers. Besides that, teachers too face great challenge to teach these skills and conventions as students may at times find them confusing and difficult to understand and write effective writing in English.

OBJECTIVES

This study was conducted to determine the level of journalism skills of the students from the public secondary schools in the Province of Ilocos Sur.

Specifically, it sought to answer the following questions:

1. What is the profile of the respondents in terms of the following:

- a. age,
- b. sex,
- c. year level,
- d. religion,
- e. parents educational attainment,
- f. type of elementary school graduated from,
- g. presence of elementary school publication,
- h. membership in school organization
- i. position in the Editorial Board,
- j. attendance in journalism seminars/trainings,
- k. number of years in publication, and
- l. awards received as a publication staffer?

2. What is the level of the journalism skills of the respondents in terms of the following:

- a. editorial writing;

- b. news writing; and
- c. feature writing?

3. Are there significant differences on the level of journalism skills of the respondents between and among the schools in the Divisions of Ilocos Sur?

4. What are the significant predictors (socio demographic factors) that affect the level of journalism skills among the respondents?

5. What are the weaknesses of the respondents along editorial writing, news writing and feature writing?

METHODOLOGY

Descriptive-correlational research design was utilized with a questionnaire as the instrument of gathering pertinent data. It consists of two (2) parts: Part I, elicited information on the profile of the respondents; and Part II – are the topics that were developed by the respondents in writing editorial article, news article and feature article respectively. Rubrics were used to assess their articles.

To evaluate the students' articles in editorial writing, news writing and feature writing the researcher based her rating system on the following norms as indicated in the rubrics. Rating Scale for the Raw Score in Editorial, News and Feature:

Rating Scale	Descriptive Rating
3.26-4.0	Very Good (VG)
2.51-3.25	Good (G)
1.76-2.50	Poor (P)
1.00-1.75	Very Poor (VP)

452 students from the three (3) school divisions of Ilocos Sur, namely: Ilocos Sur, Vigan City, and Candon City were the respondents of this study.

Total	447	100

As presented in the table, majority of the respondents (337 Or 74.65) are at 14-16 age range; while a great number of respondents (8 or 1.8%) are 17-19 years of range.

As regards sex, it is indicated in the table that majority of the respondents(321 or 71%)are female while a great number(131 or 29 %) are male.

As to year level, a great number of respondents (198 or 43.8%) are fourth year, and 59(13.1%),Grade 8.

As regards religion, it is indicated in the table that great majority of the respondents(362 or 80.1 %) are Roman Catholic and there is 1(.2%),Protestant and 1 Adventist.

As to father's educational attainment, the table shows that a great number(136 or 30.2%), are college

As for mother's educational attainment, the table shows that a great number of the respondents (154 or 34.1%)are college graduates (154 or 34.1%). One (1 .2%) has doctoral units and another with no schooling .

Almost all of the respondents (426. Or 94.5%) (426 or 94.5%) came from public school while 25 (5.5%), graduated from the private schools.

As presented in the table, majority of the respondents (323 or 72.9%), are from schools with publication while a mark percentage of the respondents (120 or 27.1%) are from elementary schools without a publication.

As for the position in the school paper, majority of the respondents (239 or 53.6%) are non-members while the rest hold various positions in the school paper (71 or15.9%).

As for the number of years in the publication, majority of the respondents (247 or 55.3%) do not have experience in publication since mostly are non-staffers. There is one (.2%) who has been in the school publication for 7-8 years.

Table 4 presents the item mean ratings on the level of journalism skills of the students along Editorial Writing.

Variables	Mean	DR
Lead/Introduction	2.35	Poor
Research	2.49	Poor
Opinion	2.77	Good
Structure	2.57	Good
Ending	2.26	Poor
Grammar/Spelling	1.82	Poor
Over-all Mean Rating	2.37	Poor

As a whole, the level of journalism skills of the students along editorial writing is **"Poor"** as backed up by the over-all mean rating of 2.37. Taking the indicators of editorial writing singly, the level of skills of the respondents is ("Poor") as evidenced by the following; lead (2.35), research (2.39), ending (2.26), and grammar/spelling .Only in opinion(2.77) and structure(2.57) are where the respondents posted a **"Good"** level of skills as shown in the table.

The editorial writing of the respondents contains lead that needs to be more interesting. The article contains less than the required amount of research about the issue at hand. The article contains several grammar and spelling errors. The article contains several grammar and spelling mistakes. The ending has a minimal success with call to action. Getting a rating of "Good" for opinion means that the article has an opinion that could be stated more clearly using more appropriate words. When it comes to structure, the article is structured in an effective way. Evidently, respondents' articles revealed their difficulties in writing a good lead, insufficient knowledge toward the topic and poor grammar as backed up by the rating "Poor" in these three criteria.

Table 5 shows the item mean rating on the level of journalism skills of the students of public secondary schools in the province of Ilocos Sur along news writing.

Variables	Mean	DR
Headline	1.97	Poor
Supporting Details	2.44	Poor
Facts	2.74	Good
Lead	2.20	Poor
Grammar/Spelling	1.71	Very Poor
Over-all Mean Rating	2.21	Poor

As a whole, the table shows that the level of journalism skills of the respondents along news writing is "Poor" as reflected in the over-all mean rating of 2.21. Taking the indicators in news writing singly, the level of

skills of the respondents is “Poor” as evidenced by the following; headline (1.97), details (2.44), and Lead (2.20). They were rated “Good” in details (2.44) and “Very Poor” in grammar/spelling as supported by the mean score of 1.71.

The article has a headline that does not describe the content. Most of the details in the article are clear but do not correlate on the topic well. Lead sentence is not clearly connected to the article. Moreover, the article is missing one of the 5 W’s., It is also evident in their articles that there were several spelling or grammar errors.

Parker (1993) supported this view when he stated that writing could be a torment to students. In addition, Pearsall and Cunningham (1988) and Emmons (2003) advocated that writing is definitely “hard work”. Therefore, it is evidently true that writing poses a number of problems to the students, as it is a skill that is difficult to master.

Table 6 below presents the item mean ratings on the level of journalism skills of the students of public secondary schools in the province of Ilocos Sur along feature writing.

Variables	Mean	DR
Idea	3.62	Very Good
Organization	3.20	Good
Voice/Tone	3.65	Very Good
Presentation	3.41	Very Good
Convention	2.87	Good
Over-all Mean Rating	3.35	Very Good

As reflected on the table, the journalism skill level of the respondents along feature writing is “Very Good” as supported by the mean rating of 3.35. Taking the indicators of feature writing singly, it shows that their level in the following components namely; idea(3.62),Voice/Tone(3.65) and presentation(3.41) is “Very Good”. The respondents show a “Good” level on organization (3.20) and convention (2.87).

Their articles display a thorough understanding of the feature format and

provide a high a degree of accurate and appropriate information. Their articles also manifest that most of the paragraphs have a clear focus on the topic and include facts that support the topic ideas. The tone, sense of audience and purpose are sophisticated and effective. It also shows that their work has a high degree of clarity and support. Their articles applied grammar, usage, spelling, and punctuation with considerable accuracy and effectiveness

Hedge (1990) agrees that extensive reading and more exposure to the language can help improve students’ writing performance. Furthermore, writing needs three things; experience, observation and imagination. This evidently shows that students write best when they have the experience or knowledge about the topics they are familiar with. Moreover, the observation and experience they have in the language enable them to compose and write proficiently and effectively.

Table 8 presents the summary of the Analysis of Variance (ANOVA) tests for significant differences on journalism skills

Journalis m skill	Mean Percentage Rating			F value
	Candon	Vigan	Ilocos Sur	
Editorial	61.96 ^a	60.98 ^a	57.75 ^a	1.23
News	55.39 ^a	53.55 ^a	55.94 ^a	0.60
Feature	71.10 ^a	69.97 ^a	64.37 ^b	5.49 ^{**}
Over-all	61.98 ^a	60.31 ^a	43.48 ^b	23.04 ^{**}

****Significant at 0.01 level.**

Means across the rows followed by the same letter are statistically the same, as determined by Tukey HSD post hoc tests.

As a whole, the over all level of Journalism skills of the respondents between and among schools divisions along editorial writing is “Good” with a total percentage of 60.23 as reflected on the table. Among the respondents in the three divisions, those from Candon City and Vigan City were rated “Good” on the level of journalism skills along editorial writing with a mean rating of 61.96 and 60.98, respectively. Ilocos Sur Division is “Good” with a mean rating of 57.75. The

respondents' article was focused on the topic "Bullying". Students are expected to have a wide knowledge on this topic because the information was massively disseminated before the opening of this school year. The issues about bullying that had been spread through media had somehow given the respondents knowledge on it. It's evidently shown in their articles that they have enough researches and facts, only they are not properly substantiated with sensible opinion. Another contributory factor to their "Good" performance is the structure of their articles. Their articles did not manifest ideas that flow logically and with a powerful presentation as what editorial article should manifest.

As a whole, the level of Journalism skills of the respondents between and among the schools divisions along News Writing is "Good" with a total percentage of 54.96 "Good" rating was recorded in all divisions, with mean rating of 55.39 (Candon City), 53.55 (Vigan City), and 55.94 (Ilocos Sur). The "Good" performance of the respondents along news writing could be due to poor headline and lead. News is a very intricate article to write. First, the article itself must have a good headline as it tries to catch the attention of the reading public. In writing a headline, a writer has to follow some conventions and styles. Headlines are never called titles; they must show what the news is all about. Due to these conventions and styles in writing a news story, though the article is good in general, the headline may affect the entirety of the news article. Lead on the other hand is even more complex to write. If a writer is not aware and knowledgeable of the different rules and styles of writing, a lead, then, of news article will not be effective. As evidently shown in the respondents' news articles, writing a good headline and a good lead were their weakness. Most of their errors lie in the headline and in the lead, thus contributing to their "good" performance.

As a whole, a mean rating of 66.77 ("Good") was obtained by the respondents as their level journalism skills level along feature writing. A "Good" rating was recorded in all divisions, with a mean rating

of 71.10 (Candon City), 69.97 (Vigan City), and 64.37 (Ilocos Sur). This result obtained by the respondents could be attributed to their familiarity with the topic. The topic itself that was developed by the students featuring a place they have gone to could have been a great factor in achieving this "Good" rating as the students were able to treat and expose the topic well. Aside from the fact that feature is a personal essay, respondents were freer to explore and express what they feel and see in the place they had been to in the past. As clearly manifested in their outputs, they were not limited in their descriptions of the place and did not bother themselves for any restrictions in writing except that they showed some weakness in organizing their ideas. The respondents showed various styles in presenting a feature article due to the fact there was no restrictions unlike writing news and an editorial article. Thus, respondents were free in expressing their thoughts without following rigid rules in writing. Moreover, Hedge (1990) agrees that extensive reading and more exposure to the language can help improve students' writing performance. Furthermore, writer needs three things and they are experience, observation and investigation.

Feature writing skills of the respondents from Candon City (mean percentage rating, 71.10%) and Vigan City (mean percentage rating, 69.97%) are statistically the same (no significant difference, $p > 0.05$).

There is a significant difference on the feature writing skills of the respondents from Candon City and Ilocos Sur divisions ($p < 0.05$). Candon City respondents have better feature writing skills (mean percentage rating, 71.10%) compared to the respondents coming from the Ilocos Sur division (mean percentage rating, 64.37%).

There is also a significant difference on the feature writing skills of the respondents from Vigan City and Ilocos Sur divisions ($p < 0.05$). Vigan City respondents have better feature writing skills (mean percentage rating, 69.97%) compared to the respondents coming from the Ilocos Sur division (mean percentage rating, 64.37%).

On the summary of the journalism skills rating among the three divisions, it is noted a "Good" rating (55.25) along with the following mean ratings; Candon City (61.98), Vigan City (60.31), and Ilocos Sur (43.48). The over-all mean rating is 55.25 ("Good").

The "Good" rating obtained by Candon and Vigan City Divisions is a result of a higher scores they got in Editorial writing where both of them rated "Good". This has become an edge over Ilocos Sur Division that was rated "Good" in editorial writing. Taking it as a whole, the over-all journalism skills rating is "Good". This rating has a strong implication. Respondents' articles did not follow some rules. In writing, aside from correct grammar and structure, there are conventions to be followed in order to come out with a good article. For example in writing a news article, one criterion is the lead. When a student is not aware of these rules, the article will just be plain article. Their satisfactory performance may also be due to poor grammar as it was shown in their articles for news, editorial and feature respectively. The respondents consistently showed "Poor" rating in grammar in all three areas namely news, editorial and feature. Thus, this criterion affected the over-all rating of the articles.

There is no significant difference on the over-all journalism skills of the respondents from Candon City and Vigan City divisions ($p < 0.05$). Vigan City respondents have an over-all journalism skills (mean percentage rating, 60.31%) compared to the respondents coming from the Candon City division (mean percentage rating, 61.98%).

There is also a significant difference on the over-all journalism skills of the respondents from Candon City and Ilocos Sur divisions ($p < 0.05$). Candon City respondents have better journalism skills (mean percentage rating, 61.98%) compared to the respondents coming from the Ilocos Sur division (mean percentage rating, 43.48%).

There is also significant difference on the over-all journalism skills of the respondents from Vigan City and Ilocos Sur divisions ($p < 0.05$). Vigan City respondents have better journalism skills (mean

percentage rating, 60.31%) compared to the respondents coming from the Ilocos Sur division (mean percentage rating, 43.48%).

Significant predictors (socio demographic factors) that affect the level of journalism skills among the respondents?

Journalism skill	Regression F value	Model Significant Predictors	Coefficients
News writing	9.101**	Constant	63.402
		Membership in Academic org	7.703
		Position in the Editorial Board	1.698
		Type of elem School grad from	-14.474
Feature writing	7.584**	Constant	66.491
		Institutional Award	7.612
Editorial writing	4.770**	Constant	7.827
		Mother's educ'l attainment	2.313
		Year level	3.483
Over-all Journalism skill		Constant	76.193
		Membership Sports org	-16.356
		Type of elem school	-19.901

**Regression is significant at 0.01 level.

The table above shows the different models for the variation of news writing skills among the respondents. Model 3 shows that membership in academic organization, position in the school publication and type of elementary school graduated from have significant effects on the news writing skill of the respondents.

This model shows that the feature writing skill of the respondents tends to become higher if they have received an institutional award. This may be due to the fact that students who receive awards are most likely the students who excel in academics. For this reason, school publication advisers chose them to become members of the school publication. These honor students tend to demonstrate a higher ability in writing as evident in their

composition writing in their respective classrooms.

This model means that the editorial writing skill of the respondents tends to become higher with the mothers' educational attainment and their year level, meaning, the higher the educational attainment of their mother and of their year level, the higher their editorial writing skill is. The table clearly implies that among the predictors that have bearing on the journalism skills of the respondents are mother's educational attainment and their year level. Respondents whose mothers are college graduates show higher skill in writing an editorial. This could be attributed to different reading materials at home or other media such as television and internet. Most parents with higher educational attainment explore their children to more reading materials. The accessibility of media and gadgets at home could also be another factor. They get informed and this can be utilized in their articles.

Year level as correlated to their journalism skills, shows that the higher their year level are, the better writer they are in editorial writing. It holds true in many situations. Most of the key positions in the editorial board are occupied by the senior and junior students. Since their first year in high school or even during their elementary, they had attended several seminars and trainings in journalism. When they reached their senior year, they become more experienced in writing articles. Their experiences in joining competitions in journalism have increased their knowledge in writing an editorial. As they get older, their opinions which are necessary in writing an editorial are more matured and substantial compared to the respondents who are in the lower year level.

This model means that the journalism skills of the respondents tend to become lower if they are members of sports organization. Since the coding for type of elementary school is 0 for private and 1 for public schools, the model predicts lower journalism skills for respondents who studied in public elementary schools. Students who have inclination on sports manifested lower level of journalism skills.

There is no scientific explanation for these except the fact that sports inclined individuals tend to be less creative in writing. Their essays are not substantiated well as shown in the articles of the respondents who are members of sports organizations.

The journalism skills of the students coming from the private schools tend to be higher than the writing skill of the students who come from public schools. This could be due to the fact that most private schools require their students to speak the English language in their campuses. In this way, students are taught to be grammar conscious. This serves also as a training ground for them to learn the second language. Number of students in a classroom is also a great factor. Admittedly in private schools there are fewer student in one classroom compared to public schools whose classrooms are crowded. Their writing activities could be facilitated well in private schools. With their fewer numbers, their compositions are checked and critiqued right away.

The weaknesses of the respondents in editorial writing, news writing and feature writing.

In editorial writing, the respondents were poor in writing a lead and ending. Their articles also manifested that respondents had insufficient knowledge on the topic. Their grammar and spelling on the other hand were poor.

In writing a lead or an introduction for an editorial article, the lead should be interesting because if not it would not sustain the interest of the readers. Obviously, respondents unaware of this, just wrote an introduction that is convenient for them..

Their insufficient knowledge of the topic is due to their unawareness of the issue about bullying. It would not be easy to write an article if a writer is not equipped with necessary information that would validate his/her idea. Though editorial influences and molds public opinion, the writer must at least be knowledgeable on the topic at hand.

Their grammar errors are mostly in subject and verb agreement. This seems to be very basic in grammar but most of the time violated the subject and verb agreement

rules. There are subjects with intervening words before their verb that do not have appropriate verbs. The use of transition words was very poor. Their sentences which have relations to the following sentences that would have been more effective if there are appropriate transitions to introduce these ideas. There are prepositions that were inappropriately used in the sentences. Spelling was also a problem in their articles. There were words that are very common yet misspelled.

The respondents' news articles were rated poor in headline, supporting details, and lead. It was also manifested in their articles that they were very poor in grammar.

The headline of a news article should capture the readers' attention and accurately describes the content. Most of the common errors the respondents committed were writing a headline that did not describe the content. There are facts unnecessary written in the headline. Some of the articles also did not have headlines. They directly wrote the details of the news.

The supporting details of their articles were not clear and were not relevant to the topic. They wrote opinion in their news which violated objectivity because a news story must not carry the personal opinions of the writer.

Their lead, on the other hand, was not clearly connected to the article. But the glaring error is most of the respondents wrote a crowded lead. Lead of a news is the first paragraph of the news story that contains the 5 W's and 1 H but it doesn't have to put all the 5 W's and 1 H because it would make the lead crowded, the respondents were not able to identify the most important facts in the story. The information given to them required the respondents to write a "Who" lead but what they did was to start their news with where lead which is less important.

Since the purpose of the news is to inform, the news writer must strive for simplicity and clarity. Sentences should be short. This was the handicap of the respondents-to express their ideas clearly and simply. There were sentences that were supposed to be expressed in active but they chose to write them in passive and this affected the overall presentation of the news article.

The respondents' feature articles were generally very good, but still, the respondents have to work on organization and convention. A feature story, just like news story, has interesting information to tell. The information, therefore, must be organized with high level of effectiveness. Their articles had not achieved a high level of effectiveness because there are parts of their feature article that needed to be rearranged, like writing the most important to the least important or vice versa. Though respondents were rated good in convention for their feature articles, still, they have to work on grammar, spelling and punctuation. The most common errors the writers committed were the correct usage of conjunctions especially in connecting clauses. Instead of using 'and' since the ideas are co-equal they used 'but'. Because of the presence of modern gadgets in communication sometimes the way they communicate through text messages are carried in writing. Most sentences in their feature articles were not punctuated.

Conclusion

Based on the findings of the study, the conclusions were drawn;

Most of the respondents are female, 14-16 years old, Roman Catholic, graduates of public elementary schools with school publication. They have attended institutional journalism seminar/training and recipients of institutional award. There are more nonmembers (plain student) of the Editorial Board.

The respondents' level of journalism skills along news writing and editorial writing is "**Poor**" and their level in feature writing is "**Very Good**."

The overall level of journalism skills of the respondents in the three divisions in the Province of Ilocos Sur is "**Good**". However, the level of journalism skills of the respondents from Vigan and Candon City is "**Good**" and those from the Division of Ilocos Sur is "**Poor**."

The following socio demographic factors are significant predictors of the respondents' journalism skills.

- a. Institutional awards received came out to be a predictor of the overall journalism skills of the students in the province of Ilocos Sur.
- b. Mother's educational attainment and year level of the respondents show significant effect on the editorial writing skills of the respondents.
- c. Membership in sports organization and type of elementary school graduated from have significant effects on the feature writing skills of the respondents.

Recommendations

On the basis of the findings and conclusions of the study, the following recommendations are hereby forwarded:

Since the overall level of journalism skills of the respondents is "Good" only, the publication advisers with the support of the administration should provide seminars, lectures or even training-workshop on journalism so that the publication staff will be equipped on the different dynamics of campus journalism.

The publication adviser should provide student-journalists more trainings and workshops in newswriting and editorial writing to further enhance the skills of the publication staff the two genres.

Students' compositions can be utilized as training grounds and vehicles for them to write effectively and creatively. Writing exercises should be given more during classroom sessions. Giving them topics that are within their experiences and limits would enhance writing ability further.

Since respondents were found to be "Very Poor" in grammar and spelling, teachers are encouraged to conduct remedial activities on these identified weaknesses. Grammar as a foundation of good writing apart from having ideas should be taken as a vital content in teaching language. More drills and exercises on grammatical rules should be provided to employ mastery on the learners in classroom sessions.

Teachers must be sent to seminars or conferences and other in-service trainings to update themselves with the latest trends or innovations in language teaching particularly on journalism writing.

A parallel study should be conducted to address other concerns of the students on journalism skills most especially on other

factors affecting the journalism skills of students.

DISCOURSE COMPETENCE OF STUDENTS IN STATE UNIVERSITIES AND COLLEGES (SUCs) IN ILOCOS SUR, PHILIPPINES

Cynthia M. Carino
cynthiamongascarino@gmail.com
Ilocos Sur Polytechnic State College

Abstract

One of the pressing problems in the educational system today is the deterioration of quality education particularly on English proficiency provided and observed among learners. Regardless of grade or year level, it is an observable fact that most students could hardly express themselves fluently in English.

This study aimed to determine the level of discourse competence of students in State University and Colleges in Ilocos Sur, Philippines; S.Y 2014-2015. Students' level of discourse competence was analyzed along phonology, vocabulary, syntax, coherence and rhetorical organization. It also looked into the profile of the students, teachers and school. The quantitative-qualitative method of research was employed through the use of triangulation: questionnaire, interview and classroom observation. Data were analyzed statistically through the using: Frequency and Percentages, Mean and ANOVA.

Majority of the respondents are female mostly reside in rural areas whose parents are high school graduates and most are unemployed. The teachers have high educational attainment with sufficient trainings/seminars; rendered 21 years and above in teaching with 4-6 preparations of subjects. The discourse competence of the students in State University and Colleges in Ilocos Sur, Philippines was Fair. Recommendations are forwarded as follows: there should be a follow up study relative to such competence in other year level and other courses to test if other significant variables would influence the discourse competence of the students. Teachers must employ various teaching strategies to give students more time to study and to use linguistic inputs. Teachers should master the art of questioning and should encourage students participation in extra-curricular activities to enhance their discourse competence.

Key Words: discourse competence, State Universities and Colleges

INTRODUCTION

One of the pressing problems in the educational system today is the deterioration of quality education provided and observed among learners. Regardless of grade or year level- whether elementary, high school or college, it is an observable fact that most students could hardly express themselves fluently in English during recitations or during interactions inside the classroom. This scenario is not only observed in oral discourse but also in written discourse. It has always been the observation of the researcher that most of the students do not answer essay questions during quizzes or examinations even if the questions require personal or self-explanatory responses.

An article by Gonzales (Inquirer, 1998) then Secretary of Education, noted that 20% of the country's 5 million high school learners cannot express themselves well in oral and written English and enter college with this linguistic handicap. He said that the youth are ill-equipped for life in a world where communication skills are crucial to growth if not survival.

In the study made by Pascasio (1981), she described learners' performance in college as follows: a) they are unable to read and comprehend lectures and in their assigned readings; they can hardly express themselves orally as well as in written; and c) they do fossilization of grammatical features not following standards of college level English. She further stressed that college outputs are of remedial and repetitive in nature which brings frustrations on the part of the teacher.

Though efforts have been made to improve the quality of education in the Philippine setting, as reflected in the major curricular reforms such as Program for Decentralized Education Program (PRODED) in 1994 and Secondary Education Development Program (SEDP) in 1995, still Filipino learners performed poorly. Papa (Inquirer, 2005) witted the scores obtained in the National Achievement Test (NAT) and the High School Readiness Test (HSRT) from 2002 to 2004 due to poor

reading skills. This phenomenon could translate into the continued floundering of high school and elementary learners into college as revealed in the scores of 32% to 38%.

To equip the learners with skills essential for their development is of utmost consideration. One of the learners' skills that need to be developed is their language ability. If their skills are developed and enhanced, surely, learners will survive in the language in and out of the classroom. Likewise, the learners must also become aware of the social meaning of language forms that entails the ability to vary their own speech to suit different circumstances. In addition, effective communication style in the classroom is beneficial. The learners benefit by understanding better what their instructors wish to convey and will be better motivated.

The instructors are benefitted, too, because the knowledge that they effectively communicate creates confidence and dispels anxiety. Hence, teaching and learning become a more satisfying collaborative experience. Successful communication relies on good exchange of ideas between the teacher and the students. Most classroom activities effectively prevent this from happening as tasks form an "interface" between the teacher and the students. Establishing effective communication in the classroom is therefore vital. If language learners fail to master the linguistic forms of the language at a certain stage, they will not attain a level of language proficiency that is beyond the minimal competence level in the target language.

OBJECTIVES

This study determined the level of discourse competence of second year education students of the State Universities

and Colleges (SUCs) in Ilocos Sur, School Year 2014-2015.

Specifically, it sought to answer the following questions:

1. What is the profile of the respondents in terms of:

- A. Student-Related Factors
 - a. sex,
 - b. place of residence,
 - c. parents' educational attainment,
 - d. parents' occupation,
 - e. language spoken at home, and
 - f. exposure to mass media;

- B. Teacher-Related Factors
 - a. educational attainment,
 - b. number of years in teaching English,
 - c. number of preparations,
 - d. number of English training programs attended,
 - e. academic rank,
 - f. methods of teaching;

- C. School-Related Factors
 - a. adequacy of instructional materials, and
 - b. school environment?

2. What is the level of discourse competence of the students along the following:

- a. phonology,
- b. vocabulary,
- c. syntax,
- d. coherence, and
- e. rhetorical organization.

3. Is there a significant relationship between the level of discourse competence of the students and the following:

- a. student-related factors,
- b. teacher-related factors, and
- c. school-related factors?

METHODOLOGY

Quantitative-qualitative method of research was utilized to determine the discourse competence of the student-respondents from the three State Universities and Colleges (SUCs) in Ilocos Sur. A survey method was used in the gathering of data through questionnaires which determined the respondents' profile in terms of student-related factors, teacher-related factors and school-related factors. Classroom observation and interview were also administered to assess the level of students' discourse competence. The second set of questionnaire was answered by the teacher-respondents on their professional factors, methods of teaching, and the adequacy of instructional materials.

To assess the discourse competence of the respondents along phonology, the researcher utilized the sample test she made. The said test consisted of 10 questions answered by the respondents and 15 sentences consisting of words with critical vowel and consonant sounds. The Discourse Assessment Criteria or Rating Scale (see Appendix H) was used to evaluate the students' phonological competence.

Rating Scale	Descriptive Rating
5.00 – 4.51	= Very Good
4.50 – 3.51	= Good
3.50 – 2.51	= Fair
2.50 – 1.51	= Poor
1.50 – 1.00	= Very Poor

Out of 872 students, 275 of them were chosen through stratified random sampling from three (3) State Universities and Colleges, namely: Ilocos Sur

Polytechnic State College, North Luzon Polytechnic State College and University of Northern Philippines.

PRESENTATION, ANALYSIS AND INTERPRETATION OF DATA

Problem 1. What is the profile of the respondents in terms of student-related factors, teacher-related factors and school-related factors?

A. Student-related factors

Table 1. Profile of the Student-Respondents

Socio-demographic Factors	f	%
Sex		
Male	76	27.6
Female	199	72.4
Total	275	100
Place of Residence		
Rural	223	81.1
Urban	52	18.9
Total	275	100
Parents' Educational Attainment		
Father		
Doctoral Degree	1	.4
Master's Degree	2	.7
College Graduate	57	20.7
Did Not Finish College	58	21.1
High School Graduate	93	33.8
Did Not Finish High School	24	8.7
Elementary Graduate	23	8.4
Did Not Finish Elementary	17	6.2
Total	275	100
Mother		
Master's Degree	2	.7
With Master's Unit	2	.7
College Graduate	60	21.8
Did Not Finish College	60	21.8
High School Graduate	89	32.4
Did Not Finish High School	20	7.3
Elementary Graduate	32	11.6
Did Not Finish Elementary	10	3.7
Total	275	100
Parents' Occupation		
Father		
Professional	90	32.7
Skilled	164	59.6
Unemployed	21	7.7
Total	275	100
Mother		
Professional	140	50.9
Skilled	117	42.5

Unemployed	18	6.5
Total	275	100
Language Spoken at Home		
English	56	20.4
Tagalog	111	40.4
Iloko	266	96.7
Others: Itneg	16	5.8
Exposure to Mass Media		
Books	223	81.1
Magazines	154	56.0
Newspapers	161	58.5
Radio	197	71.6
Television	244	88.7
Internet	186	67.6

As presented in the table, majority of the student-respondents (199 or 72.4%) are female. All of them are from the rural areas of Vigan City, Candon City and municipality of Sta. Maria. Most of their fathers and mothers are high school graduates. Majority (164 or 59.6%) are skilled workers and most of the mothers of the respondents (142 or 51.6%) are unemployed. Majority of the respondents (266 or 96.7%) are using Ilocano at home, followed by Tagalog (111 or 40.4%), English (56 or 20.4%) and other dialect such as Itneg (16 or 5.8%) and (244 or 88.7%) are exposed to television, followed by reading of books (223 or 81.1%), listening to radio (197 or 71.6%), using the internet (186 or 67.6%), reading newspapers (161 or 58.5%) and reading of magazines (154 or 56%).

B. Teacher-related Factors

Table 2. Profile of the Teacher-Respondents in Terms of Professional Factors

Professional Factors	f	%
Educational Attainment		
Doctoral Degree	3	33.3
Master's Degree with Doctoral units	3	33.3
Master's Degree	1	11.1
Bachelor's Degree with M.A. units	2	22.2
Total	9	100.0
Number of Years in Teaching English		
21 years & above	4	44.4
16-20 years	2	22.2
11-15 years	0	0
6-10 years	0	0
0-5 years	3	33.3
Total	9	100.0
Number of Preparations		
7-9	1	11.1
4-6	6	66.7
1-3	2	22.2
Total	9	100.0
Number of English Training Programs Attended		
10 or more	6	66.7
7-9	1	11.1
4-6	2	22.2
Total	9	100.0
Position/ Academic Rank		
Associate Professor I to V	1	11.1
Assistant Professor I to IV	3	33.3
Instructor I to III	5	55.6
Total	9	100.0

Based on the table, majority of the teacher-respondents (6 or 66.6 %) finished either a Doctorate Degree or Master's Degree with units in the doctorate, followed by Bachelor's Degree with MA units (2 or 22.2%) and Master's Degree holder (1 or 11.1%), Four (44.4%) have served for 21 years and above and 3 (33.3%) have been in service for 0-5 years and only two (22.2%) have been teaching for 16-20 years. (6 or 66.6%) have 4-6 preparations, two (22.2%) with 1-3 preparations and only one (11.1%) with 7-9 preparations.

On Number of English Training Programs Attended. Majority of the teacher-respondents (6 or 66.7%) have attended 10 or more training programs in English. There are two (22.2%) teachers who have attended

4-6 training programs and only one (11.1%) has attended 7-9.

On Position/Rank. It is noted that out of nine (9) teacher-respondents, majority (5 or 55.6%) are Instructors, three (33.3%) are Assistant Professors, and only one (11.1%) is an Associate Professor.

On Methods of Teaching Table 3 shows the overall assessment of the respondents on the level of use of teaching methods is "High" as supported by the mean rating of 4.11.

Table 3. Level of Use of Teaching Methods of the Teacher-Respondents as Assessed by Themselves and by the Students

Methods	UNP	ISPSC	NLPSC	As a whole	
	Mean	Mean	Mean	Mean	DR
Lecture	4.60	4.45	4.71	4.59	Always
Discussion	4.67	4.64	4.78	4.70	Always
Inductive	3.79	3.9	3.90	3.86	Often
Deductive	4.09	4.17	4.16	4.14	Often
Inductive-Deductive	3.79	4.08	3.98	3.95	Often
Reporting	3.43	4.38	3.97	3.93	Often
Activity	3.92	4.27	3.97	4.05	Often
Inquiry	4.21	4.28	4.62	4.37	Always
Second Language	3.69	4.00	3.86	3.85	Often
Content-Based	3.66	3.94	3.57	3.72	Often
Overall	3.98	4.21	4.15	4.11	High

<u>Norm:</u>	<u>Item DR</u>	<u>Overall DR</u>
4.21 – 5.00	Always	Very High
3.41 – 4.20	Often	High
2.61 – 3.40	Sometimes	Fair
1.81 – 2.60	Rarely	Low
1.00 – 1.80	Never	Very Low

Taking the items separately, the "discussion method, lecture method, and inquiry method" are used "Always" with mean ratings of 4.59, 4.70 and 4.37 respectively. Other methods are used "Often" like deductive method, activity method, inductive-deductive method, reporting method, content-based method, inductive method, and second language approach with a descriptive ratings of 4.14, 4.05, 3.95, 3.93, 3.72, 3.86 and 3.85, respectively.

This shows that college instructors are still more inclined to use discussion and lecture methods which are still the most widely used methods in the schools.

4.21-5.00	Very Highly Adequate	Very High
3.41-4.20	Highly Adequate	High
2.61-3.40	Satisfactorily Adequate	Fair
1.81-2.60	Fairly Adequate	Low
1.00-1.80	Not Adequate	Very Low

C. School-Related Factors

The overall assessment of the respondents on the use of instructional materials was “High” as shown by the mean rating of 3.74.

As a whole, the overall assessment and perception of the respondents on school environment is “Good” as supported by the grand mean of 4.14.

Taking the respondents by school, UNP had the highest overall mean of 3.61, followed by ISPSC (3.52) and NLPSC (3.45); all described as “Good.”

Table 4 shows the Adequacy of Instructional Materials

Items	UNP			ISPSC			NLPSC			As a whole	
	Mean	Mean	Mean	Mean	Mean	Mean	Mean	Mean	Mean	DR	
Adequacy of Instructional Materials											
Books	3.94	4.08	4.05	4.02					Highly Adequate		
Journals	3.52	3.58	3.44	3.51					Highly Adequate		
Guides	4.07	4.23	3.95	4.08					Highly Adequate		
Workbooks	3.63	3.81	3.40	3.61					Highly Adequate		
Modules	3.66	4.24	3.48	3.79					Highly Adequate		
Handouts	4.15	4.21	4.05	4.14					Highly Adequate		
Newspapers	3.30	3.59	3.27	3.39					Satisfactorily Adequate		
Encyclopedia	3.39	3.69	3.17	3.42					Highly Adequate		
Teaching aids	3.93	4.19	3.67	3.93					Highly Adequate		
Charts	3.49	3.82	3.11	3.47					Highly Adequate		
OVERALL	3.71	3.94	3.56	3.74					HIGH		

Norm:
Statistical Range Item DR OverallDR

The level of adequacy of instructional materials of the three SUCs in the province of Ilocos Sur is “High” as backed up by the overall mean of 3.74. Hand-outs got the highest mean of 4.14 with a descriptive rating of “Highly Adequate” while newspapers got the lowest mean of 3.39 although still described as “Satisfactorily Adequate.”

Table 5 Mean Ratings on the Perception of the Student-Respondents On their School Environment

School Environment	UNP	ISPSC	NLPSC	As a whole	
	Mean	Mean	Mean	Mean	DR
STUDENTS' PERCEPTIONS TOWARDS ENGLISH SUBJECT					
English subject is difficult to understand	3.11	3.24	2.48	2.94	Often
English subject is interesting	4.50	4.73	4.37	4.53	Always
English subject is meaningful	4.58	4.72	4.46	4.59	Always
English subject promotes creative thinking	4.66	4.79	4.67	4.71	Always
English subject promotes world understanding	4.63	4.63	4.57	4.61	Always
English subject is boring.	4.34	4.04	4.32	4.23	Never
OVERALL	4.30	4.36	4.15	4.27	VERY GOOD
STUDENTS' PERCEPTIONS TOWARDS ENGLISH TEACHERS					
The English teacher is punctual	4.55	4.58	4.71	4.61	Always
The English teacher is good-tempered	4.67	4.51	4.73	4.64	Always
The English teacher is polite	4.74	4.69	4.71	4.71	Always
The English teacher is rational	4.63	4.65	4.71	4.66	Always
The English teacher has	4.78	4.71	4.83	4.77	Always

good human relationship					
-------------------------	--	--	--	--	--

On Students' Perception Towards English Subject. The students' overall perception towards the subject is "Very Good" (4.27). Taking the respondents by school, ISPSC posted the highest mean score of 4.36, followed by UNP (4.30), both with a descriptive rating of "Very Good" while NLPSC posted the lowest mean score (4.15/ Good).

The table further shows that the students rated Item 4 "English subject promotes creative thinking" with the highest mean of 4.71 described as "Always" while they gave Item 6 "English subject is boring" the lowest mean of 1.75 with a descriptive rating of "Never." This would only mean that students enjoy learning English.

On Student's Perception Towards English Teachers. The data reflect that students perceive their instructors as "Very Good" as indicated by the overall mean of 4.65. Taking the respondents by school, NLPSC registered the highest mean score of 4.68, followed by ISPSC (4.65) and UNP (4.62), all described as "Very Good."

Table 6 also shows that the English instructors are perceived to be "Always" interested in teaching their subject of specialization as reflected by the mean rating 4.81; they are experts and with good human relationship with mean of 4.79 and 4.77, respectively described as "Always." This was also emphasized by Bloomfield (1966) when he said that there is a need for teachers to have mastery of the language. He claims that the prime requisite to teacher preparation is the mastery of the language to be taught.

On Students' Perception Towards Classroom Atmosphere. The table presents an overall mean of 4.12 on the students' perceptions towards classroom

atmosphere which is described as "Good." Among the school- respondents, ISPSC posted the highest mean score of 4.25 described as "Very Good," followed by UNP (4.17/Good) and NLPSC (3.93/Good).

This finding implies that generally, classrooms are conducive to the teaching-learning process. Also contributing to a good attitude towards classroom atmosphere is the mean rating of 4.40 given by the respondents on the Item "the classrooms can accommodate all the students even big classes," "classrooms are conducive to learning" with a mean of 4.24, and "classrooms are with good lighting system" with a mean of 4.22. The least mean rating 3.64 is given to Item "the English classroom is free from outside distractions."

On Students' Perception Towards Co-Curricular Activities. It can be gleaned from Table 6 that the student-respondents seldom participate in English co-curricular activities as supported by the overall mean of 3.52 described as "Good." Taking the respondents by school, UNP, ISPSC and NLPSC posted a descriptive rating of "Good" with a mean score of 3.61, 3.52 and 3.45, respectively.

It is noticeable in this portion that even though students showed a "Good" attitude towards co-curricular activities related to the English subject, there were only few who participate in essay writing and join English clubs which got the lowest mean of 2.69 and 2.83, respectively.

Problem 2. What is the level of discourse competence of the students along phonology, vocabulary, syntax, coherence, and rhetorical organization?

Table 6 presents the level of competence of students in phonology, vocabulary, syntax, coherence and rhetorical organization.

	UNP	ISPSC	NLPSC	As a whole	
	Mean	Mean	Mean	Mean	DR
PHONOLOGY	3.13	3.86	3.94	3.64	Good
VOCABULARY	2.75	2.86	2.84	2.82	Fair
SYNTAX	2.63	2.84	2.82	2.76	Fair
GRAND MEAN	2.84	3.19	3.20	3.08	Fair
COHERENCE	3.04	2.72	2.71	2.82	Fair
RHETORICAL ORGANIZATION	2.82	2.75	2.73	2.76	Fair
GRAND MEAN	2.74	2.73	2.72	2.73	Fair

Norm: **Statistic Range Descriptive Rating**

4.51-5.00	Very Good
3.51-4.50	Good
2.51-3.50	Fair
1.51-2.50	Poor
1.00-1.50	Very Poor

The table above shows that students' overall discourse competence is at "Fair" level except for phonology with 3.64 as Mean rating described as "Good". This means that most of college students in SUCs in Ilocos region can at least express themselves using English language although based on findings when it comes to pronunciation and proper enunciation of words many Ilocanos found to have a hard tongue producing critical vowel and consonant sounds.

Problem 3. Is there a significant relationship between the discourse competence of the students and the following: a. student-related factors, b. teacher-related factors, and c. school-related factors?

Table 7 Correlation Coefficients Showing the Relationship Between the Students' Discourse Competence and the Student-related Factors

Legend: ** - Correlation is significant at 0.01 level
* - Correlation is significant at 0.05 level

Student-Related Factors	DISCOURSE COMPETENCE					
	Phonology	Vocabulary	Syntax	Coherence	Rhet. Org.	Overall
Sex	-.079	-.022	-.020	-.037	.023	-.028
Place of Residence	-.034	-.013	-.025	-.013	-.011	-.011
Parents' Educational Attainment						
Father	.005	.060	.064	.082	.073	.058
Mother	.024	.113	.098	.100	.083	.095
Parents' Occupation						
Father	-.010	-.079	-.091	-.050	-.094	-.074
Mother	-.073	-.091	-.117	-.088	-.098	-.106
Language Spoken at Home	.007	.057	.013	.029	.043	.038
Exposure to Mass Media	.000	.111	.118	.124*	.128*	.117

Among the student-related factors, only exposure to mass media has a significant relationship with coherence ($r=.124$, $p<.05$) and rhetorical organization ($r=.128$, $p<.05$). This finding implies that the discourse competence of the students is not affected by their personal characteristics particularly sex, place of residence, parents' educational attainment and parents' occupation and language spoken at home.

Table 7 shows that there is no significant relationship between the discourse competence of the respondents and the teacher-related factors. This means that teacher's educational attainment, number of years in teaching English, number of preparations, number of English training programs attended, academic rank and methods of teaching do not affect the discourse competence of the student-respondents.

Table 8 Correlation Coefficients Between the Students' Discourse Competence and the Teacher-Related Factors

Legend: ** - Correlation is significant at 0.01 level
* - Correlation is significant at 0.05 level

Teacher-Related Factors	DISCOURSE COMPETENCE					
	Phonology	Vocabulary	Syntax	Coherence	Rhetorical Organization	Over all
Educational Attainment	-.332	-.321	-.513	-.369	-.347	-.364
No. of Years in teaching English	-.621	-.621	-.556	-.618	-.620	-.617
No. of Preps	.378	.392	.080	.330	.359	.286
Number of English training programs attended	-.468	-.471	-.350	-.453	-.462	-.468
Academic rank	-.215	-.214	-.229	-.221	-.218	-.192
Methods of Teaching	-.136	-.141	-.029	-.119	-.129	-.118

Table 8 shows that there is no significant relationship between the discourse competence of the respondents and the teacher-related factors. This means that teacher's educational attainment, number of years in teaching English, number of preparations, number of English training programs attended, academic rank and methods of teaching do not affect the discourse competence of the student-respondents.

Table 9 Correlation Coefficients Between the Students' Discourse Competence and the School-Related Factors

Legend: ** - Correlation is significant at 0.01 level
* - Correlation is significant at 0.05 level

School-Related Factors	DISCOURSE COMPETENCE					
	Phonology	Vocabulary	Syntax	Coherence	Rhetorical Organization	Overall
Adequacy of Instructional Materials	.040	-.003	.041	.002	-.006	.011
Students' Perceptions Towards English Subject	.030	.000	.026	-.009	-.023	.008
Students' Perception Towards English Teachers	.107	.087	.124*	.120*	.117	.124*
Students' Perceptions Towards Classroom Atmosphere	.121*	.091	.126*	.094	.081	.116
Students Perceptions Towards English Co-curricular	.212**	.103	.165**	.133*	.146*	.172**

Table 9 displays the correlation between the school-related factors and the respondents' level of discourse competence. It is clearly shown in the table that adequacy of instructional materials and students' perceptions towards teachers did not show significant relationship with the discourse competence of the students. On the other hand, it can be gleaned from the table that relationship exists between the students' perceptions towards English teachers and syntax (.124), coherence (.120) and their overall performance (.124). This implies that students who have positive perceptions towards their English teachers tend to have a better discourse competence as far as syntax and coherence are concerned.

There is also a significant relationship between the students' perceptions toward classroom atmosphere and phonology (.121) and syntax (.126). This means that students tend to have better performance in phonology and syntax when their classroom atmosphere is good.

It is also noted that students' perceptions towards English co-curricular activities is highly significant with phonology (.212), and syntax (.165) and highly significant in their overall performance (.172). This implies that students who are actively joining or participating in English co-curricular activities such as debate, quiz bowl and public speaking tend to have better discourse competence than those students who are not engaging in any English co-curricular activities. This could also mean that students can develop their confidence particularly their communicative/discourse competence through constant exposure every time they join English co-curricular activities.

Conclusion

Based on the findings of the study, the following conclusions were drawn: Most of the student-respondents are female. All of them are from the rural areas of Vigan City, Candon City and municipality of Sta. Maria. Most of their fathers and mothers are high school graduates.

Most of the teacher-respondents of the SUC's in the Province of Ilocos Sur are either Doctoral Degree holders and Master's Degree holders with doctoral units, teaching English for 21 or more years, and with 4-6 preparations. Majority of the teacher-respondents have attended 10 and above seminars or training programs in English. Moreover, most of the teachers belong to Instructor I to Instructor III. The methods of teaching primarily employed by the teachers are the discussion and lecture. Meanwhile, instructional materials was perceived to be at "Highly Adequate" level. On School Environment, the overall assessment and perception of the respondents is "Good." The student-respondents had generally "Fair" discourse competence in all areas such as phonology, vocabulary, syntax, coherence and rhetorical organization. Finally, the discourse competence of the respondents is significantly related to exposure to mass

media, teacher-related factors and school-related factors.

Recommendations

Based on the findings and conclusions drawn in this study, the following recommendations are hereby forwarded:

There should be more student talk in the classroom to allow for more interaction and exchange of ideas from students. Teachers must employ various teaching strategies to give students more time to study and use the linguistic input.

Since the result of the students' discourse competence is only at "Fair" level, teachers are encouraged to give more exercises or activities to students that would develop their mastery in the pronunciation of critical vowel and consonant sounds, proper stress and intonation, subject-verb agreement, correct usage, use of conjunctions, transitional devices, and idiomatic expressions to further develop their skills in phonology, vocabulary, syntax, coherence and rhetorical organization.

The teacher should use varied teaching strategies and methods aside from discussion and lecture whenever possible. Teachers should also learn or develop the art of questioning to provoke critical thinking in the students and to encourage them talk and express their feelings. Moreover, it is suggested that teachers should use simple, short and clear statements and/or questions and whenever necessary, questions should be re-stated or rephrased.

Teacher-training institutions should continually improve, update and enrich their English programs emphasizing the development of the discourse competence of the learners as well as the interpersonal and pedagogical value of language across curriculum.

Teachers should encourage the students to participate in extra-curricular activities in order to enhance their discourse competence. School administration should improve the admission, retention and specialization policies of the college.

A similar study on discourse competence in other school setting is recommended to determine if other significant variables (like other course/programs not only in education or in other year level) would influence the discourse competence of the students.

POLICY IMPLEMENTATION OF SMALL BUSINESS EMPOWERMENT IN WAJO REGENCY- INDONESIA

Muhammad Guntur, Herlina Sakawati and Sulmiah

hmguntur13unm@yahoo.com; herlinamappakanro@gmail.com; mya.ahmad@gmail.com
Department of Public Administration, Faculty of Social Sciences, State University of Makassar

Abstract

Empowerment of small businesses nationwide impact on the existence of small businesses in Wajo regency that absorb labor in various fields of business, especially on businesses engaged in small industries. This study aims to determine business empowerment policy implementation in Wajo. The study was conducted with qualitative approach involving small businesses with a focus on implementation aspects of small business empowerment. Collecting data using in-depth interviews, participatory observation, and documentation. Data analysis using data reduction, data presentation, and conclusion.

The results showed that small businesses in Wajo not develop optimally, due to the policy aspects of the means of supporting the development of small businesses have not been able to encourage the growth of productive ventures. On the other hand policies on the business climate in terms of licensing and partnership seeks already well underway. Ease of availability of banking facilities give small entrepreneurs access capital, but is still constrained in terms of collateral.

Key Word : Policy Implementation, Empowerment, Small Business.

INTRODUCTION

Micro, Small and Medium Enterprises (MSME) is one important part of the national economy and development. The growth of the MSME sector currently looks encouraging. The role of the MSME sector and business activity since the economic crisis hit our country. Given MSME as a driver of the economy and national development should be conducted in an effort to empower small business sector. One of the government's efforts to empower small business is the issuance of a legal umbrella, namely MSME Empowerment Policy No. 20 of 2008.

Concern of the government to help small entrepreneurs in the form of actions empowerment of small businesses that are the majority of national economic actors in the middle to lower level, it is essential to get serious attention from the government.

One of the priority programs of the Cabinet Indonesia Bersatu is the development of small businesses that have been formalized in Government Regulation No. 7 of 2005 on the National Development Plan in year 2004-2009 of Cooperatives and MSME which is believed to be a motivator and a buffer for the national economy.

Government efforts to empower small businesses never ceases to make corrections from the policy side, namely the issuance of a new Law No. 20 Year 2008 on Micro, Small and Medium Enterprises (MSME). With the basic laws governing small businesses will have certainty and fairness businesses through programs empowering small businesses, like in other countries small businesses commonly referred to as family businesses obtain legal protection of local government and are allowed to gain access related with the

development of enterprises, Antonio (1999: 2)

Empowerment of small businesses nationwide also have an impact on the existence of small businesses that exist in areas such as small businesses in Wajo are labor-intensive with a variety of business sectors, the main business engaged in the silk weaving industry. Another impact is felt in the presence of a small business is the emergence of new generations as an entrepreneur who develops itself in the field of entrepreneurship. With the spirit and the willingness to cultivate the entrepreneurial community, as is done by entrepreneurs in Wajo with spirit as a city of trade, it is generally more likely to opt trying than those in other occupations.

On the other hand, Wajo District Government through the Department of Cooperatives, MSME, Trade and Industry has established a Strategic Plan based on the Long Term Development Plan Medium Year 2009-2014, which is one of operational technical documents in carrying out its duties and functions in serving the community, especially communities cultivate small businesses have the power to implement the program of small business empowerment, that is; 1) motivation employee Department of Cooperatives MSME, Trade and Industry is quite high, 2) presence of personnel who have the technical competence operations to foster MSME, 3) The commitment of the executive and legislative institutions, centers and areas to organize the SME sector, 4) support the rules relating to the empowerment of MSME, Strategic Plan, Department of Cooperatives MSME, Industry and Commerce.

The problem faced by MSME and also become a weakness is the lack of access to information, particularly information market (Isaac, 2005: 37). This is a constraint in terms of marketing its products, due to the limited access to market information which resulted in lower market orientation and lack of competitiveness at the global level. The lack of information about the market, making MSME can not direct the development efforts clearly and focus, so its development stagnant. This paper will discuss the implementation of policies empowering small businesses in the district Wajo by focusing on the silk weaving industry sectors. Based on the background of the problems above problem in this study can be formulated "Describing the policy implementation of small business empowerment silk weaving industry sectors associated with the growth of the business climate and partnerships in Wajo?"

FRAMEWORK THEORY

a. Policy implementation

policy program have been taken as an alternative solution must be implemented, which is carried out by administrative bodies and government agencies at lower levels. Sawicki (in Tangkilisan, 2003: 9) explains that: Implementation related to various activities geared to realize the program, which in this position the executive set out to organize, interpret and implement policies that have been selected.

Based on the above understanding, relating to the implementation of various activities geared to realize the program, which at this position is how to organize the executive set. An executive is able to organize the resources, units and technique that can support the implementation of the program in effectively and efficiently, as well as the

interpretation of the planning that has been made, and instructions that can be followed easily for the realization of the program implemented. Dunn (2003: 132) termed the implementation of the more special by calling the implementation of the policy is the implementation of control policy actions in a certain period of time. Related to factors affecting the implementation of a program policies, Cheema and Rondinelli (as cited in Subarsono, 2005) argues that there are several factors that influence policy implementation of government programs that are decentralized. These factors include:

1) Environmental conditions

Environmental is deeply influence policy implementation, which referred to the environment include the socio-cultural environment and the involvement of program beneficiaries.

2) The relationship between organizations

In many programs, the implementation of a program needs support and coordination with other agencies. It required coordination and cooperation for the success of a program.

3) Resource organizations for program implementation

Implementation of policies need to be supported by the resources both human resources and non-human resources .

4) The characteristics and capabilities of the implementing agencies

The definition of the characteristics and capabilities of the implementing agency is covering bureaucratic structures, norms and patterns of relationships that occur within the bureaucracy, all of which will affect the implementation of a program.

(Subarsono, 2005: 101).

b. Policy Micro, Small and Medium Enterprises

MSME in the economy of Indonesia is a business group that has the greatest number and proven resistant to a wide range of economic crisis shocks. Criteria businesses included in the Micro, Small and Medium Enterprises has been regulated in a legal umbrella. Based on Law No. 20 Year 2008 on Micro, Small and Medium Enterprises (MSME) there are several criteria used to define the terms and criteria of Micro, Small and Medium Enterprises. According Rahmana (2008: 48), several institutions or agencies even provide its own definition in the Small and Medium Enterprises (MSME), including the Ministry of Cooperatives and Small and Medium Enterprises (Menekop and MSME), the Central Statistics Agency (BPS), the Minister of Finance Decree No. 316 / KMK.016 / 1994 dated June 27, 1994. the definition of MSME given vary between one another.

According to the Ministry of State Minister of Cooperatives and Small and Medium Enterprises, that the definition of small enterprises including Micro enterprises is a business entity that has a net worth of Rp 200.000.000 (two hundred million rupiah , excluding land and buildings, and has annual sales of Rp 1.000.000.000 (one billion rupiah). Meanwhile, Medium Enterprises (ME) is a business entity owned Indonesian citizens who have a net worth greater than Rp 200,000,000 until Rp 10.000.000.000, not including land and buildings.

The Criteria for Micro, Small and Medium Enterprises (MSME) according to Law number 20 year 2008 (UU No.20 Tahun 2008) are classified based on the amount of assets and turnover is owned by a business that is (in Indonesia currency) :

1. Micro Business Maks.50 Million Max. 300 Million

2. Small Business > 50 Million - 500 Million > 300 Million - 2.5 Billion

3. Medium Business > 500 Million - 10 Billion > 2.5 Billion - 50 Billion

c. Empowerment

Conceptually empowerment comes from the word "power" which means power. The Webster and Oxford English Dictionary (as cited in Sumaryadi, 2005: 98-99) provides two meanings of to empower namely: (a) to give power or authority to is give power to direct or delegate authority to other side, (b) to give ability or to enable is to provide the ability to give empowerment. This view holds that empowers means dividing the power of the people or groups in power to those who do not have it for a balance between rulers and ruled, so the outfit conditions not occur. The idea of empowerment, will not be separated from the concept of "power" itself. However, the concept of power here is not merely leads to power, but also on the strength, ability or potential more from within the person or group who are empowered.

Empowerment can also be interpreted as a goal and a process. For the purpose, empowerment is a state to be achieved, such as the people who have the power or authority and empowerment that leads to independence according to the types of power mentioned earlier.

In empowerment, engagement parties empowered so important that the purpose of empowerment can be achieved to the fullest. Programs that include the community, possess a number of purposes, namely that the aid effectively because in accordance with the will and recognize the abilities and needs, and increase empowerment (empowering) Persons empowered with experience designing,

implementing and accountable efforts to improve themselves and the economy (Kartasmita, 1996 : 249).

According Sennet & Cabb (as cited in Suharto, 1998: 209) This powerlessness is caused by several factors such as the lack of economic security, lack of political access, the lack of access to information and technology, lack of financial support as well as lack of education and training ". Theorists such as Seeman (1985), Seligman (1972), and Learner (1986) are summarized by Suharto believes that "powerlessness experienced by a group of people is a consequent of the internalization process resulting from their interactions with society. Groups of people who are less empowered considered themselves weak and powerless because they are think like that ". Seeman call it with alienation, Seligmen call it powerlessness and Learner termed it the surplus powerlessness.

Based on the review at above references, the nature of the development and empowerment of small businesses aimed at: (a) foster and enhance the ability of small businesses into the business a strong and independent, and can develop into a medium-sized business, (b) increase the role of small businesses in the formation of national product, the expansion of job opportunities and businesses, increase exports, and increased and equitable distribution of income to manifest itself as the backbone and strengthen structures

The government's policy for the development of MSME in the long term aims to improve potency and active participation of SMEs in the process of national development, especially in economic activities in order to achieve equitable development through the expansion of employment and income generation. Goals and fostering small

businesses are to increase the number of medium entrepreneurs and to create enterprises more strong and independent. So that economic actors can play a role in the national economy.

As for government policy related to the development of MSME, which are:

a. Capital assistance.

In general, the capital of SMEs are still weak, this contributed determines the success of development strategies and development in the field of capital, including how the government and the community to implement the concept of capital to help SMEs. Law No. 23 of 1999 (UU No.23 Tahun 1999) About Bank Indonesia answering these issues where there is some activities conduct by Bank Indonesia in assisting the development of small businesses one of which is Small Business Loan (KUK).

b. aspects of Partnership

Partnership refers to Mohr and Spekman (1994) is a strategic relationship that has been deliberately designed or constructed between companies to achieve the intended purpose, mutual benefit and mutual dependence is high. The partnership that the company will make an impact in terms of access to technology and new markets, offer products / services more broadly, economies of scale in research and product together, access to knowledge and a variety of risks (Powell as cited in Mohr and Spekman, 1994: 63) , The impact experienced by the company is gaining access to new technologies. This is especially true on a partnership between the companies that have different levels of technology. In addition to impacting on the acquisition of and access to technology, the partnership will essentially impact on access to new markets. This is especially true for companies that partnered to different

industries or complementarities and partnerships at the international or global level.

c. Institutional Aspects of Business Financing.

Interest institutional program is to facilitate, accelerate and expand small businesses access to productive resources to be able to take advantage of available opportunities and potential of local resources and adjusts its business scale in accordance with the demands of efficiency. Support system is built through development support institutions / business development service providers are affordable, the spread and quality to improve the access of small businesses to markets and productive resources, such as human resources, capital, markets, technology, and information, including a boost intermediation financial institutions for small businesses

The purpose and benefits of the research are: 1) To determine the policy implementation of small business empowerment weaving industry sector in Wajo. 2) To determine the potential development of the silk industry enterprises in Wajo. While the benefits of this research are: 1) Helping to benefit the development of science, especially the science of public administration with regard to small business empowerment policies silk weaving industry in Wajo. 2) Contribute empirical findings in the field of the study of public policy related to policy implementation of small business empowerment through various groups of observers in the field of empowerment in society, 3) Provide input for regional government in optimizing the empowerment of small businesses that have been made, so that it can be felt benefits the small entrepreneurs silk weaving industry in the area of Wajo.

RESEARCH METHODS

This research use descriptive research type with qualitative methods, which described how government policy in terms of policy implementation empowerment of the silk industry in Wajo. This study took place in the district of Tempe and Tanasitolo with the consideration that the two districts are populated more entrepreneurs weavers be compared to other districts, making it possible to perform more in-depth research will be widely available for comparison and data obtained.

The focus in this research is about the empowerment of small business policy implementation weaving industry in Wajo. These aspects are the focus of this research is; 1) the business climate; 2) partnership seeks; 3) institutional strengthening. The type of data that will be collected through this study include: 1) primary data, 2) secondary data. While the source of the data that is; businessman weaving silk obtain capital support from financial institutions. Data collection techniques in research methods: a) Observation b) Interview.

The data were then analyzed; a) To review all available data from various sources, such as interviews, observations that have been in written in the remarks field, and documentation, b) Presentation of data. Data that has been reduced and classified by group problem under study, so that the possibility of drawing conclusions (verification). c) Verification (conclusion). Researchers draw conclusions based on the theme of finding the meaning of the data collected. The analytical method used by the researchers in this study is intended to get a clear picture of the phenomenon of silk weaving Wajo employers in responding to the problem of their business development.

RESULTS AND DISCUSSION

1. Geographic Wajo Regency

Wajo regency with its capital Sengkang, located in the middle of South Sulawesi province with a distance of 242 km from the provincial capital, elongated in the direction of East Sea, with its geographical position between $39^{\circ} 3' - 4^{\circ} 16' 53''$ latitude and $119^{\circ} - 120^{\circ} 27'$ BT. Capital City Wajo Sengkang dubbed the trading city whose population is happy in the world of commerce. This is evidenced by the appearance of actors engaged in wholesale business that serves traders from the surrounding district, as Soppeng, Bone and Sidrap. The traders from other districts usually buy merchandise directly in Makassar, but lately traders more like shopping in the City Sengkang is because the price of the merchandise equal to Makassar, there is even the price is below the price sold in Makassar.

2. Small Business Empowerment Policy Implementation Silk Weaving Industry in Wajo

Government Wajo in empowering small businesses can not be separated from the mechanisms and commitments that have been outlined by the central government with reference to the Law Empowerment Policy of Small Business No. 20 of 2008, then describes in the form of Regional Regulation Wajo District No. 6 of 2008 about Organization and work procedure of the Regional Office of Wajo previously established by Regional Regulation number 15 of 2001 about the establishment of organizational structure and working procedures of the Department of Cooperatives MSME, Trade and Industry. In carrying out the work program of each agency still refer to the Strategic Plan have been made before, namely Strategic Plan of

the Department of Cooperatives MSME, Trade and Industry Wajo Regency Year 2009-2014 based on the Law No. 20 of 2008 (UU No.20 Tahun 2008) about the empowerment of MSME.

Direction of government policy in the area of small business development is essentially devoted to the pursuit of high economic growth areas, employment, increased competitiveness and included business development that is friendly to the environment. Therefore, the Government Wajo in developing small business is always guided by the Law Small Business Empowerment, as the researcher outlines as follows:

1. Fostering a conducive business climate, aimed at providing equal opportunities to the people and businesses in developing its business, including access to productive resources. More emphasis on regulatory aspects addressed. Various regional regulations have been implemented by the Regional Government with regard to the empowerment of small businesses which are separating a few department. formerly Department of Cooperatives, MSME, Trade and Industry become one department, and then split into two departments, namely the Department of Industry, Cooperatives, MSME became one department and the Department of Trade became the Department of Trade and Markets Management and add again one department that related with empowerment of MSME, namely the Department of Licensing.
2. Increase access to financial resources, which is a classic

problem. In relation to the capital, the government Wajo cooperation with various financial institutions, both banks and financial institutions non-banking financial institutions. In addition through the banking system, the government is also encouraging the utilization optimization SOE profits. The government also continued to allocate part of the budget for the retrofitting of small businesses through cooperatives, to provide support in serving the needs of funding for small businesses. Financial support is a stimulant for small businesses to simplify operational processes in running the business, such support is also a big push from the government to small businesses as a pillar of the economy can be run with the maximum. As for financial support made by financial institutions, both banks and non bank institutions provide credit facilities in the form of capital credit in the amount of Rp 50.000.000 to Rp 1.000.000.000 which have the potential business activities to be developed.

3. The study conducted showed that the greatest obstacle of small businesses is a limited market. With such a limited market, is certainly difficult to expect MSME to develop marketing and capitalization of capital independently. As a result, MSME stagnated and only a few are able to achieve large scale, because this issue affects the size of a small business product marketing, both in the domestic and international markets.
4. One of fostering regional business development undertaken by the

Government of Wajo is doing promotional activities for small businesses in various forms of promotional activities, whether carried out at home and abroad with the hope to increase turnover and profits of the employers. The research findings, obtained information that forms of promotion have been followed by several small businesses, both at the district, provincial, national, and international, namely in the form of exhibition, Mission / Contacts Trade and Business Meeting. Forms of business promotion is most often followed by businessmen from Wajo is the sale in the form of an exhibition held by MSME at the provincial level, both the exhibition in the framework of exhibition development, and exhibitions conducted by government and private agencies.

Based on the Wajo Central Bureau of Statistic In 2013, the condition of small business period 2013 to 2014 showed a positive development. During this period, the contribution of small businesses to the gross domestic product averaged 56.04 percent. By sector activity small businesses dominate agriculture, construction, trade, hotels and restaurants. These sectors are the sectors most labor-intensive. The ability of the business sector in creating added value are very different from one group to another and reflect the characteristics of their respective businesses. BPS data in 2013 showed that of the total 43.22 million units of small businesses in 2013 increased by 1.61 percent, and the number is the largest part businesses in Wajo.

For industrial activity has yet to show a meaningful contribution in supporting the economy in Wajo. Most of the existing industries are located in the district of Tempe and Tanasitolo, the industrial base is in the field of clothing (silk). As the largest silk producer in the province of South Sulawesi, Wajo well-known as "silk manufacturers". Location marketing is Makassar up out of the country. Nevertheless, the activities of the silk industry has not shown a meaningful contribution to the regional economy, particularly the industrial sector. This is understandable because the network marketing directly to the provincial capital and local economic impact that can be felt is its impact on other sectors, especially the trade and transport.

Given the market share of silk fabrics Wajo not only marketed in Sengkang and Makassar, but also to several cities in Java, such as Cirebon, Pekalongan, Solo and Yogyakarta. In fact it has become the export product and the target of many well-known designers. The price also varies, which is determined by the motives and quality fabrics. This proves that one of the industrial centers, especially centers of the weaving industry is labor-intensive and became one of the mainstays that contribute positively to regional revenue Wajo. When the center is managed by the weaving industry development model integrated industrial centers in the form of area equipped with supporting facilities of business, then it is possible, especially in the field of local revenue centers of the weaving industry makes one of the largest regional income in Wajo.

Based on the research findings have been analyzed previously, then the next is described further in the discussion of the research that the government in this case

the agencies involved in the problem of small business empowerment in control in implementing policies empowering small businesses will have an impact on the business development of weaving when the government able to facilitate all the support needed by small entrepreneurs engaged in the weaving business including; a) the provision of business location and strategic market, b) the reduction or elimination of charges and other levies on the private sector, c) encourage the formal sector to help small entrepreneurs, d) granting business permits fast and cheap, e) development of business in the form of education and skills training, f) marketing assistance, production and management, g) eliminating bureaucratic and administrative barriers, h) access to infrastructure, and i) access to other economic resources.

While the pattern of development of silk weaving region centered at a township name Sempangge not give color or characteristic as silk weaving the development of industrial estates, industrial park craft bag in Sidoarjo. While Wajo has always been known as the largest producer of silk fabrics in Indonesia and even in foreign countries that should already have a complete silk department industries. The government's policy in building silk industries area still half-hearted, the government should build settlements silk market in the specific area that is equipped with various facilities in it that could give appeal to a seekers sarong that made from silk, such as houses of the village artisans and sellers of silk sarongs. Even employers in the region are woven want inns or cafés can be occupied for the rest of the visitors.

One of the weaknesses in the silk business development in Wajo is a partnership issue that has not been felt by employers, so that prices can be pushed around by people who

have the capital, the main raw material supply in the form of a seasonal play. Silk raw material imported from Enrekang and Soppeng, while for spinning and weaver was done in Wajo, because only Wajo people who have the skill to weave silk than other regency.

Financial institutions and state enterprises, as institutions that facilitate the provision of capital in the form of loans is expected to ease with do not prioritize the collateral or guarantees, but the business cycle and behavior of entrepreneurs is committed to conducting its business activities. Things that are needed by small businesses, namely, a) convenient and adequate access to credit and other input factors, b) low-interest loan

CONCLUSIONS AND RECOMMENDATIONS

Judging from the policy implementation program empowering small businesses weaving silk, particularly infrastructure development program has not developed its full potential, due to the policy aspect settlement means silk in the village Sempangge not been able to encourage economic growth entrepreneurs silk weaving. This is because the facilities provided by the Government relating to inadequate weaving business activities as expected by employers weaving. On the other hand policies to expand the business climate in the aspects of the partnership, the banks are already well underway. Marketing silk still faces a complicated chain, but the business promotion policy has been implemented through various times in exhibitions both at national and international levels.

All the agencies concerned with the empowerment of small businesses should be the leading sector in the field of small

business empowerment, and so we need a policy on mapping potential locations of the program will be selected by taking into account the linkages between the concept of the region as well as aspects of Human Resources that promote aspects of the business climate and increase the growth of entrepreneurial insight. To better accommodate the interests of small business development, it is necessary to issue regulations more special area set up mechanisms for the management of small businesses ranging from the mechanism of the establishment of a business license, the arrangement location of the business, the growth of the business climate, the partnership seeks, institutional strengthening business financing in order to build synergy and connectivity between the government and entrepreneurs.

Abstract : The simple concept of life in Indonesia is unity. Visible unity today is we have reached a point in history where we are in grave danger of destroying Earth's life sustaining capacity with a spiritual crisis capable of inflicting disharmony relationship between humans and nature. We can see the proof evident are in the differences in point of view that is not communicated properly which can lead to conflict of stakeholders nation in making environmental policies in Indonesia. In order to resolve such environmental issues, Indonesian must examine and reassess their underlying attitudes and beliefs about the earth, and their spiritual as well as physical responsibilities toward the planet. Spiritual ecology and Green government is a direct response to the mounting calls for a paradigm shift in the way humans relate to the natural environment. This Paper offers a new set of solutions by proposing a compelling new synthesis of environmental protection in Indonesia based on Green government with examining reviews beliefs and values to see how they relate to nature in a multitude of diverse approaches under the rubric of spiritual ecology. The implementation of Green government in Indonesia must be addressed with making a model of governmental affairs division of ecologically oriented towards green forms of government added the principle of the division of government functions that implement the money follow function correlated with the principles of ecological function characteristic. Thus, ecological renewal and sustainability necessarily depends upon spiritual awareness and Indonesia government attitude of responsibility.

Keywords: Spiritual ecology, Green government, disharmony, sustainability, government

Introduction

Policy is an instrument of government, not only in the sense of government which concerns only the state apparatus, but also governance that touch the management of public resources.¹ This means that a policy which contain provisions or government decisions are considered to be able to bring about positive impacts to the lives of its citizens. Bridgemen and Davis (2004: 4-7) explains that public policy has at least three dimensions are intertwined, namely as an objective, as the selection of the legal action or lawfully (authoritative choice), and as a hypothesis. ² Public policy is a means to an decision, meaning that public policy is concatenation of government action designed to achieve certain results expected by the public as a government constituent. Selection policy actions are legal or authoritative because it was made by institutions that have legitimacy within the government system. Policies are made based on the theory, models or hypotheses about cause and effect. Policies always rely on assumptions about the behavior. Policy always contains incentives that encourage people to do something.

In relation to public policy and the government's role in it of course subject to the conditions and situations that exist in real terms. As we know that in every country, the government's role in leading

the organization into a nation are very important. The role of government in the country, including in Indonesia at least consist five important things are:

1. Keeping the sovereignty of the nation
2. Making public policy
3. The provision of public services
4. Guard sustainability of the country, as well as
5. Maintain harmony and dynamics of the nation. ³

In connection with the government on the fourth point which is preserving the regions of the country, the government needs to be proactive in guarding, maintaining, and preserving the country's territory. Proactive in the sense that in public policy-in the national, regional, and local always be pro-environment. Long-term public policy, having regard to the importance of the environment in a holistic manner. Proactive in the sense that a policy consistently run pro-environment, so it is not distorted in its implementation because of the influence of those who have short-term interests, which in turn will destroy the environment. ⁴

As we know that the term environment Literally translates to "Life Environment", but in reality is more widely referred to as (Environment). The environment is not only to discuss the man and his environment but also animal (fauna) and plants (flora) with its environment in an effort to realize the

⁴ Ibid

livelihood or biosphere. According to Emil Salim (1982: 14-15), giving the opinion that the environment means any property, the state conditions, and the effect that there is in the room were occupied and affect living things, including human life. In this case the space limit in the sense of the environment can be very broad, but for practical purposes can be limited space environment with factors that can reach humans e.g. natural factors, political factors, economic factors, social factors and others. The environment also be interpreted everything around an object affect each other.⁵

The opinion was reinforced in the Law of the Republic of Indonesia Number 32 of 2009 on the Protection and Management of the Environment in article 1, paragraph (1) that "The environment is a unity with all things space, power, state, and living creatures, including humans and their behavior, affecting the nature itself, the continuity of livelihood, and welfare of human beings and other living creatures. But in fact people are less able to translate the importance of the environment."⁶

In years past, economists increasingly realize how important implications caused by a variety of environmental problems. Against the successes of economic development efforts. Attitude that is not responsive environmental conditions in people's lives, causing damage and environmental degradation also can decrease the rate of economic growth

⁵ F. Gunarwan Suratmo, *Analisis Mengenai Dampak Lingkungan*, Yogyakarta : Gadjah Mada University Press, 1995, page 3

⁶ Regulation Number 32 year 2009 about Environment

because of the high cost burden born by developing countries such as Indonesia due to the level of productivity of natural resources are diminishing health-related problems.⁷

Research Methods

In this paper, the method used to analyze this issue is as follows. there are three aspects related to data management and data analysis proposed by Levine (1985), Wolfe (1992), and Huberman and Miles (1994), which are summarized as follows:

1. A system that ensures high-quality accessibility to the data.
2. Documentation of any analysis that is Carried out; and
3. Retention and protection of the data and related analysis of documents after the study has been completed.

According to Miles and Huberman are measures of data analysis is divided into three phases:

1. Data Reduction

In qualitative research, data reduction does not necessarily refer to quantifying the nominal data. Qualitative Data needs to be reduced and transformed in order to make it more readily accessible, understandable, and to draw out various themes and patterns. Data reduction acknowledges the voluminous

⁷ Michael P. Todaro dan Stephen C. Smith, *Pembangunan Ekonomi Edisi Ke Sembilan*, Jakarta : Erlangga, 2006,page 562

nature of qualitative data is in the raw. It directs attention to the need for focusing, simplifying, and transforming of raw data into a more manageable form.

In qualitative research, data reduction measure does not necessarily refer to the nominal data. Qualitative data needs to be reduced and altered to make it more accessible, understandable, and draw out various themes and patterns. Data reduction recognizes the bold nature of qualitative data in the raw. Directing attention to the need to focus, simplify, and transform raw data into a form that is more easily managed.

2. Data Display (Data Presentation)

The notion of a data display is intended to convey the idea that the data are presented as an organized, compressed assembly of information that permits conclusions to be drawn analytically. Displays may involve; tables of the data; tally sheets of themes; summaries or proportions of various statements, phrases, or terms; and similarly reduced and transformed groupings of data.

The idea of the display data is intended to convey the idea of the data presented organized, compressed assembly of information that enables analytical conclusions to be drawn. Displays may involve data table; theme tally sheets; summary or the proportion of the various statements, phrases, or terms; and also reduced and changed grouping of data.

3. Conclusions and Verification

On the last analysis, we will discuss activity is conclusion drawing and verification. Throughout the research process, the investigator has been making various evaluations and decisions are informed about the study and the data. Sometimes Reviews These have been made on the basis of the material found in the existing literature (as the researcher spirals back and forth to the literature).

Conclusions and Verification. During the study investigators have made evaluations and decisions about the study of information and data. Sometimes this has been made on the basis of the material found in the existing literature (as researchers spiral back and forth to the literature).⁸

Sustainable Development Commitment

Damage to the environment is even a common problem found in all regions in Indonesia. In the review reports of environmental degradation and climate change in 2013 stated that environmental issues are still a chore for us together.⁹ A number of events and issues have become our common agenda to address and overcome the present and the future. Some actual issues and community concerns, including about floods, land and forest

⁸ Bruce L. Berg, *Qualitative Research Methods for the Social Sciences Fourth Edition*, Allyn & Bacon, Boston, 2001, page 35-36

fires, global warming, land degradation due to mining. Key Performance Index KLH is the Environmental Pollution Control, Environmental Degradation Control and Capacity Building.

Sustainable development will only be achieved if human needs and the capacity of the natural resources of renewable in equilibrium, over time, in other words sustainable development can be realized if management and utilization of natural resources for the benefit of people today can guarantee sustainability in the future. As it is known that the current economic growth is increasingly marked by the opening of land for industry resulting in a change of use of agricultural land into industrial areas of new industrial and residential areas.

Based on the Sustainable Development Goals, at the United Nations Sustainable Development Summit on 25 September 2015, world leaders Adopted the 2030 Agenda for Sustainable Development, the which includes a set of 17 Sustainable Development Goals (SDGs) to end poverty, fight inequality and Injustice, and tackle climate change by 2030.¹⁰ Mentioned on points to 12 i.e. Ensure sustainable consumption and production patterns are the target in 2020¹¹, Achieve the environmentally sound management of chemicals and wastes throughout all Reviews their life cycle, in

accordance with the agreed international frameworks, and Significantly reduce Reviews their release to air, water and soil in order to minimize Reviews their adverse impacts on human health and the environment. This means that by 2020, is expected to achieve environmentally friendly management of chemicals and all wastes throughout their life cycle, in accordance with the framework of internationally agreed, and significantly reducing their release into the air, water and soil to minimize the adverse impact on human health and the environment.¹² So to make it happen need to be implemented in a synergistic effort between the government and the public.

In Law No. 25 of 2004 on National Development Planning System elaborated further with the various laws and regulations each region in order to set the Long Term Development Plan and the Medium Term Development Plan. National Long Term Development Plan regulated in Law Number 17 Year 2007 on the National Long Term Development Plan for Years 2005-2015. In Chapter II regulates the General Conditions, the letter I found the chapter that speaks of Natural Resources and Environment. In it there is a recognition that: "the management of natural resources is still ongoing and still ignores environmental sustainability so that the environmental carrying capacity decreases and the availability of natural resources depleted".¹³ Furthermore, in chapter III, which speaks about the vision and mission of the National

Development 2005-2025, set out eight missions, one of them is the mission points to six, titled "Realizing Indonesia beautiful and everlasting". The contents of the six missions to the following ..

Realizing Indonesia beautiful and sustainable is to improve the management of the implementation of development that can maintain a balance between the use, sustainability, availability and use of natural resources and the environment while maintaining the functions, capacity and comfort in life in the present and the future, through the utilization with a harmonious space for residential use. socio-economic activities, and conservation efforts; improve the economic utilization of natural resources and environmentally sustainable; improve the management of natural resources and the environment to support the quality of life; provide beauty and comfort of life; and to improve the maintenance and use of biodiversity as the basic capital development.¹⁴

Nowadays environmental problems quite often discussed. As is well known that the ozone layer is now dwindling. With the continued depletion layer, it is feared if this layer does not exist or disappear altogether from the universe. Without the ozone layer so many negative consequences that could befall living creatures on this earth, among others: the diseases will spread rampant, erratic weather, global warming, even the loss of an area due to be the melting of ice in the North Pole and South. The universe only waiting period demise alone. Indeed, many ways to be chosen to address this issue. Scientists provide inputs to address this

issue in accordance with a scientific background. The writers did not miss to participate in tackling the problems that have been widely reported in recent years.

For example, Causes and Impacts of Local Environment

1. Drought: drought is a shortage of water caused water sources can not provide the water needs of humans and other living beings. Impact: cause interruptions health, food shortages.
2. Flood: a natural phenomenon when the river can not accommodate the overflow of rainwater. It all can happen because of forage retaining flowing water is reduced. Impact: interruptions health, skin diseases, human activity is inhibited, a decrease in food productivity, etc.
3. Avalanche: is the erosion of land by the water run-off because of reduced water retention. Impacts: damage to residences, fields, rice paddies, disrupt the economy and transport activities
4. Beach erosion: soil erosion coastal plains due to sea waves. Impact: causing damage to dwellings and the loss of economic potential such as tourism activities.
5. Seawater intrusion: sea water (salt) filling the basement has been widely used by humans and not their custody sea water intrusion such as mangrove areas. Impacts: the shortage of

¹⁴ *Ibid*, page 40

fresh water, and damage the health.¹⁵

It also can be known about environmental issues and effects at the national level is as follows :

1. Fires: The process of forest fires can occur by natural or manmade. fire by humans is usually due to land clearing for plantation Impacts: counts the contribution of CO₂ in the air, loss of biodiversity, the smoke produced can damage the health and the smoke can affect other countries. Not only at the local but to neighboring countries were also affected.
2. Offshore oil pollution: the result of the exploitation of oil transported by tanker to a petroleum processing. Offshore oil pollution caused by leaking storage system or a sinking ship that caused a release of oil into the waters. Impact: The resulting waste can be spread depending on sea waves. Can have an impact to several countries, resulting in the closing of the sea surface layer that causes the penetration of the sun decrease cause impaired photosynthesis, oxygen binding, and can cause the death of marine organisms.¹⁶

Environmental problems not only at local and national levels. But all the environmental problems that occur at local and national levels also

contribute to the problem at the global level. Here are a few problems:

1. Global Warming: Global Warming is basically a phenomenon of global temperature increase from year to year because of the greenhouse effect caused by increased carbon dioxide, gas emission, methane, dinitroxide, and CFC so that solar energy captured in the earth's atmosphere. Impact on the biophysical environment: melting polar ice caps, rising sea water quality, the expansion of deserts, increasing rain and flooding, climate change, extinction of flora and fauna, fauna and pest migration. Impact on the socio-economic activity: disorders of the coast and the town beach, disruption to infrastructure functions as roads, ports and airports. A disturbance in the residential, agricultural productivity interruptions. Increased risk of cancer and disease

2. Ozone Layer Depletion: the influence of ultraviolet radiation stratosphere layer, CFCs decompose and liberate chlorine atoms. Chlorine will accelerate decipherments ozone into oxygen gas resulting greenhouse effect. Some of the other atoms that contain bromine such as metal bromide and halon also increase decomposition of ozone. Impact for living things: more cases of skin cancer melanoma which can cause death, increase the incidence of cataracts in the eye and eye cancer, hampering the immune humans (immune), decreased production of corn, the increase in air temperature and mortality in wild animals, etc.

3. Acid Rain: The process of industrial revolution resulted in the

¹⁵ Cited from : Himpunan Pemerhati Lingkungan Hidup Indonesia (Association Of Indonesian Environmental Observers) by <http://www.hpli.org/isu.php> accessed on Tuesday, 26 April 2016

¹⁶ *Ibid*

emergence of air pollution substances. The air pollution can react rainwater and dropped into acid compounds. Impacts: the corrosion process becomes faster, irritation of the skin, the respiratory system, causing acidification of the soil.

4. Population growth: population growth that follows growth world an environmental problem. Impacts: the population growth will lead to increased demands on natural resources and space.

5. Desertification: a desertification, lowering ability mainland. In the process of desertification productivity reduction process occurs gradually and land depletion upper part due to human activity and climate varied as droughts and floods. Impact: The impact initially but now local environmental issues already have global impact and caused an increasing critical land on the earth so that the catcher CO₂ becomes less and less.

6. The decline in biodiversity: is a multifaceted kind of living species. Not only represents the number in the region, including the uniqueness of species, genes and ecosystems is a natural resource that can be renewed. Impacts: since biodiversity is to own a great potential for good in human health, food and economic

7. Pollution B3 (Hazardous and Toxic Materials): material which has a chemical identified one or more of characteristic explosive, flammable, is reactive, toxic, different causes of infection, are corrosive. Impact: once only locally but is now among countries also do the exchange process and waste on the high seas.

And if it all happened so hazardous and toxic waste may be acute until the death of living creatures.¹⁷

Spiritual Potential Resolves Environment Crisis

In order to resolve natural crisis we can see in order perspective. Everyone has it spiritual potential for emerging field in religion, conservation, and academia recognizing that there is a spiritual facet to all issues related to conservation, environmentalism, and earth stewardship. We can use these as the nature protection which working in the arena of Spiritual Ecology further suggest that there is a critical need to recognize and address the spiritual dynamics at the root of environmental degradation. these are what we call with spiritual ecology.

Proponents of Spiritual Ecology assert a need for contemporary conservation work to include spiritual elements and for contemporary religion and spirituality to include awareness of and engagement in ecological issues.

Despite the disparate arenas of study and practice, the principles of spiritual ecology are simple: In order to resolve such environmental issues as depletion of species, global warming, and over-consumption, humanity must examine and reassess our underlying attitudes and beliefs about the earth, and our spiritual responsibilities toward the planet. U.S. Advisor on climate change, James Gustave Speth, said: "I

¹⁷ *Ibid*

used to think that top environmental problems were biodiversity loss, ecosystem collapse and climate change. I thought that thirty years of good science could address these problems. I was wrong. The top environmental problems are selfishness, greed and apathy, and to deal with these we need a cultural and spiritual transformation."¹⁸

The difference between this spiritually-oriented ecology and a religious approach to ecology can be seen as analogous to how the Inter-spiritual Movement moves beyond interfaith and interreligious dialogue to focus on the actual experience of spiritual principles and practices. Spiritual ecology similarly explores the importance of this experiential spiritual dimension in relation to our present ecological crisis.

The Engaged Buddhist teacher Thich Nhat Hanh speaks of the importance of mindfulness in taking care of our Mother Earth, and how the highest form of prayer is real communion with the Earth. Sandra Ingerman offers shamanic healing as a way of reversing pollution in *Medicine for the Earth*. Franciscan monk Richard Rohr emphasizes the need to experience the whole world as a divine incarnation. Sufi mystic Llewellyn Vaughan-Lee directs our attention not just to the suffering of the physical world, but also its interior spiritual self, or *anima mundi* (world soul). Bill Plotkin

and others are involved in the work of finding within nature the reconnection with our soul and the world soul. These are just a few of the many different ways practitioners of spiritual ecology within different spiritual traditions and disciplines bring our awareness back to the sacred nature of creation.

For that by basing itself on the theory of ethics biocentrism, Eco centrism, a theory of natural rights, and ecofeminism¹⁹, can be formulated several moral principles that are relevant to the environment as follows:

1. Respect for nature

Regardless of differences in viewpoint between anthropocentrism, biocentrism, Eco centrism, and ecofeminism, all theories of environmental ethics are equally recognize that the universe needs to be respected. Respect for nature is a basic principle for humans as part of the universe entirely. In other words, nature has a right to be respected, not only because human life depends on nature. But mainly because of the ontological fact that humans are part of nature, humans are members of an ecological community.²⁰

2. Moral Responsibility for Nature

Responsibility towards nature is not only individual but also collective. The principle of moral responsibility demanded of man to take the initiative, effort, wisdom, and concerted action significantly to maintain the universe and everything

¹⁸ Crockett, Daniel. "Connection Will Be the Next Big Human Trend", *Huffington Post*, Aug 22, 2014.

¹⁹ A. Sonny Keraf, *Etika Lingkungan Hidup*, Jakarta : Kompas, 2010, page 166

²⁰ *Ibid*, 167-168

in it. It means that sustainability and environmental damage are the joint responsibility of all mankind. The concrete manifestation is that everyone must work together shoulder to shoulder to protect and conserve nature and all its contents.²¹

3. Cosmic Solidarity

Humans can sense what is perceived by other living beings in the universe. Humans can feel sad and sick when faced with the heartbreaking reality in the form of broken and the extinction of certain living creatures. Humans feel what is happening because people feel a part of nature. The principle of solidarity and to encourage people to save the environment, to save all this natural life. Because of the nature and all life within it have the same value as human beings.²²

4. Caring for Nature

The principle of compassion and care is a moral principle in one direction, towards others, without expecting anything in return. Not based on considerations of personal interest, but solely for the benefit of nature. What is interesting here is more love and care about nature, human beings will increasingly develop into a mature human being, as a person whose identity is strong. Because nature is turned, not only in a physical sense, but also in terms of mental and spiritual. Humans are growing with nature, with the character and personality of a calm, peaceful, compassionate,

comprehensive insights natural area, such as the democratic nature to accept and accommodate difference and diversity.²³

5. No Harm

Human beings have a moral obligation and responsibility towards nature, most people will not want to harm nature unnecessarily. Obligations and the soldier's attitude could take the form of minimal form of not doing harm or threaten the existence of other living creatures. Of course it is said Peter Singer that humans are allowed to take advantage of all the contents of the universe, including animals and plants, to meet their needs. It must be based on the principle that takes into account the limits of reasonable.²⁴

6. Live simply and in harmony with nature

As expressed by the relevant Naess be "simple in means, but rich in the standard of living" and a high quality of life. With the statement emphasized that the value, quality, good way of life is not wealth, means, and standard material. This means that the patterns of consumption and production of modern humans should be limited. There must be a limit point that can be tolerated by a relatively natural. The problem is: where the cutoff point is it? who should determine the limits? Morally the answer is easy: the man himself. At this level will require a movement together in a communal changing lifestyles together. Clearly, as long as we accept that the environmental damage caused by

²¹ *Ibid*, page 169

²² *Ibid*, page 171-172

²³ *Ibid*, page 172-173

²⁴ *Ibid*, page 173-175

human behavior materialistic, consumptive, and exploratory, simple moral principle of life that must be accepted as a new lifestyle. As long as this principle is not accepted, it is hard to successfully save our environment.²⁵

7. Justice

In this case, the principle of fairness mainly talking about equal access to all groups and members of the community to participate in determining the policy management of natural resources and conservation of nature, and the share in the utilization of natural resources or the universe entirely. Thus, the principle of fairness has entered the territory of political ecology, where the government is expected to open up opportunities and equal access to all groups and members of the public in determining policy, particularly in the environmental field. As we know that natural resources not only provide economic life, but also determines the culture, way of thinking and way of being. That means broken or loss of natural ecosystems around the community will directly cause damage and loss of culture, and in other words extinction their existence as human beings.²⁶

8. Democracy

The principle of democracy here is particularly relevant in the field of environment, especially in relation to policy making in the environmental field that determines good or bad, damaged or not, whether or not the environment is polluted. This is a

moral and political principle be guarantees for pro-environmental policies. Conversely, there are very big concerns that political life is not democratic and political system that does not guarantee democracy, would be harmful to the environment protection efforts. In this regard, democracy in the environmental field is to ensure that individuals and communities have the right to fight for their interests in the environmental field, to participate in defining policies in the environmental field, has the right to obtain accurate information (related to public policy) in the environmental field.²⁷

9. Moral Integrity

This principle is closely related to the environment. Because as long as public officials have no moral integrity, thereby abusing his power for personal interests and his group at the expense of the interests of society, the environment predictably be easily harmed. Of course this does not mean we give and expect everything to the government. Insistence, advocacy, and public pressure from civil society, through NGOs, the press, universities, professional groups could be a trigger for the government to seriously incorporate the environment into agenda major development at the national level, and to make regulations relating to the environment as rules that apply to everyday life.²⁸

Degradation of environmental awareness is already happening

²⁵ *Ibid*, page 175-176

²⁶ *Ibid*, page 176-179

²⁷ *Ibid*, page 179-181

²⁸ *Ibid*, page 182-184

everywhere, because of a lack of assertiveness government to enforce the rules in maintaining their environment. Surveillance and law enforcement in the field of the environment is an important factor of environmental protection and management that will largely determine the success of environmental protection and management, as well as answering the public's expectations about the importance of environmental protection. Importance regulations on supervision and enforcement on environmental issues is firm and tight into a kind of formal guarantees of realizing a good governance in the environmental field. This in turn will ensure success in the protection and management of the environment. This means, the failure of supervision and enforcement of the implementation of the planning, utilization, control and preservation of the environment is tantamount to our failure to implement environmental protection and management.²⁹

In the end, the implementation of Green government in Indonesia is crucial needed with making a model of governmental affairs division of ecologically oriented towards green forms of government added the principle of the division of government functions. Ecological renewal and sustainability necessarily depends upon spiritual awareness and Indonesia government attitude of responsibility are solution of Indonesia natural crisis from outside and spiritual ecology is the personal answer which relate to Green government success.

THE IMPLEMENTATION OF THE POLICY OF E-ID CARD SERVICES IN NGAWI REGENCY

Dr. Eko Budi Santoso, MT

Institut Pemerintahan Dalam Negeri or Institute of Home Affair Administration, ekobs1@gmail.com

Ardian Kusuma Aji,

Institut Pemerintahan Dalam Negeri, ardiankusuma59@yahoo.co.id

Abstract

The policy of e-ID cards in Indonesia Nationally have been established since the enactment of Presidential Regulation No. 26/2009 on Implementation of National Identity Card Based on Citizen Identification Number Nationally and Home Affair Minister's Regulation No. 9/2011 on Guidelines for Issuance of National Identity Cards Based on Citizen Identity Number Nationally. However, the implementation may not meet to the policies. This research seeks to explore and describe the implementation of the policy of e-ID card at the office of Population and Civil Administration (PCR) that most responsible for implementing the policy in local government. The research was conducted with a qualitative approach to the type of exploratory and descriptive research. Locus of research at the Office of Population and Civil Registration in Ngawi Regency, that is one of the Regencies in East Java province roomates declared to be ready to implement e-ID card program in September 2014. Reseach was conducted in 2016, with the range time of research focus is in 2014-2016.

The result Showed that e-ID card serving at The Office of Population and Civil Registration in Ngawi Regency, had been conducted quite well by meeting the policy. People's satisfying level due to the quality of e-ID card serving, also was high enough. There were few constraints, Including inadequation of e-ID card tools, disturbances of network connections, the delay of providing the e-ID card blank form, less data at neighborhood unit level, long distance of unable people to come to service counter, as well as the low awareness of the importance of the e-ID card. But the Office of Population and Civil Registration in Ngawi Regency had sought to Overcome few of these constraints.

It is concluded that the implementation of e-ID card policy at the Office of Population and Civil Registration in Ngawi Regency, has been able to be conducted quite well in meeting the policy. Few constraints that still occur, can be addressed properly. Based on these results, it can be assumed that the implementation of the policy of e-ID card program in other regencies that have characteristics similar to Ngawi (Sampang, Kediri, Kediri city, Mojokerto and Pasuruan that in September 2014 declared as the regions roomates ready to run the e-ID card program), may be well enough too. Some recomendation can be proposed, that are: 1) conduct training for officer; 2) increase providing of device and material related to e-ID card service; and 3) increase the socialization to all people until neighborhood unit level; 4) increase transportation vehicle; and 5) increase quality of digital communication network.

Keywords:e-Citizen card, e-ID cards, policy implementation, public serving, Regency of Ngawi

A. INTRODUCTION

Public services in the field of population administration in Indonesia is mplemented under the provisions of Law Num. 24 of 2013 on the Amendment of the Law Num. 23 of 2006 concerning Population Administration, and Regulation of President of the Republic of

Indonesia Num. 112 of 2013 On the Fourth Amendment to the Regulation of President Num. 26 in 2009 concerning Implementation of National Identity Card (KTP) Based on Population Identification Number Nationally. Then, there are provision changes laid down in Regulation of President num. 26 of 2009

Article 10, that reads Non Electronic ID cards remain valid for residents who have not obtained an e-ID card until no later than December 31, 2014. The issuance of e-ID card program was nationally launched by the Ministry of Home affair of the Republic of Indonesia on February 2011.

e-ID card program is motivated by bad condition in conventional ID card-making system in Indonesia that allowing a person can have more than one identity card. This is due to the lack of a unified data base that collects the data from the entire people in Indonesia. Through this program, it is expected to be reached an national integrated database in order to give better public services for the people of Indonesia.

ID card based on Population Identification Number here in after called as KTP electronic (e-ID card), has the specifications and formats with a special security system. E-ID card is a must-has to be owned by every Indonesian citizen since e-ID card program was organized by the Ministry of Home Affairs. However manual ID card can still be used as long as has not been issued the e-ID cards for the citizens. The period of validity of e-ID car is a lifetime, as stipulated in Article 64 paragraph 7a Law No. 24 of 2013 concerning the Amendment of the Law No. 23 of 2006 concerning Population Administration.

In the implementation of the issuance of e-ID card for all citizens of Indonesia, then The Ministry of Home Affair organize the e-ID card program nationally, which is divided into two stages. The first stage was started in 2011 and ended on 30 April 2012 that covers 67 million people in 2.348 districts and 197 regencies/cities. While the second stage, covered 105 million people spread across 300 regencies/cities in Indonesia.

The implementation of e-ID in Ngawi included in the implementation of the first stage in 2011. To get this e-ID card, citizens in Ngawi is free of charge. This policy is in accordance with the Local Regulation of

Ngawi Regency number 16 of 2014 concerning the revocation of Local Regulation of Ngawi Regency No. 10 of 2010 concerning Distribution and Reimbursement of Print cost of Identity Card and certificate of Civil Registry.

In the implementation of national e-ID program is, Ngawi including one of districts that is considered ready to publish e-ID card in province of East Java. However, in practice there are some indications of such problems, that are: the distance factor of several districts to the regency capitol that more than 30 km, less fast service time, unavailability of blank form of e-ID card (Sinar Ngawi, August 20, 2015), and the damage of computing equipment. The various problems of the implementation of publishing e-ID card, meet the result of research conducted by Kurniati (2015: 32) as following quote: "Besides plagued with problems of equipment, human resources support was felt lacking. So when there is damage to the tool or problems in the process of recording an e-ID card, not all operators Able to resolve Reviews These problems". And also meet to result of reseach by Nazaruddin (2013) that conduct research in regency of Hulu Sungai Utara, one of regencies in South of Kalimantan province.

The result of assesment that include Ngawi Regency as one of Regencies in Est Java Province which was assesed to be ready to carry out the e-ID card program, and the fact that there were some indications of problems in implementation, are the essential background for the need to do research about how the implementation of policies on e-ID card in Ngawi. Therefore, this study was conducted. This reasearh has objective and benefits as writted below.

Objective

The objective of this research is to investigate the implementation of policies on e-ID card in Ngawi Regency and find the

various constraints faced in the implementation.

Benefits

The research is expected to provide the following benefits:

- a. In the repertoire of the theory, the results of this research can be used as input in the development of science of governance, especially with regard to e-government and more specifically in the service of e-ID card, as well as expected to be reference for further research in the study related to the population administration
- b. in practical terms, the results of this research can be input for the Office of Population and Civil Registration of Ngawi Regency in the improvement of ID-card service for the citizens.
- c. In the policy level, the results of this research can be an input in the improvement of policies on e-ID card services, both nationally and locally.

B. METHODS

The study was conducted by Qualitative and descriptive approach because in this study will attempt to describe what happens qualitatively as in the empirical fact (Sugiyono 2007 and Nasir, 2011) in the implementation of policies on e-ID card in Ngawi Regency and the various of the constraint in the implementation. According to Nazir (2011: 66) explains that "descriptive research aims to create a description, picture or painting in a systematic, factual and accurate on the facts, nature and the relationship between the phenomenon investigated".

Locus of research at the Office of Population and Civil Registration in Ngawi Regency, that is one of the Regencies in East Java province that declared to be ready to implement e-ID card program in September 2014. Other regencies that have

characteristics similar to Ngawi that in September 2014 declared as the regions that ready to run the e-ID card program were Sampang Regency, Kediri Regency, Kediri city, Mojokerto City and Pasuruan Regency. Ngawi Regency was chosen as locus, because the location of Ngawi Regency is the farthest from capitol of East java Province and can be categorized as the low class among other regencies/cities ready to run the e-ID card program, so if the implementation of e-ID Card in Ngawi Regency is quite well and meet the provisions that govern it, we could say that the implementation of e-ID in othe ready regencies and cities also quite well and meet the provision that govern them.

Research was conducted in 2016, with the range time of research focus is in 2014-2016. Data collecting were conducted by this techniques:

- a. interview

in this study, interviews were conducted with several informants follows:

 - 1) Head Office of Population and Civil Registration of Ngawi Regency.
 - 2) Service operator particularly on e-ID card service in the Office of Population and Civil Registration of Ngawi Regency.
 - 3) People who come to the Office of Population and Civil Registration of Ngawi Regency to get e-ID card service.
- b. observations

observations made in this research were participant observation(Sugiyono,2014). In participant observation, researchers involved with the daily activities of people being observed.
- c. Documentation

Documentation technique was done through various archives, materials of official report that have relation to the research problem, the various legal which be base of the policies of e-ID card both national and local level, as well as a

variety of processes and procedures in the e-ID card in Ngawi Regency.

Qualitative method of Data analysis adopt the model of Miles and Huberman (Sugiyono, 2010) which includes the following steps: 1) data reduction; 2) data display; 3) conclusion. Some of the analytical techniques used in the presentation of the data (data display) in this research, including content analysis and triangulation analysis. Content analysis, was carried out on any policies related to the implementation of the e-ID card program, nationally under Regulation of President Number 26 of 2009 concerning Implementation of National Identity Card-based on Population Identification Number nationally and Minister Regulation number 9

of 2011 concerning Guidelines for issuance of Identity Cards by Parent Number of Population by National.

Operationalization of the concept as the focus of this research, is conducted with normative based approach, based on the result of content analysis of the policies in the Regulation of President the Republic of Indonesia Number 26 of 2009 concerning Implementation of National Identity Card-based on Population Identification Number and the regulation of Minister of Home Affairs No. 9 of 2011 concerning the Guidelines for Issuance of National Identity Cards based on Population Identification Number, nationally. Operationalization of the concept in this research, as in Table 1 below.

Table 1
Implementation of the concept of Policy Implementation Services e-ID Card

Concept	Dimension	Sub Dimension	Indicators
Implementation of policies on e-ID card (as stipulated in Regulation of President of the RI No. 26 of 2009 and Regulation of Minister of Home Affairs, num. 9 of 2011)	Issuance of Electronic Identity Card in mass program	- For citizen	- Procedure of issuance of ID cards Electronic in mass program for the citizen - Delivery of Electronic Identity Card - Storing of The Population Database (as stipulated in Article 3 of Reg. of MoHA 9/2011)
		- For foreigner (WNA)	- Procedure of issuance of Electronic Identity Card in mass production and publishing for a foreigner - Delivery of Electronic Identity Card - Storing of the Population Database (as stipulated in Article 3 of Reg. of MoHA 9/2011)
	Issuance of Electronic Identity Card regularly	- For citizen	- Procedure issuance of Electronic Identity Card abasis onregular for the citizen - Delivery of Electronic Identity Card - Storing of the Population Database (as stipulated in Article 5)
		- For foreigner (WNA)	- Procedure of issuance of Electronic Identity Card abasis onregular for a foreign - Delivery of Electronic Identity Card - Storing of the Population Database (as stipulated in Article 5 of Reg of MoHA 9/2011)
	Issuance of e-ID Card for residents who unable to come or report to the service counter		- Issuance of e-ID card for residents who can not afford to come / report to the service office (as stipulated in Article 7)

C. RESULTS AND DISCUSSION ON IMPLEMENTATION OF THE POLICY OF E-ID CARD SERVING IN NGAWI REGENCY, EAST JAVA PROVINCE

As the operationalization of the concept of this research as drawn in Table 1 above, the Implementation of the policy of e-ID Card Services will be observed in three dimensions: 1) the issuance of e-ID card in mass program; 2) Publishing E-ID card on regular program; and 3) Issuance of E-ID card for residents who can not afford to come /report to the office of population administration. Each implementation of the policies in all three dimensions, are discussed in each of the following sections. At the time the study was conducted, only the issuance of e-ID card regularly and issuance of E-ID card for residents who can not afford to come / report to the service office, which can be observed directly, because the issuance of e-ID cards in mass program had been completed.

The results showed that the implementation of policies on e-ID in Ngawi Regency on three dimensions is observed generally have been implemented as stipulated normatively. On the procedure of issuance of e-ID card in mass program, it is found the fact that the procedures have been done meet to the normative provisions that govern them. There are still about 13.5% of the citizens of Ngawi that have not been

published their e-ID card. On the **dimension of procedure of issuance of regular e-ID Card**, it is also found the fact that the policy has been implemented very well in accordance with the normative (well). On the **dimension of Issuance of E-ID card for residents who can not afford to come / report to the service office**, it is also found the fact that it have been has to do as the normative provisions govern them (properly).

From observations at dimensions of 1 (issuance of e-ID cards in mass program), it is found the the fact that the Office of Population and Civil Registration (Dispendukcapil) Ngawi Regency, East Java, recorded that more than ten thousands of the residents have not been recorded the individual data for issuance the e-ID, according to the provisions. From the total of the 681.573 people who are mandatoried to have an e-ID card, there are 73.062 people who have already recorded, and there are 18.973 people who have been recorded but have not been published their e-ID Card. These indicate that there are 10.72% of compulsory ID cards that have not been recording, and 13, 5% were not yet published his e-ID card.

The implementation of policies on e-ID card serving at the Office of Population and Civil Registration in Ngawi Regency, can be described completly as follows on table 2 below.

Table 2
Policy Implementation of e-ID Serving in Ngawi Regency

No	Dimensions / Category	Sub conclusions / summary of the characteristic dimensions	Analysis and conclusions
1	Issuance of e-ID card in mass program	Office of Population and Civil Registration of Ngawi Regency have been recorded and published the e-ID cards in mass program and have achieved 89.18% of the number of people required to have an e-ID card	Implementation of the issuance of e-ID cards in mass program by the office of Population and Civil Registration in Ngawi Regency, had been quite well.
2	Issuance of e-ID Card in regular program	residents who come to the e-ID Card service in regular program will be able to get the e-ID cards, if all the requirements (data) have been met. It can indicates that the insurance the e-ID Card in regular program, has been conducted well, as stipulated on the provision govern them.	Implementation of the issuance of e-ID card in regular program by the Office of Population and Civil Registration in Ngawi Regency, have been conducted quite well.
3	issuance of e-ID card for residents who can not afford to come / report to the service office	Officer of the Office of Population and Civil Registration in Ngawi Regency, went to the residents dwell and give service in data recording required to complete population database based on the characteristic of the residents.	Implementation of issuance of e-ID card for residents who are unable to come / report to the office of Population and Civil Registration in Ngawi Regency, have been conducted quite well.

Discussion of each of the dimensions/category is described in the section after this. In each of these dimensions is discussed the performance of each of the indicators / sub category and the results of triangulation analysis based on both of data sources and data collection techniques that include observation, interviews, and documentation.

C1. Implementation of the issuance of e-ID in Mass Program (for Indonesian citizens and foreigners)

Issuance of e-ID card in mass program is issuance of the new e-ID card, or replacement of ID card due to expire, move come, damaged or lost, together to all

people and simultaneously for data collection on population administration nationally in certain time organized in a crash program by Ministry of Home Affair. In is found the fact that the issuance e-ID card services in mass program in Ngawi Regency, just only have done for the citizen, since the issuance of e-ID card for foreigner in mass program has not been donem yet. Therefore, the description of the results of this research, just describes about the issuance of e-ID card in mass program for the citizen.

Issuance of the e-ID Card in mass program done by The Office of Population and Civil Registration in Ngawi Regency, have meet the provisions govern them as

stipulated on Regulation of MoHA No. 9 of 2011, such as the fact below:

a. Procedure for Issuance e-ID Card in mass program that had been conducted by The office of Population and Civil Registration in Ngawi Regency, as below:

- 1) Office of Population and Civil Registration
 - a) Published the list of citizen residents required to have an e-ID cards
 - b) Printed the summons / call letter based on the list of residents required to have an e-ID card
 - c) Delivered the summons printed to the residents to the village head or Urbanized sub-district head (Lurah) via Sub Office which have service area covered district area, or District Head, with assigning the minutes of hand over
- 2) Village Head and Urbanized Sub-District Head (Lurah)
 - a) Received the list of citizen residents required to have an e-ID and the prints of summons based on it, from the Head of District or the head of Sub-Office with district area covered
 - b) Made a Signature on the call letters that had been printed based on the list of citizen residents required to have an e-ID card
 - c) Arranged and made a call schedule for recording photographs, fingerprints, and signatures
 - d) Delivered call letter to citizen residents for recording photos, fingerprints and signatures through RT using a receipt.

3) Chairman of Neighborhood unit (CNU) (called as *Ketua RW* and *Ketua RT*)

Received the call letters and delivered to residents for recording photograph, fingerprints and signature, with assigning the note of receipt.

4) Citizen residents

a) Received a call letter from the CNU for recording photograph, fingerprints and signature in the service counter of e-ID card (or in the office of District)

b) Come to a service counter of an Electronic Identity Card (e-ID) for recording photograph, signature and fingerprints according to the call schedule, with bringing the call letter and the old conventional ID card for the resident who have had a conventional ID card.

b. Delivering e-ID card in issuance e-ID card in mass program by the Office of Population and Civil Registration in Ngawi Regency, as below:

1) Office of Population and Civil Registration (Sub Office of PCR) of Ngawi Regency received Electronic Identity Card (e-ID), which is personalized from the Ministry of Home Affairs (MoHA), and distributed to the Sub-Office of PCR with District area covered, according to the list and recapitulation of the list received.

2) Sub Office of PCR distributed to the Village Head or Lurah according to the recapitulation list received from the Office of PCR, then make carbon copies of the recapitulation list of e-ID card to the Head of District.

3) Village Head or Lurah Received e-ID card and a recapitulation list of e-ID card from the Sub Office of PCR and

made a notification letter to the CNU in order to inform citizens to perform matching of his fingerprints and to receive e-ID Card which had been printed by the MoHA.

- 4) CNU had received notification letter from the village head or Lurah, then informed the citizens to take the e-ID card which has been printed by MoHA
 - 5) Citizen residents received notification (call letter) and came to services counter of e-ID Card with bringing the call letter that have been signed and stamped for rechcking and re-matching the fingerprints on the e-ID card.
- c. Storing of the Population Database
Based on Regulation of MoHA No. 9 of 2011, the database of population that include the result of recording of photograph, fingerprints and signature and other data according to the resident had been stored into a database of population on-site service and recorded into the chip of e-ID Card. The local database then connected and sincronized with the data server at data center of MoHA.

Some constraints or obstacles encountered in the implementation of the issuance of e-ID cards in mass program in Ngawi Regency, as follows:

- a. Online connection network was slow, so the service e-ID card was often interrupted.
- b. operator did not have high skill in providing services of recording and validation of demographic data in mass program
- c. delay in providing of blank form of e-ID card and often have to spend long time in waiting the dropping of the blank for from the MoHA.

- d. the limited number of device for recording population database, then make the service takes a long time.

C2. Implementation of Issuance of e-ID Card in Regular Program

The issuance of e-ID cards in regular program, means as the publishing new e-ID Card, replacement due to expire, move come, damaged or lost, that can be done at any time after the crash program or mass program. Implementation of issuance of e-ID Card in regular program done by Office of PCR in Ngawi Regency, have been done meet to the provisions govern it, such as can be read on the Regulation of MoHA No. 9 of 2011. The fact of implementation, as described below:

a. Procedure for Issuance of e-ID Card in Regular Program

Citizen residents of Ngawi Regency that have been recorderd before (in any local or regional), can be report to the officer in service counter of e-ID card by filling out an application form and bringing the form of national identification number to the service counter. The form is completed with a photocopy of the family card, and migration/moving letter, and old e-ID cards for displaced resident. If old e-ID card is broken or lost, the requirement need the certificate of lost from the police office where the ID card has been lost. If the resident have not been recorded yet before, after submit the requirement, recording process should be done for the resident.

b. Delivering an e-ID Card

Printing and delivering e-ID card in regular program, can be done after residents bring the application form that includes:

- 1) number Population Identification
- 2) Photocopy of Family card

- 3) Letters moved and Electronic Identity Card for People displaced or Electronic Identity Card damaged for residents whose ID card is faulty or Letter loss of Police for residents who lost her identity card.

It takes short to middle time depend on number of person on the length of queue of the service counter.

- c. Storing of the Population Database
Based on Minister Regulation No. 9 of 2011, after Recording fingerprints and other population data in the issuance of e-ID Card in regular program, then done the storing of the population database. The results are stored into local population database in the place of service and recorded into the chip Electronic Identity Card. Population Database is also sincronized and stored in a national database of population at the data center of Ministry of Home Affairs.

Many constraints or obstacles encountered in the implementation of the issuance of e-ID card in regular program in Ngawi Regency, as follows:

- a. Printing e-ID card can only be served at the Regency level, there is no equipment at the district level so that the service is blocked.
- b. Blank form is not available in many number at service counter, so if the submission of e-ID card rise up unpredictable, the blank form will be lack
- c. low awareness of the important of e-ID card for people, so there are still many people who do not have e-ID card
- d. still found employees of the service counter, who go home before the the work hours exhausted.

C3. Implementation of Publishing Electronic Identity Card for residents who are unable to come or report to the Service Office

The terms of people who unable to come or report to the service counter, means as the people who have elderly or very old, physical disability, and critical or serious illness. This research found that Officer of the Office of PCR in Ngawi Regency, came to the hose of the people to provide publishing services of e-ID Card for them. So it can be concluded that the issuance of e-ID cards for residents who are unable to come / report to the office, has been implemented as normative provisions that govern it, such as stipulated on the Minister Regulation No. 9 of 2011 concerning Publishing guidelines Identity Card-Based Identity Number population Nationally Article 7. All activities start data recording, verification and validation, capturing and recording photograph, signature and fingerprint of the people until the publication of e-ID card, have been done directly in the shelter or house of residents who are unable to come or report to the service counter.

Few constraints or obstacles encountered in the implementation of the issuance of e-ID cards for residents who are unable to come or report to the service counter in Ngawi Regency, as follows:

- a. Data Collection from the neighborhood level less well, so the service of e-ID for residents who are unable to come or report to a service less than the maximum.
- b. the distance from service counter to the house of people who are unable to come or report to the service counter, is quite long or in remote area.

D. CONCLUSION AND RECOMMENDATION

From the discussions, it can be concluded that the implementation of e-ID card service done by The Office of Population and Civil Registration in Ngawi Regency (in East Java Province, Indonesia), has been conducted quite well according to the policies that govern them.

Some constraints still happen in implementation of e-ID card service, include:

- a. disturbance or unstability of Online connection network
- b. low skill of operator
- c. limited blank form of e-ID card and delay in providing them and waiting time of dropping the blank for from the MoHA
- d. the limited number of device for recording population database and printing device
- e. low awareness of the importance of e-ID card for people
- f. still found employees of the service counter, who go home before the the work hours exhausted
- c. Less Data from the neighborhood unit
- d. the long distance and remote area belongs to people who are unable to come or report to the service counter.

Some constraints or obstacles can be overcome quite well by the Office of PCR. But some obstacles that have more wide cover and higher cost, jus can be overcome by multi sector and multi level government in sincronized coordination.

Based on these results, it can be assumed that the implementation of policies on e-ID cards in several districts / cities which have almost identical characteristics (which in September 2014 was declared as an area that is ready to carry out services of e-ID) that are Sampang, Kediri, Kediri city, Mojokerto and Pasuruan, also quite well and meet to the provisions that govern them.

Some of the recommendations according to the conclusion, it can be proposed some actions, such as follows:

1. conduct training for officer related to the e-ID card service in providing excellent service to the people. This training includes attitude to face the community, physical performance, increasing the knowledge, speed, and accuracy in serving the e-ID card for the people
2. Increase providing of the devices and materials related to e-ID Card recording and printing, in order to increase the availability of the e-ID card device, quite well at each of the office of District in Ngawi Regency. If the devices have been available quite enough at the service counter of the office of each District, so people should not have to go to the Office of PCR located at the capitol of Ngawi Regency
3. Increase vehicle to raise mobility level of the officer to reach location even in the remote area
4. Increase socialization about the procedure and requirement related to the e-ID Card service. The socialization, need to be conducted until neighborhood unit level. People would get service faster and more accurate, if they know and prepare the requirement quite well
5. Increase device and bandwidth to raise the connectivity and digital communication from local network to national data center of MoHA.

IMPLEMENTATION OF SANITATION CLINIC PROGRAM IN EAST LOMBOK REGENCY, PROVINCE OF WEST NUSA TENGGARA, INDONESIA

Dr. Eko Budi Santoso, MT

Institut Pemerintahan Dalam Negeri or Institute of Home Affair Administration, ekobs1@gmail.com

Baiq Maya Rosita

Institut Pemerintahan Dalam Negeri, baiqmayarosita@yahoo.co.id

Abstract

Public health can be influenced by environmental factors, behavior, health care, and heredity. The first three factors are easier to be found the solution rather than heredity. One of the efforts to improve the quality of the first three factors in East Lombok district has been implemented is the sanitation clinic program. Sanitation clinic program for the first time held in Indonesia by East Lombok Regency in 1995 which then have been followed by several other regencies in the province, then Province of East Java, South Sulawesi, South Sumatera, and South Kalimantan as well as other provinces in Indonesia. Although as a pioneer of sanitation clinic program, but the indicators of environmental health in East Lombok has not been good enough.

This research seeks to explore and describe the implementation of sanitation clinic program in East Lombok regency, especially in the district of Terara which is one of the most densely populated districts in East Lombok regency, and the constraints encountered in its implementation. The method used is qualitative explorative and descriptive research, with research locus in the District of Terara in East Lombok Regency. Data were collected by interview, observation and documentation.

It is concluded that the implementation of Sanitation Clinic Program (SCP) in Terara district, one of district in East Lombok regency, has not been implemented quite well and there are still many constraints encountered in its implementation. Some of the constraints include the budget for sanitation clinic program that is still limited and inadequate number of officers who are experts in the field of sanitation. It is recommended to conduct training and supervision of District Health Center (DHC) personnel in charge to SCP, so that the sanitation clinic program through the integrated efforts of environmental sanitation and the eradication of disease based on environment, can run well. And added enough budget to implement the program in accordance with the number of existing cases.

Keywords: Program Implementation, Sanitation Clinic, East Lombok Regency, Province of West Nusa Tenggara

A. INTRODUCTION

Health is a basic right for every individual and all citizens the right to obtain the same degree of health . Many factors affect the health (both of the individual and public health). Cited from Hendrik L. Blum (1974) in Soekidjo Notoatmojo, the factors are environmental, behavioral, health care, and heredity. Optimum Status of health can be achieved when these four factors together have been in optimum conditions.

When the one of the factors disturbed or not optimal condition, the health status will be shifted under optimum condition, too.

Based on the Regulation of Minister of Health Number 13 of 2015 concerning the Implementation of Environmental Health Services in District Health Center (DHC), on Article 2 which reads "Each DHC are obliged to implement Environmental Health Services, which is part of the comprehensive health care provided to patients ". According to the

regulation, so every DHC to carry out the public health service to the community in the district.

East Lombok Regency is one of the most densely populated district in the province of West Nusa Tenggara with the rate of population increase by 0.6% per year, and the total population of East Lombok district in 2014 amounted to 1,130,205 persons. This regency is the widest territory and highest population among 10 regencies in West Nusa Tenggara province. (CBS, 2014). There has been an increase in the construction of family latrine (water closet) and water supply each year in urban areas of the regency, but still not prevalently distributed. It influences the level of public environmental health still in low level, especially in rural areas. Regard to the time of starting the sanitation clinic program in 1995 that have more 20 years, and the environment health level still in low level, so it show that the result of the Sanitation Clinic Program (SHP) is not in good result. Although East Lombok is a pioneer of service activities sanitation clinic, but 85 of 192 total health workers in all health centers located in East Lombok regencies, in the field of sanitarian and public health, which is generally dominated by the nursing profession. This proves that there is still a low number of personnel who are experts in the field of sanitation and public health.

SCP is the development of program introduced by the DHC of Wanasaba in East Lombok regency of West Nusa Tenggara province in year of 1995. Furthermore, this program was followed by several DHCs in any DHCs in any onther provinces, formerly in East Java, South East Sulawesi, South Kalimantan, South Sumatra and South Kalimantan. Until 2004, the SCP program has spread throughout the provinces in Indonesia, has reached 23.4 % of all DHC in Indonesia (1,527 of 6521 DHCs in Indonesia (Aini, 2004 at the Department of Health, 2001).

Terara sub-district is one of the sub-district located in East Lombok regency, that consists of 10 villages with level of public health is still in low level. Although this district as the second district which has done the SCP after Wanasaba District, but still have many people with any diseases. There are many villages in low condition of sanitation because of the facilities and infrastructure to reach the village is still poor.

B. METHODS

This research is part of social research (Silalahi, 2006), that was be done with qualitative approach with inductive approach (Creswell, 2013). The specific method are descriptive and explorative method. According to social research methode, Ulber Silalahi in the book Social Research Methods (2006 : 11) says that the social research methods in a broad sense is a way and a systematic procedure and was organized to investigate a particular social problem with the intent to obtain information to be used as a solution to the problem. Creswell (2013: 4) explain about qualitative research, as cited below:

" Qualitative research is methods to explore and understand the meaning that the individual or group of people sejumlah ascribed social or humanitarian issues. This qualitative research process involves important efforts, such as asking questions and procedures, collect specific data and participants, analyze the data inductively from the themes that were particular to general themes, and interpret the meaning of data. The final report on this study has a flexible structure or framework. Anyone involved in this research form must implement a stylish perspective inductive research, focusing on the individual meanings, and found the meaning of the complexity problem ".

This research collects data, facts, and other evident in the subjects studied (social phenomenon) and analyze them to get deep understanding of the object of research to

find out what was going on. And then describe them to the report to have solution needed, and make inductive meaning to make wider solution to the similar condition of social phenomenon and problems.

Data collection techniques used are three techniques, namely :

1. Interview to the Chief of Medical Officer of East Lombok Regency, head of Disease Control and Environmental Health Development, 3 officer of the DHCs of Terara District that held responsibility in Community Sanitation, and 10 persons of Terara District who get the service of the Terara DHC
2. Observation by performing the direct observation of procedure and implementation of medical services in Terara DHC, especially in dicipline of the officer of DHC in SCP services, facility and infrastructures, and in location of the SCP services.

3. Documentation, that is done by collecting the documentation related the implementation of SCP in Terara District, the activities carried out by officers of sanitation clinic services.

Operationalization of the concept studied uses the concept of Hendrik L. Blum (that public health can be affected by environmental factors, behavior, health care, and heredity) and normative aspect regulated by the Ministry of Health of 2001 which says that "Service of sanitation clinic is a tools to address public health problems through integrated efforts of environmental health and disease eradication with elucidation, counseling and technical assistance from the attendant of DHCs. Clinical sanitation services not as a stand-alone unit, but as part of the DHC, working closely with other programs of related sectors in the working area of DHCs.

Table 1
Operationalization of Focus of Concept Studied

Focus of Concept studied	Category	Sub Category
Implementation of Sanitation Clinic Program	integrated efforts of environmental health trough elucidation, counseling and technical assistace	<ol style="list-style-type: none"> 1. Improvement of evironmental sanitation 2. Improvement of clean water quality 3. Improvement of family toilet 4. Improvement of environment cleanness
	Diseases Control through elucidation, counseling and technical assistance	<ol style="list-style-type: none"> 1. Improvement of healthful habit 2. Control of infectious diseases 3. improvement of disease eradication activities

C. RESULTS AND DISCUSSION

C1. Integrated Efforts Of Environmental Health

Integrated efforts of environmental health is the effort made by clinic sanitation staff in order to improve public health. This effort is done through elucidation, counseling and technical assistace of: 1) improvement of environmental sanitation; 2) improvement of clean water quality; and 3) improvement of family toilet/latrines. The complete result and

discussion about each of sub category, are described below.

From the discussion below, it can be shown that on the sub category improvement of environment sanitation, implementation of SCP has not been run well. On the sub category of improvement of quality of clean water, also can be shown that implementation of SCP has not been conducted well. And neither the result on the sub category of improvement of family

latrines/toilet. So it can be made sub conclusion that on the category of integrated effort on environment health, implementation of SCP in Terara District has not been conducted well by staff or officer of SPC with few constraints.

C1.1 Improvement of Environment Sanitation

From the research conducted, the improvement of environment sanitation in Terara District has not run well because of funding constraint. The local government of East Lombok Regency via District Head of Terara has not able to provide well the improvement of environment sanitation in Terara District. The limited funds owned by the region to implement environmental sanitation have an impact on society of Terara District that is unfulfilled on public sanitation. That is one of the causes of the low quality of sanitation in Terara District which should be able to be a role model for other district of East Lombok Regency, because Terara is the second district that run the Sanitation Clinic Program in East Lombok Regency, after the former of Wanasaba District. This limitation also cause the weak of technical assistace which can be tranfer to the society of Terara, especially in material and devices form related to the raising of environment sanitation quality.

The second cause is the limitation of human resources who have high expertise to conduct elucidation and counseling about environment sanitation to the community of Terara District. It is caused by the proffesional background of the staff of Sanitation Clinic Program are all from nurse education. They have little knowledge in environment sanitation and development of environment sanitation.

The effects of the limitations in Terara District are: 1) Still easy to find person who waste human garbage to the river; 2) easy to find environment with unpleasent smells, espesially in high density settelement; 3) easy to find garbage or trash scattered in

any settlement; 4) poor in providing garbage box or garbage dump in neighborhood.

C1.2 Improvement of Clean Water Quality

Water quality is important for everyday purposes, both for consumption and for other purposes. Some health problems often found in Indonesia are related to the water quality consumed by community in any purposes, ie for drinking, bathing, cooking and washing. In accordance with the drinking water quality targets for people in East Lombok regency is include 85 % people. This target was set by the Office of Health of East Lombok Regency for 2015. But it has not reached yet. So the spread of the disease due to the quality of water consumed by the people is still low, especially for people who are in the area Nearby river.

Improvement effort to raise the quality of clean water for people can be said that the last result is in low level. It is caused by limitation in fund to conduct elucidation, counseling, and technical assistance to raise awareness of the people to use clean water, to facilitate the people in providing the clean water for their families.

It is easy to found people use water from river directly to fulfill many daily uses, such as bathing, washing, and coocking. These indicate that the impact of the program, still in low level impact in dayly of people life.

C1.3 Improvement of Family toilet/latrines

As according to Hendrik L Blum (1974) in Soekidjo Notoatmojo (2007), there are four factors that can affect people's health, include environment, behavior, health care and heredity. These four factors are a major source of health problems, but the three factors are the esier factor to be improved by human. One of the efforts can be improved is improving the family latrine. The ideal conditions is at least one family one latrine.

The target of the Local Office of Health of East Lombok Regency on 2015 was 100% households with latrines. But in reality the target has not been reached yet. There are

still many people who use latrine in places that should not be used as latrines, such as river. It happens because many households do not have latrine for their family. Many people want to be provided their need of latrine for their family by local government. It shows the failure (unsuccessful result) of the effort in improving the family latrine. The effort done by SCP staff of DHC (in elucidation and counseling) can not change the awareness of people to provide their latrine as their need to get better health. And the technical assistance done, also can not provide mostly they need. The failure can be affected by the limitation of the SCP fund to conduct the elucidation, counseling, and technical assistance, and also the weak of SCP staff in conducting the elucidation and counseling.

C2. Disease Eradication

Eradication of the disease is one of the two main strategies in the implementation of the SCP, in addition to the integrated efforts of environmental health, to be able to address the public health problems. This is as stated in white book of Clinic Sanitation (2011) which reads "Clinic sanitation is a tool for the community to address public health problems through integrated efforts of environmental health and disease control with elucidation, counseling and technical assistance from the attendant of DHCs". In this research, the eradication of the disease as one of two categories as the focus of this study. There are three sub categories in this category (Disease control), namely: 1) Improvement of clean and healthful habit; 2) control of infectious diseases; and 3) improvement of disease eradication activities. All of the efforts at the three sub categories are conducted by elucidation, counseling, dan technical assistance.

Implementation of the three sub categories can be stated that they are not run properly in accordance with the purpose of the sanitation clinic. It happens because

some of the obstacles are faced, both from officials as well as from the patients or clients. So the spread of the disease based on the environment in the district Terara still high and the need for special treatment or action in order to reduce the amount of spread of disease in the community. Since the SCP conducted to the community, it should be able to reduce the number of patients who indicated disease based on the environment.

From the data and analysis below, can be shown that implementation of SCP in Terara District has been able to change clean and healthful habits of people. On the other hand, the conditions of sub category of control of infectious diseases, shows that implementation of SCP has reach the low level of success. Sub category of improvement of disease eradication activities, also shows the low level of achievement. So it can be conclude that on the category of disease eradication, implementation of SPC has not been conducted quite well or in low achievement.

It can be shown that 232 of 320 patients (72,5 %) at the DHC Terara during the month of January 2016, are the patients with diseases based on environment. The number of patients suffering from disease based on the environment shows that the increase of disease eradication has not been able to overcome the problem of infectious disease based on environment. Real counseling data got through the documentation technique, shows that there are 53 of 736 (4.8%) patients, have been implemented the advise stated by the staff or officer of SCP. It means that the success rate of implementation of SCP in Terara District is still considerably lower than 70%, the target to be achieved.

C2.1 Improvement of Clean and Healthful Habits

Clean living habits of society into something that should be improved, especially in people who are prone to

disease environments based environments such as rural and slum areas. Increase habits of cleanliness this is a task that must be carried out by the clinic sanitation.

SHP implementation in District Terara through elucidation, counseling and technical assistance of disease control, is expected to be able to the control of many diseases related to the environment. It is expected to improve public health. It accordance with Law No. 36 Year 2009 on Health on Article 162 paragraph 1, which says "environmental health held to realize the quality of a healthy environment".

Clean and Healthful habits for people in the District Terara, show the increasing condition, with evident such as positive response from the community through small things in daily life. Some of the daily better little things chaged, are the habit of washing their hands before eating, using of clean eating tools, and the consumption of healthy food menu. This indicates that the SHP officers/staff had success in running the elucidation and counseling about the importance of clean and healthy living habits. The strategy done are doing the elucidation and counseling to the schools both at primary and secondary school in Terara District.

C2.2 Control of infectious Diseases

Control of infectious disease is one of three sub categories that compose the category of disease eradication. The infectious disease meant here is the disease that easy to infect from one to others, that the infection or disease transmission strongly influenced by environment conditions. Some of the infectious diseases based on environment conditions, include Acute Respiratory Infections (ARI), pulmonary tuberculosis, diarrhea, malaria, Dengue Hemorrhagic Fever (DHF), food poisoning, intestinal worms, as well as health problems caused by chemical poisoning and pesticides.

Implementation of SCP is expected to overcome the problems in society of Terara District that has a number of patients suffering from disease based on the environment, in high quantities. There was 232 of 320 patients (72,5 %) at the DHC Terara during the month of January 2016, are the patients with diseases based on environment). The large number of patients with diseases environmentally based, shows an indication that the implementation of the SCP has not been able to overcome the problem of infectious disease based on environment.

C2.3 Improvement of Disease Eradication Activities

Terara eradication of the disease in Terara district generally has started to increase (according to informants from SCP staff), although for certain diseases is still high. The high number of disease patients is also found in some parts of Terara District, because of limited funds and the number of sanitation clinic staff / officer to reach them. But the action taken sanitation clinic officers in addressing diseases, particularly environmentally based disease problems, according to the community opinion, there has been no improvement. So that there is a difference of views between opinion of informan from SCP program actors and communities that receive their program.

From the counseling data documented, it was got the fact that there are only 53 of 736 (4.8%) patients who carry out the advice given by the SCP staff after the counseling session. Compared to the target to be achieved (70%), it can be said that the achievement of implementation of SCP in Terara district is still very low.

D. CONCLUSION AND RECOMMENDATION

D.1. Conclusion

The conclusion of this study is the implementation of clinical Sanitation Clinic Program (SCP) in Terara District through integrated efforts of environmental health and efforts to eradicate the disease with

elucidation, counseling and technical assistance still has not done well. And neither the achievement targets of SCP (has not been reached well). There are still many constraints encountered in SCP implementation. Some of the constraints include the budget for sanitation clinic program that is still limited and inadequate number of officers who are experts in the field of sanitation. Awareness of the people that just want to be provided their need by government, also contribute to the unsuccessful result of the SCP in Terara District.

Related to the concept of Blum (1974 in Notoatmojo, 2007), the result of this research shows that the District Terara can not work optimally in the fourth of health factors, namely environmental factors, behavior, health care, and heredity. So the effect of these is the low level of health indicator of Terara District. If the problems in these factors can be overcome, then the achievement of the District Terara will be able to compete with of another District in East Lombok, such as Montong Betok District that has already been Pilot district for sanitation clinic, and District Wanasaba that have already been able to overcome the problem of environment based diseases on their society. And the concept of Blum, is still proved quite well at this case of this research.

D.2. Recommendation

According to the conclusion, it is recommended some action, such as below:

1. Add the budget to conduct the SCP, adjusted to the number of cases in each part area of Terara District
2. Give training to the staff or officer in charge to the SCP, to increase the capacity
3. Add the medical profesional and public health officer at DHC, especially to conduct the SCP

4. Make Closed Supervision System to the staff in charge
5. Make good relationship to the informal leader in order esier to transfer awareness of value and clean and healthfull habit.

ASSESSING THE DELAYED GRATIFICATION, IDENTITY ORIENTATION AND TRANSITIONAL PLANS OF ESGP-PA RECIPIENTS :IMPLICATIONS FOR POLICIES AND PROGRAM DEVELOPMENT

Alma G. Maranda, Antoniette Zacarina B. Sansona, Jiddo Andrei G. Maranda
almamaranda@yahoo.com, asansona@gmail.com, jidandrei@gmail.com
Mindanao State University - Iligan Institute of Technology

Abstract

Governments in developing countries adopted the Conditional Cash Transfer (CCT) system to alleviate poverty and reduce the transmission of poverty from one generation to the next. In the Philippines, the ESGP-PA is the government's version of CCT. The DSWD provides for the health and education of children of extremely poor households. ESGP-PA provides cash grants for the educational expenses of the children of poor families. The ESGP-PA grant has immense implications to the lives of recipients and it is important to examine the psychological aspects to inform policy making and to assess the effectiveness of the program as perceived by the recipients. This study examined the delayed gratification, self-identity orientations and transitional plans of the ESGP-PA recipients enrolled in MSU-Iligan Institute of Technology (2014-2015). This study measured delayed gratification and self-identity orientations using standardized instruments and analyzed using descriptive and inferential statistics. Transitional plans were assessed qualitatively. Results showed that recipients had high levels of delayed gratification for achievement and moderate levels for food, money, physical and social interaction. They had higher personal and relational identity orientations than social and collective identity orientations. Relational identity ($r=-.329$, $p=.000$) and collective identity ($r=-.363$, $p=.000$) was negatively correlated with delayed gratification while money ($F=1.614$; $p=.004$) significantly influenced social identity orientation. The themes in the transitional plans of the recipients were to become successful, have good jobs, help their family, finish school and get a degree. They feared they would not reach their dreams, while financial difficulties and economic factors, hindered them from reaching their goals. In conclusion, ESGP-PA recipients' psychological well-being is positively and negatively impacted by the ESGP-PA program.

Key words: CCT, ESGP-PA, delay of gratification, identity

INTRODUCTION

Governments in various developing countries adopted the Conditional Cash Transfer (CCT) system as an effective tool to alleviate short-term poverty and reduce the transmission of poverty from one generation to another. In the Philippines, the ESGP-PA is the government's version of CCT under the Department of Social Welfare and Development (DSWD) that provides services for the health and education of the extremely poor households, particularly of children aged 0-18 years old. ESGP-PA award cash grants to satisfy the basic and higher order

needs such as food, shelter, healthcare, learning materials, education and etc. of the poor families provided that they comply with the set of conditions required by the program. This financial support from the government creates an impact to the lives of its member not only in financial aspect but as well as in their emotional and social aspects.

There are various factors that either hinder or encourage individuals to progress in their lives. The present study focused on the factors of self-identity, delayed gratification, and transitional plans of the

ESGP-PA recipients as indicators of persistence in the program. The findings of the present study were used as basis for programs and policies that would further the aim of the ESGP-PA program to maximize its effects in the lives of the recipients of the program.

Mischel and his colleagues (1988) developed a framework to explain the human ability to delay gratification. It was proposed that there is a “hot-and-cool” system that explains why willpower succeeds or fails. The cool system is cognitive in nature. It is essentially a thinking system, incorporating knowledge about sensations, feelings, actions and goals. While the cool system is reflective, the hot system is impulsive and emotional. The hot system is responsible for quick, reflexive responses to certain triggers. When willpower fails, exposure to a “hot” stimulus essentially overrides the cool system, leading to impulsive actions. Some people, it seems, may be more or less susceptible to hot triggers. And that susceptibility to emotional responses may influence behavior throughout life.

It was observed that delay of gratification was an important core component of successful personality adjustment (Mischel, 1990; Mischel & Ayduk, 2003, 2004; Mischel et al., 1996; Mischel et al., 1989, 1992; Mischel & Rodriguez, 1993; Rodriguez et al., 1989). A lack of delay gratification can be implicated in variety of addictive antisocial behaviors. At the interpersonal level, the ability to delay gratification seems to serve a long-term buffer against rejection and sensitivity the tendency to experience feelings of anxiety when anticipating being rejected by others (Carducci, 2009).

Self-identity can be seen as a person that has not one “personal self” but rather several selves that corresponds to widening circles of group membership (Tajfel, 1979). The concept of Self-Identity is explained through three (3) fundamental psychological

mechanisms that underlie it, which include: social categorization, social comparison, and positive distinctiveness. Social categorization involves the cognitive process where objects, events and people are classified into categories. By doing this individuals tend to exaggerate the similarities in his/her group and exaggerate the differences of other groups. In social comparison however, there is the tendency to compare one’s own social group to other groups. Distancing the self from groups that does not share the same beliefs and ideas – and focus more on the beliefs in the self group. Lastly, positive distinction, involves the motivation to show that the self’s in-group is preferable to an out-group.

Transitional Planning is anchored on Schlossberg’s Transition Theory (1984) where Schlossberg “believed a need existed to develop a framework that would facilitate an understanding of adults in transition and aid them in connecting to the help they needed to cope with the ‘ordinary and extraordinary process of living’” (Evans, et al., 2010). Transition refers to a passage from a life phase, condition, or status to another which involves both process and outcome of complex person-environment interaction (Chick & Meleis 1986). A process that involves three phases: ending, neutral, and a new beginning (Bridges, 2003). “The more the transition alters the individual’s life, the more coping resources it requires, and the longer it will take for assimilation or adaptation” (Schlossberg et al; p. 37, 1984). Anticipated Transitions include those that occur predictably, as expected like: going to college, changing majors, getting a job, getting married, among others. Unanticipated Transitions include those that are not predictable such as sudden death of a loved one, education interrupted by unanticipated career change, disruption in life caused by natural calamities or war.

In order for ESGP-PA recipients to succeed in their studies and complete their programs, it is hypothesized that they should

be able to delay gratification, such that it allow the recipients to suspend gratification of immediate wants and urges in favor of a greater reward which is a college degree. Moreover, it is also hypothesized that recipients who are in their adolescence is in the process of developing their own identities and it is important to determine whether their self-identity construal is related to delay of gratification. Lastly, the recipients are undergoing anticipated transitions as they are beginning college education, and it is of immense importance that they gain awareness of the challenges that they will face as they continue with the program. Knowing their fears, dreams and formulating their goals would assist them in the transition from adolescence to young adulthood.

The present study is the first that examined the psychological well-being of ESGP-PA recipients, and the findings of this study contributes to the body of knowledge on delay of gratification, self-identity and transitional plans. Moreover, this study aims to provide information on ESGP-PA recipients and their experience in college and results of this study was used to develop intervention programs that was directed at improving recipients personal, social and academic skills.

LITERATURE REVIEW

Delay of gratification refers to the capacity to delay the satisfaction of the desires, needs, wishes, impulses, whims and urges for a greater reward (Mischel, Ebbesen, & Raskoff Zeiss, 1972). The marshmallow test demonstrated that some children do not delay gratification and are immediately satisfied and gratified. On the other hand, it also depicted behaviors that characterized patience, self-restraint, self-control and strategies that distracted children from the attractive reward or item. Several years later, longitudinal studies that followed the children in the marshmallow test revealed that those who did wait and

was able to delay gratification were better students in adolescence, they manifested emotional restraint and mental regulation (Mischel, Shoda & Rodriguez, 1989).

Funder, Block and Block (1983) carried out a longitudinal study of preschool children wherein the children were tested using delay of gratification tasks using an experimental design at four years old. The researchers then measured the cognitive ability, personality factors and the situational environment of the participants in adolescence. The researchers hypothesized that personality characteristics such as ego strength and ego resiliency were linked to delay of gratification. Results indicated that girls who resisted the temptation the longest were resilient and rated as intelligent, proficient, practical and observant while boys were found to be predominantly higher in ego control, they were rated as insightful, observant, planning and consistent. Those who exhibited low control were easily stressed, uneasy, sulky and inconsistent.

In a similar study by Mischel, Shoda and Peake (1988), preschool delay behavior was hypothesized to be linked to the cognitive and social coping techniques used in delay behavior tasks. According to the researchers, effective delay emphasized the use of non-rigorous techniques and changing attentions and the production of thoughts that enhanced the ability to delay gratification. Moreover, the researchers used a longitudinal design in order to determine whether such management of delay behavior in delay tasks would still be the same after 10 years. The findings of the study reported that those who were willing to delay during preschool for a preferred reward anticipated the cognitive and social competencies of adolescents after a decade from the original delay tasks. The researchers reported that preschool children who were able to delay were viewed by their parents as scholastically and interpersonally competent.

Eigsti and colleagues (2006) aimed to determine whether preschool delay of gratification levels predicted mental regulation in adolescence and young adulthood. Mental regulation refers to the basic elements that allow the individual to direct and manage behavior in order to attain a certain outcome. The researchers tested the following hypothesis during preschool utilizing the delay of gratification task and the go/no-go task in adolescence and young adulthood. Preschool children at 4 years old participated in the initial delay of gratification tasks and was then tested again using the go/no-go tasks to the same participants after 10 years. Results showed that the stimulus preferred in the delay behavior tasks in preschool projected the performance of the individual in a mental regulation task in adolescence.

In effect, delay of gratification is an important object of study as it has been found to be linked to positive attitudes and personal characteristics such as resiliency, ego control, intelligence, adaptability, coping, and metacognitive skills. Moreover, children who were found to delay gratification in preschool was subsequently found to have better performance in high school, were more sociable, content and happy in adolescence, while those who were unable to delay gratification was reported to have poor emotional control, poor self-regulation and more likely to drop out of high school.

According to Baumeister and Muraven (1996), a person's identity, one's inner self, one's individuality and uniqueness have to be emphasized in order to adapt to the demands of modern life. At the same time they regard identity as a form of adaptation between person and context, the outcome of the interaction between what they call "the basic nature of selfhood" and the social and cultural context. They emphasize the influence of the broad, historical, and societal context upon the norms and criteria of what one's identity should be.

Cheek and his colleagues (e.g., Cheek, 1989; Cheek, Tropp, Chen, Underwood, 1994) have characterized identity as comprising three broad structural categories, each having significance for an individual's psychosocial functioning. Later, the fourth category – Relational identity – was added. Personal identity concerns one's personal values, ideas, goals, emotions, and subjective feelings of continuity and uniqueness. Social identity concerns the self in relation to others and one's public image, e.g., popularity, attractiveness, and reputation. Collective identity concerns the aspects of the self-concept that relate to social or demographical groups of affiliation, such as one's race, gender, ethnic background, religion, and feelings of belonging in one's community. Relational identity concerns the way we build our personal relationships with other people (Cheek, Smith & Tropp, 2002). These representations are relatively stable, trait-like self-descriptions that describe self-related individual differences in beliefs and goals (Leary, Wheeler & Jenkins, 1986). Individuals will vary in the importance they give to these aspects of identity when constructing their self-definitions (Cheek et al., 1994).

Research shows that individuals high in personal identity will tend to have such characteristics as sociability, autonomy, and a need for uniqueness. High personal identity is associated with making decisions and choices based on personal reasons or benefits. According to Sampson's (1978) concept of "identity mastery", to accomplish stability and continuity to one's identity, people will attempt to manage the aspects of the internal or external environment to maintain their sense of selfsameness. Individuals who place high importance on their personal identity will define their identity in terms of internally located characteristics and will attempt to manage the internal environment in order to maintain their sense of selfsameness. Having less of a need to

exercise external control, such individuals would be more stable across different situations. When social identity is a salient aspect of identity, individuals will be sociable, but there will be conformity and a fear of a negative social evaluation instead of autonomy (Schlenker & Weigold, 1990). High social identity is associated with making decisions and choices based on social reasons or benefits. Such individuals will define their identity in terms of externally located characteristics and will attempt to manage the external environment in order to maintain their sense of selfsameness. The implication of identity mastery for psychosocial functioning is that when social identity is a strong aspect of one's identity, identity is much more precarious than in the case when personal identity is the most important aspect of identity. Wade and Brittan-Powel (2000) argue that a collective orientation adds to the self-concept through a sense of belonging or group membership, thereby having implications for stability and continuity of identity of the quality associated with personal identity. Collective identity tends to be more salient in members of minority race groups with a collectivistic orientation (Cheek et al., 1994) and in the individuals who consider their ethnicity as a highly central aspect of their self-concept (Tropp, 1992). Collective identity has also been investigated for its relationship to self-concept and self-esteem in individuals from a variety of social or demographic groups (e.g., Hengst, 1997; Marmarosh & Corazzini, 1997; Wright & Forsyth, 1997). When collective identity is an important aspect of one's self-concept, and / or the group with which one identifies is perceived as valued, self-esteem is positively affected because of one's affiliation with a particular group.

There is wide concurrence that skills associated with becoming more self-determined (e.g., setting goals, problem-solving, decision-making, self-management) are important for a successful transition from school to adult life. Nevertheless, this

concurrence does not necessarily translate into increased instructional activities to promote the self-determination of students with disabilities. Individualized Education Program goals and objectives rarely include goals to promote self-determination (Agran, Snow, & Swaner, 1999; Wehmeyer, Agran, et al., 2000; Wehmeyer & Schwartz, 1998). Although self-determination is a valued transition outcome, it appears to receive little instructional emphasis.

METHODS

Research Design

This study is a multidimensional approach and analyzed through quantitative approach. The dimensions used in this study are psychological approach and social approach. A descriptive survey design was used to gather data from the participants. The information in this study was collected through self-administered questionnaires upon personal distribution of the researchers to the respondents.

Research Environment

The study was conducted at MSU-IIT, Iligan City, which falls under the Northern Mindanao Region, in the province of Lanao Del Norte. It is considered as a lone district with 44 Barangays and has a total land area of 813.37 square kilometers. It had a population of 322,821 inhabitants in the 2010 census. The majority of the populations are Muslims and Christians.

Respondents of the Study

The respondents of the study were 237 college students who were beneficiaries of the ESGP-PA enrolled in the second semester 2015-2016 in MSU-IIT, Iligan City. Seventy percent were female (166) and thirty percent (71) were male. Their ages ranged from 16 to 26 years old. They were identified

to be a resident of Lanao Del Norte, Iligan City (53.2%), Misamis Occidental (5.1%), and Misamis Oriental (1.7%). 75.1% of the respondents were Christians and 23.2% were Islam.

Sampling Criteria

Only 60% out of the 395 total ESGP-PA beneficiaries were included in the study. The inclusion was based on their willingness to participate during the conduct of the study.

Instruments

Previously tested scales and questionnaires were chosen as data collection instruments in the study. The following are the scales and the questionnaires that were used:

Delay of Gratification Inventory (DGI)

In order to measure the level of Delayed Gratification of the respondents, the researchers used the Delaying Gratification Inventory (DGI). The DGI is consists of 35 items which is composed of five domains of delay behavior, involving food, physical pleasures, social interactions, money, and achievement,. The questionnaire has 35 items, that to be answered by choosing one of the five scale; 1= strongly disagree, disagree, 3= neither agree nor disagree, 4= agree, 5=strongly agree. It has a reverse item which can be interpreted inversely such as item number; 3, 6, 9, 11, 12, 13, 19, 21, 22, 23, 24, 25, 27, 32, 33, 34, 35. According to the scale's psychometric properties, its internal consistency and test-retest reliabilities were strong for the DGI-35 composite ($\alpha = .88$, $r_{retest} = .88$) and subscale scores (average $\alpha = .77$, $r_{retest} = .76$).

Aspects of Identity Questionnaire-IV (AIQIV) (Cheek et al., 2002) is a 45-item objective inventory that measures the importance of four identity orientations in individuals' self-concepts: a) personal identity, or the importance of one's psychological traits and other personal attributes (e.g., My personal values and

moral standards), b) relational identity, or how individuals see themselves in the context of their intimate relationships (e.g., My relationships with the people I feel close to), c) social identity, or how individuals see themselves in more general interpersonal contexts (e.g., My reputation, what others think of me), and d) collective identity, or how individuals represent their various reference group identities (e.g., My race or ethnic background). Respondents filled in a blank space next to each item with a number from 1 ("not important to my sense of who I am") to 5 ("extremely important to my sense of who I am"). Higher scores indicated the larger importance of a peculiar aspect to one's identity. Cheek et al. (2002) reported internal consistency coefficients for four identity orientations from 0.72 to 0.92.

Transitional Plans Questionnaire

The Transitional Plans instrument used was a researcher-constructed questionnaire that used open-ended questions to measures their on-going planning process to ensure successful transition from college to graduation. The following questions were designed to assist them in developing a personalized plan gird to meet their specific needs.

1. What are your greatest dreams about your future?
2. What are your greatest fears about your future?
3. What barriers might get in the way of accomplishing your goals?
4. What kind of support do you think you need to help you accomplish your goals?
5. What will you do to accomplish your goals?
6. What can ESGP-PA do to help you to reach your goals?
7. What can your community or other agencies help you to reach your goals?

Procedure

Researchers coordinated with the institute's Office of Academic Affairs and ESGP-PA Coordinator in identifying the recipients of the program and who were currently enrolled in the institute for school year 2014-2015. Each recipient was approached and were given information about the present study and gave informed consent before completing the questionnaires. About 60% of the total number of ESGP-PA recipients were reached by the present study with a 100% response rate. The completed questionnaires were then tallied and scored and data was analyzed using descriptive and inferential statistics, while responses on the transitional plans questionnaire was analyzed using emergent themes and commonalities.

RESULTS

Delayed Gratification

The level of delayed gratification of ESGP-PA recipients across the following domains: achievement, money, social interaction, physical and food showed that generally, the respondents can moderately delay their gratification ($x=3.55$). Results revealed that the respondents highly manifest delayed gratification in terms of their academic achievement ($x=3.83$) and can moderately delay their gratification in the aspects of money ($x=3.74$), social interaction ($x=3.44$), physical ($x=3.40$) and food ($x=3.35$). The results implied that the ESGP-PA recipients are able to delay gratification especially when it was beneficial for them to do so, such that academic delay of gratification has the highest mean score.

Self-Identity

The level of identity orientations of the ESGP-PA recipients as a measure of their identity formation and construal of self was examined in this study. Results indicated

that the ESGP-PA recipients defined their identities based on personal identity orientation ($x=4.16$), other than relationships, social interactions and culture. Findings imply that the self-identity of the ESGP-PA recipients are based from their own personal differentiations and not heavily influenced by the other external factors. Although in some degree, aspects which are relevant to the respondent's life at present were considered important like religion, nationality, close friends, reputation and social behaviours.

Relationship between Self-Identity and Delayed Gratification

Table 1 presents the correlation between identity orientations and delayed gratification. Results showed a significant relationship between relational identity orientation and delayed gratification ($r=-.329$, $p=.000$) exhibiting an inverse weak relationship experienced by the respondents, wherein the lower the relational identity orientation the higher their delayed gratification. Also, collective identity orientation was negatively correlated to delay of gratification ($r=-.363$; $p=.000$). This would mean that the higher the feelings of collective identity the lower the delay of gratification. Findings imply that the respondents did not anchor their identities on others and do not depend on their relationships with their close friends and romantic partners. However, the recipients exhibited collective identity orientation in which they felt a sense of pride and patriotism for their culture and country. It can be deduced that the recipients have less relationships and interactions with other people who are not similar to them, hence they can delay gratification in terms of socializing but will not be able to delay gratification if they interact with people who shares their culture and religion.

Table 1. Correlation between Self-Identity and Delay of Gratification

Variables	<i>r</i>	Sig
Personal Identity Orientation	-.060	.433
Relational Identity Orientation	-.329*	.000
Social Identity Orientation	-.094	.216
Collective Identity Orientation	-.363*	.000

*Significant at $p < .05$

Multiple Regression between Delayed Gratification and Self-Identity

To determine which of the identity orientations predicted delayed gratification, a multiple regression stepwise analysis was conducted. The results indicated that relational identity orientation and collective identity orientation accounted for 32% and 36% of the variance of delayed gratification. Hence, it could be said that when an individual strongly identifies with relational and collective aspects of identity, the more they are likely to have delayed gratification. From this, it is implied that when one is concerned with one's personal and close relationships and identifies with one's culture and religion, the more they are able to delay gratification. Delay of gratification thus can be seen as a function of external factors rather than internal factors. This is in contradiction with existing literature on delayed gratification which says that delayed gratification is internally motivated and is therefore dependent on one's ability to persevere.

Table 2. Multiple Regression between Delayed Gratification and Self-Identity

Variables		Sig
Personal Identity Orientation	.020	.863

Relational Identity Orientation	-.323*	.010
Social Identity Orientation	-.145	.161
Collective Identity Orientation	-.369*	.002

*Significant at $p < .05$

Differences in Self-Identity Orientations in terms of Delayed Gratification

To determine which of the identity orientations impacted delayed gratification, a one-way ANOVA was conducted. Results indicated that relational identity orientation ($F=1.380$; $p=.049$) and social identity orientation ($F=1.394$, $p=.041$) were statistically significant. Thus, there is a marked difference among the identity orientations of the ESGP-PA grantee respondents. The relational and social identity orientations accounted for the differences in the mean scores of delayed gratifications. This implied that the ability to delay gratification is influenced by relationships with close friends and one's social behaviours.

Table 3. ANOVA of Self-Identity Orientation and Delay of Gratification

Variables	F	Sig
Personal Identity Orientation	.878	.689
Relational Identity Orientation	1.380*	.049
Social Identity Orientation	1.394*	.041
Collective Identity Orientation	1.102	.330

*Significant at $p < .05$

Differences in Delay of Gratification in terms of Social Identity Orientation

To determine which domains of delayed gratification influenced the social identity orientation, one-way ANOVA was carried out. Results indicated that of all the

measured domains, money ($F=1.614$; $p=.004$) was found to be significant and accounted for the differences among the delay of gratification variable. This would mean that having and spending money influenced the social identity orientation. Evidently, money happens to be an influential aspect on social identities, thus having money and being able to spend it can contribute to one's reputation and social behaviors being ESGP-PA recipients with an allowance received from the government greatly influenced their social identity orientation in terms of money.

Table 4. ANOVA between Social Identity Orientation and Delayed Gratification

Variables	F	Sig
Money	1.614*	.004
Social Interaction	1.366	.144
Food	1.345	.155
Physical	1.337	.160
Achievement	1.220	.242
Total	1.389	.127

*Significant at $p<.05$

Transitional Plans

Dreams

There was an overwhelming response when asked what their foremost dream was, this was directed at the future and were long term goals that the respondents' desired to accomplish. The dreams revolved around three areas, their personal dreams for themselves, dreams for their families and dreams of becoming in relation to their schooling. In terms of their personal dreams, the ESGP-PA grantee respondents wanted to become successful, have good, stable and financially rewarding jobs, and hopefully to practice their professions when they graduate. Their dreams for their families included helping their family, improving their family's economic status, giving back to their parents and making their parents proud of them. Lastly, their dreams in school were

inclined at completing their degrees, finishing school, graduating from IIT and doing academically well in school.

Fears

In the same way that the respondents were asked to identify their dreams, they were also asked to identify their greatest fears. The responses of the ESGP-PA grantee respondents were consistent with their dreams since their greatest fears revolved around of not being able to reach their dreams. Thus, they said that they were afraid of not becoming successful, not having a stable and financially rewarding job after graduation, not being able to provide and help their families and not completing their degrees or finishing school or graduating from IIT.

The respondents' fears revealed that in as much as they know what they want to be in the future, they are also aware that anything could happen along the way and hinder them from reaching their dreams. As such their fears of not being able to fulfil their dreams would mean that they failed to be the bearer of hope and progress for their families. This further imply that they are afraid and uncertain of what the future will bring for them especially about how to maintain their scholarships, whether financial support might be withdrawn, that there will be no jobs for them if and when they graduate and that the jobs available to them would not pay enough for them to provide for their families.

Planned Behavior

The ESGP-PA grantee respondents were also asked what type of behavior or what it would take them to be able to reach their goals in the future. The responses where focused on internal factors of the respondents such as hard work, perseverance, dedication and commitment to their dreams. Although they recognize that they receive a grant from the government being ESGP-PA recipients but their responses generally indicated internal locus

of control. They believed that it is through their own efforts that they would be able to accomplish the goals they have set for themselves. Hard work referred to hurdling all the academic rigor and demands of their schooling in IIT, while perseverance was more of being able to continue with their education and scholarship despite the difficulties they are facing. Dedication and commitment were more of becoming immersed in the program and in their roles as scholars and as the hope of their families. They are dedicated in the sense that they would be able to put everything on hold just to be able to realize their education while commitment to continuing with the program and not ever thinking of quitting or skipping the scholarship.

DISCUSSION

The results of the study showed that the respondents' degree of delayed gratification is moderate, however, in terms of the achievement domain it is high. This would mean that the respondents can moderately delay their gratification in terms of food, physical, social interaction, and money, while they can highly delay gratification for achievement. Specifically, the respondents could delay gratification when it came to tasks in school, improving themselves and putting in hard work, however, they were less likely to delay gratification when it came to eating food they really like, sticking to a healthy diet, doing tasks they do not like, waiting to take their turn, helping other people, and spending money when they get it.

The self-identity of the respondents were measured in terms of four orientations, the personal, relational, social and collective. It showed that the respondents had moderate personal and relational identity orientations and low social and collective identity orientations. This would mean that the respondents self-identity is anchored on their personal and relational identity orientations, such as their personal values, moral

standards, personal goals, hopes for the future and self-knowledge, as well as being a good friend, caring about close friends' family. The respondents were less likely to associate their self-identity to their popularity, physical appearance and attractiveness, being part of a family or their political issues. However, they did indicate that their religion, and pride in their country and reputation are very important.

Relational identity orientation is negatively correlated to delayed gratification. This would mean that higher relational identity orientation is associated with lower level of delayed gratification. Respondents who had high relational identity orientation were more likely to not delay gratification. Thus it could be said that being giving importance to one's relationships to close friends would be associated with lesser ability to delay gratification providing evidence on the assumption that friends do influence one's self-control.

Money was also found to be positively correlated with collective identity orientation, which meant that the higher the ability to delay gratification in terms of money, the higher the collective identity orientation. This is a novel finding, in that money had been associated with individualistic orientations, but this could be a function of culture and the unique Filipino psyche.

The transitional plans of the respondents were gathered as open-ended questions and were analysed using themes and categories. The dreams of the respondents were centred on the personal, family and school. Such that the respondents wanted to become successful, have good jobs, help their family, finish school and get a degree. While the group's fears were focused on the inability to reach their dreams, such as not finding a job after graduation, not being able to help their parents and not finishing their degrees. The barriers to their dreams were singularly that of the financial and economic factors, such that the scholarship was not

enough to cover their needs in school. The respondents also reported that they sorely need the moral, financial and spiritual support of their family, friends and community. The respondents also pointed out that they could only do hard work, be persistent, dedicated and committed to the achievement of their dreams. The ESGP-PA program have given them the opportunity to reach their goals, they were thankful of such opportunity although there were also responses that indicated discontent on how the program was managed and awarded. It would also seem that the respondents felt that there were little social support for them in terms of their community and other government agencies. They feel overwhelmed with the pressure of being a scholar and yet they feel that government agencies are not helping them and that their community is not at all supportive of their scholarship. Lastly, the respondents also reported that the government should be able to provide them jobs after graduation.

The respondents can delay gratification, but they do so poorly when it came to the enjoyment of spending money. It is evident that the grantees enjoy the financial rewards of their scholarships and that it influences their behaviour and way of thinking about their responsibilities towards the government and their families. Also, the respondents are highly shaped and influenced by their own personal values and standards and their relationships with significant others and these become part of their identity orientations and influence who they believe themselves to be. Lastly, they have positive and negative views about their scholarship and it influences their own understanding of the challenges and rewards of being an ESGP-PA grantee.

IMPLICATIONS FOR PROGRAMS AND POLICIES

1. The ESGP-PA recipients were able to delay gratification in terms of achievement

but not so much in terms of money. Thus it is recommended that they be given intervention programs that would enhance their skills in terms of working towards accomplishing their goals, as well as in the management of their finances.

2. The ESGP-PA recipients were found to be able to highly delay gratification in terms of achievement, this is important as it indicates that the recipients can be able to persevere and prove themselves when it came to accomplishing their tasks in school. Hence, adequate support should be given to the recipients in terms of recognizing their efforts and achievement as small successes help develop their confidence and ability to persist until graduation.

3. The ESGP-PA recipients were also found to anchor their identity orientation on their personal values, moral standards and thoughts and feelings about themselves and what they believe they are, as well as on their relationships with close friends and family. Healthy identity formation is the key to the development of any adolescent and it is recommended that the recipients be given programs that will strengthen their self-awareness and help them achieve a healthy identity.

4. The ESGP-PA recipients were found to identify with their religion and sense of pride in being a Filipino, this could be a valuable resource for MSU-IIT and the government in terms of challenging the recipients to do their best and complete their degree programs.

5. The ESGP-PA recipients' transitional plans were focused on being able to finish the program and graduate from MSU-IIT with their chosen degrees and to be able to have a stable and well-paying job in the future. This would indicate that the recipients are able to envision their futures and what they need to do to reach their goals. Primary of which is to be able to help their families and improve their way of life. It is recommended that the recipients be given the much needed support by other government agencies and

institutions to encourage them to persist and complete their degrees.

6. It is apparent that the ESGP-PA recipients seem to be burdened and has to contend with the pressure of being the beacon of hope of their families and be the object of scrutiny of their neighbors and communities. Thus, it is recommended that the recipients and their parents be given intervention programs that would empower the parents to provide the needed emotional and psychological support of their child as ESGP-PA recipients. Also, to involve both parent and child in a program or activity that would enhance their communication and relationship.

7. There was a brewing disappointment among the ESGP-PA recipients in terms of their scholarships and its provisions, it is recommended that the implementing agencies be able to provide dialogues and discussions about the ESGP-PA mechanisms and to address the questions and ill-feelings of the recipients.

Thailand has been implementing UHC for almost fourteen years, and on the other hand, Indonesia entering the third year of UHC. Both of Thailand and Indonesia experienced the financial burden in implementing UHC Policy. The problem is more on the bulk amount of fund to cover the UHC from the annual budget which is accounted of the Annual National Gross Domestic Products (DGP), and become the burden for the National Budget allocated each year. Second, the quality of service is still in poor quality for Indonesian case and there is unequal distribution of government health facilities particularly in primary health care in Thailand. Third, the procedures of UHC for referral services is still complicated for the patients to get advance health care. Thus, by considering the Universal Health Coverage (UHC) Policy is an important health policy issue among ASEAN Countries, including Indonesia and Thailand, this research seeks to provide policy model of UHC in these 3 important aspects particularly in financial model, improvement quality service and simplify referral service of current situation. The analytical approach of this study is derived from a qualitative research methods. In this research, the qualitative model used the interview guide and focus discussion group to explore the information. FGD is conducted both in Indonesia and Thailand with the certain respondents and and key informen. The research results shown in the evaluation of UHC in both countries are still facing state financial burden for the health care, lack of health-care service facilities particularly at primary health units and the procedure of referral system needs to be symplified.

Keywords: Policy Evaluation, Policy Model, Universal Health Coverage.

I. Introduction

1.a. Background

The implementation of Universal Health Coverage (UHC) both in Indonesia and Thailand began to take on a more definite shape for health service provision at large. Indonesia is one of several low- and middle-income countries aiming to improve their health financing systems and implement universal health coverage (UHC) so that all people can access quality health services without the risk of financial hardship⁴. Indonesia in 2014 marked a consecutive National Health Insurance as part of Universal Health Coverage (UHC) until now as its second year implementation. Even though the progress the Indonesian government has made since the rollout of the National Health Insurance Program (JKN) at the beginning of 2014, yet various issues remain such as health care infrastructure, health chain supply, drugs supply, sufficient and proper funding of the program⁵.

A research conducted by National Team for the Acceleration of Poverty Reduction⁶, found that the implementation of JKN needs to be accompanied by major reform in the health-care system, those are : health-care service facilities, human resources in health, cost of health care rates, drugs supply, and strengthening the referral system. Base on data of Indonesian Ministry of Health, strengthening primary health-care

service facilities is also essential for effective health services delivery. The number of primary health-care service facilities working with BPJS Kesehatan as of January 2014 was 15,861, including 9,598 public health centres and 6,263 clinics, doctors or dentists. This could potentially increase to 23,768 between 2014 and 2019. However, both the quantity and the quality of primary health-care facilities need attention. The number of health-care facilities with referral services is adequate at the moment but these services will need to expand by 2019. As of 1 January 2014, 1,701 health-care service facilities were working in cooperation with BPJS Kesehatan. These included 533 government hospitals, 109 specialist and mental health-care hospitals, 104 national armed forces hospitals and 45 national police force hospitals. A further 504 facilities could potentially be added to this list, including 56 government hospitals, 42 private hospitals, 396 specialist and mental health-care hospitals and 10 national armed forces hospitals. The referral system also needs to become more efficient and effective in delivering health services (MoH 2012)⁷.

Meanwhile Thailand, which has been implemented the Universal Coverage (UC) as part of Universal Health Coverage since 2002, has marked development of the health insurance system that can provide useful lessons for other lower- and middle-income countries. Universal coverage was achieved in Thailand in 2002, after the newly elected government introduced the “30-Baht for All Diseases Policy” in 2001. This 30-Baht policy extended health insurance coverage by establishing a

⁴ Institutional analysis of Indonesia's proposed road map to universal health coverage, Amanda Simmonds and Krishna Hort, 2013.

⁵ Universal healthcare coverage in Indonesia One year on, The Economist Intelligence Unit Limited 2015.

⁷ *ibid*, page 14.

Universal Coverage Scheme (UCS) to cover about 45 million Thais who were not already covered by the Civil Servant Medical Benefit Scheme (CSMBS) and the Social Security Scheme (SSS), by requiring only a 30-baht (about US\$1) copayment per visit. The policy also implemented major reform toward demand-side health care financing and strategic purchasing of health services, with closed-end payment mechanisms. Instead of providing budgetary funding to public sector health care providers based on its size, staff number, and historical performance, the 30-Baht Policy introduced a capitation payment that pays providers based on the number of people under their responsibility (contracting unit) ⁸. Thailand's experience reforming its health care financing and coverage expansion can provide valuable lessons for many other low- and middle-income countries that are exploring options to improve the health coverage of their population.

However there are also some challenges of UHC implementation in Thailand. The UCS covers 75% of the Thai population, provides a comprehensive (and growing) package of services and deepening financial risk protection, and relies on general tax as its source of funding. In its first 10 years the scheme was adequately funded, aided greatly by GDP growth and strong political commitment.

1.2. Research Objectives

This research generally is an evaluation study on UHC both Indonesia and Thailand. This research

⁸ Health Financing Reform in Thailand: Toward Universal Coverage under Fiscal Constraints, Piya Hanvoravongchai, The World Bank, Washington DC, January 2013.

basically is the second year stage of evaluation study on UHC both Indonesia and Thailand. The results for the first year shows that there is tendency of overburden of public finance for both Indonesia and Thailand. Both of Thailand and Indonesia experienced the financial burden in implementing UHC Policy. The problem is more on the bulk amount of fund to cover the UHC from the annual budget which is accounted of the Annual National Gross Domestic Products (DGP), and become the burden for the National Budget allocated each year. Second, the quality of service is still in poor quality for Indonesian case and there is unequal distribution of government health facilities particularly in primary health care in Thailand. Third, the procedures of UHC for referral services is still complicated for the patients to get advance health care.

Thus, by considering the Universal Health Coverage (UHC) Policy is an important health policy issue among ASEAN Countries, including Indonesia and Thailand, this research seeks to provide policy model of UHC in these 3 important aspects particularly financial model, improvement quality service and simplify referral service of current situation.

1.3. Significance of the Study

Both Indonesia and Thailand still facing a lot of problem in this UHC Policy. Study by Mutiarin, et al⁹. shown that Thailand has one of the most complex health care systems in Asia,

⁹ Evaluation of Universal Health Coverage Policy : A Comparison Study between Indonesia and Thailand, Dyah Mutiarin, et. al. ICONPO VI, Philippine, 2015.

prior to reform, there were about six different health benefits schemes, targeting different groups of people with different benefit packages, compare to Indonesia which has started UHC Policy in 2014, and it only has one scheme of UHC Policy with two different category of participants.

The Evaluation of UHC in Indonesia and Thailand results in varies remarks, but most of the results have higher remarks in Thailand. The perception of respondents on implementation both UC and JKN are varies. It has 5 parameters in the measurement such as: 1. Standart of Procedures of public hospital, 2. Communication between agencies of UHC Healthcare, 3. Medical human resources readiness, 4. Convenient Facilities and infrastructure, and 5. Medicine sufficiency. In Thailand, the result shown that the most higher remark is in parameter Standard of Procedures of public hospital 4.68, while the lowest remark is in parameter Convenient Facilities and infrastructure is 4.35. In Indonesia the highest remark is in parameter Convenient Facilities and infrastructure 4.20, while the lowest is parameter Communication between agencies of UHC Healthcare 3.77 only. The quality of service in Thailand shows the better result compare to Indonesia. Continuous care services in Thailand has the highest result of 4.67, while the highest result of Indonesia in the same parameter has the result for 4.17.

Over all, Universal Health Coverage (UHC) in ASEAN countries

1.4. Conceptual Framework

a. Universal Health Care Policy

WHO stated that Universal health coverage is the single most

has been a crucial issue of how a country provides health care policy for their citizens at large. The access to quality health service, provision of heath services, benefit to health scheme, and institutional design are amongst the features of UHC in its implementation (Lagomarsino, 2012; Simmonds and Hort, 2013). Indonesia and Thailand as developing countries in ASEAN experience UHC with the same rationality face the same problems in healthcare. The problem of inequality and poor quality still remains as the basic problem for both UHC in Indonesia and Thailand (Prakongsai et al. 2009; Limwatananon et al. 2009; Pitayarangsarit, 2012; Harimurti et al.2013; Road Map toward National Health Insurance, UC 2012-2019; Simmonds and Hort, 2013).

Thus, the significance of the study of this research is to understand that both of Thailand and Indonesia experienced the financial burden in implementing UHC Policy. The problem is more on the bulk amount of fund to cover the UHC from the annual budget which is accounted of the Annual National Gross Domestic Products (DGP), and become the burden for the National Budget allocated each year. this research seeks to provide policy model of UHC in these 3 important aspects particularly financial model, improvement quality service and simplify referral service of current situation.

powerful concept that public health has to offer, attests to the increasing worldwide attention given to universal coverage—even for less

affluent countries—as a way to reduce financial impoverishment caused by health spending and increase access to key health services (Lagomarsino et al., 2012, 933). In his recent study Lagomarsino et al. (2012) observed nine low-income and lower-middle-income countries in Africa and Asia that have implemented national health insurance reforms designed to move towards universal health coverage.

In past decades, high-income countries pursuing universal health coverage have relied on various approaches. On the other hand, lower-income countries wishing to pursue coverage reforms have to make key decisions about how to generate resources, pool risk, and provide services (Lagomarsino et al., 2012, 933). In their recent study, some developing countries are attempting to move towards universal coverage. The nine countries are five at intermediate stages of reform (Ghana, Indonesia, the Philippines, Rwanda, and Vietnam) and four at earlier stages (India, Kenya, Mali, and Nigeria). These nine countries have launched ambitious national health insurance initiatives designed to move towards universal coverage, or have implemented incremental improvements to existing national insurance programs. The nine developing countries are creating hybrid systems, which is shown on below table.

Figure 1. National Level Schemes of UHC

	Year of reform	Revenue generation (sources of revenue ordered by proportion of contribution)	Risk pooling		Service delivery		
			Single	Multiple	Primarily public	Mixed	Primarily private
Intermediate-stage reform countries							
Ghana (NHIS) ⁵	2003	Value-added tax, investment income, formal-sector payroll contributions, household premiums	x				x
Indonesia* (BPJS) ¹⁴	2004	General government revenues, formal-sector payroll contributions		x			x
Philippines (PhilHealth) ¹⁷	1995	General government revenues, formal-sector payroll contributions, household premiums	x				x
Rwanda (Mutuelles) ¹⁸	2000	Donor funding, general government revenues, household premiums, formal-sector payroll contributions		x	x		
Vietnam (VSS) ¹⁹	2002	General government revenues, formal-sector payroll contributions	x		x		
Early-stage reform countries							
India* (RSBY) ²⁰	2008	General government revenues		x			x
Kenya* (NHIF) ²¹	2002	Formal-sector payroll contributions, household premiums		x			x
Mali* (Mutuelles) ²²	2009	General government revenues, household premiums		x	x		
Nigeria* (NHIS) ²³	2009	Formal-sector payroll contributions, general government revenues, household premiums, donor funding		x			x

For purposes of this table, we focus on the main national-level schemes. NHIS=National Health Insurance Scheme. BPJS=Badan Penyelenggara Jaminan Sosial (social security administrative body). PhilHealth=Philippine Health Insurance Corporation scheme. Mutuelles=community-based health+insurance schemes. VSS=Vietnam Social Security. RSBY=Roshniyo Swasthya Bima Yojna (national health insurance programme). NHIF=National Hospital Insurance Fund. *Countries that are working to expand existing pools to include new populations, or are merging existing pools to create one pool.

Table 1: Structure of health financing reforms in nine developing countries

Source : Lagomarsino et al, 2012.

This study found that each of the nine countries has had strongly rising incomes, with per-head income increasing by between 15% and 82% between 2000 and 2010 (data from World Bank world development indicators database), which the evidence suggests ought to lead to demands for improved access to care and reductions in household out-of-pocket health-care costs (Lagomarsino et al, 2012, 935).

Regarding the health policy, at least there are three demands that must be satisfactorily answered by the stakeholders, namely: 1.) good understanding about the politic process that affects the policy, 2.) the necessity to create a participative policy formulation system, 3.) that the result of the policy formulation must be able to

answer the real problem in the society.

Further, the decentralization policy in health sector has been fueled by new efforts at democratization through promoting accountability and introducing competition and cost consciousness in the health sector. The state's new role has shifted from being an implementer of health service delivery, to a regulator creating enabling environment (World Bank on Social Accountability: Strengthening the Demand Side of Governance and Service Delivery¹⁰, 2006) . World Bank in 2004 developed framework modified to illustrate the accountability mechanisms in a decentralized setting. This conceptual differentiation is important as it captures the re-positioning of actors, mandates and authorities in the decentralized service delivery system. The so-called *intermediate route of accountability* refers to client *voice* and the *compact* mechanisms relating clients to public officials and service institutions at the sub-national government level.

b. Health Care Policy Evaluation

Public policy particularly in health sector does not only deal with individual or segmented interests, but it deals more with common objectives, public interests, or citizens at large. The proposed course of action that constitutes policy is then implemented through subsequent decisions and actions.

Reviewing health sector policy could not be separated from the nature of public policy itself. Grindle (1980 p. 11) says that the activities of implementation is strongly influenced by a number of factors (a) the content of policy (b) the context of policy implementation.

Factors of policy content (content of policy) covers; (1) affected interests 2) type of benefit, (3) the desired extent changes, (4) location of decision making, (5) implementer programs and (6) affiliated resources. Whereas in the context of implementation the factors that influence are: (1) power, interests and strategies of the actors involved, (2) character-institutional characteristics in the regime, and (3) compliance and responsiveness.

Study that had done by World Bank¹⁰ shown that Indonesia's system is characterized by a mix of public-private provision of services, with the public sector taking the dominant role, especially in rural areas and for secondary levels of care. However, private provision is increasing. Health service utilization rates are generally low nationally. About 14 percent of the population used outpatient care in the month before the 2010 Susenas survey. Around 60 percent of outpatient visits occurred at private facilities (typically clinics/midwives and nurses) and the rest at public facilities, mostly at primary care level. Susenas data also show that the better-off used private facilities for ambulatory services: 69.5 percent compared to 51.6 percent among the bottom three deciles. Public facilities continue to dominate inpatient care, except for the top three deciles, a larger proportion of which use private facilities for inpatient care.

Mutiarin, et.al., found that with the official estimates indicate that

¹⁰ Universal Health Coverage for Inclusive and Sustainable Development, Country Summary Report for Indonesia, Puti Marzoeki, Ajay Tandon, Xiaolu Bi, and Eko Setyo Pambudi, Health, Nutrition and Population Global Practice World Bank Group, August 2014.

there are 76.4 million poor and near-poor beneficiaries of the 252.8 million total population in 2014, the National Health Agency/BPJS in Indonesia is managing formerly Jamkesmas to cover almost one third of the population. Based on the estimate that the government finance is targeted to cover 86.4 million with the PBI premium of Rp 19,225 per person per month, the central government's contribution to BPJS would equal to Rp 19.9 trillion. Since the government budget in 2014 was only Rp 44.9 trillion, it implies that almost half of the overall government health budget would be used to finance the BPJS. Then, the consequence is straightforward: the share for financing other areas of spending such as salaries and operating costs for centrally-financed hospitals, investments in improving supply and much-needed preventive and promotive interventions would have to be shrunk. The 2015 budget is allocating Rp 47.8 trillion. While in Thailand, with the government's attempt to help all Thai citizens to have health security coverage, the number of registered population for UC scheme will be increased every year and as a consequence the cost of health care using tax-based compulsory finance will rise respectively. The money allocated for UC scheme has increased from 56,091 million baht in 2003 to 154,258 million baht, about three times when it was first started. As previously elaborated, as more people (about 73 percent of population) joined the UC scheme, it is the government's obligation to provide health care benefits as it promised during the election campaign in 2002. Though, looking at financial of UC Scheme, it seems to be alarming, but this money

is only accounted for 1.1percent or 1.2 percent of the Annual National Gross Domestic Products (DGP), and only about 6percent of the National Budget allocated each year¹¹.

In other hand, the path ahead for universal health coverage in Thailand should remain focused on equity, evidence, efficiency and good governance (Health Insurance System Research Office/HISRO, 2012). The study by HISRO (2012) stated that for ambulatory care in health centres, district hospitals, and provincial hospitals were pro poor while university hospitals seem to pro rich. This result can be implied that district health centres, district hospitals, and provincial hospitals performed well in terms of pro poor utilization. This might be due to the geographical proximity to rural population who are vastly poor. This pattern was consistent before and after UHC implementation meant that pro poor utilization was maintained. However, the pro rich pattern of university and private hospital might be explained that main customers of these hospitals are CSMBS and SSS patients who are better off than UC scheme patients. This pattern was similar in hospitalization of inpatients (Thammatach - aree, 2011).

Study by Simmonds and Hort (2013), state that there were potential inequalities in implementing universal health coverage in Indonesia. Indonesia experience Poor quality and unequal distribution of government health facilities have been issues in implementing UHC. While in Thailand, the UHC has been implemented since

¹¹ Evaluation of Universal Health Coverage Policy : A Comparison Study between Indonesia and Thailand, Dyah Mutiarin, et. al. ICONPO V, Philippine, 2015.

2002. UHC in Thailand known as Universal Coverage (UC) Thai government passed the National Health Security Act in 2002. UHC become one of the most important social tools for health systems reform in Thailand. The new Universal Coverage Scheme (UCS), combined the already existing Medical Welfare Scheme and the Voluntary Health Card Scheme. (Jurjus, 2013).

1.6. Methodology

This evaluation is based on the policy evaluation of health insurance in the selected areas. Most of the data in this study will be qualitative in nature. Rossman and Wilson 1991 in Driscoll, et.al. 2007). In qualitative research, literature on methodology suggest that in qualitative research tradition, *confidence* or credibility is acquired by performing the procedures of triangulation (Denzin, 1970). Triangulation has also come to mean convergence among researchers (agreement between field notes of one investigator and observations of another) and convergence among theories. The instruments for qualitative approach will use interview guide and Focus Discussion Group. Intense discussions among the UHC implementer and the health care units will be conducted within small groups, e.g. 5 to 20 participants, with pre-determined topics or issues. The size of the groups is kept small to ensure that all of its members actively participate in the discussions.

Data using in this research will be primary data and secondary data. Primary data will be collected through FGD. There are considerable constraints to obtain data from the primary sources, and in this way, secondary data sources are particularly important. Secondary data

However there are also some challenges of UHC implementation in Thailand. The UCS covers 75% of the Thai population, provides a comprehensive (and growing) package of services and deepening financial risk protection, and relies on general tax as its source of funding. In its first 10 years the scheme was adequately funded, aided greatly by GDP growth and strong political commitment.

consist of all evidence in the forms of documents and records.

II. Findings and Results

2.1. Profiles of UHC Financial in Indonesia and Thailand.

The master plan for implementing JKN has been laid out by the Ministry of Health in the Road-Map for National Health Insurance 2012-2019, a complicated and ambitious policy for a country that is targeting universal coverage for 252.8 million people. According to the plan, the transformation of five existing schemes (Jamkesmas, Askes, Asabri, Jamsostek, and parts of Jamkesda) into a single scheme under BPJS should be completed in 2014. Then, the BPJS will manage the health insurance scheme for all people who have paid the premium and all for whom it has been paid. As explained earlier, the BPJS system will cover both the premium payers as well as poor individuals whose premium is paid by the government under the Premium Payment Assistance (PBI). Monthly premium and membership fee (4.5% of salary) are made compulsory for all the workers, and the registration is to be completed in mid 2015. By 2017, all big and medium enterprises are expected to have the scheme. By 2018, the small enterprises are targeted to join. And by 2019 all

Indonesian citizens and foreigners who work permanently in the country should be covered by the BPJS scheme.

The benefit packages to be covered by the BPJS include preventive and curative personal health care and rehabilitative services. Both medical and non-medical services such as ward accommodation and ambulance are also included. For the primary health care, the providers are Public Health Clinics, Private Clinics and general practitioners. And for the secondary and tertiary health care, the providers are both public and private hospitals. All the institutional arrangement has also been established under the master plan. Ministry of Health is responsible for setting regulations on health service delivery, tariff of services, medical prescriptions, and pharmaceuticals. Together with Ministry of Finance and the National Social Security Council, the ministry should also regulates monitors and evaluate the Universal Health Coverage (UHC) policy. The BPJS is responsible for registering health beneficiaries, administering membership, supervising health-care providers, and managing claims and complaints.

While in Thailand, according to Hanvoravongchai (2013), the National Health Security Office (NHSO), which serves as a state agency under the authority of the National Health Security Board (NHSB). According to the law, the board is authorized to prescribe the types and limits of Health service for (UCS) beneficiaries. The Board also appoints the NHSO secretary-general, who is in charge of NHSO operations. Under the law, the NHSO is responsible for the registration of beneficiaries and service providers, and administers the

fund and pays the claims according to the regulations set out by the NHSB.

Table 2. Characteristics of Thailand's three public health insurance schemes after achieving universal coverage in 2002

Scheme	Population coverage	Financing sources	Benefits package	Purchasing relation	Access to service	Per capita expenditure 2010
Social Security Scheme (SSS)	Private sector employees, excluding dependants	14% Payroll tax financed, tri-partite contribution 1.5% of salary, equally by employer, employee and government	Comprehensive: outpatient, inpatient, accident and emergency, high-cost care, with very minimal exclusion list; excludes prevention and health promotion	Contract model: inclusive capitation for outpatient and inpatient services	Registered public and private competing contractors	US\$ 71
Civil Servant Medical Benefit Scheme (CSMBS)	Government employees plus dependants (parents, spouse and up to two children age <20)	9% General tax, non-contributory scheme	Comprehensive: slightly higher than SSS and UCS	Reimbursement model: fee for service, direct disbursement to public providers for outpatients; conventional DRG for inpatients	Free choice of public providers, no registration required	US\$ 367
Universal Coverage Scheme (UCS)	The rest of population not covered by SSS and CSMBS	75% General tax	Comprehensive: similar to SSS, including prevention and health promotion for the whole population	Contract model: capitation for outpatients and global budget plus DRG for inpatients	Registered contractor provider, notably within the district health system	US\$ 79

Source: Health Insurance System Research Office, 2012

In other hand, the path ahead for universal health coverage in Thailand should remain focused on equity, evidence, efficiency and good governance (Health Insurance System Research Office/HISRO, 2012). The study by HISRO (2012) stated that for ambulatory care in health centres, district hospitals, and provincial hospitals were pro poor while university hospitals seem to pro rich. This result can be implied that district health centres, district hospitals, and provincial hospitals performed well in terms of pro poor utilization. However, the pro rich pattern of university and private hospital might be explained that main customers of these hospitals are CSMBS and SSS patients who are better off than UC scheme patients. This pattern was similar in hospitalization of inpatients

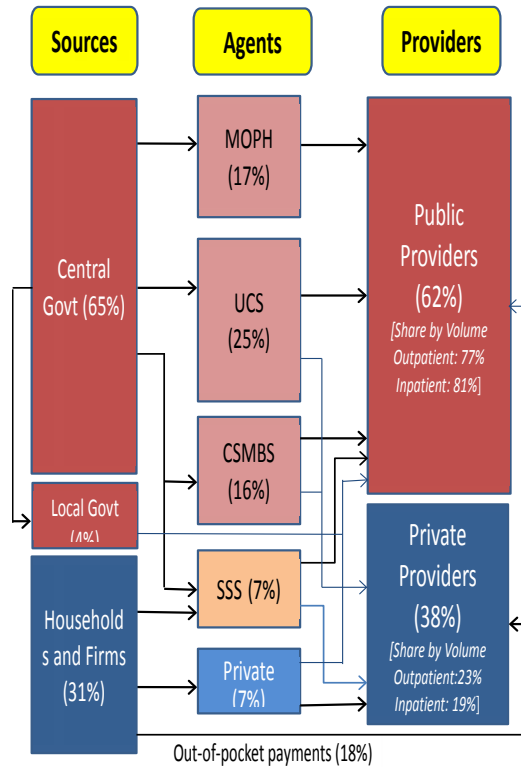

(Thammatach - aree, 2011).

The NHSO receives a UCS budget from the government based on the number of beneficiaries it covers and the capitation rate per beneficiary. Each year, the NHSO estimates the cost of service provision based on its unit cost studies and the number of beneficiaries it will cover. This cost per beneficiary (the capitation rate) is then submitted for approval by the government cabinet. The total budget based on the capitation rate is then submitted together with NHSO operating costs as part of the government budget to be approved by the parliament. Since its inception in 2002, the parliament has never revised the capitation rate approved by the Cabinet. However, the government could change the capitation figure requested by the NHSB, as happened in 2011, when the approved budget per capita is lower than the proposed capitation rate (Hanvoravongchai , 2013).

Further, the NHSO channels the funds to the contracted providers using several active purchasing mechanisms, with capitation and diagnosis-related groups (DRGs) the main payment methods. Payment for outpatient services is allocated based on the number of beneficiaries registered with a provider network (Contracting Unit for Primary Care, CUP). The capitation rate is adjusted by age composition, and the money is channeled directly to the CUP at the beginning of each budget year. For MOPH facilities, the amount transferred may be deducted for specific expenses, such as staff salary, at the central or provincial level depending on prior agreement between the NHSO and MOPH. Payment for inpatient services was allocated using case-based payment

(following DRGs) under a global budget ceiling cap.

According to Hanvoravongchai , 2013, the main Actors and Fund Flows in the Thai Health System are described as below:

Sources: Data on fund flows are from National Health Accounts 2010 by the International Health Policy Program (IHPP)- Thailand. The diagram are non-MOPH public sector agents.

The Thai health financing system is financed mainly by general government revenue (tax-based financing). Wakatabe's et al (2016), showed that NHSO faces more difficult to convince the government in order to secure the capitation for preventive services due to less robust evidence than curative services. Therefore, the proportion of UC-PP has been marginalised from 15 to 10% of the UC budget by a higher increase in curative care. In 2013, 470 million US\$ (7.20 US\$ per capita) was allocated from government general taxes to these services for the entire population

(65.4 million) (NHSO, 2013b). Under the prevention and promotion express-based payment (PPE) system, 248 million US\$ (3.8 US\$ per capita) was used for contracting units for primary care (CUPs) and primary care units (PCUs) provide service-based prevention (Evans et al., 2012). In 2013, NHSO also introduced performance-based financing (PBF) for 18 services (NHSO, 2013b). Seventy-five per cent of PPE is paid prospectively through age risk-adjusted capitation, while the remaining 25% is paid retrospectively if providers have achieved annual performance-based targets set by NHSO in consultation with MOPH.

According to Srithamrongsawat et al. (2010 cited by Hanvoravongchai, 2013) there were several UCS Impacts on the Health System and Health Outcomes. Based on an evaluation of the UCS in 2011 by a group of independent international experts (HISRO 2012, 120), the introduction and implementation of the UCS has resulted in at least the following six areas of impact on other components of health systems:

1. The approach of strategic purchasing adopted by the NHSO and the knowledge and know-how generated for its implementation indirectly influenced other major health insurance schemes to be more active in their purchasing. For example, the CSMBS and SSS have considered the use of the DRG system for inpatient care payments. The UCS decision to cover renal replacement therapy and antiretroviral treatment also influenced the SSS to expand its benefits package for their beneficiaries.
2. The UCS led to increased

investment in the primary care system through improving the technical quality of, and coordination across, providers at the district level.

3. The UCS contributed significantly to the development of the information system in the health sector. The need to expand coverage to the population not already covered by other schemes led the NHSO to work with the Bureau of Registration Administration to improve the Ministry of Interior's vital registration system and birth registry to better capture the Thai population.
4. The increase in financial autonomy at the hospital level from the UCS payment system relative to the previous budgetary system allowed many health care providers to better respond to the increase in health care utilization by hiring more temporary staff or by providing additional compensation for higher workloads of their staff.
5. The UCS contributed significantly to strengthening the health technology assessment capacity in response to its demand for evidence for benefits package decisions. The UCS also supported the introduction and implementation of the Hospital Accreditation system.
6. The initial phase of the UCS saw higher staff workloads that demanded rapid adjustment from the health care providers to satisfy the increase in health service needs. The UCS focus on curative care also means public health functions, especially the areas that do not receive UCS funding, were

adversely affected by a relatively lower level of funding for P&P.

While in Indonesia the scheme, Jaminan Kesehatan nasional (National Health Insurance/JKN) was implemented by the newly-formed social security agency Badan Penyelenggara Jaminan Sosial Kesehatan (BPJS). It sought to improve the situation for citizens stuck in the middle of healthcare provision. Universal health coverage is defined as ensuring that all people have access to needed promotion, preventive, curative and rehabilitative health services, of sufficient quality to be effective, while also ensuring that people do not suffer financial hardship when paying for these services. Universal health coverage has therefore become a major goal for health reform in many countries and a priority objective of WHO. JKN member consist of 126 Millions members has been achieved by August 2014, with 18.355 contracted health facilities, consisting of 16804 primary care facilities and 1551 hospitals.

According to SEARO (2014), there are four main JKN issues raised in 2014 include:

1. Availability and equitable distribution of health services in outer islands to serve JKN members and overall quality of healthcare services (Supply Site Readiness, WB 2014)
2. Provider payment: issues with long time laps for government primary care facilities in receiving capitation payment due to regulation on decentralization; and low tariff set in INA-CBG prospective payment.
3. Lack of JKN socialization activities for the people at large and

coverage issues of people in the informal sectors.

4. Assurance of sustainable financing towards UHC.

In Indonesia, payments made to advanced level facilities were reformed through Ministry of Health regulation No. 69/2013 on the standard tariff for health services. These reforms were applied to level I and advanced level health-care service facilities under regulation No. 71 2013 on JKN health services. When Jamkesmas was first launched (2009–2010), payment of claims was based on the Indonesian Diagnoses-related Group (INA-DRG) but this was developed into the Indonesian case-based groups (hereafter referred to as INA-CBG) and has been used since 2011. As of 2014, it is not only used for patients who are PBIs but also for non-beneficiaries.

The INA-CBG payment model is the amount of the claim that BPJS Kesehatan pays advanced health-care facilities for their services, according to the diagnosed illnesses. The tariffs are determined and issued by a team known as the National Case-mix Centre (NCC), under the Ministry of Health. Every year the team meets and processes data from hospitals and Jamkesmas to determine the tariffs and improve the methods used for calculating them. It allows greater transparency in managing and financing hospitals; • It provides an incentive for greater efficiency and better quality of service in hospitals, Also, case-based groups payments do not distinguish between high and low risk cases although the cost to the hospital is greater in high risk situations. This means that the case-based groups approach creates financial incentives for hospitals to

avoid high-risk patients and this threatens the equity of access to health services (TNP2K, 2015).

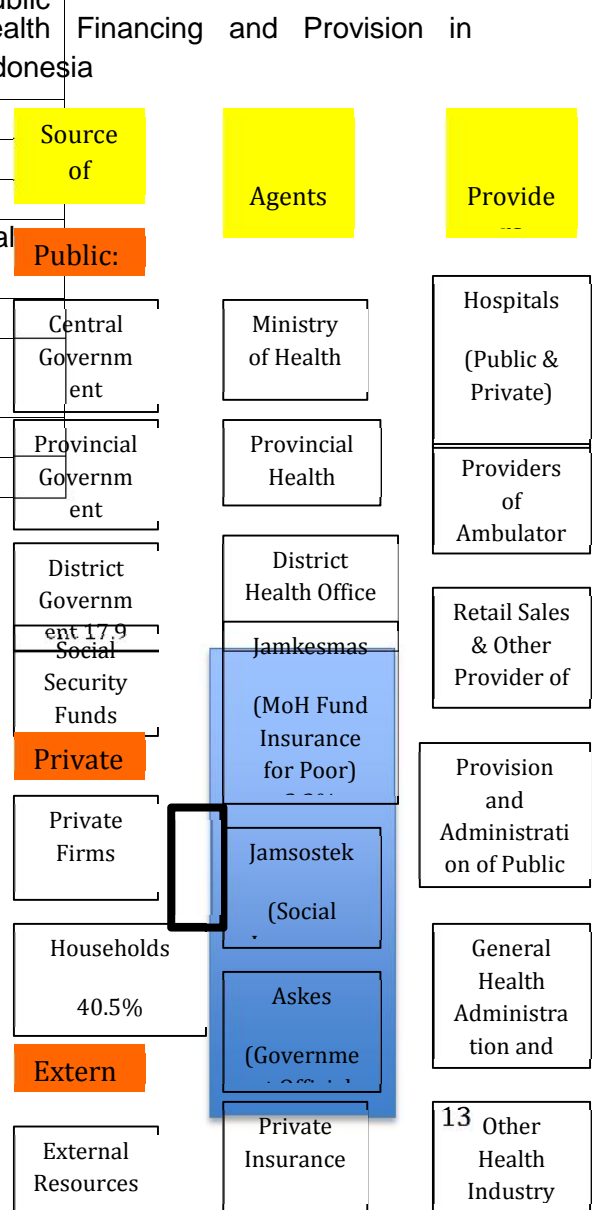

providing for excess or additional coverage of services not included in JKN.

The most important challenge for creating prospective payments, which in effect reducing out-of-pocket transactions, is to establish and continuously maintain the database on health service. Table below describes the database of health service tariff in Indonesia that has been evolving recently in the national effort to attain universal coverage (Kumorotomo,2014).

No.	Elements	INA-CBG (JKN, 2014)
1	Data coding	6,000,000 records
2	Costing benchmark	137 hospitals
3	Contributors	All classes in public and private hospitals
4	Case distribution	Normal
5	Trimming method	IQR
6	Tariff reference	Mean
7	Number of case-base group	1077 + 6 Special CMG
8	Tariff grouping	6
9	Proportion of implemented tariff	100%
10	Clustering	5 scales
11	Medical care class	3, 2, 1

Source: Wibowo, 2014 and Kumorotomo, 2015.

Under JKN, all citizens are now able to access a wide range of health services provided by public facilities, as well as services from a few private organisations that have opted to join the scheme as providers. JKN care aims to be comprehensive, covering treatment for everyday concerns such as flu through to open-heart surgery, dialysis and chemotherapy. Private insurance continues to play a role by

Source: Adapted from Soewondo et al, 2011; BPJS, 2014.

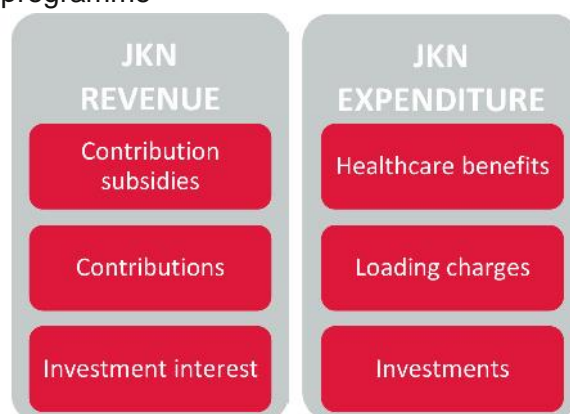

Figure above shows the general institutional arrangement for health financing and service delivery in Indonesia. Since 2014, the BPJS is aimed at integrating Jamkesmas, Jamsostek, Askes, and Jamkesda (which actually means insurance schemes managed by provincial and district governments). However, it turned out that most of Jamkesda schemes are currently managed by the provincial and district governments. There have been resistance from some of the provincial governors and district heads to fully integrate to the BPJS systems on the grounds that most beneficiaries at the local levels are in favor of the Jamkesda and they have been registered by the Jamkesda. As a compromise, the BPJS is applying the so-called "bridging" program for registration and for reimbursement of health services provided by public as well as private hospitals. Therefore, in many provinces and districts the Jamkesmas is complemented and even substituted by the Jamkesda (Kumorotomo, 2015).

Health financing for BPJS is set based on premiums from employers, employees and the government general revenues as outlined below. Payment of the individual contributions is an essential component in the design and management of the overall

Social Health Insurance system, with estimates developed to be actuarially correct. Funding for the scheme is made up as follows:

1. Pooling of funds from contributions of individual members;
2. Subsidized contribution for those below the poverty line (PBI) from central and/or local government;
3. A structuring the contribution of individual members currently outside the insurance system.

Financial sustainability of the JKN programme

Source: Hidayat (2015).

The contributions for the poor and near-poor are paid by the government. In 2014, 86.4 million people were eligible for contribution assistance (known as PBI) and the GOI spent IDR 19.9 trillion (equivalent to US\$ 1.43 billion) financing PBI. In 2014 the JKN scheme exhibited a rather large financial deficit with a medical claim ratio of 115%. This policy brief presents an assessment of the medium-term financial sustainability of JKN over the next five years. In 2014, the estimated costs PMPM were IDR 31,812, while the average contribution amounted to just to IDR 27,696. Dividing the costs by the contribution results in a claim ratio of 114.9%. It is obvious that JKN contribution levels are inadequate to

cover the health care services, resulting in a deficit of about 15% or IDR 4,116 PMPM. In future, the average JKN contribution could rise from IDR 27,696 PMPM to IDR 34,020 PMPM in 2019, an average increase of 4.6% a year. This projected rise is

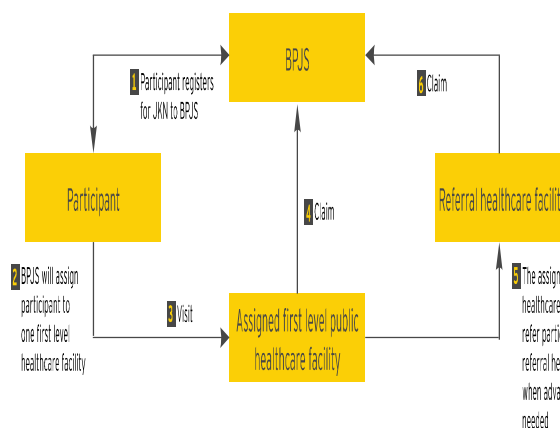

predicated on rising salary levels in the formal sector, a higher share of members from the informal sector, an increase of PBI subsidies and an assumedly better collection rate (Hidayat,2015).

Financial state of JKN (IDR trillion) 2014-2015

Source: Hidayat, 2015.

JKN operates on cashless referral model - refer to the diagram below for an illustration of claim procedures.

Source: Ernst and Young Indonesia, 2015

BPJS Kesehatan has been suffering from a deficit of claims it has paid against premiums it has received since late 2014. In 2014, the deficit stood at Rp 1.54 trillion, with Rp 42.6 trillion

paid out in claims and Rp 41.06 trillion received in premiums. The country's total expenditure on health (TEH) has three-fold increase in the period 2005-2012, from IDR 28.4 trillion in 2005 to IDR 252.4 trillion in 2012; or from IDR 357.800 in 2005 to IDR 1.055.100 in 2012 in terms of percapita per year. As % of GDP, TEH has increased from 2.8% in 2005 to 3.1% in 2012. Further analysis found that the general government expenditure on health has increased around 10% share from 28.4% TEH in 2005 to 39.2% TEH in 2012. Therefore, by percentage of TEH, the private expenditure has experienced 10% share reduction from 71.6% TEH in 2005 to 60.8% TEH in 2012 (Soewondo, 2014)

Conclusion

Based on the Indonesian's JKN in Indonesia and UC implementation in Thailand, both of them, facing the challenge for insurance coverage budget which is significantly increasing as well as its deficits. The governments of both countries need to address the constraints in providing benefits packages and payment mechanisms. The governments should building a strong pooled-fund for universal health coverage requires institutional arrangements that are responsive to financial efficiency, benefit equity, and continuous

commitment giving services and high quality of health services to the poor. Finally, there is a need to balance

between supply-side and demand side for services.

The Struggle of Midwife Temporary Contract toward the Government Policy in Indonesia

Mia Rosmiati¹, Eko Priyo Purnomo²

ABSTRACT

This paper aims to describe to what extent the effort of Midwife Temporary Contract (MTC) in Indonesia can influence the government policy. The background of this paper is about there is a gap between the expectations and capabilities of MTC and government policy. This study is an explanatory descriptive, describing the efforts of MTC in Indonesia in influencing government policy on the demands removal of Midwife Temporary Contract into the Civil Servant. Using secondary data, which is data obtained from books and articles on the internet. There are several process already done to verify the proportions of some relationships aspect among instruments, objectives, and the policy process. Data collection techniques from the research literature or references sourced from books and the internet that are relevant to this paper. Meanwhile the technique of data analysis in this study is a qualitative technique by analyzing secondary data and then using that theory can be used to explain the case being studied. Relative Deprivation theory proposed by Ted Robert Gurr in his book *Why Men Rebel* became the theoretical foundation of the focus in this paper. Relative deprivation theory can be simply explained that the social upheaval appears and takes the form of socio-political movements when there is a gap between the expectations and the capabilities within the community.

Keywords—Midwife Temporary Contract, Interest Group, Government's Policy, Civil Servant.

1. Introduction

Distribution of midwives in Indonesia has not evenly spread becoming the background of government's regulation to put the midwife in the village. Since 1989 this regulation exist in order to improve health care in Indonesia, also to decrease Maternal Mortality Ratio (MMR) and Infant Mortality Rate (IMR). Based on data of Ministry of State for Administrative and Bureaucracy Reform (MENPANRB) ,there are 44.108 Midwife Temporary Contract are scattered in almost rural areas in Indonesia. (www.menpan.go.id accessed on August 3rd,2016).

On the other hand, there are several problems of implementation this regulation such as; they should work in the village which has difficult demographic. Therefore, the facilities of the Midwife that has been given by the local government its not effective and less minimum. For example, they solemnly struggling reach the place they are working at and the safety has not established well. Moreover, there is a problem with their occupation, where their salary often bonded by local government. For example the amount salary of MTC is Rp. 1.700.000, but they just received Rp. 1.452.450.,and the salary always being rejected lately. They should get the occupation in the earlier of month which due on 2th.

In addition, the status of the midwife still Non-Permanent Employee or we call it Midwife Temporary Contract (MTC). Meanwhile, there is a regulation; **Government Regulation (PP) No.98 year 2000 junto PP No.11 in 2002 about the procurement of civil servants, that medical personnel in 35years old should appoint as civil servant. Meanwhile,**

for the age of 35 years old above should appointed as government employees in the agreement (P3K). It's means that the government can not ensure the safety and prosperity of the midwife itself. There is a gap between the expectations and the capabilities of MTC and government regulation became an interesting issue. It became necessary to know how far their effort to improve their life as a midwife, especially Midwife Temporary Contract to change the regulation on placement village midwife in Indonesia. This research study by the title "The Struggle of Midwife Temporary Contract toward the Government Regulation on Placement Village Midwife in Indonesia"

2. Objective of the Study

To explain the efforts made by the Midwife Temporary Contract (MTC) who works in the village to influence the government regulation.

3. Research Methodology

This study is an explanatory descriptive, describing the efforts of MTC in Indonesia in influencing government regulation on the demands removal of Midwife Temporary Contract into the Civil Servant. Using secondary data, which is data obtained from books and articles on the internet. There are several processes already done to verify the proportions of some relationships aspect among instruments, objectives, and the regulation process. Data collection techniques from the research literature or references sourced from books and the internet that are relevant to this paper.

Meanwhile the technique of data analysis in this study is a qualitative technique by analyzing secondary data and then using that theory can be used to explain the case being studied. Relative Deprivation theory proposed by Ted Robert Gurr in his book *Why Men Rebel* became the theoretical foundation of the focus in this paper. Relative deprivation theory can be simply explained that the social upheaval appears and takes the form of socio-political movements when there is a gap between the expectations and the capabilities within the community.

4. Discussion

4.1 Government Regulation on Placement Village Midwife

Since 1989 the government's regulation of the Indonesian Ministry of Health (MOH) exist to put the midwife in the villages, in order to decrease the Maternal Mortality Rate (MMR) and Infant Mortality Rate (IMR) (Handbook Midwife Coordinator, 2010). Based on the data of Ministry of State for Administrative and Bureaucracy Reform (MENPANRB), until 2016 had approximately 44.108 midwives who works in the village are scattered in almost all parts of Indonesia (www.menpan.go.id). The purpose of this regulation as the effort of the government to improve the health services especially in maternal, neonatal, infant and toddler.

Furthermore, Indonesia was became the highest one in MMR and IMR of several countries in the world. According to Indonesia Demographic Health Survey (IDHS) in 2012, the Maternal Mortality rate (MMR) in

Indonesia reached 359/100,000 live births and the Infant mortality rate (IMR) was 32/1,000 live births. In addition, the data received by the Ministry of Health shows that the number of women who die from pregnancy and child birth in 2013 was as many as 5019 people. Meanwhile, the number of infants who died in Indonesia based on the estimated IDHS 2012 reached 160,681 children.

In order to decrease the MMR and IMR in Indonesia, the Indonesian Ministry of Health (MOH) puts midwife in the village. According to Circular Director General Constructor of Public Health (Surat Edaran Jendral Pembina Kesehatan Masyarakat) No.429/Binkesmas/Dj.III/1990 dated March 29, 1999 about the placement of midwife in the village.

4.2 Issues Midwife Temporary Contract (MTC) in Indonesia

There are several demands of MTC by using the articulation of public interest channels or we call it intervention. They were writing a petition on the website www.change.org. Based on www.change.org there are 10 systematic problems faced by MTC in Indonesia :

1. The period of work already 9 years. And the contract extension is 10th years, but in the report of government still zero (0) year.
2. Every contract extension, they often cheated by the Health Service.
3. The right to maternity leaves just 40 working days (Permenkes No. 7 in 2013). Many midwives who experienced miscarriage, due to health conditions that are not prime, natural or refer the patient sat workplace accidents. Entitlement is the worst in the world.

4. Most studies diploma I. But the minimum required to graduate Diploma III (Law No.36 in 2014 on Workers Health and Law No.5 in 2014 on State Civil Apparatus).
 5. Do not given the opportunity to pursue higher education. Because they have to stay at the work site 24 hours a day. Village Polyclinic (Polindes), Puskesmas (sub).
 6. Although higher education up to degree S3, still labeled Non-Permanent Employee and will have no effecton improving the group, careers and salaries.
 7. About salary: *First*, the salary of the state budget that is not air-slip / receipt salary. *Second*, the account transfer always change (PosGiro, now through Bank Mandiri BRI). *Third*, the salary criteria Ordinary village, there are two different salary SK. From the Ministry of Health and the health office. The figure Rp. 1.700.000, -. The other is Rp. 1.452.450 million, - *Fourth*, the salary is given every second month running (different from the words of Health Minister Nila F Moeloek, 5 November 2014), and in fact up to date 10 of the current month, then usually accepted. And many whose salary postponed, even not paid many months. This happened in Karawang, OKU Sumsel, Bombana Sultra, Deli Serdang, North Sumatra and Lebak Banten. *Fifth*, the salary under the terms of taxable (Village Fair) made TIN, filling SPT. Sixth, indicated bumping rules with the income tax cuts Rp. 221 638, - / month / person, salaries under the provisions of the taxable (Law No. 36/2008 on Income Tax), in the village of Common Criteria. *Seventh*, the tax deduction is not in accordance with the amount of monthly salary of Rp. 1.45245 million. *Eighth*, since five years of no pay increases (Minister of Health Decision No. 1307 / Menkes / SK / IX / 2010 on Principal Income and Special Incentive Doctor Employees not fixed and Midwife Employees Variable, in 2010). *Ninth*, do not get 'thirteenth wages' as civil servants. *Tenth*, do not get severance, or even retirement as civil servants.
 8. The cost of labor claims since Jampersal and BPJS often not paid. Often late for months
 9. Referring patients in remote rural areas and very remote still much to walk away on a stretcher, traditional boats, or pick up. And it is not uncommon that eventually gave birth in the streets. Rescuing two only, while risking her life village midwife.
 10. The condition of the health infrastructure is still low. Frequent electricity out ages, crimes-prone, face difficult field conditions, mountainous areas, coastal, border, and prone to conflict. Discrimination work load between Non-Permanent Employee village midwife and Civil Servant reflected from the above problems.
- According to the petition above we can get several points of their problems while they work as village midwife in Indonesia;
- There is a gap between the expectations and capabilities of MTC (Midwife Temporary Contract) and government regulation. **Government Regulation (PP) No.98 year 2000 junto PP No.11 in 2002 about the procurement of civil servants, that medical personnel in 35years old should appoint as civil servant. Meanwhile, for the age of 35 years old above should appointed as government employees in the agreement (P3K).** But they didn't appointed yet, especially for the age 35y.o.

- There is a problem with their occupation, where their salary often bonded by local government. For example the amount salary of MTC is Rp. 1.700.000, but they just received Rp. 1.452.450.
- Therefore, the salary always being rejected lately. They should get the occupation in the earlier of month which due on 2th.
- The facilities of the Midwife that has been given by the local government its not effective and less minimum. For example, they solemnly struggling reach the place they are working at. The safety has not established well.

Based on the problems faced by MTC Indonesia that can be studied with the theory of relative deprivation. Relative deprivation theory can be simply explained that the social upheaval appears and takes the form of social movement politics when there is a gap between expectation value (value expectations) and the ability (value capabilities) within the community (Robert Ted Gurr, 1970). In this theory-which emphasized the gap between *das sein* and *dassollen* and in turn will bring on a feeling of 'seizure'. It deprived is classified as a value or a fundamental requirement for the community. It starts from the value of wealth, power, and interpersonal (Munafrizal Manan, 2005) where the expectation of MTC to get the secure of the prosperity and safety as long as they serve the country in the field of health care. Negative psychological experienced by MTC as long as they work in the village with the difficult demographic and the facilities in the village has not adequate enough.

In addition, the problem of wages received by the Midwife Temporary Contract (MTC) has not

enough for fulfill their needs. This relates to that presented by Thomas Aquinas(in Faturochman, 1998:4) that the wages received by workers should be able to meet their needs so that they can survive in society.

5. Demonstration

According to Etheridge and Howard Handelman defined interest group is an organization that seeks to influence public regulation in an important area for members. (Marcus Ethridge and Howard Hadelman, 1994.Page150).In this case, the Midwife Temporary Contract in Indonesia created an interest group known as Forum Midwife Temporary Contract (bahasa:Forum Bidan Pegawai Tidak Tetap). This group aims to influence government regulation to ensure the welfare and safety of MTC, such as appointment of the Temporary Contract into Civil Servant.

Demonstration by Forum MTC in Indonesia and cooperation with the Confederation of Indonesian Trade Union Alliance (CITUA) is the effort to influence government regulation. According to Gabriel A. Almond and G.Bingham Powell in their book, *Comparative Politics Today: A World View*(Gabriel A. Almond and G.Bingham Powel.1992. Page 62-65),mentions some ways of interest group to articulate their interest, one of them is demonstration. It is motivated by the disappointment of the society of government regulation on their devotion to the country. According to Robin William(in Faturochman, 1998:6) said that disappointment caused there is no realization of their hope(desire), will become the social protest.

On September 14, 2015 the demonstrations has occurred on Street Medan Merdeka Barat, Central Jakarta conducted by thousands of midwives who are members of the Forum MTC in Indonesia. As stated by the Chairman of the Forum MTC in Indonesia Lilik Dian Ekasari:

“There are 10 thousand midwives, who resigned today are thousands. Our target is to the Palace and the Office Ministry of State Administrative and Bureaucracy Reform(Kemenpan-RB)”(www.KendariNews.com , accessed on 29th November 2015)

In this demonstration led by Lilik Dian Ekasari demanded the government to immediately to appoint the Midwife Temporary Contract into the Civil servant.

"Now is the time of human resources management system reform , especially midwife who was served since 2005 to get the right job security guaranteed by the state," (www.KedariNews.com , accessed on 29th November 2015)

Moreover, in this demonstration the MTC demanded of their rights. As quoted from sources <http://news.okezone.com/read/2015/09/28/338/1221896/lima-tuntutan-bidan-kepada-jokowi> as follows :

1. President Jokowi (this is your midwife) save the village as a permanent employee of Non-Permanent Employee midwife.
2. Publish decree about Midwife Temporary Contract to appointas a permanent employee.
3. Stop the appointment of the non-permanent employee midwife.
4. The State must ensure the welfare and safety of the midwife who works in the

village, because village need a midwife.

5. Budget (APBN) 2016 make sure that will be prepared and ensured to appoint the Midwife Temporary Contract to be the Civil Servant.

Lilik Dian Ekasari added that many villages are still needs the midwife, while the midwife on duty just appointed as contract staff. By appointment of MTC become Civil Servant can improve public health services in Indonesia.

“To appoint a midwife to be a civil servant is a solution to fulfill the necessary of the village itself. This is an essential part of the strategic elements of national security in the field of health,”(www.KendariNews.com accessed on 29th November 2015)

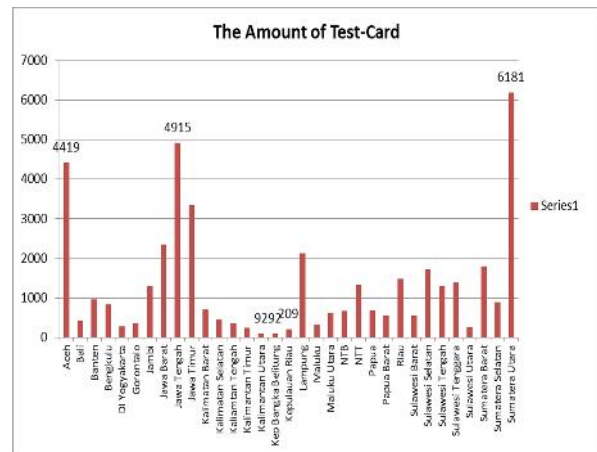

6. Government’s Response towards The Village Midwife Demand

The efforts by the Midwife Temporary Contract (MTC) in Indonesia to influence government regulation has received a positive response from regulation makers. Demonstrations conducted by a midwife of Forum MTC in Indonesia and cooperation with CITUA(Confederation of Indonesian Trade Union Alliance) received a positive response. Conducted a very effective way of making a petition at *change.org* and perform demonstrations continue, proved on 28 September 2015 Ministry of State Administrative and Bureaucracy Reform (MENPANRB) will appoint 16,000 MTC becomes Civil Servant. As reported by (MENPANRB) on its official website.

"In principle, I can accept the aspiration for considering the removal of 16,000, MTC" (www.menpan.go.id, accessed on 29th November 2015)

According to yuddy (the Chairman of MENPANRB 2015), consideration to appoint the MTC become a civil servant because it meets three things. Therefore, they have the Decree of the **Government Regulation (PP) No.98 year 2000** junto PP No.11 in 2002 about the procurement of civil servants, that medical personnel in 35years old should appoint as civil servant. Meanwhile, for the age of 35 years old above should appointed as **government employees in the agreement (P3K)**. Moreover, the struggle of midwife who work 24hours a day, without thinking about the small salary and fight as well as spearhead the implementation of government policies regarding Card Healthy Indonesia (KIS).

Based on data of Ministry of State Administrative and Bureaucracy Reform (MENPANRB) there are 43.268 Midwife Temporary Contract who has already follow the general skill test (TKD) as requirement to appoint as Civil Servant. Its according to MTC who has already registered on June 1th, 2016, and has printed their test card. There are 840 people who are not follow this test, the amount of the original 44.108

source: <http://www.menpan.go.id/berita-terkini/5318-840-bidan-dokter-ptt-tidak-ikut-tes-cpns>

Of that number, most participants from Sumatera Utara i.e 6,181 people. While the two provinces namely Kalimantan Utara and Bangka Belitung, participants are each only 92 people. Another area that has Midwife Temporary Contract with large numbers is Jawa Tengah (4.915), Aceh (4.419), Jawa Timur (3.350), Jawa Barat (2.350) and Lampung (2.122). For other regions, the number of participants under the 2000 people. (www.menpan.go.id accessed on August 3rd, 2016)

For the result of the Civil Servant test will be announced on August 12th, 2016. (www.jpnn.com accessed on August 3rd, 2016)

7. Conclusion

The efforts that have been made by the Midwife Temporary Contract (MTC) through interventions and demonstrations can be an example of other social interest groups. In addition, when we trying to articulate our interest, we should pay attention to ethics, effectiveness and efficiency of our way in order to achieve our goals.

Marawi City, Lanao Del Sur Philippines**

Abstract

This study was focused on the perceptions of the respondents on the status of compliance of DENR-EMB employees on the laws, policies, rules, regulations and ordinances that governed the operation of small-scale mining in Iligan City. More specifically on determining the legal requirements including local ordinances in the approval of licenses to operate small-scale mining and other related activities, the small-scale mining and related activities approved by the DENR as of 2010, the role of the City Government of Iligan in the approval processing of applications for Small-Scale Mining and other related activities, the status of compliance of the DENR-EMB employees with the legal requirements and the local ordinances for the approval of small-scale mining and other related operations in Iligan City in terms of procedural requirements, rules and policies, and the granting of licenses as perceived by the respondents.

This undertaking employed the descriptive-explanatory research design. A survey questionnaire was used as a major tool in gathering the necessary data on the status of compliance of the DENR-EMB with the legal requirements and local ordinances for the approval of small scale mining and other related operations. Document analysis was also utilized to gather information on the legal requirements including local ordinances in the approval of licenses to operate small-scale mining.

Moreover, as disclosed in this study majority of the respondents perceived a strict compliance among the DENR-EMB employees to the legal requirements in the processing and issuance of license (s) to operate small-scale mining. This implies that DENR and the concerned local government units such as Iligan City have effectively performed their duties and responsibilities in ensuring that small-scale mining is operating without destroying the environment, and not harmful to people's health.

Hence, major recommendation of the study is to fully implement the laws and policies concerning the operation of small-scale mining and to conduct a nation-wide information and education campaign regarding the advantages and disadvantages of small-scale mining.

Key words: *Perception, Legal Requirements, Approval, Level of Compliance, Implementation*

INTRODUCTION

Since ancient times mining has had fundamental political impact on society. In fact, it is considered as one of the oldest human activities (Encarta, 2007). In the Philippines, among others, its negative political impact is the inability of the government to enforce laws and regulations related to mining. Regulation has been difficult in areas where small-scale mining has been a way of life (Bantay Kita, 2012). Majority of these activities are illegal and the facilities used are usually substandard. Soil and water contamination exists in some communities affected. Landslides and floods are also common

detrimental effects. Aside from that, it also exposes miners and plant workers to health problems such as the hazardous chemicals in gold extraction (Bantay Kita, 2012).

Moreover, the challenge of regulating small-scale mining is not just in the Philippines but all throughout the world. A case in point is China where small-scale mining and other related activities employed roughly 2.5 million people despite the dangers posed by this occupation. Official statistics suggests that around 6,000 people die each year in this kind of activity. But recent attempts by the government to deal with this issue demonstrate how difficult and complex the problems can be (<http://www.ilo.org>).

It is also significant to note that although wealthy nations have regulated industrial pollution within their borders, toxic emissions from industry and mining are still a major cause of disease and disability in developing countries. Significant related pollution still remains relatively ignored throughout the global south (www.blacksmith-institute.org).

The case of the Philippines where pollution is a major problem especially in urban centers like Metro Manila, the proliferation of mining operations further complicates the problem.

Aside from pollution, illegal mining also contributes to the frequency of natural disasters such as typhoons. The Country's National Risk Reduction Management as quoted by Sabas (2014) claimed that disaster as one of the big impact of illegal operation of small-scale mining and other related activities is a serious threat to people and their assets, particularly in densely populated areas. As such, the Philippines have been innately exposed to natural and human induced hazards whether it is geological, meteorological, hydrological or oceanic, biological and technological. Sometimes these sources act in combination. It was further argued that per records available, at least 60 percent of the total land area of the country is exposed to multiple disasters and hazards. This resulted to 70 percent of its population being vulnerable to natural calamities (Sabas, 2014).

Few years ago, Mindanao experienced the adverse effects of not protecting its

environment when typhoon Sendong damaged several of its communities and major cities. It was in the evening of December 16 when heavy rains brought about by the aforesaid tropical storm hit Northern part of Mindanao, leaving around 1,257 people died and 173 missing, damaging 451,721 houses, 14,705 of them totally damaged and another 37,016 partially damaged and destroying thousands of livelihoods. The tropical storm was accompanied by 350 mm of rainfall in 24 hours (equivalent to a month rainfall), as recorder by Philippine Atmospheric Geophysical Astronomical Services Administration (PAGASA) (Sabas, 2014).

Sendong was considered as the world's deadliest storm of 2011 which resulted in flash floods and landslides across the Philippine Archipelago hitting 13 provinces and affecting 1.1 million people, and leaving Cagayan de Oro and Iligan City with the worst devastation they had ever seen. The effect of the storm was also compounded by illegal logging in the hinterland areas. Deadly logs dislodged by the storm hit downstream causing both death and destruction (UNOCA Report, 2012).

Indeed, Sabas (2014) juxtaposes that the wreckage brought about by this killer typhoon left an unimaginable picture of Iligan City. Many of its barangays were submerged in flood which claimed thousands of Iliganon lives (recovered and missing). Furthermore according to Sabas (2014), this shocking situation definitely brought profound problems both for the people and the city. Many residents ended up homeless and had to stay temporarily in uncomfortable evacuation centers in tents and make shift dwellings while some are still recovering on the kind of trauma that brought them by the Typhoon (Sabas, 2014).

It is within this context that this study was conducted with the purpose of finding out the perceptions of DENR-EMB employees on the implementation of small-scale mining and other related activities in Iligan City.

Statement of the Problem

Generally, this study focused on determining the employees of the Environmental Management Bureau (EMB), Department of Environment and Natural Resources perceived the status of compliance

of their agency with the legal requirements in the approval of the operation of small-scale mining operation.

In particular, the study sought to answer the following questions:

1. What are the legal requirements including local ordinances in the approval of licenses to operate small-scale mining and other related activities?
2. What are the small-scale mining and related activities approved by the DENR as of 2010?
3. What is the role of the City Government of Iligan in the approval and processing of applications for Small-Scale Mining and other related activities?
4. What is the status of compliance of the DENR-EMB with the legal requirements and the local ordinances for the approval of small-scale mining and other related operations in Iligan City in terms of: a.) procedural requirements; b.) rules and policies; and, c.) the granting of licenses as perceived by the respondents?

Theoretical Framework

The study recognizes the absence of specific theories that could serve as the foundation in the description and presentation of the research problems and the corresponding findings. Nevertheless, some relevant theories on policy and program implementation were described or discussed in this part of the study.

Implementation has been defined as carrying out of a basic policy decision, usually incorporated in a statute but can be in form of important executive orders or court decisions (Mazmanian and Sabatier, 1983). It has also been defined as those actions by people that are directed at achievement of objectives set forth in the policy decision (Horne and Meter, 1974).

Thus, policy implementation is what develops between an intention of the government to do something and its ultimate impact following action (O'toole, 2000). Implementation is said to commence once goals and objectives have been established by policy decisions and funds committed (Horn

and Meter, 1974). Implementation involves both organizational systems and processes and actions of members of the organization.

As cited by O'toole (2000), implementation consists of actions involved in it and the results of these actions. The understanding of implementation requires the recognition, that is: 1) a process involving multiple actions; 2) in many cases involves multiple organizations; 3) the important role of clients or recipients. These characteristics necessitate the need to look at issues of coordination across institutions in the absence of operational authority.

The evolution of implementation research saw the development of two main approaches based on assumptions- the top-down and the bottom-up approaches (Matland, 1995).

Schofield (2001) further stated that the top-down approach assumes that the implementation begins with policy objectives and implementation will follow in a linear fashion- a product of a rational public administration model and which assumes distinct policy formulation and implementation. The top-down approach lays emphasis on the actors who design the policy and the factors which can be manipulated from the centre. The emphasis in such case is more on the rational design of the policy.

Moreover, as seen by Meter and Horne (1974) as well as Sabatier (1989), the starting point of implementation is the decision to identify the central actors who are the most influential in producing the desired effects of the decision. In this regard, implementation is influenced by three sets of variables, namely: tractability of the problem; ability to structure the implementation: and non-statutory variables. This top-down approach has a prescriptive bent as it attempts to develop generalizable policy advice across different policy areas. However, Shofield (2001) argued that the criticism of this approach has been that it fails to consider the significance of past actors in the same policy area.

It treats implementation as an administrative process and ignores the expertise of local implementers but sees them as impediments to implementation.

On the other hand, as explained by Shofield (2001), the bottom-up model which

was developed from the main criticism of the top down model ignored the behavioural aspect of implementation and the key role of local implementers. Its main focus was on the motives and actions of actors involved in implementation and assume that formulation and implementation are an integrated process, and are descriptive in nature as emphasis is on explaining the role of factors causing difficulty in implementation (Matland, 1995).

According to Hjern and Porter (1981) as well as Hull and Hjern (1982), the bottom-up model lays emphasis on the target groups and service deliverers, and state that policy is made at this level. Bottom-up models are more descriptive in nature and state that implementation can be better understood by looking at the policy from the viewpoint of target groups and service deliverers. Policy implementation is assumed to occur at two levels (Matland, 1995).

METHODOLOGY

This undertaking employed the descriptive-explanatory research design which aimed to determine the status of compliance of DENR-EMB with the legal requirements and the local ordinances for the approval of small-scale mining and other related operations in Iligan City in terms of procedural requirements, rules and policies, and the granting of licenses as perceived by the respondents. A questionnaire was used in gathering data from the 76 regular employees of the different divisions of DENR-EMB who were considered Respondents of the Study and was presented and analyzed using descriptive statistics such as frequency count, percentage distribution. The weighted mean was utilized to provide general assessment on the status of compliance of the DENR-EMB with the legal requirements and the local ordinances for the approval of small-scale mining and other related operations in Iligan City in terms of: a.) procedural requirements; b.) rules and policies; and, c.) the granting of licenses as perceived by the respondents.

The formula is:

$$x = \frac{\sum (x)}{\sum}$$

Where: x = mean value
 \sum = summation
 w = observed frequency
 X = frequency expected

Furthermore, the following verbal interpretation was used to attain uniformity in the over-all interpretation of the mean score obtained in the Status of Compliance:

Legend	Verbal Interpretation	Score
4.5 – 5.0	Always	5
3.5 – 4.4	Often	4
2.5 – 3.4	Undecided	3
1.5 – 2.4	Seldom	2
1.0 – 1.4	Never	1

Document analysis was also utilized to obtain data on the legal requirements including local ordinances in the approval of licenses to operate small-scale mining and other related activities in Iligan City; the role of the City Government of Iligan in the approval and processing of applications for Small-Scale Mining and other related activities; and, the data on the small-scale mining and related activities approved by the DENR as of 2010.

HIGHLIGHTS OF THE FINDINGS

Legal Requirements and Ordinances in the Approval of Licenses to operate Small-Scale Mining and other Related Operations

The Approval of Licences to operate Small Scale Mining and other related operations has a sound legal basis. This has been enshrined by the specific provisions and existing government policies, laws, rules, regulations and local ordinances that include the following: 1) People's Small-Scale Mining Law of 1991; 2) The Philippine Fisheries Code of 1998.; 3) The Philippine Mining Act of 1995; 4) Republic Act No. 7160; 5) Republic Act No. 8371 or the indigenous Peoples Right act of 1997; 6) Presidential Decree 984 also known as the 1976 National Pollution Control Decree; 7) Presidential Decree 1586 otherwise known as the Philippine Environmental Impact Assessment System; and 8) Presidential Decree 1899 also called Individual Application for Small-scale Mining. Some of the important provisions of these related laws on mining were incorporated or integrated with the Iligan City Ordinance 11-5763 otherwise known as City Environmental Code.

These aforesaid related mining laws, in general, provide that there should be a strict enforcement of small-scale mining laws and the re-establishment of small-scale mining as a new dimension in mineral development. Furthermore, pursuant to the Philippine Fisheries Code of 1995, the City government of Iligan through its City Ordinance No. 11-5673 also provides the strict banning of the quarrying of beach, sands, and other similar areas in all water bodies within the City of Iligan. The Philippine Mining Act under Department Administrative Order 30 series of 1992 which regulates quarry resources extraction on privately owned lands and/or public lands for building and construction materials is also being observed by the LGU Iligan.

It is worthy to note that these laws and regulations have been adopted by the local government of Iligan City through its City Environmental Code which ensures adequate measures to safeguard and conserve land, mineral, marine, forest and other resources within its jurisdiction.

Furthermore the said legal requirements withal are basically part of the implementation process being spearheaded by DENR-EMB in closed coordination with the City Government of Iligan. The data suggest that Iligan City has recognized the existence of several government laws and policies governing the operation of small-scale mining. In fact, its sincere effort of protecting the environment from the destructive effects of illegal and sub-standard mining activities were manifested in the existence of City Ordinance 11-5763 which integrates and implements the important provisions and legal requirements specified by national mining laws and acts. Thus, the important implication of this is that the City Government of Iligan has been strictly following and implementing the legal requirements and ordinances in the approval of licenses to operate small-scale mining and other related operations.

Approved Small-Scale Mining and other Related Activities

Insofar as the approved Small-Scale Mining and other related activities in Iligan City is concerned, the data provided by the

City Environment and Management Office had revealed that as of August 2014, there are four (4) types of approved operations namely: 1) industrial sand and gravel; 2) commercial sand and gravel; 3) quarrying; and 4) small-scale mining. Basically, according to our key informants in the City Government of Iligan, the processing of the aforementioned approved small-scale mining had complied with existing rules and policies in the approval of the small-scale mining and other related activities such as: (a) mineral resources exploration, development, utilization and conservation governed by the principle of sustainable mining; (b) mining activities are always guided by current best practices in environmental management committed to reduce the impacts of mining and effectively and efficiently protect the environment; (c) mining activities are strictly undertaken with due and equal emphasis on economic and environmental considerations, as well as for health, safety, social and cultural concerns; and, (d) the granting of mining rights are in conformity with existing activities, policies and programs of the government that directly or indirectly promote self-reliance, development and resource management.

It is significant to observe that the granting or approval of application to operate small-scale mining of the different establishments in Iligan City which was granted with mining and quarrying permit is renewable every 2-5 years. This is an effective control measure in regulating activities of small-scale mining in the city especially when its operation is destructive to the environment. Subsequently, the findings suggest that the City Government of Iligan is very strict in the approval of small-scale mining in the City. This can be attributed to the fact that the City Government of Iligan has already learned its lesson from Typhoon Sendong. The constituents of Iligan would never forget the thousands of deaths and millions of properties lost because of the said incident. Hence, the data also revealed that small-scale mining and other related activities in Iligan City are strictly and regularly being monitored by the Local Executives and DENR, in particular.

Role of the City Government of Iligan in the Approval and Processing of Applications for Licensing Small-Scale Mining and other Related Operations

This undertaking tried also to delineate the role of the City Government of Iligan in the approval and processing of applications for

licensing small-scale mining and other related operations. As provided under DENR Administrative Order No. 2010-21 as well as Section 8 of the Philippine Mining Act of 1995, and in pursuant to the Local Government Code and other pertinent laws, the LGUs shall perform the following roles in mining projects within their respective jurisdictions: a) to ensure that the relevant laws on public notice, public consultation and public participation are complied with; b) in coordination with the bureau/regional office and subject to valid and existing mining rights, to approve applications for small-scale mining, sand and gravel, quarry, guano, gemstone gathering and gratuitous permits and for industrial sand and gravel permits not exceeding five (5) hectares; c) to receive their share as provided for by law in the wealth generated from the utilization of mineral resources and, thus, enhance economic progress and national development; d) to facilitate the process by which the community shall reach an informed decision on the social acceptability of a mining project as a requirement for securing an ECC; e) to participate in the monitoring of any mining activity as a member of the Multipartite Monitoring Team; f) to participate as a member of the Mine Rehabilitation Fund (MRF) committee; g) to be the recipient of social infrastructure and community development projects for the utilization of the host and neighbouring communities ; h) to act as mediator between the ICCs and the contractor as maybe requested; and i) to coordinate with the Department and Bureau in the implementation of the Act and the implementing rules and regulations in their respective jurisdictions.

The findings imply that the national government is consistent with their effort to protect and conserve our environment.

Thus, the Local Government Units like the City Government of Iligan are expected to play significant role in regulating, evaluating and monitoring the operation of small-scale mining and subserviently adhere to the laws, rules policies and regulations in the approval and processing of the same.

Respondents' Perceptions on the DENR-EMB Status of Compliance with the Procedural Requirement

By and large, this study intends to comprehend the perceptions of the respondents on the DENR-EMB status of compliance with the procedural or legal requirements specified under related laws and local ordinances on mining, in general. As shown in Table 1, there are seven (7) procedural requirements posed to the respondents as to whether DENR-EMB employees considered or observed the said requirements in the approval of applications for mining operations. In this connection, same table, revealed that of the seven requirements, five of them, namely: "permit to operate"; "wastewater discharge permit"; "recommendation letter for approval from the OIC, Regional Director of Mines and Geosciences Bureau"; barangay resolution"; and "project environment monitoring" were perceived by the respondents as "always" complied or observed by DENR-EMB employees with the computed weighted mean ranging from 4.5 to 4.8. On the other hand, the legal requirements such as "real property tax declaration" and "authorization from the land owner" were perceived as "often" complied or observed by DENR-EMB employees with frequencies ranging from 44 to 46 and the computed weighted mean ranging from 4.3 to 4.4.

The over-all weighted mean of 4.571 which is verbally interpreted as "always", imply that the respondents perceived that the DENR-EMB are effective in compliance with the legal requirements for the processing and approval of applications for small-scale mining operations in Iligan City, and consequently only one small-scale mining is operating in Iligan City and that DENR-EMB especially its officials and employees seems to be very strictly adhere in the approval of licenses to operate small-scale mining in Iligan City.

Table 1. Frequency and Mean Score Distribution of the Responses of the Respondents' Perception on the DENR-EMB Status of Compliance to the Procedural Requirements

Procedural Requirements	Responses					Mean	Verbal Interpretation
	Always	Often	Undecided	Seldom	Never		
1. Permit to Operate	68	5	3	0	0	4.8	Always
2. Wastewater Discharge Permit	65	7	4	0	0	4.8	Always
3. Recommendation letter for Approval from the OIC Regional Director of Mines and Geosciences Bureau	64	3	9	0	0	4.7	Always
4. Barangay Resolution	49	15	10	2	0	4.5	Always
5. Real Property Tax Declaration	44	17	13	1	0	4.3	Often
6. Authorization from the Land owner	46	17	11	1	1	4.4	Often

Respondents' Perceptions on the DENR-EMB Status of Compliance with the Rules and Policies set by the DENR

Table 2 bespeak on the status of compliance of the DENR-EMB with the rules and policies set by the Department of Environment and Natural Resources. It revealed that four out of five rules and policies presented to the respondents were perceived by majority as "often" complied by them DENR-EMB. These rules and policies include the following: "mining activities must always be guided by current best practices in environmental management committed to reduce the impacts of mining and effectively and efficiently protecting the environment"; "mining activities shall be undertaken with due and equal emphasis on economic and environmental considerations, as well as for health, safety, social and cultural concerns"; "investments in commercial mining activities from both domestic and international sources shall be promoted in accordance with

policies and the principles and objectives herein stated"; and "the granting of mining rights shall harmonize existing activities, policies and programs of the government that directly or indirectly promote self-reliance, development and resource management". Each of the aforesaid rules and policies has a computed weighted mean of 4.4 which is verbally interpreted as "often".

On the other hand, the rule or policy on "mineral resources exploration, development, utilization and conservation shall be governed by the principle of sustainable mining" was then perceived by majority of the respondents as "always" followed by the employees of DENR-EMB.

The findings suggest that DENR-EMB had strictly complied with its own set of rules and policies governing small-scale mining. It only proves that the said agency is consistently performing its assigned functions as provided by law, for the protection and conservation of the environment as well as the protection of the community from the destructive effects of irresponsible mining operations.

Table 2. Frequency and Mean Score Distribution of the Responses of the Respondents' Perception on the DENR-EMB Status of Compliance with the Rules and Policies set by the DENR

Rules and Policies	Responses					Mean	Verbal Interpretation
	Always	Often	Undecided	Seldom	Never		
1. Mineral resources exploration, development, utilization and conservation shall be governed by the principle of sustainable mining	48	17	9	2	0	4.5	Always
2. Mining activities must always be guided by current best practices in environmental management committed to reduce the impacts of mining and effectively and efficiently protecting the environment	45	16	12	3	0	4.4	Often
3. Mining activities shall be undertaken with due and equal emphasis on economic and environmental considerations, as well as for health, safety, social and cultural concerns	47	15	12	2	0	4.4	Often
4. Investments in commercial mining activities from both domestic and international sources shall be promoted in accordance with state policies and the principles and objectives herein stated	48	15	11	2	0	4.4	Often
5. The granting of mining rights shall harmonize existing activities, policies and programs of the government that directly or indirectly promote self-reliance, development and resource management	48	12	14	2	0	4.4	Often
Overall Weighted Mean						4.42	Often

Respondents' Perceptions on DENR-EMB Status of Compliance to the Requirements in the Approval and Granting of Licenses

In the approval and the granting of license to operate a certain small-scale mining industry, set requirement was imposed that include environmental impact assessment (EIA) process, EIA and agency's requirements and other major requirements must be observed.

In this connection, Table 3 reveals that for the environmental impact assessment process, six related indicators were used. As shown by the data in the same table, all the five indicators were perceived by majority of the respondents as "always" complied by DENR-EMB, namely: "determination of environmental impacts project" (x=4.5); "project concept and pre-feasibility stages (x=4.6); "conduct of pre-feasibility stages of the project cycle" (x=4.5); "preparation of the project pre-feasibility study" (x=4.5); and, "projects detailed engineering design" (x=4.6); These imply that the DENR-EMB is submissive to the prescribed environmental

impact assessment process before endorsing the approval or the issuance of license to operate a certain small-scale mining.

On the other hand, as to the EIA Process and Agency's Requirements such as: "environmental compliance certificate (ECC) of covered projects"; "recommendations of EIA inputs to decision making prior to the issuance of clearances, permits and licences under their mandates"; and "the issuance of an ECC or CNC under the environmental impact system which does not exempt the proponent from securing other government permits and clearances as required by other laws"; Table 3 discloses that all the preceding indicators were perceived by majority of the respondents as "always" complied by the DENR-EMB with the frequencies ranging from 50 to 57.

Finally, it is also reflected in Table 3 that of the other three major requirements for the approval and issuance of licenses to operate small-scale mining activities, two of them, namely, " there is a site inspection before the approving officer issue an Environmental Compliance Certificate" (x=4.6) and " there is a public hearing before the implementation of

the mining operation in the subjected area” (x=4.6) were perceived by majority of the respondents as “always” complied by the DENR-EMB employees. On the other hand, the other requirement which says that “there is a regular evaluation and monitoring of the mining project” (x=4.4) was perceived by majority of the respondents as “often” complied by DENR-EMB employees.

Subsequently, these findings suggest that DENR-EMB is highly compliant to the requirements for the approval of small-scale mining and other related activities. It could also be inferred from the findings that

DENR-EMB and the City Government of Iligan is effectively performing their duties and responsibilities related to the approval of licenses to operate small-scale mining activities in Iligan City, that they have been strictly evaluated and monitored by the local government in coordination with DENR-EMB and that the negative impact of small-scale mining on the environment has been seriously considered through the environmental impact assessment requirement.

Table 3. Frequency and Mean Score Distribution of the Responses of the Respondents’ Perception on the DENR-EMB Status of Compliance to the Requirements in the Approval and Granting of Licenses

Requirements in the Approval and Granting of Licenses	Responses					Mean	Verbal Interpretation
	Always	Often	Undecided	Seldom	Never

IMPLICATIONS

The DENR is the leading government agency in the implementation of these laws and policies. How effective is the DENR in performing its duties and responsibilities greatly depends on its coordination network with Local Government Units.

In this study, it was found out that the local government units like the City Government of Iligan play significant role in regulating and monitoring the activities of small-scale mining. This is to ensure that small-scale mining will not be detrimental to the environment and the people. These findings are being sustained by the study commissioned by Bantay Kita / Action for Economic Reforms (2012), that the conflicting policies on resource extraction/development versus environmental protection and weak governance as indicated by the absence of local regulations threaten the environment and public health. According to the same author, the negative impacts of small-scale mining activities have been observed in many communities particularly in South Cotabato. Poverty and the attractiveness of immediate money from the mining industry attract children and women to work in the mines. These expose women and children to hazardous chemicals and unsafe mining practice (Bantay Kita / Action for Economic Reform 2012).

Furthermore, the study has revealed that majority of the respondents perceived that DENR-EMB have "always" complied with the legal requirements on governing or affecting the operations of small-scale mining and that the DENR-EMB have always subjective in so far as allowing the operation of small-scale mining in Iligan City and at the same time, consistently ensuring the protection of the environment and the people from the irresponsible or irregular activities of small-scale mining. The findings also imply that small-scale mining and other related activities in Iligan City were strictly and carefully monitored by the concerned agency in coordination with the concerned local government unit as indicated by the fact that

only one small-scale mining is operating in Iligan City.

The roles of Local government of Iligan as to the approval processing of applications for licensing Mining and related operations implies that the Local Government Units are strictly conforming to the protection of the environment in accordance with laws and standard guidelines of the Department of Environment and Natural Resources.

It was also revealed that the DENR-EMB comply with the procedural requirements, rules and policies and approval and granting of licenses, as a requisite for any project specifically small-scale mining and other related activities and which also indicates that based on the responses of the respondents, it shows that DENR-EMB assumed to have sufficient policy implementation consistent with standard guidelines pursuant to the laws provided for the environmental protection and conservations.

Finally, the researchers found out that small-scale mining is not really a big impact on some occurrences of environmental destructions, probably because of such activities were not rampant in the area and to some point somehow it is being heedfully monitored by the DENR in coordination with its line bureaus and the City government of Iligan itself.

RECOMMENDATIONS

Based on the findings and implications, the following recommendations are being drawn: First is the urgent need to strictly enforce the full implementation of the related policies, laws, rules, regulations and local ordinances on small-scale mining in particular, so that the detrimental effects of irresponsible and irregular operation of small-scale mining can be prevented or avoided. It has been observed that there are more than enough laws and policies governing the operation of small-scale mining but the problem is that they are not being implemented in Toto. This recommendation also requires strong coordination network between DENR and the local government units. However, the conflict of interest of local officials who are in charge

of regulation and governing the community and who also have interests in mining operations poses a threat in the strict enforcement of laws in the communities.

Second is the necessity of conducting a nation-wide and local-wide information and education campaign about the advantages and disadvantages of allowing the operation of small-scale mining in the Philippines. Majority of the Filipinos are not familiar with the benefits and the aftermath or destructions that small-scale mining may result. For instance, while small-scale mining would provide employment opportunities and increase the incomes of the people where it is operating, yet it would also create certain environmental destructions such as soil erosion or landslides, on the other hand. Its irregular operation is also hazardous to the health of the people. In other words, there is a need for the development of sound policies and laws to balance economic development and environmental sustainability and public interest.

With reference to the significant findings and implications of the study it is therefore recommended that:

1. The DENR should maintain the kind of implementation guidelines they have as to the prevention for possible illegal mining practices that might arise;
2. The employees should strengthen/widen their knowledge and capabilities in the implementation of small-scale mining and other related activities as to sustain their goals and objectives specifically in preserving the environment and the resources of Iligan City;
3. The City Government of Iligan City should also continue their coordination with the DENR in order to protect their environment which is also for the benefit of everyone;
4. Strict adherences to the standard guidelines of operating small-scale mining and other related activities

should also be practiced by all local government units in order to prevent cases of environmental destructions as the main cause of the illegal operations of such activities;

5. People of Iligan City also must take responsibility in protecting their community/environment as to participate in the prevention of calamities; and,
6. The Government must strengthen its policies and laws regarding illegal operations of small-scale mining activities to avoid calamities not just in Iligan City but all throughout the country.

Abstract

This study deals about retiring employees who are about to end their professional careers. It further examined the relationship of the levels of social adjustments, life satisfaction, well-being and transitional plans among the government and private employees in Iligan City. The respondents were 100 retiring employees from private and government organizations. Four instruments were used namely: Social Adjustment Scale (SAS), Satisfaction with Life Scale (SWLS), Subjective Well-Being Inventory (SWBI) and Transition to Retirement Questionnaire (TRQ). To analyze the data, descriptive statistics through frequency, percentages, mean, T-test, Pearson Correlation and Regression Analysis were used. Results show that retiring employees were well adjusted with their work, and were generally satisfied with their present lives. Furthermore, findings show significant relationship between the levels of well-being and transitional plans. This study recommends that retiring employees may also focus on things that will help them feel important in the eyes of the society and to their family, so that they can still enjoy the rest of their lives meaningfully, and for Human Resource Development Office to come up with early intervention programs to prepare the retiring employees cope with anxiety to the world of the unknown after retirement.

Keywords: social adjustment, transitional plans, Retirement

INTRODUCTION

Retirement is defined as the act of ending ones work or professional career: the act of retiring (Merriam-Webster, 2014). In the Philippines, REPUBLIC ACT NO. 7641 SECTION 1 of Article 287, Presidential Decree No. 442, as amended, otherwise known as the Labor Code of the Philippines, considered any employee as retired upon reaching the retirement age established in the collective bargaining agreement or to other applicable employment contract. In the absence of a retirement plan or agreement providing for retirement benefits of employees in the establishment, an employee upon

reaching the age of sixty (60) years or more, but not beyond sixty-five (65) years is hereby declared as compulsory retirement age, so long that the employee who has served at least five (5) years of service in the said establishment. Traditionally, retirement has been viewed as a gateway to old age. Today however, there is a great trend of retiring in earlier ages together with the increasing changes in health and lifestyle; people can expect to live many healthy years as a retiree (Henkens & Van Dalen, 2003). The media and other advertisements foster a view of retirement, as a period of fun and self-expression, which contrast to work life that

is shown to be the period of one's dutiful and full of responsibility.

In this study, it aimed to determine the differences and relationship of social adjustment, life satisfaction, well-being, and transitional plans of the retiring private and public employees in Iligan city.

Moreover, it sought to answer the following questions; to what extent do the retiring employees adjust to their social situation? Were they satisfied with their present life? How do they assess their sense of well-being? And how do they prepare for their transition to their life after retirement?

Social Adjustment or being socially adjusted with their families, relatives and friends and also being able to adjust with their life expenditure is essential for the retiring employees. Moreover, life satisfaction is a good indicator of the quality of life that a person have. (Neuhs (1990), Osborne (2009), Stephan (2009) and Wynne (1995). The quality of life or sense of positive well-being that a retiree possesses plays a great part in the acceptance of their new roles in the society. Continuity Theory of Madox(1968), emphasizes the importance of established roles and patterns in the maintenance of the person's fulfillment and acceptance (Atchley, 1989; Bell, 1979). To be ready for retirement will help the employee to accept and be productive with regards to their retired life.

It is important that Human Resource Development Office may help the retiring employees take into considerations their welfare as retiring employee. Being aware of their life after retirement would enable the retiring employee become sensitive as to how they prepare their transition from their career to a life after they retire.

While retirement is certain to the life of the working employees, but in the Philippines, the government does not offer much life support to those people who retire. Hence, this should be a concern of every Human Management Development Office, to help the retiring employees retirement life more meaningful for them.

LITERATURE REVIEW

Retirement is the point in time when an employee chooses to leave his or her employment permanently (Heathfield, 2010). An employee may choose retirement for reasons other than the wish to stop working. Employees may suffer ill health or debilitating physical problems that require retirement. Family problems and responsibilities may require retirement. An employer may require employees to take early retirement in order to cut costs and preserve the business. Whatever the reason, retirement from employment marks the start of the next chapter of an employee's life.

In terms of employees adjustment to retirement, a study conducted by

Asamoah (2012) entitled **Adjustment Towards Retirement**, reveals that **males** and females behave differently in many respects. Whereas males in general are risk takers, most females are risk averse. Males and females also differ in their spending and savings patterns.

In accordance to marital status, Married and unmarried people in the working class may have different spending and savings behavior.

As to the nature of occupation, permanent workers in the public sector are expected to behave differently from their colleagues who are temporary workers because the permanent workers have stable job and income. As a result their expenditure and savings profiles could be well managed by them.

If workers adjust themselves this way during their working life, then they may not come to terms with the realities of retirement life.

According to the study of Torstam (2005) entitled, **Gerotranscendence: A theory of positive aging**, the transition to retirement includes becoming a "senior." There is a widespread belief that seniors are not expected to be interested in continuing to work unless it is a volunteer. Their "job" is to enjoy retirement and not to work. If retirees look old enough, they may experience the stereotype of being assumed to be physically frail, hard of

hearing, with poor vision and with slow comprehension.

According to the study of Kahn (1980) entitled **Convoys over the life course: Attachment roles and social support**, moving from where one has lived and raised a family over time to a retirement in another geographical locality can lead to the loss of supportive friendships. The "social convoy" (Kahn & Antonucci, 1980) to which a future retiree belongs is abandoned. Although retirees may make new friends, they will not have a shared history like the network of friends established over years in their former place of residence.

According to another study by Motjuwadi (2013) on **Life Satisfaction And Adjustment Of Retired Migrant Workers**, retirees with higher educational levels (mostly retired non-migrant workers) had a higher level of life satisfaction and adjusted better to retirement than those retirees with lower educational qualifications and therefore also low occupational status. The results showed that retirees with higher educational and occupational status had fewer work disruptions and spent longer periods of time working in one place of employment than those retirees with lower educational levels.

Davey and Szinovacz (2004) investigated the effects of the transition to retirement on the conflict between married couples. The transition to

retirement resulted in no change in marital conflict. However, when wives continued to work, conflict increased and resulted in a decline in marital quality of life. Possible reasons for this increase might be related to males still seeing themselves as “breadwinners” or a spousal power struggle.

According to another study conducted by Osborne (2012) entitled **Psychological Effects of the Transition to Retirement**, the psychological effects that include partial identity disruption, decision paralysis, diminished self trust, experience of a post retirement void, the search for meaningful engagement in society, development of a retirement/life structure, the confluence of aging and retirement, death anxiety, the critical nurturing of social relationships, and self-actualization caused disengagement from work life to the transition to retirement .

According to Osborne (2012), in a subsequent study, retirees who were low in neuroticism and high in extraversion reported higher retirement satisfaction, while retirees who were high in extraversion were more active. Similar findings regarding the validity of neuroticism and extraversion as predictors of life satisfaction in retirement were obtained by Robinson, Demetre, and Corney (2010).

Finding engagement in meaningful activities is crucial. If retirees are willing to face the fact that that they are entering the

latter stages of life, they may wish to acknowledge their mortality as motivation to complete tasks that have lain dormant (e.g., visiting and talking with family connections, past and present). They also have the opportunity to give of themselves in terms of helping future generations as to what Erikson (1963) called “generativity.”

Life Satisfaction

According to another study by Heybroek (2011) entitled **Life Satisfaction and Retirement: A Latent Growth Mixture Modelling Approach**, the end of working life may be associated with the loss of a role fundamental to personal identity and social status. This can result in disengagement from society due to the loss of social support and networks. Retirees may also experience low motivation and boredom if they are unable to replace the lost role with new activities (Pinquart and Schindler, 2007). Research has shown that the disruption brought about by retirement may be associated with low levels of life satisfaction and high levels of stress (Szinovacz, 2003; Pearlin et al., 1981; Kessler et al., 1985; Burke, 1991; 1996).

From the research of Pinquart (2007) entitled **Changes of life satisfaction in the transition to retirement: A latent-class approach**, contradictory positions have been

advanced as to whether retirement has negative, positive, or no effects on subjective well-being. The authors investigated changes in life satisfaction in 1,456 German retirees. Using latent growth mixture modeling, the authors found 3 groups of people who experienced retirement differently. In Group 1, satisfaction declined at retirement but continued on a stable or increasing trajectory thereafter. Group 2 demonstrated a large increase in satisfaction at retirement but overall declining satisfaction. In Group 3, satisfaction showed a temporary very small increase at retirement. Groups differed by retirement age, gender, socioeconomic status, marital status, health, unemployment before retiring, and region. Thus, retirement is not a uniform transition, and resource-rich individuals are less likely to experience retirement-related change in satisfaction.

Well-being

Another study by Dr. Moen and psychologist Jungmeen Kim, PhD (2002) entitled, **Retirement Transitions, Gender, and Psychological Well-Being: A Life-Course, Ecological Model.** *Journal of Gerontology: PSYCHOLOGICAL SCIENCES*, showed that newly retired women tend to be more depressed than continuously retired or not-yet-retired women, especially if their husbands remained employed. Newly retired men experience more marital

conflict than non-retired men. In addition, newly retired men with employed wives tend to show higher marital conflict than newly retired men with none employed wives. However, men who are retired and re-employed with wives who are not employed have a higher morale than couples where neither spouse is working.

In the study conducted by Charles (1999) entitled **Is Retirement Depressing?: Labor Force Inactivity and Psychological Well-Being in Later Life**, revealed that retirement is defined as apparently a permanent labor force that is connected to non-participation in a man's mature years. Further, the findings is negatively correlated with well-being. Discontinuous retirement incentives in the Social Security System, and changes in laws affecting mandatory retirement and Social Security benefits allows the exogenous effect of retirement on happiness to be estimated. This paper finds that the direct effect of retirement on well-being is positive (Charles, 1999).

A study conducted by Twigg (2013) entitled, **The Future of Retirement: A new reality**, revealed that clearly, retirement means different things to different people. Often these differences are shaped by cultural factors, so while 58% of respondents globally would like to spend more time with friends and family, some societies are more family-orientated, especially in Asia, where this was chosen by 75% in

Malaysia, 71% in Singapore, 68% in China and 61% in India. This compares with Latin American countries such as Brazil on 51% and Mexico on 52%. In Egypt, only 37% wanted to spend more time with their family and friends when they retire (Twigg, 2013).

Transitional Plan

Results from Petkoska and Earl (2009) entitled, **Understanding the Influence of Demographic and Psychological Variables on Retirement Planning** have shown that being older (Bassett, Fleming, & Rodriguez, 1998; Glass & Kilpatrick, 1998), being male (Hurd & Wise, 1989; Quick & Moen, 1998), being more educated (DeVaney & Su, 1997; Yuh & Olsen, 1997), and earning a higher income (Bassett et al., 1998; Grable & Lytton, 1997) are related to greater financial planning. Individuals with these demographic characteristics are thought to engage in greater planning due to opportunity structures (Ekerdt, DeViney, & Kosloski, 1996) afforded to this cohort.

Based on the findings and results from the study of Perera et al (2001) entitled **“Managing the Process of Retirement: The Medical Professionals’ Perceptions”**, they have proposed the ff:

- (1) Increasing individualization and flexibility in the transition towards retirement. Flexible working hours and shared jobs can also solve productivity issues and provide stability in workplaces.

- (2) Actively involving organizations in the preparation of retirement. The importance of retirement preparation cannot be overestimated. Organizations interested in promoting positive adaptation should provide workers with easy access to retirement training and planning programs.
- (3) Carrying out an active policy aimed at older workers. This allows older workers to transmit knowledge and/or train their "successors", gradually reducing their workload and/or adapting the tasks they do (less direct customer service, more training of new professionals).

A study by Barnett et al, (1999) entitled **“Physical Activity and Transitioning to Retirement: A Systematic Review”** have shown that exercise and leisure-time physical activity increase after the transition to retirement, but whether and how total physical activity changes remains unclear and needs further research. People who retire from low-grade or manual occupations appear to be particularly vulnerable to low levels of physical activity in retirement.

The study of Dr. Marwan T. Al-Zoubi (2012) entitled **“The Shape of the Relationship between Salary and Job Satisfaction: a Field Study”** indicated that there are differences in the job satisfaction depending on the salary range. The results indicated that the biggest job satisfaction level was with the medium-range salary which comes

between 700-1400 USD per month (M=68.8, SD=2.67). Also the job satisfaction is in a low level with salaries less than 700 USD (M=55.5, SD=2.62). job satisfaction descended to reach it lowest levels with the employees who earn more than 1400 USD per month (M=52.2, SD=2.27). Distributing these means on a line chart indicates that the relationship between Job Satisfaction and salary amount is a curvilinear one. This means that the Job Satisfaction is low with the high and low salaries and it is in the highest level with the medium range salary. The last result is in line with some previous research such as Brown et al (2007) in which they indicated that happiness at work has a curved relationship with the amount of salary.

In line with these, Life satisfaction is a relative term. It is an individual's choice how or when he or she is satisfied. Studies show that individuals who retire feels role-less in the society, it is because they are being deprived by the things they do for half of their life. But some study also shows that it's not the job that only affects the individual's satisfaction, environmental factors like religion and other social norms will also affect them. In terms of social activities, the second related study states that retirees may experience low motivation and boredom when they are unable to replace their lost roles with new activities. In terms of Satisfaction alone, the last related study states that adults in retirement age are

satisfied with their life if they can control things which are important to them and if they received enough affection from their romantic partners.

METHODS

Research Design

This study employed the descriptive-correlation of research. The correlational method is used to determine how the following multidimensional variables namely; social adjustment, life satisfaction, well being, and transitional plans affect the lives of the retiring employees.

Respondents of the Study

The respondents of this study were 50 male and 50 female private and government-retiring employees in Iligan city, with age ranging from 55 to 65 years old.

Research Environment

The City of Iligan is a highly urbanized city in the province of Lanao del Norte, located in the Northern Mindanao Island of the Philippines..

The retiring employees from Private establishments of Iligan city were from Holcim, Lafarge, and Mabuhay vinyl Corporation. Whereas, the respondents from the government sectors came from Department of Education, Department of Public Ways and Highway, and City Hall.

Research Instruments

The following Standardized instruments were used to gather data; Social Adjustment Survey (SAS), Satisfaction With Life Scale (SWLS), Subjective Well Being Index (SWBI/SUBI) and Transition to Retirement Questionnaire (TRQ)

Social Adjustment Scale (SAS)

Social-Adjustment Scale,(SAS) is a 44 item questionnaire that consists of 7 domains or subscales ,dealing with one's social adjustment. This scale have been used with many different groups of people including standard community samples, arthritis sufferers, undergraduates, alcoholics, and people recovering from heart surgery. The scale has also been used in clinical trials of psychotherapy and medication particularly with people suffering from depression.

Satisfaction with Life Scale (SWLS/SUBI)

Satisfaction with Life Scale (SWLS) consists of five statements that measure an individual's life satisfaction. This scale is a 7-point likert scale, 35 being the highest possible score and 5 is the lowest. This scale is short and simple to administer and score. It can easily be added to assessments using multiple measures with no significant increase in time (Pavot et al. 1991).

Subjective Well-Being Inventory (SWBI/SUBI)

Subjective Well-Being Inventory is a 40-question scale that deals with one's well being, persons feel with regard to their day-to-day concerns like their health or family. Such knowledge is necessary if an improvement in the quality of life of people is to be brought about. This is a questionnaire on how you feel about some aspects of your life. This scale consists of 11 domains with a rating of 1, 2 or 3; 3 as very much and 1 as not so much.

Transition to Retirement Questionnaire (TRQ)

The TRQ is designed to assess five dimensions related to personal perceptions of transition to retirement, retirement, and personal plans and activities. The TRQ seems to be an interesting tool for use in research but also for interventions with young retirees or people preparing for retirement.

Data Gathering Procedure

Letter was sent to the retiring employees asking permission to conduct the study.

The researchers then administered the questionnaires to the retiring employees in both Public and Private sectors in Iligan City.

After gathering the questionnaires, the data was then analyzed, and interpreted.

Data Analysis and Treatment

The data collected from the study was analyzed using the following statistical tests:

Descriptive statistics like frequency percentage distribution and mean were used to determine the extent of social adjustment, life satisfaction, well being and transitional plans of the retiring employees.

The Independent Sample T-test was used to determine the significant difference between the private and government retiring employees' level of life satisfaction, social adjustment, well-being and transitional plans.

Pearson's Correlation coefficient was used to determine the significant relationship of retiring employees' life satisfaction, social adjustment, well-being and transitional plans.

Multiple regressions were used to determine the significant interaction of the level of life satisfaction, social adjustment, well-being and transitional plans of the retiring employees.

RESULTS AND DISCUSSIONS

This section discusses the differences of the government and private retiring employees social adjustment, life satisfaction, well-being and transitional plans.

OVERALL TABLE FOR MEANS OF VARIABLES

Retiring Government Employees		
Variables	\bar{x}	Interpretations
<i>Social Adjustment</i>	3.47	Adjusted
<i>Life Satisfaction</i>	5.04	Highly satisfied
<i>Well Being</i>	2.20	Positive well-being
<i>Transitional Plans</i>	3.72	Unprepared

Results revealed that retiring government employees believed that they were socially adjusted to the fact that they will be retiring, they are already highly satisfied with their life, since they have positive outlook towards their health, however, they are quite unprepared as to what they will be doing after they retired.

OVERALL TABLE FOR MEANS OF VARIABLES

Retiring Private Employees		
Variables	\bar{x}	Interpretations
<i>Life Satisfaction</i>	4.23	Dissatisfied
<i>Transitional Plans</i>	3.49	Unprepared
<i>Social Adjustment</i>	3.47	Adjusted
<i>Well-being</i>	2.10	Positive

Although sometimes private retiring employees were dissatisfied with their life because they were unprepared to retire, but somehow they realized that they can socially adjust to their upcoming retirement, if they will maintain a healthy positive outlook in life.

Moreover, results revealed that there is no significant difference in the social adjustment, life satisfaction and transitional plans of private and government retiring employees. However, positive well-being is more felt by the private employees than the government employees.

Social Adjustment

The retiring private employees were socially adjusted with their work outside their home, housework, and family. However, they still have difficulties in adjusting with their extended family that most likely have affected their social and leisure activities.

Relationships among private retiring employees level of Social Adjustment, Life Satisfaction, Well Being and Transitional Plan.

Results show that there is a strong negative relationship between social adjustment, and transitional plans of private retiring employees; a weak negative relationship between life satisfaction and well-being but a strong positive relationship between well being

and transitional plans was revealed among the private retiring employees.

Relationship among government retiring employees level of Social Adjustment, Life Satisfaction, Well Being and Transitional Plans.

Findings revealed a weak positive relationship between Social Adjustment and Life Satisfaction; a moderate negative relationship between social adjustment and well-being; and a strong negative relationship between social adjustment and transitional plans of the government retiring employees.

Interaction of Variables Among the private retiring employees

Results show that life satisfaction, well-being and transitional plans has no significant effect on social adjustment among the retiring private employees. This implies that when their life satisfaction is high their social adjustment is low.

Moreover, well-being and transitional plan has no significant effect on the life satisfaction of the retiring private employees. This means that when their transitional plan is high, their life satisfaction is low.

Interactions of Variables (Government)

Results show that life satisfaction, well-being and transitional pan has no

significant effect on the social adjustment of the retiring government employees. This implies a positive effect on their life satisfaction thus when their well-being is high then their life satisfaction is also high.

Implications

Both government and private retiring private employee respondents were most of the time adjusted with their work outside their home, housework, and family. However, they still have difficulties in adjusting with their extended family that most likely have affected their social and leisure activities.

On the other hand, retiring private employee respondents were dissatisfied with their life, as compared to the retiring government employees, because government retiring employees felt that they have gotten all the things they had dreamed of, and were already living their ideal life, therefore, they think they would no longer regret anything about their life after retirement.

With regards to their sense of well being, findings showed that to some extent both retiring private and government employees were contented with their well being. However, for the retiring government employees, they were very much concerned about their primary group and social contacts, which somehow affect their sense of

general well-being negatively. Findings imply that retiring employees find it hard in communicating with their friends, since they do not spend much time with them because of their busy work schedules. They fear that when they retire their friends might not be able to closely bond with them anymore. In addition they also felt that they were not that physically healthy anymore, so they also need the help of their family and friends to support and take care of them when they retire.

For their transitional plans, both retiring private and government employees, considered themselves being an easy glider, an adventurer and a continuer. However, they seldom considered themselves as a retreator and a searcher.

Understanding the factors that determine the sense of well-being of the retirees is an important economic and policy topic. Although most previous studies examine only economic well-being, this study examines a broader measure of well-being to examine if other determinants such as social adjustments, life satisfaction and transitional plans other than economic well-being, such as the pension received by the retirees would play a significant impact on their retirement life. The results showed that while economic well-being (as measured by income and wealth) does increase overall well-being, the effect of income is a nuanced one. The increased income does

not generate significantly increased well-being. Retirees seem to value not only having income above the typical amount, particularly in terms of relative pension income, but also for Social Security income. These show that other factors such as social adjustments, life satisfaction and transitional plans are critically as important with income to the overall sense of well-being among the retiring employees.

Moreover, retiring employees, as the findings implied, would like to continue their professional life after retirement. It seems that retirement for them does not represent a particular important transition, as there is the intention to continue to work either in full time or part time. They¹ would not think of themselves as being useless during their retirement period. However, they were not anymore willing to learn new skills (e.g., activity, language) and discover new horizons and were not open anymore to possibilities such as moving to a different city or country, or of a change in life course. But instead, they would only like to somehow take things as¹ they come which means that they no longer like to work for further projects or activities, but, would likely prefer to engage in sports or leisure activities and spend time with friends and family, during retirement, if their pension would warrant.

Hence, the findings lead to more Resource Management concern to

address the issues and challenges of retiring employees. If this concern would not be properly addressed, retirees may suffer from clinical depression or decline in health. The key to a positive retirement is to ensure that the benefits of the employees would not get lost, but would be simply experienced in a different way. Thus Human Resource Management play a very significant role in assisting the retiring employees for a life after their retirement years.

RECOMMENDATIONS

Based on the implications of the study, the following are the recommendations:

1. Since most of the retiring employees were not able to bond closely with their family and friends while they are still working because of their busy schedules, it is recommended that they already start communicating with them to forge close ties in preparation for their retirement period.

2. Scheduling leisure activities with their children and spouse would help foster warmth and loving relationship with them. This could help in coping with their loneliness when they approach retirement.

3. Retiring is often a great opportunity to start a new, totally unrelated career, hence retiring employees shall start learning new skills to prepare them for a life after retirement. Human resource

management should provide opportunities along this line.

4. Retiring employees shall already plan what they would like to do during retirement. Human Resource Office where they are employed can assist them find fulfilling activities, such as in helping local volunteer groups.

5. Moreover, most of the retiring employees plan to invest their retirement money, Human Resource Management shall sponsor seminars and training to provide them opportunities, knowledge and skills as to how they would invest their money properly when they retire.

6. Human Resource Management may also help the retiring employees open their opportunities for a life after retirement through continuous program of activities that may help them widen their horizons to more stimulating experiences such as taking a class and learning a new skill, being a mentor, and by joining civic, religious and non-government organizations among others.

Abstract

Human Resources are one of an important part in managing of the organization, including in local government organization. Therefore, human resources should have to be good managed in order to increase the effectiveness and efficiency of an organization by using several model of human resource management in governance. The aim of this paper is to describe how to manage human resource properly and sustainably. This research focuses on how the state apparatus implement their human resources management policy. It could be done at the Biro of Health in Sleman, Yogyakarta.

The method that be applied for this research is qualitative analysis which uses directly to portray of the detail interviewees by conducting the in-depth interview. The respondent is the Head of the Biro and several staffs at the Biro. This paper concludes that model of human resource management at the selected Biro is the Strategic model. The Strategic model is the proper model to be applied in this case. The model is suitable in local government because there is a balance between personnel authority (deputy), line manager (the head Department of local employee) and units (the head of department, division, and sub division).

Keywords: H Human resource management, model of Human resource management, public organization, Local Government, Yogyakarta, Indonesia.

INTRODUCTION

The need of high qualification of human resources is consent in such organizations; whether in a public or non-public organization. To have progressive works, the skilled workers are needed but not all qualified human resources could work as smooth as the

provided guidelines. That is why there is a controlling method on it, called human resources management.

Human resources management is an important instrument for the governmental organization or non-governmental organization maintaining bridge the working plan and also

successful progress. The aims of human resources management itself are to increase the effectiveness organization to achieve the objective of the organization. It can realize if the human resources in the organization could manage as well as possible. For the public sector, the responsibility of bureaucracy within give the services to society must be supported by human resources with professional and competent qualification.

Then, based on the vision or long-term plan of government of Indonesia proclaim that Indonesia will be a prominent state in 2025. However, the government of Indonesia does believe that the human resources as one of the challenges to realizing the vision. The good human resources depend on how local government carries out the management of human resources and what the model or type of human resources management that is incompatible with public organizations. In additional, doing the structuring human resources organization is needed in order to make the organization runs well and efficient. Nevertheless, a still much local government that develop yet the system of human resources management which is comprehensive (Harry,2010:pg, 2377).

Then, based on the vision or long-term plan of government of Indonesia proclaim that Indonesia will be an independent state in 2025. However, the government of Indonesia does believe that the human resources as one of the challenges to realizing the vision. The good human resources

depend on how local government carries out the management of human resources and what the nowadays, the human resource management being high attention from many sides. The influence of it toward appliance in the organization gives several changes, in which the changes in positive aspect, development of human resources, followed by ideal compose of structure in, and at the end it is reflecting the good organizational system. Human resource management has the biggest impact toward the effectiveness of organization than another resource. Community strives for government provides the first-rate service, necessary oriented and also service satisfaction from the community. Public service is not only administration problem but also fulfillment of desire from the public.

There are several indicators show that public service sector is bad service. For example long-winded service which caused lots loss whether for client and server; the cycle of process gone to be stuck; disposed of bureaucratic in which the administrative process always run really slow then continued by lots of requirement which sometimes create a misunderstanding among less educated people; expensive cost that was becoming unfriendly cost for low economic level of society; attitude of bureaucrat that shows as functionary than public servant, etc.(Abas & Triandyani, 2001). A Model or type of human resources management that is compatible with public organizations. In additional, doing the structuring human resources organization is needed to make the organization runs well and efficient.

Nevertheless, a still much local government that develop yet the system of human resources management which is comprehensive (Harry,2010: pg, 2377). Based on the data of Ministry of utilization of civilian state apparatus there is still around 50% bureaucracy do that.

Therefore, the type or model human resource management is needed to be applied for increasing public service delivery in Indonesia.

RESEARCH OBJECTIVES

Considering above backgrounds, this research contains several objectives. Firstly, intended to analyze how HRD Management at the Biro of Health, Sleman Regency runs the human resources management. Secondly, what the model of human resources management use in Biro of Health, Sleman Regency. By knowing these, there will be an opportunity what actually model of human resources management that compatible with the local government, especially in Sleman Regency. The good human resources management eventually will be a sample for another department to better management of human resources.

RESEARCH METHOD

In this research used The method that used in this research is qualitative analysis or qualitative approach. It is defined as an approach in research that uses interpretation as the method to understand the world (Denzin & Lincoln,

2005). The data collected is through deepened interviews with respondents related to this research and through library research. A literature study was done by reading and studying the materials literature related to the research by the author.

THEORETICAL FRAMEWORK

1. Human Resource Management

The define of Human resources management (HRM, or just HR) is a capacity in organizations intended to maximize worker performance in service of an employer's strategic targets. (Johnasen, 2009). Human Resource also concerns itself with organizational change and industrial relations, and that is the adjusting of hierarchical practices with necessities emerging from aggregate dealing and governmental rules. (Klerck, 2009).

According to R. Buettner, Human Resource Management covers the following core areas:

- a. Job design and analysis,
- b. Workforce planning,
- c. Recruitment and selection,
- d. Training and development,
- e. Performance management,
- f. Compensation (remuneration), and
- g. Legal issues.

Human resources management refers to all those activities associated with management of work and people in organizations (Boxall and Purcell, 2011).

Yovita (2002) argued that human resource management is the program and activity for the purpose of getting, developing, raising, and utilizing to achieve the aims of the organization. Moreover, not only the management of human resources but also the human resources itself have to qualify and have skills to realize the objectives of the organization.

Human resources management can be understood as the system or function. Then, the system implemented in several function of human resources management. Finally, the human resources management define that all of the activities begin from panning of the human resource until firing human resource (Jusuf, 2011). In order to achieve the purpose of the organization that already settled, the local government or public organizations must have pattern development system human resources management (Harry, 2012). Accordingly, to managed the human resources especially in the local government or public organization needed management or system to handle it. Also, to development human resources have to continuous implementation (Harry, 2012).

2. Model of Human Resources Management

Model of Human resources management is the strategy that can be used in the public organization in order to manage the human resources to achieve the aims of organization, in other meaning, management model proved to be an ideal method to be applied in developing an organization.

Human resources management model also be able to increase the public service because if the organization can manage the human resources with the best model, it means that they can service the society as well as their best qualification. Therefore, here it is the 4 model according to Condney (2005), that can be used in human resources management of public organization:

a. Traditional Model

The model of traditional of public human resource management focuses on a central personnel organization directing rules and procedures, ostensibly to achieve fairness and value in public sector organizations. Little believed is given to line elements of the organization, whether they are clearing streets, giving entertainment services to nationals, conveying social services to customers, or encouraging strategic relations with an outside nation. Obviously, such a center was not the first goal. As Van Riper calls attention to in his investigation of the U.S. Civil Service (1958), central personnel functions were aimed at professionalizing the workforce and providing equity and fairness in disseminating a public: government employments. Starting in the late 1800s, the national government and major U.S. urban communities started to unify staff capacities, for example, enlisting, testing, enrollment, and arrangement. Affected by the dynamic change development and hypotheses of exploratory administration, faculty looked for the one most ideal approach to enlist, arrange, evaluate, remunerate, and advance open representatives.

Moreover, the Intergovernmental Personnel Act of 1970 and past elected enactment urged local governments to create civil service frameworks with the promise of following elected income sharing dollars.

b. Reform Model

The reform model seeks to decentralize personnel authority and decision making to line managers. Very nearly a mirror image of the traditional model, the reform model qualities dispersal of genuine personnel authority to different organizational units, permitting them to settle on essential decisions concerning employee recruitment, selection, classification, and compensation. In numerous examples, these decisions might be made by line managers having minimal formal knowledge of or training in modern human resources management practices and techniques. The result might be receptive to the quick needs of the organization; however, with no central organizing focus, issues of equity and decency inside and among organizational units might show up. For instance, effective and consistent management of equivalent work opportunity objectives might be hampered, pay differences might get to be pervasive, and employee assessment inequities might emerge.

c. Strategic Model

The strategic model proposes combining the two original models just talked about. Obtaining from Perry's discussion of a strategically arranged government civil service system (1993),

the strategic model seeks to adjust the competing requests of the traditional and reform models, perceiving the advantages of some centralizing efforts but also realizing that human resource management takes place throughout an organization and should support, not hamper or subvert, the organization's general objectives.

In the strategic model, the personnel capacity is shared between personal authorities and the line departments that utilization human resource management. Exercises that can utilize such cooperative plans include conceiving and directing evaluation centers, recruiting key personnel, and rebuilding organizational classification systems. Here the human resource management is an organizational consultant, a valued individual from the managerial group, not a roadblock to be stayed away from. Mesch, Perry, and Wise (1995) take note of that "the strategic human resource management model emphasizes decentralization and devolution of authority. It seeks not uniformity but the variety in personnel policies and practices. Strategic human resource management endeavors to pare down exorbitant rules and regulations, empowering managers to capacity all the more productively and to concentrate on accomplishing their organizational mission within a competitive environment". (p.398)

d. Privatization Outsourcing Model

Privatization model of public human resource management is applying greater impact in the field. As

government payrolls, contract and political pioneers increasingly look to the private sector for models of organization, outsourcing, and privatization of the public human resource management function will likely continue, particularly for large organizations in which economy-of-scale components make privatization and outsourcing more feasible. In this model, the public human resource management function becomes increasingly moot. The challenge for organizations and managers alike is to hold coordinative control over the

Human Resources function when privatization and outsourcing happen. It ought not to be forgotten that even if various functions performed by a private entity, the public's business, and welfare are still in question. Issues of decency, delegate bureaucracy and value should not be rejected. The writing, management and oversight of contracts should strive to represent the values of efficient and responsive public service.

Here the comparison between four models of human resource management by Condrey, (human resource management handbook, 2005):

Table.1 A Comparison of Four Models of Public Human Resource Management

Function	Traditional Model	Reform Model	Strategic Model	Privatization or Outsourcing Model
Service Delivery	Centralized	Decentralized	Collaborative	Contract
Goal Orientation	Uniform enforcement of rules, policies, and procedures	Manager-centered	Respectful of human resource management and organizational goals	Effective contract negotiator and administrator
Communication Pattern	Top-Down	Two-Way	Multidirectional	Reports and contract monitoring
Feedback Characteristic	Formal and Informal Complaints	Muted	Continuous	Muted
Value Orientation	"Merit"	Immediate responsiveness to organizational mission and goals	Effective organization functioning coupled with a respect for effective human resource management practices	Efficiency, private sector preference
Role of Human resource management	Enforcer of "merit"	Diminished authority and control	Organizational Consultant	Contract negotiator and administrator
Perception of	Hindrance to	Adjunct	Full managerial	Dismissed

human resource management profession	effective organizational functioning	collection of Skills	partner	
Role of Education	Public personnel administration	Adjunct to managerial skills	Human resource management, general management, practical focus	Contract negotiation and administration skills

Source : Condney, (*human resource management handbook,2005*)

3. Public Organization

Public organization as an official organization which established by consideration of a state, it is controlled and paid under the administration of government. It purposed to maintain any matters that public delivered to the government through several forms such as democracy protest, voting, and others and composed it into several term for example policy or programs (Liam, 2015).

The demand from public to the government, it is replied in the form of public organization which officially have the duty to provide services for those who need helps. It is the concern with the services offered to the citizens, and people who work on it could be coming from any type within reason, the qualification is same and equal required for anyone who wants to work on the public organization (Liam, 2015).

In general, there are often a few more provisions made, purposed to set (an example to benefit the employment of people with a disability or from an ethnic minority) which is the final goal is

to promote integration. Public organizations are significant because they are very transparent. Their work is easily and often heavily scrutinized to ensure maximum productivity and high standards. Additionally, these organizations are usually non-profit, to provide a fair service to the taxpayers (Liam, 2015).

Public organization according to Prof. Dr. Taliziduhu Ndaha, (Husin, 2015) is public organization refers to the bureaucracy that purposes to public service.

4. Local Government

Local government is a managerial body for a small geographic area, for example, a city, town, district, or state. A local government will typically just have control over their particular land district, and can not pass or authorize laws that will influence a more extensive range. (Bussiness Dictionary. com, 2016). Local governments can elect officials, enact taxes, and do many other things that a national government would do, just on a smaller scale.

In the other hand, local government is general society organization of towns, urban areas, provinces, and regions. Notice that this type of government incorporates both district and city government structures. It can be testing, yet these elements must cooperate to administrate a specific geographic territory. At that point, the organization of local government varies depending on the state. In any case, all local governments derive their authority from the state in which they are located. (Ashley, 2016)

Local governments (otherwise called local councils) handle group needs like waste accumulation, open amusement offices, and town arranging. (Australian gov., 2016)

DISCUSSION

Human resources management in local government or public organization is the process that consists of planning, organizing, leader and controlling activities that related with job analysis, job evaluation, developing, compensation, promotion, and discontinuance of work relation to achieving the aims of the organization that already settled. (Mutiara, 2004).

Practically, on human resources management could be understood by several side, one of it is the model of human resources management.

Thus, in this paper will discuss five important elements that determine model in human resources management:

- A. Planning
- B. Developing
- C. Compensation
- D. Evaluation
- E. Firing

Picture 1. Line coordination

According to structural frame defined above, it is reflecting that coordination started from mutual coordination consent from multipurpose whether central person, line manager and units, then it continued by resulting the proposed which given by three of those.

Central person is the deputy of Sleman regency, Yogyakarta, Indonesia. The line manager is the

head of medical department particularly in Subdivision of employment that manages the human resources management at Biro of Health. Then the last, units are the institution that uses the human resources such as government clinic, and also Regional Hospital (RSUD).

1. Planning

Planning in human resources management is a significant thing to do. The public organization in local government especially in Biro of Health in Sleman Regency, Daerah Istimewa Yogyakarta could determine how many employees or bureaucrat that needed. In this process, which are position analysis and workload analysis. It is in order to know what position and also what is the duty that need in public organization itself. Then, after doing the position analysis and workload analysis, public organization in local government know what actually bureaucrat need, therefore in planning human resources management do recruitment human resource that appropriate with public organization itself. It was already attached in legislation (*Undang-undang*) number 5 year 2014 about the state civil of apparatus. As mention in article 55 until 67 about recruitment.

At Biro of Health, Sleman Regency according to the interview with Mrs. Prima Wulan as a head of Subdivision of employment and supported by staff of employment which is Mrs. Diah and and also Mr. Widiarto

as a head of nutrient section that recruitment process in there divided into two part, which are the civil servants (PNS) recruitment and non-state public apparatus recruitment. After that, for state civil apparatus is managed by Department of local employee (*Badan Kepegawaian Daerah*) Sleman Regency. The beginning process for recruiting is Department of local employee (*Badan Kepegawaian Daerah*) open the registration civil servants formation with consideration the result of job analysis and workload analysis in each Department. The Head of Medical Department of Sleman Regency can request first the employees necessary based on their job analysis and also workload analysis and then, it can proposed to Department of local employee (*Badan Kepegawaian Daerah*). Then, for placement of civil servants (PNS) that has been accomplishing the requirement and pass the test will be managed by Corporation of local employment (*Badan Kepegawaian Daerah*).

The second process for non-state civil apparatus is managed by Corporation of local public service (*Badan Layanan Umum Daerah*) at Biro of Health, Sleman Regency. The institution related with Biro of Health that needs the employees must have job analysis and workload analysis that already studied and checked. For example, local government clinic (*puskesmas*) need the employees. Therefore, job analysis and workload

analysis became the basis for determining. Afterward, local government clinic delivers the employees necessary to Biro of Health, Sleman Regency, and then Biro of Health will analyze it in order to propose to Deputy of Sleman Regency. After the Deputy of Sleman Regency had approved it, the Head of Medical Department makes the composition of the team in order to compose employees planning and recruiting that invited professional organization such as Head of Midwife division and head of the section that related to it. After that, the team will determine the employees criteria that will accept, and then the next step is open registration, administration selection, interview and the last is training.

Further, referring to an orientation of the organization. Orientation within an organization is crucial to the sustainability and to achieve these goals. Orientation is a process whereby new human resources introduced to an environment that will occupy. Therefore, people can be adapted to existing conditions in the field, in general, orientation carried out by the service departments within the government, either the district or the city or even the province. Generally the process this orientation takes many days and may involve other parties.

2. Developing

Developing is needed to increase productivity employee and maintaining the employee ability to

human stabilization resource. For example, held the DIKLAT (education and training) public organization for employees especially in local government. Based on the National Government Regulation (Peraturan Pemerintah) of Indonesia number 101 the year 2000 about “education and training civil servants” is aims to:

- a) Increasing knowledge, skills, and attitude to implement position duty as operational based on personality state civil of apparatus according to institution necessary.
- b) Creating apparatus that capable as role of reformer and nation unity.
- c) Sharping attitude and spirit of service-oriented, aegis, and society empowerment.
- d) Establish one vision and though dynamic in holding governmental order, and also development in purpose maintaining good governance.

DIKLAT or training at Biro of health, Sleman Regency is a necessary in order to increase the capacity of the employees. Beside of that, training is a form of employee development toward achieving the vision and mission of an organization. (Rosidiah, 2011). The process toward achieving vision and mission is inseparable from various challenges such as technological development, politic-social, and the demand for high-quality service.

According to Legislation (Undang-undang) number 5 the year 2014 about civil servants, as mention in Article 69

until article 70 about career development, every civil servant required to develop themselves through having more education, training, courses and also seminar. At Biro of Health, Sleman Regency applied job analysis to determine what training that needed by the employee.

By applying the training in order to have independent institutions to having management on competence development which implicated on annual plan book. Public organizations included Biro of Health commonly held training annually.

The mechanism or method applied in the training of biro of health is flexible (Prima, 2015) It defined that they could do and held the training if they need it. However, at least every institution do the training once annually. Then, the sources human resources development itself is from the institution and other in which related with what they need, either Regency lever or province level. The developing process teaches many new skills to an employee to fulfill the career desire. (Rachmawati, 2008)

At Biro of health there is 2 DIKLAT or training method, (Prima,2015):

1. Pre-position DIKLAT
2. Position DIKLAT

Firstly, Pre-position training implemented to provide knowledge in order to form and build national awareness, personality, and ethics of civil servants. On the other side, basic

knowledge about the system of governance, task scope, and its organizational culture in order to carry out the duties and role as a public servant. Pre-position training is a condition of appointment of the candidate of the civil servant. Therefore, the candidate of the civil servant should be included in the pre-position training no later than two years after his appointment as a civil servant.

Secondly, position training implemented to develop knowledge, skills, and attitudes of civil servants in order to carry out the tasks of government and development better. The position training is consist of Leadership training, functional training, and also Technical training.

Leadership training implemented to achieve the requirements of leadership competencies government apparatus that appropriate in the structural hierarchy. Functional training implemented to achieve the requirements of competence that appropriate to the type and level of Functional respectively. Type and level of functionality for each position determined by the Trustees of Functional that concerned.

Technical training implemented to achieve the necessary technical competence requirements for the implementation of the tasks of civil servants. Technical training can be carried out in stages. The type and level of technical training assigned by the technical authority concerned. From

low level, the determination of an employee to follow training is the Head of Department of Health, but it still depending on consideration of SKP and PKP and adapted to the kinds and types of training that will follow.

At Biro of Health, Sleman Regency, which already experienced on human resources development program by implementing Coaching Clinic, where employees were provided by information and training related to Information Technology. (Prima, 2015) The materials that given was helpful for the employee in the daily work process. As at present, information technology-based services are needed by the community and make it easier to coordinate with employees in hospitals and government clinic or other agencies.

3. Compensation (Reward and Punishment)

There is two kind of compensation given for employee which are reward and punishment. The purposes of compensation according to Candra Wiguna, (2015) is:

1. Getting the employee that qualified
2. Maintaining the employee
3. Ensuring the justice
4. Appreciating desired behavior to improvement the public organization
5. Controlling the costs

Completing the legal regulation which is the legislation (Undang-undang) number 13 the year 2003 about employment.

Reward

The reward is a function of human resource management related to all forms of rewards promised to be received by employees as the implementation of the tasks in achieving the objectives company.(Rizki, 2008)

Lawler (1983) argued that reward is positive incentive that increasing satisfaction from personality necessary and also to encourage the employees in order to become more productive in the organization. In additional, reward has been arranged in legislation (Undang-undang) number 5 the year 2015 civil servants particularly in reward, article 82. It is “every civil servant show the loyalty, dedication, qualification, integrity, discipline, work performance in implementing the order be able to reach an award”. Moreover, it can be position promotion or sign of honor. Afterward, “Punishment is giving the sanction to the employee that did not implement the order. And also, not doing the order appropriately” (Pradipha, 2015). The punishment could be position reduction.

At Biro of Health, the system of rewards is also based on the regulation which is Undang-undang number 5 the year 2014 as mention before. As the example of rewards that has been done this institution is the financial reward, promotion, remuneration, and has an opportunity to competency development.

1. Punishment

The punishment is given to who that do infraction of the rules that apply.(Nurmiyati,2011) The aims of sanction are to make employees more active and make every effort to do its job.(Nurmiyati, 2011) Moreover, it can be an example for other employees not to repeat the same thing. Based on the Undang-undang number 5 year 2014 about civil servants, article 86 mention that discipline in civil servants is very important. Here about the discipline civil servants in Undang-undang number 5 the year 2014:

- 1) To ensure the implementation of the tasks, civil servants should obey with the discipline of civil servants.
- 2) The institution of government should enforce the discipline toward civil servants and also implement the various efforts to improve discipline.
- 3) Civil servants with disciplinary offenses will get the discipline punishment.

Another more details are assigned in Government Regulation number 53 the year 2010 about civil servants discipline. At Biro of Health Sleman Regency, the punishment that most severe punishment is demotion because did not come to work without any reason during 31-35 days.

4. Evaluation

Evaluation of human resource management is an important thing to ensure that function of employees in the public organization that whether is useful or not. In additional, the evaluation is objective assessment which is from *Sasaran Kinerja Pegawai* (SKP) and *Penilaian Kinerja Pegawai* (PKP). Performance appraisal in civilian state apparatus was based on the regulation from the government which is Peraturan Pemerintah number 46 the year 2011 and also *Peraturan Kepala Badan Kepegawaian Negara* (Perka BKN) number 1 the year 2013. Performance assessment processes to evaluate the employee toward his job in an organization. According to the interviewee who is Ibu Prima, 2015 said that the aims of evaluation are:

- a. To career determination development and position promotion
- b. To determination training and education (DIKLAT)
- c. To determination mutation or change the employee
- d. To improvement productivity and responsibility from the employee
- e. To increase the employee motivation
- f. To avoid injustice with each employee
- g. To measure the successfully of personal leadership

Then, the principal of doing the performance assessment is:

- a. Objective

- b. Measure
- c. Accountable
- d. Participation
- e. Transparent

The assessment for evaluation that applied by Biro of Health in Sleman Regency is already carry out evaluation forms that appropriate with government regulations.

Every employee has to arrange SKP as the plan for implementation of the program that appropriates with details of the job, responsibility and also the authority that compatible with the structure and working procedure in the organization. Also, SKP is arranged and be assigned as the operational planning for program implementation with referring to *Renstra* (Strategic planning) and *Renja* (Work Planning).

Besides, the workplace behavior assessment covering aspects:

- a. Service orientation
- b. Integrity
- c. Commitment
- d. Discipline
- e. Teamwork
- f. Leadership (Just for PNS that has certain position)

The workplace behavior assessment applied through observer by Official assessors toward PNS based on criteria that have been determined. Also, official reviewers give

the assessment also considering propose from other assessors that one level within each work unit.

5. Firing

Firing for civil servants is dismissing the job resulting in the corresponding loss of its status as a civil servant. (Government Regulation Number 32 the year 1979)

Taking into the government regulation number 32 the year 1979 about the civil servants firing explain that firing for public servants is consist into 2:

1. Firing as a public servant : Firing as a public servant is the dismissal caused the public official will no longer serve as Civil Servants.
2. Firing from the position of the civil : The firing of the cause no longer working in an organizational unit of the State anymore, but it still serves as the Civil Service.

Afterward, Dismissal as a Civil Servant consists of dismissal on the Civil Servant and dismissal with respect as Civil Servant. Civil Servant was dismissed with respect as a civil servant accept the rights of its personnel based on the legislation in force, such as the right to a pension. A Civil Servant, who are dishonorably dismissed as a civil servant, the loss of their rights of employment, among others, retired.

Civil Servant dismissal with respect by considering the position if:

- a. Pass away
- b. Demand on own personally
- c. Retirement age limit reached
- d. Firing because the existence of simplifying organization
- e. Dismissal due not proficient physical or spiritual
- f. Dismissal due leaving duties
- g. Termination due to other matters

Civil Servant dismissal with no respect as the Civil Service, due to:

- a. Dismissal due to perform violation or act of corruption
- b. Violate the promise of civil servants, promise position state or employee discipline regulations civil
- c. Arrested according to law decision with an absolute power of law, caused by intentional criminal which demanded by at least four years arrested at the highest or by higher law in the other condition.

At Biro of Health of Sleman Regency intended to government regulation on 32 the year 1979 about the firing of the civil servant, that has been changing several article into government regulation number 19 the year 2013 about changing the regulation of firing of the civil servant.

CONCLUSION

Based on all the data information above, it defining that model of human

resources management which have ideal values to be applied is the strategic model.

Regarding guideline of the requirement to be an organization which considering using the model of strategic human resources management, it has to meet the requirement of the theory given which reflecting by several indicator, there are planning, developing, compensation, evaluation and also firing. And according to that consideration, Biro of Health in Sleman regency consider being an organization which applying the strategic model of human resources management because it already fulfills 75% of all requirement to be an organization which using the strategic model of human resources management.

The central person in Biro of Health of Sleman Regency is the deputy of Sleman, which in policy-making and also making the important decision and it requires consideration of the Deputy, then he is the one who will decide or make decisions. Line managers at Biro of Health are the Regional Employment Board and Head of Department. Head of Health Department employees will not only regulate but also may decide or take a policy if it is very urgent. The unit also means part by the use of human resources, namely the Head of Sub-Division of employment, which directly manage human resources at Biro of Health of Sleman Regency.

Abstract

The martial law imposed by late Philippine President Ferdinand Marcos has affected the national government of the country and needless to say it has also affected even the local governments of municipalities through its laws and implementation. This study aims to analyze how martial law affected the local government of Polomolok, South Cotabato as an emerging municipality in Southern Philippines (Dole Philippines was established in Polomolok on December 1963 thus driving Polomolok's economy to new heights) and how the martial law inflicted human rights violation through the *Iliga* (led by the Manero brothers) which were considered as part of the government's Integrated Civilian Home Defense Forces (ICHDF) as it was established to counter rural insurgencies perpetrated by either the Communists in the Northern Luzon and in Southern Mindanao the Muslim secessionists, the Blackshirts.

This study will primarily be based on oral interviews of key respondents and other respondents that may corroborate or give additional information for the fulfillment and development of this study, also archival research will be applied. Furthermore, this study will aim to unveil local history of Polomolok during the martial law and be part of the national story of the Philippines those years due to the rareness of literatures and histories written in light of martial law in provincial and/or rural areas in the Philippine South.

Keywords: Iliga, local government, human rights

INTRODUCTION

Philippine history will never forget September 21, 1972 as the start of one of the darkest times of the latter. The day of the declaration of the martial law by the late Philippine President Ferdinand Marcos. The martial law was aimed to “save” the Republic from the rebels (Communists in the North and Muslim secessionists in the South), “purge” the government and

the society of its corrupt practices and also the people who were behind the activities, to subject the entire Filipino population in national discipline and genuine agrarian reform (Marcos, 1981).

Through this efforts and visions, the martial law administration had implemented several programs and projects to realize its aims and to consolidate the cooperation of every Filipino in the archipelago. Public infrastructures were built to answer the need for industrialization of the country (Marcos, 1981), programs for self-sufficiency and social discipline were instigated to bolster national morale and cooperation and the intensification of the military counterinsurgencies especially in the Philippine South (Gleeck, 1987) where the military presence was noticeable due to the strength of the Muslim movements of insurgencies.

Polomolok (*F'lom'lok*, two fused B'laan terms which are given three different meanings such as "hunting ground", "upper portion of the creek" and "cradle of hunters") is a municipality located in between the municipality of Tupi and General Santos City. Polomolok was part of the National Land Settlement Administration's settlement area in Mindanao (Koronadal Valley) opened so as to hasten Mindanao integration to the Philippines (Asleah, 2011). It was organized by Atty. Ernesto T. Jimenez as its first overseer (Sentillanosa, 1987). Later, Polomolok became a municipality on August 21, 1957 by virtue of Executive Order No. 264 by former Philippine President Carlos P. Garcia putting Datu Badong Nilong as first mayor. Today, Polomolok is under the administration of Mayor Honey Lumayag-Matti, daughter of former Polomolok Mayor Engr. Isidro Lumayag. It is now one of the fastest growing municipalities in Mindanao and the entire Philippines as well. The Province of South Cotabato website would describe Polomolok as the province's largest agro-industrial municipality not just because it is the home of the Philippines's largest food processing company, the Dole Philippines Incorporated but also because of the presence of various factories manufacturing hog feeds, cotton, and ice.

Polomolok, South Cotabato, as a booming municipality during the 1970s, had not been excluded from the efforts of the national government's aims of a New Society. As home of one of the world's largest

food processing company, Dole Philippines, the national government has exerted plans and projects for Polomolok to develop and improve as a municipality that time.

MARTIAL LAW AND THE LOCAL GOVERNMENT

General Orders No. 6, 7 and 7-A

Malacañang had started to mobilize the military and the Philippine Constabulary all over the country to search for firearms, regardless of its legal registration, and confiscate ammunitions of whatever kind. Gen. Order No.6 banned the ownership of guns and ammunitions in the entire country on September 22, 1972. General Orders No.7 dated September 23, 1972 and 7-A dated September 30, 1972 exempts the members of the Armed Forces of the Philippines, the Philippine Constabulary and other militia group that were deemed helpful for the government to facilitate reform in the urban and rural provinces of the country. Mayor Barney French, the mayor of Polomolok from July 1968 until January 1980, consequently adhered to these orders and issued a gun ban order. He stressed out during the 11th Meeting of the Sangguniang Bayan dated October 16, 1972 that people possessing firearms must surrender them in the Office of the Chief of Police of the local Philippine Constabulary not exceeding by October 25, 1972. Failure to do so will be dealt with “drastically” and can entail the punishment of death to anyone that will be disobedient to the Presidential Order. (Minutes of the 11th Sangguniang Bayan Meeting, 1972).

Searches and surrenders of ammunitions were conducted by the joint forces of local Integrated National Police and the Philippine Constabulary on the months of September and October of 1972 that many people of Polomolok had really felt the pressure the government, even furthered by the military, stressing out to the people that it was serious in disciplining the country and to destroy hindrances of the “Bagong Lipunan” and private armies were disbanded due to the government’s efforts to subdue private militia due to its threat to the Republic as what the President had declared and their firearms were confiscated to suppress

armed insurgencies. According to Mrs. Elsa Biantan, President of the Catholic Women's League in Polomolok for twenty years up to now stated that there was a strict confiscation of firearms that time. Policemen and military personnel conducted a house to house inspections to confiscate firearms from the people and to prevent mayhem to occur in Polomolok. However, the combined police and military force were unable to confiscate all of the firearms thus outlaws were able to continually "harass" the people. Some people made improvised guns commonly known as "paltik" for safeguard however others hired the Ilaga for protection.

Despite of the strict implementation of the orders, the local populace had created improvised firearms to protect them from rebel elements that had fled to the mountains to extort money from local residents. The failure of the local government and the local police and military to confiscate all the arms had created a new breed of private security armies and body guards of private individual such that they would hire Ilaga (Ilaga was a term used to call the paramilitary group founded by Bernardo Baylosis popularly known as "Commander Toothpick" (Startup, M.M. & Laird, M.M., 1985)) members in order to protect their interests and guard them. This proliferation of improvised firearms had later pressed Mayor French to extend the arms of the General Orders which authorize the Philippine Constabulary to confiscate these weapons. The Municipal government adhered "religiously" to the general order that they also mobilized their civilian messengers namely Leonardo Limos, Gemino Dipus and Marciano Deypalan to cooperate closely with the Police officers handling the order. Right after the issuances of this order the Sangguniang Bayan was assured by Mayor French of the release of the funding of an irrigation project in Barangay Glamang of Polomolok by the national government.

Presidential Declaration No. 823 and General Order No. 5

The very foundation of the rights of the Filipinos stipulated in the third provision of the Bill of Rights was prohibited by the very institution supposed to defend it at all cost. The General Order No. 5 was decreed as law by Presidential Decree No. 823 on November 3, 1975. Presidential Decree No. 823 outlawed pickets and strikes against workers of the vital

industries such as telecommunications companies, water companies and many more. It had also widened the scope of the terms “strikes”, “lockouts” and “pickets” that to include slow down, mass absences and deliberate slowing of work rate (Presidential Decree No. 823) (Timberman, 1991). This step of the government was aimed to make a “beautiful” picture of the implementation of the martial law in the country. Groups that would be violating this order would be immediately penalized and would be “dealt with immediately” (Rodriguez, 1985). The people of Polomolok were not immediately aware of the effects of the martial law. The obvious implementation of the martial law in the municipality was the curfew hour and the increased presence of the military. The time of martial law, as one informant contends, people can never say anything against the government because everyone knew that there existed a tight surveillance aimed to the local populace and to know who were among the locals were not conforming to the actions of the government. The informant even added that they were so afraid especially when they were going to the town market because military and police personnel were evidently posted.

The very presence of the military intimidated the people of Polomolok. The local police acted like military officers. Also the civilian populace was intimidated of the numerous arrests due to the extreme implementation of the General Order No. 5 by a certain “Sergeant Pantik”. According to Mrs. Yañez, individuals caught discussing about the ills of the society and the wrongdoings of the government were brought for investigation and interrogation in Hill 191 (which was later converted to a local public cemetery and now Golden Sunshine Resort), which was then an infamous prison camp in Miranda, Polomolok. They were detained and were forced to admit even to fabricated accusations just to escape further torture. The municipal leaders, according to Mrs. Yañez, were kept adherent to the military in terms of peace and order matters and they could not launch any program regarding to the latter without the military’s positive response to it. Mrs. Yañez and Mrs. Biantan both agreed upon the fact that the local police became informants of the military and the *tiñente del barrio* (barangay captain) served as reinforcement of intelligence operative of the military by providing them information of who were against the Marcos dictatorship in the locality.

Presidential Decree 1016 – The Integrated Civilian Home Defense Forces

In the later years, the government especially the military saw the importance to create a more diverse and sporadic group that will aid the military in putting down hooligans and insurgents that spread all over the country. Thus, ICHDF or Integrated Civilian Home Defense Forces was created through the Presidential Decree No.1016 (Startup, M.M. & Laird, M.M., 1985) on September 22, 1976. ICHDF was a unit of the Armed Forces of the Philippines and was trained by the military to augment military presence in local communities especially in rural areas of the country. General Jose Crisol, Deputy Minister of Home Defense and the architect of the creation of Integrated National Police (INP) described the ICHDF as a unit “against lawless elements and to assist law enforcement agencies in restoring peace and order.” (Youngblood, 1993).

In Mindanao, ICHDF group was a recognized entity that helped the military put down insurgencies. The local *Ilaga*, originally an Ilonggo term for rat and later used to refer to the fanatic pseudo-military entity founded in Samar, mostly Ilonggos, and being satirically expounded to Ilonggo Land Grabbers Association by their enemies. An informant, who chose not to divulge his identity in this study said that the Ilaga was organized by the Magnificent Seven, a group of seven Ilonggo Mindanao mayors namely Nicolas Dequiña of Midsayap, North Cotabato, Wenceslao Dela Cerna of Alamada, Cotabato City, Pacifico Dela Cerna of Libungan, North Cotabato, Bonifacio Tejada of Mlang, North Cotabato, Conrado Lemana of Tulunan, North Cotabato, Jose Escribano of Tacurong, Sultan Kudarat and Esteban Doruelo of Pigcawayan, Cotabato. The Magnificent Seven organized the Ilaga because of the threat of the Blackshirts and the Barracudas and to protect the Christian villages and population. It factored and spread to Mindanao and had gone against the Muslim secessionist, Blackshirts of Cotabato and the Barracudas of Lanao, armed wing of the Mindanao Independence Movement the precursor of Moro National Liberation Front (Araneta-Divinagracia- Ilonggo National Movement, 2015).

“In the mid-1970’s the Ilaga broke into factions just as the BSDU (Barangay Self-Defense Unit [author’s note]) was about to be renamed ICHDF (Integrated Civilian Home Defense Forces [author’s note]). One splinter group was led by Commander Bucay and Commander Inday, aliases of Norberto Manero, Jr. and Leonarda Lacson Manero. The husband-and-wife team, together with the remnants of the Ilaga group, set up their headquarters in Polomolok, South Cotabato. Bucay was designated by then Brig. Gen Delfin Castro of the Central Mindanao Command...as the Commanding Officer of the ICHDF Special Strike Force under the Special Warfare Group...” (Startup, M.M. & Laird, M.M., 1985). The Ilaga was bestowed the title Barangay Self-Defense Unit through the virtue of then Provincial Commander turned a Parliament member and Deputy Minister of Civil-Military Relations Col. Carlos Cajelo that made the justification that the Ilaga were after the Muslim secessionists in Mindanao. Thus the image of a folk hero turned into a lawless hooligan (Startup, M.M. & Laird, M.M., 1985).

The Maneros were also suspects to the massacre of Ali Mamalumpong and his brother. Geroge Pontilla, a witness furnished by the Justice and Peace-Social Action Center reported that Larry Gonzaga, a Manero follower cut out the sex organ of one of the Mamalumpong brother to be eaten in the right time (Startup, M.M. & Laird, M.M., 1985).

Edgar Arguilles, another ex-follower, said in his sworn statement that Norberto and Leonarda ordered the team leader George Manero on May 29, 1977 to massacre B’laan communities in Kiniles and to be exact in the words of Manero “... *magmasaker kamo sang Bilaan sa Kiniles...*” (massacre some B’laans in Kiniles) , Polomolok, South Cotabato. Fernando Guymon was a B’laan pastor reported to be killed by the George Manero’s group in Polomolok. Arguilles reported that George Manero asked Guymon who he was and Guymon responded who he was and George Manero told Fernando Guymon “... *indi ka na mabuhì, nong...*” (You won’t live anymore) and Fernando Guymon said, “Praise the Lord, Alleluia” and George Manero fired his shotgun. Arguilles added that certain men only named as Uldarico, Sedonio, Kris and Ronnie Abella, all followers of the Maneros hacked Guymon’s children and wife using their samurai.(Startup, M.M. & Laird, M.M., 1985).

The case of the Maneros against the party of Fr. Tullio Favalli and the Mamalumpongs allegedly financed by many affluent families in General Santos, Sarangani and South Cotabato. Atty. Cornelio Falgui, who once served as Kiamba mayor, made a courageous stand in the side of the Maneros and saved the lives of the Manero in the court quest when the Mayor of Magsaysay, Davao del Sur ordered the Maneros arrest and made PC Captain Filipino Amoguis captured the Maneros and killed them through a firing squad. Atty. Falgui successfully defended the Maneros in court and indeed saved the lives of the Maneros and *“...in saving Manero’s life the charismatic and extremely violent Manero would be indebted to him ever after. Indeed, years later, long after Mayor Falgui’s death, Manero continues to hold a close relationship with Falgui’s son, General Santos City-based Attorney Tomas C. Falgui.”* (<http://.blogspot.com/2011/11>).

A respondent who wish not to divulge his identity due to security concerns said that the Maneros used to work with the government and when Atty. Falgui successfully saved them from death penalty through firing squad the Maneros were indebted to him and worked for him. Now the Maneros worked for Dole Philippines by securing the lands they owned in Polomolok.

PRESIDENTIAL DECREE NO. 198

With the increased spending of the government to finance more projects in the rural communities, the national government had selected many communities in the provinces to finance them. Among the large projects of the Chico Hydroelectric Dam and the Magat Dam that were constructed to produce power in many locations in Luzon. Irrigation was also a primary project of the government the two dams stipulated earlier also was equipped with instruments to release water for the agricultural fields in the vicinity. In May 25, 1973, President Marcos signed his Presidential Decree No. 198 or the Provincial Water Utilities Act of 1973.

In Polomolok, the Community Development Ministry helped in the realization of the water sewage in the Municipality that had been a dream of the people in Polomolok for many years. The administration of Barney French had once initiated the program however not realized because of tight municipal budget. (Sentillanosa, 1984) Following the survey done by the Municipal Planning and Development Office, in accordance to the majority population's desire to have a clean water supply, Polomolok Water District was built to provide safe and clean water for the municipality on the middle months of the 1980. It was formally ordered by the local government to be constructed by virtue of Sangguniang Bayan Resolution No. 63 under Saturnino Calulo's leadership. It aimed to answer the plea of the growing population for potable water which was difficult to acquire due to the distance of the nearest watersheds that at that time resided in far-flung mountainous areas in Polomolok and drilling of deep well at that time was too expensive for private exploration, thus the Polomolok Water District served as a very great help in the development of the municipality (Sentillanosa, 1984).

Anecita Balanay, the Municipal Agriculturist of Polomolok from 1974 – 1999, said that the Water District was a great help in the Municipality of Polomolok because before when Water District was not operating yet, it was difficult to get potable water and the source was very far from us living in Purok Bliss and other places in Polomolok and upon operation, life had been a lot easier.

The Polomolok Water District, through the financial support of the national government through PD No. 198 was inaugurated on October 9, 1980 and the appointed manager was Mr. Hilarion Visande Jr. and was assigned to the office to supervise the operation of the Polomolok Water District and to continue the development of the exploratory operations that supplied water to many homes in Polomolok up to the present. (Polomolok Water District Website).

HUMAN RIGHTS SITUATION

Freedom of Speech

As stated in the 19th Article of the Universal Declaration of Human Rights; this right includes the freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers. This right must be upheld by the state and the government. Various decrees and orders issued by the President that can be said that violated this provision of the Universal Declaration of Human Rights. Greater Manila area and other provinces were purged of oppositions to silence the redress of grievances and to ensure positive response of the people due to the absence of opposition.

Presidential Declaration No. 823/824 and General Order No. 5 had created an atmosphere of threat towards protests and upheavals. Many arrests were made because of these orders of the President. Even powerful government officials and politicians were arrested because they were blatant and “noisy” opposition members. In Polomolok, military and police worked in the stiff implementation of this orders that even private conversations were deemed to be under surveillance of paid civilian informants. Even church magazines were under the watchlist or surveillance of the authorities. Mrs. Yañez would recount that if Concern Magazine were outside the church these magazines will turn to ashes. Furthermore, Mr. Leopoldo Biantan, the husband of Mrs. Elsa Biantan, would recall the saying “the ground has its ears and the news has its wings” was famous during the martial law years. Military and police officers’ primary job was to keep a keen ear on the people who talked antagonistic things about the government. There were barangay captains who reported to the military the people doing and saying something against the government that was why the people were so afraid of talking about the defects of the government.

In the Concern Magazine Volume 5 No. 5, there was a manifesto that were distributed to the employees of Dole Philippines and other key industries and companies in South Cotabato calling for strike to show that the workers were not happy in the condition of the companies. They were

advocating for a strike to alleviate their working condition. This manifesto was allegedly reared by Communists in South Cotabato and was able to call the attention of Dole's top management. The company called for the attention of the local police to counter this call of strike for they know that strike could affect the operation of the company. Thus, the police moved into action immediately and searched for the culprit in distributing this call which was a direct violation of the Presidential Decree 823/824. What happened was a gross violation of the human rights, the right to be heard, to a peaceful assembly as well as in association with others.

Freedom to own property and its maintenance

Article 17 of the Universal Declaration of Human Rights states that "Everyone has the right to own property. No one shall be arbitrarily deprived of his property" and is considered as a vital right of each individual and must be protected by the government.

The Philippine economy was aided to progress and development due to the entry of large international companies which were usually owned by the foreigners. These companies were established in various provinces and even to cities where large Filipino industries were already operating (Rodriguez, 1985). The Philippines is open for these foreign companies to have access to wider and larger lands that would be use for their business operation. This situation was true to Dole Philippines Incorporated that built their mega plantation in Polomolok, South Cotabato. Their main plantation and canning structures are now located in Barangay Cannery and their business operations had expanded in the nearby Municipalities such as the Tupi and T'boli, Maasim and Surallah as well as in City of General Santos.

In Polomolok, which hosted the original pineapple plantation of the company, vast tract of lands were purchased by Dole Philippines Incorporated in a questionable manner. Suspicious dealings were engaged with the land owners who were usually members of the indigenous settlers in the area. Their lack the proper education and misinformed of exact market value of their land made them a victims of

unscrupulous transactions for they were not paid with just amount compensating of their sold lands.

According to respondents who chose not to divulge their identity, Dole Philippines purchased their lands in a payment of one can of sardines and few clothings in exchange of one (1) to three (3) hectares. It was undertaken in an unscrupulous manner that he was deceived and uninformed of the real value of the lands. Other stories gathered by the researcher that Dole Philippines promised a certain amount much higher than they usually offered but never pay the amount due for the unknown reasons even yet they had continued the use of the land.

The government at that time was relentless in desperation to speed up opening new lands for industries and residences to be established. A respondent said that the Blackshirts of Polomolok was just a made-up story. The authorities said that the Bla'ans of Polo-Landan areas were Blackshirts if not sympathizers and they were harassed by the Ilaga (ICHDF-Polomolok). This group oftentime killed the Bla'ans because of those accusations. Some who had fled to saved their lives and upon their return they found out that their lands were illegally occupied and planted pineapples and corn or were occupied by other people.

A respondent, who chose not to reveal his identity, even said further about the expanse of the lands that the Ilaga allegedly grabbed from the Bla'ans who were secured by Presidential Decree No. 762 on July 5, 1961 by President Carlos P. Garcia declaring the 2,507 hectares of land located in Polo-Landan-Maligo-Kiniles area as reservation area. He said that the lands that were grabbed by the Christian settlers in the area, was immensely vast. The land areas that were grabbed from the Bla'ans were the entire 2,507 hectares however based on the survey we did it was 2,511 hectares. Later, the Christian settlers sold the lands to Dole Philippines and some leased it with Dole Philippines despite that the Dole Philippines was aware that the lands were illegally grabbed from the B'laans.

The lands were supposed to be ancestral domains that were reserved for the B'laans however with the illegal grabbing of their lands many were left landless and many were poverty-stricken making then most

marginalized group now adays. These unfortunate circumstances allegedly involving the government forces through the ICHDF or locally known as *laga* to create more residential and industrial area in Polomolok was a violation of the rights of the B'laans. The Municipal government was silent in the said issue and municipal records did not reflect stories regarding this. Cases were not filed due to fear of pressure from the mega company and the stories were still considered hearsay though respondents were still present and stood silent witness to these atrocities.

Right to the Recognition as Person before the Law

The history of Polomolok during the imposition of the Martial though in 1981 the martial law was lifted, however the continuance of injustice persisted. Justice and equal right for the rule of law was part of a promise of the reforms of the New Society however justice to the Manero victims was elusive. According to Benjie Nequento, a Justice and Peace – Social Action Center (JP-SAC) official , JP-SAC is a religious agency which was organized to help people acquire justice through legal aid, that had been assigned to be part of the team to help the Mamalumpongs against prominent opponent that protected the Maneros, he stated that the Maneros were just so tough. I can remember that time that children were being frightened by threats of their mothers that Manero would eat them if they go home late at night or if they would go home late in the evening. It was as if Manero was like Maria Labo that time.)

Mrs. Takahashi-Magpayo would describe the ill reputation of the Maneros as notorious. Mrs. Takahashi – Magpayo observed that the Maneros have strong grip to powerful politicians because no matter how the military and the police exerted effort to search for them their capture was elusive.

Pepito L. Moderacion, a member of the 453rd Philippine Constabulary Command in Camp Lira, City of General Santos, had filed his affidavit in which he divulged several atrocities done by the Maneros on their ICHDF operations in Kiniles, Barangay Lamcalyap, Municipality of Polomolok. Moderacion narrated the events that lead to the murders of Ali Mamalumpong and his brother through a sworn statement on 1983. He presented on his affidavit that on October 1977, he was ordered by his

superior Commanding Officer 1st Lt. Antonio P. Billones to join the ICHDF group supervised by Norberto Manero, Jr. and Leonarda Lacson Manero “without divulging my identity as an enlisted PC personnel”.(Startup,M.M. & Laird,M.M, 1985). Moderacion had confessed in his sworn affidavit that he had witnessed several unlawful arrests made by the ICHDF group of Manero without warrants and their murderous acts perpetrated towards Christians and Muslims in Polomolok particularly those who were suspected of being rebels.

Moderacion, upon being present in the actions undertaken by the Maneros and their followers, witnessed the events in the killing of the Mamalumpong brothers. He said that on November 5, 1977 at around 3:30 in the afternoon Kumander Inday (Leonarda Lacson Manero) with other followers armed with high-powered firearms took the Mamalumpongs in their farm lot in Kiniles, Lamcalyap, Polomolok. Kumander Bucay (Norberto Manero, Jr.) was already there in the said farm lot with their other followers. The Mamalumpongs were then stripped naked, hogtied and interrogated by Kumander Bucay after which ordered the Mamalumpongs to be shot to death. The two brothers were then slaughtered and sliced into pieces, their internal organs taken from their bodies and then cooked to be eaten.

Another witness to the Mamalumpong case was George Pontilla, an ex-follower of the Maneros and later on was against them for their ritualistic cannibalism. He testified before the court in his sworn affidavit that he was once a member of the Integrated Civilian Home Defense Forces – South Cotabato Striking Force under the command of Kumander Bucay and Kumander Inday until he surrendered his firearm to the Maneros on June 22, 1978. He swore before the court that he witnessed that the Mamalumpong brothers were hogtied beaten by bar guns after which they were butchered and were eaten. A part of the body was cut off from one Mamalumpong brother by a certain Larry Gonzaga and was kept in Pontilla’s possession for an exhibit of the heinous crime.

To note the report of the Fact Finding Mission of Patricia Startup, M.M. and Eileen Laird, M.M. on May 1985, the military seemed to protect the Maneros despite their cannibalistic and inhuman treatment of accused

rebels. In one instance when Defense Minister Juan Ponce Enrile released an ASSO (Arrest, Search and Seizure Order) against the Maneros who were instigated to the murder of the Mamalumpong brothers the military, with their highest officials and commanders, seemed not interested or junior officers seemed not courageous enough to tell the whereabouts of the Maneros. They were not interested to hand in the Maneros to the court due to their significant role in suppressing Muslim dissenters and insurgent in Southern Cotabato.

Leopoldo Ojacastrro, a vital witness to the murder case was stabbed to death while on the way to a meeting even if he was under the military protection. Further, Col. Mariano Miranda, 3rd Brigade Commander of the Southern Command of the Philippine Constabulary refused to disarm the Maneros despite official orders and growing requests of the local populace to do so. In addition, Brig. Gen. Delfin Castro refused to make a move on arresting the Maneros instigated in the issue on grounds that the Maneros were not already present in the area of his command. However, numerous sightings were reported such as that of Norberto Manero, Jr. (Commander Bucay) was seen entering a local movie house in Koronadal and Leonarda Lacson Manero (Commander Inday) was spotted as a wedding sponsor in Polomolok. (Startup,M.M. & Laird,M.M, 1985).

Thus, the notorious reputation of the Maneros had intimidated even the judicial system of the court that time. The case was first heard in Dadiangas (General Santos City) but due to security reasons and a court decision the case was filed to Alabel despite the fact that the massacre was orchestrated in Kiniles, Polomolok. The trial rolled for the first time when the Maneros were captured after the intervention of high-ranking military and Cabinet members. Former Chief of Staff Fidel Ramos was said to have intervened to capture the elusive murderers. It took several years of searches and seizures and several people who affirmed the murders of the Mamalumpong brothers, Francisco Guymon, Fr. Tullio Favalli and other people who had experienced the atrocities and abuses of the Maneros to be put to trial.

Right of Security of Tenure in Employment

The Universal Declaration of Human Rights was a sacred document which assured the people of the world on their rights as individual and a society. These rights must be protected, of course with other limitations on case to case basis however it is clear on this document that the state must uphold this even to the gravest time in the country. This is a duty the state must be responsible of. The Universal Declaration of Human Rights had stated that “Everyone has the right to work, to free choice of employment, to just and favorable conditions of work and to protection against unemployment” (Article 23 Paragraph 1).

On June 28, 1983, Concern Magazine denounced the unjust termination of eleven (11) supervisors of Dole Philippines over an unreported and unpublicized reason. Concern Magazine reported that on February 26, 1983, Mike O'Brien, Dole Philippines' Over-all Manager for Agricultural Operations Division, terminated Toriano Chua, Silvestre Maquidato, Romeo Plete, Paul Echem, Elenterio Dapanas, Roberto Gregorio, Ciriaco Pagaduan, Carlito Cadiao, Reggie Batita, Tomas Montano and a certain “Mr. Roque” all were supervisors of the Agricultural Operations Division without prior notice. This issue led to further events that it caught the attention of local media and ultimately the Regional Office of the Ministry on Labor. The municipal government according to Mr. Fin stipulated that if ever Dole would do something crazy we can easily sanction them or punish them. I will say this that the municipal government held Dole on their neck that is why they do not do nasty things. During our time, we told the Dole officials that they should never do bad things if you do not want to be banished from here, so Dole is just frightened of the Municipal government.

However, the issue was never discussed in any Sangguniang Bayan meeting nor the municipal government ordered an investigation for them to know the grounds of the matter. The Municipal government was silent about the issue maybe because, as one informant told, they feared Dole Philippines would decide to close its operations which means a great economic downfall for the Municipality of Polomolok because many had depended to Dole Philippines for their living. Apart from economic

downturn, Polomolok will suffer a tremendous unemployment rate and will only mean a gigantic slash in Polomolok tax revenue. Businesses will also be affected. This domino effect of Dole Philippines's exit from Polomolok if ever the municipal government would intervene and Dole would not like it perhaps halted the municipal government in intervening in the issue and kept its hands in creating the issue bigger.

Later of 1983, Dole Philippines' Supervisors' Club Chairman now a Municipal Councilor of the Sangguniang Bayan of the Municipality of Polomolok Hon. Jose Falcon relayed a message to local newspapers and the Concern Magazine as well a message to Dole Philippines and the Ministry of Labor – Regional and National Office manifesting their concern over the issue and personal qualms that any of them serving as supervisors and all employees of Dole Philippines, in general, could be terminated at any time over any reason under the grace of high-ranking Dole Philippines officials (Concern Magazine, Volume 5 No. 6, 1983).

The clergy, seeing the injustice perpetrated by Dole Philippines sympathized with the sacked supervisors and other employees of Dole Philippines. Our Lady of Lourdes Parish of Polomolok led by Fr. Jaime Apolinares and Fr. George Carin was, at that time raising funds for the construction of the parish building, heard of the news and ultimately condemned the matter. They relayed to the administration of Dole Philippines that their donation of about P 40,000.00 to the parish project had been withdrawn and will be returned by Fr. Apolinares himself as a form of disgust towards Dole Philippines' unfair treatment to the eleven sacked supervisors. In addition, a religious organization in Polomolok named as Samaritanos-Cursillistas condemned the unreasonable action of Dole Philippines. Salvador Hormigos, the group's leader, wrote a letter addressed to Dole Philippines' General Manager and Vice President on Cannery Operations Seren C. Bacani condemning the "hostile action" (Concern Magazine Volume 5 No. 5, 1983).

CONCLUSION

The local government is a political and administrative unit established to administer and protect the interests of the local people or its constituents. It is expected to be the vanguard in protecting the rights and interests of its constituents. What happened in Polomolok, South Cotabato was obviously an opposite of what was expected. The local government was silent and even cooperative in the measures and programs of the national government even if it was obviously against the very fundamental rights of the people.

The local government was guilty of conniving with a dictatorial regime and its atrocities were never opposed by the local government. Also, the local government had posed “deaf ears and blind eyes” to the pleas of its people and had also the same stance with regards to the human rights violations committed by the national government. It is very sad to know that the very institution expected to protect the people did not have the courage and will to do so.

There are many stories that surround the martial law years of Polomolok however limits to this paper had been bounded that the researcher is limited to select significant issues on local government policies and administration thus at the end of the day the narratives herein would serve as a reminder of their responsibilities and obligations to the people they serve.

ABSTRACT

This research is about the recommendation model of collaboration which is an analysis and synthesis of core components and core values by stakeholders in the Development of planning regions in Mamuju. This research aims to find a tentative prototype model of collaborative development planning in Regency Mamuju. This type of research is qualitative descriptive. This research uses phenomenology approach. The primary data source from the government, public and private and secondary data from the planning documents. The focus of this research is the analysis and synthesis of five core components that is collaborative leadership; strategic vision, collaborative team processes and collaborative structure and seven core values, namely respect for people, honor and integrity, ownership, consensus, full responsibility and accountability, trust-based relationship and the recognition and growth, which is the determinant factor and values that can inspire actors in the process of local development planning in Mamuju. The technique of collecting data through observation and in-depth interview about the core values in regional development have been documented and analyzed using qualitative descriptive. Technical analysis of the data consists of data collection, data reduction, data presentation and conclusion. Findings on the model of collaboration in Mamuju, that to create a joint commitment of all stakeholders both between the government and the public or by the private sector, the prototype model of collaboration 3C (Core component, Core Value and Core Competence) in local development planning in Mamuju district can build commitment among stakeholders including integrated well with fixed forward linkage partnership, trust (trust) and the middle (Middle way).

Keywords: Collaboration, Planning and Development

Introduction

The decentralization policy as stipulated in Law No. 32 of 2004 and Law No. 25 Year 2004 is a new strategy that brings hope in entering the reform era, globalization and free trade. The principal matters contained in this law is democratization, initiatives and community development and maintaining regional biodiversity values. That hope appears therefore this

policy is seen as a new way to create a better order in a scheme of good governance with all the basic principle.

In relation to the above, the Government Mamuju do the mechanisms of collaboration on a regional development plan in Mamuju where the collaboration of the two parties interact and mutual contributions between the government and society in the achievement of the vision of the region on the one hand while on the other hand the problems public can also solved. It can be seen that the technocratic planning to put the government as the absolute authority to plan and carry out development for the benefit of the public, based on technical considerations of the government that its implementation is encapsulated in the RKA SKPD.

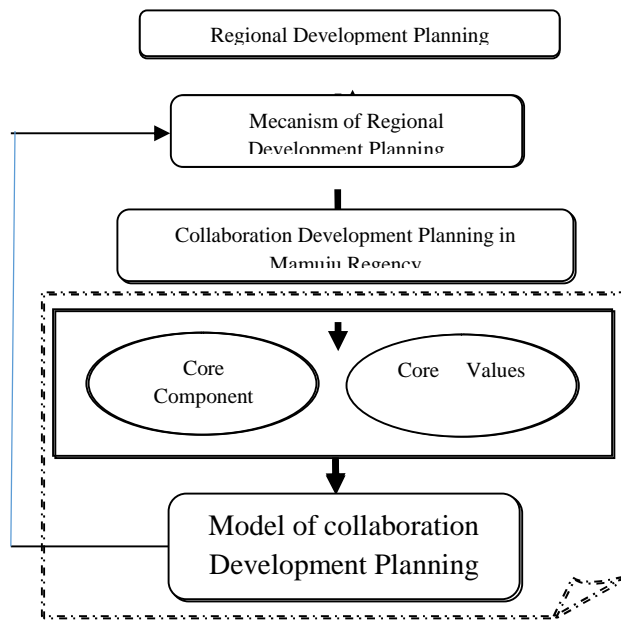

While participatory planning involving all community in their village development, is a method or way of planning that enables real community institutions in planning development. planning to do more based on studies of the problems they face and the potential available in society. In this way the public can be expected to make a craft and be able to implement, maintain, and follow up the results of development. Cooperation and synergies between the two, as well as multi-party from the private sector, it can be said to be a collaborative development planning. The synergy can be seen in the problems faced by the community based on facts and reality, occur equality parties involved, the government merely supports the initiative of the community, and the lack of mutual trust between the community and government.

Collaboration comes from the real conditions of participatory planning which sees the reality of regional development planning in Mamuju, in the organization of collaborative deliberations which in reality is a participative dynamics undertaken by stakeholders. That condition is rationality objective in regional development in Mamuju that on one side of participatory planning is mandated by Law No. 25 of 2004 and on the other hand the implementation of collaborative planning gain positive response community through the successful implementation of certain programs were achieved as the Program construction of 3 km long canal in the village of Polo Pangale, Mamuju regency Fiscal Year 2011, where the program is a result of the introduction of planning issues annual floods were carried out by the community facilitated by government officials.

Research Methods

This research is a qualitative descriptive phenomenological approach, which began on 14 May 2014 until 15 July 2014 in Mamuju. Informants were interviewed was the Regent of Mamuju, Head of Bappeda, Secretary of the Public Works Department, secretary of health department, the village chief, community leaders and NGOs. The technique of collecting data through observation and in-depth interviews related to core values and technical data analysis consists of data collection, data reduction, data presentation and conclusion. The focus of this research is the analysis and synthesis of daricore componetsdan core values which become determinant factors and values that can inspire the actors in the process of local development planning in Mamuju.

The core components used indicators, namely; *culture of collaboration*; 1). Equality, 2) Confidence in representing, 3). Confidence in the integrity, 4). The regulatory process in the community forums, *collaborative leadership*; is 1). Ability set a vision, 2). The ability to instill a sense of community, 3) The ability to optimize the potential, 4) the ability to interact and communicate with staff, 5) Involvement of staff and the courage to take decisions and responsibilities, and 6) the ability mobilize stakeholders to collaborate in achieving the objectives. Strategic vision of collaboration; 1). The vision of mutual interest and 2). The vision that make the actors more productive to coordinate and cooperate in addressing the problems and achieve common goals. Team collaboration processes; 1). The team that has the knowledge and insight, 2) Team to carry out duties in accordance with its role, 3). Teams are able to negotiate to solve the problem, and structure of the collaboration; 1). Aspects of the delegation of authority, 2). Structure in information systems and human resources. While indicators core values, namely; respect for people at all levels of musrenbang, awards and integrity, reward the ideas and opinions of others and able to implement the agreement stipulated joint ownership, a sense of the region by maintaining development results, consensus, decisions made on the basis of mutual agreement, full responsibility and accountability, have a sense of responsibility for the decisions made together internally and responsibility towards stakeholders, mutual trust (trust-based relationship), mutual trust among stakeholders in Musrenbang at various levels of the forum of planning and Recognition and growth, results achieved show an increase in terms of both quantity and quality in planning meetings.

Research Results

Development is a process that is inclusive, where the development process as a platform for the involvement and contribution of the various stakeholders in the utilization of resources to

achieve the expected conditions. So that all stakeholders can be involved in the planning process, it is necessary to build collaboration between all parties concerned and interested in it. This study found that of the entire series of collaborative processes dalam perencanaan regional development are still many complaints and expectations that are not in accordance with what is desired by stakeholders. The findings show that the timing of the discussion forum as an activity undertaken to establish collaboration with all stakeholders is very limited components. Implementation of the discussion forum should not do only one day but held for a few days so that people can put forward the problems faced in front of SKPD technical and meetings should not only become a means of listening to the opinions or proposals aspirations of the people but also by monitoring directly to the location of a proposal from the community (Compilation informant interviews; Bahri Siga, Zainal Abidin, Ali Rahman, Rusnani, June 2014).

In addition, Regent Mamuju Suhardi Duka (June, 2014) says that in planning the approach is self-reliance, by not creating dependency on the public but created a model, which means that the government's role diminishing returns and eventually create self-sufficiency, but not suddenly stopped but there are stages and the process undertaken to provide independence and actualize the potential resources in the community. In addition, this study found a low innovation from the community because just hope the government program. This condition indicates that independence has not been created (grassroots) in general, although the middle class has begun to capture the opportunities by investing in areas related to development planning.

Based on the analysis of core components and core values it can be seen that that the government's success in creating collaborative Mamuju regency in regional development is highly dependent and the extent to which the core components of core values as basis for implementing the planning process in a discussion forum. In other words, Mamuju district governments should be able to find the model that is most appropriate tentatif in planning its development so that it meets the aspirations of the community.

Source: Research results, 2014

Based on the results of the analysis of core components and core values that require collaborative in the process of collaborative interaction between government and government, or between government and the public found a few things that a weak point for Musrenbang in Mamuju. Based on the research findings note that from the cross tabulation conducted found three aspects that were not executed during the execution of the collaboration between the government and the public, namely:

1. The limited time for carrying out the process Musrenbang so that every actor involved in the planning process does not have the same opportunity to convey the aspirations associated with determining the direction, planning and development decisions
2. Qualification of human resources as the actors involved in the process of collaboration remains limited which is a representation of representation and delegation of authority enabling the bias of the goals and objectives desired by whom it represents.
3. The use of IT in the form of a management information system that has not been used, resulting in low access of information between all actors involved, including the public and the government.

Cross tabulation above shows research findings related to core component's core values as a basis for finding weaknesses in the process of collaborative development planning in Mamuju district to be the basis in formulating a tentative models are most appropriate to establish collaboration in Mamuju. Before the proposed tentative models in question will first be analyzed on field findings with regard to the components and the basic values of collaboration is in the process musrenbang in Mamuju regency.

1. Respect for people as a fundamental value Build Collaboration

The value of respect for others as a fundamental value in building collaboration. Research findings showed that local development planning in Mamuju regency value of respect for others remains the underlying value in the process of collaboration. Based on the analysis of research data through cross tabulation is known that the value of respect for others as one of the elements of a culture of collaboration in the form of equal access for all stakeholders in Musreimbang forum. Similarly, the ability to accommodate and equalize the leadership of a shared vision in determining priority programs of development planning, formulation of strategic vision is realized through coordination and intensive communication with all stakeholders associated with the desired strategic vision statement. It must be born from the aspirations of stakeholders musreimbang participants. A form of respect to other people on the team also found that the process of formation of a work team as a representative of the stakeholders to express their aspirations and coordinate in musreimbang forum. While the element of collaboration structures found in the mechanism of representation and delegation wewenagn and responsibilities in a very important element of an advanced collaboration is based on the value of respect for one another.

Based on the analysis, it can be concluded that build collaboration in local development planning in Mamuju regency done by promoting the value of the award to others as a fundamental value in building collaboration. Value appreciation to others can be found in the form of culture, leadership, strategic vision process team and collaboration structures.

2. Honor and integrity as a fundamental value Build Collaboration

Creation of an effective model of collaboration in order to encourage each stakeholder to be involved in the process can only be created if the value of the award and integrity as the underlying value of the fulfillment of the elements of collaboration. Analysis of the value of honor and integrity against known collaborative culture in the form of equal access in every forum participant can be realized. It is necessary to uphold the integrity pnhargaan and society by engaging in decision making and planning.

Similarly, the elements of collaborative leadership where leaders must be able to accommodate and create a unified vision if upholding respect and integrity of the community by engaging in decision making and planning.

Process Musreimbang one goal is to build a shared vision that comes from aspiration stakeholders can be built if upholding pnhargaan and integrity of the community by engaging in decision making and planning. This can also be done through the establishment and coordination process team to do if upholding pnhargaan and integrity of the community by engaging in decision making and planning. Thus the structural element of collaboration in the form of representative mechanisms and the delegation of authority to do if upholding pnhargaan and integrity of the community by engaging in decision making and planning.

Based on the analysis, it can be concluded that build collaboration in local development planning in Mamuju regency done by promoting the value of respect and integrity as a fundamental value in building collaboration. Value and integrity of the award can be found in the form of culture, leadership, strategic vision process team and collaboration structures.

3. Ownership as a fundamental value Build Collaboration

Models of effective collaboration to encourage each of the stakeholders to be involved in the planning process could be created if the value of a sense of belonging as the value of the underlying elements of the collaboration. The results of the analysis of cross-tabulation of the core components of core values and collaboration indicates a sense of community for their equal

access in the forum. In addition, because the leadership can accommodate and create a unified vision between government, private and public. Building a shared vision can be built because it comes from aspiration stakeholders. Another element is the establishment of processes and coordination team to do because people have a sense of ownership, including due to the mechanisms of representation and delegation of authority as an element of collaboration.

Based on the analysis, it can be concluded that build collaboration in local development planning in Mamuju regency done by promoting the value of ownership as a fundamental value in building collaboration. Values ownership can be found in the form of culture, leadership, strategic vision process team and collaboration structures.

4. The Consensus as a fundamental value Build Collaboration

Analysis of the value of consensus on the creation of an element of collaboration demonstrated equal access in the forum can give birth to a decision in the planning process (consensus). Another element is the ability to accommodate leadership and create a unified vision can give birth to a decision in the planning process (consensus). The decision also is based on the ability to build a shared vision that comes from aspiration stakeholders can give birth to a decision in the planning process (consensus).

This process is also born of the element of team building process and coordination can generate decisions in the planning process (consensus) in collaboration. The value of consensus was also found on the mechanisms of representation and delegation of authority can give birth to a decision in the planning process (consensus). Based on this, the important values that are also found in building collaborative element of local development planning in Mamuju regency is consensus as basic values embraced by all stakeholders, including government, private and public.

5. Full responsibility and accountability as a fundamental value Build Collaboration

Models of effective collaboration should meet the values and the basic component in the collaboration. Based on the findings of the study were analyzed using cross tabulation of the core components of core and value in Musrenbang forum appears on the sense of responsibility and akubtabilitas between all stakeholders. The sense of responsibility is shown in the form of a culture of collaboration as equal access in forums, leadership ability to accommodate and create a unified vision, building a shared vision that comes from aspiration stakeholders as well as team building and coordination processes spawned a sense of responsibility and accountability. Included is a collaborative structure that is found in the form of mechanisms of representation and delegation of authority. Based on this analysis it is known that the regional development planning Mamuju done by collaboration among stakeholders through the fulfillment of the values and elements of collaboration in the implementation of musrenbang.

6. Trust-based relationship sebagai nilai dasar Membangun Kolaborasi

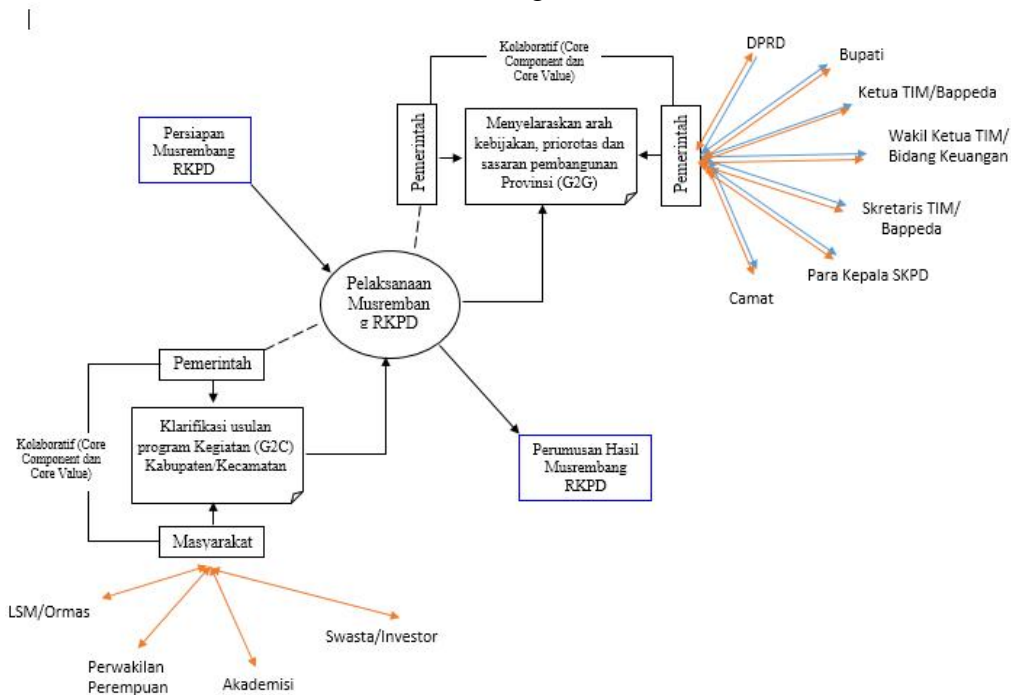

Collaboration can be done in regional development if it has a value of mutual trust between stakeholders in implementing the elements of collaboration. In the implementation of regional development planning in Mamuju regency based on the research findings note that the value of trust is found in the form of equal access in the forum as a form of cultural collaboration. While the collaborative leadership demonstrated by the ability to accommodate and the leadership of create a unified vision and build a shared vision that comes from aspiration stakeholders a strategic vision to be decided. These include the establishment of a team of collaborative process that can create a relationship of mutual trust. While in the organizational structure is found in the form of the mechanism of representation and delegation of authority from every element of stakeholders.

Based on the analysis, it can be concluded that build collaboration in local development planning in Mamuju regency done by promoting the value of mutual trust as a fundamental value in building collaboration. Values have to trust each other in the form of culture, leadership, strategic vision process team and collaboration structures.

7. Recognition and growth as a fundamental value Build Collaboration

Recognition and growth as a fundamental value in the collaboration process should be realized in every element of collaboration. Based on the results of cross tabulation analysis of research data found that in Musrenbang in Mamuju regency in the framework of regional development planning is found in the form of public recognition of the benefits felt. Besides leadership and create a unified vision can accommodate the needs of the community. Thus the strategic vision of collaboration is the result of a shared vision that comes from aspiration stakehokdgers. In addition to gaining recognition and growth perceived by stakeholders is done through a team building process and coordination as well as mechanisms of representation and delegation of authority as a form of collaboration structural element.

Based on the analysis, it can be concluded that build collaboration in local development planning in Mamuju regency done by promoting the value of recognition and growth as a fundamental value in building collaboration. Value recognition and growth can be found in the form of culture, leadership, strategic vision process team and collaboration structures. In brief, a model of collaboration can be seen in the following scheme:

Specification:

—> Line of Coordination and Consultation

—> Line of Collaboration and Empowerment

Figure 2. Schematic Model of Regional Development Planning Collaborative Mamuju Regency

Musrenbang scheme implementation process in the perspective of collaboration between the government(Regent and deputy regent, head of regency/city, elements of the central government, officials Bappeda and SKPD regency/city, chiefs of district), and the Society is

consists of delegates representing Musrenbang districts, academia, NGOs/community organizations, community leaders, investor/private as well as the representation of women. In the process of collaboration found that the regional development planning stages of documents and procedures for preparation of work plan development of the region in Mamuju carried out in accordance with established procedures, and in the process there is collaboration between the government and the government and between government and public.

Patterns of collaboration developed between the Government and the Government is the integration of various functions of bureaucratic pattern across policy arenas and levels of government. Bureaucratic function in question is a legislative function and yudikasi between local governments in this regard Mamuju regent by the local parliament. In this section occurs vertical relationship between SKPD to the district governments, as well as the vertical relationships between the District Government and the Provincial Government.

While the model of collaboration between the Government and the community as well as other parties such as the private sector and investors are patterns of integration and empowerment is to involve citizens and non-government agencies. This pattern follows the pattern of representation or delegation to submit proposals and suggestions of the local development planning through musrenbang. The process is built on the trust in the delegation or the designated representative of each stakeholder. This collaborative process is shown in the form of institutionalized discussions, negotiations between non-government groups and the government. Thus it takes the ability of the government as a mediator and facilitator of collaboration to be able to take the middle ground on the proposal and suggestions submitted by the delegation.

Discussion

Musrenbang carried out in three main stages before a decision is made that regional planning stages of preparation, implementation and formulation stages Musrenbang RKPD results. In the process there Musrenbang collaborative interaction between government and society.

Based on the three things that a weak point of the collaborative process during Musrenbang in Mamuju causes important to find a tentative model of collaboration that can cover the weaknesses of the aspect of time, qualifying human resources and IT. Limitations time owned by each of the actors involved in the collaboration can still run with the mechanisms of vertical and horizontal linkages relationship between government and society. While the fulfillment of time so that all stakeholders can convey the overall aspirations can be done through a pattern of IT-based relationship with building management information systems.

Human resources qualifications are not met, meaning it needs discussion institutionalized mechanism to be made, and negotiations between the groups for a process of perception and understanding of development planning. This is possible because at any stakeholders have had the trust and leadership tried to take the middle of the way in defining the planning and decisions. While the weakness of collaborative processes associated with IT-based information systems that need to be built has not been institutionalized. This is done to enable the relations between government agencies with citizen organizations and non-governmental organizations.

Based on the research findings note that in the process of collaborative development planning district Mamuju as an organization, the important role of every part in the planning process are in the organizational units of a particular start level level of village, district, SKPD of Regency, including non-governmental organizations community. Theories about the pattern of

the relationship between each of the elements in Mamuju district government carried out in the coordination of regional development planning. Musrembang is part of the process of coordination and communication between units in the organization of local government in the preparation of local development planning. In the fact, this research found an association vertical coordination, functional coordination either horizontally, diagonally, and territorial. This is reflected in the collaborative planning process development through Musrenbang conducted by the district Mamuju as the process of integrating the planning, discussion and exchange of ideas that is mutually beneficial.

Although basically the implementation of collaborative planning during this time conducted in Mamuju district government, leading to more collaborative model is not clearly defined. This is by the fact, the mechanisms do still very rigid and not flexible to the planning mechanisms and procedures included in the planning through Musrenbang as a manifestation of coordination structures both horizontally and vertically. If codified by Model Mintzberg that there are five important elements in building organizational design that leads to an effective organization in decision making.

In the Model Mintzberg, five elements are (1) operating core whereby employees or staff carrying out basic work-related activities of the organization, (2) strategic apex where the chief was given overall responsibility for the organization, (3) the middle line held by the linking between the strategic apex and the operating core, (4) techno-structure serves as an analyst that serves the interests of the organization and establish a specific standardization within the organization and (5) support staff who provide direct support services to the organization.

The fifth element in the context of this study refers to a model that analyzed Development Planning of the role of each of the elements in the organizational structure at musrenbang in Mamuju district. In detail can be seen in the following scheme:

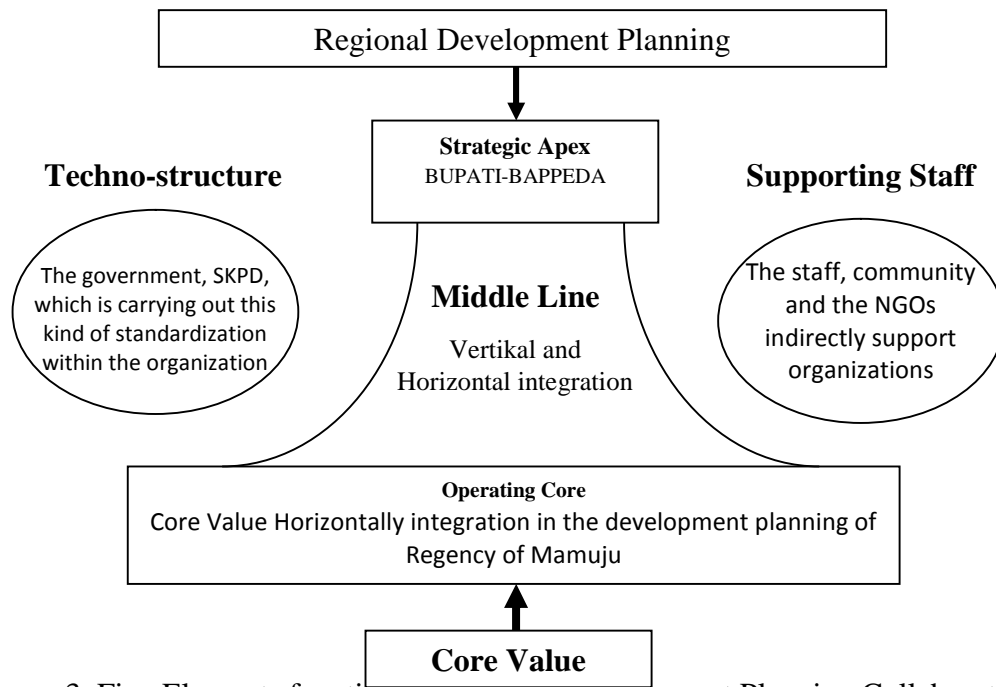

Figure 3. Five Elements function in Regional Development Planning Collaborative Mamuju

Apex Strategic role as a standard common set of priorities in regional development planning policy Mamuju, included in the standard detailing the allocation of resources and deciding how to mobilize additional resources, and summarize the information and evaluate the performance of development planning. This function is executed by the supreme leader under Mamuju regency policies that are in a leading sector in SKPD Planning Departement Mamuju regency.

Techno-structure conduct the evaluation process and accommodate the expert advice and input from other Part in decision making processes in regional development. This is done with reference to the standards development planning policy that has been set.

Core Value is the overall component considered in determining local development planning Mamuju district. This is reflected in the support staff, including NGOs and community to provide a variety of needs in planning, including information required in planning, including administrative support either directly or indirectly to the organization

Middle line role is to keep the horizontal and vertical integration in the planning process pembangunan area. Vertical integration means that there is coordination with the leadership or SKPD regions with the central government and provincial governments, and Horizontal integration means there is a tight coordination between SKPD with all stakeholders involved in development planning.

In Mamuju district development planning carried out with reference to the national policy and development planning policy level of South Sulawesi province. This means that the city district government has the authority to draw up development plans of each region with reference to the policies of the central government. It means that in this pattern is not likely to model Strategic Apex. The government only became responsible for the principal of the policy relating to regional development planning by involving stakeholders in implementation while Regent surrender or delegate its authority to the government officials.

Although in the context of a particular implementation of collaborative development planning in Mamuju district still has the characteristics of technocrat but the percentage is limited to a few dankebijakan rules set by the local government. Musrenbang mechanism itself is still more emphasis on supporting staff, including the involvement of the whole society stakeholders in development planning.

It is still possible to create a model of collaboration driven by the strong tendency components of core and core values during development planning Mamuju regency in progress. In Musrenbang clear mechanism contains vertical and horizontal collaboration. Collaboration vertical as noted previously led to the collaboration between local government and central government or between government district and district government. As for horizontal collaboration created through a process of collaboration between sectors inthe Regency. Based on the findings, the tendency of the collaborative process of regional development planning in Mamuju district can be seen in the following scheme.

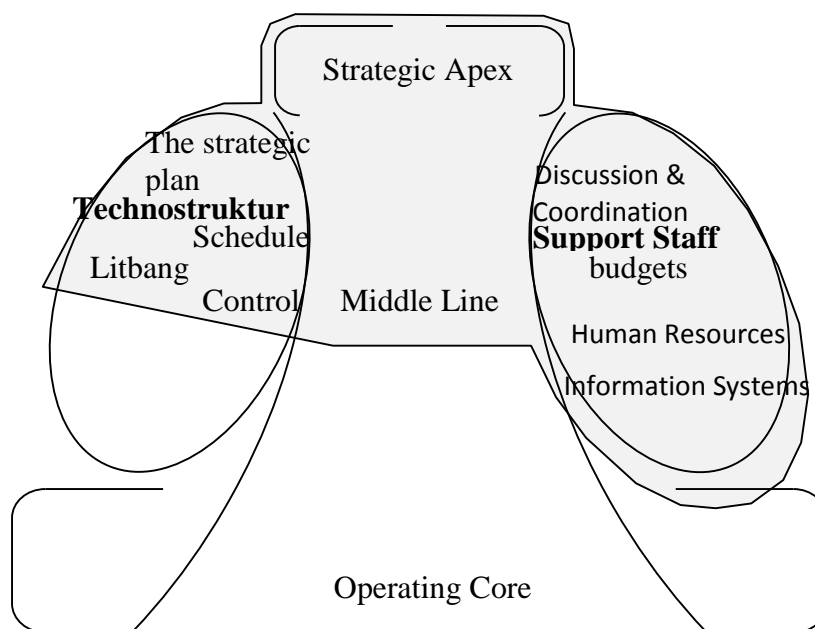

Figure 4. Tentative Collaboration Model Configuration Regional Planning Mamuju

Based on the schematic configurations can be known tendency of regional development planning Mamuju. To identify trends, it can be seen from the aspect that dominates the development planning process. According to Kates (2007: 8) The fifth design configuration is (1) Simple Structure, (2) Machine bureaucracy, (3) Professional bureaucracy, (4) Divisional Form, (5) Adhocracy.

Based on this, the research found that the regional development plan is likely to do an analysis of the trends in regional development planning process in Mamuju. The trend that will show the characteristics of the collaborative process of regional development planning. But when referring to the results of research, the more likely that enable is supporting staff, which means there is a process of collaboration between all stakeholders in the planning of regional development. As mentioned that if the trend in the Strategic apexes which means dominated by the role of policy makers that such planning is centralization, if dominated by the role of support staff means is collaboration, if dominated by Technostructures mean to be Standarization, and if it is dominated by Operating Core, means is professionalism.

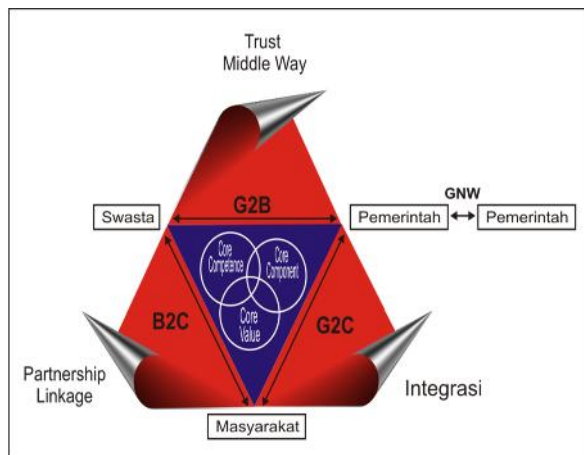

The dominance of the support staff found on aspects Discussion and coordination is done on the mechanism Musrenbang ranging from musrenbang village, District and the Regency. There are also representatives of other elements that are also involved in the planning process Mamuju regency. Another aspect is the availability Human Resources and budget are in the process of regional development perencanaan. This is in line with Mitzberg that the tendency of the support staff is determined by payroll and pricing as an important element in the decision making.

Furthermore, it can be determined that the most ideal configuration is Adhocracy. Adhocracy characterized by a high horizontal differentiation, vertical differentiation are low because many levels of administration that would limit the organization with the ability to make adjustments. The need for monitoring is also minimal because the professionals have live up to its role as desired by management. This is reflected in the emergence of some stakeholders as a representative of informing in musrenbang activities. Vertical and horizontal differentiation can

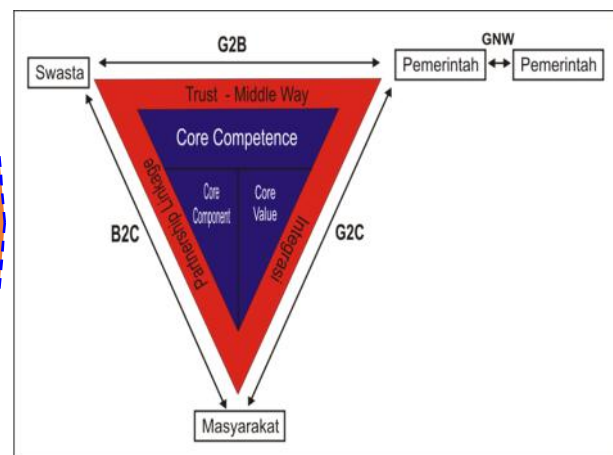

be realized through the reduction of the dominance of the central government to the regions and included the establishment of horizontal coordination between SKPD in Mamuju local governments in establishing regional development planning.

Thus, it becomes critical to formulate about the most effective model of collaboration in regional development Mamuju district. The formulation of the collaboration models need to consider that in the process of collaboration must contain the principle of integration by including the citizens to participate in the development planning process. Besides these values has become one of the many values that must be contained in a collaborative process. The integration is built still refer to a vertical pattern horizontal in their respective capacities. This pattern will guarantee the establishment of relations between the central government and local governments, including local governments to the level of the lowest leaders. Kararakteristik key to this model is a relationship of trust, partnership and integrative. According to Weber et.al argued that successful collaboration emphasizes the integration of various functions of the bureaucracy, cross-policy arena, and levels of government and involving citizens, communities and non-governmental organizations in problem solving and implementation process.

The collaboration model characteristics will create a form of collaboration that can direct the development planning process involving stakeholders include bureaucratic functions and cross-cutting policy by fostering links with the overall partnersihp stakeholders involved in the development planning process. This model is still considering building horizontal and vertical communication between government and society.

Based on Figure 5, it can be argued that the model of collaboration in the area of Development Planning to consider the factors that affect the likelihood of collaborative creation of better collaboration in the development planning process. In the model of the stakeholders involved are the government, private sector and communities each have roles and functions to collaborate to produce the desired development planning together.

In the process, in fact, a collaborative relationship in the form of a line relationship of coordination or consultation, which would be the building shows the interaction of both sides or more and does not tend to be the more decisive one than the other side. For that we need still consider the core component and core values of collaboration is awakened. According Agranof and Mc. Guire (2003:35) asserts that the higher the interdependence between actors or organizations either vertically or horizontally, the greater the need to collaborate. The interdependence which will result in actions made together and worked together well. For that, Pomeroy and Berkes (1997:466), suggests that there is a reciprocal relationship between the government, public and private have their respective roles. This is in line with Nyachhyon (2006:22), which suggests that there are three main categories of relationships between stakeholders in a collaborative manner, namely, 1) Collaboration between government and the private sector (G2B), 2) Collaboration between government and citizens (G2C), and 3) collaboration between the private and public (B2C), then in the process of local development planning in Mamuju found an association with the four categories of the collaboration between the government and the government (GNW). The explanation of each collaboration between pemerintah, public and private, as follows;

a. Government to Business (G2B)

Collaboration between government and private Mamuju PTT Exploration and Production Malunda Limited which is an oil and gas company of Thailand (Attachment 12) and PT. Surya Raya Lestari (SRL) is a palm oil company in Mamuju district as well as between the Mamuju District Government with local NGOs.

The shape of the three stakeholders cooperation agreement contained in the form Contractor Contacts Cooperation (PSC) PTT Exploration and Production Malunda Limited, the three parties agreed to cooperate in efforts to empower communities in local development planning Mamuju. PTTEP local NGO as an institution that is experienced in community development programs. The process of empowerment through Siola program (Stimulation of the Child layananana Integration Optimization) requires the participation of NGOs as agents of change to implement assistance to the community in local development planning process to find a solution to the problems faced.

While collaboration between the government and NGOs is realized in cooperation with, among others; form of training, dissemination, seminars and other activities that are increasing the capacity of the community in local development planning.

Seeing the context of government relations and NGOs in regional development planning, the relationship between the two are co-management advocative, where NGOs assist governments, provide suggestions and input in musrenbang and regional development planning discussion forum. The Government considers that the cooperation with NGOs merupakan suatu favorable to overcome the limitations of management and budget constraints in accommodating the needs of society. Relations between the government and the private sector also occurs at the level of co-management informative, where governments provide information to PTTEP

(private) about community needs in the health sector and the private education take on the role to be able to provide a solution to these problems by using CSR funds.

b. Government to Civil Society (G2C)

The commitment and government support Mamuju in guarding the ideas and suggestions from the community or delegations and representatives also presented in the proposal. In this process the submission of the proposal remain through Musrenbang so it needs to be appreciated. In the process, there is still a fact that in addition to human resource there are still some who do not understand the issues related to the proposals and suggestions of the public or delegate appointed following the proposal musrenbang so that sometimes do not respond adequately. The level of appreciation of the government to be very low with some factors such as budget adjustments proposed by the government and non-compliance with the district or provincial government programs.

This collaboration is still necessary to do better, especially between SKPD while considering aspects of core and core components of value. There is still a tendency of the political overtones are slightly more dominant against the decision of the collaboration between SKPD in Mamuju in an appreciation of the proposals need to be eliminated. Each horizontal collaboration on education needs to build better and so we need increased support adequate human resources. So the researchers concluded that the collaboration that exists between the government and the public on the co-management consultative, where the public to provide input padatahap musrenbang opinions or ideas and planning discussion forum to the government, but the decision entirely on the government to deliver documents RKPD Mamuju regency. As well as the co-management cooperative, where people dilibarkan by the government in planning poses (musrenbang and discussion forum) to plan and monitor the development of Mamuju. After the process perencanaan telah poured in product planning, the government inform the public about the formulation of policies that have been planned to be held on musrenbang cope run, this relationship is called by Pomery and Berkes (2006:13), as the relationship CVO-management instructive that the government inform society, for example; on formulas pemerintah rencanakan resource management to be implemented.

c. Business to Civil Society (B2C)

Collaboration between the public and private sectors can dilihat on the cooperation between communities and PT Surya Raya Lestari (SRL). PT SRL giving attention to the problems faced by the people who live around the company.

The role of government is important, especially to overcome masalah funding. Implementation of Law No. 40 of 2007 on Limited Liability Companies and the Law No.25 of 2007 on Investment which requires companies, especially companies that utilize these resources to spend corporate social responsibility. Under the regulation, it is expected that the private sector uses natural resources in conducting their business in order to further enhance its role in addressing social and environmental permasalahan through grant policy of corporate social responsibility or CSR (Corporate Social Responsibility).

Implementation of the use of funds of CSR in the village of Polo Pangale (Appendix 11), which with the fund, to help the villagers Polo Pangale to overcome the problem of seasonal flooding that resulted in public service at the District Office Sampaga and activity at SMAN 1 Subdistrict Sampaga and SMPN 1 Subdistrict Sampaga disturbed.

Collaboration the relationship with NGOs as an extension of the PT. SRL with the community is assistance (co-management advocative), where NGOs play a role in empowering

communities, to accompany and to transfer knowledge to masyarakat so that communities are able to plan and solve problems faced.

d. Government Networking (GNW)

Collaborative interaction between the government and the government in this regard on education with the aim to align regional development priorities and goals for the district / city with policy direction, priorities and goals for the development of the province. When ideas, ideas and input from the community, rural/village to the district governments filed in District Musrenbang is a form of submission of proposals and ideas to SKPD, then the process of collaboration is also intended to sharpen the performance indicators of priority programs and activities of the district/city; and agree on priorities for regional development and regional priority programs and activities. This process is understood as a process which is a vertical relationship cooperated and a consultation among government relations.

In order to enhance collaborative model that was built in Mamuju, it is necessary formulation of a model of collaboration to create the shared commitment of all stakeholders both between the government and the public or by the private sector, including the relationship between the government staff in the government agencies and between SKPD. Build collaboration is critical to creating a partnership linkage, which integrates well by promoting confidence trust and the middle way. This is because often the collaboration between SKPD and between staff and management in collaboration SKPD not wake up in the planning process are made in a single institution. Sometimes still planning process is not fully involve all task forces / work agencies are available. Despite the fact that there is a process of internal meetings within the agency to assess a particular program, but was not able to accommodate and involves all components in the institution. Similarly, if it had been on the horizontal collaboration with other officials.

In creating a partnership linkage, which integrates well by promoting confidence trust and the middle way in the process of development planning in Mamuju district requires not only core components and core values as described by Marshall (1995:12) but from the findings of the study, the researchers consider it necessary to add core competence, it is based on the definition of some expert Del Castillo (2005:48); Kamidin, (2010:79); Setyowaty, (2010) says that the competence has the same meaning as the word ability, skill or expertise.

The low quality of human resources both apparatuses become collaborative leadership and team processes and people who become participants and representatives of the community in its territory in the process of regional development planning in Mamuju illustrates the need for human resource management competence based on local development planning in Mamuju district, where the management of human resources is a combination of skills, knowledge, attitudes and behavior that is owned by an individual to be able to carry out the duties and role of the position occupied in the team productive and professional manner. This is in line with the opinion of Lertputtarak (2012:90-91) that the essence of the competency-based HR management looked at individuals from the aspect of personal quality.

Competency-based human resource management aims to deliver results in accordance with the organization's goals and objectives, and performance standards that have been set. concerning the competence of each individual to do the job or take a decision in accordance with the roles and responsibilities within the organization that are relevant to the expertise, knowledge and capabilities (Setyowati,2010). This is in line with the reinforced by Kamidin Donald (2010), which introduced the theory of competence is based on the theory of the window, that each competency of the individual observed from four sides shaped windows, namely; education,

skills, work experience, and mastery technology). The essence of the theory of the window is the competency that HR has skills supported by a mature work experience is a human who has the capability competitiveness.

In the prototype model of collaboration 3C (core component, core values, and core competence) competency-based padaproses development planning in Mamuju, the stakeholders involved are government, private and community each have the ability to carry out its role and functions in collaboration to produce a development plan together.

Conclusion

The conclusion of this study is in order to enhance collaborative model that was built in Mamuju, it is necessary formulation of a model of collaboration to create the shared commitment of all stakeholders both between the government and the public or by the private sector, including the relationship between government officials in the government and between SKPD. The prototype model of collaboration 3C (Core component, Core Value and Core Competence) in local development planning in Mamuju district can build commitment among stakeholders including integrated well with fixed forward linkage partnership, trust and the middle way.

COMMUNITY EMPOWERMENT THROUGH INFORMATION

Siti Widharetno Mursalim, S.IP., M.Si.
siti.widharetno@yahoo.com
Sangga Buana University, Bandung, Indonesia

Abstract

The term empowerment often heard in government programs. Empowerment is defined as helping people to help themselves. More can be said as efforts continued and the process of how to function as a 'power' (driving's force) in achieving the goal of self-development. However, in its development, community empowerment is often juxtaposed with economically empowering. Though empowers can be done in various aspects not only economic ones.

In the midst of media information, the things that need an empowerment is empowering information. Empowering information is a communication process constructed by society in informing what happened to him and his environment. Empowering information society is built from a concern for others or the environment. The concern of empowering information society is to bring others, rather than to think oneself as in the economic context - before others, yourself first established.

In the context of information, now the world community must treat information not as a means to get it, but as a means to convey something. Before the information age, only people who have a lot of information can rules the world, but now we are in the century of creativity, it means anyone can fill (providing) information then he is deemed to exist by the world.

Therefore, in this century, people are not only satisfied with access to the information obtained easily, but also they should be able to provide the content (information) to others. In other words, productivity is highly demanded by today's media so that the public are taken into account and are considered to exist. This is where the information comes to media functions as a bridge between the community - not the communities and countries. As a means, the information media of course here comes not as an entity that is dead, but alive and provide solutions to community problems that occur during this time. Which became the capital for the community is their control over socio-cultural conditions that exist in the vicinity. With this capital they will understand what needs to be shared to the public, what their problems are and what their potential. In building synergy, what needs to be assisted by others and what is required of others but in their village.

Keywords: Empowerment, Community, Information.

PREFACE

In the past, information gaps can be placed as one of the indicators of poverty. "The gap indicates the inability to access information and use the information that will have an impact on the welfare of a person".

The lack of public access to information needed can be caused by two main problems. First, because the information is still exclusive (information is not distributed to the public intentionally). The lack of public access to information of this type need to be assisted by the government to disseminate information

more "expensive" to the public, for example through brochures, newspapers, radio and television. The second is the weakness of their own communities in accessing information that is already available in their environment. It can be caused by low motivation of people to access the information. In the second case this empowerment can be achieved by the importance of the information campaign for the public.

However, the current problem is not just limited to whether or not a community is able to access and use the information, but

the public in this case must position itself as a source of information.

How many policies of the government that can not solve the problem in the community and then not respected by the community. It was due to the government's ignorance of the condition of society. For that people here must be able to convey information related to itself and the environment, could be about culture, current issues in the region, the potential of the region, and so forth.

There are currently too many Institutions of State or Government in implementing the program of activities included or on behalf of community empowerment and the more concern that the knowing process, procedure, plan activity until the execution is only limited to the Institute.

Many other Institutions, NGOs, interest groups have not been so understanding about the concept of empowerment is implemented so that there is prejudice against the majority community empowerment programs that have been implemented, because of the principles of transparency and participation of institutions or other components of society are less applicable to the maximum.

Before examining further, there needs to be a common understanding of empowerment so that all parties can understand the true meaning, which is expected in any implementation, monitoring and decision-making that is given can be understood thoroughly and in accordance with the concept of community empowerment.

Community empowerment is actually a concept of economic and political development which summarizes various social values. This concept reflects the new development paradigm, namely that is "people centered, participatory, empowering, and sustainable".

In the concept of empowerment, the community is seen as subject who can

change, and therefore needed a better approach known by the acronym ACTORS. consisting of:

1. Authority, empowering done by giving confidence to the people to make changes that lead to improvements in the quality and standard of their lives.
2. Confidence and competence, empowerment can begin with cultivating and fostering confidence and viewing capabilities that communities themselves can make changes.
3. Truth or belief, to be empowered, society or person should be sure that he has the potential to be developed.
4. Opportunity, which gives people an opportunity to choose everything they want so that they can develop themselves according to their potential.
5. Responsibility, namely the need to emphasize their sense of responsibility in society to the changes made
6. Support, the support of the various parties to the process of change and empowerment can make society 'better'

LITERATURE REVIEW

The term empowerment is a translation of the English "empowerment" can be interpreted as a process to give power or authority to authorize. According to Chambers in Huraerah, this concept represents a new paradigm of development, which is "*people-centered, participatory, empowering, and sustainable.*" (Huraerah, 2011: 95). Furthermore, empowerment is an effort and the process of how to function as a '*power*' (*driving's force*) in achieving the goal of *self development*.

Associated with the definition of empowerment, Dharmawan (2007) citing the opinion of Fear dan Schwarzweller (1985) which suggests that empowerment is understood as:

"a process in which increasingly more members of a given area or environment make and implement socially responsible decisions,

where the probable consequence of which is an increase in the life chances of some people without a decrease (without deteriorating) in the life chances of others”

In this connection, (Robbins, Chatterjee & Canda, 1998) briefly stated as follows:

Empowerment, “process by which individuals and groups gain power, access to resources and control over their own lives. In doing so, they gain the ability to achieve their highest personal and collective aspirations and goals”.

Therefore, empowerment can be equated with the acquisition of the power and access to resources for a living (Pranarka, 1996). In addition, the concept of empowerment was also expressed by many of them by Rappaport (Weissberg, 1999) interpret:

“Empowerment is viewed as a process: the mechanism by which people, organization and communities gain mastery over their lives.”

Schneider (1999) state that:

“Empowerment goes well beyond the narrow realm of political power, and differs from the classical definition of power by Max Weber, Empowerment is used to describe the gaining of strength in the various ways necessary to be able to move out of poverty, rather than literally “taking over power from somebody else” at the purely political level. This means, it includes knowledge, education, organization, rights, and ‘voice’ as well as financial and material resources.

Hacker, 1999 state that:

“Empowerment may be understood as a process of transformation. This includes the transformation of the unequal power relationship. Unjust structures of society, and

development policies. Empowerment also means transformation in the sense of changing and widening of individual’s opportunities”.

Osmani (2000), defines empowerment as:

“Empowerment may, socio-politically, be viewed as a condition where powerless people make a situation so that they can exercise their voice in the affairs of governance.”

With the limitations above, Dharmawan (2000) define the meaning of empowerment as:

“A process of having enough energy enabling people to expand their capabilities, to have greater bargaining power, to make their own decisions, and to more easily access to a source of better living.”

The concept of empowerment is a concept of planned change. Social change is a study of social dynamics. The term social change were taken from the English language, namely “social change”. At first, social change is defined by Ibn Khaldun in Martono as follows, "The community has historically moved from nomadic communities towards people (living) settled (referred to as the people of the city)." (Martono, 2012: 1-2).

Wan Hasim in Garna defines, “Social change as the channel adjustment applies to patterns of interaction between individuals as a social unit in society.” (Garna, 1992: 13). Furthermore Moore in Anwar defines, "Social change as an important change of the social structure includes the patterns of behavior and social interaction, including norms, values and cultural phenomenon." (Anwar: 2007: 51). As according Martono, "Social change can be imagined as the changes that occur in or cover social system. More precisely, there is a difference between the state of a

particular system in a different time period." (Martono, 2012: 2).

Regarding social change Sztompka explained, "The basic concepts of social change involves three things: first, a study of the differences; second, studies should be performed at different times; and third, the observation in the same social system. (Martono, 2012 : 2).

Furthermore Martono explained that, "To be able to study social change, we have to see any difference or change in condition of the object that becomes the focus of the study. Second, the study of changes should be seen in the context of a different time, in other words, must involve a comparative study in a different time dimension. Third, the objects that are the focus of the comparison must be the same object." (Martono, 2012: 2-3).

Martono also explained, "The time dimension in the study of social change include the past tense (past), current (present), and future." (Martono, 2012: 3). Studies of social change observed changes in the conditions of the past and the present. Studies of social change may also include the condition of the future or make projections about the future to study the history of searches, and supported by a variety of data (statistics) are available on the condition of the past and present.

So that people can make changes to the social, Hagen argues that, "The process of change is closely related to creative individuals, which creates a special kind of social relationships all the time, for that social change will not happen without a change in personality." (Anwar, 2007: 51). Hagen theory, put education in a strategic position in social change or development. According to Hagen, "the starting point of social change is the education to the community in order to enhance the role of individuals and communities through the

utilization of their potentials." (Anwar, 2007: 51).

RESEARCH METHODS

The method used in this research is descriptive method. This descriptive research method according Sugiyono :

"Descriptive research is research conducted to determine the value of an independent variable, either one or more variables (independent) without making comparisons, or connect between one variable with another variable." (Sugiyono, 2007:11).

Data collection techniques used in this study is a literature study (library research), namely the collection of data by studying various literature books and documents related to empowerment.

DISCUSSION

Community empowerment is the embodiment of the nuances of community capacity building in human resource empowerment in order to understand the rights and obligations in accordance with the status and role in society.

The need for empowerment is from reality that position of the majority of the people in demanding their rights and perform their duties with less demonstrated their access to several facilities including the information is still low.

Basic interpretation of people-centered development is the assumption that humans are the main targets and the source of the most strategic. Therefore, the development also includes a concerted effort to improve the capabilities and human potential and mobilize their interest to participate in the decision-making process on matters that have an impact on them and try to promote human strength, not perpetuating dependency that creates a relationship between the state bureaucracy to society.

Proposition above also indicates that the core of people-centered development is the empowerment which lead to the independence of the community. In this context, the dimensions of public participation was very important. Through the participation of the people and their struggle ability to generate and sustain growth into a strong collective. But the participation here means not only public involvement in the implementation of community development or simply placed as an "object", but must be followed by public involvement in decision-making and development planning process, or the public as well placed as a "subject" the ones who determine the course of development. Because of the high rate empowerment and consider initiatives and local differences. In an effort to empower the community can be seen from three sides, namely:

First, create an atmosphere or climate that allows the potential of developing societies (enabling). Here the starting point is the recognition that every human being, every society, has the potential to be developed. That is, no society completely without power, because if so would have become extinct. Empowerment is an effort to build the power to encourage, motivate, and raise awareness of their potential and strive to develop it.

Second, strengthen the potential of community-owned or power (empowering). This is necessary in order to take more positive steps, aside from just creating a climate and atmosphere. These include the strengthening of concrete steps, and involves the provision of various inputs (input), as well as opening up access to the opportunities that will make people become empowered. Third, empower also contain *ati protect*. In the process of empowerment, it must be prevented that the weak are getting weaker, because in the face of strong *kekurangberdayaan*. Therefore, protection and siding with the weak nature

of fundamental importance in the concept of community empowerment.

The main approach to the concept of empowerment is that people are not used as objects of development projects, but is the subject of its own development efforts.

There are some biases thinking about community empowerment leading to the goal of empowerment was not reached, are as follows:

The first bias is the tendency to think that rasioal dimension of development is more important than moral dimension, the dimension of material is more pentingdaripada institutional dimension and the economic dimension is more important than its social dimension. As a result of the assumption is that the allocation of development resources be prioritized according to the same mind.

The second bias is the assumption that the development approach that comes from above is more perfect than the experience and development aspirations bottom level (grass-roots). As a result of development policies become less effective because it takes little account of the real and living conditions in the community.

The third bias is that many community development at lower levels require more assistance than the material technical and managerial skills. This assumption often results in waste of resources and funds, for lack of preparing the technical and managerial skills in the development of human resources and lead to more people at lower layers left behind.

The fourth bias is the assumption that technology introduced from above is always far more powerful than the technology that comes from the community itself. The presumption can thus lead to the development approach that on the one hand too pushy and generalize certain technology to the entire area of development in the country that is very broad and diverse stages of this development. On the other hand, the

development approach too ignore the potential of traditional technologies with little improvement and renewal may be more efficient and more effective to be used in comparison with imported technology.

The fifth bias is the assumption that the institutions that have developed among the people tend to be inefficient and less effective even inhibit the development process. This assumption makes the institutions of society in the bottom layer was underutilized and lacking any effort to renew, strengthen and empower her. Even the fact there is a tendency to introduce new institutions that are foreign and are not always in line with the values and norms of society.

The sixth bias is that people in the lower layers do not know what she needs or how to improve its lot. Therefore, they must be guided and given instructions and does not need to be involved in the planning despite regarding itself. As a result of this assumption many development projects aimed at the people, but did not hit the target, does not solve the problem and even detrimental to the people. This biased view of society as an object and not the subject of development.

The seventh bias, with regard to the above, is that the poor are poor because of stupid and lazy. Thus, how to handle such paternalistic must treat the ignorant and lazy, and not give confidence. Assuming such a problem poverty is seen more as a social enterprise (charity) and not the efforts to strengthen the economy.

The eighth bias is a measure of efficiency in development of applied, for example ICOR, mean that the investment must always be directed to immediately produce for growth, while empowering the community, will generate growth and even a source of growth more sustainable, but generally within a time frame longer. The presumption is thus moved from the concept of development was very technical and do not understand the social and

cultural sides of the development and the potential that exists in people as strength development.

The ninth bias is the assumption that the agricultural sector and the rural sector is a traditional, less productive and have a long investment period, because it was less menjharik to conduct large-scale capital in the sector. In connection with that, bernitra with farmers and small enterprises in the agricultural sector and rural areas deemed unprofitable and high risk. This assumption has also resulted in prejudice and hamper efforts to seriously build farms and small businesses in rural areas.

The tenth bias with regard to the above, is the imbalance in access to funding sources. Propensity to save on the people, which is quite high in Indonesia as reflected in the ratio of private savings to GDP (over 30% is among the highest rates in the world), often was not offset by the investment policy through the banking sector is more concentrated on large investments, and most of them enough to invest in the property sector that is highly speculative. Increasing investment activity tends to be concentrated in urban areas, in the industrial sector is actually heavily subsidized and protected, which consequently also encourage urbanization. Taiwan and Japan's previous experience shows that investment in rural areas can improve growth and at the same time causing its economic equity firm.

From that biases can be seen that some people are positioned as an object, and in this case the community should be explored its potential, given the confidence so that they can inform to the world associated with their existence as well as their pot.

Aditya (2003), revealing the various dilemmas in the implementation, first, it must be recognized since the early 1990s, the Indonesian government began to develop programs and community empowerment to alleviate and reduce

poverty (poverty Alleviation and poverty reduction). These efforts are faced with differences in understanding of poverty. On the one hand, poverty is seen as an absolute state with kriterian that have been defined and uniform and then used as the basis for preparing projects pengentasannya. In fact, giving his relative poverty. Poverty is also about how the social conditions mendefinisasikannya. A person may not be poor in community life and cultural specific geographic although in absolute terms are defined as poor. This means that the efforts undertaken emberdayaan not deal with the fact that for sure.

Second, with regard to relativity in measuring the success of empowerment is a separate issue, because of the success itself is still debated in the context of technical and substantive. Evaluation of the empowerment project is almost always done by measuring the success of which relates to how a program implemented and how the planned budget can be implemented, but often overlook the substantial side of the goal of empowerment itself. Meanwhile on the other hand the substance of its own empowerment continues to be debated concerning the understanding of empowered community and who defines it.

Forms of empowerment that is the provision of aid is often just does not answer the problem powerlessness. Relief is usually a sum of money actually makes the effort to empower spawned a new dependency. Even forms of assistance provided is actually intended as a trigger for the rise of empowerment, but often bore the mentality of the recipient and not driving in a society that become target.

Adhering to the principle of community empowerment aimed at society's independence and improve their quality of life through information, then the direction of the independence of society is the form of assistance to prepare the

community to be able to produce information.

Fourth, regarding the sustainability of the program / activity. On the one hand, many programs / activities carried out by developing mobilization government or pseudo participation of target communities where invited, persuaded, even ordered to participate in empowerment projects were carried out, it was not awake sustainability. On the other hand, empowerment by organizations outside of government try to answer these problems with thinking that states need to develop a critical awareness in the community in the form of institutional strengthening, political education, and advocacy efforts. Under certain conditions these efforts were able to answer the problem of dependence but in certain circumstances it is also an effort to be slow moving.

Fifth, agendas that are political or institutional strengthening should chosen as second agenda after several agendas that address issues related to the needs of the stomach. This means that society is really poor will think pick empowerment nuanced economic aid first rather than thinking about how to move in and trying to be independent.

Sixth, by empowering with the partnership becomes quite interesting phenomenon. Many parties involved try to establish cooperation towards empowerment. However, this program will be in vain if each of the parties are not in a similar capacity. Domination will make cooperation becomes unbalanced, the consensus is not manifest in justice, and in fact it is very difficult to encourage forms of partnership and cooperation aligned in position.

Seventh, the issue of globalization, confront the country about the importance of the market and efforts to shrink the role of the state. Even though. The powerlessness of the community is often caused by a market-oriented development.

This condition will give birth to a new helplessness in which the state will only be a spectator only. Pierra Bourdie criticism on this understanding states that the world will be in the condition as Darwin's theory of natural selection (the survival of the fittest) where the helpless will increasingly empowered.

Eighth, in the context of Indonesia, the welfare state has actually been designed through the thoughts of the founders of the nation embodied in the Constitution of 1945. The dilemma faced by Indonesia is because we already have a concept but always deny to make it happen.

For that we need to understand the meaning and significance of empowerment and community empowerment.

Empowerment in the context of society is the ability of individuals who fused in the community and build community empowerment is concerned. A society which the majority of members are physically and mentally healthy and educated and strong and innovative, of course, have high empowerment, however, in addition to the physical value of the above, there are values intrinsic in a community which is also a source of empowerment, such as family values , mutual cooperation, effort and typical of Indonesian society (and some other countries) is diversity. Community empowerment are the elements that allow a society to survive (survive), and in terms of dynamic develop themselves and achieve progress. Community empowerment is a source of insight into what in politics at the national level is called the national security.

Empowering communities is an attempt to increase the dignity of society which in the present conditions are not able to escape the trap of poverty and underdevelopment. In other words, is to enable and empower the community's independence.

Within the framework of the thinking, efforts to empower communities can be seen from three sides, namely:

First, create an atmosphere or climate that allows the potential of developing societies (enabling). Here the starting point is the recognition that every human being, every society, has the potential to be developed. That is, no society completely without power, because in that case would have become extinct. Empowerment is an effort to build it by pushing the power to motivate and raise awareness of their potential and strive to develop.

Second, strengthen the potential or the power possessed by the people (empowering). This is necessary in order to more positive steps, instead of just creating a climate and atmosphere. Retrofitting includes real steps, and involves the provision of various inputs, as well as opening up access to the opportunities that will make people become more and more empowered. In order to empower these efforts are very fundamental sources of economic progress such as capital, technology, information, employment and markets. Put in the form of empowerment concerns the development of infrastructure both physical, such as irrigation, roads, electricity, or social such as schools and health care facilities, which can be reached by the lowest layers down to the next these results can be a source of information to share with wide community. For that there needs to be common programs that apply to all, not always can touch this society. Empowerment is not only involved the strengthening of individual members of society, but also institutions. Empowerment must inculcate the values of modern culture such as hard work, thrift, openness and accountability is a staple part of this empowerment. Similarly, reform social institutions and its integration into development activities and the role of the people in it. What is important here is the

increase participation of people in the decision-making process concerning themselves and their societies. Therefore, community development very closely related to stabilization, familiarization and practice of democracy.

Friedman (1992) state :

He empowerment approach, which is fundamental to an alternative development, places the emphasis an autonomy is the decision-marking of territorially organized communitie, local selfreliance (but not autarchy), direct (participatory) democracy, and experiential social learning”.

Third, empower also contains the meaning of protection. In the process of empowerment, it must be prevented that the weak are getting weaker, because of power to face of strong opponent is not enough. Therefore, the protection of the weak and siding with the urgent nature of the concept of community empowerment. Protects does not mean isolating or covering of interaction, because it will actually dwarf the small and weaken the weak. Protecting should be seen as an attempt to prevent competition is not balanced, and the exploitation of the strong over the weak. Community empowerment is not to make people become increasingly dependent on a variety of delivery programs (charity). Because basically what can be enjoyed, must be produced on one’s own account (the results of which can be exchanged with other parties). Thus, the end goal is the community’s independence, enable and develop the ability to advance themselves toward better life ongoing basis.

Community empowerment processes related to internal and external factors. in this connection, although internal factors are very important as a form of self-organizing of a society, we also need to give attention to the external factors. Community empowerment process should also be accompanied by a team of facilitators multidisciplinary to mobilize the

potential of the community and helping to provide scientific about how they can share activities, culture, and information that is owned by the local community through various forms of both activities and the media. Assistance Teams is one external factor in community development. The role of the team early in the process is very active but will be reduced gradually during the run up to the community has been able to continue its activities independently.

Technically, initiatives in community development team will gradually be reduced and eventually stopped. The role of the facilitating team will be met by the group management or other parties deemed capable by the community. The time the facilitator team need to retreat depends collective agreement that has been established since the beginning of the program with citizens.

Based on some of the experiences reported that the facilitating team to do a minimum of three years after the process began with the stage of socialization. Although the team had retreated, its members still play a role, namely as an advisor or consultant when required by society.

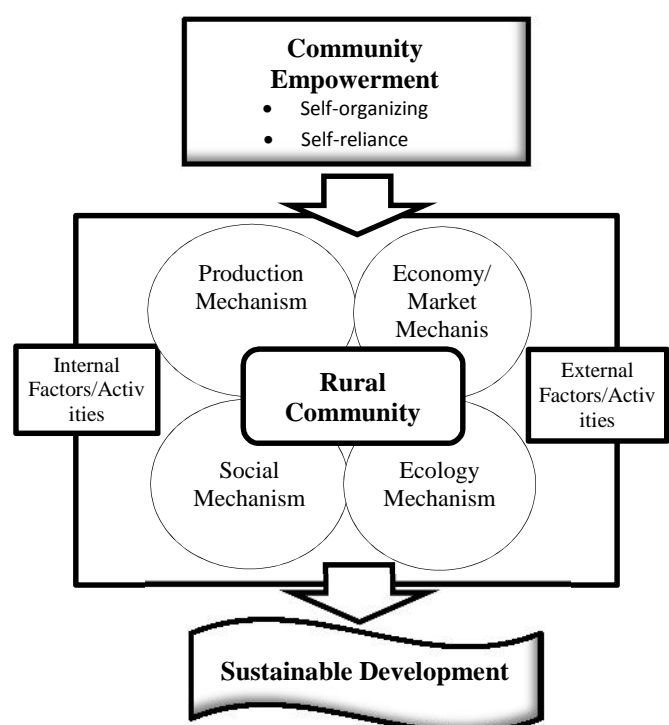

Figure 1. The Process and The Linkage of Community Empowerment and Sustainable Development (Subejo dan Supriyanto, 2005).

Although the team had retreated, its members still play a role, namely as an advisor or consultant when needed by the community. Schematically, the mechanism of division of roles according to the period between the team and the community in the process of community empowerment can be seen in Figure 2.

The beginning of process → Team Retreat (Time)

Figure 2. The Processes of Dividing Role in Empowering Communities (Subejo dan Supriyanto, 2005).

Furthermore, Subejo and Supriyanto (2005) said that the empowerment of the community as one of the central themes in community development should be placed and oriented in the same direction and a step with a new paradigm of development approaches. Old development paradigm that is both top-down needs to be orientated towards the bottom-up approach that puts farmers in rural communities or as center or by the Chamber in Anholt is often known by the slogan "put the farmers first"

According Nasikun (2000) in Subejo and Supriyanto (2005), associated with the paradigm of a new development must also be the principle that development must first and foremost be done at the initiative and boost the interests of the public, the public

should be given the opportunity to be involved in the whole the planning and execution of construction, including the selection and control of infrastructure assets so that the distribution of profits and benefits of the success of a community development program is determined by several key components or aspects, as recorded by Subejo and Supriyanto (2005).

Important aspect in a community empowerment program is a program organized by the community, able to answer the basic needs of society, to support the involvement of the poor and other marginalized groups, constructed from local resources, sensitive to the values of the local culture, environmental impacts, not creating dependency, sharing relevant parties involved (his government agencies, research institutions, universities, NGOs, private sector and other parties), and implemented in a sustainable manner.

In harmony with the stages of development activities such as has been stated, the stages of empowerment activities can be divided into various phases, namely:

1. Determination and introduction of the working area: before conducting work on zoning codes need to obtain agreement between the team of facilitators, local government officials, (representative) local communities, and other stakeholders (businesses, community leaders, NGO activists, academics, etc.). It is not just to avoid friction or conflict of interest, but jutru to build synergies and gain support in the form of participation of all stakeholders, for the success of community empowerment programs and activities to be performed.
2. Dissemination activities: namely the effort to communicate planned community development activities to be undertaken in the region. Included in socialization activities, should also be raised about the relevant parties that will be required participation / involvement,

the expected roles, approaches, strategies and measures to be undertaken.

3. Awareness of society: done to sensitize the public about the "existence", both as individuals and members of society, as well as environmental conditions relating to the physical environment / tekis, social, cultural, economic and political. Included in the awareness is:
 - a. Together with the community analyze the circumstances relating to the potential and problems, as well as analysis of the factors that cause the problems related to internal weaknesses and external threats. Perform root-problem analysis, analysis of alternative solutions, as well as alternative options at the best possible solution.
 - b. Showing the importance of the changes to improve the situation, including formulating priorities change, stage of change, how to make and achieve change, the necessary resources, and the role of aid (capital, technology, management, institutional, etc.) are required.
4. Organizing the community: including the election of leaders and groups the task (task group) that will be established. Community organizing is important, because to implement changes in order to solve a problem or improve the state often can not be done individually (individual), but requires a community organization included in the organization are: pembangian role and development of a network of partnerships.
5. Implementation of activities by providing training related to the information and how the information's release.
6. Policy advocacy: for all community empowerment efforts require the support policies that favor the interests of the community. These advocacy activities are needed to secure political support

and legitimacy of the elite of society (government officials, business people, community leaders, NGOs, academia, etc.).

7. Politicization: in a sense constantly maintain and improve the bargaining position through practical politics. It is necessary to obtain and preserve the legitimacy and sustainability of the policies to be achieved through community empowerment.

CONCLUSIONS

Based on the discussion that has been described above, it can be concluded that empowerment is the effort made by the public, with or without external support, to improve their lives based on the power of their own, through the optimization of power and bargaining power has, in other words, , empowerment must put the power of the community as a major capital and avoid the "engineering" outsiders often deadly self-reliance of local communities.

Empowerment through information to do with foster participation undertaken by the community that stage can initially together with the facilitating team tried to explore the potential of which is owned by the community, and make all the activities and values, objects owned by the community became an object information.

Having collected the initial stage, people will be assisted to package that information in order to attract even have a high value so that it can assist in improving the welfare of these populations.

The next step is to inform the information that has been packaged as attractive as possible to spread through any medium capable to access their existence. So that this information can be received by the outside community and the government in this case is useful to develop a policy for the community itself.

ABSTRACT

In the time of Law No. 5 of 1974 was in effect, considering that district is a government administrative region in order to implement the principle of deconcentration, formation of district was enacted by Decision of Minister of Home Affairs. In the time of Law No. 22 of 1999, formation of district was sufficiently done by Regional Regulation, referring to Article 66 clause 6 of Law No. 22 of 1999. There is new change related with policy of the formation of new district according to Law No. 32 of 2004, which is stated in Article 126 clause (1) that: "District is formed within the region of Regency/City by Regional Regulation guided by Government Regulation". In Article 4 clause (4) of the law, it is stated that division of a region can be carried out after certain minimum period of government administration. In the Explanation of Article 4 clause (4), it is stated that minimum period of administration for a new district to be formed is 5 (five) years.

District is formed within the region of regency/city by Regional Regulation guided by Government Regulation. Formation of new district can be as division of a district into 2 (two) or more districts, and/or merger of administrative villages and/or subdistricts from other districts into one new district. Formation of district must meet certain administrative, technical, and regional physical conditions. Regency/city government can form a district in a region that cover one island or more, which requirements are exempt from administrative, technical, and regional physical conditions considering effectiveness of services and empowerment for people in remote and/or outmost islands. Formation of district should first receive approval from regent as the agent of government.

Keywords: Regional Government, District Planning, Public Service

A. Introduction

General opinion acknowledges that centralized government become increasingly less popular due to its incapability to appropriately understand local values or sentiments of local aspirations. Public would feel more secure and peaceful when local government is close to them both physically and psychologically (Bonne Rust, 1968). It is assumed that a government close to its people and more understanding of public needs can be realized only through decentralized government, a government that is authorized to autonomically govern its local potential to meet its own need.

Law No.22 of 1999 replaced by Law No.32 of 2004 on Local Government had changed the status of district from administrative area to working area for local agencies. The change of the status would influence the function of services provided

by district administration. District administration as a local agency is delegated with some of the authority from regent/mayor. Without this delegated authority, *camat* (district head) won't be able to administer activities legitimately (Sadu Wasistiono, 2002: 82).

Considering the job characteristic, district is preferably categorized into a group of line agency referred to as regionality line agency. Activities of *camat* and staff are operational in nature, "to do, to act" in providing public services directly. Line agency in district organization are divisions that define the quality of front line officer, which means that the improvement of quality of human resource at district level should begin from line agency, by providing trainings on technical job as well as service management (Wasistiono, 2002: 36).

According to Ryaas Rasyid, there are three true functions of government:

service, empowerment, and development. The success in achieving government mission can be seen from its capability to deliver these three true functions.

Generally, according to Sadu Wasistiono (2002: 44), the main obstacles as the weakness of district in providing public services are including:

1. Conflict of interest between relevant agencies;
2. Lack of personnel resource in district, thus delegation of authority become less effective if not supported by knowledge and skills.
3. Limited facilities and infrastructures, as these are the media to accelerate the delivery of service process.
4. Lack of financial resource, as it is one of necessities in the implementation of activities, thus delegation of authority is necessarily supported by operational funding.

Considering the past experience of the implementation of regional autonomy that prefer the principle of real and responsible autonomy by emphasizing more on autonomy as obligation rather than right, then Law No.22 of 1999 replaced by Law No.32 of 2004 on Local Government has emphasized more on **delegation of authority of autonomy to regency/city** based only on principle of decentralization in form of extensive, real, and responsible autonomy.

According to Law No. 32 of 2004 Chapter I Article 1 clause (5), in regional autonomy, it is the autonomous region's right, authority and obligation to govern and manage their own local administrative affairs and public interest according to law and regulations. In general explanation of Law No. 32 of 2004, it is stated that **the aim of giving extensive autonomy to a region** is directed to accelerate the realization of public welfare through improvement in public services, empowerment, and participation. In addition, through extensive autonomy, a region is expected to be able

to improve its competitiveness by taking account of the principles of democratization, even distribution, justice, privilege, particularity, and regional potential and diversity within the System of the Unitary State of the Republic of Indonesia.

For the implementation of decentralization policy according to Law No. 22 of 1999 since January 2001 to October 2004, there were more than 34 Government Regulations and 12 Presidential Decrees on division/formation of province and regency/city enacted. In addition, there were also approximately 30 laws on division/formation of province and regency/city enacted (www.depdagri.go.id).

Facts above describe us that during the implementation of regional autonomy policy, there were many division/formation of regions both at the level of province and regency/city. This is understandable, since the **substance** of division/formation of a region is intended to deliver services from government agencies closer to public. By the division/formation of region, it is expected that the aim of regional autonomy policy such as improvement in public services, democratization, and empowerment can be realized, although in Law No. 32 of 2004 conditions for division/formation of region had been revised, particularly on technical and physical conditions.

In order to deliver services from government organizations closer to public, it is also possible to implement **the division of district**. Division of district that is planned to carry out in Eastern Seram Regency consists of 4 (four) districts: District of Bula, East Seram, Pulau-pulau Gorom, and Werinama. The division is intended mainly to deliver services closer to public, to improve peacefulness and orderliness, to accelerate the development of regional potential, and to create new inter-competing developing regions to accelerate the improvement of public welfare. In addition, selection of district for

division is based on the area size, population size, and potential.

Result of preliminary survey on regional potential indicated that development at those four districts is not evenly distributed, especially in certain areas relatively remote (far **orbitasi**) from administrative center of the districts and also hardly reachable by transportation. Administrative services barely reach out remote working areas of district particularly between villages, and also there are still so many potentials unexploited. These lead to discrepancy of public services and development between certain parts within working areas of the district administration. Because of the difficult demographic and geographic circumstances between villages, specifically road access to administrative center of the district, then it is necessary to take policy of division of district division, so that hopefully the smaller coverage of control and closer distance to local people would enable the more optimal delivery of public services.

In response to the problems, alternative **selections of policy** can be taken are **strengthening** the districts and **division of district within administrative working area** of districts by considering their potentials as well as delegation of authorities from Regent to Camat provided with personnel (*personil*), equipment (*peralatan*), funding (*pembiayaan*), and documentation (*dokumentasi*) (P3D).

By the formation of new district, it is certain that the coverage of administrative control would be **smaller** and the service agency would be **closer** to public. The formation of new district is expected to have positive impact to the improvement and distribution of development specifically to the establishment of new access of economic growth and improvement of the quality of public services.

Criteria for the formation of district still refer to Decision of Minister of Home Affairs No. 4 of 2000, stating that main variable of the division of district is minimum population size, area size, and number of

villages/subdistricts as shown in Tabel 1 below:

Table 1
Criteria for Formation of District

No	Variabel	Minimum Number/Extent
1.	Population size a. Java and Bali b. Sumatera and Sulawesi c. Kalimantan, NTB, NTT, Maluku, and Irian Jaya	10.000 people 7.500 people 5.000 people
2.	Area size a. Java and Bali b. Sumatera and Sulawesi c. Kalimantan, NTB, NTT, Maluku, and Irian Jaya	7,5 km ² 10 km ² 12,5 km ²
3.	Number of Villages/Subdistricts	4 villages/subdistricts

Source: Decision of Minister of Home Affairs No. 4 of 2000

But, as the enactment of Law No. 32 of 2004, government immediately established new Government Regulations that govern the System of Local Governance to support the Law No. 32 of 2004. Two of the them that had been enacted was Government Regulation No. 72 of 2005 on Administrative Village and Government Regulation No. 73 of 2005 on Subdistrict Administration.

In addition to Government Regulations above, Department of Home Affairs are in discussion on Draft Government Regulation on District Administration. In the Draft Government Regulation, it is stated that criteria for formation of district is are as follow:

1. Population size
 - a. For city:
 - 1) For Java and Bali: minimum 25,000 people;
 - 2) For Sumatera and Sulawesi: minimum 15,000 people;
 - 3) For Kalimantan, NTB, NTT, Maluku, and Papua: minimum 6,000 people
 - b. For regency:
 - 1) For Java and Bali: minimum 20,000 people;
 - 2) For Sumatera and Sulawesi: minimum 10,000 people;

- 3) For Kalimantan, NTB, NTT, Maluku, and Papua: minimum 5,000 people
2. Area size
 - a. For city:
 - 1) For Java and Bali: minimum 5 km²;
 - 2) For Sumatera and Sulawesi: minimum 7.5 km²;
 - 3) For Kalimantan, NTB, NTT, Maluku, and Papua: minimum 10 km².
 - b. For regency:
 - 1) For Java and Bali: minimum 7.5 km²;
 - 2) For Sumatera and Sulawesi: minimum 10 km²;
 - 3) For Kalimantan, NTB, NTT, Maluku, and Papua: minimum 12 km².
3. Area Coverage
 - a. For city: minimum 4 (four) subdistricts or villages;
 - b. For regency: minimum 5 (five) subdistricts or villages.
4. Minimum Period of Government Administration for division of district is at least 5 (five) years.
5. Availability of facilities of district office should at least include:
 - a. Building and office rooms;
 - b. Office equipment;
 - c. Office stationary;
 - d. Office transportation.
6. Criteria for potential of the district:
 - a. Features of natural resources potential;
 - b. Availability of human resource potential;
 - c. Possibility of potential to develop.
7. Other criteria of to consider:
 - a. Sociocultural features;
 - b. Geographic location;
 - c. Public aspirations.

In addition to three variables based on Decision of Minister of Home Affairs No. 4/2000 and Draft Government Regulation on District above, measurement of potential is also carried out by simulation of Government Regulation No. 129 of 2000 on Requirements of Formation and Criteria of Division, Elimination, and Merger of Regions by considering other variables that support the requirements of the formation of district such as demography, *orbitasi* (distance from administrative center),

education, health, religiousness, sport facilities, transportation, communication, public lighting, politics, public safety and order, agriculture, fishery, animal husbandry, forestry, mining, employment, socioculture, community economics, social circumstance, and administrative aspects.

In relation with facts above, it is assumed to be necessary to study the potential of working area of districts and villages administration in order to reliably assess and evaluate the variables or criteria to determine whether it is possible or not to carry out the division of District of Bula, East Seram, Pulau-pulau Gorom, and Werinama in Eastern Seram Regency, Maluku Province.

B. Problem Statement

In the context of **division** of District of Bula, East Seram, Pulau-pulau Gorom, and Werinama, the problems found can be stated as follow:

1. How is the description of **capability level** of District of Bula, East Seram, Pulau-pulau Gorom, and Werinama in order to be able to encourage successful democratization, development, and public services;
2. How is the description of public aspiration on the planning of division of district;
3. How was the form and quality of public services delivered by government;
4. Whether it is possible to carry out the division of district within working area of Eastern Seram Regency, namely District of Bula, East Seram, Pulau-pulau Gorom, and Werinama;
5. Which parts of region should be selected for division in order to support the successful democratization, development, and public services?

In relation with these, the problems can be **limited** with **focus** of the study on measurement and evaluation of 21 variables of district potential assumed to meet the conditions for division of district, including demography, *orbitasi* (distance from administrative center), education, health, religiousness, sport facilities, transportation, communication, public lighting, politics, public safety and order, agriculture, fishery, animal husbandry, forestry, mining, employment, socioculture, community

economics, social circumstance, and administrative aspects, and **locus** of the study on all villages in those 4 districts in Eastern Seram Regency, namely District of Bula, East Seram, Pulau-pulau Gorom, and Werinama.

C. Aim and Purpose of Study

From this study, there are several alternatives for design of the division of district in District of Bula, East Seram, Pulau-pulau Gorom, and Werinama to encourage the successful implementation of regional autonomy policy. The models can be **utilized** as reference by *DPRD* (regional parliament) and Local Government of Eastern Seram Regency to determine the best alternative design for division of district, and to achieve the optimization of potential toward the improvement of public services, development, and democratization. **The purposes** of this study are:

1. To provide district-based database on capability level of District of Bula, East Seram, Pulau-pulau Gorom, and Werinama in order to support the implementation of regional autonomy;
2. To provide alternatives for design of the division of district in order to deliver services closer to public;
3. To establish a pattern of optimization of potentials in order to improve public services, development, and democratization.

D. Frame of Reference

Improvement purpose of regional autonomy, as stated in Law No. 22 of 1999, is improvement of public services and welfare, development of democratization, justive, even distribution, and sustainment of harmonious relationship between central and local government and also between local governments in order to maintain the wholeness of the Unitary State of the Republic of Indonesia. Meanwhile, according to Law No. 32 of 2004, the purpose is to accelerate the realization of public welfare through improvement of public services, empowerment, and participation.

Therefore, regional autonomy is placed completely on Regency/City, and delegation of authority of the autonomy to

Regency/City is based on decentralization principle of extensive, real, and responsible. Achievement of the purpose of regional autonomy is considerably determined by capability level of working area of the district as one of government units closest to public in the delivery of public services, implementation of development, and improvement of democratization. Division of district is intended to improve effectiveness of the implementation of administration, public services, development, and democratization. In order to accomplish it, it is necessary to carry out **measurement and evaluation** on district potential as the basis to define whether the division of district is proper or not. As for potential considered to be reliable for division of district can be assessed and evaluated on 21 variables including demography, *orbitasi* (distance from administrative center), education, health, religiousness, sport facilities, transportation, communication, public lighting, politics, public safety and order, agriculture, fishery, animal husbandry, forestry, mining, employment, socioculture, community economics, social circumstance, and administrative aspects.

Result of measurement is **certain number of score** for potential capability that become **basis of evaluation** whether a district is **proper or not** for division. Evaluation of potential capability for division of district is carry out on potential of **parent district and planned new district. Result of evaluation on potential** can be categorized into 3 level: high, adequate, and low.

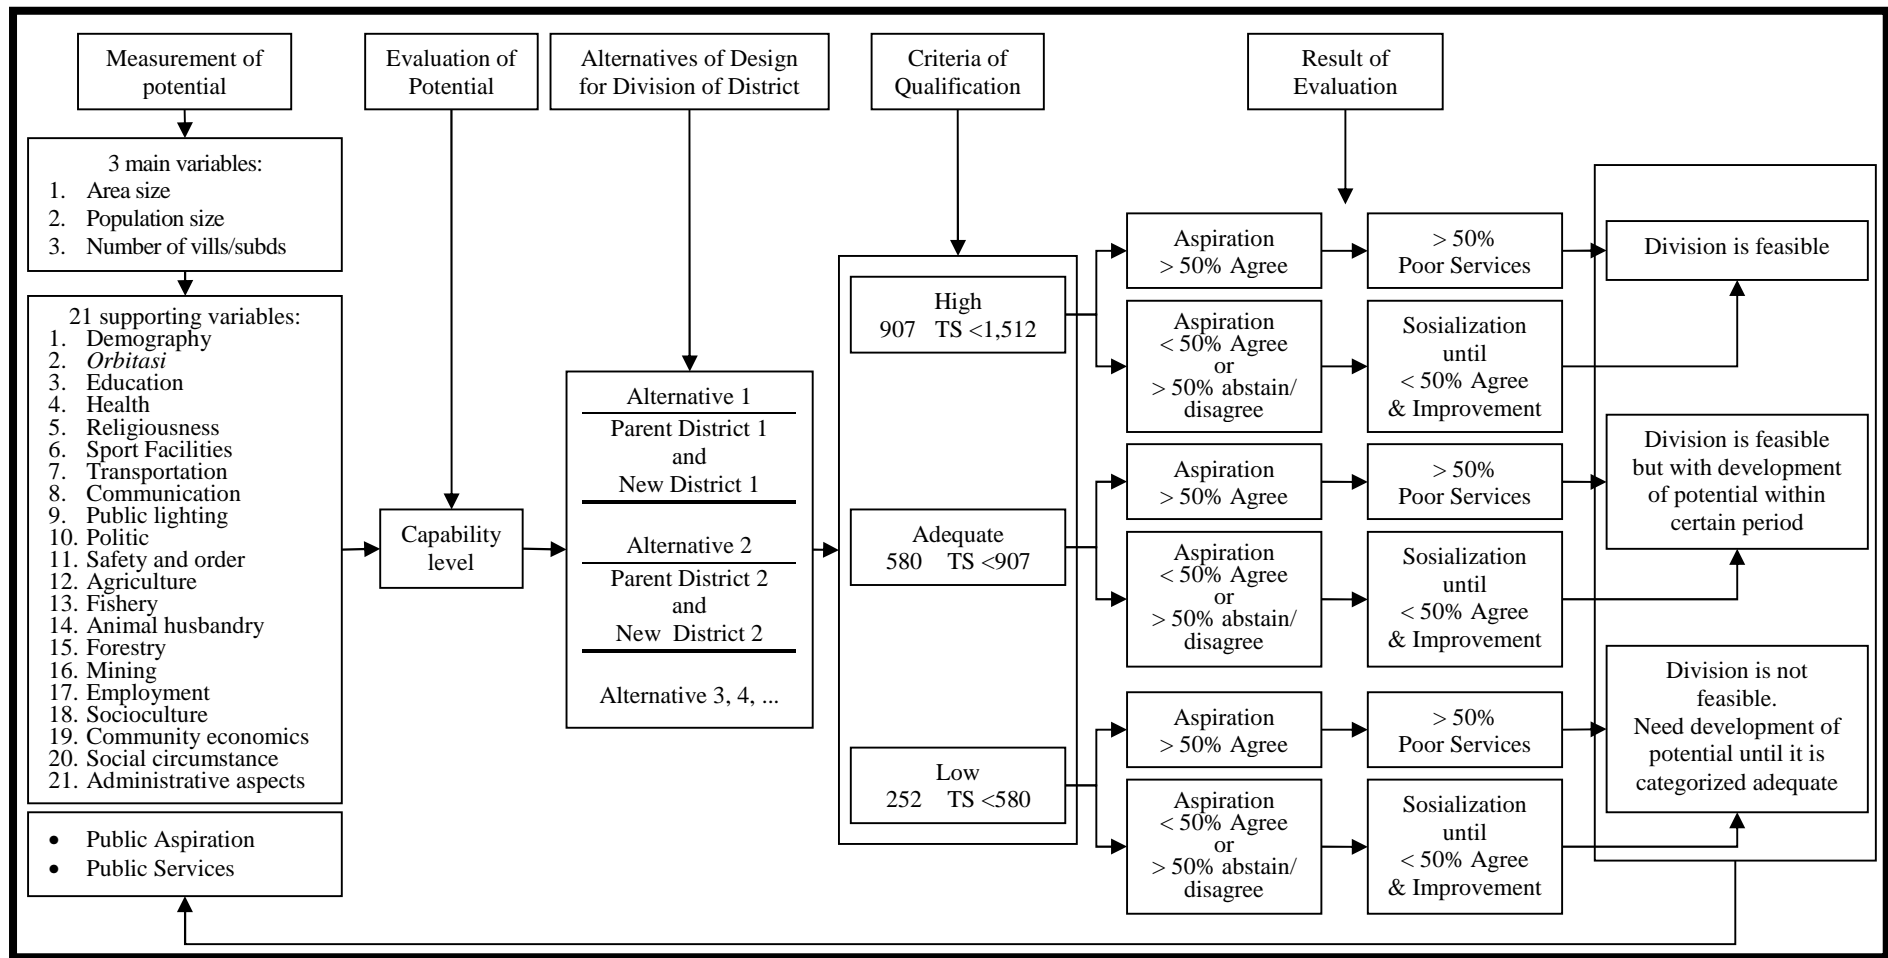

Results of evaluation become **recommendation of policy** as follow:

1. If parent district and planned new district have **high potential**, then alternative taken is **recommend the division of district**;
2. If parent district and planned new district have **adequate** potential, then alternative taken is implement the division of district along with **development of the potential within certain period of minimum 3 or 5 years for reevaluation**. If the condition is not met within that period of time, then it is recommended for the district to be re-merged with parent district;

3. If any or both administrative units have **low potential**, then alternative taken is to postpone the division of district. For district with low potential, it is recommended to **build the potential until it is considered adequate, and then carry out development of the potential until it is proper for division of district**. If the potential is considerably low, division of district is not feasible.

In addition, formation of district should also take account of public aspiration. If result of survey indicate that more than 50% people wish for the formation of new district, then division of district is feasible. On the other hand, if result of survey on public services indicate that more than 50% people answer that the public services is bad or low, then division of district is not feasible.

For more clearly, the frame of reference can be shown as chart below:

Frame of Reference

E. Methodology

This study is application of measurement and evaluation model on **capability of potential** as description and explanation about force or effect of variables observed on the achievement of government administration at district level. There were two groups used as main variables referring to Decision of Minister of Home Affairs No. 4 of 2000 and 21 supporting variables: demography, *orbitasi* (distance from administrative center), education, health, religiousness, sport facilities, transportation, communication, public lighting, politics, public safety and order, agriculture, fishery, animal husbandry, forestry, mining, employment, socioculture, community economics, social circumstance, and administrative aspects.

Source for this study was 4 districts in Eastern Seram Regency, namely District of Bula, East Seram, Pulau-pulau Gorom, and Werinama, covering all villages/sudistricts within administrative working area of the districts to be selected for division of district. Operational definitions of those 21 variables were broken down into 72 indicators:

- (1) Demography, a general description on condition of population, measured by index comparison indicators of population size, area size, average number of households, neighborhoods and wards, householders, and population density.
- (2) *Orbitasi*, reflecting the relocation level of public services, measured by comparison indicators of travelled distance and time from village/subdistrict to district as administrative center.
- (3) Education, one of basic components of public services, measured by comparison indicators of indices between educational facility, number of students and number teachers at each level (kindergarten, elementary, junior high, and senior high school, and college), illiteracy ratio, graduation ratio, dropout ratio, index of informal school.
- (4) Public health, a general description of health condition locally, measured by comparison indicators of each index between health facility, paramedic, infant and child mortality rates, ratio of infant and baby participants of immunization, index of baby with malnutrition, family-toilet ration, underprivileged family ratio, drinking facilities ratio, and habitability index.
- (5) Religious facilities, one of supporting elements for public sociocultural activities mainly to encourage religious life, measured by indicators of number of praying facilities such as mosque, prayer house, church, temple and monastery, and index of other religious supporting facilities.
- (6) Sport facilities, one of supporting elements for public activities mainly for physical exercises, measured by comparison indicators between number of sport facilities (such as for volleyball, soccer, badminton, basketball, table tennis) and population size, and index of sport communities.
- (7) Transportation, a vital component for public activities, measured by index comparison of number of transportation facilities such as station of public transportation, 2- and 4-wheeled vehicles, and road conditions.
- (8) Communication facilities, a vital component for public activities, measured by index comparison between number of communication facilities, such as indicator of phone customers, phonebooths, internet café, number of households with TV, radio, and ratio between availability of post office and population size.
- (9) Public lighting, one of supporting elements for public activities, measured by index of electricity customers, and other public lighting.
- (10) Political awareness, reflecting public sociopolitical activities, measured by index comparison indicators between number of voters and number of electorates in legislative and executive elections, number of vote-getter political parties, and number of NGO and other social organizations.
- (11) Public safety and order, one of important elements in bringing the feeling of safety in life, measured by

- comparison indicators between security facilities (such as security posts) and number of security personnel (such as civilian defense units and other security officers), and crime intensity index.
- (12) Agriculture, reflecting public economic activities in agricultural business field, measured by index comparison indicators of plantation areal size, yields and ownership, number of agricultural groups, index of irrigation management, and index of plantation and rice field infrastructures.
 - (13) Fishery, reflecting public economic activities in both sea and freshwater fishery, indicated by fish farming areal size, yields, and ownership.
 - (14) Animal husbandry, reflecting livestock farming activities, measured by index comparison between large livestock, medium-sized livestock, and poultry farming.
 - (15) Forestry, a description on comparison of forest's total area and forest yields in a region.
 - (16) Mining, measured by comparison between amount of mine materials and number of miners, including number of mining companies in Eastern Seram Regency mainly Mining Type C.
 - (17) Employment, ratio comparison between number of employed people, labor force, and unemployed people, and also number of large, medium and small companies, and agricultural businesses.
 - (18) Socioculture, reflecting the diversity of public sociocultural potential, measured by index comparison indicators of number of facilities for art, number of social houses, and index of tourism facilities, such as tourist attractions, hotels/inns, restaurants and cafés.
 - (19) Community economics, one of supporting elements of economic activities, measured by index comparison indicators between shopping centers, financial institutions both banking and non-banking such as cooperatives, loan offices, and other community businesses.
 - (20) Social circumstances, reflecting reality of social conditions, measured by index comparison between number of disabled people and problematic people under government's responsibility.
 - (21) Administrative aspects, reflecting performance effectiveness level of village administration, and ratio of officials delivering public services, measured by index comparison indicators of *PBB*, *PADes*, other village revenues, number of village administrative staff, and *BPD* and also *KPD*, Decisions of Village and Village Regulations.
- Data needed for this study were quantitative and qualitative according to 21 variables, with source of data consisting of:
- a. Primary data, acquired by field study through directly watching, observing, recording, and interviewing politicians, local officials, public figures, youth leaders, female leaders, religious leaders and educational leaders, and also other targeted groups.
 - b. Secondary data, collected to supplement primary data, available in local *BPS* (Statistics Indonesia), Local Secretariat, *Bapeda*, Local agencies, Offices, Districts, Villages/Subdistricts and other institutions with related information. This secondary data was acquired through study on documents, reports, brochures, newspapers, and other literatures including websites.
- As for data collection, techniques chosen in field study were:
- a. Using of filling form to record secondary data.
 - b. Interview, collecting data through direct communication according to certain predetermined guide with competent and authorized parties on problems being studied: public figures, religious leaders, youth leaders, educational leaders, and female leaders.
 - c. Questionnaire, distributing list of questions on matters relevant with problems being studied. It was intended to acquire objective (existing) data as it was the most recognizable and understandable way for respondents in data collection.

Qualitative data was analyzed by **content and depth** approach to interpret the phenomena on 21 variables. For the accomodation of the qualitative analysis was by stimulating various probable qualitative answers from respondents about the phenomena. From the structure of open-ended questions list, supplemented by result of in-depth interview, and then observation on the site, all data were compiled into structured file. Yet, some of the qualitative data were renovated into quantitative data through non-parametric process. The quantitative data were then categorized, classified, and processed as the basis for **measurement and analysis to provide explanation and evaluation** about strengths and weaknesses of the variables.

Categories of evaluation on monography of villages/subdistricts were based on certain scale and defined according to classification of very high, high, moderate, low, and very low based on total of representative scores. Each category of evaluation became the basic to make a choice about whether or not the division of district should be carried out, as well as about optimization of the potentials. Evaluation was determined by distribution method, that uses average scores as the consideration for data distribution. The calculation of score in this method was adjusted by deviation and sharpness of data distribution curve. Each subindicator was scored 1 for the lowest value and 6 for the highest value. The scoring was by:

- a. Calculating average, standard of deviation, and coefficient of kurtosis/skewness;
- b. Calculating limit 2 (value 2 x kurtosis/skewness x standard of deviation), and limit 1 (value 1 x kurtosis/skewness x standard of deviation), and;
- c. Defining classes of index for scoring:
 - (i) If indicator value > average + limit 2, then scored 6;
 - (ii) If average + limit 2 indicator value < average + limit 1, then scored 5;
 - (iii) If average + limit 1 indicator value < average, then scored 4;
 - (iv) If average indicator value < average - limit 1, then scored 3;

- (v) If average - limit 1 indicator value < average - limit 2, then scored 2;
- (vi) If indicator value average - limit 2, then scored 1.

Assumption used in weighing is that every variables or criteria have different weight according to role and urgency in implementation of administration, development and society. Weight for basic services such as health and education is 11; for communication, transportation, community economics and public lighting is 7; for demography, socioculture, politics, *orbitasi* and agriculture is 5; for employment, administrative aspects, religious facilities, sport facilities, public safety and order, animal husbandry and fishery is 3; for social circumstances is 2; and for forestry and mining is 1. Minimum passing score is total of score of subindicators in every variables/groups of criteria multiplied by above average score for every variables/groups of criteria multiplied by weight for every groups of indicators. Calculation for maximum and minimum total score of each and every variables can be seen in table below:

Table 2
Maximum and Minimum Score of Variables of Study

No	Variable	Number of Indicator	Weight	Min	Max	Min Total Score	Max Total Score
1	2	3	4	5	6	7	8
1.	Demography	3	5	1	6	15	90
2.	<i>Orbitasi</i>	2	5	1	6	10	60
3.	Education	4	11	1	6	44	264
4.	Health	5	11	1	6	55	330
5.	Religious	1	3	1	6	3	18
6.	Sport	1	3	1	6	3	18
7.	Transportation	1	7	1	6	7	42
8.	Communication	1	7	1	6	7	42
9.	Public Lighting	2	7	1	6	14	84
10.	Political Awareness	3	5	1	6	15	90
11.	Public Safety & Order	2	3	1	6	6	36
12.	Agriculture	2	5	1	6	10	60
13.	Fishery	2	3	1	6	6	36
14.	Animal Husbandry	2	3	1	6	6	36
15.	Forestry	1	1	1	6	1	6
16.	Mining	1	1	1	6	1	6
17.	Employment	3	3	1	6	9	54
18.	Socioculture	3	5	1	6	15	90
19.	Communcity Economics	3	7	1	6	21	126
20.	Social Circumstance	2	2	1	6	4	24
21.	Administrative Aspects	6	3	1	6	18	108
Total						252	1,512

A district is assumed to be feasible for division if reach minimum score of 1,592, or categorized as high potential. Minimum passing score is total of score of subindicators in every variables/groups of criteria multiplied by above average score for every variables/groups of criteria multiplied by weight for every groups of indicators. Assumption used is that above average score for every variables is 3.6 within interval of 1 to 6. See table below:

Table 3
Score Above Average with Score of 3.6 with Potential Category of Adequate

No	Variable	Number of Indicator	Weight	Above Average Score	Total Score
1	2	3	4	5	6
1.	Demography	3	5	3.6	54
2.	<i>Orbitasi</i>	2	5	3.6	36
3.	Education	4	11	3.6	158
4.	Health	5	11	3.6	198
5.	Religious	1	3	3.6	11
6.	Sport	1	3	3.6	11
7.	Transportation	1	7	3.6	25
8.	Communication	1	7	3.6	25
9.	Public Lighting	2	7	3.6	50
10.	Political Awareness	3	5	3.6	54
11.	Public Safety & Order	2	3	3.6	22
12.	Agriculture	2	5	3.6	36
13.	Fishery	2	3	3.6	22
14.	Animal Husbandry	2	3	3.6	22
15.	Forestry	1	1	3.6	4
16.	Mining	1	1	3.6	4
17.	Employment	3	3	3.6	32
18.	Socioculture	3	5	3.6	54
19.	Communcity Economics	3	7	3.6	76
20.	Social Circumstance	2	2	3.6	14
21.	Administrative Aspects	6	3	3.6	65
Total					907

Based on table above, **score above average is 1,592**, which means that a district is considered **feasible** for formation of new district if result of the measurement have score equal to or more than 1,592. In accordance with that, category of measurement on potentials of district in implementation of administration, development, and society can be defined as seen in table below:

Table 4
Category of Option

No	Variable	Total Score Interval	Weight
1	2	3	4
1	High Potential	907 TS < 1,512	Division is feasible
2	Adequate Potential	580 TS < 907	Division is feasible, but with development of potential within certain period
3	Low Potential	252 TS < 580	Division is not feasible.

F. Result of Study

Based on explanation above, there are several conclusions can be taken as follow:

1. Division of district of East Seram, PP Gorom, Werinama and Bula is based on capability level or potential of each district through measurement and evaluation on main and supporting variables. Main variable is based on normative regulation of Decision of Minister of Home Affairs No. 4 of 2000 and supporting variables is based on 21 variables of study, namely demography, *orbitasi* (distance from administrative center), education, health, religiousness, sport facilities, transportation, communication, public lighting, politics, public safety and order, agriculture, fishery, animal husbandry, forestry, mining, employment, socioculture, community economics, social circumstance, and administrative aspects. Descriptions are as follow:

a. Potentials of East Seram District

Result of analysis generally indicates that, in accordance with the potentials, East Seram District is feasible for division based on high total score of its potentials by 100.6%, where:

- 1) 5 out of 21 variables of study (24%) scored above average score of whole East Seram District;
- 2) Result of data processing describes that potentials of East Seram District scored 990 or 100.6% of minimum standard or, in other words,

potentials of East Seram District scored above minimum standard (990 > 907), which indicate that East Seram District is feasible for division.

Regional planning through division of East Seram District can be designed by 3 best alternatives of regional planning as follow:

- 1) Alternative 1 (score difference 4)
 - Planned parent district with score of 989, consisting of 10 villages: Kiltai, Kilwaru, Geser, Kellu, Kefing, Urung, Kilmuri, Kwaos, Kian Laut, and Kian Darat.
 - Planned new district with score of 993, consisting of 7 villages: Damana, Kilmoi, Kilbat, Sesar, Air Kasar, Waras-waras, and Gah.
- 2) Alternative 2 (score difference 7)
 - Planned parent district with score of 987, consisting of 8 villages: Kiltai, Kilwaru, Geser, Kellu, Kefing, Urung, Kilmuri, and Kwaos.
 - Planned new district with score of 994, consisting of 9 villages: Kian Laut, Kian Darat, Damana, Kilmoi, Kilbat, Sesar, Air Kasar, Waras-waras, and Gah.
- 3) Alternative 3 (score difference 26)
 - Planned parent district with score of 978, consisting of 9 villages: Kiltai, Kilwaru, Geser, Kellu, Kefing, Urung, Kilmuri, Kwaos, and Kian Laut.
 - Planned new district with score of 1,004, consisting of 8 villages: Kian Darat, Damana, Kilmoi, Kilbat, Sesar, Air Kasar, Waras-waras, and Gah.

Based on criteria above, then priority options for division are as follow:

Table 5
Priority Option of Alternatives
for Division of District
in East Seram District,
Eastern Seram Regency

No	Alternative	Score	Score Difference	Priority
1	Alternative 1 Planned New District and Planned Parent District	993 – 989	4	I
2	Alternative 2 Planned New District and Planned Parent District	994 – 987	7	II
3	Alternative 3 Planned New District and Planned Parent District	978 – 1,004	-26	III

Based on table above, alternative 1 is selected as priority 1. This is by consideration that the division relatively have more balance in terms of potentials than alternative 2 and 3 for 21 variables of study. Difference of score earned between the planned parent district and the planned new district in alternative 1 is only 4, while in alternative 2 is 7 and alternative 3 is 26.

In accordance with that, alternative 1 surpasses other alternatives in terms of such as the difference of capacity level between planned parent district and planned new district after the division that would be much more balanced. Therefore, alternative 1 would be better in ensuring the improvement of public services, democratization and public welfare in both planned parent district and planned new district after the division.

b. Potentials of Pulau-pulau Gorom District

Result of analysis generally indicates that, in accordance with the potentials, Pulau-pulau Gorom District is feasible for division based on high total score of its potentials by 96.9%, where:

- 1) 4 out of 21 variables of study (19%) scored above average score of whole Pulau-pulau Gorom District;
- 2) Result of data processing describes that potentials of PP Gorom District scored 968 or 96.9% of minimum standard or, in other words, potentials of PP Gorom District scored above minimum standard (969.8 > 907), which indicate that PP Gorom District is feasible for division.

Regional planning through division of PP Gorom District can be designed by 2 best alternatives of regional planning as follow:

- 1) Alternative 1 (score difference -1)
 - Planned parent district with score of 970, consisting of 11 villages: Amarsekaru, Amarwatu, Kota Sirih, Mida, Kilkoda, Dai, Miran, Rarat, Ondor, Kataloka, and Pulau Panjang.
 - Planned new district with score of 969, consisting of 9 villages: Teor, Tamher Warat, Kelangan, Tamher Timur, Amarlaut, Utta, Lahena, Effa, and Ilili.
- 2) Alternative 2 (score difference -2)
 - Planned parent district with score of 971, consisting of 5 villages: Miran, Rarat, Ondor, Kataloka, and Pulau Panjang.
 - Planned new district 1 with score of 969, consisting of 9 villages: Teor, Tamher Warat, Kelangan, Tamher Timur, Amarlaut, Utta, Lahena, Effa, and Ilili.
 - Planned new district 2 with score of 969, consisting of 6 villages: Amarsekaru, Amarwatu, Kota Sirih, Mida, Kilkoda, and Dai.

Based on criteria above, then priority options for division are as follow:

Table 6
Priority Option of Alternatives
for Division of District
in PP Gorom District,
Eastern Seram Regency

No	Alternative	Score	Score Difference	Priority
1	Alternative 1 Planned Parent District and Planned New District	970 – 969	1	I
2	Alternative 2 Planned Parent District and Planned New District 1 and Planned New District 2	971-969	2	II

Based on table above, alternative 1 is selected as priority 1. This is by consideration that the division relatively have more balance in terms of potentials than alternative 2 for 21 variables of study. Difference of score earned between the planned parent district and the planned new district in alternative 1 is only 1, while in alternative 2 is 2.

In accordance with that, alternative 1 surpasses other alternative in terms of such as the difference of capacity level between planned parent district and planned new district after the division that would be much more balanced. Therefore, alternative 1 would be better in ensuring the improvement of public services, democratization and public welfare in both planned parent district and planned new district after the division.

c. Potentials of Werinama District

Result of analysis generally indicates that, in accordance with the potentials, Werinama District is feasible for division based on high total score of its potentials by 100.6%, where:

- 1) 9 out of 21 variables of study (43%) scored above average score of whole Werinama District;
- 2) Result of data processing describes that potentials of Werinama District scored 957 or 100.6% of minimum standard or, in other words, potentials of Werinama District

scored above minimum standard (957 > 907), which indicate that Werinama District is feasible for division.

Regional planning through division of Werinama District can be designed by 3 best alternatives of regional planning as follow:

- 1) Alternative 1 (score difference 9)
 - Planned parent district with score of 961, consisting of 6 villages: Elnusa, Atiahu, Bemo, Werinama, Hatumeten, and Batu Asah.
 - Planned new district with score of 952, consisting of 4 villages: Liliana, Polin, Tunsai, and Lapela.
- 2) Alternative 2 (score difference 31)
 - Planned parent district with score of 972, consisting of 5 villages: Atiahu, Bemo, Werinama, Hatumeten, and Batu Asah.
 - Planned new district with score of 942, consisting of 5 villages: Liliana, Polin, Tunsai, Lapela, and Elnusa.
- 3) Alternative 3 (score difference 72)
 - Planned parent district with score of 1,000, consisting of 4 villages: Bemo, Werinama, Hatumeten, and Batu Asah.
 - Planned new district with score of 929, consisting of 6 villages: Liliana, Polin, Tunsai, Lapela, Elnusa, and Atiahu.

Based on criteria above, then priority options for division are as follow:

Table 7
Priority Option of Alternatives for
Division of District
in Werinama District, Eastern Seram
Regency

No	Alternative	Score	Score Difference	Priority
1	Alternative 1 Planned Parent District and Planned New District	961 – 952	9	I
2	Alternative 2 Planned Parent District and Planned New District	972 – 942	31	II
3	Alternative 3 Planned Parent District and Planned New District	1,000 – 929	72	III

Based on table above, alternative 1 is selected as priority 1. This is by consideration that the division relatively have more balance in terms of potentials than alternative 2 and 3 for 21 variables of study. Difference of score earned between the planned parent district and the planned new district in alternative 1 is only 9, while in alternative 2 is 31 and alternative 3 is 72.

In accordance with that, alternative 1 surpasses other alternatives in terms of such as the difference of capacity level between planned parent district and planned new district after the division that would be much more balanced. Therefore, alternatives 1 would be better in ensuring the improvement of public services, democratization and public welfare in both planned parent district and planned new district after the division.

d. Potentials of Bula District

Result of analysis generally indicates that, in accordance with the potentials, Bula District is feasible for division based on high total score of its potentials by 101.8%, where:

- 1) 6 out of 21 variables of study (28.6%) scored above average score of whole Bula District;

- 2) Result of data processing describes that potentials of Bula District scored 1,050.9 or 101.8% of minimum standard or, in other words, potentials of Bula District scored above minimum standard (1,050.9 > 907), which indicate that Bula District is feasible for division.

Regional planning through division of Bula District can be designed by 3 best alternatives of regional planning as follow:

- 1) Alternative 1 (score difference -21)
 - Planned parent district with score of 1,042, consisting of 7 villages: Bula, Hote, Benggoi, UPT. T, UPT. R. Benggoi, Waimatakabo, and UPT. U. Airmatakasu.
 - Planned new district with score of 1,063, consisting of 5 villages: Waru, Belis, Solang, Dawang, and Salas.
- 2) Alternative 2 (score difference -37)
 - Planned parent district with score of 1,030, consisting of 7 villages: Waru, Belis, Solang, Dawang, Salas, Bula, and Hote.
 - Planned new district with score of 1,066, consisting of 5 villages: Benggoi, UPT. T, UPT. R. Benggoi, Waimatakabo, and UPT. U. Airmatakasu .
- 3) Alternative 3 (score difference -57)
 - Planned parent district with score of 1,023, consisting of 6 villages: Waru, Belis, Solang, Dawang, Salas, and Bula.
 - Planned new district with score of 1,079, consisting of 6 villages: Hote, Benggoi, UPT. T, UPT. R. Benggoi, Waimatakabo, and UPT. U. Airmatakasu.

Based on criteria above, then priority options for division are as follow:

Table 8
Priority Option of Alternatives for
Division of District
in Bula District, Eastern Seram Regency

No	Alternative	Score	Score Difference	Priority
1	Alternative 1 Planned New District and Planned Parent District	1,042 – 1,063	-21	I
2	Alternative 2 Planned New District and Planned Parent District	1,030 – 1,066	-37	II
3	Alternative 3 Planned New District and Planned Parent District	1,023 – 1,079	-57	III

Based on table above, alternative 1 is selected as priority 1. This is by consideration that the division relatively have more balance in terms of potentials than alternative 2 and 3 for 21 variables of study. Difference of score earned between the planned parent district and the planned new district in alternative 1 is only 21, while in alternative 2 is 37 and alternative 3 is 57.

In accordance with that, alternative 1 surpasses other alternatives in terms of such as the difference of capacity level between planned parent district and planned new district after the division that would be much more balanced. Therefore, alternative 1 would be better in ensuring the improvement of public services, democratization and public welfare in both planned parent district and planned new district after the division.

2. A district is feasible for division if each potential of both planned new district and parent district is in high interval (907 TS < 1,512). It is feasible for division **with condition** if each potential of both is in adequate interval (580 TS – 907). It is denied or declared as not feasible for division if each district has potential with score less than 580.
3. Result of measurement and evaluation on potentials, public aspiratio and service aspects at District of East Seram, PP Gorom, Werinama and Bula will be explained below. From the

scoring of secondary data of monography of villages and subdistricts in 4 districts planned for division, it indicates that all districts is declared as **feasible** for division as seen in table below:

Table 9
Recapitulation of Capability of the
Districts

No	District	Score	% of standard	Category
East Seram District				
1	East Seram District	990	100.6	High Potential
2	Planned Parent District	989	101.2	High Potential
3	Planned New District	993	99.6	High Potential
PP Gorom District				
1	PP Gorom District	969.8	96.9	High Potential
2	Planned Parent District	970.0	92.9	High Potential
3	Planned New District	969.4	101.8	High Potential
Werinama District				
1	Werinama District	957	100.6	High Potential
2	Planned Parent District	961	101.0	High Potential
3	Planned New District	952	100.1	High Potential
Bula District				
1	Bula District	1050.9	101.8	High Potential
2	Planned Parent District	1042	100.6	High Potential
3	Planned New District	1063	103.4	High Potential

Based on the measurement on potentials of each district, it is clear that all 4 districts planned for division fall into high potential category where the scores are within the interval of 907 TS < 1,512.

4. From the public aspiration in 4 districts, principally, majority of people, **agree with the planning for division of district**, either public figures, religious

leaders, youth leaders, female leaders, and educational leaders. One way of public aspiration insupporting the division of district is by inclusion of public aspirations in determining capital of district if there will be division of district.

a. Level of Agreement in East Seram District

Below is chart showing aspiration and sociocultural aspect of respondents on division of East Seram District.

**Chart 1
Public Opinion on Division of East Seram District**

Based on chart above, it is seen that 56.0% people agree, 25.9% feel uncertain, and 18.1% disagree with the planning of division of East Seram District. Therefore, it is concluded that most of people in East Seram District agree with the planning of division.

b. Level of Agreement in Pulau-pulau Gorom District

Below is chart showing aspiration and sociocultural aspect of respondents on division of P.P. Gorom District.

**Chart 2
Public Opinion on Division of Pulau-pulau Gorom District**

Based on chart above, it is seen that 74.4% people agree, 16.2% feel

uncertain, and 9.4% disagree with the planning of division of P.P. Gorom District. Therefore, it is concluded that most of people in P.P. Gorom District agree with the planning of division.

c. Level of Agreement in Werinama District

Below is chart showing aspiration and sociocultural aspect of respondents on division of Werinama District.

**Chart 3
Public Opinion on Division of Werinama District**

Based on chart above, it is seen that 12.8% people agree, 78.4% feel uncertain, and 8.8% disagree with the planning of division of Werinama District. Therefore, it is concluded that most of people in Werinama District feel uncertain about the planning of division.

d. Level of Agreement in Bula District

Below is chart showing aspiration and sociocultural aspect of respondents on division of Bula District.

**Chart 4
Public Opinion on Division of Werinama District**

Based on chart above, it is seen that 72.0% people agree, 17.67% feel uncertain, and 10.33% disagree with the planning of division of Bula District. Therefore, it is concluded that most of

people in Bula District agree with the planning of division.

5. From the aspect of services and quality of administrative service, either in education, health, public facilities, licensing and public participation, it is seen that service delivery in almost all districts are considered poorer than service delivery at the level of regency and village/subdistrict.

a. Service Delivery in East Seram District

Below is data presentation to determine quality of services provided by government officials in implementing their function as public servant. The result indicates that overall comparison of average value of all services according to village are as follow:

Table 10
Comparison of Average Value of All Services by Village

Village	Averages of all services	Rank
Kiltai	2.45	5
Kilwaru	2.38	9
Geser	2.29	12
Kellu	2.49	1
Kefing	2.38	7
Urung	2.22	15
Kilmuri	2.48	2
Kwaos	2.48	3
Kian Laut	2.13	17
Kian Darat	2.43	6
Damana	2.38	8
Kilmoi	2.45	4
Kilbat	2.28	14
Sesar	2.15	16
Air Kasar	2.37	10
Waras-Waras	2.34	11
Gah	2.28	13
Kec. Seram Timur	2.35	

Graph 1
Comparison of Average Services Values

The highest average value of service as seen from table above is Kellu Village with average value of all services by 2.49, followed by Kilmuri and Kwaos with average value of all services by 2.48.

Result of public satisfactory index (PSI) on services at Administrative Offices at level of Regency, District, and Subdistrict in East Seram District is as follow:

Table 11
Public Satisfactory Index on Services at Administrative Office in East Seram District by Components

No	Components of Services	Value	Priority for Improvement
1.	Procedure	2.504	5
2.	Requirements of services	2.548	7
3.	Certainty of the officer	2.621	8
4.	Discipline of the officer	2.388	3
5.	Responsibility of the officer	2.675	12
6.	Capability of the officer	2.532	6
7.	Quickness of the delivery	2.252	1
8.	Fairness in the delivery	2.624	9
9.	Attitude of the officer	2.835	14
10.	Fairness of the fee	2.664	10
11.	Suitability between delivery and fee	2.407	4
12.	Time accuracy	2.264	2
13.	Cozyness	2.671	11
14.	Security	2.833	13

Source: Processed Questionnaire Data 2005

Final compiling result of public satisfactory index from each component of service explains that:

Based on the result of public satisfactory index calculation, total value of each service unit acquired from total of average value of each components of service. Meanwhile, composite index value for each component of service is multiplied by same scale, that is 0.071.

Index of service unit is calculated by means as shown below:

Table 12
Public Satisfactory Index on Service
at Administrative Office in the City Planned as Capital

Values	Value per component														
	C1	C2	C3	C4	C5	C6	C7	C8	C9	C10	C11	C12	C13	C14	
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	
Total value per component	1064	1083	1114	1015	1137	1076	957	1115	1205	1132	1023	962	1135	1204	
AV per component = Total Value per component ÷ number of question-naire filled	2.50	2.55	2.62	2.39	2.68	2.53	2.25	2.62	2.84	2.66	2.41	2.26	2.67	2.83	
Scaled AV per component = NRR per component x 0.071	0.18	0.18	0.19	0.17	0.19	0.18	0.16	0.19	0.20	0.19	0.17	0.16	0.19	0.20	
PSI of Service Unit															*) 2.54 **) 63.57

Where: C1 to C14 : Components of Service
 AV : Average value
 PSI : Public Satisfactory Index
 *) : Total of Scaled AV of PSI
 **) : PSI of Service Unit x 25

Therefore, it can be concluded that results of index value of service unit are as follow:

- Value of PSI after converted = Index value x Base value = 2.54 x 25 = 63.57
- Quality of service is B
- Performance of service unit at administrative office is **Good**

In order to improve service quality, it is prioritized for components with lowest value. Components with higher value need to be maintained. It indicates that service units at administrative office necessary to improve are:

- Quickness of service
- Time accuracy
- Discipline of the officer

b. Service Delivery in Pulau-pulau Gorom District

Below is data presentation to determine quality of services provided by government officials in implementing their function as public servant. The result indicates that overall comparison of average value of all services according to village are as follow:

Table 13
Comparison of Average Value of All Services by Village

Village	Averages of all services	Rank
Teor	2.45	5
Tamher Warat	2.38	13
Kelangan	2.29	18
Tamher Timur	2.38	12
Amarlaut	2.38	9
Utta	2.48	2
Lahena	2.37	15
Effa	2.46	3
Ilili	2.34	17
Amarsekaru	2.43	6
Amarwatu	2.38	11

Village	Averages of all services	Rank
Kota Sirih	2.45	4
Mida	2.28	20
Kilkoda	2.38	9
Dai	2.37	14
Miran	2.34	16
Rarat	2.28	19
Ondor	2.39	8
Kataloka	2.42	7
Pulau Panjang	2.49	1
P.P. Gorom District	2.39	

Graph 2
Comparison of Average Services Values

The highest average value of service as seen from table above is Pulau Panjang Village with average value of all services by 2.49, followed by Utta Village with average value of all services by 2.48, and Effa Village with average value of all services by 2.46

Result of public satisfactory index (PSI) on services at Administrative Offices at level of Regency, District, and Subdistrict in P.P. Gorom District is as follow:

Table 14
Public Satisfactory Index on Services at Administrative Office in P.P. Gorom District by Components

No	Components of Services	Value	Priority for Improvement
1.	Procedure	2.464	4
2.	Requirements of services	2.578	9
3.	Certainty of the officer	2.664	11
4.	Discipline of the officer	2.508	5
5.	Responsibility of the officer	2.720	12
6.	Capability of the officer	2.524	7
7.	Quickness of the delivery	2.180	2
8.	Fairness in the delivery	2.514	6
9.	Attitude of the officer	2.756	14
10.	Fairness of the fee	2.542	8
11.	Suitability between delivery and fee	2.322	3
12.	Time accuracy	2.170	1
13.	Cozyness	2.592	10
14.	Security	2.752	13

Source: *Processed Questionnaire Data 2005*

Final compiling result of public satisfactory index from each component of service explains that:

Based on the result of public satisfactory index calculation, total value of each service unit is acquired from total of average value of each components of service. Meanwhile, composite index value for each component of service is multiplied by same scale, that is 0.071.

Index of service unit is calculated by means as shown below:

Table 15
Public Satisfactory Index on Service
at Administrative Office in the City Planned as Capital

Values	Value per component														
	C1	C2	C3	C4	C5	C6	C7	C8	C9	C10	C11	C12	C13	C14	
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	
Total value per component	1232	1289	1332	1254	1360	1262	1090	1257	1378	1271	1161	1085	1296	1376	
AV per component = Total Value per component ÷ number of question-naire filled	2464	2578	2664	2508	2720	2524	2180	2514	2756	2542	2322	2170	2592	2752	
Scaled AV per component = NRR per component x 0.071	0175	0183	0189	0178	0193	0179	0155	0178	0196	0180	1065	0154	0184	0195	2.51
PSI of Service Unit															**) 62.63

Where: C1 to C14 : Components of Service
 AV : Average value
 PSI : Public Satisfactory Index
 *) : Total of Scaled AV of PSI
 **) : PSI of Service Unit x 25

Therefore, it can be concluded that results of index value of service unit are as follow:

- Value of PSI after converted = Index value x Base value
 = 2.51 x 25 = 62.63
- Quality of service is B
- Performance of service unit at administrative office is **Good**

In order to improve service quality, it is prioritized for components with lowest value. Components with higher value need to be maintained. It indicates that service units at administrative office necessary to improve are:

- Time accuracy
- Quickness of delivery
- Fairness of fee

c. Service Delivery in Werinama District

Below is data presentation to determine quality of services provided by government officials in implementing their function as public servant. The result indicates that overall comparison of average value of all services according to village are as follow:

Table 16
Comparison of Average Value of All Services by Village

Village	Averages of all services	Rank
Liliana	2.33	5
Polin	2.33	4
Tunsai	2.27	10
Lapela	2.28	9
Elnusa	2.33	5
Atiahu	2.29	7
Bemo	2.34	3
Werinama	2.37	2
Hatumeten	2.29	8
Batu Asah	2.49	1
Werinama District	2.33	

Graph 3
Comparison of Average Services Values

The highest average value of service as seen from table above is Batu Asah Village with average value of all services by 2.49, followed by Werinama Village with average value of all services by 2.37, and Bemo Village with average value of all services by 2.34.

Result of public satisfactory index (PSI) on services at Administrative Offices at level of Regency, District, and Subdistrict in Werinama District is as follow:

Table 17
Public Satisfactory Index on Services at Administrative Office in Werinama District by Components

No	Components of Services	Value	Priority for Improvement
1.	Procedure	2,436	4
2.	Requirements of services	2,624	10
3.	Certainty of the officer	2,672	11
4.	Discipline of the officer	2,544	7
5.	Responsibility of the officer	2,732	12
6.	Capability of the officer	2,552	8
7.	Quickness of the delivery	2,040	1
8.	Fairness in the delivery	2,576	9
9.	Attitude of the officer	2,808	14
10.	Fairness of the fee	2,496	5
11.	Suitability between delivery and fee	2,320	3
12.	Time accuracy	2,132	2
13.	Cozyness	2,532	6
14.	Security	2,792	13

Source: *Processed Questionnaire Data 2005*

Final compiling result of public satisfactory index from each component of service explains that:

Based on the result of public satisfactory index calculation, total value of each service unit is acquired from total of average value of each components of service. Meanwhile, composite index value for each component of service is multiplied by same scale, that is 0.071.

Index of service unit is calculated by means as shown below:

Table 18
Public Satisfactory Index on Service
at Administrative Office in the City Planned as Capital

Values	Value per component														
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Total value per component	69	66	66	66	68	68	50	64	72	64	50	53	63	68	
AV per component = Total Value per component ÷ number of question-naire filled	2.4 36	2.6 24	2.6 72	2.5 4	2.7 3	2.5 5	2.0 4	2.5 8	2.8 1	2.4 96	2.3 2	2.1 32	2.5 32	2.7 92	
Scaled AV per component = NRR per component x 0.071	0.1 73	0.1 86	0.1 9	0.1 8	0.1 9	0.1 8	0.1 5	0.1 8	0.2 0	0.1 99	0.1 8	0.1 7	0.1 8	0.2 0	2.5 0
PSI of Service Unit															**) 62.6 3

Where: C1 to C14 : Components of Service
 AV : Average value
 PSI : Public Satisfactory Index
 *) : Total of Scaled AV of PSI
 **) : PSI of Service Unit x 25

Therefore, it can be concluded that results of index value of service unit are as follow:

- Value of PSI after converted = Index value x Base value
= 2.50 x 25 = 62.58
- Quality of service is B
- Performance of service unit at administrative office is **Good**

In order to improve service quality, it is prioritized for components with lowest value. Components with higher value need to be maintained. It indicates that service units at administrative office necessary to improve are:

- Quickness of delivery
- Time accuracy
- Discipline of the officer.

d. Service Delivery in Bula District

Below is data presentation to determine quality of services provided by government officials in implementing their function as public servant. The result indicates that overall comparison of average value of all services according to village are as follow:

Table 19
Comparison of Average Value of All Services by Village

Village	Averages of all services	Rank
Waru	2.45	6
Belis	2.38	10
Solang	2.29	11
Dawang	2.49	1
Salas	2.38	8
Bula	2.46	4
Hote	2.48	2
Benggoi	2.48	3
UPT. T	2.19	12
UPT. R. Benggoi	2.43	7
Waimatakabo	2.38	9
UPT. U. Airmatakasu	2.45	5
Bula District	2.40	

Graph 4
Comparison of Average Services Values

The highest average value of service as seen from table above is Dawang Village with average value of all services by 2.49, followed by Hote and Benggoi with average value of all services by 2.48.

Result of public satisfactory index (PSI) on services at Administrative Offices at level of Regency, District, and Subdistrict in Bula District is as follow:

Table 20
Public Satisfactory Index on Services at Administrative Office in Bula District by Components

No	Components of Services	Value	Priority for Improvement
1.	Procedure	1,736	3
2.	Requirements of services	1,816	10
3.	Certainty of the officer	1,920	14
4.	Discipline of the officer	1,791	6
5.	Responsibility of the officer	1,852	11
6.	Capability of the officer	1,798	7
7.	Quickness of the delivery	1,536	1
8.	Fairness in the delivery	1,800	9
9.	Attitude of the officer	1,901	12
10.	Fairness of the fee	1,798	7
11.	Suitability between delivery and fee	1,744	4
12.	Time accuracy	1,576	2
13.	Cozyness	1,769	5
14.	Security	1,915	13

Source: *Processed Questionnaire Data 2005*

Final compiling result of public satisfactory index from each component of service explains that:

Based on the result of public satisfactory index calculation, total value of each service unit is acquired from total of average value of each components of service. Meanwhile, composite index value for each component of service is multiplied by same scale, that is 0.071.

Index of service unit is calculated by means as shown below:

Table 21
Public Satisfactory Index on Service
at Administrative Office in the City Planned as Capital

Values	Value per component														
	C1	C2	C3	C4	C5	C6	C7	C8	C9	C10	C11	C12	C13	C14	
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	
Total value per component	78	72	86	76	77	74	68	75	88	74	71	60	72	84	
AV per component = Total Value per component ÷ number of question-naire filled	1.736	1.816	1.920	1.791	1.852	1.798	1.536	1.800	1.901	1.798	1.744	1.576	1.769	1.915	
Scaled AV per component = NRR per component x 0.071	0.123	0.129	0.136	0.127	0.131	0.128	0.109	0.128	0.135	0.128	0.124	0.112	0.126	0.136	
PSI of Service Unit															**) 44.29

Where: C1 to C14 : Components of Service
 AV : Average value
 PSI : Public Satisfactory Index
 *) : Total of Scaled AV of PSI
 **) : PSI of Service Unit x 25

Therefore, it can be concluded that results of index value of service unit are as follow:

- a. Value of PSI after converted = Index value x Base value
 = 1.77 x 25 = 44.29
- b. Quality of service is C
- c. Performance of service unit at administrative office is **Adequate**

In order to improve service quality, it is prioritized for components with lowest value. Components with higher value need to be maintained. It indicates that service units at administrative office necessary to improve are:

1. Time accuracy
 2. Quickness of service
 3. Fairness of fee
6. Option for division of district is based on consideration that planned parent district **shall not** become weaker nor unable to implement administration, with difference of capability level between planned districts should not be huge, and there should be certainty in improvement of public services, democratization, and public welfare.

G. Recommendation

In order to assure the successful implementation of division of district as seen from the capability of district in the delivery of service, implementation of administration and development effectively and efficiently, there are several recommendations as follow:

1. Considering that district is agent for regency/city and delegated some authorities from regent/mayor, then division of district should be followed by delegation of some authorities from regent/mayor to Camat according to potentials and problems faced, either in planned new district and parent district;
2. Preparing design of district organization according potentials and characteristic of district (typology of the district), as well as pattern and attribute of authorities delegated from regent/mayor to Camat;
3. Preparing budget for performance and logistic of the district according to magnitude of authorities of Camat, potentials, and problems of each district; and
4. Preparing design of measurement and evaluation on performance of the district according to authorities of Camat, potentials, and problems of each district.
5. All equipment, personnel, and implementation cost of division of district are under responsibility of Local Government, including improvement of entire demographic administrative services for all regions involved in division, either ID card, Family Register, and other demographic administrative affairs.

THE CREATION OF ROSULPHIL AND ITS RELEVANCE IN ILIGAN CITY'S GOVERNANCE

Norjannah B. Bao, Marwah M. Camama, Rohane M. Derogongan, Ph.D., Rose F. Langbid and Neil Arkhe P. Azcuna, MIH¹

norjannah.bao@g.msuiit.edu.ph; marwah.camama@g.msuiit.edu.ph;
rose.langbid@g.msuiit.edu.ph; rohane.derogongan@g.msuiit.edu.ph;
neilarkhe.azcuna@g.msuiit.edu.ph

ABSTRACT

ROSULPHIL is the acronym of the Federated Royal Sultanate League of Iligan-Pilimpinas which is now the umbrella-central-national royal organization of all tribal traditional Sultanates and Datuships in the Philippines and it is duly registered at the Securities and Exchange Commission and its present headquarter is Iligan City-the Industrial City of Mindanao with its majestic waterfalls and the City of Tri-People's known as Indigenous Muslims, Christians and Lumads who live side-by-side peacefully, help and respect each other under the Honorable City of Government of Iligan City.

This study aims to: (1) to know the history and objectives of the organization; (2) to know the role of the organization in all the traditional Sultanates and Datuships in the Philippines; (3) know the role played by the organization in the local government (4) to know the importance of the Organization in the settlement of feudal conflicts or *rido* and religious aspects; (5) to know if the organization has its significance in the on-going MILF - GPH peace process.

The resources and information of the study was made possible through interview with selected members of the organization like Sultans, Datus, Rajas, Putri, Baes, civil personalities in the area, and some key respondents. Moreover, unpublished materials like *Sarsilah* and family documents were used as primary sources.

Keywords: ROSULPHIL, Sultanate, traditional government, rido

¹ Bao, Camama, Derogongan, Langbid and Azcuna are faculty members of the History Department, Mindanao State University-Iligan Institute of Technology, 9200 Iligan City, Philippines.

Introduction

Sultan is a noble title originated in the Middle East which was adopted by several Muslim rulers. It is an Arabic word which means “strength”, “authority” and, “rulership”. Consequently, it came to be used as the title of certain rulers who claimed almost full sovereignty in a particular domain. Moreover, the term **sultan** is used for male ruler which is equivalent to a King while its counterpart is *sultana* for female monarch who can also be associated to a Queen. The dynasty and lands ruled by a sultan is known as *sultanate*.

In order to spread further the message of Islam, missionaries and traders were sent throughout the world. In the Philippines, the coming of Islam can be explained through different theories such as trading, missionary, political and economic theories. . Trading route, monsoon, theories (missionary), political and economic, sultanate in Sulu, Maguindanao and Pat A Pangampong sa Ranao, (particularly in Lanao del Sur). Even today, Sultanate systems in some non-muslim dominated areas are still practiced by some of the Muslim residents. A great example was the creation of the Federated Royal Sultanate League of the Philippines (**ROSULPHIL**).

The said organization is a SEC (Securities Exchange Commission) registered royal Sultanate and Datuship organization which is considered as the central-national Sultanate in the country today. It also serves as the umbrella royal group of all royal traditional Sultanates and Datuships considering that not only Muslims are members but even some Christians, Lumad, or indigenous peoples particularly in Mindanao.

ROSULPHIL is the acronym for the Federated Royal Sultanate League of the Philippines, a SEC registered

royal Sultanate ad Datuship organization which is considered as the central-national Sultanate in the country. It serves as the umbrella Royal group of all Royal traditional Sultanate and Datuship considering that not only Muslims are members but even some Christians, Lumad, or indigenous peoples particularly in Mindanao.

Its relevance to Iligan City and the Philippines is no less than for its campaign for the maintainance of peace and order as well developments on the different areas of the Philippines particularly Iligan City. This is due to the fact that the founding member of Rosulphil is the Royal Sultanate House of Iligan City (ROSULI).

Significance of the Study

ROSULPHIL as a non-profit organization aims to unify all the existing Royal Houses in the Philippines and unite the Tri-People in Mindanao to achieve peace, solidarity, harmony and progress. It is essential to know the story behind its foundation, the functions and contributions it carries to the sultanate of Lanao and Iligan and its goals as an organization. Conflict-resolution is one function of the organization which is very important to maintain peace in the area. This study gives a background about ROSULPHIL to appreciate its impact especially in mediating conflicts and preserving traditional form of governance alongside with the western political system. This study also presents the organization's initiative in providing peace in Mindanao.

Methodology

The research sought to explore the history of Rosulphil and its impact to Iligan City's governance. In this regard, the research used several methods

such as interviews with the key respondents both primary and secondary sources to support the validity and authenticity of the study. Furthermore, interviews were conducted among the key persons like the Sultan of Iligan HRH. Ibrahim Camama, HRH. Arnold Garbanzos, HRH Ben Kadil and others. The researchers also visited and conduct an ocular inspection to *masjids* which are claimed to be among the most important achievements of the organization. Finally, they immersed on religious seminars, attended programs on peace talks and accompanied the members in settling *rido* (vendetta) among M'ranaws in Iligan City and adjacent areas.

What is a Sultanate?

The word sultanate was literally derived from an Arabic word, Al Sultaniyyah which means "authority". Historically, it is the oldest political traditional system of the Muslims of which the Sultanate had ruled for centuries almost half of the world particularly Middle East and some parts of the Asian continent. As a matter of fact, the present Muslim countries which still have Royal Sultanates are Brunei Darusalam, Malaysia, Indonesia and Oman. In the Philippines today, we have Royal Sultanates in Lanao, Iligan City, Marawi City, Sulu, Maguindanao, Pasay City, Laguna, Paranaque, Makati, Cagayan and many others.

Further, Sultanate is the highest traditional political institution/organization of the Muslims in every community in accordance with the Ijma and Taritib (Royal Code of Laws). In other words, Sultanate is the most unique Muslim traditional culture because without Sultanate, Muslims cannot be treated as distinct or real Moro/Muslim Filipino from other tribes.

The Founding of ROSULPHIL

By the arrival of Sharif Alawi in Tagoloan, northern Mindanao by around 17th century, Iligan may have flourished as an old Maranao (a Subanu-Ilanun or a sub-Manobo Igaonon/Higaonon) settlement along the mouth of Nonokan River and subsequently, Madulog River onto Bayug Island. At this early phase, Iligan may have been subjected to the Tagoloan sphere of influence under Sharif Alwawi's heirs and descendants. Hence, Iligan hitherto appeared to have been part of Tagoloan, which lorded over Lanao region by virtue of kinship with Balt or Momungan (now Balo-i), and even as far as Bayabao around the Lake (Ranao).

The founding fathers of Tagoloan sultanate may trace their origin and lineage to Sharif Alawi, who is often regarded as their First Ruler, if not Sultan, albeit hardly established by chain of sucession since Alawi's reign up to his present progenies. The reigning sultans or rulers of Tagoloan (Greater Tagoloan in Lanao for that matter) may have spanned barely 3-4 generations, or about 120 years since around the 1980's to 2010. In other words, the Sultanate of Greater Tagoloan in Lanao could have been conceived only lately, almost at par with other Lanao Sulatanates though Tagoloan may have been established in ancient time as early as or even before Sharif Alawi covering a wide region. The Sultanate of Iligan may have been created and carved out of Greater Tagoloan in Lanao but must understandably remained to be an integral part of the latter. The Sultanate of Bandara Iligan was regarded merely as "satellite" to Greater Tagoloan.

The Sultanate of Bandara Iligan was founded on September 7, 2003, with its first Sultan proclaimed in the person of Ibrahim S.Camama, a Maranao and bonafide Iliganon with

kinship ties with the old Iliganon families. Ibrahim Camama, an aleem (scholar) by then still fresh from the Kingdom of Saudi Arabia and formerly Professor of the Mindanao State University in Marawi City, was nominated as Sultan sa Bandara Iligan (downtown Poblacion) by the Executive Committee of the Sultanate of Greater Tagoloan. At the start, there was no idea of Iligan to be separated from its mother Sultanate Greater Tagoloan, according to a reliable source Sultan Mala sa Tagoloan. He said that “the Sultan sa Iligan was meant and intended only for Iligan downtown Poblacion (i.e. Bandar) and not the whole city”.

Be that as it may, the above was the immediate background that paved way for the establishment of Iligan into a sultanate viz. Sultanate of Iligan, which never before existed as an entity and eventually, born out the so-called “The Royal Sultanate House of Iligan”. After its creation, the Sultanate of Bandara Iligan together with the City-wide Sultans of Iligan (later “Top Brass”) consolidated the Barangay Sultanates crafted and created for the City of Iligan, within the territorial jurisdiction of the Sultanate of Greater Tagoloan, to comprise the “Royal Sultanate House of Iligan” (i.e. ROSULI).

The “Top Brass” Sultans included the Sultan sa Iligan, (Backbone of the Sultanate) Cabugatan (Life-blood of the Sultanate), Makhdum (Soul of the sultanate), Gaus (Brain of the Sultanate), and Macadar and Mangompia (muscle and strength of the sultanate). These top brass sultans consolidated the Sultanate of Iligan, City-wide sultans and its composite Barangay Sultanates in some 44 Barangay under its royal patronage as

the “Royal Sultanate House of Iligan” (ROSULI) to be later recognized and inaugurated as the following independent Royal Sultanate House. These top brass sultans, by consensus, to widen the realm of their territorial jurisdiction, agreed to make an addendum from “Iligan-Mindanao-Pilimpinas” anchored on traditional place-names preferred over the legal and political subdivisions.

The ROSULPHIL had already enthroned and conferred Royal Titles to a number of renowned and reputable personages (like the City Mayor of Iligan, Queen of the South, some officials and professionals) and inaugurated and accredited some Royal Sultanates and in contact with other ruling houses far and wide in Luzon and Visayas. The organization look forward to the future and opportune time of uniting and consolidating the various sultanates and royal families in the country today in order to seek and promote the common aspiration of Humanity in establishing GOD’s Sovereignty on Earth, as it would be for the entire universe and that we are mainly His Servants and Stewards to obey and submit to His commandments and wisdom. In sha ALLAH, by His will.

It’s Role in Iligan City’s Governance

Iligan City Government being the principal base of the ROSULPHIL recognized the Sultanate through the Office of the City Mayor. When Hon. City Vice-Mayor Henry C. Dy was the OIC Mayor on June 5, 2005, he signed a paper recognizing the important role of the Royal Sultanate House of Iligan City, being the founding member of ROSULPHIL. In fact, the then incumbent City Mayor Lawrence Cruz is a bonafide royal member of the Royal Sultanate House of Iligan City as Datu Adil of Iligan who was enthroned by the

said Sultanate on September 7, 2003 at MSU-IIT Gymnasium.

Iligan City, the Federated Royal Sultanate League of the Philippines (ROSULPHIL) held a special meeting of officers and members and invited fuests last October 21 (2009) at the Torogan of Sultan sa Iligan, Palao-o, Iligan City. This was a special meeting attended by ROSULPHIL's Top Brass (Sultan sa Iligan, Sultan Gaus, Sultan Macadar, Sultan Makhdum, with royal members Bae Romapunut, Datu sa Iligan) after a lull of several months, in view of prospects on some upcoming projects with the City Government of Iligan and some prospective donor countries of OIC (Organization of Islamic Conference) including private foundation. It was also attended by other guests from the far-flung LGUs of Lanao Sur and the City of Iligan. The special royal agenda tackled in the said assembly are the following:

- 1) 2010 Social and Political development
- 2) Royal Restructuring and Reorganization
- 3) Inter-cultural Forum on Islamic Principles
- 4) Agro-industrial Institute
- 5) Asia-Pacific Islamic University
- 6) Tagean-Tallano Claim
- 7) Iligan City Royal Academy
- 8) ROSULPHIL Relations with the City Government of Iligan
- 9) Khalifatul Ardh and Islamic Sultanniyah

In addition, the Federated Royal Sultanate League of the Philippines (ROSULPHIL), through the Royal Sultanate House of Iligan City and House of Makhdum, pledges to support

calamity victims wrought by typhoon Ondoy. Needless to say, this move is strongly enjoined as an obligation on the part of those bestowed with means and wealth towards the needy. This concern is part of the humanitarian endeavor and responsibility and in sympathy with the fellow countrymen.

Main Objectives, Plans and Programs of the ROSULPHIL

The main objective is to revive the Sultanate and Datuship Traditional system, not only in Lanao areas and in Mindanao but if possible in all parts of the Philippines where there are Muslims considering that is part and parcel of the future that once upon a time this country before the coming of the Spaniards was ruled by Sultans, Datus and Rajahs. For instance in Luzon was under the rule of Datu Tallano, Manila and Tondo were under Rajah Matanda and Raiah Sulayman respectively. While Rajah Humabon was the ruler of Cebu, Leyte for Rajah Kulambo and Datu Lapu-Lapu in Mactan who killed Magellan. In Mindanao, it was Sultan Kudarat who fought against the Spaniards fiercely.

The Royal Sultanate of Iligan has two-pronged plans in the implementation of its programs and projects. This can be categorized into Short and Medium-Range Plan and Long-Range Plan. To sponsor and/or host a TV and Radio Talk Show Program, to support existing Da'wah Projects in the City for the prevention of crimes and other immoralities punishable by Philippine Laws and Shariah, to extend moral and spiritual support to Muslim Residents and some possible assistance or facilities and, to establish peace and development

monitoring center with the City Government and other government agencies are among the Short and Medium- Range Plan. On the long range Preparation, they are planning to establish Royal Torogan of the Royal Sultanate House of Iligan City, Tagoloan Aklim, to construct more *madaris* (Islamic schools) and to promote literacy rate in Arabic and Bahasa Melayu and if possible, an Islamic University , to construct several *Masjids* for the growing Muslim residents in the City of Iligan, to legislate Sultanate Court system with the existing Shariah Court, to establish cultural center which can host the holding of seminars and conferences, cultural activities like the Qur'an reading competition, cultural performances, sports and Muslim Wedding Ceremonies, to establish Science and Technology Center, to establish communication Network which includes printing/publication center, to establish livelihood projects in catering the needs to jobless Iligan residents, to create Muslim Chamber of Commerce in Iligan City with the hope of joining cooperative economic ventures with other chamber of commerce and industries in the City including foreign investors and, the creation of the Muslim Iligan Executive Council For Peace and Development as the umbrella organization of all major Muslim Associations in the City. The source of funding for the said programs shall be collected from the members of the Royal Sultanate House of Iligan, from among the patrons and sponsors, both local and abroad, including local and national government agencies, especially those extended from other royal houses. Since, the organization is mainly anchored on Islam and most of its members are Muslims, its main

priority is to look for the welfare and wellbeing of Muslim residents in the city as well as to protect their basic rights through its representation in some of its departments and compartments.

Qualifications being a Sultan/Datu/Ba-e

Meanwhile, the expected role of Sultans, Datus, and Baes may be read as follows:

1. They must serve as Islamic model (must be a practicing Muslims otherwise they could not be allowed to gain any of the positions mentioned above)
2. They must serve as model to humanity (must be cognizant of their role similar to that of *Khalifah* (Muslim Ruler) and must promote the universal and ideological values of Islam)
3. They must be able to trace their Muslim ancestry who bears royal blood.
4. They must be able to trace their relation or bloodline with the royal or noble ruling families of the Bangsamoro Homeland.
5. They must be able to trace their *bangsa*, which is anchored on Islam, the Shari'ah, religion of the patriarch Abraham (AS).

The Sultan, Datu, and Baes are, then, the nobilities of all Muslims because they have been and shall ever remain as the bedrock of the *Bangsa and Agama* (lineage and religion) Islam.

Furthermore, the ROSULPHIL is advocating federal system of government in Mindanao with the following principles:

1. "The Federated Islamic State of Mindanao" as a member state shall be federated by their own freewill with the rest of the "Federal Republic of the Philippines".
2. Each Federated State of Mindanao, for that matter, the "Federated Islamic State of Mindanao" shall adopt its own "State Constitution."
3. The "State Constitution" shall promulgate pertinent matters such as governance at each hierarchical level, from local to state and federal level.
4. The Federal Government of the "Federal Republic of the Philippines" under its Federal Constitution shall likewise promulgate pertinent matters such as foreign affairs, financial system (taxation, currency, so on), and inter-state and international relations, and national security to the federation.
5. It shall recognize the uniqueness and peculiarities of each federated state components based on its existing Code of Laws or *Igma* and *Taritib*.
6. It shall reserve the right or option to choose its own Code of Laws, or *Igma* and *Taritib* which shall form the constitution.
7. It shall be independent and autonomous in all matters pertinent to governance, including the power of State Taxation, except in foreign affairs and currency.
8. The form of government under the proposal of establishing a Bangsamoro Federated State for Mindanao shall be a "Constitutional Modern Sultanate" (modified monarchy).

Moreover, the ROSULPHIL earned the epithet of "Madrasah and Masajid" builders for having facilitated and/or constructed, by far, since 2007 to date, 43 establishments. It has also created its own economic arm, the Royal Sultanate Development Authority (ROSDA), and is registered with S.E.C Projects and programs are underway. It also maintains its regular Newsletter, the Royal Tarsila, and has by far published 35 issues since it came out with the first issue sometime in 2007-2010. As a sultanate system, it exercised and performed number of duties and functions in line with the power and authority of the sultanate, such as settlement of rido in the City of Iligan, solemnizing marriages under the Shari'ah, issuance of Certificates (halal, conversion, baptism, etc.), representation for the Jama'ah (cogregation) in City wide activities, holding of Islamic seminars, Qur'an Reading programs, and similar others.

ROSULPHIL'S Campaign for Peace

The Federated Royal Sultanate League of the Philippines initiates an effort towards attaining a peaceful solution to the surging outrage against the violent attacks on civilians by the revolutionary elements of the Moro Islamic Liberation Forces, otherwise MILF lawless rebels.

Last August 18 (2008), MILF forces sowed a reign of terror by attacking the town centers of Kolambugan and Kauswagan, both in the province of Lanao del Norte. A score of civilians were taken as human shield and a couple of others killed during a skirmish between pursuing government troops and retreating attackers into the hinterland. Over a dozen of houses or homes were burned that turned to ashes on the site of Kauswagan and a series of school buildings at Kolambugan.

The attack came after the collapse of the purportedly signing of the Memorandum of Agreement on Ancestral Domain (MOA-AD) last August 5, 2008 between the Government of the Republic of the Philippines (GRP) and the Moro Islamic Liberation front (MILF) due to the resistance by a hard core triumvirate on the expanded Bangsamoro Juridical Entity (BJE) that integrated portions of Lanao del Norte and Iligan City, also North Cotabato and Zamboanga provinces with a restraining order filed with the Supreme Court of the Philippines.

With the events occurred in Lanao del Norte, ROSULPHIL convened at the Torogan of the Sultan sa Iligan in an effort to restore order, trust and confidence especially involving tensions between or among religious elements within the Lanao provinces, including Iligan City. The peace forum was sponsored by the Rotary Club of Metro Iligan in cooperation with the Dean's Office of the College of Arts and Social Sciences of MSU-IIT, with Dean Geoffrey G. Salgado as main convenor.

Members of ROSULPHIL

Practically, all Royal Houses and Datuships in the Philippines today are deemed members of the ROSULPHIL, aside from the individual royal members being enthroned by the ROSULPHIL, aside from the individual royal members being enthroned by the ROSULPHIL who are both Muslims and non-Muslims because even the Christians and Lumads are also royal people, not only the Muslim Filipino/Moros. That is why they are also entitled to be Datus, Rajahs and Ba-es considering that we are just one people, under one ancestor – the Grand Royal Patriarch Prophet Ibrahim (Peace be upon Him).

The following are the permanent and Active Members of Federated Royal Sultanate League of the Philippines (ROSULPHIL).

Al-Sultan Sa Iligan Dr. Aleem Hadji Ibrahim S. Camama
Grand Royal Patriarch Sultan Yang Dipertuan Agong sa Pilipinas
The Founding Chairman, ROSULPHIL-ROSULI

HRH Hom Rogelio H. Hamac
Sulotan sa Angeles City

HRH Hassan M. Lindongan
Sulotan sa Panggasinan

HRH Hadji Hasim E. Unti
Sulotan sa Pampanga

HRH Abdul Fatah D. Sarip
Sulotan sa Paranaque

HRH Benjie Tang
Datu Ampuan sa Marbel

HRH Datu Ali sa Socsargen

HRH Sheik Sirad M. Manggis
Sultan sa Pasay City

HRH Hadja Asnia D. Bacara
Bae Adil sa Pampanga

HRH Cacayaden M. Manta
Bae a Labi sa Lipa City

HRE Maulana Fatani Abdul Malik
Grand Royal Mufti of the ROSULPHIL

HRH Alimatar L. Mama
Sultan Cabagutan sa Laguna

HRH Amerodin S. Samporna
Sultan sa Central Luzon

Sultan Mohammad C.M. Pumbaya
Sultan Lakandula sa Pilimpinas

Datu Nur Abduraman Arnold A. Garbanzos

HRH Amoran B. Macatangcop
Sultan sa Crossing Calamba, Laguna

Note: The aforesaid Sultans, Datus, Ba-es were duly enthroned in accordance with their respective Royal Titles mentioned above by the Royal Majlis of the ROSULPHIL-ROSULI at Crystal Inn, San Miguel, Iligan City on June 16, 2011, headed by the first Grand Royal Patriarch Sultan Yang Dipertuan Agong of the Philippines.

Major Contributions/Projects done particularly to Peace and Development

It has been very active until now in the interfaith dialogue, Peace and Development Seminars/Conferences with the tri-peoples known as Muslims, Christians and Lumads particularly in Iligan City and Lanao provinces. For the first time, all Royal Sultnate Houses and Datuships have been united nationwide through the ROSULPHIL and became the central and umbrella royal organization in the country today.

Also, in contribution to peace and development, the ROSULPHIL has already constructed more than forty (40) Mosques and Madrasahs in the different parts of the Philippines particularly in Iligan City and Lanao Areas. Masjid in Ong Compound, Palao Iligan City (01-18-10); in Camama Farm in Purok 4 Nanka, Balo-i Lanao del Norte (04-18-08), in Macabangkit Farm, Cacar Ditucalan, Iligan City (06-29-08), in Bagong Silang, Iligan City (07-23-08), in Upper Lanipao Iliga City (07-25-08), in Purok 19 Mandulog, Iligan City (04-03-09), in Punud, Pantar, Lano del Norte (12-13-09), in Gutum, Lanipao (03-30-10), in hinaplanon, Iligan City (4-2-10), in New Capitol, Marawi City (07-23-10), Celdrn, Tubod Iligan City (9-3-10), Bakasan Balo-I, Lanao del Norte (11-16-10), Pagalongan, Tagoloan Lanao del Norte (1-14-11), Pindulonan, Pasaynan, Matunggao, LDN (9-2-11) and Lumbak, Balo-i LDN (1-12-13).

The organization have enthroned several well-known personalities – both Muslims and non-Muslims as Sultans, Datus, Rajahs, and Ba-es and they became bonafide members of the ROSULPHIL like Queen of the South (Ba-e sa Pagabatan). Conversion of Islam without compulsion is also one of its major contributions.

A Sultan/Datu is a person of royal authority and a religious leader. Hence, there is a Sultan/Datu who at the same time an Imam of the Muslim community and thus can solemnize Muslim marriages.

By nature, the Sultan/Datu/Rajah is mandated by Allah to prevent crimes/evils and to establish peace on earth being a vicegerent of Allah, quoting from

Qur'anic verse, "Command what is right and forbid what is wrong".

Hence, the Sultanate in crime prevention is more on Sulh (amicable settlement) of Rido/conflict of which decision of the Sultan/Datu is final and executory without any appeal. However, since the Sultan/Datu possesses executive, legislative and judicial powers, his role in the settlement of Rido is not only limited to criminal cases but even civil and administrative case sin the community.

The creation of the different Royal Sultanates in the predominant Christian areas for the first time in history like the Royal Sultanates of Iligan City, Cagayan de Oro, Cavite, Manila, Paranaque, Cebu City and many others. Also, the installation of the highest Royal Traditional Title in the country today for the first time known as the Grand Royal Patriarch Sultan Yang Dipertuan Agong of the Philippines, equivalent to the Sultan Dipertuan Agong of Malaysia and Brunei Daru Salam. And of course, the creation of the Union 13 Hinterland Barangays of Iligan City (UHB) under the efforts of the ROSULPHIL-ROSULI to help the City government of Iligan in developing the hinterlands.

The masjid and numerous madrasahs could be seen in Iligan and its neighbouring areas. There are so far a total of 43 masjid and several madrasah successfully constructed and are now operational which benefited the Muslims since 2007 up to date. Some prominent members were also invited in several numbers of *dialaga* (engagement) and *kandori* (celebration) sponsored by a certain family of Mranaos. They used to sanctify matrimonial ceremonies among

couples and give blessings to the newly enthroned members of the Royal House. Examples of these are the matrimonial ties of Dr. and Dra. Manticayan held within the vicinity of Iligan last 2009 and the enthronement of the Queen of the South last 2008 at MSU-IIT Gym, Iligan City. In terms of settling disputes, they already pacified several others. To name a few are the case of "theft" that involves the Chief of Police of Tagoloan, who is the culprit or no less a victim, and a certain defendant working for Sultan Cabugatan sa Iligan. The defendant worker pleaded for legal assistance but to no avail and through the intercession of ROSULPHIL's top brass the case was mediated amicably with the family of the Tagoloan's Chief Police at their residence in Mahayahay, Iligan City. Another was the case of three students from MSU-IIT who were discriminated and accused of possessing bombing inside the campus by a certain employee, it was also settled amicably by the ROSULPHIL

Conclusion

The Sultanate in the Philippines is legally been disenfranchised and practically reduced to non-entities by a provision in the Philippines constitution prohibiting the grant of a title of nobility to a Filipino citizen. Coincidentally, the same constitution provides respect for the local culture, traditions and practices. Many non-Muslims do not realize that the Sultans are not only temporal but also spiritual leaders. They are the symbols not only of their communities but also considered devoted followers of Allah in this world. Their duty and responsibility is not only confined in defending their people and communities but also their religion— Islam. For Muslims, their culture,

tradition and religious practices can never be separated from the Sultanate.

It is unfortunate that the role of the Sultanate is limited because it is totally disfranchised under the present Philippine Constitution. However, the said constitution spiritually recognized the Filipino Muslim culture and traditions, of which the Sultanate is included. That is why the ROSULPHIL is more inclined to Federalism, in case there will be a constitutional change in the country which the ROSULPHIL believes that it is the best form of government because most of the countries in the world that are Parliamentary-Federal are more progressive and besides Philippines is composed of many tribes and has 7, 1000 islands.

The Mranaos of Lanao were acquainted with the sultanate system when Islam was introduced. The area was divided into Four Principalities of Lanao or the *Pat a Pangampong a Ranao* which are composed of a number of royal houses with specific territorial jurisdictions within mainland Mindanao. This decentralized structure of royal power in Lanao was adopted by the founders, and maintained up to the present day, in recognition of the shared power and prestige of the ruling clans in the area, emphasizing the values of unity of the nation (*kaiisaisa o bangsa*), patronage (*kaseselai*) and fraternity (*kapapagaria*).

Hence, Iligan hitherto appeared to have been part of Tagoloan, which lorded over Lanao region by virtue of kinship with Balt or Momungan (now Balo-i), and even as far as Bayabao around the Lake (Ranao). The Sultanate of Iligan may have been created and carved out of Greater Tagoloan in Lanao but must

understandably remained to be an integral part of the latter. The Sultanate of Bandara Iligan was regarded merely as "satellite" to Greater Tagoloan.

The Royal Sultanate of Iligan City was founded through the initiative of all its members, especially the Seven-man organization Executive Committee under the leadership of its able, energetic and Founding Chairman, the Sultan of Iligan, Sultan Ibrahim Camama, with unselfish support of the members of the Royal House of Greater Tagoloan that fostered unity and cooperation with the Royal Sultanate League of Bandara Iligan – Greater Tagoloan.

The Sultanate House may serve as catalyst for change and development. It shall be expected to perform a significant role with respect to Iligan City and its residents, especially in peace and order or settling disputes among lawless elements or adherents, and in attending to the spiritual, educational, political and socio-economic uplift of Muslim inhabitants and other residents of Iligan City.

In general, the Bangsa Moro People are now faced with a new challenge of restoring, strengthening and refining the sultaniyyah system which is their ultimate aspiration of realizing the Imamah (leadership) or Khilafat (stewardship). The prospect of the sultaniyyah system to thrive in Philippine society depends largely on the traditional or historical realities of the Bangsa Moro People in relation to the Malay World, especially Malaysia and Brunei.

Recommendation

The Sultanate System in Mindanao may seem so hard to understand but it was the first political structure in the Philippine archipelago. It combines civil and religious authority, as the state in the pacific and set the pace for social mores and ideas. There are many Royal Houses in the Philippines, in Mindanao particularly in Lanao areas, the Pat A Pangampong sa Ranao which is composed of number of royal houses with specific territorial jurisdictions. In line with this, the researcher recommends to focus and conduct a study on the other Royal Houses in Lanao and deals with its history, functions, goals and its objectives and its significance in the area's governance, mediating conflicts and providing peace in the area among the inhabitants.

City Innovation, Pekalongan as UNESCO Creative City: Processes, Contexts and Lessons Learned

Dr. Teguh Yuwono, M.Pol.Admin.
Wahid Abdulrahman, S.I.P.,M.Si.

teguhyuwonos@gmail.com

Department of Politics and Government Science
Diponegoro University, Semarang, Indonesia.

Abstract

Generally speaking, there are many ideas about theories and strategies to plan or develop an innovation in a city. However, in practice it is not as simple as perceived. Building and developing innovation in a city is not an easy job. There are many obstacles found in creating innovative city. Among small numbers of cities able to create an innovative city is Pekalongan city, Indonesia. Pekalongan city capacity to have international award from UNESCO as Creative City in Craft and Folk Arts category is indicator of city management capacity, especially in planning, implementing and evaluating policy capacities. This research is intended to have knowledge about why Pekalongan city is able to be World Creative City as awarded by UNESCO. The main objective of this research is to find what kinds of processes and contexts behind innovations successfully conducted in Pekalongan city to maintain sustainable local good governance performance, especially in crafts and folk arts category. The research method occupies qualitative type which is best suitable to deeply discover processes or contexts behind the phenomena studied. In depth interview, observation and Focus Group Discussion (FGD) are used to collect data. There are five main factors determining why innovation of Pekalongan city as UNESCO craft and folk art occurs. These five factors are namely *firstly*, leader or individual; *Secondly*, city traditions to sustain this innovation; *thirdly*, Pekalongan local people proud. *fourthly*, civil society independency and *fifthly*, partnership model of cooperation among stakeholders. Interestingly, among these determining factors, it is found that human capitals (such as batik skills, feeling of proud, cooperation in implementing innovations and so the like) are important elements in succeeding Pekalongan as UNESCO creative-innovative city. This paper provides an interesting explanation in these innovation processes and contexts. There are many lesson learned that may need to share to other cities across the world.

Keywords: *creative city, craft and folk arts, leadership, partnership, cooperation, social capital.*

INTRODUCTION

There are two main reasons, namely empirical and theoretical why local government innovation in Pekalongan city is important to study. The empirical reasons cover several as follows. *Firstly*, leading a successful city in the context of strong political competition in Indonesia is not a simple one. Pekalongan city has provided a successful city that has been able to prove a good performance (Bappeda Pekalongan 2013).

Secondly, strong political competition in the era of local autonomy in Indonesia has led to many corruption cases of local

leaders. For sure, a city that has a political leader (such as a city mayor) committing to a corruption case would not be able to lead and manage the city management and development well.

Thirdly, a city leader who commit in corruption is then not able to create and lead government innovation in order to improve public welfares. Corruption makes local leader not be able to focus on their power exercise for the sake of public interests.

Finally, Pekalongan as one famous city in Indonesia that is able to create and develop government innovation namely

creative city. In 2014, Pekalongan city was declared as UNESCO's creative city because of its good performance in craft and folk arts. UNESCO maintained that Pekalongan city is "an excellent example of how culture-based development can support citizens, particularly women, in developing viable income generating activities and improving their quality of life" (Source: <http://en.unesco.org/creative-cities/pekalongan>).

Meanwhile, theoretical background of this research is related to the study of government innovation theories. There are two main theoretical paradigms on government innovation research namely good governance and relations between government and economic growth or development (Davis & Keating 2000; Grindle 2010). Study of government innovation has been not many. Therefore, putting innovation in government, especially local government is then pivotal (Chhotray & Stoker 2009; Chiba 2009; Hadiz 2010).

RESEARCH QUESTIONS AND OBJECTIVES

This research is intended to answer three important questions, namely:

- a. What kinds of innovation shown by Pekalongan city so that awarded UNESCO's creative city?
- b. What are factors determining Pekalongan city in innovating local government so become a creative city?
- c. What kind of model is implemented in Pekalongan city innovation of UNESCO's creative city?

Furthermore, this research is intended to look for the following, namely:

- a. Knowledge about government innovation of Pekalongan city in related to the award of UNESCO's creative city?
- b. Knowledge about important factors determining the innovation success

of Pekalongan as UNESCO's creative city?

- c. Knowledge about possible model implemented in Pekalongan city in relation to its innovation to creative city.

IMPORTANCE OF STUDIES

In relation to the concern about the importance of the study of this research, there are three main reasons need to raise. Firstly, there is a limited number of research or study regarding to the question of why innovation can be achieved well within a local government level. There are a lot of research dealing with innovation, but majority is in the private sector model. Not many examples can be easily found in the public or government sector (Kooiman 2000; Sumarto 2009).

Secondly, the study of local government has more opportunities to be studied as a system of government rather than the study of innovation. Innovation is often seen as small part of governance so that there is no plenty attention paid (Maldonado 2010).

Finally, the research on innovation is often less focused on processes. Research on the government sector is more focused on output rather than process of innovations. Less attention is also paid to the main factors determining the success of innovations (Serrat 2012; Stocker 1998).

Based on this three main reasons, this research is going to fulfill the research gap, particularly in looking at the innovation of local government of Pekalongan city in creative city. Analyzing this innovation by process may be able to contribute the study of local government innovation, not only by output but also by process (Turner & Hulme 1997).

RESEARCH SETTING

Pekalongan city is one developed local government in Central Java Province, Indonesia. It is located in the western part of the central java province and has population

about 299.142 people (Suara Merdeka 2016).

Pekalongan city is known as batik city. Batik is one famous handicraft cloth that has been lasting for about 300 years. This can be seen from the history of Pekalongan. Nowadays Pekalongan city develops Jetayu Zone as a cultural zone that is supported by Museum Batik Nusantara and many heritage building since Dutch Colonial.

Batik development centres are then developed in many areas of Pekalongan namely Kawasan Grosir Batik Setono, Kawasan Grosir Batik PPIP, Kampung Wisata Batik Kauman, Kampung Wisata Batik Pesindon, Sentra Batik Buaran, Kampung Wisata ATBM and Handicraft Medono, Kampung Canthing Landungsari and many others. There are also many supermarkets and mini markets in Pekaongan main roads that sell batik.

Batik is then become the life of the Pekalongan Society. Batik is very important in sustaining people economy of the city. Batik business has been able to make Pekalongan famous as batik city, not only currently known, but since long time ago (under Dutch colonial).

In the context of UNESCO creative city, Pekalongan city has been able to develop not only batik as a breath of people economy, but also to develop multiculturalism of Pekalongan city. Head of Pakalongan Planning Board maintains that the multicultural life of the city is one main factor why UNESCO provided excellent appreciation to the city. Multiculturalism in Pekalongan city can be seen from several facts, such as there is a cultural balance and full respects among three main races in Pekalongan, namely Javanese, Arabic and Chinese.

There is always presented multicultural events every a year, such as Pekalongan Batik Festival or Pakalongan Anniversary Event. In these two main events, multiculturalism of the city is manifested

since there are many public contributions from three main races in Pekalongan.

Batik is also able to provide every economic life of the society including women. UNESCO provided special comment related to this performance. Support of economic activities in Pekalongan is very much influenced by the batik roles and contributions.

THEORETICAL FRAMEWORK

Innovation in local governance is a new situation which may be freshly new (innovate) , or something renew or reinvent (reinvention) or may be revitalization. Innovation may include innovation capability, innovation activity, wider sector conditions for innovation and impact on performance (Serrat 2012:6).

Innovation capability is a potential capacity that make possible the innovation to take place or occur. Innovation capability refers to leadership and culture, innovation management, organizational innovation capacity that make a innovative change possible.

Innovation activity is activity that create change take place and possible to run well. Innovation activities includes four main steps, namely generating ideas, selecting ideas, implementing ideas and diffusing ideas.

Wider sector conditions for innovation is environmental factors influence the success of innovations. These factors include authority, power, autonomy, incentive and enabler's factors.

Impact on performance is output or outcome produced by the innovation activities or processes. Impact is something that may be known after 2 or 3 years more of innovation.

In relation to the process of innovation, there are four important steps, namely generating ideas, selecting ideas, implementing ideas and diffusing ideas (Serrat 2012: 6-7; Eggers & Singh 2009).

Generating ideas is very early step in governance innovation processes. In this

step, it covers several things such as change type that are expected, how many or how much changes are expected, where the sources of changes are explored and also what are the real changes themselves. Ideas of innovation in this generating ideas may come from many people or actors, for examples, from staff, customers, senior managers, research, competitors and others.

Selecting ideas is the second step in innovation process, namely choosing or selecting the best ideas that will be implemented in the innovative changes. This second step may deal with something like arranging resources to innovate, developing ideas in multi teams and also exercising pilot projects.

Implementing ideas is the third step. In this step, innovation activity is implemented. This include embed innovation activity, providing training and education and also measuring performance indicators to ensure the success of innovation programs.

Diffusing ideas is the four step before innovation success can be measured. This step includes socializing or spreading ideas through many ways such as discussion, seminar, FGDs and others. This step is important to make sure that innovation process is going on the right track.

Theoretical questions in regard to the consent about the main factor influenced innovation is explained by Dudley and Richardson theory. According to this theory, there are four main factors determining innovation or changes, namely ideas, individual, interests or institution (Dudely & Richardson 2000: 18-19).

Idea is related to the concept or human thinking regarding to change or innovation. Ideas may be come from many sources such as learning from history, other experience, ideal human thinking or many others.

Individual refers to a person who may be in power or authority that are able to generate or manage changes or

innovations. Individual here is usually someone who has power or authority to do it, for examples, a leader (president, minister, CEO, manager or other).

Interest is very important element innovations or government changes. Interest may determine the motivation of changes or innovations. Interests may be come from many situations which are multiple the spiritual force of innovation. Public choice theory mentions the significance of interests in determining human or political motives.

Finally, institution is other important element in policy changes or innovation. Institution is able to determine and become an important key in succeeding policy changes or innovations. Traditions, experience or organizational learning within an institution can be able to determine the success of failure of policy changes or innovations (Chiba 2009; Kay 1993).

Although in practice, this factor is not working alone. There is always dominant factors that emerge from several factors influencing together. Therefore understanding comprehensively to all factors involved is then very important.

Meanwhile, other theory by Pierre & Peters (2000:2-3) maintain that there are three important factors of policy changes or innovations, namely political culture, tradition and institution.

Political culture refers to democratic relations among actors involved in the political system of the city. This includes how people or actors within the society influence policy process started from policy formulation, implementation until to evaluation stages (Kooiman 2000; Stoker 1998; Sumarto 2009).

Tradition refers to the people activity or customs that already implement and long lasting in the society. Tradition that is good in the community is sustained to make sure that good society values or traditions are maintained to the sake of common welfares.

Institution, similarly to other theory, refers to the capacity of organization to manage changes or innovations. Institution values, such as organizational cultures, togetherness, solidarity, unity and commitment are very significant in proceeding changes or innovations (Wagener 2004).

In sum, there are several important factors may be taken from the theories, such as ideas, interests, institutions, individuals (leader), tradition and political culture. These factor may be mixed up in the practice, but can be theoretically known or partly determined in concept.

METHODOLOGY

Research on Pekalongan creative city is qualitative type. Qualitative method is chosen is the research is intended to know deeply the process of innovation (as suggested by Denzin & Lincoln 2003:6-9; Ritchie & Lewis 2003: 1-6) taken place in Pekalongan city as well as to discover underlining factors why innovation may occur in Pekalongan.

Creswell (2009:4) maintains that qualitative research can be able to discover six important findings, regarded to understanding meaning, context, unanticipated phenomena, process, causal explanations and patterns.

This research is explanatory, namely try to explain the research phenomena regarding to Pekalongan creative city. Explanatory research in qualitative is pivotal since it will be able to provide "*complex holistic picture in natural setting*" (Creswell 2009:175).

Data collection used primary and secondary data. Primary data were obtained by individual indepth interviews with the informants. And the completed by focus group discussion from three main actors of governance in Pekalongan city, namey the government, the private actors and the civil society relevant to the focus of the study. Informants interviewed

individually were 10 people. Informants invited in discusses in FGD were 35 peoples.

Secondary data were obtained from the local government of Pekalongan, particularly from Development and Planning Board (*Bappeda*). These data covered many information from the beginning process of innovation of creative city in Pekalongan which was important in the study of documentation (Weiste & Foard 2006: 96-101).

Data found from the field were then analyzed by qualitative method, namely interpretation by using triangulation. There were several steps of data analysis used, namely reading the transcripts, categorizing and contextualizing the data relevant to the interpretation and drawing conclusions.

RESULTS AND DISCUSSIONS

This section explains two main elements, namely process of Pekalongan creative city and explanation about factors determining the innovation of Pekalongan creative city. As stated in the methodology, this research fulfill the gap on the aspect of process so that this explanation is important.

UNESCO's Pekalongan Creative City: Process

The process of to be creative city of Pekaongan was started by the city vision confirmed by Basyir Ahmad, city mayor of Pekalongan city in 2005. It was stated that the Pekalongan city vision is Pekalongan as batik city that developed, independence and welfares. In order to realize this vision, the mission of the city was then stated in 2005 as:

- a. To establish social life and governance based on Pancasila and 1945 constitution.
- b. To establish good governance based on professionalism, trust, commitment, participation and information technology.

- c. To establish developed local government by providing good infrastructure and synergy in development zones, spatial policy, environment and natural resources.
- d. To fulfill social basic needs of society and develop human resource management.
- e. To establish strong local economy through enhancing local potential products that are highly competitive, be backed by creativity and innovation.

Based on these vision and mission, it was clear that the spirit of innovation or creative city was actually initiated by the government since 2005. Basyir Ahmad, the City Mayor developed many innovation programs in order to develop a creative city.

In 2013, the City Mayor then decided to take part in a city nomination of UNESCO's creative city. From Indonesia, there were five cities taking part in the UNESCO nominations, namely Bandung, Surakarta, Yogyakarta, Denpasar and Pekalongan.

From these five cities from Indonesia, by UNESCO in 2014, Pekalongan city was then declared as the member of World creative city in the category of crafts and folk arts. There are seven categories of UNESCO's creative city namely, music, film/cinema, literature, gastronomy/ cullinair, design, media arts and craft & folks arts.

Interviews with the City Mayor Basir Ahmad revealed that initiation of taking part in the UNESCO creative city program was firstly initiated by the government. Supports from the central government, particularly Minister of Trade and Creative Economy.

UNESCO under Decision Letter No DG/4/14/8542 on 28 November 2014 then decided Pekalongan City as a member of world creative city network of UNESCO. Creative city, according to UNESCO is a city that able and excellent in developing creativity as a part of strategies to develop sustainable city. UNESCO's creative city

network is intended to establish international cooperation among cities in order to enhance the development of creativity, social inclusion and sustainable development.

There are four main strategies to develop creativity in terms of Batik development in Pekalongan city, namely (a) providing good environment to develop Batik; (b) establishing Batik Museum; (c) adding batik as local content in Senior High School curriculum in Pekalogan and then (d) promoting batik in scientific institution for sustainable batik development.

Firstly, providing good environment for batik to develop is one effective way to sustain city creativity of Pekalongan. City Mayor Ahmad Basyir confirmed that creating good environment is important to guarantee the sustainability of batik to exist for longer time. The development program of Batik environment is designed by developing batik as source of economy (income) and as cultural arts (aspects of culture and arts).

Secondly, establishing of batik museum in Pekalongan is a strategy to preserve batik as main element of Pekalongan city. Batik museum is intended not only to note the historical development of batik, but also to provide learning and education for the people. Batik museum is one effective way to indirectly educate the people about the importance of batik for Pekalongan society.

Thirdly, educating batik as a part of lcal content in the school in Pekalogan is one important way to embed young generation awareness of batik. By adding batik in the school curriculum, it can make the future of batik is well and may guarantee the sustainability of batik.

Finally, having study program of batik in a university (such as University of Pekalongan and PUSMANU polytechnic) can provide optimism about the future and sustainability of batik. School or university may be expected to create a system that

may be able to sustain for long time. Education is also important to scientifically teach the meaning, concept, theory and methodology of batik development and sustainability.

The process of Pekalongan creativity in batik and arts was firstly initiated by the local government led by City Mayor Basyir Ahmad and the internal team of local planning board (*bappeda*) and telecommunication board (*dishubkominfo*). The local government initiation and spirit were then supported by non government (NGOs) participation especially from batik group community and artist community association.

Several city events of Batik that are established annually are for instance, annual batik carnival, annual batik workshop and show, annual arts performance, annual batik fashion show. Interestingly to sustain batik creativity, batik tourism is developed. There are several batik tourism destination such as Batik Pesindon kampung, Batik Kauman kampung, Batik Landungari kampung and Batik Setono.

All batik programs under the local government of Pekalongan is intended to sustain city creativity of batik. In doing so, creating city ecosystem to sustain batik is then significant. This city ecosystem of batik has already been created through several activities, such as:

- a. Strengthening regulation and policy to preserve and develop batik for long time
- b. Providing sustainable batik through education (curriculum in schools and universities)
- c. Developing support facilities or infrastructure, such as, batik museum, batik kampung, and others.
- d. Strengthening batik promotions and business (batik markets, annual batik events)
- e. Establishing support batik events (batik fashion show, batik carnival)

- f. Developing local tourism based on batik (batik kampung); and finally
- g. Strengthening batik community (business or culture).

Main Determining Factors

As stated in theories that there are many main factors determining the capacity of innovation or creativity of the city, such as idea, interest, individual, institution, tradition, and also political culture (Dudley & Richardson 2000; Kay 2006; Piere & Peters 2000). Based on individual interviews and FGD with many informants, it can be revealed that the first main factor of Pekalongan innovation in creative city is because of the government initiation.

The government initiation is very much led by the city mayor. The city mayor generated bureaucratic resources to set a program which supported to creativity of the city. The city mayor had power and resources to ask people or community participation across the city. This community was for example batik business people, batik lovers, batik educators and other concerning groups of batik, arts and cultures.

The government initiation was very effective because of experts teams or supporting very good staffs from bappeda, dishubkominfo and also from Dinas Perdagangan and creative industries. Head and Secretary of Bappeda of Pekalongan city confirmed that it is not easy to have UNESCO's creative city award since there are many requirements should be completed. Creative city team of Pekalongan can be said that they work very hard to meet the UNESCO standard in dealing with the creative city network. Interestingly, majority of team members from Bappeda was led by women who had very high motivation and hard working.

This government initiation can be seen as leadership or the influence of leader (as stated in Dudley and Richardson Theory as individual) in the process of getting

recognition from UNESCO. The role of individual or leader (city mayor) in Pekalongan was significant since he had sufficient power and authority to manage the city innovation or creativity. His role in developing, supporting and empowering staff was pivotal.

The second factor that makes it easy for Pekalongan to get UNESCO's creative city is tradition of batik. Batik has already been known and popular as part of Pekalongan people's life since hundreds of years ago. Batik can be seen as the breadth of Pekalongan people. Creativity of Pekalongan people in batik has been going on for a long time. This long historical batik provided more resources and human capital for Pekalongan city to develop their creativity or innovation through batik, arts and cultures.

History of Pekalongan showed that batik was very popular since Dutch colonial. Batik has become sources of economic life as well as social arts and cultures. Batik has been known as the symbol of Pekalongan people, in terms of creativity, economy or cultural arts.

Due to these traditional factors, the current local government of Pekalongan is then very easy to develop batik creativity since human capital or skills in managing batik has been occupied. Human capacity of Pekalongan society in creating batik and arts led to a condition where people have been able to sustain batik well.

Romy, batik business community activist said that batik has become the life and tradition of the people for hundreds of years since the kingdom era of old Indonesian history. Batik has been worn by the people from very long time ago as a part of people's culture and arts. The special characteristic of batik in Pekalongan, according to Romy is the color of batik is very lively and full of dynamic colors and cultures. This batik is different from batik developed by the kingdom elites at that time. Pekalongan batik is often mentioned as coastal batik, that is different from

the kingdom traditions in Yogyakarta or Surakarta kingdom.

Thirdly, local people's pride becomes an important factor in developing batik creativity in Pekalongan. In every season, people of Pekalongan are always happy and willing to wear batik. Need for batik by the community is highly demanded from time to time.

Edywan, batik businessperson confirmed that batik can be separated from the soul of Pekalongan society. Batik will always come in every situation, every life of the people. Batik is local people's pride as well as local people's sources of economy and arts or cultures. Batik has been able to sustain the life of people as well as the life of local government.

Fourthly, civil society independence of Pekalongan contributes to the creativity of the city. Civil society of people in Pekalongan in dealing with batik is strong. Society can determine their own activities related to batik.

Anita, Bappeda staff added that civil society in Pekalongan plays an important role in developing batik as business as well as culture or arts. They develop batik by developing from generation to generation. Many young people learn batik from their parents or ancestors so that batik has then become very popular and strong in tradition and cultures.

Finally, cooperation between government, community and business people creates the success of creative city of Pekalongan. Cooperation and collaboration between these three actors in governance of Pekalongan provided good opportunities to have successful innovation in creative city.

Adi, from entrepreneur association maintained that innovation success would be achieved by one actor or element only. There has been collaboration among actors, because resources were spreading out among them. The government was for sure need private actor and society supports to

make public policy works. Although in the case of Pekalongan creative city, the most active role of actor was the government. However, business people and society or community provided good efforts and opportunities to create the program successful.

Economy of the city has been good in performance since collaboration of among three actor in this governance. They have been communicated each other to discuss and cooperate in formulating, implementing as well as evaluating policies related to innovation and creative city.

Model telling about the main factor determining these success of creative city in Pekalongan may be as follows:

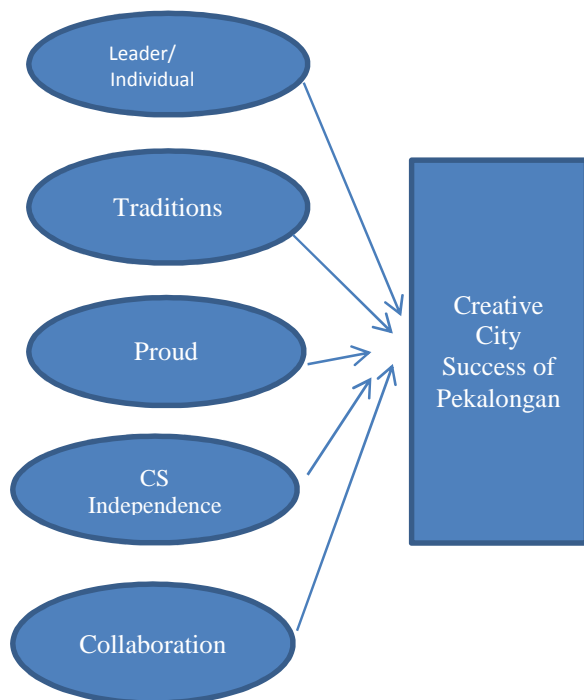

Figure 1: Five Determining Factors in Creative City of Pekalongan

CONCLUSION/RECOMMENDATION

Based on research results and above discussion, it can be concluded that:

- a. Creative city of Pekalongan was achieved by implementing four strategies namely providing good environment to batik development, establishing batik museum, integrating batik into school

curriculum and promoting batik in scientific institutions for sustainable batik development.

- b. Process of creative city was initiated by the local government, especially the city mayor supported his staff in Bappeda of Pekalongan city.
- c. This government initiation was then broadly supported by non government actors and communities across areas in Pekalongan city. This makes cooperation or collaboration among the actors become critical in the city programs.
- d. There are five main factors determining the innovation success of creative city in Pekalongan city, namely leader/leadership, traditions, local people proud, civil society independence and collaboration among three main actors in governance.
- e. The awareness of multiculturalism and sustainability is important in supporting the city to have creative city awarded by the UNESCO.

In dealing with the question of sustainability of creative city in Pekalongan, there are several recommendations need to be followed, as follows:

- a. Improving more roles of young people to develop batik, in terms of business or arts and cultures. Young generation is the future of the city. Involving them in the public policy process of the city is critical.
- b. Providing more opportunities to non government organizations (NGOs) and community to sustain in the creative city program is very important. The government role was strong. It is needed non government and community roles to sustain the creative city programs for now and the future.

- c. Demanding more batik or other cultural events not merely dominated by the local government initiation. Majority batik events have been initiated or dominated by the government. In the future, it is important to involve many non government and community actors to take a part.
- d. Facilitating people to provide more raw materials for the sake of batik sustainability. Raw materials are very much supplied by import so need more government intervention to guarantee the provision and sustainability.
- e. Providing enough facilities for arts and cultures activists to support and sustain creative city of Pekalongan in folk arts. Batik is developed well. But folk arts and cultures need more attention and commitment from policy makers.

These conclusions and recommendations can be lesson learned that may be implemented in other cities around the world. Many lessons can be learnt, especially related to spirit of tradition and innovation led by the city mayor. Continuing city mayor (the current city mayor of Pekalongan) is also willing to continue or sustain the program of creative city. It means that the guarantee of governmental leadership sustainability is taken placed.

³moehyamien@yahoo.com. Ph.D Program Islamic Educational Psychology of Universitas Muhammadiyah Yogyakarta Indonesia.

Abstract

This study using a test analysis of Structural Equation Model (SEM) on trends in the adolescent delinquency behavior are influenced by psycho (internal juvenile form of self-control and self-identity) and social (ie environmental factors such as family, school, peers and the media) with the mediation of psychosocial control who suspected that the malicious behavior or behavior that is a symptom of illness (pathology) socially in adolescents due to social neglect.

The population of this study were 1354 students of SMA Muhammadiyah I: 568 students, MA Maarif Al-Mukarrom: 323 students, MA Pondok Arrisalah: 261 students, and MA Darul Istiqomah: 202 students. The sample of this study were 225 students.

Based on the findings of the internal factors, the environment and delinquent teenagers, that the influence of the control psychosocial against behavioral tendencies delinquency amounted to 26.7%, while the environment adolescents contributes to behavioral tendencies delinquent teenagers at 19.1% and internal adolescents against behavioral tendencies delinquency amounted to 17.9% influence negative. The magnitude of the indirect effect on the environment adolescent behavioral tendencies delinquency for their psychosocial control of 21.4%. The amount of internal indirect influence behavioral tendency of adolescents to delinquency for their psychosocial control of 4.5%.

Thus that environmental factors such as Environment at the Institute of Islamic Education in Ponorogo (MA Pondok Modern Arrisalah, MA Maarif Al-Mukarrom, MA Darul Istiqomah and SMA Muhammadiyah I) as the factor most responsible for causing delinquensi teens. In other words, teens, family, school, peers, and the media that the level of religiosity is high, then the behavior tends to correspond with the values and norms in society, more cautious in thinking, say and behave, as well as avoid the danger delinquency or trends.

Keywords: Adolescents; Institute of Islamic Education; Psychosocial Control; Delinquency Behavior.

A. INTRODUCTION

Adolescence involves a process that is reaching a crucial period in one's life, presents so many challenges, such as changes ranging from changes in the physical, biological, psychological, and social, which requires teens to face and overcome the challenges of change with the consequences of psychological, emotional, and behavioral (Herien P., 2009: 4, R..A. Webster, et al, 1994: 647-657).

Adolescence is a time of change, a time when teenagers face a variety of new experiences. At the stage of childhood, most teenagers live in a protected environment and arranged where parents or adults who care is the party in control. During adolescence, teens tend to become less dependent on the protection of families and stepped into a situation that they have never met. Various neighborhoods move brings new situations and events (D. Baumrind in P.A. Cowan & E.M. Hetherington, 1991: 219-244, N. Grossman and K.N. Rowat, 1995: 249-261, SS. Robin and Johnson, 1996: 69-99)

Common problems adolescents in schools based on the information by interview and focus group discussion by Herien P. (2009: 19) from various sources principals or supervisors, it was shown delinquency adolescents include lack of student discipline is reflected in the frequent delays students enter school, untidiness students in dress school uniform, breaking the school rules such as smoking in or outside the school environment and often 'hang out' outside the school fence so late for class. The lack of student motivation for learning as

reflected in the scarcity of students read literature, insecurity students on the way home and go to school, and the difficulty of students to get public transport to get to and from school.

According to developmental psychologists are Papalia et al. (2004), John W. Santrock (2007), Messina and Messina (2003), Gilliom et al. (In Santrock, 2007), there are several reasons why teenagers commit behavior delinquency, among others: (1) immature personality, (2) offspring (genetic), (3) the living conditions of an unstable family (not in harmony).

The symptoms of delinquency as noted above it is almost difficult to find in Islamic educational institutions. Islamic educational institutions in this regard are boarding schools, educational institutions under the organization Muhammadiyah and Nahdlatul 'Ulama and other organizations. It can be associated with the conclusion of Nata (2001) which states, teenagers who live in Islamic educational institutions including schools better understand, appreciate, and practice a religion well. Besides the teens who live in boarding schools can read the Qur'an properly, understanding, and able to implement the teachings of worship well, the values of religion and morality.

But in fact, as an expression of Fauzi R. A. (2009) in his research that the life in boarding school students found violations such as smoking, dating or courtship, staying outside the hostel, theft, and research R. Yasmar (2009) that delinquency in the form of truant students, coming late to school, smoking, fighting, and the results of the interview (along Ust Syamsul Hadi Untung, 2015) in Pondok

Modern Gontor Ponorogo portray various disciplinary offenses, namely in 2011 in the form of minor offenses 34 111, was 351, and the weight of 22, in 2012 in the form of violation 43 157 mild, moderate and severe 41 in 1138, and in 2013 in the form of minor offenses 39 100, was 450, and the weight 52. Ponorogo have some criteria of Islamic educational institutions junior high and high school, which are managed by an organization with 24 institutes Muhammadiyah, Nahdlatul 'Ulama as many as 13 institutions, and in the form of boarding schools; with the criteria of modern boarding school (*'ashriyah*) as many as 18 agencies, traditional (*salafi*) of 9 institutions, and the combination of modern and traditional as many as 33 institutions (Ministry of Religious Statistics Kab. Ponorogo, 2015).

Thus, a teenager's life can not be separated from the life of the surrounding community. At the Institute of Islamic Education perform a variety of control adolescent psychosocial be disciplined approach, approach to guidance and counseling, coaching morals students (S.N. Erna. R, 2009), the development of social interaction clerics and students (Andi W, 2009), the pattern of communication for students (Rina J.P, 2013) and as self-control theory of Hirschi on delinquency adolescent behavior due to the routine activity Houghton et al. (2008: 205-223).

This research generally aims to analyze trends delinkuensi behavior of teenagers through psychosocial control approach. In particular, this study aims to (1) analyze the global models and the factors that influence the behavioral

tendency delinquency adolescents with psychosocial control approach to the analysis of Structural Equation Modeling (SEM). (2) outlines a general overview of Islamic educational institutions in Ponorogo in East Java with the identification of adolescent behavior tendency delinquency, (3) formulate a model of psychosocial control approaches in the prevention and countermeasures against the tendency delinkuency adolescents as well as the differences between Islamic educational institutions in Ponorogo.

B. THEORETICAL

1. Meta-Analysis of Delinquency Adolescent Behavior

Sample studies reviewed in the meta-analysis of studies based on the opinions logical psychologists and research a number of 89 journals that have characteristics; 1) research delinquency teenagers, internal factors and environmental factors teenager some 41 journals, 2) research delinkuency teenagers and psychosocial control some 21 journals, and 3) research religiosity boarding school number 27 of the journal.

From the results of this meta-analysis tells us that the behavior of juvenile delinquency in several studies in the journal more leads to behavior caused delinquency crime, due to the lack of attention of family and school environment and is influenced by many internal factors to be teenagers teens cultural communities.

The plan of this study assumes that adolescents with boarding schools and Islamic institutions can minimize

the tendency of delinquency adolescent behavior, which is in development, they are in transition/change context with its surroundings, as disclosed by Hill in psychosocial theory.

2. Delinquency Adolescent Behavior

a. Understanding Adolescents

Adolescence is a period of transition or the transition from childhood into adulthood. At this time individuals undergoing changes, both physically and psychologically. Changes are apparent physical changes, where the body is growing rapidly so as to achieve the body shape of adults accompanied by the development of the reproductive capacity (H. Agustiani, 2009: 76, Steinberg and Belsky, 1991: 131, Kimmel, DC, and Weiner, IB 1995: 87)

Adolescence is known as one period in the span of human life that has some unique characteristics. The uniqueness comes from the position of adolescence as a period of transition between childhood and adulthood (Lerner, Richard. M Lerner & David F. Hultsch, 1983: 94, Elizabeth Hurlock, 2006: 86), with physical changes, emotional changes, cognitive changes (Piaget in Hurlock, 2006: 35-39),

Erikson (in Hurlock, 2006) says that adolescence is a person who in terms of chronological age is the age range 12-21 years, the transition of biological, cognitive, social, and psychosocial development is experiencing a form of identity, autonomy, intimacy, sexuality and achievement.

b. Adolescent Behavior Theory

Behavior as a reaction to both simple and complex character in adolescents does not happen automatically, but as a result of the stimulus received by the individual concerned both external and internal stimuli. Characteristics of adolescent behavioral reactions of interest is the nature of the differential. That is, the stimulus may cause more than one response is different and some different stimulus could cause the same response (Anwar, 2009: 17) the relationship model of behavior that says that the behavior of (B) is a function of individual characteristics (P) and the environment (E), ie $B = f(P, E)$ (Kurt Lewin in Azwar, 2009: 23).

Behaviorism Skinner emphasized the scientific study of the behavior of the observed responses and diterminan-diterminan environment. In behavior by B.F. Skinner (1969), the mind, consciousness or unconsciousness, is not needed to explain the behavior and development. Social Cognitive Theory (social cognitive theory) states that behavior, environment and cognition are important factors in the people development. Albert Bandura (1986) was the architect of the contemporary version of the theory of social cognition, which was originally by Mischel (in Santrock, 2007) called cognitive social learning theory (cognitive social learning theory).

Bandura stated that behavioral factors, environmental, and

personal/cognitive, such as confidence, planning, and thinking, can interact on a reciprocal basis. Thus, in view Bandura, the environment can affect a person's behavior (in accordance with the views Skinner), which includes self-efficacy, self-identity, and self-control. The attitude and behavior of people will be different based on environment situation (Tjahjono, 2011).

c. **Theory of Delinquency Adolescent**

Adolescents referred to as Juvenile Latin Juvenile, which means young people, the characteristic features of the youth, distinctive properties in the adolescent period, while the delinquent from the Latin "delinquere" which means ignore, which expanded into a nasty, naughty, anti-social, criminal offenders, noisier maker, troublemaker, peneror, wicked and so forth (Kartini K., 2006).

The term Juvenile delinquency or rogue behavior is a symptom of illness (pathological) socially in adolescents caused by a form of neglect social, so they developed a form of deviant behavior (Hurlock, 2006, Conger & Dusek in Hurlock, 2006, Sarwono, 2008, Santrock, 2007).

Factors juvenile delinquency by Santrock (2007), namely: identity, self-control, age (McCord in Kartono, 2006), gender, expectations about education and values in schools (Chang and N. Thao Lee in Kartono, 2006), the

family (Gerald Patterson and his colleagues in Santrock), influence of peers (Santrock, 2007), socioeconomic class, and the quality of the environment around the residence.

3. **Control Theory of Psychosocial**

a. **Social ties as a factor of Conduct Delinquency**

Indonesia is known as a transitional society or modernizing society. Such a society is different from tradition oriented society (traditional society) and modern society (modern society). State transition society by Emile Durkheim (1951) says it will bring the individual members of the community to the state of anomie is normalesness, which is a social system in the form of no instructions or guidelines for behavior. The condition of anomie or ambivalent (obviously not espoused values) and ambiguous (unintelligible form of behavior) (Sarlito, 2008), this course does not only apply to members of the adult community, but also against the teens.

The need for social cohesion as well as neighborhood schools run by religious organizations, such as boarding schools, boarding school or any other form, so that the stronger the social bonds in the teens, further reducing forms delinkuensi, with various norms, rules, and personality *Islami*.

b. **Social Control Theory of Travis Hirchi.**

The theory of social control start from the assumption or presumption that individuals in the same society, which is to be "good" or "evil". Good-evil one is fully dependent on strong social bonds with people (Paul H.S. 2008). Thus, according to this understanding is something that needs to be sought clarity is strict adherence to the norms, and the factors that cause a person submissive or to obey the norms of society. Hirschi (2006) classification of the elements of the social bond into four, namely (a) attachment, (b) commitment, (c) involvement, (d) beliefs.

4. Internal Affecting Adolescent Behavior Tendency Delinquency

The tendency of adolescent behavior is influenced by internal teenager, the form of which self-control and self-identity. According to Berk (in Carter Hay, 2001: 707), self-control is the ability of individuals to resist the urge or impulse as opposed to behavior that does not conform to social norms.

Teresa C. Lagrange (1999: 41): focuses on the success of changing the self, self-destructive ward success, autonomy, freedom to set goals, the ability to separate the rational thoughts and feelings, as well as a set of behaviors that focus on personal responsibility for themselves, emotion regulation factors (consisting of active distraction, passive waiting, information gathering, comfort seeking, focus on delay object/task, as well as the peak anger) (Gilliom in Nicole et al., 2010: 31. Thomas et al., 2012: 378) , Identity Theory of Stryker and Burke (in

Sanrock, 2007: 102) states that there are three uses of the word identity in general. The first is related to the culture, the second is related to the categories of collective relating to social structures, such as racial groups, gender groups, and others, the third related to the multirole done in life.

5. Concepts Affecting Behavior Trends Delinquency

a. The concept of family Sa'adah

Al-Attas (1995: 19) confirms *al-Sa'adah* in humans is the peak of happiness lastly, by way of surrender voluntarily to Islam with faith in Allah, and obey all the commands and prohibitions. Al-Attas (1995: 67) saw happiness has affinity with the world of two-dimensional (*duniawiyyah*) and the next (*ukhrawiyyah*).

Al-Attas (1995: 43) classifies happy that there are three cases, namely self (*nafsiyyah*), body (*badaniyyah*), the things that are outside of the human self (*kharijiyyah*) such as wealth and in others related to it. Based on the definition of that happiness includes two branches in every Muslim is a branch of faith and charity. Faith must be strengthened by a solid faith through all the pillars of faith and Islam as well as deep religious knowledge (QS. Al-Ra'd (13): 28). And charities that accompanies the intention that practice the values of Islam and the nature *Mahmudah*.

b. The concept of religiosity ta'dib as school/boarding school

In Islamic education, known the terms al-study groups, *al-tarbiyyah* and *al-ta'dib* (Nasir B, 2001: 125). These three terms can be traced back further, the individual actually has its own significance in relation to education (J.A. al-Suyuti, 1995: 111).

Said *al-ta'dib*, is *masdar* of *addaba* which means the process of educating that is more focused on the development and refinement of morals or manners. The substance is more focused on efforts to establish a Muslim personal morality. The use of the word al-Islam *ta'dib* literatures language that refers to the meaning of education, has started since the Prophet Muhammad sallallahu 'alaihi wa sallam as his saying, which means: "My God has to educate me, then he perfected my education". (Al-Attas, 1980: 25-30, Abdul Mujib and Mudzakkir, 2008: 67).

c. Religiosity concept Peers

According Jalaluddin (2002) the word religion comes from the Latin root *religio* which is *religare* which means binding. Ansari (2006) defines religious, religion or *din* as a system of belief or system of faith on the basis of something that is absolutely beyond human beings and is a system of rites (order of worship) man to which is considered essential, as well as the system of norms governing the relationship of man with man, human and other natural with faith and governance system of worship that have been referred. According Gloc and Stark

(in Jalaluddin, 2002, Thoules R.H., 2000) there are five aspects of religiosity: (1) aspect of ideology (the ideological dimension) relates to the level of someone in asserting the truth of their religion (religious belief).

d. The concept of media intensity

The intensity of media refers to the level of frequency of use of the media used by teenagers. The intensity itself is influenced by the amount of time spent on activities related to media. Tubbs and Moss (2000: 200) states that the amount of time can be measured by the frequency and duration of communicating communicating Altman and Taylor (in Griffin, 2008) put forward the theory of Social Penetration is an image of a pattern of development of relations, a process of identification as well as the social penetration refers to a bond of relationship in which individuals move from superficial communication towards a more intimate communication. The main component in this theory refers to *resprosititas* (reciprocity), which is a process where the openness of others directing others to open (DeVito J., 2007: 38, West & Turner, 2008: 200).

C. METHOD

This research can be classified on the type of study using analysis test Structural Equation Model (SEM) (Program LISREL) (Imam Ghazali, 2008: 89), which is a model that is also called A Covariance Structure Model to test the models empirically, in

explaining variance and the correlation between a set of variables that diobservasikan (observed) in a system of causal (causal) factors that are not observed (unobserved) and to determine the influence either directly or indirectly latent variables both endogenous and exogenous.

Some variables are independent variables in the form of internal juvenile, family environment, school environment, neighborhoods, and media, such as control variables psychosocial mediators of family environment, school environment, media, and the dependent variable in the form of adolescent behavior delinquency.

Gauges in this study using a scale of psychological consists of the scale of self-control was measured using the instrument of self-control scale developed by Gottfredson and Hirschi (1990: 117), consisting of 24 items of questions, covering aspects of the act of sudden, a decision shortly, the ability to see the risk, physical behavior, selfishness and patient manner.

Scale identity of Marcia (in Santrock, 2007: 129) that includes the status of the adolescent identity: identity diffusion, identity foreclosure, identity moratorium, and identity achievement.

Scale family environment in the form of Sa'adah and spirituality of Al-Attas (1995: 43), the self, the body, the things that are outside of the human self, the school environment such as religiosity of Amatullah ta'dib Armstorng (in Abdul Mujib and

Mudzakir, 2008: 22), namely education manners in truth, education manners in her dedication, education manners in Islamic law, education manners in friendship, peer environment in the form of religiosity of from Gloe and Stark (in Jalaluddin Rahmat, 2002: 98) that ideology, ritualistic, experiential, intellectual and kruseksuensial and media in the form of media intensity of Tubbs and Moss (2000: 200) that communicates the frequency and duration of the communication.

Scale psychosocial control of Hirschi (1969), namely attachment, commitment, involvement, and beliefs and behavioral tendencies of adolescents delinkuensi Will Kalkhoff (2002), in the form of abuse behavior, dangerous behavior, the behavior of the victim impact material, and behavioral impact of physical victims. The population in this study 1354 siswa number of grade 1 and grade 2 school SMA Muhammadiyah, MA Maarif, MA Pesantren Pesantren Modern and traditional MA (Department of Education, 2005). Thus the overall sample size of the study population was 225 students or 15% of the population.

D. Results and Discussion

1. Multicollinearity and singularity

Multikolinearity and singularity can be tested and detected from the value of the determinant of the covariance matrix. As presented in table 1 below:

Table 1. Multikolinearity and singularitas

	KY	KM	ME	MI	KL	KD	KY	LA	L	L2	L3	L4	L5	KD
KY	1													
KM	0.95	1												
ME	0.95	0.97	1											
MI	0.96	0.96	1.11	1										
KL	0.97	0.97	0.97	0.97	1									
KD	0.95	0.97	0.97	0.97	1.05	1								
LA	0.91	0.92	0.94	0.94	1.05	1.06	1							
L	0.91	0.97	0.97	0.95	0.91	0.97	0.98	1						
L2	0.92	0.93	0.93	0.94	0.94	0.92	0.94	0.92	1					
L3	0.91	0.94	0.91	0.93	1.02	0.92	0.96	1.03	0.94	1				
L4	0.91	0.94	0.95	0.97	1.03	1.04	1.03	1.04	0.96	0.96	1			
L5	0.91	0.93	0.93	0.93	0.91	0.94	0.94	0.94	0.92	0.92	0.92	1		
KD	0.96	0.95	0.95	0.94	0.94	0.93	0.94	0.91	0.90	0.90	0.90	0.90	1	

Condition number = 39.438
 Eigenvalues 1.049 .401 .242 .221 .195 .131
 .117 .105 .100 .080 .074 .060 .046 .027
 Determinant of sample covariance matrix = 0.000

In the sample table covariances value determinant of the sample covariance matrix = 0.000. From these values concluded that there was no indication of a problem Multicollinearity and singularity on the analyzed data. Despite showing zero value, the value is still positive that this model is still considered good (Imam Ghazzali, 2008: 97).

2. Test the suitability of the model goodness of fit

Conformance testing research as in table 2 below:

Table 2. Goodness of Fit Index

Goodness of fit index	Criteria	Cut of value	Description
Chi-square	Harus kecil	70,261	Fit
Significant	0,05	0,081	Fit
Probability	0,08	0,035	Fit
RMSEA	0,90	0,958	Fit
GFI	0,90	0,502	Not Fit
AGFI	2,00	1,277	Fit
CMIN / DF	0,90	0,978	Fit
TLI	0,90	0,987	Fit
CFI	0,90	0,943	Fit
NFI	0,90	0,987	Fit
CFI	0,90	0,906	Fit
RFI	0,90	0,987	Fit
IFI			

Conformance testing research models used to test how well the level

of goodness of fit of the model study. Based on test results that have been presented above, it is known of the 12 criteria, 11 of which are in good condition and one was in no fit. With this result the whole it can be said that the model study had the goodness of fit is good.

3. Results Analysis

Subsequent analysis is the analysis of Structural Equation Model (SEM) in full model intended to test the model and hypotheses developed in this study. Testing the model in Structural Equation Model done with two tests, which test the suitability of the model and the significance test causality through regression coefficient test.

a. Analysis of the hypothesis

Results of data processing for SEM analyzes were not conducted modification indices that describe the analysis of the research hypothesis is seen in figure 2 as follows:

Figure 2. Analysis SEM trends of behavioral delinquency

The picture above is the result of SEM analysis that have passed

the test modification indices. Test modification indices done because the analysis of the model in the early SEM ineligible Goodness of fit, so the need for improvement through modification indices SEM models.

The results of hypothesis testing regression weights as Structural Equation Modeling analysis in Table 3 below:

Table 3. Regression Hypothesis Testing Results Weight

			Estimate	S.E.	C.R.	P	Label
Control psychosocial	<--	Internal adolescent	.182	.061	2.980	.003	par_11
Control psychosocial	<--	Environment	11.567	14.344	.806	.420	par_12
Delinquency behavior	<--	Control psikosocial	.230	.220	1.043	.297	par_13
Delinquency behavior	<--	Internal adolescent	-.166	.083	2.004	.045	par_14
Delinquency behavior	<--	Environment	2.369	4.344	.545	.586	par_15

Based on the table above hypothesis obtained results as follows below:

1. H1: the existence of internal influence teenagers to psychosocial control in the above table amounted to 2.980 P value of 0.003. Results from these provide information that there is an internal influence teenagers to control psychosocial, because it meets the prerequisites which the value of CR above 1.96 and meets the P values below 0.05 can thus be said that the hypothesis 1 (H1) is accepted.
2. H2: the existence of internal influence on the behavior of adolescents delinquency in the

above table amounted to 2.004 P value of 0.045. Results from these provide information that there is an internal influence on delinquency behavior teenagers, because it meets the prerequisites which the CR values above 1.96 and satisfy P values below 0.05 can thus be said that the hypothesis 2 (H2) is received.

3. H3: the influence of the environment on adolescent psychosocial control in the above table is at 0806 P value of 0.420. Results from these provide information that there is no environmental influences on adolescent psychosocial control, because it does not fulfill the prerequisites which the CR values below 1.96 and did not meet the P value above 0.05 can thus be said that the hypothesis 3 (H3) is not accepted.
4. H4: the influence of the environment on the behavior of delinquency adolescents in the above table is at 0545 P values for 0586. Results from these provide information that there is no environmental influences on delinquency behavior adolescents, because it does not fulfill the prerequisites which the CR values below 1.96 and did not meet the P value above 0.05 can thus be said that the hypothesis 4 (H4) is not accepted.

5. H5: the influence of psychosocial control the behavior of delinquency in the above table amounted to 1,043 P value of 0.297. Results from these provide information that there is no influence on delinquency behavior psychosocial control, because it does not fulfill the prerequisites which the CR values below 1.96 and did not meet the P value above 0.05 can thus be said that the hypothesis 5 (H5) is not accepted.

b. Analysis of the effect of direct and indirect effect

1. Analysis of direct influence

Results of the analysis of direct influence in this study, namely:

a) The amount of direct influence adolescent environment to control psychosocial of 0802 (80%) and the direct influence of internal teens to psychosocial control of 0168 (16.8%).

b) The amount of influence the control psychosocial to the trends in adolescent delinquency behavioral of 0267 (26.7%), while the adolescent environment contributes to the trends in adolescent delinquency behavioral by 0191 (19.1%) and internal adolescents to the trends in adolescent delinquency

behavioral of 0179 (17.9%) had a negative impact.

2. Analysis of the indirect effect
Results of the analysis of the indirect effect in this study, namely:

a) The amount of indirect influence on the adolescent environment to the trends in adolescent delinquency behavioral due to psychosocial control of 0214 (21.4%)

b) The amount of indirect influence on the internal adolescent to the trends in adolescent delinquency behavioral because of the psychosocial control for 0045 (4.5%)

4. Discussion

a. Trends in adolescent delinquency behavioral caused that adolescence is a period of transition of changes ranging from changes in the physical, biological, psychological, and social, demanding teenagers able to face and overcome the challenges of change with the consequences of psychological, emotional, and behavioral.

b. Institutions of Islamic Education in Ponorogo amounted to 586 institutions, this suggests that most teens have in life in Institutions of Islamic Education of Ponorogo. Adolescent environmental influences to the trends in adolescent delinquency behavioral for 0191 (19.1%) and internal teens by 0179 (17.9%) had a negative impact. The magnitude of the indirect effect on the

adolescent environment to the trends in adolescent delinquency behavioral mediated by psychosocial control of 0214 (21.4%) and the amount of internal indirect influence on the trends in adolescent delinquency behavioral because of the psychosocial control for 0045 (4.5%). It provides information that adolescent environment has a strong influence on the trends in adolescent delinquency behavior rather than internal factors. And psychosocial control has a strong influence as well. The stronger the environmental function and internal adolescents as psychosocial control, then further reducing the trends in delinquency behavior and the various temperament unfavorable in adolescents.

c. Differences between the Institute of Islamic Education (School Muhammadiyah, Maarif School, Pesantren Modern and Traditional Pesantren) in the treatment of adolescent delinquent provide as follows:

1) The direct effect of adolescent environment to adolescent delinquency behavior dominated by SMA Muhammadiyah 1 of 49.4%, MA Darul Istiqomah 12.5%, and the others. It provides information that the Institute of Islamic Education that is less boarding school (*pesantren*), has a direct influence sufficient to adolescent delinquency behavior of Institute of Islamic Education, who plays schools like Modern Arrisalah MA and MA Pesantren Darul Istiqomah.

Adolescent in boarding school in daily life with Islamic values, commitment to self-identity, the ability to control themselves, a strong belief in the teachings of Islam, and is actively involved with the rules of the institution. The rules for forming social bonds as a form of adolescent psychosocial control.

2) The indirect effect on adolescent environment to adolescent delinquency behavior mediated by psychosocial control of 30.4% in MA Maarif Al-Mukarram, 26.7% in MA Pondok Modern Arrisalah, and others. It provides information that the boarding school system to form social bonds as psychosocial control. Strong social bonds, forming a psychosocial control to the trends in adolescent delinquency behavior, as in MA Darul Istiqomah have an indirect negative effect and I SMA Muhammadiyah at the time was the school.

d. Model of psychosocial control approach in the prevention and countermeasures against the trends in adolescent delinquency behavioral in Islamic educational institutions in Ponorogo, namely:

1) Discipline, some ways and approach adopted within the framework of enforcement of discipline at the school/boarding school, such as socialization sunnah discipline, scrape disciplinary offenses with absentee night, involving students

organizations/students in the discipline, various rules of discipline.

2) *At-tarhib wa At-tarhib*

e. Critical reasoning of this study are:

1. Adolescence is a period of transition of changes ranging from changes in the physical, biological, psychological, and social demanding teenagers face and overcome the challenges of change with the consequences of psychological, emotional, and behavioral, which then performs the behavioral tendency delinquency.
2. Psychosocial approach of internal control environment with a juvenile and religious values can reduce the tendency of teenagers delinquency behavior, only in some agencies; less the maximum value investment religiosity psychosocial impact on the lack of control on the trend delinquency behavior.
3. The need for clear rules of discipline and planting at-tarhib wa at-tarhib and the activities that lead to competence and high achievement with teenagers watching developments in the various Institutions of Islam.

D. Conclusion

Internal and environmental factors on behavior trends in delinquency behavior have a strong influence, either direct or indirect effect mediated by psychosocial control. The stronger the role of psychosocial control the diminishing trends in adolescent delinquency behavior. This indicates that the Institute of Islamic Education and its role is

expected to function as a control adolescent development, especially trends in delinquency behavior, hoping to usher teenagers into various achievements and the development of their talents to better.

Universitas Muhammadiyah Yogyakarta, Indonesia

Abstract

Poverty is one of the main challenge and complex issue in Indonesia, particularly in Yogyakarta. Based on data by “Badan Pusat Statistik” Yogyakarta, in 2014 Yogyakarta reached 507.500 number of citizen. Then, in 2015 it increase up to 520.100 number of citizen. It means Yogyakarta increase number of poverty for around 12.600 number of citizen in a year. Therefore, Yogyakarta should have an option to decrease the number of poverty. One of the option which already applied is through voluntary activity especially in term of education. Education as the basic needs of quality improvement on human resources, it reflecting the citizen to be more independent in manage their living to be better and better, and it is also the key to fight poverty. Local government using method by applying regulation to decrease poverty and beside of that, youth movement also take a part on it. In Yogyakarta around thirty communities concerning in education improvement through several method applied. The aims of this paper is to analyze how volunteer could give the positive effect toward poverty decreasing in Yogyakarta. Then, the method that used in this research is qualitative analysis which applying direct and detail interview with respondent. The respondent is several communities that concern with education, and also several students that affected from volunteers. Then, the technique of analysis data are literature review, data attachment, and conclusion. By using the descriptive analysis and also exploited primer data, this paper concludes that volunteer contribution especially in education can give the bigger positive effect toward reduction of poverty in Yogyakarta. Based on the existence of voluntary community concerning on education which actively works for citizen proved by additional public facility provided for children around Yogyakarta such as free books, mobile library and informal teaching and learning activity.

Keywords: poverty, volunteer, education, citizen, community.

1. INTRODUCTION

Poverty is a multi-dimensional problem requiring holistic solutions that are sustainable over time. As a country characterized by great diversity in culture, religion, ethnicity, ecology and economies, Indonesia has experienced many challenges in pursuing poverty reduction. Economic growth and increased income are important but not the only routes to poverty reduction. These need to be complemented by better access to basic services, education, empowerment of the poor, and reduction of social exclusion, insecurity and vulnerability. Poverty is one of the main challenge and complex issue in Indonesia, particularly in Yogyakarta. Based on data by “*Badan Pusat Statistik*” Yogyakarta, in 2014 Yogyakarta reached 507.500 number of citizen. Then, in 2015 it increase up to 520.100 number of citizen. It means Yogyakarta increase number of poverty for around 12.600 number of citizen in a year. (*Badan Pusat Statistik*, 2014). Therefore, Yogyakarta should have an option to decrease the number of poverty.

Unemployment has been trending downwards in recent years, and was below 6 per cent in 2014. This indicates that the target of reducing unemployment to between 5 and 6 per cent, as set out in the medium term development plan for 2010-2014, has been met.(Allen, 2016). However, unemployment remains a challenge, particularly for youth generation, especially within the context of a slowing economy. Supporting youth to optimize their educational attainment will be a key factor for improving outcomes in this regard. Substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs and entrepreneurship. Realizing full and productive employment is essential to

generating the resources needed to achieve all the other goals.

Actually Indonesia is currently in a phase of development where it has a high working-age population rather than an ageing, dependent population. In order to optimize the benefits associated with this low dependence ratio, it is essential that the Government expands its investment in education and skills training, especially as highly educated workers can enjoy higher wages and better job opportunities. In particular, as the economy continues to modernize, the demand for highly educated workers will to continue to grow, underscoring the importance of appropriate education and skills investment now. The question is how to get a higher education, while they (the children) are people who are poor ? What kind of education can reduce poverty? and who did it other than by the government?

Interesting to observed, when in Yogyakarta which is said to be a student city in Indonesia. but still found many street children who lack formal education. There are also suburban schools are still far from decent. One of the option which already applied is through voluntary activity especially in term of education. Education as the basic needs of quality improvement on human resources, it reflecting the citizen to be more independent in manage their living to be better and better, and it is also the key to fight poverty. Local government using method by applying regulation to decrease poverty and beside of that, youth movement also take a part on it by voluntary activity especially in education. Therefore, to answer the previous question, in this paper we will discuss about the Volunteer Contribution in Education Especially toward Reduction of Poverty in Yogyakarta.

Poverty is a multi-dimensional problem requiring holistic solutions that are sustainable over time. As a country characterized by great diversity in culture, religion, ethnicity, ecology, and economies, Indonesia has experienced many challenges in pursuing poverty reduction. Economic growth and increased income are important but not the only routes to poverty reduction. These need to be complemented by better access to basic services, education, empowerment of the poor, and reduction of social exclusion, insecurity, and vulnerability. Poverty is one of the main challenge and complex issue in Indonesia, particularly in Yogyakarta. Based on data by “Badan Pusat Statistik” Yogyakarta, in 2014 Yogyakarta reached 507.500 number of the citizen. Then, in 2015, it increases up to 520.100 number of the citizen. It means Yogyakarta increase number of poverty for around 12.600 number of the citizen in a year. (Badan Pusat Statistik, 2014). Therefore, Yogyakarta should have the option to decrease the number of poverty.

Unemployment has been trending downwards in recent years and was below 6 percent in 2014. This indicates that the target of reducing unemployment to between 5 and 6 percent, as set out in the medium-term development plan for 2010-2014, has been met. (Allen, 2016). However, unemployment remains a challenge, particularly for youth generation, particularly the context of a slowing economy. Supporting youth to optimize their educational attainment will be a key factor for improving outcomes in this regard. Substantially increase the number of youth and adults who have relevant skills, including technical and vocational skills, for employment, decent jobs, and entrepreneurship. Realizing full and productive employment is essential to

generating the resources needed to achieve all the other goals.

Indonesia is currently in a phase of development where it has a high working-age population rather than an aging, dependent population. To optimize the benefits associated with this little dependence ratio, it is essential that the Government expands its investment in education and skills training, especially as highly educated workers can enjoy higher wages and better job opportunities. In particular, as the economy continues to modernize, the demand for highly educated workers will continue to grow, underscore the importance of appropriate education and skills investment now. The question is how to get a higher education while they (the children) are people who are poor? What kind of education can reduce poverty? And who did it other than by the government?

Interesting to observed, when in Yogyakarta, which is said to be a student city in Indonesia. However, still found many street children who lack formal education. There are also suburban schools are still far from decent. One of the options which already applied is through voluntary activity especially in term of education. Education as the basic needs of quality improvement on human resources, it reflecting the citizen to be more independent in manage their living to be better and better, and it is also the key to fighting poverty. Local government using the method by applying regulation to decrease poverty and beside of that, youth movement also takes a part of it by voluntary activity especially in education. Therefore, to answer the previous question, in this paper, we will discuss the Volunteer Contribution in Education Especially toward Reduction of Poverty in Yogyakarta.

2. RESEARCH OBJECTIVES

Based on the backgrounds, this research objective in this paper firstly, to analyze how volunteer contribution especially in education can reduce poverty in Yogyakarta. Secondly, in what way volunteers in the community can help reduce poverty in Yogyakarta.

3. RESEARCH METHOD

The method that used in this research is qualitative analysis or qualitative approach. The data collected is through indepth interviews with respondents related to this resaerch and through library research. The data analysis in this research is use analysis method by Milles and Huberman which are data reduction, data attachment, and conclusion.(Sugiono, 2009).

The venue In this research is community around Yogyakarta, Indonesia. Focus in this research is Volunteer Contribution Especially in Education toward Reduction of Poverty in Yogyakarta

4. THEORYTICAL FRAMEWORK

1. VOLUNTEER

Volunteer is a person that have an activity takes on a task, responsibility or some project on they concern without needing to be assigned, ordered, or told to do so. Often a volunteer is not paid for the work that they provide. Many people as possible believe that volunteerism is one way reciprocal transactions can occur between different systems. People who volunteer learn new things and feel like helpful and needed. People receiving assistance from volunteers benefit from the services and from

knowing they are important enough for others to care about the all focusing. For the example like agencies, businesses, and also organizations providing opportunities for volunteerism can generate positive public relations and have enough volunteers to carry out their operations. From a community perspective, volunteering can change a new different to make how people think about others, bring different cultures words, volunteerism allows opportunities for a greater diversity of inputs and outputs. Volunteering is part of help activity theory. But its not just an action for helping some people with spontaneity. It is an action more proactive than reactive, and its demanded a commitment of time and a lot more of effort (William 2004). In other definition, volunteering is the person give an energy, service, skill and also time without expect to have more of money Schroeder (1998).

2. EDUCATION

John M Echols and Hasan Shadily said that education have a connected with study. Characteristic of education is educate and also give a positive model to instructor or target of education According to the characteristic of the Education it consist to :

- a. Informal Education, is the education obtained someone from the experience of life. Education can run in the family in intercourse, and in employment, the community, family and organization.
- b. Formal Education, is the education such as which takes place on a regular basis, and certain terms in a strict manner. The component in education include :

1. System
2. Teacher and method
3. Cultural and Society

Rousseau said that education is one of tools to given effect in the future. But education will use when we life in the future.(Ahmad, Abu 2003)

Education is defined as an attempt to humanize the young man or the appointment of a young man to the human level. (Driyarkara, 1950).

Many thing of places like schools or colleges when seeing or hearing the word. They might also look to particular jobs like teacher or tutor. The problem with this is that while looking to help people learn, the way a lot of schools and teachers operate is not necessarily something we can properly call education. They have chosen or fallen or been pushed into 'schooling' – trying to drill learning into people according to some plan often drawn up by others. Famously called this banking – making deposits of knowledge. Such 'schooling' quickly descends into treating learners like objects, things to be acted upon rather than people to be related to. (Freire, P. 1972)

Education is wrapped up with who we are as learners and facilitators of learning – and how we are experienced by learners. In order to think about this it is helpful to look back at a basic distinction amongst others between having and being. (Fromm, E.1979).

3. POVERTY

Poverty is the old problem in the case of society since its connected with citizen prosperity. In the pilot of *Keluarga Sejahtera*, poverty is the condition when people disable with them self with the standard of life and no

capability too with energy and physical (1996:10). Poverty can be token with attitude and behavior that can accepted in the weak to advancement, low of human resource, low of quality human resource, and also low in the value of production. Financial is the number one to get a participation for the development. Observing deeply about poverty and this will appear various typologies poverty and dimension because they have multi complex definition, dynamic and with regard to space and time at which in that since poverty can be seen every viewpoint anywhere. Poverty can divide it with two criteria, it is :

1. Absolutely Poverty, it's the poverty that measured by income levels required to meet their basic needs.
2. Relatively Poverty, is the society who have income has reached basic needs but much lower than the state of poverty. While the poverty because of the natural disasters and chronic poverty and poverty in those less of skill and no more have stamina.

Several cause of poverty according Kuncoro (2000:107) included with:

1. In Macro, poverty occurs because
2. of ownership dissimilarity the resources to see distribution of income, poor of people that have only resources in limited numbers and the quality is low.
3. Poverty occurs a result of the difference the quality for human resources because the quality of human resources on the low level. Its means that productivity and unresponsively
4. Poverty turn up because have some differences about accessibility and finance.

Of the such as cause derived for the retardation, not perfect of the market and also caused by a lower factor. In the third of causes have a circle origins of the poverty.

5. DISCUSSION

Poverty characteristic in Yogyakarta

Poverty is the existing problems in any big cities in Indonesia , one of them is in Yogyakarta. Based on the data from the central bureau of statistic (BPS) the number of poor people in this town in 2014 reached 507,500 thousand people and increased to 520,100 thousand people in the year 2015. The inhabitants of which is said to be poor is individuals who are not able to fulfill the basic needs of them and characterized by productivity is low as well as a lack of capital. Of fundamental rights must be fulfilled such as food needs, health, work and education. Poverty in Yogyakarta or more in urban areas, in march 2014 the number of poor in urban reached 333,03 thousand people and fell to 329,65 thousand people in 2015 .In march 2014 the number of poor in rural reached 211,84 thousand people and up in march 2015 reached 220,57 thousand people .Poverty in Yogyakarta influenced by several factors , where factors in the sector food dominated the cause of poverty compared with the sector non-food .

Table.1 Factors caused poverty in Yogyakarta

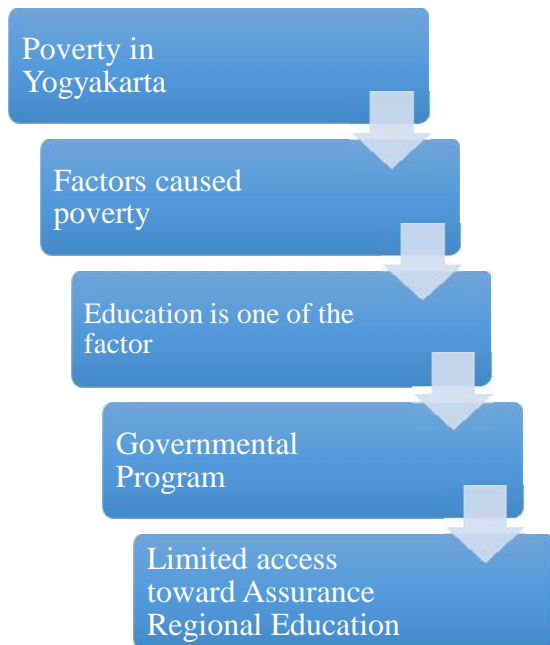

**Lima Kontribusi Terbesar Garis Kemiskinan menurut Tipe Daerah
Maret 2015 (Persen)**

Jenis Komoditi	Perkuliaan	Jenis Komoditi	PerDesaan
Makanan			
Beras	30,70	Beras	35,41
Rokok kretek filter	9,31	Rokok kretek filter	6,05
Daging ayam ras	5,58	Daging ayam ras	5,34
Telur ayam ras	5,56	Telur ayam ras	4,14
Mie instan	4,06	Mie instan	3,91
Non Makanan			
Perumahan	26,04	Perumahan	27,80
Bensin	16,75	Bensin	14,71
Pendidikan	9,46	Kayu bakar	7,48
Listrik	7,59	Listrik	6,98
Perlengkapan mandi	4,97	Perlengkapan mandi	5,08

Sumber: BPS, Susenas Maret 2015

Food sector are the main cause of poverty , three of the five commodities dominate the rice , cigarettes as a filter and of chicken .The sector is closely related to poverty. Non-food sector who became the biggest contributor to the housing and gasoline. One sector non-food such as education contributed 9,46 percent poverty in urban areas .Education is the cause of poverty for the links between them cannot be separated .The low level of education and lack of access to reach education cause productivity individual of being inferior .Productivity will affect the ability someone in order to gain the work so in scope the world of work will tend to take the job anything with the income available. Minimal job opportunities and a level playing high causes the individuals who the level of schooling low unable to compete. As a result, income is only enough to be used for the needs of and not enough to be used to save at the future for education .The situation and condition like this is poverty circle that is hard to arrange roots but the problem.

CYCLE THOUGHT OF POVERTY AND EDUCATION IN YOGYAKARTA

Governmental Policy in Decrease Poverty

Looking at the situation and the condition of the City Government Yogyakarta made various efforts to reduce poverty. City Government established a *Tim Koordinasi Penanggulangan Kemiskinan (TKPK)* by focusing on seven aspects of areas such as income, housing, clothing, food, health, education and social services. Within the field of education municipal government has had a strategy that is through the *Bantuan Operasional Sekolah (BOS)* and *Jaminan Pendidikan Daerah (JPD)* with release funds amounting to 101.2 billion for compulsory education for 12 years. This educational assistance given to the family card *Kartu Menuju Sejahtera (KMS)*. KMS is the identity poor population of Yogyakarta where the parameters are based through the decision of the Mayor of Yogyakarta No. 417 / KEP / 2009 on Stipulation Parameter Data Collection Poor Family. JPD is intended to

provide greater opportunities for children from poor families to study with waivers for 12 years. Besides getting a guarantee fee, children from poor families can enjoy several benefits like getting quotas in the Enrollment of Students New (PPDB) to enroll in school favorite, given help from kindergarten to high school a good school of State, Private and Extraordinary, and given the opportunity, if want to study up to the outside of Yogyakarta. Guidelines Assurance Award Regional Education Yogyakarta Mayor Regulation No. 19 Year 2010 on Guidelines for the Regional Education Guarantee. Assistance provided includes the school operating costs, investments, and the purchase of uniforms and books. Implementation JPD program is intended to reduce poverty in Yogyakarta. However, based on the results of research studies Assurance Education (JPD) in the city of Yogyakarta has not been effective due to several factors such as access, irregularities, to within service coverage.

Transnational movement or volunteer role throughout education in decreasing the poverty

A volunteer contribution, especially in education toward reduction of poverty, is to long-term by teaching the informal method which they apply. This method is expected to they received with children their community or we call that students community coming from the different backgrounds education. Students are expected to who is unable to and do not go to school will receive a method of lessons learned from every their community. Of this, our team has mapped some method used from various communities that are in Yogyakarta to give education to their students.

a. Alternative learning

Usually, each community does ice breaking or games when the stage in the first meeting of the contact between. Not only in the first meeting of but also according to the conditions certain are have felt saturated education done by a volunteer. Why is that? Because the volunteer has to ingratiate students their community first, they gave education more serious. For example on a community 1000 Guru Yogyakarta, Kelas Inspirasi UMY and Sanggar Anak Alam, they started with the introductions using sing together, play a game traditional, play charades, guess a profession and others. This game does not only entertain but also must have a message of education and certain values. Usually, the volunteer would give messages education in accordance his or her songs in the last session.

b. Training

According to Gunawan, poverty reduction effort can be done by make policy of them are a policy of not directly in the form of preserve our environment and set up the poor through training activities. When the old man the responsibility of the government in preparing community groups through his training program, then the a volunteer attended with their willingness to training regularly and impressed relaxed to his sons as student of the community to the science which he could later when mature or can even prepare early to help his family. Such an example, deafart community which providing training for children in term of art training, deafart hopes that they could have an output in term of qualified children who have creativity and independence in facing their further life, instead of having certain weakness and limitation on their audience. Beside of that, the income they got is coming

from what they did by themselves, without depending on others.

c. Speaking

The power of communication, is including one the way we do for the socialization that useful to shape a relation. There are many communities have taught how a manner of speaking to the crowd, said it was good presentation, sociable, read a poem, a harangue, etc. This way has been proved effective to increase confidence in students community mingle against the surrounding environment. It was not uncommon that of aspects were capable of engendering children who optimistic and cheerful to be more steady in staring his future.

For example, on a community Sanggar Anak Alam, the community who has been standing since 2000 use one of this method in developing optimism to their students since on average her students were students primary schools and junior high school. Of that age children often not confident, hence the volunteer help in confidence early one of them is the training of speak in front of his friends. The same thing also applied in 1000 guru Jogja and kelas inspirasi UMY, children in the village usually more not confident. Build moral characteristic of their students to be a good human resources, more independence and having a good attitude in order to be socialize easier in public. Especially when there is a mismatch social in a class or one school. With this method, hope can remove the wrong perception.

d. Character Building

Community based on strengthening character building as *1000 guru Jogja, kelas inspirasi UMY, Sanggar anak alam*, etc they are usually stressed the motivation to study and discernment to children to be what he

provided front. According to the instruction a volunteer that children they is divided into three types of. *First*, students who have been having ideals and character has formed. *Second*, students who have ideals but doubt. *Third*, students who do not have the ideal and usually he confused with his future. Of the three these problems the volunteer usually motivate and inspiring to their students through a question and answer session, call the police, doctor, and others their be the idol by children. Also, lessons character the basis of curriculum the government also be more emphasis on to children. The hope is from early the children already knows their goals and focus on truth has come to you with planned from now.

e. Ability Improvement

There are many communities also taught the ability certain to students their community that able to develop interest and their talents which are expected to become support for members they work long enough. For example on a community deaf art, this community aimed at to expand their friends "*tuna rungu*" or deaf, that others and its environment know that they have the capacity and special aptitude which enabled them to accepted in the society. The volunteer calls them friends are not students or children because they with they and us do not want to separate or discrimination with other.

Methods used by the community is divided into two classes of them class sign language every Monday and Thursday afternoon, and class creative as paint, dance, hip-hop, the art of theater, pantomime which was conducted in every afternoon. The community exercises the people with disability especially the hearing impaired to more independent, more capable of work, and not troublesome others.

f. Creativity Improvement

The learning methods informal has been very effective at this time is an increased creativity. Learning how to create a work with an instrument of all over us as its object. There are many communities implement this in the capabilities of these are the nurturing creativity to make their businesses without resorting to the government only. With unemployment so are squeezed and open his labor. Step by step the poverty rate will be decline. As practiced by the deafart community, they teach creativity by classes creative as paint, dance, hip-hop, the art of theater, pantomime which was conducted in every the afternoon to people with listening limitation or other students that they may more independent.

The same is applied by *FISMO* and *Sekolah Raya* in creating students who able to process used goods become a thing of the aesthetic is and economical. Training from paint, to make art paper, the art of wood, etc. Of course, the was easy to get and obviously is somewhere we. Creativity like that which should be needed young people these days without relying on anyone else. Unemployment will be declining and of course, poverty will be pressed.

g. Ecology and Cultural learning based

Within public schools formal education rare based ecology and education based culture as practiced by communities among others *Code pintar*, *Sekolah raya*, *FISMO*, etc. For example, *FISMO* taught their students to promote not littering and using second-hand to be handicrafts or a creativity aesthetic is and worthy of selling. Education as is not only to protecting the environmental around but also work regarding economical if provision it was brought to adult later.

Another example supposes, *code pintar* who a visionary power namely grow critical thinking his children, develop the interest in and aptitude children as well as protecting the environment and love art. Background vision out of *code pintar* this is because their students are on the outskirts of a river that sometimes flood. Hence, children are taught from the outset not littering especially in a code's river. Other activities of the community are the art of staging culture as gamelan of Java, traditional dance of gedruk, etc that results from staging are those in facilities the community activities.

Sumber data : Dinas Pendidikan Kota Yogyakarta, Lampiran Keputusan Walikota Yogyakarta Nomor 580/KEP/2011, 2011

Educational programs provided by the government was able to reduce the number of dropouts, but not necessarily in

line with the program's objectives. The average length of the school each student to increase each year, but not coupled with the achievement of 12-year compulsory education. In 2014 Gunungkidul into counties with an average length of the school year low of just 6.45 years. The local government assistance is only capable of supporting infrastructure in the teaching-learning process, while there are still many needs of students who have not been seen by the government as the need for the fulfillment of Extraordinary students, and schools that have access to hard to reach. Communities engaged in education appears to help resolve the problem of education in Yogyakarta, which is not seen by the City Government. These communities are not only resolve access problems difficult to achieve, but also able to move in the field of meeting the needs of space art.

h. Providing Public Services

Several transnational movement in term of non-governmental organization or community such as KAGEM, Hoshizora and others also providing public services in order to improve educational quality of public, moreover children or youth in around Yogyakarta. Reading material provider independently in term of books, mobile library and ICT based learning such as let children learn technology through out introduction by i-Pad, computers and others. Qualified tutor provided freely to help student increasing their capability in learning through consultation, teaching, discussion and so on. And also the basic fundamental needs to learn which is fund in term of money also provided, some of them is fresh money, and some other providing link toward the fund source, like what Hoshizora has been doing for several years, in connecting students with the scholarship provider for long term

studying until they reach their higher education, moreover until their job seeking process. Followed by learning based alternative, mentality learning, leadership and direct appliance learning is a complete combination toward the reduction of poverty itself. So, there is a possibility toward those transnational movement to support producing educational assistance for resulting high qualified human resources in order to decrease poverty in Yogyakarta.

CONCLUSION

Based on the above, this paper conclude that volunteer contribution especially in education can give the bigger positive effect toward reduction of poverty in Yogyakarta. Regarding the several communities that concerning to developing of children education, many of them have method to deliver the material to the children like teach the character building throughout informal teaching method. In addition, by the presence of a volunteer this get them going more independent and creative because guidance a volunteer capable of develop the talent the children to basic needs in adulthood later.

The communities and their volunteer contribution can reduce the poverty in Yogyakarta. Then we can see it after 10-20 years later. Because the facility given a volunteer as mobile library, book, scholarship, and others unable to help them in short term time, will but some this may help them in promote the spirit of learning so that in the future (20 years from now) will show the results. In addition, communication built between a volunteer and her children shall have made a new unwittingly this is the way they got a job more widely under acquaintance more.

RECOMMENDATION

Recommendations what we have given the surrounding community in Yogyakarta is related to the management good human resources or financially that is in their community. The a volunteer is expected to contribute full and inconsistently. Because most of community whom we met the average volunteer often go out and nonpermanent they were very influential in the provision of education to the his sons.

Recommendations what we have given the government is the government should grow more matter to community good financially or policy or regulations more strengthening the legal basis community like this. Because, with any regulations will make community it will facilitate the management and finding funding of course. More than that, with the government service for communities will make the government had care to the poor especially his sons. In addition, education and school curriculum will more developed and better.

Abstract

7 Indonesia's 1945 Constitution, Article 31, Sentence 1, stipulates that "each citizen has the right to
8 education." This means that the Indonesian government has the obligation to provide and run a
9 national education system, in order to make intelligent the nation. Then, described in 2003 Law
10 number 20 on National Education System and in 2008 Government Regulation Number 47, on
11 Compulsory Education, that stipulated the Government and Local Government guarantee the
12 execution of compulsory education at the least in basic education without charging any tuition fee;
13 and obligates each region to set up Local Regulation and implement the Basic Compulsory Education
14 Program.

15 The Bojonegoro Regency Regulation Number 4 Year 2012, Article 65, Sentence 1, letter (a)
16 states that: "the Local Government is obligated to set a 12 (twelve) year compulsory education, which
17 comprises of 9 (nine) year basic education and 3 (three) year middle education." It guarantees that
18 each child has access to at the least 9 years of education, and that 9 year basic education expenses
19 is provided for.

20 The evaluation of the 9 year compulsory education in Bojonegoro, shows that the average length
21 of education is 6.7 years. It means that the citizen of Bojonegoro having finished the 6 year
22 Elementary School. The aim of 9 year compulsory education hasn't been reached.

23 Using the qualitative descriptive method, show several causal factors. These factors are that
24 school participation is low, there is significant level of illiteracy and school drop outs, and the
25 psychology of rural people who think that to ease the parents' burden, after 6 years of Elementary
26 school the girls are married off and the boys help with earning money.

27 To reach the aim of 9 year compulsory education, there should be a special program to eradicate
28 illiteracy, raising the capacity of Kejar Program A and B, Back to School Movement, and Education
29 Policy that involves both formal and non-formal education.

30 Key Words:

31 Evaluation, Indonesian Education System, Program/Policy, 9 Year Compulsory Education

INTRODUCTION

The 1945 Constitution of the Republic of Indonesia, article 31, paragraph 1 states that "every citizen has the right to education". This means that the Indonesian government has the obligation to provide and run a national education system, in order to make intelligent the nation and the increase faith and and good character in the

context of educating the nation. Then, described in 2003 Law number 20 on National Education System and in 2008 Government Regulation Number 47, on Compulsory Education, that stipulated the Government and Local Government guarantee the execution of compulsory education at the least in basic education without charging any tuition fee; and obligates each region to set up Local

Regulation and implement the Basic Compulsory Education Program.

Bojonegoro Regency Government in order to provide educational services have made Local Government Regulation No. 4, 2012, on the Implementation of Education in Bojonegoro. Bylaw is set compulsory in article 65, paragraph 1, letter (a), which reads: "Local Government is obliged to establish compulsory twelve (12) years, including primary education 9 (nine) years and secondary education three (3) years", This means that local governments guarantee every child has a chance to learn at least 9 years, and ensure the availability of the cost of basic education for 9 years. This regulations has been implemented for about 3 years, and the results of initial studies have shown that primary education 9 (nine) years in 2015 has not been reached. These conditions lead researchers to carry out the evaluation of 9-year basic education program or a 9-year compulsory program in Bojonegoro. Given the Bojonegoro district is now a district with rapid growth as a producer of oil and gas, and followed the development of new industry and supporting both the agricultural industry and oil-gas industry, so the level of education is an absolute demand in necessary.

Evaluation of the education program is needed because the process of evaluation of the results will provide some information that can be a consideration in achieving the goals set, seen from the level of achievement and constraints affecting the achievement, as a form of accountability of the implementor. This is consistent with the opinion of Stufflebeam and Shinkfield (1985; 159) in the book *Learning Program Evaluation*, Prof. Eko Putro Widoyoko (2015) which says: "*Evaluation is the process of deliniating, obtaining, and providing descriptive and judgmental information about the worth and merit of some object's goals, design, implementation, and impact in order to*

guide decision making, serve needs for accountability, and promote understanding of the involved phenomena". Related with the program compulsory 9 years in Bojonegoro, which has been running in three years, shows that the achievement of program is not run optimally. This evaluation is carried out with the intent and purpose in order to know why the program has not been achieved, what causes it, and the results of this evaluation should able to provide information about things to do, which is input as a policy-making in order to move forward to realize the activities in accordance with the specified program.

INDONESIAN NATIONAL EDUCATION SYSTEM AND 9 YEAR COMPULSORY EDUCATION PROGRAM IN BOJONEGORO REGENCY

National Education System according to Indonesian Republic Rule No. 20, year 2003, article 1, paragraph (1) is an education based on Pancasila dan Constitution of the Republic of Indonesia Year 1945 is rooted in religious values, national culture of Indonesia and responsive to the changing era. While in the National Education System in accordance with the Rule No. 20 of year 2003 Article 1 paragraph 3 said that is the overall educational components in an integrated manner to achieve national education goals.

National education goals is the development the potential of students to become human beings faith and fear of God Almighty, noble, healthy, knowledgeable, skilled, creative, independent, and become citizens of a democratic and responsible. The level in the national education system is defined by the level of development of learners, objectives to be achieved, and the ability must be develop. The level of national education consists of Elementary Education, Middle Education and High Education. In order to implement the

elementary education needs to be made a Government Regulation on Compulsory Education No. 47 Year 2008 concerning Compulsory

9-Year Compulsory Education Program in Bojonegoro is regulated by Regulation No. 4 of year 2012, concerning the organization of education in Bojonegoro Regency. According to this regulation, the compulsory is the minimum educational program to be followed by the citizens of Indonesia, under the responsibility of the Government and Local Government. The purpose of this program has been set in the local rule, chapter II, section 2, Article 3, which reads: The purpose is to provide education: a). Equalization the quality of educational opportunities; b). developing the potential of learners to become a man of faith and devoted to God Almighty, noble, healthy in physic and mental, knowledgeable, skilled, creative, independent and become citizens of a democratic and responsible; c). Improving the quality of learning activities and developing the management of education, based on transparant education budget and providing education accountability in overall and community participation.

Compulsory education specifically addressed in chapter XXI, Article 65, which reads as follows: Paragraph (1) Local Government shall: a). establishes compulsory education in twelve (12) years, of basic education in nine (9) years and in three (3) years for secondary education; b). ensure every child gets the opportunity to learn up on secondary education; c). ensuring the availability of basic education costs for the implementation of compulsory twelve (12) years.

From some of the provisions stipulated in the Regulation mentioned above can be interpreted that the compulsory in 9 (nine) years at Bojonegoro is the basic education level that must be reached, before rising to a secondary education in 12 (twelve) years.

Evaluation in compulsory education is seen as a process of determining the results achieved in several activities planned to promote the goals (Suchman; 1961, in Anderson 1975). Meanwhile, according to an expert evaluation of the program Stufflebeam (1971, in Fernandes 1984) says that the evaluation is a description of the process, searching for and providing useful information for decision makers in determining the decision alternatives.

METHODOLOGY

In the implementation of this evaluation, the methodology used is qualitative method. This method is used to examine the condition of the object that is natural, (as the opposite of experiment), where the research is as an instrument keys. The data collection techniques is done by triangulation (combined) and using inductive data analysis. (Prof. Dr. Sugiyono, 2005: 1), in the opinion of Bogdan and Taylor (1975; 5) that the qualitative method is a procedure that produces descriptive data in the form of words written or spoken of people and observed behavior.

The data collected is in the form of documents of implementation the compulsory 9 years in 2015, in the form of Rough Partisipation Index (APK), Real Partisipasion Index (NER), transition index and dropout index, and also interviews to the community / parents, and the child in school-age but don't go to school, and the institutions in the Bojonegoro Regency. All the data is processed and analysed. Responden selected is Head of Office and staff data section, the Office of education and Culture in Bojonegoro Rgency, school-age children are not in school, the community. The researchers randomly determined them in accordance with needs.

In the opinion of Lexy J. Moeloeng, qualitative analysis is research that

analytical procedures that do not use statistical analysis procedures or other means of quantification. (Lexy J. Moeloeng, 2006: 6). The analysis used in this study correspond to the type of data required. The method of analysis used as well the method of descriptive and explorative.

EVALUATION OF THE IMPLEMENTATION PROGRAM 9 - YEAR COMPULSORY IN BOJONEGORO REGENCY

Literacy Index

The literacy index is the proportion of the population aged 15 years and over who can read and write in Latin or others. Literacy index obtained from the percentage of the population over 15 years old, who can read and write by the total population above 15 years. The development of literacy index in Bojonegoro from 2012 to 2015 continued to rise. It showed a success against illiteracy alleviation efforts in Bojonegoro. In 2012 the literacy index in Bojonegoro is 84.60%. Whereas in 2014 the literacy index increased to 98.60% or an increase about 14%. And in 2015, the Department of Education make a breakthrough to improve the literacy index of 100% for the productive age. As an illustration can be seen in the table below:

Table 1.
The Developments Literacy Index
Year 2012- 2015 in Bojonegoro

Description	Unit	2012	2013	2014	2015
Literacy Index	%	84.60	85,79	93,58	100

Source: Socio-Economic Macro Data East Java 2012 – 2015

The literacy index of the data, showed that the increase in the literacy index is 100% focusing on productive age, thus Bojonegoro been completed in eradicating illiteracy in productive age specifically

The Avarage of Learning Duration

Every year an increase in learning duration in Bojonegoro regency. Although the average of increase is relatively small. In 2012 the learning duration of Bojonegoro residents aged 15 years and above was 6.4 years, whereas in 2015 the average of learning duration in Bojonegoro was 6.8 years. More details, the average of learning duration from 2012 to 2015 in Bojonegoro can be seen in the chart below:

From the average of learning duration in Bojonegoro on the 2015 was 6.8, compared to Medium-Term Education Plan (RPJMD) Year 2014 – 2018, the average of learning duration has not been reached. In order to increase the the average of learning duration, the government must continue the public education program of productive age and older through Learning Packet to emilinate the illiteracy, namely Kejar Packet A, B, C.

Rough Participation Index

The Rough Participation Index is the ratio of the number of students at education level in the elementary / junior / senior high school divided by the population aged 7 to 18 years or the ratio of the number of students, regardless of age, who is studying in a certain educational level of the population of the age group associated with education level. The Rough Participation Index shows the level of participation of the population in general and an educational

level. The Rough Participation Index is the simplest indicator to measure the absorption of the school age population at each level of education. The Rough Participation Index developments in Bojonegoro are as follows:

Table 2.
The Development of The Rough Participation Index in Bojonegoro Regency 2012 – 2015

Description Of The Rough Participation Index	Year			
	2012	2013	2014	2015
Elementary School	100,98	100,99	101,01	101,01
Secondary School	99,99	100,02	100,03	104,04
Senior High School	78,53	80,88	80,88	84,97

Source : Education Office in Bojonegoro Regency, 2015

From the table above shows that the participation of the population in education at every level of experience has increased, because groups of people who are already literate continuing education through the Kejar Packet.

Real Participation Index

The Real Participation Index is the ratio of the population aged between 7 and 18 years were enrolled at the school level of education as elementary / junior / senior high school divided by the population aged 7 to 18 years. The Real Participation Index shows the percentage of students with age associated with education levels of the population in the same age. The Rough Participation Index and The real Participation Index is also an indicator of the absorption school-age population in every level of education. However, when compared The rough Participation Index, The Real Participation Index is an better indicator to look the absorption at the standard age group population participation in education in accordance with these standards.

Table 3.
The Development of The Real Participation Index in Bojonegoro Regency 2012 -2015

Description of The Real Participation Index	Year			
	2012	2013	2014	2015
Elementary School	99,11	99,45	99,71	100
Secondary School	91,66	92,55	92,55	93,44
Senior High School	71,77	75,72	75,72	80,45

Source : Education Office in Bojonegoro Regency, 2015

As seen on table above, The Real participation Index in all level are increased, specially in secondary level.

School Participation Index

One indicator that is often used to measure the performance of educational attainment is the School Participation Index. This indicator shows how much school - age children by a certain educational level are within the scope of education and absorption of formal education to school – age population. The School Participation Index is calculated based on the number of students in basic level per 1,000 population of primary school age.

Table 4.
The School Participation Index of Elementary and Secondary School in Bojonegoro Regency 2012 – 2015

No	Description	Unit	Existing Year			
			2012	2013	2014	2015
1	Elementary School	The Rough Participation Index (%)	100,98	100,99	101,01	101,01
		The Real Participation Index (%)	99,11	99,45	92,55	92,55

		The Real participation Index (%)	71,77	75,72	75,72	84,97

Source : Education Office in Bojonegoro Regency, 2015

The Availability of School Building and Other Educational Facilities

Besides The School Participation Index, the indicators of performance in education is the availability of school building and other educational facilities. More specifically the availability of educational facilities in Bojonegoro can be seen in table below:

Table 5.
The Availability of Educational Facilities In Bojonegoro Regency 2012 – 2015

No	Description	Unit	2012	2013	2014	2015
1	Educational facilities in Elementary School					
	- School Building	Unit	1.072	1.112	1.029	1023
	- Class Room	Local	5.374	5.442	6.629	7217
	- Teacher	Local	984	991	1.053	9031
	- Library	Local	833	881	890	923
2	Educational facilities in Secondary School					
	- School Building	Unit	216	224	211	218
	- Class Room	Local	1.692	1.782	1786	1927
	- Teacher	Local	196	209	4011	4756
	- Library	Local	111	112	132	139
3	Educational facilities in Senior High					

School	Unit				
- School Building	Unit	134	142	94	149
- Class Room	Local	1.125	1.221	1060	1553
- Teacher	Local	67	74	2357	3779
- Library	Local	133	141	153	169

Source : Education Office in Bojonegoro Regency, 2015

From the data above, shows that the educational facilities at all levels of education have added the number of facilities, ranging from the growing number of teachers, classrooms and libraries. This shows that the quality of education improvement in Bojonegoro goes well.

Number of Graduates and Students Graduation Index

The increasing number of graduation of students at various levels each school year, is the good condition of all parties, including government and society. But if there is a decrease, it needs to be observed wisely, by looking at the correlation and synergy among students, teachers and the parents. Here presented data on the percentage of the graduation and the number of graduation in Bojonegoro during the period 2012 – 2015.

Table 6.

The Increasing Number of Graduation, Transition Index and School Capacity in Bojonegoro Regency 2012 – 2015

Year	The Number of Graduation (%)		
	Elementary School	Secondary School	Senior High School
2012	100,00	94,21	98,69
2013	99,87	99,70	99,79
2014	100,00	99,80	99,81
2015	100,00	100,00	100,00
Year	Transition Index (%)		
	Elementary School	Secondary and Senior High School	
2012	99,14	94,94	
2013	99,68	96,03	
2014	99,72	97,33	
2015	99,83	98,02	
Year	School Capacity		
	Elementary School	Secondary School	Senior High School
2012	112	264	302
2013	114	263	306
2014	114	263	306
2015	106	245	298

Source : Education Office in Bojonegoro Regency, 2015

Based on these data, the percentage of elementary graduation in Bojonegoro years 2012 - 2015 was 100%, which means that students fully pass on elementary education (SD / MI), except in 2013 amounted to 99.87%. In 2015 for secondary (SMP/MTs)

increased graduation to 100%, as well as to senior high school (SMA/MA) graduation in Bojonegoro reaches 100%. This condition is a proud achievement for Bojonegoro, for all levels of graduation reached 100% pass. This achievement is also followed by the increase transition index rise by 0.11% from the previous year's level of SD / MI and SMP / MTs and 0.69% for senior high / MA. But to school capacity in 2015 has decreased for all levels of education, compared to 2014.

The Children do not Attend the School in 2015

The children in school age who do not attend the school is also one indicator that is often used to measure the performance of educational attainment. This indicator shows how much school-age children do not attend school, according its level. The greater the numbers in education, it indicates the dropout index. These conditions affect the average long term learning.

Table 7.

The Children Do Not Attend The School in Bojonegoro

Source : Education Office in Bojonegoro Regency, 2015

The table above shows that the higher the level of education, number of children do not getting the school is high. It can be calculated that in 2015, 1633 children in elementary school age do not attend the school, and it was very influential on the implementation of compulsory education. Given the number of primary school age children 9 (nine) years, many are not go school. This means that the 9 (nine) years compulsory, has not run optimally in Bojonegoro.

Psychological Factors of Children do not Attend School

In addition to factors of technical, non-technical factors also greatly affect the child does not attend school. These factors are economic factors and social-psychological factors. Especially in rural communities that consider that after six years primary school to reduce the burden on parents, the girls is married, and the boys go to work to help find some money. From the interviews with school dropouts and parents, their opinion is as follows:

- 1) "I do not go to school, because I help my mother to sell at markets, my father at home".
- 2) "I do not want to continue my school to junior high school, because my parents can not pay for school, let my sister go to school, I want to find some work to help my parents".
- 3) "In village children do not need to be high education, elementary school is enough, let them to be married, to lighten the burden of the parents"
- 4) "I do not want to go to school, because my father said it's better to work to help my parents, which is I already able to read and write".

From the interview, we know that a program related to public policy will work well and effectively, takes the form of socialization of the good sense and the right to the public about the importance of this program in the run, in order to get full

support from all elements of society. The factors that influence the success of the nine year compulsory program, in the terms of the socio-cultural is as follows:

- 1) Education Level of Parents
Education of parents will greatly affect the pattern for educating children. Because it will connect with the perception of parents towards the school itself. In some communities the skills of reading and writing, as well as primary school graduates are generally enough to understand simple problem of living. Most parents only got lower education as well elementary graduation. In this conditions, can happen several possibilities, such as not sending their children to school or dismisses her son prematurely.
- 2) Society Tradition Factor
Traditions and customs of the community often impede the participation of children to school. From some areas there is still a tradition of children to participate traveling away with their parents, such as visiting their family. Parents do not feel guilty even though taking his son to leave the school in the long term. Another tradition is still many people in society who believe educating girls is less profitable, so that parents are reluctant to send girls to the school. Because in the end, the girls will be a housewife, who only take care of the house working that are considered not require high school. Another tradition in the community is about to marry off girls at a young age. Because if they have a girl child is old enough, but not to get married in early, it becomes a burden and disgrace in the family.
- 3) Economic Factor
Poverty affects the level of education. Many rural residents are below the poverty line. The poverty index determine the drop out index of school. The parents cannot send their children

to school, because they do not have enough money for the school fee. Their children must help their parents to work for getting better life.

Nine Year Compulsory Education Evaluation in Bojonegoro Regency

From all the data that has been presented above when evaluated in terms of the implementation of the nine (9) year compulsory education program in Bojonegoro, shows the following:

- 1) From the adult literacy index, indicate that Bojonegoro already carry out the completion of illiteracy in 2015 for productive age, while the unproductive age are still many who are illiterate, and the literacy index is not accompanied by the intensity of education through the Paket Kejar Program.
- 2) From the indicators the average of learning duration in Bojonegoro Regency, showed 6.8 years. This is due to people who have completed literacy program is not followed by Kejar Paket as the advanced form of education. And unproductive are still many who are illiterate.
- 3) From the Rough Participation Index, all levels of education has increased. It is as a result of an increase in the literacy rate of productive age, and this condition when associated with Medium-Term Education Plan (RPJMD) Bojonegoro years 2014 - 2018, the Rough Participation Index is reached.
- 4) The Real Participation Index in 2015 also increased, but not in accordance with the target in Medium-Term Education Plan (RPJMD) Bojonegoro, so these index affect the implementation of the 9-year compulsory education program in Bojonegoro.
- 5) The Transition Index and graduation index indicates the difference between the graduation rate and the transition rate. It can be concluded that there is no continuing education to secondary

school or senior high school. It also means not achieving the 9-year compulsory education in Bojonegoro.

- 6) From the number of school-age children who do not attend the school is in high level. It affects the The Rough Participation index and Real Participation Index and the average of learning duration. Therefore, it is required of Bojonegoro government policy to enforce compulsory education, to get them immediately return to school.
- 7) From the social psychological factors as economic factors, helping their parents, and get married to reduce the burden on parents. All the factors affects the number of children who do not attend the school. Hopefully the government make a regulation to ban school age children to get working, or free schooling and socialization the terms of marriage.

From the results of the evaluation of each indicator of education \ performance in the framework of compulsory education as a trust legislation Bojonegoro number 4, year 2012, concerning the provision of education in the Bojonegoro Regency, indicating that the compulsory education program in Bojonegoro has not been reached, so that the program is run by purpose, the government is expected to make relevant policies, so that the 9-year compulsory education program can be run in Bojonegoro

CONCLUSION

From the description of the background and purpose of the evaluation, as well as the methods used in the evaluation of the 9 (nine) years compulsory program, as stipulated in Bojonegoro Regulation No. 4 of year 2012, concerning the provision of education in Bojonegoro, we can conclude as the following:

- 1) The literacy index is very influential on compulsory education 9 year in

Bojonegoro, because the increase in the literacy rate is only in the productive age, while the unproductive age remain illiterate.

- 2) The average of learning duration of schooling is still low, at 6.8 years, which still far from the target. The literacy people is not directed to pursue education in Kejar Paket (a program to eliminate the illiteracy). The unproductive age people are still illiterate.
- 3) The Rough Participation Index and The Real Participation Index have not been targeted which is set, so that this contributes to the 9 year compulsory education
- 4) There is the high difference between graduation rates and transition index, which show that children do not continue to pursue higher education, especially from elementary level (SD / MI) to secondary level (SLP / MTs)
- 5) There are large number of school-age children do not attend the school. It need to get attention of the government to make "back to school program" and implemented for free
- 6) The social psychological factors that cause parents allow their children out of school, such as economic constraints, working to help the economy of parents and married for girls to reduce the economic burden of their parents. In this case the children do not continue schools will affect the the learning duration, the Rough Participation Index and The real Participation Index. It severely hamper performance to achieve 9 – year compulsory education program. With these conditions, expected the Local Government of Bojonegoro provide socialization on the dangers of early marriage. They must told about the problem caused by the early marriage as about the health of reproduction, maturity emotional, healthy family and other social problem.

The government must give strict punishment to parents employing children of school age. The parents should get legal counseling mainly on the protection and the rights of children.

REKOMENDATION

The result of evaluation of the Bojonegoro Regulation no. 4 year 2012 on the implementation of Education in Bojonegoro; recommend a few things that are expected to be done by the government, as follow:

- 1) Increased the capacity the Kejar Paket A and B.
- 2) The Government set a new program in education, namely: "Back to School Program"
- 3) Make the regulation in formal education and nonformal education to succeed the 9 year compulsory education program, no exception to the right of every citizen to education equally.
- 4) Socialize the mature age to get marriage to the parents and the importance of family planning for building the healthy family.
- 5) Give strict punishment to parents employing children of school age.
- 6) Compulsory program requires a commitment of both society and government. The cooperation between the private sector and the government in the provision of scholarships, will be an opportunity to go to school.
- 7) The learning duration should not be the substance, but the competency to be achieved learners to face today and tomorrow, in order to educate the nation.
- 8) Involving community organizations to provide information and new paradigm to parents about the importance of formal schooling for their children in digital era. And also about family planning and the protection and the rights of children.

BASIC EDUCATION CURRICULUM IN THE DIVISION OF ILOCOS SUR, PHILIPPINES

ORLANDO A. BATARA, Ed. D.
Bataoraorlando@yahoo.com
Ilocos Sur Polytechnic State College
Sta. Maria, Ilocos Sur, Philippines

ABSTRACT

This study aimed to appraise the Status of the Basic Education Curriculum (BEC) in the Division of Ilocos Sur along the following dimension: goals and objectives, relevance of curriculum, competence in the use of teaching methods/approaches/strategies, adequacy of equipment and instructional materials, problems encountered, administrator performance, and teachers' performance.

In this study, the profile of administrators and teachers in terms of personal and professional factor were likewise look into. The personal and professional factors considered were determined in terms of position, length of service, length of administrative experience, salary, number of management trainings attended, awarded/recognition received, and membership in organization, age, sex, educational attainment, area of specialization, number of years teaching area of specialization, position, salary, length of service and training attended.

Goals and Objectives. Both of the administrators and teachers assessed the objectives of the BEC as "High" (3.80).

Relevance of Curriculum. The BEC as a whole is "High" (3.84).

The administrators and teachers are "Highly Competent" in using varied methods/approaches/strategies in imparting knowledge, skills and attitudes to the pupils.

Adequacy of equipment and instructional materials. They are assessed as "fairly adequate" (2.86)."

Problems encountered. "Moderately pressing" (2.86)

Performance of the administrator-respondents. The overall mean rating was 8.46 with "very satisfactory" as a descriptive rating.

Performance of the Teacher-respondents. The overall mean rating was 8.22 with "very satisfactory" as a descriptive rating.

The pupils' achievement was "Very Satisfactory" level with an overall mean rating of 85.68.

There was a significant relationship between the pupils' achievement and the attainment of goals and objectives ($r=.046$), competence in the use of teaching methods/approaches/strategies ($r=.058$) and teachers' performance ($r.041$).

Among the activities undertaken to implement the BEC, Seminar (1400 or 57.8%) shows the first rank while action research (26 or 1.1%) obtained the last rank.

Some problems were identified in the implementation namely: lack of trainings management and leadership to the administrators, only few teachers pursued graduate studies, giving of teaching assignment to teacher were not suited to their area of specialization although some teachers in the elementary are generalist, and lack of teachers' training and insufficient supply of equipment and instructional materials.

Key Words: Basic, Education, Curriculum

INTRODUCTION

An overcrowded curriculum can hinder or delay the development of lifelong learning skills as coverage of the subject matter tends to take priority over in-depth learning.

The curriculum serves as the core of educational efforts where the field draws a wide range of thinking about the complex, interrelated, and interacting phenomena that it involves. Every educational system is ultimately assessed in terms of curriculum or curricula. When a system's values are challenged, its goals criticized on its subject offerings praised or condemned, it is the curriculum that occupies center stage. As Garcia (1973) has said:

"The curriculum is the heart of education. It is "life sources" which to a significant extent determines the success or failure of an educational system. It is thus not surprising that both educator and layman dwell on issues which revolve around the curriculum whenever they stop on where the educational system is headed."

The Dep Ed curriculum stands on the conviction that functional literacy in its comprehensive meaning is the ability that is most essential for learning in this new world. Filipino learners who attain functional literacy will have acquired sufficient self-discipline, which can lead to sustainable accomplishments with our people innate adaptability to change. Filipino learners can do self-regulated learning, and with enough motivation, they on their own can seek sources of knowledge, read instructional materials, and conduct explorations on other subject matters or topics that interest them.

The curriculum aims empowering the Filipino learner to be capable of self-development throughout one's life and to be patriotic, benevolent, ecologically aware, and Godly. This overall aim entails the acquisition of life skills, a reflective understanding and internalization of principles and values, and the development of the person's multiple intelligences. Thus in the restructured curriculum, training in life skills, the identification and analysis of values, and the recognition of multiple intelligences permeate all the learning areas.

The design of the curriculum is based on the principle that there are two main sources of reliable and meaningful knowledge for contemporary basic education: expert systems of knowledge and the learner's experience in his/her context. The curriculum has been

restructured so that these two main sources will interact with one another reciprocally, and in this sense, the restructured curriculum is an interactive one.

This curriculum promotes more mutual interaction between students and teachers, between students themselves (collaborative learning), between students and multi-media sources, and between teachers of different disciplines. Also, what makes this curriculum interactive is the use of information technology and greater emphasis on computer literacy in all learning areas in every area in every school where equipment is available.

The task of curriculum development is never-ending, dynamic, and enormous task. It is a cycle that starts with curriculum planning, and moves on to curriculum development, curriculum implementation, and curriculum evaluation.

The ideal teacher for the interactive curriculum is not the authoritarian instructor but the trustworthy facilitator or manager of the learning process. She is not somebody on whom learners always lean but somebody who gradually rids them of the tendency to lean. She enables learners to become active constructors of knowledge and not passive recipients of information.

STATEMENT OF PROBLEM

This study assessed the Basic Education Curriculum in the Division of Ilocos Sur, Philippines. Specifically, the study answered the following:

1. What is the profile of the school administrators and teachers in the public elementary schools in terms of the following:

A. Administrator-Related Factors

1. position,
2. length of teaching service,
3. length of administrative experience,
4. monthly salary,
5. number of management trainings attended,
6. number of awards/recognition received; and
7. membership in organization?

B. Teacher-Related Factors

1. age,
2. sex,
3. civil status,
4. educational attainment,

Template for Full Paper Writing

5. area of specialization,
 6. no. of years teaching area of specialization,
 7. position,
 8. monthly salary,
 9. length of service; and
 10. trainings attended on BEC?
2. What is the status of the Basic Education Curriculum in the Division of Ilocos Sur along the following:
- a. goals and objectives,
 - b. relevance of the curriculum,
 - c. competence in the use of teaching methods/approaches/strategies
 - d. adequacy of equipment and instructional materials,
 - e. problems encountered,
 - f. administrators' performance; and
 - g. teachers' performance?
3. What is the level of pupils' achievement in the public elementary schools in the division of Ilocos Sur?
4. Is there a significant relationship between the pupils' achievement and the following factors:
- a. administrator-related factors; and
 - b. teacher-related factors?
5. Is there a significant relationship between the pupils' achievement and the status of the Basic Education Curriculum?
6. What r topics that are the activities undertaken to implement the Basic Education Curriculum?

Conceptual Framework

The research paradigm as shown revolves on the appraisal of the status of the BEC in the Division of Ilocos Sur along the attainment of goals and objectives, relevance of the curriculum, competence in the use of teaching methods/approaches/strategies, adequacy of equipment of instructional materials, problems

encountered, administrators' performance, and teachers' performance. It was posited in the study that the pupils' achievement is related to the status of the BEC.

Related Literature

Republic Act 9155 otherwise known as the Governance of the Basic Education Act of 2001 mandated for the Restructured Basic Education Curriculum Reform 2002 translating subjects and activities of what in point are relevant and quality education as it shall promote holistic growth of pupils, enabling them to acquire the core competencies and to develop the proper values and attitudes.

The Governance of Basic Education Act of 2001 provides the general goal of basic education: to develop the Filipino learners by providing them basic competencies in literacy and numeracy, critical thinking and learning skills, and desirable values to become caring, self-reliant, productive, socially aware, patriotic, and responsible citizens.

As cited by de Jesus (2004) basic education can transform the Philippines into a great nation and that education can be a great equalizer by creating opportunity developing skills, and building competence and capability for the school children.

Lockheed and Levin (1991) the teachers who are the key curriculum planners, should exert more effort to implement the intended curriculum adequately, to develop/use innovative instructional materials, to maximize the use of increase learning time and to get actively involved in developing effective teaching process.

Lardizabal (1988) suggested that method is good if it utilizes the principle of "learning by doing". Since one learns through self-activity, provision should be made for direct experiencing. Activities should be planned so as to give children opportunities for doing, reacting and undergoing.

According to Quibol (1983) the major problem in the implementation of the program is limited budget and supplies of instruction as revealed by the teacher respondents.

Barcena (1982) as mentioned by Apolinar, expressed his ideas on the importance of materials and equipment. He avers that materials are inputs for more effective learning. Relative to this, learning environment should be

provided with necessary facilities by the school authorities so that quality education may be achieved. Teachers find difficulty in laboratory classes due to inadequacy of supplies, materials and equipment needed in teaching different units.

Bandas (1985) made on the study on the implementation of the New Elementary School Curriculum (NESC) in the Division of Mountain Province. She found out that the most pressing problems in elementary were lack of workbooks, textbooks, teaching aids and devices, facilities and equipment, preparing appropriate and adequate development activities congruent with lesson objectives, infusing values in every lesson and using mastery learning approach in all learning areas.

On the other hand, Gado (2003) pointed some problems affecting the implementation of the BEC were "fairly serious" which means that teachers have to be trained more and that instructional manuals should be made available for the teachers to use.

Gregorio (1967) pointed out ten methods namely, 1) Presentation, 2) Demonstration, 3) Reading 4) Drama 5) Discussion 6) Cases 7) Graphics 8) Playlikes 9) Gaming 10) Learner's Directed Inquiry

According to Anders as mentioned by Barcena (1982), audio-visual materials re educational aids that work primarily through the senses especially hearing and seeing. Visual aids include display boards, models, and mock-ups, overhead transparencies, photographs, drawings and slides. The findings of Anders was further supported by Mangkarotai (1986) for he recommended that "tools and equipment in teaching the subject should be provided and to have more for actual use." Hands on activities will further visualize and conceptualize abstract ideas which are believed to be more effective in imparting the lessons. Pupils get fascinated with the tools when they themselves experience manipulating.

Equipment and materials, according to Ainley (1987) constitute an important element of the physical environment for teaching. Two views were advance by Ainley concerning two ways to which physical influence pupil learning; (1) changes in the physical environment could change behavior by removing impediments to activities which are considered desirable but not feasible; (2) changes in the physical environment

could cause changes by suggesting possibilities which have not been previously imagined.

Corey and Dale (1984) give emphasis on the teacher's decision on audio-visual materials for instruction. According to them, teachers are right to be concerned about having ready access rich and varied collections for instructional materials, equipment and services. They understand how much resources influence both the nature and quality of their student's work.

Gapate (2004) revealed in her study that the problems encountered were "slightly serious" on the lack of materials, lack of references or supplementary materials, and teachers' indifference.

In Garcia's (1984) study, the findings showed that almost all the school administrators and the teachers have expressed favourable opinions on the administrative practices of "rating the performance of teachers" and setting goals and objectives of the school with the participation of teachers, pupils and parents. On the planning function, school administrators have appraised all the teachers, "Very satisfactory." On the organizing function, both school administrators and teachers have appraised almost all the teachers as "Very Satisfactory." There is a substantial disagreement between the appraisal of the school administrators and teachers on the administrative practices. There were favorable opinions on the item regarding the planning and evaluating functions.

Umali (1990) conducted a study on "Leadership Styles and Selected Factors in the Work Environment: Inputs to a Human Resource Development Program," and concluded that the Secondary School Administrators of Pampanga have their best performance on the component in planning and organizing work followed by the component on community relations. Their lowest performance score is on the components and accuracy in submitting reports.

Fernandez (1989) claimed that teachers are the pillars of the educational system. He further expressed that the quality of teachers determines the standard of the school. Along this line, teachers should always be updated with the educational innovations to maintain if not reach for the better in their performance, instructional skills, and classroom management.

Camacho (1995) demanded that educational institutions as organizations can be effective if its teachers as members of the

organization are to perform toward the achievement of the institutional goal. Teacher's performance therefore, demands evaluation.

Reotutar (1996) stressed that staff development in the school setting implies a program for promoting the professional and personal growth of staff members so that they can improve the teaching learning opportunities for students. A wide variety development programs is provided by different schools.

Esmena (1991) recommended for the school administrators to guarantee fair assessment of their teacher's performance by constantly motivating them, and should their strategies adoptive to present situation and their self-development in their profession.

Doctor (1991) in her master's thesis has the following recommendations as far as teacher's performance is concerned.

- Continuous in-service education program should be implemented to sustain the teacher's teaching effectiveness. These two were rated average only should be encouraged to grow professionally to improve themselves.

- The criteria used in teaching teacher's teaching effectiveness should be discussed fully within the administrators, teachers and students so that they will a common frame of reference.

- The guidelines in the use of Performance Appraisal System for Teachers should be reviewed and the entire educational sectors should be involved by asking feedbacks from the field.

- Teachers should utilize varied and appropriate teaching strategies to improve student's academic performance they should identify student's strengths and weaknesses in their particular subjects and be flexible in their methods and style.

Maquizo (1984) discussed that administration and supervision of teachers, the school plant, and such other activities that are related to curriculum making and student development.

In a study conducted by Bernardez (1983) on the "Management Practices of Secondary School Principals in Cabanatuan City as viewed by Teachers and Administrators themselves and their Implications to Administration and Supervision," the following were revealed:

1. The Secondary School Principals were comparatively middle aged and mostly women.
2. Age, sex, civil status and supervising experiences do not influence the management practices of principals.
3. The management practices of the principals in either the public and private schools do not vary.

As a result of the study of Refuerzo (1985) the teacher has always been expected to prepare the young people to become useful, upright and active citizen in the community. His study conformed on the mission-vision of the Basic Education Curriculum.

In the study of Dulay (1991) she found out that educational qualifications and age were very important factors in affecting the preparation of the teachers. It also found out that educational qualifications of teachers had a highly significant relationship with overall implementation.

Permpol (1985) stated that faculty who had been in the service, became better teachers because of their rich accumulated experience in the subject matter.

Biquero (1978) stated in her study that ateacher was expected to grow with his years in the teaching service; experience, exposure, idea sharing with other teachers, knowledge and skills gained and in-service trainings. Suggestions given by the schools officials contributed to the upgrading of his/her competence in teaching.

Menguito (1993) conducted a study to determine the relationship of educational attainment to successful performance. She found out that those who had higher education tend to be more effective than those who had lower educational attainment.

Arellano (1995) stressed that what students are good, competent, professional and dedicated educators and not teachers who in their experience in the academic community, have become ineffective, bore teachers who blame students to cover up in their inefficiency. Students likewise do not need teachers who, in their own domestic environment, are not loved and cared for, resulting in tyrants in classes who in belittle and insult students openly.

Alkin (1971) as cited by Duro states that product phase of evaluation determines whether or not the objectives have been attained. This phase often includes analysis of strengths and weaknesses with recommendations for future modifications if appropriate product evaluation is also often extended to assess terms effects, its main objective being ascertain the extent to

which the program has met the needs of the group it is intended to serve.

Methodology

This section presented the research design, sources of data, population, scoring and statistical analysis of the data that gathered in the study.

Research design. This study employed the descriptive-correlational method of research.

Population. Total enumeration of the 358 administrators and 2,516 teachers in the first and second Congressional Districts of Ilocos Sur were used as respondents of the study.

DISTRIBUTION OF RESPONDENTS BY DISTRICTS AND SCHOOLS

DISTRIBUTION OF RESPONDENTS BY DISTRICTS AND SCHOOLS

Data Gathering Instrument. The questionnaire served as the principal means of collecting data. It was administered to the administrators and elementary teachers in the Division of Ilocos Sur.

Data Gathering Procedure. Before the administration of the questionnaire, a letter request was sent to the Schools Division Superintendent of Ilocos Sur asking permission to allow the researcher to conduct his study in the elementary schools in the division. Immediately after the approval of his request, he administered the questionnaire to the respondents. Actual collection of data followed and retrieval of questionnaire was done.

The researcher conducted documentary analysis. Data on administrator’s performance, teachers’ performance and pupils’ academic result were gathered through the record of the school submitted to the Department of Education, Division of Ilocos Sur.

Statistical Treatment of Data. All collected data were properly tabulated and analyzed using:

1. Frequency and percentage were used to determine the number of responses or to establish the distribution of schools along teacher and administrator-related factors.
2. Mean was utilized to describe the status of the BEC.
3. Simple Correlation Analysis was utilized to determine the relationship between the pupils’ academic achievement and the following factors: administrator-related factors and teacher-related factors and the relationship between the pupils’ achievement and the status of the BEC.

Result and Discussion

1. Assessment of the Basic Education Curriculum along the following: Goals and Objectives

The goals and objectives of the BEC were achieved at a High Level. This based on the computed overall mean rating of 3.80. As a whole, among the goals and objectives of the program, the 4th objective “To teach basic health knowledge and the formation of desirable health habits and practices” obtained the highest mean (4.01) while the 7th objective “To develop critical and creative thinking through responsible judgment on current issues and concerns” garnered the lowest mean (3.61). The findings suggest that the administrators and teachers should well improve teaching competency level along critical thinking not from textbooks alone but from practical experiences which may help integrate concepts to daily living and process relevant knowledge, skills and attitudes.

Relevance of the Curriculum

The curriculum of the BEC as a whole, is implemented at a “High” level. Item 3 “Objectives are geared towards acquisition of knowledge, skills and attitudes” (3.93) has the highest mean rating, while item 5 “The pupils have sufficient activities for mastery of both contents and skills” (3.74) got the lowest mean. The BEC aims to

provide pupils' activities in order to arouse their interest to learn and to acquire knowledge, skills, and values, therefore, the curriculum maximizes in the learning activities of the pupils.

This is the consistent concept of Lockheed and Levin (1991) that the teachers are the key curriculum planners, should exert more effort to implement the intended curriculum adequately, to develop/use innovative instructional materials, to maximize the use of increase learning time and to get actively involved in developing effective teaching practices.

Competence in the use of teaching methods/approaches/strategies

The administrators and teachers competence in the use of teaching methods/approaches/strategies was evaluated as "High" with a mean rating of 3.41. This finding is similar to Gapate (2004) that the teachers' competencies in the use of teaching methods/approaches/strategies was evaluated as "High" with a mean of 3.99. Reading, Presentation Method and Demonstration Method are most commonly and competently used by the administrators and teachers for they are rated "Highly Implemented" as supported by mean ratings of 3.75, 3.73, and 3.72, respectively. On the other hand, the following methods/approaches/strategies used at a "Moderately Competent" level: Drama, and Data Retrieval Chart have the same mean ratings of (3.13), followed by Cases (3.11). Fieldtrips got the lowest mean (2.84) which is similar with Manzano's findings (2003) that fieldtrips as a method of teaching got the lowest mean rating of 2.94 still described as "Sometimes used". Therefore, this implies that the administrators and teachers were efficient in their execution of suggested methods/ approaches/ strategies that helped improve pupils' performance. Based on their means, although at a "Highly Competent" level could still be improved through the provision of adequate instructional materials and funds or resources.

Adequacy of Equipment and Instructional Materials

Equipment and instructional materials in teaching subjects are assessed "Fair" (2.76). Among the equipment and instructional materials

mentioned of the highest mean are items 5 and 6, "Pictures and Flashcards with mean ratings of 3.91. These flashcards and pictures are commonly used as they can be made easily utilizing their personal resources. The item with lowest mean rating of 1.81 describes as "Poorly Inadequate" is item 16, "Overhead projector". This gadget is available in the district offices only and is used during seminars. This finding contradicts Lazo's findings (2003) that the overhead projector is very common equipment in the schools. The findings imply that most of the schools in the Division of Ilocos Sur have met the minimum requirements prescribed by the Dep Ed on the equipment and instructional materials. Although some of the items were "Poorly Inadequate". There is a need therefore to look for some means to provide adequate teaching materials to enhance higher level of attainment of the objectives of the program.

Problems encountered

The administrators and teachers find the problems they encounter "Moderately Pressing" (2.86). Moderately serious problems are: inadequate prototype lesson plans, poor ventilation and lighting of the classrooms, lack of time in preparing the activities, difficulty in fusing values in every content lessons, inadequate supply of equipment and facilities, limited knowledge in BEC. Pressing problems along the line include: lack of reference or supplementary books, lack of workbooks and inadequate Audio-Visual Arts. Instructional materials are main hindrances of the full implementation of the BEC. According to Gregorio (1974) as cited by Manzano (2003), effective teaching requires a rich environment and instructional materials and devices. Instructional materials and devices will challenge the attention of the learners, stimulate thinking and facilitate understanding which makes learning more meaningful.

Level of Pupils' Achievement in the Division of Ilocos Sur

The elementary pupils in the Division of Ilocos Sur have "Very Satisfactory" level of achievement. In the first congressional district, District no 3 (Caoayan District) earned the highest achievement score of 87.88, District No. 6 (San Vicente) second with achievement score of 87.17 and District No. 2 (Cabugao District) third with achievement score of 86.23. Caoayan

District had the highest achievement score and again rated high in the status of the BEC. Therefore, the status of the BEC is greater effect the achievement scores of the pupils. District No.4 (Magsingal District) got the lowest achievement score of 83.66. However, all the districts rated "Very Satisfactory" in their pupils' achievement.

In the 2nd Congressional District, District No. 5 (Narvacan North District) obtained the highest achievement score of 86.89, District No. 12 (Sta. Maria District) with the second achievement score of 86.65, and District No 11 (Sta Lucia District) is the third with achievement score of 86.55. Unfortunately, District No. 2 (Banayoyo- Lidlidda-San Emilio District) garnered the lowest achievement score of 83.91. All the districts in the second congressional district are "Very Satisfactory". It shows that pupils in the upland school did not show good performance in their achievement. This is an indication that the farther the schools, the tendency that pupils will perform slow because of lack in disseminating information.

Activities undertaken to implement the BEC

Seminars (1400 or 57.8%) got the highest rank, followed by workshops (250 or 10.3%) and trainings (202 or 8.3%) respectively. The findings agree with the observation that these activities are essentially enhancement used by the teaching skills, strategies and other related programs and commonly used by teachers which are contributory to the improvement of quality education in the public elementary schools. Action research (26 or 1.1%) ranked at the bottom. This finding implies that this is not so much utilized in the teaching process and only master teachers are obliged to make action research because it is one of their functions, a great help in finding solution to problem encountered by the learners in the classroom learning. However, classrooms teachers should also conduct action researches for the realization of school objectives or purposes. This implies further that classroom teachers should be trained in conducting action research or other researches.

Findings

1. Status of the BEC

- Goals and Objectives. Both of the administrators and teachers assessed the objectives of the BEC as "High" (3.80).
- Relevance of Curriculum. The BEC as a whole is "High" (3.84).
- Use of Teaching Methods/Approaches/Strategies. The administrators and teachers are "Highly Competent" in using varied methods/approaches/strategies in imparting knowledge, skills and attitudes to the pupils.
- Adequacy of equipment and instructional materials. They are assessed as "fairly adequate" (2.86)."
- Problems encountered. "Moderately pressing" (2.86)
- Performance of the administrator-respondents. The overall mean rating was 8.46 with "very satisfactory" as a descriptive rating.
- Performance of the Teacher-respondents. The overall mean rating was 8.22 with "very satisfactory" as a descriptive rating.

2. Level of Pupils' Achievement

- The pupils' achievement was "Very Satisfactory" level with an overall mean rating of 85.68.

3. Significant relationship between the pupils' achievement and status of BEC

- There was a significant relationship between the pupils' achievement and the attainment of goals and objectives ($r=.046$), competence in the use of teaching methods/approaches/strategies ($r=.058$) and teachers' performance ($r.041$).

4. Activities undertaken to implement the BEC.

- Among the activities undertaken to implement the BEC, Seminars (1400 or 57.8%) shows the first rank while action research (26 or 1.1%) obtained the last rank.

Conclusions

1. The variables assessing the status of the BEC were rated "High" in the attainment of goals and objectives, relevance of the curriculum, and

competence in the use of teaching methods/approaches/strategies. Further findings indicated that adequacy of equipment and instructional materials were found out to be "Fairly adequate", and problems encountered was rated "Moderately pressing". On the other hand, the performance of the administrator-respondents and teacher-respondents were both at a "Very satisfactory" level.

2. The pupils' achievement in the public elementary in Ilocos Sur rated as "Very Satisfactory".

3. There was a significant relationship between the pupils' achievement and the BEC status indicators such as attainment of goals and objectives, competence in the use of teaching methods/approaches/strategies and teachers' performance.

4. There are activities undertaken to implement the BEC accordingly: seminars, workshops, trainings, remedial teaching, remedial reading, cooperative learning, collaborative learning, demonstration teaching, study sessions and action research.

Recommendations

1. Audio-visual equipment and instructional materials should be provided to arouse pupils' interest to learn more. More funds for the purchase of these should be provided. Administrators and teachers should continue to make varied materials that are practical but functional. Conducting popularity contests, raffle draws, and soliciting donations for well-to-do families in the community and from graduates and friends abroad will greatly help.

2. Considering that the administrators and teachers' performance is generally very satisfactory, they should continue working for outstanding performance.

3. Likewise, the pupils' achievement should also be improved towards the outstanding level.

4. More action researches should be conducted by classroom teachers not only by master teachers since they are in the position to feel and observe the pupils' problems, needs, and behavior in the classrooms.

5. It is further recommended that a continuing reassessment on the quality of education in terms of performance and other variables for a higher standard educational system be conducted.

of Technology

Abstract

Inclusive education in the Philippines played a significant role and fundamental way in creating learning environments that foster educational systems with lifelong learning and economic opportunities especially to students vulnerable to exclusion or at the risk of being marginalized in the school. In Southern Philippines, the Mindanao State University-Iligan Institute of Technology had long been serving as a social laboratory for national unity and integration through its mandated Charter carried along as part of the whole Mindanao State University System. The task embodies significantly the assistance in helping accelerating the program of integration among the peoples of Southern Philippines, particularly the Muslims and other cultural minorities into the mainstream of national life through education. However, the current issues and challenges on inclusive education are highly evident within the institution which led to the questioning of its Charter, particularly among the children of indigenous people or the Lumads’ access to opportunities provided for students in tertiary education.

The research was based on statistical data from school registry, focus group discussions and key informant interviews among administrators, teachers, and students of the institution. Thus, this study attempted to determine the challenges faced by the IPs in terms of gaining access to opportunities in tertiary education and how MSU-IIT responded

to or addressed the issues on inclusive education among the IPs. In addition, this study also dealt with how the socio-economic, ethnic, and cultural profiles of the IPs have affected the System’s goal of “integration through education.”

Keywords: *Indigenous peoples, inclusivity, education, integration, cultural minorities, marginalization*

Introduction

Indigenous students’ inclusivity in tertiary institutions is essential in the fulfilment of “integration”. The extent of the realization of this pressing need, however, is also often overlooked by institutions.

Inclusive education in the Philippines played a significant role and fundamental way in creating learning environments that foster educational systems with lifelong learning and economic opportunities especially to students vulnerable to exclusion or at the risk of being marginalized in the school. In Southern Philippines, the Mindanao State University-Iligan Institute of Technology had long been serving as a social laboratory for national unity and integration through its mandated Charter carried along as part of the whole Mindanao State University System.

The task embodies significantly the assistance in helping accelerating the program of integration among the peoples of Southern Philippines, particularly the Muslims and other cultural minorities into the mainstream of national life through education. However, the current issues and challenges on inclusive education are highly evident within the institution which led to the questioning of its Charter, particularly among the children of indigenous people or the Lumads’ access to opportunities provided for students in tertiary education.

The Mindanao State University – Iligan Institute of Technology is non-secular, non-sectarian academic institution, it does not discriminate potential students based on their religious affiliation and ethnicity. MSU-IIT, as part of the MSU System, follows the MSU Charter to do the following: (1) Perform the traditional functions of a university, namely: instruction, research and extension service; (2) Provide trained manpower skills and technical know-how for the economic development of the Mindanao, Sulu, and Palawan (MINSUPALA), and; (3) Help accelerate the program of integration among the peoples of Southern Philippines, particularly, the Muslims and other cultural minorities (History 3 Reference Material, 2014).

In fact, the mission statement of the University says,

“Committed to the attainment of peace and sustainable development in the MINSUPALA region, the MSU System will set the standards of excellence in science, arts, technology, and other fields; accelerate the economic, cultural, socio-political, and agro-industrial development of the Muslim and other cultural groups, thereby facilitating their integration into the national community, preserve and promote cultural heritage of the region and conserve its natural resources; and infuse moral and spiritual values. For collaborative efforts, for diplomatic relations, and for international recognition as a leading institution of higher learning, the MSU System will pursue vigorously linkages with foreign agencies.”

Moreover, in its vital mandate, the “1954 Congressional Committee conceptualized the Mindanao State University as a social laboratory for national integration...it is the only university (in the country) directly charged by the government to advance the cause of national unity and actively

pursue integration through education” (History 3 Reference Material, 2014).

Statement of the problem

This study attempts to determine the challenges faced by the IPs in terms of gaining access to opportunities in tertiary education and how MSU-IIT responded to or addressed the issues on inclusive education among the IPs. In addition, this study also dealt with how the socio-economic, ethnic, and cultural profile of the IPs has affected the System’s goal of “integration through education.”

Hence, this paper aims to determine and assess the Mindanao State University – Iligan Institute of Technology’s extent of inclusivity of the indigenous people, as part of the considered cultural minorities, in realization and attainment of the Charter’s mandate.

Significance of the study

The plight of cultural minorities and indigenous communities for their equal recognition and self-determination in the Philippines has been a pressing concern. In response to this predicament, the government has taken its step through passing the responsibility to academic institutions since it is the avenue of conglomeration of diverse ethnicities. In fact, the mere creation of the Mindanao State University System is anchored on “integration through education”.

Hence, this study will reflect the University’s attainment of the Charter’s mandate. Whether or not the mandate has been responded accordingly, it will be indicative of the gravity of action needed. The University will take its cue on the gaps to be bridged for the full execution of the mandate.

Methodology

The study is descriptive in nature. Data collection is based on statistical data from school registry, focus group discussions and key informant interviews among administrators, teachers, and students of the institution within the Mindanao State University – Iligan Institute of Technology premises.

The respondents of the study are selected through non-probability sampling, specifically the purposive sampling method. The researchers treated and organized the data in a descriptive and narrative form. After presenting and discussing the data, the findings were summarized and conclusions were drawn in accordance to the theoretical framework. From the analyses of data and the conclusions that were made, recommendations were formulated.

Furthermore, this study took into account ethical considerations in the course of the research. The researchers practiced the five basic ethical principles which are the avoidance of harm, avoidance of deception, respect to privacy, the practice of confidentiality and the notion of informed consent towards the respondent. In addition, the researchers guaranteed confidentiality of privileged information that were given by the respondents, and provided assurance that the information obtained will be used only for the purposes of this study.

Locale of the Study

This study was conducted at the Mindanao State University – Iligan Institute of Technology, a University in Iligan City, province of Lanao del Norte, Northern Mindanao. With an average student population of not less than 12,000 per

semester, the University caters to all the students within the country.

Institute Vision

A world-class institution of higher learning renowned for its excellence in Science and Technology and for its commitment to the holistic development of the individual and society.

Institute Mission

To provide quality education for the industrial and socio-economic development of Mindanao with its diverse cultures through relevant programs in instruction, research, extension, and community involvement.

Theoretical Framework

Originally, the concept of inclusion revolves around the common assumption of a restricted education intended to people with disabilities and learning difficulties. During the 19th century, forerunners of special education consistently argued for and facilitated the development of provision for children and young people who were excluded from the mainstream education. In the later years, governments and other institutions presumed responsibility for such provision. The twentieth century education saw the advent and development of its certain special field, special schools, and quite a few institutions that effectively addressed the norm for students with disabilities and learning difficulties. Moreover, the segregated education of children, as most scholars and educators consider it be, according to their difficulties was seen as essential because they were deemed to be incapable of benefiting from ordinary

methods of instruction (Winter and O'Raw, 2010).

Historically, this was also evidently reinforced by the medical model of disability which views the barriers to learning as being within the child such as the advances of psychometrics or the science of measuring the mental capacities and processes. This segregated approach largely went unchallenged for many years. As the field of special education expanded, it became the received and unquestioned wisdom that separate provision was the appropriate and most effective option for meeting the needs of a minority of children while safeguarding the efficient education of the majority (Winter and O'Raw, 2010).

The drive for inclusive education in the Philippines has been advocated not only by the basic education but also by the higher education. These streams from the government laws and policies from the constitution, Republic Acts (RA) 7277 otherwise known as Magna Carta for Disabled Persons and its Implementing Rules and Regulations, and 9442 also known as An act amending the RA 7277) and Department of Education (DepED) and Commission on Higher Education (CHED) memoranda pertaining student with disabilities (Lartec, Bustos, Carpio, Casiano, De Guzman, and Tongyofen, 2015). Moreover, in the 1987 Philippine Constitution, Art. IV, Section 2, mandates the state to encourage non-formal, informal and indigenous learning systems as well as learning independent and out of school youth study programs and to provide adult citizens, the disabled and OSY with training on civics, vocational efficiency and other skills.

Respectively, this paradigm shift on the special needs on education is influenced by and a result of the Salamanca

Declaration in 1994 at the World Congress. As one of the participating countries, Philippines aims to promote the objective of the Education for All by considering the fundamental policy shift required to promote the approach of inclusive education particularly by enabling schools to serve all children including those with special needs (UNESCO, 1994). Therefore, there is an essential mechanism for any institution to lead the idea or to embrace the philosophy of inclusion by learning the theories and principles behind inclusive education with teacher education institution in the forefront. Teacher education plays a very significant role in instilling these principles to the would-be teachers because if they have a positive attitude, they are willing to provide accommodations to students with special needs (Baker, Boland, & Nowik, 2012) and if they radiate positive attitude, it would lead to its successful implementation (Burke & Sutherland, 2004; Avramidis & Norwich, 2002).

As an example in the Philippines, Saint Louis University's School of Teacher Education (SLU- STE) in Baguio City deals greatly on inclusive education by integrating a 3-unit subject entitled "Inclusive Education" in the curriculum of the pre-service education. This subject has been offered since 2002 every second semester in the first year level. The subject mainly discusses the principles of inclusive education, values such as accepting and valuing differences, understanding disabilities, and teaching and administrative strategies to integrate inclusion in the classrooms and in the schools (Lartec, Bustos, Carpio, Casiano, De Guzman, and Tongyofen, 2015).

The insufficiency of related studies made the researchers to utilize the work of Dr Eileen Winter and Mr Paul O'Raw (2012) entitled Literature Review of the Principles

and Practices relating to Inclusive Education for Children with Special Educational Needs, that entails a summary of existing literature on inclusion, current definitions of inclusion and a collation of the main principles and practices involved in inclusive education.

The differences and the confusion between integration (mainstreaming/incorporation of students with special needs in schools) and inclusion (essentially means that the school adapts to the child to facilitate personalized learning opportunities for all students). Adapt frameworks to various excluded groups (especially rural populations, girls, and students with special needs). Language as a factor related to the lack of access to education and to dropouts (lack of support for minority languages, indigenous and migrants).

Primarily, in the context of indigenous peoples' challenges of inclusivity on integration, this study was delineated from the seven principles of inclusive education pedagogy by Tanenbaum (2016), a secular, non-sectarian nonprofit organization that promotes mutual respect with practical programs that bridge religious difference and combat prejudice in schools, workplaces, health care settings and areas of armed conflict. These principles include the following salient points: (1) teaching all students; (2) exploring multiple identities; (3) preventing prejudice; (4) promoting social justice; (5) choosing appropriate materials; (6) teaching and learning about cultures and religions; and (7) adapting and integrating lessons appropriately. The researchers

highly underscore the context of inclusion on tertiary level and education especially in the case of Mindanao State University-Iligan Institute of Technology, Iligan City, contrary to the universal notion envisioned upon students with disabilities and learning difficulties. In line with the indigenous students' experience, they tend to be overtly excluded in schools or even universities for some certain economic and socio-cultural aspects such as the accessibility to the school, financial constraints, lack of local government's initiatives and programs, and even their doubt and anxieties to become a part of a larger mainstream society which underlies the very issue on integration in Southern Philippines. The above mentioned principles cover the paradigm of the indigenous students' challenges vis-à-vis their growing impetus in search for education as a basic necessity.

Accordingly, first of which highlighted the concept of exploring multiple identities through building confidence and affirming identity for indigenous students support their learning, integration, and ethos preservation. Generally, students who are excited about themselves and other people, and who are inquisitive about the world around them will more easily learn to be compassionate and understanding of people who are different from them. They are less likely to hold negative feelings about others, if they are comfortable with themselves and also with those who are different. Perhaps, this is the blatant enigma among indigenous students that are long been considered a fragment of the marginalized cultural population of Southern Philippines in their very own locality and much more likely, in an educational institution dominated by Christian and Muslim entities. Also, Tanenbaum (2016) asserted in the aspect of preventing prejudice that people are obviously influenced by the legacy of

institutionalized inequalities that permeate history as well as the stereotyped ideas and images encountered every day. As to the general population, the best scholarly and genuine approach to address preconceived stereotypes and to prevent them from escalating into feelings of prejudice and bias is to create awareness through education integration. This can be done by discussing students' stereotypes in both large and small groups and in the long term, would create student awareness of stereotyped beliefs and inequality.

According to Tanenbaum (2016), schools or universities must cater and teach students, regardless of ethnic and religious differences, explicitly about histories of unfairness, or institutionalized inequality. In relation to the indigenous' experiences, Christian and Muslim students should be guided to a humble understanding that institutionalized inequality is not everybody's fault, but that it is everybody's responsibility to become aware, and to create fair and equitable learning communities. It is imperative to discuss all of the student's feelings and attitudes to accept prejudicial behaviors or feelings that should be assessed in the long process. Educational institutions like Mindanao State University-Iligan Institute of Technology (MSU-IIT) should also cultivate a productive atmosphere of trust, examination and responsibility rather than one of guilt to promote the culture of peace, dialogue and integration in Southern Philippines. Educational institutions must set clear boundaries and rules about behaviors that are based on prejudices, such as teasing, bullying or excluding as well as goals for an anti-racist, anti-sexist, anti-biased classroom or learning community. In the context of indigenous peoples' circumstances, institutions should work explicitly with students to create ways to recognize and

interrupt discriminatory or biased language and acts.

Academic institutions should essentially help people to identify prejudicial behaviors as commonly conceived in a heterogeneous society. The common people tend to put others, places and things into categories to contextualize them in relationship to their selves. But respectively, placing a value on people means that is less than the value we place on ourselves, and thus, people are susceptible to treat others in an unfair manner. Particularly, in the academe, one should not be afraid to talk about stereotypes. Train students to discern fact from fiction, especially when it comes to stereotypes. If a student makes a statement or uses words that are prejudiced or are based on a stereotype, the academe or teacher should address the situation by asking questions about the information source, asking whether there are other points of view on the stereotype, provide concrete information that will enable students to rethink their stereotypes based on new information.

Young people are good judges of what is or is not fair. It is vital in talking to students about issues of fairness, and of justice or injustice in terms of equality especially in the perspectives of indigenous people and with this, several education institutions were encouraged to make comparisons (Tanenbaum, 2016). This would definitely help the academe to compare situations of injustice in their own lives to larger social issues. For some students, their experiences of injustice are directly linked to larger social issues, such as access to equitable education, immigration rights and civic neglect of urban environments. Hence, these larger social issues will be regarded as "new" ideas with which to grapple.

In parallel, the MSU System promote dialogues and provide grounds that would help students develop empathy and awareness within the broader community and develop a worldview through the encouragement of students to explore their perspective on issues within and outside their immediate communities and their relationship to the larger world. History 3, The History of Filipino Muslims and Indigenous Peoples of MinSuPala is a pedagogical medium for the integration of indigenous perspectives and experiences would be the application of critical thinking skills in discussing challenges of mainstream integration. General students should explore why they think what they think and examine where they got their opinions. There is a must for any educational institution to assist students in activities to gain accurate information or to see other perspectives through exploring power dynamics among the people in Mindanao and in the society. It would entail questions on students if every view has been represented in a given situation. This would serve as a catalyst to explore how they define “power,” who has power, who doesn’t, and examine issues of access to power that evidently undermine the situation of the indigenous people in Mindanao.

The encouragement of an academic institution particularly on its constituents and students to develop a sense of civic responsibility also plays a major significant role in creating grounds for the culture of understanding and integration among the people of Southern Philippines. The use of academic learning to encourage students understand their unique roles in society and the contributions that they can make. Institutions on the other hand should stipulate role models by introducing to students the other civic organizations and grass root communities who have created social change. With this, the full integration

of social justice perspective into all content areas can be addressed continuously in many different contextualization such as drawing the attention to a character's behavior in a book or in a math problem that compares the resources of one city with another. In terms of service learning and action planning, indigenous students should get involve in taking social justice issues into their own hands. Service opportunities can help them feel empowered to address issues of inequity in their own communities. The educational institutions might as well help them develop concrete projects and programs that are achievable and relevant in their own communities. On the other hand, the institutions’ general students should be guided in critically examining the mistaken assumptions of taking on the role of “rescuer” in humanitarian aid/“charity work. Hence, it is imperative for students to engage their voices and viewpoints of the communities with which the service learning is taking place.

And lastly, it is important that academic institutions and students learn about other cultures and religions in a positive and comfortable manner. This includes learning about the cultural and religious differences among their peers – as well as other cultures and religions that are more remote from their experiences. General people as well as students should value the opportunities of asking questions. The encouragement to think about how to ask respectful questions of each other and to practice doing so will underline the appropriate ways on inquiries of identity, religion, culture and race.

The academic institutions must use positive terms to gain information about others. The essential way for a learning community that hopes to open dialogue starts when people realize they may ask previously silenced questions, they can

become more eager participants in the integration. Emphasis on culture is not a fixed or permanent condition. Society and culture are constantly changing. Languages, religions, rituals, traditions and ways of knowing change over time. People often appear very different now from how they may have appeared in the past. It is important for any academic institutions to recognize the evolving nature of, and the inaccuracies of, previously assumed images. In the context of the academe, it will allow opportunities for students to learn about the ever changing cultures of the world. Complicate this goal through a range of subjects - not just social studies.

There is vast diversity within every cultural group. It may be more helpful for students to grasp the notion of diversity within groups and geographic regions than to try to oversimplify the experiences of a certain people, nation or region. The institutions must see a range of nuanced views and make connections within and between cultures. For example, a generalization such as “Muslim women cover their hair” is not only false, but it does not address the range of beliefs among Muslims about modesty in dress and what that entails. A more helpful discussion may guide people in seeing connections in all religions where people may cover their hair in different instances due to religious requirements and preferences (for example: Amish women, Jewish women, Greek Orthodox women, Sikh men and women, Catholic women, etc.) These discussions require constant attention to nuance and acknowledging the spectrum of practices that spring from the range of ways people interpret their religious teachings and beliefs.

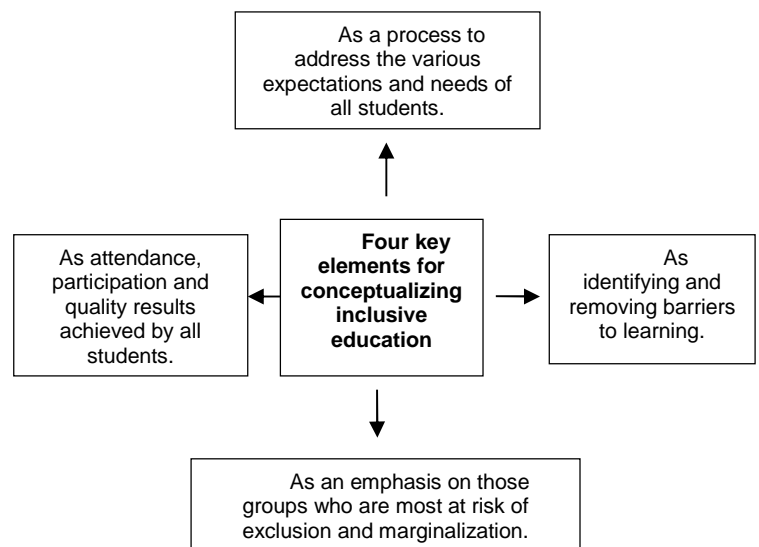

Inclusive education is related to the effort of overcoming barriers that prevent the participation and learning of all children,

regardless of their race, gender, social background, sexuality, disability or attainment in schools (Booth & Ainscow, 1998) and allows these children to socialize with their peers without special needs and actively participate in class activities which help develop their social competence, communication skills, behavior skills, and academic performance (Fisher & Meyer, 2002; Copeland et al., 2004).

Inclusive education does not only focus on the barriers that students face but also, as Booth and Dyssegaard (2008) argue, focuses on the development of cultures, policies and practices in educational systems as well as in educational institutions for them to be able to respond to the diversity of their students and to treat them equally. With this, the responsibility of teachers in creating an environment of meaningful learning where inclusion of students is practiced is deemed important.

Conceptual Framework

Guidelines for inclusion (UNESCO, 2006)

Discussions

In an interview with Jamaloding A. Sayana, a Higaunon student of the Mindanao State University – Iligan Institute of Technology, from Purok Bayanihan, Rogongon, Iligan City, the researchers were able to gather information relevant to the question of the inclusivity of the indigenous students in the Institute.

Sayana and the other 9 graduating students from Rogongon Agricultural High School, took the Mindanao State University – System Admissions and Scholarship Examination for the S.Y. 2015-2016 at the MSU-IIT campus. Out of the 10 SASE takers, only 4 of them passed. According to Sayana, the other 18 students from his batch weren't able to take the exam because of problems in accessibility and financial matters.

It should be noted that Rogongon is a hinterland barangay of Iligan City with a travelling time of 3-4 hours from the city proper. The researchers had a personal experience of going into the barangay for their community extension – 2-hour jeepney ride from the city proper to the center of the barangay and another one or two hour hike to the steep mountains where the school is located. Indeed, the researchers can understand the dilemma Sayana and his classmates faced when he said that one of the primary reasons for their inability to take the exam was because of accessibility.

In addition, besides the non-refundable testing fee of Php250.00, Sayana said that they have to incur a Php240.00 worth of fare in travelling to and from the examination venue. Sayana expressed that with the nature of his parents' work as farmers, to shell out such money is already a challenge.

Here we could see that the inclusivity of indigenous students in education is already confronted with a challenge from the initial phase – the accessibility. Availability of education is given; its accessibility is another thing.

In an interview with Sayana, he was asked of his perception on their state of inclusivity and he answered,

“Wala ma’am, wala man pud mi gi-inform ma’am so wala mi malay ma’am...katong nag-assembly mi sa mini-theater ma’am wala man pud mi nadunggan ma’am.”

“No ma’am, we weren't informed about anything so we weren't aware. During an assembly at the mini-theater, we didn't hear anything, ma’am.”

He then added by expressing his feelings towards their situation,

“Murag usahay ma’am kay maka-ana mi nga “wala lagi mga kauban namo diri?” mawad-an mi ug panlantaw ma’am ba. Pag muanhi na mi sa IIT ma’am, wala mi kaila, upat ra gud mi kabuok magtagbo-tagbo diri ma’am pero usahay pag magtagbom mi, mag-Hinigaunon pud mi ma’am, gusto namo i-preserve among culture ma’am. Kung Bisaya among kauban, mag-Bisaya pud mi.”

“Sometimes we could ask ourselves, “why don't we have any fellows here?” then we lose sight. Every time we come here in IIT, we don't know anyone; there are only four of us [Lumads] here, and sometimes when we see each other, we speak in Higaunon, we want to preserve our culture, ma’am. If we are with Bisayas, we speak Bisaya.”

On a lighter note, the Integrated Performing Arts Guild (IPAG), a resident cultural group of the Institute has made Sayana happy and relieved that an organization is showcasing their culture, he said,

“Kana bitawng sa IPAG ma’am, malipay mi ma’am. Ay, tuara! (clapping his hands) Parehas atong performance nila nga Data

Lakungan ma'am, grabe ug singgit namo ato ma'am kay ayos kaayo sila ma'am. Ang uban kay gikilig ma'am (giggling). Ayos kaayo pagka-perform ma'am. Ipa-audition unta ko sa IPAG ma'am pero wala ko nidayon ma'am kay maulaw man ko."

"The ones performed by IPAG (Integrated Performing Arts Guild), it makes us happy. Oh, there! (claps hands) Like that one performance they did about Datu Lakungan, we were really shouting and giggling all over. It was done beautifully. They actually wanted me to audition for it but I didn't pursue doing so because I'm shy."

When asked about his desire to have their own organization, he fervently said,

"Yes ma'am para pud molutaw among culture ma'am, ma-preserve. Pananglitan kanang sa mga Maranao, MIMSA ma'am, sa mga Christian naa pud silay organization, ang Higaunon kay wala man gyud ba. Wala pud mi nangita ma'am kay abi pud namo ug wala ma'am. Kung naay programa bitaw ma'am kay ang MIMSA, ang mga KASAMA ra ang naay organization diri so abi namo nga walay privileges ug decision ang mga Lumad diri so wala nalang pud mi gasaba-saba ma'am."

"Yes ma'am so that our culture will surface, it will [then] be preserved. Like in the case of Maranaos, they have the MIMSA (MSU-IIT Muslim Students Association), as for the Christians, they also have their organization, while there is none for us, Higaunons. We didn't bother looking for an organization because we thought there's no such existing one. When there's a program, only the MIMSA and KASAMA are present so we thought we didn't have privileges."

He frustratingly added,

"Nahiubos mi ma'am kay kumbaga murag wala bitaw gitan-aw among culture ma'am, wala gi-preserve ba. Murag ang gitutokan ra kay ang mga Maranao ug Bisaya ma'am. Kumbaga, kung minorities ang mga Maranao ma'am unya kay gitutokan man sila diri so murag kami na gyud ang pinaka-ubos bitaw ma'am. Mao na among na-feel ma'am. Murag ubos ra kaayo mi..."

"We were disappointed ma'am because it seems like our culture isn't recognized, it's not preserved. It seems like the only [cultures] looked into are the Maranaos and Bisaya. Say, if the Maranaos are considered the minority but since their culture is focused at, then it will come out like we are the ones on the bottom. That's what we feel – that we are really at the bottom..."

Hence, in order to alleviate the problem and put a solution to their current situation, he expressed his aspiration of an organization for indigenous students,

"Magbuhat ug organization diri ma'am para naay organization ang mga Lumad. Pwede nga madaghan ang mga Lumad diri nga moskwela ma'am kay mang-invite mi nila. Kung makatukod mi ug organization ma'am, ipakita pud namo among ability or talent ma'am isip mga Lumad para dili bitaw mi nila i-ubos ma'am. Kay basin man gud masalipdan mi ma'am ba. Kay kung diri ra man gud sila mag-focus sa mga Maranao ug Bisaya ma'am, so masalipdan gyud mi ma'am. Kung naa mi gusto i-suggest, dili namo ma-suggest."

"An organization for the Lumads should be created. It could be that because of that, many Lumads will come and study here since we will invite them. If we could build an organization, we could show our abilities or talents as Lumad. If they will just focus on the Maranaos and Bisaya, then, definitely, we will be overshadowed. We are afraid that our [ethnolinguistic group] will be overshadowed. If we want to suggest something, we cannot do it [since we don't have an organization as an avenue.]"

Conclusions and Recommendations

After careful analyses of the data gathered, the researchers have points to be laid regarding the inclusivity of indigenous people's inclusivity on "integration through education".

Records from the Department of Student Affairs show that there is no existing indigenous students' organization. This,

alone, could account for the lack of avenue of indigenous students' concerns and programs. This lack of institutional representation manifests their extent of inclusivity in the institute.

It is apparent that the indigenous students' inclusivity through education is already confronted with a challenge in its initial phase – that is, accessibility. Availability of education is already a given, its accessibility is another matter that needs serious attention. The fact that the indigenous students from the hinterland have to travel hours to the examination venue already poses interference to easy access.

The implementation of History 3 – History of the Muslim Filipinos and Indigenous People in the MINSUPALA has served its purpose on educating the students of MSU campuses. While this is a vital action in disseminating information and cultivating corrected histories to the minds of students, what should be penultimate to education is the means of expression through an institutionalized organization. This way, plans and ideas concerning cultural awareness and development could be properly facilitated, effectively mobilized, and efficiently realized.

Hence, the researchers recommend the administration of the Mindanao State University – Iligan Institute of Technology to facilitate the creation of indigenous students' organization. Through this, policies concerning their rights and privileges would be made known to the indigenous students. Also, this will help facilitate the showcasing of culture through cultural displays and exhibits.

Furthermore, the researchers recommend partnerships between various actors and institutions such as stakeholders, collaboration with the civil societies,

international organizations; designing curriculum or policies on equal access to all levels of education. Also, schools should protect and take care of conflict resolutions, offering quality education while respecting diversity, address social inequity, and poverty levels through inter-sectoral policies.

The challenge for educators is to find ways of sharing expertise and provide wider educational opportunities for the full implementation of inclusive education.

ABSTRACT

To reform the children in conflict with the law (CICL) and to get the said children back to the social mainstream were the main aims of the Juvenile Justice and Welfare Act of 2006 (Republic Act 9344) in the Philippines. However, in the context of its 10 years of operation, major structural limitations such as inadequate personnel and poor local facilities adversely affect its efficient implementation. Thus, this study tries to examine the profiles of CICLs who are currently under the custody of personnel managing rehabilitation centers in the cities of Northern Mindanao, Philippines and the factors that are responsible for their engagement in crimes and other delinquent acts. Employing mixed methods, findings in the study indicate that these CICLs are mainly males, barely educated, between 13-16 years of age and came from dysfunctional and poor families. Commonly, they were apprehended due to theft and robbery while a substantial number have been charged of heinous crimes like murder, homicide and rape. Although the law protects the CICLs from becoming hardened criminals since they are not detained in penal institutions, this provision has been abused by unscrupulous adults who use children as fronts to do criminal acts like peddling illegal drugs or robbery. The CICLs consequently become recidivists since they are no longer afraid of committing a crime. Absence of parental care and guidance, peer group influence, vices, and poverty are the most common reasons cited for violating the law.

Keywords: Children in Conflict with the Law, Rehabilitation Center, child offender, Juvenile Justice system

INTRODUCTION

Republic Act 9344 in the Philippines otherwise known as "The Juvenile Justice and Welfare Act of 2006" provides the legal definition, institutional support and processes to be undertaken for the protection of Children in Conflict with the Law" (CICL). Section 6 of the same law stipulates that "a child fifteen (15) years of age or under at the time of the commission of the offense shall be exempt from criminal liability". Once the age of the CICL is determined, the child shall be subjected to a community-based intervention program supervised by the local social welfare and development officer, and probably refer the child to a youth care facility or '*Bahay Pag-asa*' (House of Hope) managed by LGUs or licensed and/or accredited NGOs monitored by the Department of Social Welfare and Development (DSWD) (Sec. 20, RA 9344).

The phenomenon of CICL in the Philippines is a social problem that adversely affects the social capital of the county's youth sector. The increasing number of youth offenders is on the rise (Philippines in Figures. 2013). However, it is not only a major concern in the Philippines but also worldwide. For instance, data from the United States indicate the increasing involvement of children younger than age 10 and 18 in the juvenile justice system. The United States was not alone in seeing a dramatic increase in violent crime by juveniles in the 1980s and early 1990s. Many European countries and Canada experienced

increases in their rates of violent crime, particularly among juveniles (The National Academies Press, 2001).

Selected literature on CICL studies in the Philippines show that, on a national scale, CICL have been found to be usually involved in crimes against property, mainly robbery and theft. At the local level, however, the trend in monitored offences is quite different. Data from the Davao City Jail show that the majority of children in detention are involved in cases of chemical and substance abuse (Ancheta-Templa. 2004). Meanwhile, data from the Davao City Social Services and Development Office (CSSDO, 2001) show that rugby and solvent users comprise 38.7% of the reported 472 CICL provided with services. Children involved in curfew violations (32.2%) and in theft and shoplifting (22.6%) turned out to be the most common cases (CSSDO, 2001).

On the other hand, Shoemaker (1994) in his study comparing male and female delinquency using self-report data in a coastal city in the southern Philippines, found out that delinquency is higher among males. Using regression analysis, he was able to point out that peer relations and attitudinal constructs are significantly associated with delinquency. He raised the interest in finding out the family context and to the influence of peer groups, and gender on delinquency, especially among middle-class males.

There are still areas to be explored in light of the implementation of RA 9344 in other regions in the Philippines like Region 10 especially with respect to

the CICL staying in a rehabilitation center for the youth which is named the House of Hope or *Bahay Pag-asa* . Thus, this study intends to examine the profiles of the of the CICL housed in the rehabilitation centers in the region, the family situation of the respondents, the offenses they committed and the reasons for committing them.

Conceptual /Theoretical Framework

Cultural transmission theories posit that crime and delinquency are learned and culturally transmitted through socialization. According to Sutherland, crime and delinquency are learned in interaction with other people, for the most part within intimate primary groups such as families and peer groups (Sutherland and Cressey, 1978, as cited in Sullivan and Thomson, 1991). There are two elements of this learning process. First, people learn the specific techniques for engaging in criminal behaviour. Second, people learn to value criminality more highly than conventional behaviour. By associating with other people who are more likely to learn to view these activities as desirable, the juvenile will learn a rationale why they are preferable to a more conventional way of life. According to cultural transmission theories, learning to be criminal or delinquent involves mechanisms of socialization similar to those associated with learning any social status. If people have close group ties with others who conform to established group values, they are likely to learn to conform to that lifestyle. Those who associate with criminals or delinquent groups are more likely to adapt criminal or delinquent values.

Home conditions are significant factors that account for the proclivity of children to become delinquents. Parental absence will expose the child to the circumstances where necessary example, discipline or affection will complete his or her personal and moral development. The absence of parental control may predispose the child to do habitual uncontrolled impulses. A high prevalence of disrupted families is thought to increase delinquency both by its effects on children and by weakening formal and informal community social controls (The National Academies Press, 2001).. Also, unemployment and poverty in the family may tempt the children to become thefts resulting from the primal urge for food, clothing, and shelter, and from the jealous desire for some of life's luxuries. (Bridges,1927).

This study looks at some aspects of home conditions (marital status of parents, economic means of the family, relationship status of family members) and the associations of the CICL in committing the offense by looking at their profiles; the causes and nature of their delinquent behaviour.

METHODOLOGY

This article is mapped out from the data obtained from the study entitled "An Assessment of the Juvenile Justice and Welfare System in Region 10: Its Implications to Internal Security" conducted by the researchers in Northern Mindanao, Philippines. Region 10 is composed of 8 cities comprising of Malaybalay, Valencia, Cagayan de Oro, Iligan, Ozamiz , Tangub, Gingoog, and Oroquieta. Iligan City and Cagayan de

Oro City are the two highly urbanized areas among these 8 cities. Region 10 also covers 5 provinces, namely: Bukidnon, Camiguin, Lanao del Norte, Misamis Occidental and Misamis Oriental (Please refer to the map). Region 10 has a total population of 4,689,302 as of August 2015 census (<http://www.nscb.gov.ph/ru10/>). There are 7 *Bahay Pag-sa/Pangarap* (House of Hope) facilities available in the region where the CICL respondents are housed at the time of the study. These facilities are distributed as follows: Iligan City,1; Cagayan de Oro City, 1; Gingoog City 2; Valencia City, 1; and Ozamiz City 2.

Figure 1. Map of Region 12

There were two sources of primary information in this study; the 49 CICL respondents in the rehabilitation centers and the 38 focus group discussion (FGD) participants who

participated in the three FGD sessions held in Iligan City, Cagayan de Oro City and Ozamiz City. The participants comprise of the officers of the City Social Welfare and Development (CSWD), Barangay Chairs of the barangay having the most reported incidents of CICL, police personnel, CICL, parents of CICL, house parents of youth rehabilitation centers, Barangay Council for the Protection of Children (BCPC) and local security officers of the barangay.

This study made use of two data gathering instruments: the Survey questionnaires which were given to all the 49 CICL respondents and the focus questions used during the FGD sessions. Informed consent was given to all the CICL respondents prior to interview proper. Fieldwork was conducted in July 2015 to February 2016.

RESULTS AND DISCUSSIONS

Socio-demographic and Family information of CICL

Age

In The 8 cities of Region 10, the actual ages of the 49 CICL respondents in the study range from 13 to 19 years old. However, at a glance, the distribution of their ages are as follows: 13 (3 cases), 14 (1 case), 15 (9 cases), 16 (12 cases), 17 (14 cases, which is the mode) and 18 (8 cases).

Across ages, younger CICL respondents who are in ages 13 and 14 comprise 4 cases (8.1%). Those in ages 15-16 have 21 cases (42.9%) in which the highest frequency is noted in the

most urbanized city which is Cagayan de Oro. The older CICL respondents are in ages 17-18 with 22 cases (44.9%). The modal age is 17 years old which is close to the mean age which is 16 years old. There are also 2 CICL cases who are 19 years old. They are those who happened to be below 18 years old at the time they committed the offense and are still in the reformation center since their cases are still being heard in courts (see Table 1).

Table 1. Age of Respondents

Age	Total	
	N	%
13	3	6.1
14	1	2.0
15	9	18.4
16	12	24.5
17	14	28.6
18	8	16.3
19	2	4.1
Total	49	100.0

Sex

The data on sex distribution of respondents show the predominance of male constituting 86%. According to Reckless (1961), a good part of this great difference between male and female involvement in crime results from the differences in what is expected of men and women. Biologically and psychologically, human maleness may mean greater activity, greater risk taking, greater aggressiveness, greater wandering; and human femaleness may mean greater inactivity and greater passivity. On the other hand, from the sociological point of view, males are accorded by custom greater opportunities and latitudes for movement and activity, and females are more restrained and curtailed in their

activity according to custom. (Reckless, 1961: 37:38)

Also, Okagbue (2010) noted that based on the international police data, delinquency rate is higher among male juvenile offenders which is more than double than that of juvenile females. There are many reasons why this is the case. Among others, it tends to be true that girls in the family are subject to stronger family control than are boys.

Place of Origin

In terms of origin, more than half of the CICL respondents live in urban areas (26 or 53%). On the other hand, 18 or 37% also live in rural areas. There are 5 cases (10%) who live outside of the cities where they are now presently housed (see Table 2).

Table 2. Origin of CICL Respondents

Address	Total	%
Rural	18	37
Urban	26	53
Others	5	10
Total	49	100

Educational Attainment

Of the 49 CICL respondents, more than half (26 or 53.1%) are in the elementary level. It is followed by 15 or 30.6 % who are high school level. It is worthwhile noting that there are highly educated CICL respondents who are college level (3 or 6.3%). On the whole, the mode indicate that half of the CICL obtained low level of education because

they have not even finished elementary education.

Table 3. Educational Attainment

Educational Attainment	Total	
	N	%
Elementary Level	26	53.1
Elementary Graduate	2	4.1
High School Level	15	30.6
High School Graduate	2	4.1
College Level	4	8.2
Total	49	100.0

Number of Siblings

The data on the number of siblings of the CICL respondents indicate that there are 10 respondents (20.4 %) with 1-2 siblings, followed by 13 cases (26.5 %) with 3-4 siblings; 15 or 30.6% with 5-6 siblings, 6 cases or 12.2% with 7-8 and 5 or 10.2% with 9-10 siblings. The average number of siblings is 5 which is also indicated by the mode. The respondents generally live in bigger households.

Family-Related Information

Parental Education

The data on maternal education show that the mothers of CICL respondents mainly attained high school education (16 cases or 35.6%) Another 10 cases (22.2%) have mothers with low education having achieved elementary level only. Mothers obtaining college education also comprise 10 cases (22.2 %). There are 9 cases or 20% who do not have an idea about the educational level of their mothers.

Across all the cities, high school education is the modal education of the CICL's fathers. It is followed by 7 cases

who do not have information about their father's education; 6 cases each for those whose paternal education is high school level and elementary level; and 4 cases are college graduate.

Three trends can be seen in the data. The modal education of CICL's fathers are high school level/graduate with 14 cases or 38.9%. On the other hand, there are 7 cases of CICL's fathers with elementary education. Better educated fathers also obtain 7 cases. It is also worth noting that 7 CICL respondents do not know the educational levels of their fathers suggesting inability of these fathers to share personal information with their children.

Parental Occupation and Income

Generally, the mothers of the CICL respondents are housewives (25 cases or 54.3%) and the rest of the cases (21 or 45.7%) are into varied low paying jobs and manual livelihood like workers in eatery (6 or 13%), laundrywoman (3 or 6.5%) and farming (2 or 4.3%).

There are only 19 cases out of 49 who reported maternal income and 5 cases (26.3%) of them have no idea on this information. Another 4 CICL respondents (21.1%) admitted that their mothers do not have income. They could be those respondents whose mothers are plain housewives. Of the 10 cases (55.5%) who indicated that their mothers have income, the mode comprising of 3 cases or 15.8% fall in the Php 3, 000.00 monthly income bracket. On the other hand, only 2 CICL

respondents reported to have mothers who earned a monthly income of Php10, 000.00.. The average income of mothers per month is estimated at Php 4, 250.00.

With respect to paternal occupation, 12 (29.3%) respondents answered that their fathers do skilled jobs like carpentry or masonry. The are also 9 CICL respondents who admitted that their fathers work in unskilled jobs being generally construction workers. Seven CICL respondents also declared that their fathers are farmers (7 cases), or businessmen (4 cases). As the data would show, respondents' paternal occupation are not economically stable in as they do not land in high-paying jobs.

Looking into the income of CICL respondents' fathers, t3 (16%) of them said that their fathers earned less than Php 300.00 monthly. Seven respondents (3%) also have fathers whose monthly income is within the range of Php3, 000.00-Php 5, 999.00; 4 (21%) claimed that their fathers have Php 6, 000.00-Php 8, 999.00 monthly income; 5 cases have Php 9, 000.00 monthly income and up. The average monthly income is less than Php 5,000.

Relationship Status of Parents

Out of the 49 CICL respondents, there are 20 cases or 40.8% of them whose parents are married and still live together. On the other hand, about the same number (18 cases or 36.7%) have separated parents. There are also 7 cases (14.3%) among the respondents who are living with their widow mothers. The data suggest that

CICL respondents are predominantly living in single-parent households where full parental support cannot be fully expected.

Description of the Relationship of Household Members

What is notable to examine is also the atmosphere of the family of the CICL respondents. Of the 101 multiple responses to this item, the data indicate that the children have positive home conditions where love (24 cases or 23.8%), peace (19 or 18.8%) respect (13 or 12.9%) and a prayerful life (10 or 9.9%) govern their homes. The majority of CICL respondents admitted to have positive home conditions where love and care, kindness and concern, attention and support are provided by the parents to their children.

On the other hand, adverse home conditions characterized by lack of love (10 cases or 9.9%), constant trouble (7 cases or 6.9%), chaos (5 cases or 5%), lack of concern/attention (6 cases or 5.9%) and stress (5 cases or 5%) were also mentioned.

Table 4. Relationship of family members in the Household

Response	Total	
	N	%
Always in trouble	7	6.9
Broken family	1	1.0
Chaotic	5	5.0
Fighting for food	1	1.0
Lack of concern/attention	6	5.9

Respectful	13	12.9
Stressful	5	5.0

Total	101	100.0
-------	-----	-------

Common Problems in the Family

Out of 42 CICL respondents who gave answers on this item, the majority (27 cases or 64.3%) cited poverty or financial inadequacy as their main problem which is common across all the cities covered in the study. Quarrels in the family come next with 7 cases or 16.7%. There are also 4 CICL respondents who said the separation of their parents is their problem.

Table 5. Common Problems of CICL's Family

Response	Total	
	N	%
Financial/poverty	27	64.3
Always having family trouble/quarrel	7	16.7
Separated parents	4	9.5
Payment of Settlement/Being Trouble maker	2	4.8
Don't know	2	4.8
Total	42	100.0

Coping Mechanisms

The top 3 responses on their economic coping are the following: engage in credit/borrow money (12 cases or 32.4%), engage in farming, fishing and vending (10 cases or 27%); find job/look for support (4 cases or 10.8%).

With respect to the problem regarding conflicts in the family, 6 CICL respondents (16.2%) coped by mediating family quarrels. Three respondents from CDO coped by making good at his studies, ignore the situation and having friends.

In the Philippines, Banaga (2004) also indicated that most of the CICL respondents have to work to earn additional income for their families and or to find belongingness in their peers . The researcher further described that since their income is not enough, they are forced to engage in criminal activities such as snatching, shoplifting and got involved in illegal drugs trade. Poverty has also been cited by Sabangan (2011) and Etimadi et al. (2004) as a pressing home problem. Although poverty is not a justifiable excuse for committing crime, thousands of other juveniles have failed to get out of the trap and are forced to break the law primarily to survive. The other factor is the neglect and abuse that the children experienced at home.

Discipline in the Family

Both parents of the CICL respondents are the disciplinarians in the family (40 cases or 81.6%) which manifests the egalitarian nature of the Philippine society. However, there are also other family members who provide discipline to the children like grandparents, aunt, uncle or sibling alongside with the presence of either or both parents.

The study of Etimadi et al. (2004) in Cebu City also pointed out that one of the contributing factors to delinquency is the family where physical abuse is common.

Forms of Corporal Discipline Experienced

The top 3 most commonly experienced physical discipline was

being slapped (23 cases or 47.9%), boxed (9 or 18.8%), pinched and kicked with 5 cases each or 10.4% per type of discipline. There are 2 cases who were being spanked by belt. On the other hand, 2 cases (4.2%) had kneeled on salt. On extreme cases, one respondent from Iligan City was being injured as a form of punishment and another case from Cagayan de Oro City was chained.

Table 6. Physical/ Corporal Discipline Experienced

Response	Total	
	N	%
Slapped	23	47.9

Pinched	5	10.4
Kicked	5	10.4
Spanked by belt	2	4.2
Kneeled on salt	2	4.2
Injured	1	2.1
Chained	1	2.1
Total	48	100.0

According to Sheldon Glueck and Eleanor Glueck (1950), delinquent boys often have fathers who are over strict in their discipline or fail to apply any discipline or mothers who fail to apply good supervision over them or do not pay attention to their children. In addition, a home that has no feeling of being together, disunited in doing things as a family is vulnerable to child delinquency. Being reared in a dysfunctional family is rated as the greatest risk factor for behaving in violent ways or becoming a victim of violence. A dysfunctional family is a family in which feelings are not expressed openly and honestly, coping skills are lacking and family members do not trust each other. Violent behavior is

usually learned early in life by observing the ways parents and other adults act. Children who have observed violence begin to show aggressive behavior at an early age. When children are treated in harmful ways, they are more likely to become juvenile delinquents (Meeks et al., 1995).

The most important factor that leads to juvenile delinquency seems to be the kind of parenting a person received. Parents of juvenile delinquents often lacked skills on how to raise children. Parents who lack parenting skills often are unable to set guidelines for their children’s behavior. They may not know how to get their children to do what they supposed to do. They may attempt to get their children to do what they expect them to do by using force. Their children learn this way of dealing with others. When children watch their parents behave in violent ways, they are more likely to be violent when they are frustrated. Often, parents who have violent behavior allow their children to treat other children in harmful ways. They allow their children to push, kick, fight, and call other children names (Ibid).

Related Information Being CICL

Where Stayed During the Apprehension

On the whole, 4 in 10 CICL respondents stay with complete parents during apprehension and 3 in 10 cases also live with single parents (either with mother only or father only), 2 in 10 cases stayed with their relatives, grandparents etc, and 1 in 10 cases are with friends. The usual reasons cited for not staying with both parents are

parental separation, one parent already cohabited with someone and stubbornness.

Times Apprehended for Committing Offense

The majority comprising of 31 cases or 86.1% said that it is their first time to commit an offense. There are 2 cases (5.6%) who have been apprehended twice and 3 cases who were caught 3-5 times already. This means that around 15% of the CICL respondents are repeat offenders.

Table 7. Times Apprehended for Committing an Offense

Response	Total	
	N	%
1	31	86.1
2	2	5.6
3	1	2.8
4	1	2.8
5	1	2.8
Total	36	100.0

Offense Committed

The top offenses committed by CICL respondents are the following: theft (17 or 40.5%), drugs (10 or 23.8%), rape (5 or 11.9%), murder (4 or 9.5%) and child abuse (2 or 4.8%). Theft has been predominantly reported both by the highly urbanized and least urbanized cities in the region. Drug-related offense is distributed across all the cities which is a reflection of the proliferation of drug problem in the Philippines. What is noteworthy is the involvement of the juveniles in heinous crimes like rape and murder at a very early age. In fact, the secondary data collected in the region indicate the

alarming increase of the incidence of heinous crimes committed by CICL.

Table 8. Offense committed

Response	Total	
	N	%
Rape	5	11.9
Theft/Stealing	17	40.5
Drugs/shabu	10	23.8
Rugby	1	2.4
Rugby, curfew, stealing	1	2.4
Child Abuse	2	4.8
Murder	4	9.5
Killed someone by vehicular accident	1	2.4
Homicide and Frustrated homicide	1	2.4
Total	42	100.0

Of note is the semblance of the findings in this study with the research conducted by Banaga (2014). Two of the most common crimes she mentioned which is also predominant in the major Philippine cities, specifically Metro Manila, Cebu City, and Davao City are crimes against property like theft and drug-related violations. The most common drugs involved are shabu and rugby (Bañaga, 2004). In Nigeria, Okagbue (2010) also found out that stealing/burglary (57.3%), assault/fighting (9.7%), wandering/truancy (8%), murder/manslaughter (4.9%), illicit drug use (1.7%), prostitution (0.9%) and rape (0.3%) were the crimes committed by youth offenders in his country.

The Companions in Committing the Offense

There are 4 in every 10 CICL respondents who made a crime with companions, where their friends (80%) stood as their accomplice. The other

people who were also involved were clan mate, neighbour, or younger brother. Also, most of their companions were apprehended and the rest were not. The latter were all able to flee out of the crime scene and went to other places in the Philippines. One CICL said that “he was the only one being identified in committing the crime” so he was the lone person being apprehended.

Furthermore, 75% of their accomplice were generally older than them. They are called by the children in several names like “uncle”, *manoy/kuya* (literally means elder brother), and *ate* or elder sister. According the FGD participant, “the crimes which usually involved companions are the following: illegal drugs, substance inhalation, snatching, gang riot, theft and robbery”.

Age When First Offense was Committed

The CICL respondents started to commit crime at the age of 15 (12 cases or 26.7%) which is also the mode in the distribution. Those who are also 16 years old comprise 11 cases or 24.4%, 9 cases (20%) for 17 years old offenders, 8 cases who are 14 years old, and 5 cases (11.1%) for those in ages 12 and 13 at the time of their commission of the offense.

On the other hand, one of the 3 cases of repeat offenders started doing illegal activities at the age of 8 and repeated to do other crimes when he was 13, 14 and 17 years old

Based on the information provided by the FGD informants, children at certain age brackets would do certain delinquent activities: for children with ages 6-12, they are involved in public disturbance and substance inhalation; ages 7-15 are engaged in drug addiction like taking marijuana; ages 8-15 already do snatching, pickpocketing, shop lifting and substance abuse; ages 12-15 can already conduct a hold up, prostitution, gang recruitment; 15-16 do human trafficking or rape, and 15-20- are daring enough to commit robbery and murder.

Table 9. CICL’s Age When Committing the First Offense

Response	Total	
	N	%
12	1	2.2
13	4	8.9
14	8	17.8
15	12	26.7
16	11	24.4
17	9	20.0
Total	45	100.0

Reason for Committing the Offense

When asked about the reason why they committed the crime for the first time, the modal response was that they were being influenced by friends (10 cases or 25%). It is followed by the temptation of having no money (7 or 17.5%); experiment or curiosity and vices with 6 cases each; being threatened or fuelled by revenge (5 cases), having been accused (3 cases), accident/unaware (2 cases) and ordered by leader (1 case).

Table 10 . Reason for Committing the Offense

Response	Total	
	N	%
Temptation/ no money	7	17.5
Accused	3	7.5
Experiment	6	15.0
Threatened/ revenge	5	12.5
Influenced by friends	10	25.0
Vices	6	15.0
Ordered by leader	1	2.5
Accident / unaware	2	5.0
Total	40	100.0

The report of FGD participants also indicate that parental factor is significant in the commission of juvenile offense. One observation cited is the lack of parental guidance to check on the behaviour of children, especially vagrancy. However, the most alarming side is that some parents from poor families even encourage their children to steal junks (*didang*) to support the economic needs of the family. The CICL may start to do *didang* or steal less valuable properties and this repeated behaviour will eventually lead the child to become a seasoned theft. Children also serve as front-liners in crime because the parents know that minors are not imprisoned for committing a crime as enshrined in RA 9344. A participant shared that “a parent consented to the child’s involvement in stealing a part of a heavy equipment (crane) and even extorted money from the owner of the crane who failed to prove that the child was involved in the crime “.

The study of Etemadi et al. (2004) in Cebu City also pointed out the contributing factors to delinquency: the

family where the parents cannot sustain the economic needs of the family and the social environment:- the role of delinquent peers and the presence of illegal activities in the area where the children are raised. The study of Fernandez et al. (2014) and that of Bruno et al. (2014) also pointed the factors identified by Etemadi et al. (2004) among the CICL in Iligan City who are detained in Iligan City jail and Bahay Pag-asa..

It was also gathered from the FGD participants that children who are involved with gangs or are having friends who are delinquents will eventually become delinquents. Gangs are involved in vices, drugs, violent behaviour and vagrancy which will be acquired by a newly recruited member. Hirschi (1969) identified the role of peers in the process of becoming a delinquent. Delinquent acts are usually committed with companions, usually delinquent friends. Three-fourths of those boys have four or more close friends who have been picked up by the police for committing delinquent acts in the previous period, while only slightly more than one fourth of those with no delinquent friends. In the language of Alampay (2006), “Adolescents are more susceptible to peer influence than are adults”.

In the assumptions of the differential association theory, “the earlier we are exposed to criminal definitions, the more often we are exposed to them, the longer they last, and the more strongly attached to those who supply us with them, the more likely we are to commit criminal acts when

opportunities to do so arise” (Walsh, 2012, p.7). This means that becoming a hardened criminal, as in the case of the few CICL respondents who committed heinous crimes, develop out of the frequency and duration of association with peers doing criminal activities.

CONCLUSIONS

The CICLs are generally male and have low level of education, much lower than the educational levels of their parents. Although more CICL are living in urban areas, it was noted that even a city with low level of urbanization have considerable number of youth offenders in the region. They come from families with more number of children and poverty is their number one problem.

Despite indications that majority of CICL live in favourable home conditions characterized by love, care, respect and attention, but a third of them live in unfavourable home situations governed by conflict, absence of love, attention and care of parents. The fragile structure of their families coupled with parental separation make these children vulnerable to delinquency as they are forced to engage in criminal activities such as snatching, shoplifting and got involved in illegal drugs trade just to eke out a living.

These children admitted to have received discipline mainly from both parents, specifically physical in nature. But the bad influence of violent behaviour observed at an early age may predispose these children to use violence in their later years. Parenting skills are necessary to guide the children develop positive behaviour and shy away from any form of delinquency. However, parents may also become the culprit in the formation of delinquent behaviour among the respondents as they tried to prod their children to steal to help the family. Thus the

implementation of RA 9344 that aims to correct delinquent behavior of children may suffer from structural impediment because of this mentality. Children’s moral definition is further obscured due to wrong parenting which takes advantage of the impunity of the children to legal obligation under the law.

As found out by the aforementioned studies (Banaga, 2004; Okagbue, 2010; Etimade et al., 2004; Templa et al., 2004), the most common type of offense committed by CICL are crimes against property like theft, drug-related violations and crime against persons like rape and murder. Property-related crimes especially theft and robbery reflect the phenomenon of social deprivation on one hand among the violators versus the affluence of the much privileged class. Deprivation will explain why the CICL are tempted to commit a crime. Moreover, in this study, the differential association theory of Sutherland is manifested in the reason why the CICL committed the offense because of the influence of peers and their engagement of vices. These peers become their accomplice in their commission of the crime.

RECOMMENDATIONS

For Policy recommendations, the following are advanced:

1. Since the family is the basic unit of society, intervention programs involving parents and children shall be targeted at the household level or a “household approach”
2. Parents proven to have done parental neglect or use children for nefarious purposes shall be held liable for the misbehaviour of children and shall be accorded corresponding penalty.
3. Enhancement of parental skills shall be incorporated in livelihood and poverty alleviation programs of the government

which shall be implemented at the barangay level.

4. Intensify implementation of adult literacy classes to deviate attention of out-of-school youth from their delinquent friends and focus on more productive career-enhancing activities.

5. Periodic assessment and monitoring of the implementation of RA 9344 especially as regards infrastructure support, personnel adequacy, legal follow-up and monitoring of CICL after care activities.

6. The funding support required for the CICL can be intensified with more external linkages that will enhance or foster their employability skills after rehabilitation.

ABSTRACT

Attention government, experts and observers of education to reformulate public service policy in the field of education through various forums brainstorming is important to follow, because it can stimulate us to also look at the complexity of the problems of education in Indonesia at this time, particularly the problem of educated unemployment amongst whom are alumni of institutions of higher education. The literature search result article presents and discusses the subject of discussion ever held by experts INDEF three decades ago that discussed again by education experts in Biak Numford together participants from relevant agencies (IISIP Biak, 2015). The results of the discussion agreed that the political economy of public policy in education highlighting the problem of educated unemployment in Indonesia is still the focus and locus of the study are important and relevant today, as it turns out a statement the number of unemployed educated majority come from the disciplines of the social and cultural inviting a wide response, both of the high officials and the public. The Ministry of Education and Culture is considered most responsible for the realization of the concept "link and match" the target of accusations of causing the large number of educated unemployment. Therefore, it was recommended strategies for improvement "incentive structure" for the education community (educators / teachers, religious teacher or lecturer and academic staff / employees) through the improvement of the real sector, keeping the relation between institutional / educational bureaucracy in order to avoid the process of involution , reform of higher education that do have to adjust to the demands of business and industry, as well as streamline the coordination, synchronization, and inter-agency simplification in addressing unemployment is multi-dimensional in this era of the ASEAN Economic Community (AEC).

Keywords: Political Economy, public policy, unemployment.

INTRODUCTION

Political Economy of public policy in the field of education, particularly to discuss the theme of educated unemployment (Theodoropoulou, 2008), is always interesting to talk about at various scientific forums. Therefore, Mr. Wardiman Djojonegoro never denied that the institution becomes the cause of the large number of educated unemployment. According Wardiman that the factors that determine whether graduates of

educational institutions (Universities) ready or not ready is a businessman (Kompas, November 8, 1986).

Educational institutions only provide supplies when graduates later work and not to prepare the workforce. Nevertheless, Wardiman regard still need to increase the amount of labor scholars only 3 percent to 10 percent, so that the added value of the Indonesian economy can also be increased (Voice Reform, December 18, 1996). In fact, at the end of

the Five-Year Development (PELITA) VII, the government expects the number of college graduates (PT) has doubled. Efforts will also be undertaken by the Ministry of Education, then, is to reverse the ratio of the discipline of the social sciences and the exact sciences, the original composition is 70: 30 to 30: 70 by adding the number of polytechnics, so hopefully this program can reverse pyramid composition of the workforce.

According Rachbini, et al. (Institute for Economic Development and Finance / INDEF, 1996: 2) that, anxiety various parties to the employment problem is not because the majority of labor is not ready to face the free trade of the era. Concerns overflow of labor from foreign countries who qualified a scourge and is expected to displace domestic employment if not immediately prepared. Competition is expected to occur at all levels and types of work. Thus, the necessary strategy and appropriate policies to address this, so that "Indonesian workers be able to host in their own country," not otherwise be servants to the gentlemen in foreign countries. However, a hasty reaction from various groups with a number of statements have political motives instead of just giving the impression of a lack of a common vision and understanding of employment issues being faced by Indonesia until today. Therefore, the concern is not the right solution for the response hasty.

To avoid the ineffectiveness of the solutions offered in addressing the problem of educated unemployment in Indonesia, the government together with the public and business (industry) need to apply creative solutions to be provided new jobs to job seekers, especially in the era of the ASEAN Economic Community (AEC) today (Akib, 2015). Based on data obtained from Indonesia Investments (2016) it is clear that, in the year 2010 to 2015, the unemployment rate of the labor

force in Indonesia showed an increasing trend fluctuates. In 2011, an increase from the previous year, but in 2012 and 2014 decreased compared to the previous year. And in 2015 experienced an increase in unemployment.

Indonesia Reports Investments (2016) explains that one of the characteristics of Indonesia is quite high unemployment faced by young workers aged 15 to 24 years, much higher than the average rate of unemployment nationally. Students who had just graduated from university and vocational and secondary school students are having trouble finding a job in the national labor market. Almost half of the total workforce in Indonesia only has a primary school diploma. The higher the education the lower the labor force participation in Indonesia. Nevertheless, in recent years seen a change in the trend: the share of higher education diploma holders getting bigger, and the share of basic education diploma holders wane. Based on this phenomenon, this article aims to explain the political economy of public policy in the field of education, in particular on the case of educated unemployment in Indonesia.

LITERATURE REVIEW

Political Economy of Public Policy

Alternative thinking about the political economy of public policy, particularly in the field of education and educated unemployment (Rachbini et al, 1996; Theodoropoulou, 2008), with reference to the results of the analysis of secondary data that is ex-post facto, based on the re-actualization of the content of education policy and employment nationally in Indonesia (Law No. 13 of 2003 on Employment). In fact, in formulating education policies can not be separated from the background of the political structures and institutional factors underlying the policy was born. A result that shows up is usually not more policies

that are efficient, effective, and economical, but have evolved into a political decision, because it is colored by the interests of the political environment that determines the pattern of operation, characteristics, and the performance / performance of the actors involved.

Neither least the performance of the actors involved will determine both whether or not handling the problems of education. This means there is a performance trade-offs between the political environment as the external environment with education policy. In these conditions it is also clear that there is a coherence between the education policy with economic and political dimensions that affect the appearance of the policy.

Conceptually, a political economy approach is a formal label that can be applied to a variety of public policy issues. For example, studies on the measurement of cost and benefit that is caused by the specific structure of the policy or decision making (Stainland, 1985: 2). Staniland added that more relevant and philosophically aggressive with this approach is that the main stream of new political economy. "New" approach is intended to apply assumptions, language and logic of neo-classical economics to understand political behavior, as well as further afield on the whole issue of decision-making, both in the public sector and the private sector. By some thinkers social science, political economy analysis method is often understood as economic politics that economic theories are used to explore various political issues.

The rationale for this theory is due to the political events always imply the actual economic process or behavior of economic actors in the face of a particular process or political events (Haryadi, 1990). Meanwhile, for the political economist as Kuntjoro-Jakti (1991: 5) and Rachbini (1996: 17, 43), the reason is, because the

political economy could be a "bridge" to understand the reality and economic processes relating to the political process, so it is a convergence (Akib, 1997) or the synergies between the two (Rachbini, 1996). Therefore, if visualized will appear integration and interaction (Frey, 1978: 9; Caporaso and Levine, 1993: 7; Alt and Chrystal, 1990) or intersection (Yamamura and Yasuba, 1987: 35) between the two.

In order to obtain a common understanding of the meaning of political economy and political economy, then the following is introduced expert opinion. Kuntjoro-Jakti (1991: 5) which states that the political-economic analysis method is an implementation approach which is based on economic theory to understand political phenomena. In short, the economic theory of politics. Meanwhile, economic policy analysis methods can also be said as the application of the approach stems from the way political theory for understanding economic phenomena. In short, the political theory of economics.

Kuntjoro-Jakti (1991: 3) states that, despite the political economy approach is considered inferior to the method of economic analysis pure (pure economics) because the analysis is considered less rigorous (sharp), but in practice is also evident limitations of economic theory purely because it is not able to delineate institutional social reality in society that brought in the current economic problems. In addition, pure economic science is only able to see the indicator on the surface, without being able to reach more realistically in the root of the problem occurred. This phenomenon is more obvious because economists generally more concerned about the development of macro-economic analysis of fiscal and monetary policies, as well as economic development.

Despite the obscurity of meaning and weaknesses in terms of rests, but the

discussion by using the approach of political-economic analysis is carried out by a number of economists. The goal according to Gilpin (1987) is to formalize the study concerned with the economic of public policy, by asking political questions about who benefits, who loses from the policy, and how the process (Haryadi, 1991: 14). This view is consistent with the core of the discussion of the theory of economic regulation of Stigler (in Rachbini, 1996: 130) which explains who benefits and who bears the brunt of the existence of a regulatory or economic rules issued by the government, so anything that happens because of their institutionalization done in the community.

Articulation Role of Government

In every activity of governance, development, community empowerment, and public services, including in economic activities in a country, either on the system of capitalism and socialism, the government always expected to play a very important role, minimal in carrying out the regulatory function, the function of equalization, distribution functions, and control functions. Reality as that described by the drafter pure capitalism, Adam Smith (1776), which states that, basically the government of a country has three main functions, namely: 1) maintain internal security and defense, 2) conduct judiciary, and 3) provide goods and services that were not provided by the private sector, such as roads and dams (read in Yay, 2010).

Similarly, during this reality, which in the era of the modern economy, none of the capitalist state is able to run purely capitalist system. The question is why the government needs to play a particular role in the economy of a country. The next question is whether or not it's better if it were left entirely to the economic activities of the private sector, or the market mechanism. Answers to questions like

these, by Adam Smith explained that, in a capitalist economy, someone will do the things that are considered to meet the interests or the best for himself. In any transaction activity that is done, each individual will perform activities that are in harmony, that seemed to have been set by "the invisible hand" of the unseen. Thus, it would seem that the scope of government activity being very limited or restricted, are just a few things or activities that can not be done by the private sector. The role of government as it is getting "less" in line with the demands and the spirit of "Reinventing Government" by Osborne and Gaebler (1992), which states that the role of government in the economy just as a director, not a player (steering but not rowing). In other words, in this case the role of the government is required when there is market failure.

In fact, the principle of economic freedom such as this often face a variety of conflicts of interest, because of the lack of coordination and synchronization of harmonious inter-actor interests or the interests of each individual. For example, the interests of employers are often incompatible with the interests of employees and even contradictory, can create conflicts of interest are different. In this case, of course, the government must carry out the functions and roles, so naturally when the government has a role and the authority to regulate, repair or direct the activities of the private sector. The private sector was also not able to overcome the global economic problems, so that the economy may not be the exercise itself fully. Based on this insight, in a system of a modern economy, for example in the case or the problem of unemployment, the role of government can be classified, at a minimum, into three categories, namely: 1) the role of the allocation or reallocation - in allocating economic resources and human resources in various fields and sectors of productive

activity, 2) the role of distribution - the ways and means to distribute the labor force that has the knowledge and expertise in various fields and types of activities, and 2) the role of stabilization - by arranging so that the workforce be distributed proportionately and professionally (Yay 2010; Reich, 2010).

Role Resource Allocation

Private goods (private goods) is the availability of goods that can be met by the market system, namely through the transaction between the seller and the buyer, but not all people's needs for goods and services can be provided by the private sector. Goods and services can not be provided through the market system is caused by the failure of the market (market failure). The market system can not provide certain goods and services, because the benefits are not only enjoyed personally but also by others. Examples of goods and services can not be provided through the market system, among other things, is cleaning the air and river water or sea water, and so forth. Air or water contaminated by pollution causing various diseases. Everyone is feeling the negative effects of air and river water or sea water is dirty and smelly, but nobody wants to buy a tool to clean the air, river water or seawater, and even what happens is the bad habit of the community in taking advantage (of fish) on the river with by poisoning or a bomb, as the case shown in the print media or electronic media. The reason is, when he bought an air purifier or cleaner river water or sea water then it is not only he who enjoys air or clean water but also others in the vicinity. Though he can not prohibit other people to inhale or take fish or water that has been cleaned.

Based on the illustration above, it can be said that the market system has failed to provide goods and services that do not have the nature of an exception,

namely for others to enjoy these goods. As with the private goods that can be provided via the market, because these items have the nature of an exception (excludable, divisible). For example, when someone buys a flip, then that person can exclude other people to wear them. So, someone will buy these sandals when needed. However, in the case of public goods, a person would not want to clean the air and river water or sea water, even if that person requires air or water, because it can not exclude other people who also have the benefit of air or clean water. Therefore, the public goods provided by the government for reasons of market system fails to accommodate through "market mechanism".

The next question is, how much the government should provide public goods? Several large government budget should be provided to provide roads, defense, security, public order, justice, and so on? Given in the case of public goods are a matter of setting the value of A, then the payment for the supply of such goods can not be done with the voting system (voting). In a voting system, everyone will be trying to use their rights, so that the results are as preferred. Results of voting itself, is not going to please everyone, because certainly there are those who are satisfied and vice versa, there are those who feel aggrieved. But by using certain criteria, the results of the voting will be close to completion an efficient market mechanism coordinated.

Role of Distribution

The role of government in the allocation of economic resources is to keep the allocation is carried out in an efficient, effective, and economical. Another role of government is cultivated as a tool distribution of human resources and sources of income. The success of the distribution of resources and sources of income depends on the ownership of the

factors of production, demand or supply factors of production and labor, as well as the ability to earn income. While the ability to earn an income for a person (the labor force that works) is determined by factors of education, talents, skills, and so on. Ownership of the factors of production as a source of revenue depends on the demand factors of production and the amount offered by the owners of the factors of production. Meanwhile, supply and demand determine the price of the factors of production are concerned. Finally, factor market is strongly influenced by the level of technology to produce labor-intensive goods, so the demand for labor is relatively larger than the demand for capital.

The distribution of income generated by the market system is often deemed unfair by the public. In economics, the issue of justice in the distribution of income is a very complicated issue, because the issue of efficiency is sometimes not appropriate to the problem of justice. Changes in the economy, it efficiently, if changes were made to improve the state of society or community group done in a way that does not aggravate the situation of other groups. It is of course difficult, as no action of man that does not affect others, either positively or negatively. For example, the government's policy to protect the domestic labor force to protect the entry of foreign workers or workers from abroad. This policy on the one hand protect the domestic labor force from overseas competitors, but on the other hand can also inhibit the transfer of technology and foreign investment, which often come together experts in the field.

Role Stabilization

The Government has a major role as a stabilizer of the economy. Disruption in one sector will certainly affect the other sectors, and will ultimately lead to the

creation or increase in unemployment and the disruption of economic stability. The solution, in which first suggested by Keynes is the government intervention (in Keynes, 2009). However, the government's role as an allocator of economic resources, the distribution of income and economic stability, may be a conflict arises between the government policy. For example, there is a view that economic growth will be achieved when the public investment increased ("development hypothesis view"). In general, the investment made by the rich by saving more than the poor. If the government wants rapid economic growth, the domestic private funds to be mobilized as much as possible. This means that the rich, who are potentially very large as the locomotive of national investment, should be taxed at a lower, as incentives to save and invest more. However, the imposition of lower taxes on the rich, so it is relatively lower than that charged to the poor, is clearly contrary to the principle of proportional taxation, being intended to promote economic growth. Therefore, even if the three functions of government could theoretically be separated, but in reality is not. The implication, an employment policies to tackle unemployment must be determined after careful consideration of objective and rational aspects that accommodate various other functions.

DISCUSSION

Based on theoretical thought, the literature review above, the relevant political economy approach is used to analyze and explain the determination of the political process in Indonesia education policy, including policy implications on the performance of actors involved in the management of educated unemployment problem at various levels and sectors. Here are presented the latest data on the ratio of the amount of labor

(labor force) by the number of unemployment in Indonesia.

Table 1. **Employment and Unemployment in Indonesia (millions)**

	2010	2011	2012	2013	2014	2015
Manpower	116,53	19,40	120,32	20,17	1,87	22,38
Works	108,21	11,28	113,01	12,76	4,63	14,82
Unemployed	8,32	8,12	7,31	7,41	7,24	7,56

Data from BPS (2016) shows that the trend is the amount of force (workers) working in Indonesia in 2010-2015 has increased the price fluctuates. In 2011-2012, total employment to increase, but in 2013 the number has decreased. Furthermore, in 2014-2015 the number of workforce again showed an increase. The assumption is, the more the labor force working more productively and may be the better the quality of a nation. It is inversely proportional to the data of unemployment, as more and more force is unemployed, the more unproductive and quality of a nation tend to be less good or decreased. Similarly, these assumptions may apply to the labor force in Indonesia, both working and unemployed, as the data will be presented below.

Based on data obtained indicates that, in 2010 to 2015, the unemployment rate of the labor force in Indonesia showed an increasing trend fluctuates. In 2011, an increase from the previous year, but in 2012 and 2014 decreased compared to the previous year. And in 2015 experienced an increase in unemployment. Information from Indonesia Investments (2016) states that one of the characteristics of Indonesia is quite high unemployment faced by young workers aged 15 to 24 years, much higher than the average rate of unemployment nationally. Students who had just graduated from university and vocational and secondary school students are having trouble finding a job in the national labor

market. Almost half of the total workforce in Indonesia only has a primary school diploma. The higher the education the lower the labor force participation in Indonesia. Nevertheless, in recent years seen a change in the trend: the share of higher education diploma holders getting bigger, and the share of basic education diploma holders diminishing (Indonesia Investment. 2016).

Basically, the problem of unemployment can be traced, among other things, of the government's efforts in the early New Order to fight against ignorance and illiteracy through education programs, both formal and informal. Formally, at ground level can be seen basic education program of six (6) years by way of the development of Presidential Instruction Elementary School (SD Instruction) on a large scale in various corners of the country are now followed by Indonesia and compulsory education of nine (9) years. Meanwhile, informally, the government also organized education forum through group study (Chase), either Packet A, B, or C. The program managed to reduce drastically the number of people who are illiterate. Its success not only at the primary level, but also followed by success at the level of higher education. In fact, the reality is rather striking is the increasingly large number of scholars produced by public and private universities. The number of graduates is not accompanied by the large amount of demand for labor at the undergraduate level, so as to create an undergraduate unemployment.

Unemployment scholars will be increasingly prevalent in case "domino effect" of education is not handled effectively. That is, with increasing income levels in recent years, it is not closed any possibility for a number of people who come from families able to continue to send their children to a higher level, so it will not only unemployment undergraduate

(S1) is there, but also graduates Master program (S2) or Doctoral program (S3). If that happens then obviously it will be difficult for the government, because it is like leaving a "time bomb" that would explode in the future.

The problem of educated unemployment of course have multiple dimensions related to demand and supply of educated labor, as well as government policies that govern them. Although the Ministry of Education and Culture reject the institution as one source of the problem of unemployment of educated (bachelor), but the result of the interaction between demand and supply of labor that resulted in the issue of unemployment of educated put the higher education system - on the supply side of an educated workforce - in a position that is worth questionable. On the supply side, the college system is not the only factor causing the unemployment of educated stand-alone, but it could be the problem is the product of the design of the education system as a whole. Regardless of the intensity contribution of higher education system in this matter, Mr. Wardiman statement may be very naive to eliminate the link between PT with unemployment scholar.

The education system is certainly not the only factor responsible for this problem. Labor demand side should also be questioned. Yes, the problem of unemployment among the educated in the business world demand accountability, but also feels very naive than demand accountability employers without serious understanding on the strategic environment that gave birth to the world's response effort, which in turn is considered the cause of educated unemployment. Therefore, policies and strategies for educational development should also be questioned, let alone with an allocation of the education sector in the

State Budget (APBN) is relatively small when compared with other countries.

Education system

Indonesia's economy growing at rapid dynamics in turn spawned new jobs with high skill levels. Labor demand (SDM) with a higher level of expertise is in fact a feature of the future economy is expanding rapidly toward modernization. However, the dynamics of this kind less received a response from the government in the last decade, because it is happening is "mushrooming" PT private - who was only an Institute of Exercise Private (LLS) is expandable - quality rated inadequate, as reflected in the number of graduates which grew rapidly in large numbers, but with the insight and level of skill and proficiency that is sometimes questionable. Therefore, the Indonesian education system still faces serious problems.

Rachbini, et al. (1996) and education experts highlighted some of the problems the education system in Indonesia today. The first is the issue of quality. It is undeniable that the graduates of upper secondary education (high school) who are interested in entering the PT grew rapidly, including due to system failure Vocational High School (SMK), before being applied dual education system. Today, a number of State Universities (PTN) that is estimated to be only able to accommodate about thirties percent of high school graduates who enter the PT, the rest were accommodated by Private Higher Education (PTS) which amounts to more than a thousand pieces. Response of the private sector in participating in education is commendable, because in developed countries in general, PTS was the one who actually gave birth to qualified scholars.

Second, a mis-match with the labor demand side. On the one hand, graduates of educational institutions from year to year to grow by leaps and bounds.

However, on the other side of the world of work and the various fields of economic activity it is still a shortage of experts, including for the supply of PT is very limited. There are areas of expertise that is required is precisely not responded normally by the institution, especially by PT, so that on one side there is a surplus of University graduates who are unemployed with the number and rate of growth is relatively huge.

Third, higher education systems are unlikely to give autonomy to the PT. Determination of centralized curriculum for this, it is very difficult to imagine PT to respond to the dynamics of labor demand. In fact, the allocation of the number of students in the determination of a department or program is also determined uniformly and centrally. As everything happens, where the granting of autonomy from the central government to the provincial government and district / city, as well as it seems that swept the world of education (high).

Alternative thinking

Some thoughts ever offered by experts INDEF (Rachbini, et al. 1996: 7) may be relevant as the suggestion to fix the problems of educated unemployment.

- Improvements 'incentive structure' for the workforce through the improvement of the real sector. Important ideas in it is the elimination of economic policies that provide opportunities for rent seeking (rent seeking).
- Relationship bureaucracy in order to avoid the process of "involution". At this time, the public sector (government) become a safety valve for the employment of graduates of PT. Meanwhile, the ability of public sector spending, particularly for labor, increasingly limited. In case of a decision of the Coordination Meeting of the Coordinating Ministry for People's Welfare it called for each department or

ministry increase employment scholars. This appeal on the one hand further accelerate the process of involution in the public sector. However, on the other hand the bureaucracy increasingly perceived as the main obstacles that hinder the development of the business world. Therefore, bureaucracy (public sector) need to be sterilized in order to avoid the process of involution. The solution offered is precisely contrary to the demands of today, that the government was time to reform the public sector. Without public administration reform done then surely the practice of KKN (corruption, collusion and nepotism) is becoming more prominent (mal-practice management of the state).

- Ideas about the need to reform higher education can adapt to the demands of the business world (link and match) has long been ejected. Curriculum, education, job descriptions, as well as all aspects of systems and processes demanded a "revitalization", to be closer to the demands of (market) work and development needs proportionately. Reforms are completely and comprehensively on the overall system components include, among others: (a) reform at the federal level (Ministry of Education and Culture); (b) reform at the micro level, the educational institutions (colleges). The most important aspect in this case is the granting of autonomy to educational institutions (PT) to be more flexible and dynamic in following the rapid changes taking place. In the midst of the demands of university autonomy does not mean that the government should lose a role in the higher education system. In this context, the government must provide direction and regulations guaranteeing the quality of the outcomes of the education agency (PT), while still exercising control in

execution. Today, touches have been widely granted to PTN. Meanwhile, the biggest portion of the PT is managed by private universities (PTS). Standardization product through the accreditation system which applies both to PTN and PTS, which is expected to contribute effectively in addressing and solving the problem of educated unemployment, as well as providing a sense of fairness in assessing the existence of state and private universities; (c) reform of the education agency network development with the business world. Therefore, the development of a systematic and sustainable networks, including the world's corporate responsibility efforts in the field of education.

- The unemployment problem is multi-dimensional, because it requires a coordination mechanism between agencies more effective. So far, the high official response to the problem of unemployment reflects much of the effectiveness of coordination, both in understanding the essence of the outbreak of educated unemployment, as well as in providing solutions to solve them.

CLOSING

Understanding the phenomenon of educated unemployment from the various reviews, including political economy approach, a constructive step towards the revitalization of the functions of institutions interested in its implementation. Interested agencies, among others, are the Ministry of Education and Culture as the main responsible for education at the supply side (supply), with the world of work / business and industry on the demand side (demand) labor. In addition, policies that regulate and shape the role of government (bureaucracy), also associated therewith, at a minimum as a safety valve, in addition

to carrying out regulatory functions and control functions.

The complexity of the problem of unemployment faced in times of economic crisis and institutional politics today is demanded reformulation of the draft national education system is set up. Therefore, through brainstorming forum of experts, should have presented the idea of diverse viewpoints relevant to look at the future of the national education legislation better and anticipate the problem of educated unemployment.

This research attempts to differentiate the locus of hope of high school students with OFW parents and non-OFW parents from select private schools in Iligan City. Hope is a dynamic cognitive motivational system that leads to the will of children to achieve goals. Children learn values necessary to achieve goals, first from their families specifically, through the modelling of their parents. However, the physical distance between OFW parents and their children poses a challenge to this development. Other concerns researched were which parent is working abroad; how long their parents have been away; and the modes of interaction used to communicate. This research is a descriptive and quantitative type which used descriptive statistics and ANOVA. High school students whose parents either work locally or overseas were given questionnaires which were divided into two parts: individual information and scale for locus of hope. Major findings revealed that fathers are the foremost OFW workers and most have been working for more than five years. Also, it was indicated that most OFW parents call their children daily thru cellphones and internets. Majority also visit their families every one to two years. Both groups have very high regards in spirituality as locus of hope. However, it is revealed that OFW children consider spirituality and parents more as their locus of hope while non-OFW children consider internal and peers. Nevertheless, it was also found that there is no significant difference between the level of locus of hope of OFW and non-OFW children. Thus, one of the recommendations advanced in this inquiry includes creation of programs, such as seminars and counselling, on topics such as the importance of communication be conducted to strengthen the parent-child bond.

Key Words: Locus of Hope, Philippines, High School, OFW

INTRODUCTION

Migratory separation from parents is a common situation for youth in the Philippines since many parents work abroad as OFWs to improve the financial situation of their families. Indeed, from 36, 035 OFWs in 1975, the number increased to almost 2 million in the year 2012 (Rappler, 2013). OFW remittance had grown from 11.3% in November 2009 to \$1.5 billion (Sunstar, 2010) and constituted 10% of the Philippine GDP (NSO, 2013). Clearly the economic benefits of immigration are inarguable. The money sent back home was used to finance construction of houses, tuition fees for children, food, and various other luxuries which the basic salary of an ordinary worker here in the country cannot provide (Manila Bulletin, 2011).

However, when parents leave for work abroad, they leave their children to the care of extended families or friends (Ong,

2001). This poses a challenge in achieving intimate familial relationships between migrant parents and the children (Parreñas, 2005). The absence of a parent could be a main source of stress for adolescents and stressful events are known to have severe impact on physical health. The study of Smeekens (2013) revealed that adolescents from the OFW group reported to miss their absent parent a lot and reported more emotional loneliness and worse physical health outcomes compared to the nonOFW group. Indeed, Edillon (2008) reported that OFW children appear to be more vulnerable to psycho-social shocks brought about the splitting-up of families.

Filipino families are closely-knit. But the role of extended family in filling the gap left behind by the migrant workers remains an open question (Dela Garza, 2010). With the physical absence of the parent, technological gadgets like computers and

mobile phones have become the substitute for parenting. Indeed, in a study entitled "Parents Without Borders: OFW Online Parenting" revealed that OFW parents utilize information communication technologies to monitor, guide, admonish, and advise their children. Indeed, Shannon (2012) indicated in his study that electronic communication facilities positively impacts interpersonal relationships. However, although Alampay (2014) revealed that ICT plays a role in the children's understanding of their parents' nature of work and their parents' desire to be connected to them despite the distance, he noted that connectedness is significantly better when done at home than in cyber cafes. This somehow indicates that communicating in a familial setting results to better connectedness.

Still, these cannot replace the emotional intimacy formed when the parent is right beside the child. They also miss the years when their children are growing up and forming their own personal values. As a result, parent's long years of absence create a feeling of "permanence of absence" in their children, similar to those felt by orphans and abandoned children (GMA News, 2008).

Cabial (2007) pointed out that most OFW parents justify their absence by saying that they are sacrificing for the welfare of their children. He further pointed out that the parents must also ensure that the emotional and social well-being of their children is assured in their absence (Cabial, 2007). Estopace (2007) added that even if these children obtain economic benefits from the remittances, such as attending prestigious schools and affording new and latest technologies, deep inside the children are hurting from the absence of their parents. In effect, some migrant parents overcompensate by spoiling and indulging their children with material things (Inquirer, 2011). This could send the wrong signal wherein the children only see the "money-equivalent" of migration and develop consumerist attitudes by spending their parent's remittances in gaming, gadgets and other vices due to lack of guidance (Naval, 2008). Thus, children associate their parents to phone calls, gifts, and money.

With these observations, it is important that members of migrant-sending community take steps to assess the psychological effect of migration to the children who are left behind. Popenoe (1998) opined that children rely on their families when learning values, specifically, through the modelling of their parents. Thus, when the parent is absent, physically or emotionally, the development of the children's values is hindered (Popenoe, 1998). This includes hope – its locus or source and importance.

Hope is described as the dynamic cognitive motivational system that leads to the will to learn and achieve goals (Kaufman, 2011). Medical studies even cited the importance of hope for patients in coping with different diseases and adjusting to life (Rustøen et. al., 2010; Dorsett, 2010). Furthermore, Marques et. al. (2009) found that a hope-based intervention program for middle school resulted into an increase in psychological strengths.

Snyder (2002) defines hope as cognitions regarding one's expectations and ability to attain important goals. Hope is an optimistic cognition which involves the expectation that the goals can be attained, when one is committed, determined and has laid out the plans and strategies for achieving such objectives in life. As positive thinking, hope emphasizes a person's agency and capacity to work towards attainment of goals.

According to Hanson (2015) hope is "a positive motivational state that is based on an interactively derived sense of successful agency (goal-directed energy) and pathways (planning to meet goals). It is the desire accompanied by expectation for something to succeed. However the idea that hope is a purely individual pursuit was challenged by Bernardo (2014) who integrated external and internal dimensions to locus-of-hope. The findings of Bernardo's study reveal that: "External locus of hope refers hopeful thoughts based on conjoint forms of agency that relate to other persons and external forces, which are distinct forms of hopeful thoughts compared to dispositional hope". Further, the results of the study stressed that culture-specific societal processes

and orientations may affect hopeful thoughts of individuals.

Accordingly, furthering external dimension as hope is derived from one's family, peers, and or a supernatural/spiritual being. Bernardo (2014) as cited by Inquirer (2012) proposed the three sub-dimensions based on a Philippine study acknowledging the importance of parents, peers, and a higher being in attaining one's goals. His study also supports the survey conducted by researchers from United States whose findings reveal that the Philippines leads the world in the most number of people who believe in the existence of God reflecting the country's predominant Roman Catholic population.

Bernardo's idea is buttressed by Du & King, (2012). According to them, defining hope as an individually-motivated pursuit is already outmoded. Reviewing the conservative outlook, hope theory is dominated by an individualistic assumption wherein the self is considered as the focal agent of goal attainment. However, in collectivist cultures more relational dimensions of hope also need to be considered. The locus of hope dimension (internal vs. external locus) was added to the traditional hope theory in order to capture both individualistic and collectivist types of hope. Hope could either be anchored on oneself (internal locus) or on significant others (external locus). External locus could further be divided into family, friends, and spiritual hope. However, there is still a dearth of research on the external locus of hope, with most of the previous studies focusing only the internal locus.

There is a bond that connects hope and psychological well-being of the individuals. In the study of Bernardo, Du and Yeung, (2015), it investigates whether two types of self-esteem (personal and relational) could intervene the link between four loci –of- hope (internal, family, peers and spiritual) and life satisfaction among Hongkong and Macau college students. The findings disclose that both personal self-esteem and relational self-esteem to some extent mediated the effects of internal hope on life satisfaction. Likewise the results found that relational self-esteem has bearing on the effect of the

external-family locus-of- hope on life satisfaction, and there is an overwhelming effect of personal self-esteem on the relationship between external-peers locus -of – hope and life satisfaction. Indeed friends and peers are a powerful influence and strong sources of hope.

Garcia and Sison (2012) conducted a study on "Locus of Hope and Subjective Well-Being". Some literatures which they cited maintained the idea that locus of hope is an extension of the hope theory which is expounded by Synder, its leading exponent. It posits that individuals themselves are solely responsible in being able to generate pathway and agency thinking. However it does not preclude the idea that external agents also play a crucial role in an individual's goal attainment. These external forces have been linked to its influence on an individual's goal- related pursuits (Berardo, 2010 as cited by Garcia and Sison, 2012).

Hopeful individuals have positive views about the future, and this positive outlook would aid in increasing their motivation to conduct activities that are directed in addressing vital concerns to achieve personal goals (Park, Peterson, and Seligman, 2004 as cited by Garcia and Sison, 2012). Further, the positive outlook could be an important tool to survive against the negative consequences of life. It creates a positive emotional state while on the path to pursue goal attainment. Hopeful individuals feel more competent and confident of their own skills necessary to generate more pathways and sustain their motivation towards attaining life goals and consequently attain life satisfaction as well.

In the context of the Filipino culture, supportive relationship and extended family bonds produces a high subjective well-being. Evident both during hard and good times, this type of reciprocal relationship creates a sense of meaning to the well-being of the individual, and serves as a cognitive expression of individuals' motives for furthering social connectedness and growth.

Obviously, the parents play a big role in the development of their children. Their absence leaves an indelible mark on their

child's psyche. Several researches indicated that hope indeed plays a role in coping with the impacts of challenges of life. However Garcia and Sison (2012), revealed that researches which focus on the correlation between hope and other variables are abundant yet studies on the locus of hope are scant or relatively nil. Thus, the current study investigates whether the children of OFWs differ from those whose parents live with them in terms locus of hope. This also looks into the modes of interaction used by the OFW families, which may affect their dynamics.

Specifically, this inquiry investigates the locus of hope of children of OFWs and non- OFWs in select private high schools in Iligan City. This further investigates the modes of interaction of the respondents and their OFW parents; the level of the locus of hope of the respondents; and whether there is a difference on the locus of hope between OFW children and non-OFW children.

Theoretical Framework

This research utilized the Hope theory of C N. Snyder and the Locus of Hope theory espoused by Allan B.I. Bernardo and which is reviewed by John Addy S. Garcia and Karen Gayle Sison in order to assist the researcher in analysing the variables under study.

Snyder defines hope as the perceived capability to derive pathways towards desired goals and motivate oneself in attaining those goals. It involves positive thinking and expectations that despite some odds in life, one can still achieve goals by using a certain degree of commitment and determination in the pursuit on these goals. As a cognitive set, it encompasses two components: agency and pathways. On the one hand, agency refers to awareness, understanding and mental processes which convey one's determination, motivation and capacity to achieve goals. It also refers to agents like one's family, peers or a supernatural being which have bearing on the capacity and motivation of the individual to succeed in life. On the other hand, pathways refer to one's thoughts indicating available plans and strategies needed in the attainment of goals. These two aspects represent trait

-like dispositions that are enduring across events in a person's life (Synder, 1994). As utilized in this research, hope is a positive trait of the respondents- a coping behaviour. It involves their understanding and acceptance that while challenges in life are inevitable, hope is a coping strategy. It increases their psychological strengths to continue their studies and pursue other goals.

Bernardo (2010) extended the Hope theory. He added locus of hope as a dimension of trait hope. Accordingly, locus of hope probes the trait hope component if it involves internal or external agents and whether the pathways are generated internally or externally. The internal dimension of locus of hope purports that it is the individual who is the agent of goal attainment thoughts. In other words, it is the person himself or herself as the agent of goal attainment cognitions.

The external locus of hope refers to the significant others like the family, peers, and supernatural beings or forces. By incorporating these external factors the individual's level of hope is affected thereby altering the internal nature of hope itself (Garcia and Sison, 2012). This opinion is reinforced by Shonkoff, 2013 as cited by Sandstrom and Huerta, 2013) that:

The Role of parenting underscores the dramatic effect of a child's environment and experience on his or her growth and learning. A stimulating and nurturing environment fosters a child's potential achievement while environmental stressors and deprivation inhibit normal development, and even result in negative outcomes. Healthy development requires protection and enrichment from involved adult caregivers. Parents provide their children with the external stimulation and support they need to develop and largely determine their ability to cope and adjust during stressful experiences.

(Source: The Negative Effects of Instability on Child Development: A Research Synthesis Heather Sandstrom Sandra Huerta September 2013)

As used in this inquiry, the locus of hope of the respondents who are children of OFWs could be themselves as demonstrated by their positive behaviour towards accepting the fact that absence of their parents are intended for their welfare.

Also their locus of hope is pinned on their acknowledgment the importance of significant others like relatives, friends and God in attaining one's goals.

Limitations of the study

It is necessary to acknowledge the limitation of this inquiry. There are only four factors of locus of hope which are examined in this research and this research was conducted only in four private schools hence, the researchers feel the obligation to suggest that public schools be included for similar undertakings in the future. This could increase the samples and may also improve the conclusiveness of the findings.

METHODOLOGY

Participants

Participants (N=146; Male=67, Female=74) are fourth year high school students who were selected based on their parents' type of work (OFW=73, nonOFW=73). Their participation was solicited through four (4) participating private high schools in Iligan City - Corpus Christi Parochial School of Iligan, Inc.; Iligan Capitol College; St. Michael's College of Iligan City; and, St. Peter's College. In determining the sample, this study utilized purposive sampling method for those who are children of OFWs and convenient sampling for the nonOFW children.

Materials

This investigation utilized a structured questionnaire. The instrument is composed of two parts. Part I covers the profile of the participants and Part II, the Locus of Hope questionnaire (=.906) developed by Dr. Allan Bernardo (2010) which is composed of statements relating to sources of hope or locus of hope the term used in this research. The participants were asked to rate their degree of agreement with the statements presented in a scale of 1 to 4 with four (4) as the highest and one (1) as the lowest (4=definitely true; 3=mostly true; 2=mostly false; 1= definitely false). They were asked to encircle their choices.

Data analysis

There are two statistical tools used in this research. In treating and analysing the data on the profile, this research used descriptive statistics like frequency count and percentage distribution. Then in analysing the data on locus of hope, mean is used. And, in determining whether there is difference in the level of locus of hope between OFW children and nonOFW children, Analysis of Variance is used. All the statistical tools used in this research were derived from the student version of SPSS for Windows 7.

RESULTS AND DISCUSSIONS

For OFW children, which parent is working abroad

Results revealed that 60.8% of the participants whose parents are OFWs have fathers working abroad. This is followed by 21.7% of them with mothers working as OFW. And 17.3% said that both of their parents are working as OFWs.

The data show that most of the participants with parents working abroad have fathers as OFWs. It could be inferred that Filipino fathers are more willing to work far from the family to be able to provide as they are traditionally the providers for the family.

For OFW children, parent's length of absence

Results revealed that 64% of the participants whose parents are OFWs have been working away from home for more than five years. This is followed by 16% of them whose parents are working abroad for two to five years, 11% have parents working for one to two years, 7% have parents working for seven to twelve months, and 2% have parents working for six months or less as OFWs.

The data show that most of the participants have parents working abroad for more than five years. It could even be inferred that most OFW parents may have started working even during the elementary days of the participants.

Modes of interaction of the participants and their OFW parents

In this study, the modes of interaction between the participants and their OFW parents are discussed in terms of the following variables: frequency of home vacation, frequency of communication, and method of communication.

Frequency of home vacation.

52% of the participants whose parents are OFWs indicated that their parents are home every one to two years, 16% of them said that their parents are home every seven to nine months, and 11% indicated every one to three months. These are followed by every 2 years and four to six months with 8% each. Lastly, 5% revealed that their parents have never come home.

It is evident from the findings that majority of the participants have parents coming home within the span of one to two years. Yet, some parents have the opportunity to spend more time with their children by coming home every three months.

Frequency of communication.

38% of the participants had been communicating everyday with their OFW parents. This is followed by 23% who indicated that they have been communicating every other day and 18% have been communicating every week. These are followed by 8% who claimed that "Circumstantial". A follow-up interview was conducted with these participants and they answered that "circumstantial" means "Depende sa signal, Ma'am" (It depends upon the signal, Ma'am). Meanwhile another participant said that it depends on the free time of her parent.

Moreover, 5% of the participants indicated that they have communicating with their parents on monthly basis. Next, 4% indicated that their communications are every other week. With the same percentage or 4% of them revealed that they have no communications with their parents.

Thus, the data show that a few OFW parents and their children have the opportunity to communicate every day. Still, despite the modern communications

technology, there are still families that have no communication with each other.

Method of communication.

99% of the participants use the internet to video chat, voice call, and private message chatting as means of communication with their OFW parents. While only 1% cited mobile texting as their main means of communication.

The findings stressed that the internet has become the most preferred means of communication between children and their OFW parents despite the availability of other means of communication.

Level of the locus of hope of the participants

The levels of the locus of hope of the participants are measured in terms of obtaining the mean from their responses. Primarily the levels of locus of hope between OFW children and nonOFW children are examined. Next, the locus of hope of participants with OFW parents are further explored in terms of which parent is working as an OFW, length of parental absence, frequency of home vacation, and frequency of communication.

Locus of hope in terms of nature of work of parents.

Table 1 Locus of Hope in terms of Nature of Work of Parents

	Internal	Interpretation	EXT - PA	Interpretation	EXT - PE	Interpretation	EXT - SPI	Interpretation
OFW	3.14	H	3.33	VH	2.93	H	3.45	VH
Non - OFW	3.16	H	3.21	H	2.94	H	3.40	VH

Notes: H – high
VH – very high

Table 1 shows the level of locus of hope of OFW and non-OFW children. Accordingly, participants with OFW parents have "very high" spiritual locus of hope at 3.45, "very high" parental locus of hope at 3.33, "high" internal locus of hope at 3.14, and "high" peer exposure locus of hope at 2.93. Next, participants with nonOFW parents have "very high" spiritual locus of hope at 3.40, "high" parental locus

of hope at 3.21, “high” internal locus of hope at 3.16, and “high” peer exposure locus of hope.

As shown, both groups of participants show very high preference to spirituality as locus of hope. Still, between the two groups, OFW children show the highest preference to spirituality. Observing the results, it can be noticed that OFW children prefer spirituality and parents than internal and peers. Meanwhile, the opposite is true to the nonOFW children.

It can also be observed that among the locus of hope categories, peer exposure is the least preferred for both groups of participants.

Locus of hope in terms of parent away from home.

Table 2 Locus of Hope in terms of Parent Away from Home

	Internal	Interpretation	EXT-PA	Interpretation	EXT-PE	Interpretation	EXT-SPI	Interpretation
mother	3.20	H	3.48	VH	3.01	H	3.61	VH
father	3.12	H	3.30	VH	2.88	H	3.41	VH
both	3.03	H	3.17	H	2.98	H	3.26	VH

Notes: H – high
VH – very high

Table 2 shows that participants with their mother as OFW have “very high” locus of hope for spirituality at 3.61, “very high” parental locus of hope at 3.48, “high” internal locus of hope, and “high” peer locus of hope at 3.01. Next participants with OFW fathers have “very high” spiritual locus of hope at 3.41, “very high” parental locus of hope at 3.30, “high” internal locus of hope at 3.12, and “high” peer locus of hope. Lastly, participants with both parents as OFW have “very high” spiritual at 3.26, “high” parental at 3.17, and “high” peer at 2.98.

As presented, OFW children revealed that they have very high inclination to gain hope using the spiritual pathway for the three categories. Nevertheless, the children with their mothers as OFW show the highest preference for spirituality. Moreover, despite the absence of their parents, children still have very high regard to their parents as locus of hope more so with those whose mother is away.

However, for children with both parents away, they only have “high” regard to their parents.

Locus of hope in terms of length of parental absence.

Table 3 Locus of Hope in terms of Length of Parental Absence

	Internal	Interpretation	EXT-PA	Interpretation	EXT-PE	Interpretation	EXT-SPI	Interpretation
0-6 mos.	3.11	H	3.25	H	2.63	H	3.88	VH
7-12 mos.	3.13	H	3.25	H	2.91	H	3.25	VH
1-2 yrs.	3.25	H	3.36	VH	3.05	H	3.59	VH
2-5 yrs.	2.95	H	3.21	H	2.86	H	3.26	VH
5 yrs.<	3.18	H	3.32	VH	2.89	H	3.45	VH

Notes: H – high
VH – very high

Table 3 present the locus of hope of the participants in terms of the length of the absence of their parents. Participants whose parents are away for only six months or less show “very high” spiritual locus of hope (3.88), “high” parental locus of hope (3.25), “high” internal locus of hope (3.11), and “high” peer locus of hope. Next, participants whose parents are away for seven to 12 months show “high” spiritual (3.25), “high” parental (3.25), “high” internal (3.13), and “high” peer (2.91) as loci of hope.

Participants with parents working abroad for one to two years, reveal “very high” spiritual (2.59), “very high” parental (3.36), “high” internal (3.25), and “high” peer (3.05) as loci of hope. For participants with parents working more two to five years outside the country, they expressed “very high” regard in spiritual (3.26), “high” parental (3.21), “high” internal (2.95), and “high” peer as loci of hope. Lastly, data from participants with parents working abroad for more than five years indicated “very high” spiritual (3.45), “very high” parental (3.32), “high” internal (3.18), and “high” peer (2.89).

From the data, it was found that spirituality is consistently the most used

source of hope regardless of the length of parental absence. And, among the categories, children with parents away for 0-6 months, from the moment of data collection, accumulated the highest mean score. Furthermore, peer exposure is consistently the least source of hope regardless of the length of parental absence. Also, it has been noticed that participants with parents away for 6 months or less has the lowest mean score in peer as locus of hope.

Locus of hope in terms of frequency of home vacation.

Table 4 Locus of Hope in terms of Frequency of Home Vacation

	Internal	Interpretation	EXT-PA	Interpretation	EXT-PE	Interpretation	EXT-SPI	Interpretation
every 1-3 mos.	3.16	H	3.27	VH	2.96	H	3.45	VH
every 4-6 mos.	3.15	H	3.25	H	2.66	H	3.72	VH
every 7-9 mos.	3.25	H	3.39	VH	3.03	H	3.43	VH
every 1-2 years	3.22	H	3.38	VH	2.97	H	3.54	VH
every 2 years	2.96	H	3.30	VH	2.78	H	3.30	VH
never	2.97	H	3.46	VH	2.79	H	3.46	VH

Notes: H – high
VH – very high

Table 4 reveal that the locus of hope of participants with parents coming home every one to three months have “very high” spiritual locus of hope (3.45), “very high” parental locus of hope (3.27), “high” internal locus of hope (3.16), and “high” peer locus of hope (2.96). Next, participants with parents coming home every four to six months have “very high” spiritual (3.72), “high” parental (3.25), “high” internal (3.15), and “high” peer (2.66) as loci of hope. Participants with parents coming home every seven to nine months have “very high” spiritual (3.43), “very high” parental (3.39), “high” internal (3.25), and “high” peer (3.03). Following

these participants are those with parents coming home every one to two years have “very high” spiritual (3.54), “very high” parental (3.38), “high” internal (3.22), and “high” peer (2.97). Then, those with parents coming home every two years have “very high” spiritual (3.30), “very high” parental (3.30), “high” internal (2.96), and “high” peer (2.78). Lastly, participants with parents who have never come home for vacation have “very high” spiritual (3.46), “very high” parental (3.45), “high” internal (2.97), and “high” peer (2.79).

Data revealed that children with parents coming home every four to six months have the highest spiritual locus of hope. Also, it is interesting to note that those with parents who have never been home still have very high parental locus of hope.

Locus of hope in terms of frequency of communication.

Table 5 Locus of Hope in terms of Frequency of Parental Communication

	Internal	Interpretation	EXT-PA	Interpretation	EXT-PE	Interpretation	EXT-SPI	Interpretation
everyday	3.15	H	3.41	VH	2.95	H	3.50	VH
every other day	3.21	H	3.38	VH	3.00	H	3.52	VH
every week	3.03	H	3.17	H	2.72	H	3.33	VH
every other week	3.18	H	3.31	VH	3.13	H	3.44	VH
every month	3.15	H	3.34	VH	2.84	H	3.19	H
circums-tantial	3.14	H	3.08	H	2.94	H	3.46	VH
never	3.21	H	3.38	VH	2.96	H	3.71	VH

Notes: H – high
VH – very high

Table 5 presents the locus of hope of the participants in terms of the frequency of communication with their OFW parents. Participants communicating with their parents everyday have “very high” spiritual locus of hope at 3.50, “very high” parental locus of hope at 3.41, “high” internal locus of hope 3.15, and “high” peer locus of hope at 2.95. Participants communicating every other day have “very high” spiritual at 3.52, “very high” parental at 3.38, “high”

internal at 3.21, and “high” peer at 3.00. Next, participants communicating every week have “very high” spiritual (3.33), “very high” parental (3.17), “high” internal (3.03), and “high” peer (2.72). While participants communicating every other week have “very high” spiritual (3.44), “very high” parental (3.31), “high” internal (3.18), and “high” peer (3.13). Participants with monthly communicating have “high” spiritual (3.19), “very high” parental (3.34), “high” internal (3.15), and “high” peer (2.84). Circumstantial communication garnered “very” high” spiritual (3.46), “high” parental (3.08), “high” internal (3.14), and “high” peer (2.94). Lastly, participants with no communication with their parents have “very high” spiritual (3.71), “very high” parental (3.38), “high” internal (3.21), and “high” peer (2.96).

The data revealed that spirituality is mostly considered as the top locus of hope of participants regardless of the frequency of communication with the exception of participants with parents who communicated monthly. It is highly interesting that children who had no communication with their parents have the highest locus of hope for spiritual. Also, despite the absence of communication, their regard on parents as locus of hope is still very high, which is at par with those who communicated every other day, and almost at par with those with daily communications.

Locus of hope between OFW children and non-OFW children

Table 6 ANOVA

Locus of Hope Variable	F	Sig.	Interpretation
Parental Agency	1.819	.180	No significant difference
Internal	.059	.809	No significant difference
Peer Exposure	.025	.875	No significant difference
Spiritual	.420	.518	No significant difference

Table 6 shows the analysis of variance on locus of hope between OFW and non-OFW children. According to the table, parental agency as locus of hope

has an F value of 1.819 and significant at .180 which means there is no significant difference between the participants with OFW parents and nonOFW parents. Null hypothesis 1 is not rejected. Next, internal locus of hope has an F value of .059 and significant at .809 which means there is no significant difference between the two groups. Null hypothesis 2 is not rejected. Moving on, peer exposure has an F value of 0.25 and significant at .875 which indicates there is no significant difference between the two groups. Null hypothesis 3 is not rejected. Lastly, spiritual has an F value of .420 and significant at .518 which indicates that there is no significant difference between there no significant difference between the two groups. Null hypothesis 4 is not rejected.

The data reveal that there is no significant difference between OFW and non-OFW children among the different locus of hope variables. This may indicate that the distance between the OFW parents and their children do not affect the locus of hope of the students.

CONCLUSION

Based on the results, OFW children and nonOFW children do not differ in their locus of hope. However, it can be observed that OFW children have higher rating for parents and spirituality as locus of hope while nonOFW children have higher rating for peer agency and internal as locus of hope. Also, it is interesting to note that despite parental absence, OFW children still have a “very high” rating for parents as locus of hope. Meanwhile, nonOFW children have higher rating for internal and peer as locus of hope. This is in contrary to the implied concept of Berger (2001) on family and friends. According to her, parents and peers are powerful influences during adolescence. So, when parents are away, as in the case of OFW parents, the peers become the most influencing factor. However, Sandstrom & Huerta (2013) stated that the quality of living of a child affects them till their maturity. Subsequently, the capacity to in live safe homes, eat nutritious foods, and access medical care allows children to reach their full potential (Sandstrom &

Huerta, 2013). These positive consequences may have allowed the OFW children to believe in the ability of their parents in providing them with their needs. This in turn explains their “very high” rating to parent agency as locus of hope. This assumption is supported by Belgira et. al. (2013) in their study on children of seafarers. Accordingly, the children understood the necessity of the absence of their parents as they have comparatively better lives than the other children whose parents work near. Furthermore, results from their study revealed that parental absence was not considered as a detrimental factor to the relationship of the family with the help of satisfactory communication (Belgira et. al., 2013). This in turn is similar to the results of this study of which some of the participants reported daily communication process with their OFW parent while others reported communicating with their parent every two days. Such frequent communications may have been the reason why parenting and guidance was possible. Yet, despite the availability of the information and communication technologies today, there are still a few numbers of OFW parents and children who do not communicate.

It can also be noted that despite the “very high” regards on parents as locus of hope on either parent, it can be observed that children with mothers working abroad have higher rating than those with fathers working. This validates the finding that among the migrant parents, it is the mother who expends more effort in parenting their children from a distance, being more involved in the child’s day to day life as opposed to OFW fathers (Parrenas, 2005).

Also, among the factors of locus of hope, spirituality had the highest rating for all categories and variables. These results may also be a reflection of the respondents’ education and culture, considering that Philippines have very strong religious beliefs. Especially that this is the only country in Asia that consist predominantly with Roman Catholic population, making her fifth in the world (Inquirer, 2011).

Lastly, the result of this study is parallel to the result of Bernardo (2014) in which adolescents, in general, have higher family and spiritual as locus of hope. Also the female participants of Bernardo reported to have higher parental and spiritual locus of hope. Although, locus of hope between sexes was not explored in this study, the results of this study showed that there are more female respondents than male respondents. Perhaps this contributed to the results of this study. Thus, further research is needed and other method of data gathering is suggested like case studies. Case studies allow a more in-depth discussion of data thus making the findings more meaningful and conclusive.

Recommendations

Based on the results and conclusions drawn in this research it is important that programs, such as seminars, group dynamics, and counselling, on topics like the importance of communication should be conducted to strengthen the parent-child bond as it has been implied that communication played a role for the participants in this study to develop and maintain their hope on their parents despite the absence. Also, children whose parents are new OFWs should be counselled on the necessity of the absence of their parents.

WOMEN IN A THREATENED COASTAL COMMUNITY IN SOUTHERN PHILIPPINES

ALYSSA KOLIN T. MANALASTAS

PRECYMAR M. MANLIGUEZ

MYRMA JEAN A. MENDOZA, PH. D.

ABSTRACT

This study examines women's involvement in a coastal resource management in Barangay Panalsalan, Plaridel, Misamis Occidental, a coastal community in Mindanao, Southern Philippines. Using Key informant interview, the study gathered data from 12 women officers and members of Panalsalan Coastal Resource Association (PCRA) and Barangay Women's Association (BWA). These women have resided in this coastal community for at least 10 years and are familiar with their coastal environment. Data gathering was conducted in July 2015 by the researchers.

Having lived in the area for quite some time and having involved in coastal resource management in Plaridel, these women are cognizant of the threats in the coastal resources brought about by climate change and improper ways of fisher folks. They are motivated to join the CRM in their barangay because aside from the economic incentives they get from the organization, they also feel responsible in preserving the environment for the present and younger generation.

Women's accounts reflect some folk knowledge regarding nature, specifically about the sea and fishing practices. For instance, the shape and brightness of the moon symbolizes a voluminous or scarce fish catch. "Palina" and not sweeping the floor before fishing are identified by the informants as among their local practices which are believed to bring good fish catch. Their notions on climate change are indicated in their accounts on the unpredictable weather and increased water temperature, among others.

Through their involvement in Coastal Resource Management (CRM) in varying capacities as member and/or officer, women informants claimed it has enhanced their awareness in the importance of protecting their coastal environment. They participated in the CRM's mangrove planting and campaign for the fish ban period. Their involvement in the CRM from planning to implement of activities made these women empowered and fulfilled. Despite of being housewives and having low income occupations, they felt they are contributing to safeguard their threatened coastal community and to preserve the coastal resources for their children's children.

Key Words: Coastal Resource Management, indigenous knowledge & practices, climate change, women's involvement

INTRODUCTION

If we talk of natural management from a global perspective, whom do we find in the forefront of the race for protection and preservation of the resources. The answer comes very naturally, it is the women. (Yadav, Naresh p.1, n.d.) The yesterday's women are left home or given a task to do small things in the workplace or a huge company, however the modern women become more and more active in doing what men can do. As far as the environment is concern, the need of continuous protection and preservation of it is highly compulsory. Most women do navigate and interact with the nature because they can relate some of its aspects in the nature. Gender and environment concerns come across in certain aspects of policy-making, particularly in participatory decision making and stakeholder involvement which are important both from the gender perspective but also from a broader environment perspective. (Sefraoui, 2009)

In Plaridel, an under developed municipal town located in the region of Misamis Occidental shows the active involvement of women in the different social institutions most especially in the environmental preservation features. Plaridel consist of 33 barangays, of which 13 are located in the coastal; while other 20 are situated in the upland. Plaridel has 9,885.37 hectares, that accounts 8,844.67 hectares of Alienable and Disposal area wherein basically an agricultural and a 1,040.70 hectares encompassing the only timberland in the municipality. The most common livelihood in Paridel is farming, fishing, and agricultural businesses.

Plaridel's Costal Resource Management 2013-2023, this planning process encouraged the local community

groups actively participate as principal stakeholders in the planning and its implementation. The plan was made to be applicable from 2006-2016 but were not adopted, however, when Iligan Bay Alliance for Misamis Occidental (IBAMO) was formally created and with the inclusion of Municipality of Plaridel in 2011 encourages and mandated to submit its CRM Plan approval, certification and the presentation in multi sectorial forum.

We the researchers want to know the women in Coastal Resource Management particularly in Barangay Panalsalan, Plaridel Misamis Occidental, and the challenges they encounter in managing the coastal resources and how do they address such challenges in order to implement it without the destruction of other environmental aspects of the community. With these insights, we are hoping to come up with the best practices of women in managing the coastal resource management that would be a helpful to other coastal communities.

The objectives of the study were to give an overview of Plaridel Coastal Resource Management, describe the socio-demographic characteristics of women involved in PCRMM, find out their notions on environment and coastal resources in Plaridel, climate change, and disaster preparedness, determine their involvement in PCRMM and generate assessment of women in PCRMM

The researchers believe that the findings of this study are highly significant theoretically, methodologically, and in policy making. In terms of theory, this research attempts to make meaningful links on gender roles and sustainable development.

In terms of methodology, this research provides empirical proofs about

attempts of sustainable development on the ground from the experiences women in a coastal community. In doing so, this research could provide inputs to other communities that are also implementing similar coastal resource management programs.

Moreover, the findings of this study may serve as an inspiration to all people. This will motivate them to participate in the community development and preservation of natural resources.

Furthermore, this study provides recommendation to the educators where to focus on the point to improve the plan. They may instil future strategies for development and preservation of the environment and for the success of the implementation of the Coastal Resource Management Program.

CONCEPTUAL/THEORETICAL FRAMEWORK

This study is anchored on the Ecofeminism perspective. According to the Western society, women are treated as inferior to men, 'nature' is treated as inferior to 'culture', and humans are understood as being separate from, and often superior to, the natural environment (The Green Fuse, n.d.)

Ecofeminism believes that Patriarchal society is built on four interlocking pillars; sexism, racism, class exploitation and environmental destruction. Eco-feminist analysis reveals that it is not only women who are portrayed as being 'closer to nature'; oppressed races and social classes have also been closely associated with nature. This is also the primary stage towards the foundation of ecological stability. (Sinha, 2008)

Bases such as ecofeminism describes movement and philosophies that link feminism with ecology, as of Plaridel's women involving in ecological reservations. From arguments that there are particular and significant connections between women and nature, ecofeminism interprets their repression and exploitation in terms of the repression and exploitation of the environment. These connections are illustrated through traditionally female values such as reciprocity, nurturing and cooperation which are present both among women and in nature. Ecofeminism has made a particularly useful analysis of power relations, and rejects any form of hierarchy. The emphasis is on shared power, finding our own 'power-from-within' rather than needing to impose the manipulation and control of 'power-over'. (Mishra, 2015)

Symbolic Interactionism

The role of women can be also classified as integration of the planning, implementation, management, monitoring and evaluation of this program. In planning, women are more likely to be endorsed in the field of defining activity's goal for the future of the program and its economic effects to every individual. In planning phase, women can also modify the resources, understand its valuable concern and it will serve as an effective asset to secure an achievement based on the assign tasks.

Hence, in this coastal resource management, women find their roles as an asset that what they do is for the betterment or for the cause of having a life of importance through this endeavor. Symbolic interactionism theory also emphasizes that human being make conscious and meaningful adaptation to their environment. (Blumer, 1969) Women

are not just influenced by the people around her, but also in the environment she lived in. If she lived nearby the sea probably her livelihood would be fishing and etc.

RESEARCH SITE

Plaridel is a leading municipality in agri-fishery industry and eco-tourism destination in Misamis Occidental with self-reliant, ecology-conscious and empowered people in a safe and livable place with enhanced opportunities governed by efficient and God-fearing public servants. Thirteen (13) out of thirty-three (33) barangays in Plaridel are located in coastal areas some of these are the Barangay of Calacaan, Kauswagan, Catarman, Katipunan and Looc Proper. This study will be conducted in Brgy. Panalsalan, Plaridel, Misamis Occidental, Philippines.

The interview was conducted in July 24-30 2015. Each interview lasted for about 30-60 minutes in their houses. The researchers use Visayan dialect in asking questions for the key informants to understand and express themselves thoroughly. When we submitted our first tables, the adviser suggested that we add informant to enhance our findings. Because one of our member of the researcher is from Plaridel, she gathered additional four 5 key informants.

Figure 1. Map of the Philippines

Figure 2. Map of Misamis Occidental

Figure 3. Map of Coastal Areas in Plaridel

RESEARCH METHODS

The researchers used a semi structured interview guide to gather information from the informant. The interview was done in a flexible manner to allow the informants to give their views and opinions regarding the topic that they were asked.

In-depth and intensive interview are usually recorded on tape or video-videotaping visual aspects of the interview situation are of course captured as well. Some authors argue that these recordings contain a richer representation of the interview situation than tape (Kvale 1996), in our case, we recorded the interview proceedings and at the same time took notes of important information. After gathering data, we transcribe the interview findings.

Because the qualitative design of the study using interview, data gathered were subjected to thematic analysis. Thematic analysis in its simplest form is a categorizing strategy for qualitative data. Researchers review their data, make notes and begin to sort it into categories. Styled as a data analytic strategy, it helps researchers move their analysis from a broad reading of the data towards discovering patterns and developing themes.

While researchers debate whether thematic analysis is a complete "method" per se, it is a process that can be used with many kinds of qualitative data, and with many goals in mind. For that reason, thematic analysis is often implicitly and explicitly a part of other types of data analysis including discourse analysis, grounded theory, and case study (Boyatzis, 1998). In this study, since there are guide questions, the responses for each question are classified into themes,

identified themes were then used as bases for discussion.

PRESENTATION AND ANALYSIS OF DATA

The researchers used a semi structured interview guide to gather information from the informant. The interview was done in a flexible manner to allow the informants to give their views and opinions regarding the topic that they were asked.

In-depth and intensive interview are usually recorded on tape or video-videotaping visual aspects of the interview situation are of course captured as well. Some authors argue that these recordings contain a richer representation of the interview situation than tape (Kvale 1996), in our case, we recorded the interview proceedings and at the same time took notes of important information. After gathering data, we transcribe the interview findings.

Because the qualitative design of the study using interview, data gathered were subjected to thematic analysis. Thematic analysis in its simplest form is a categorizing strategy for qualitative data. Researchers review their data, make notes and begin to sort it into categories. Styled as a data analytic strategy, it helps researchers move their analysis from a broad reading of the data towards discovering patterns and developing themes. While researchers debate whether thematic analysis is a complete "method" per se, it is a process that can be used with many kinds of qualitative data, and with many goals in mind. For that reason, thematic analysis is often implicitly and explicitly a part of other types of data analysis including discourse analysis, grounded theory, and case study (Boyatzis,

1998). In this study, since there are guide questions, the responses for each question are classified into themes, identified themes were then used as bases for discussion.

Most of the key informants obtained high school level of education. Majority earned an income between P 1, 000.00 and P 5,000.00. Clearly, educational attainment is highly correlational with the kind of occupation the key informants have. Most of the key informants want to participate because of the income they get from the funds or livelihood they have in the community. This livelihood they have is also in line with the goals they have to achieve in upholding the program. When it comes to monthly income, 8 key informants earned income between P 500.00 – P 1,000.00; 1 key informant earned income between P 1, 001.00 – P 5, 000.00; 3 key informants earned income between P 5, 001.00 – P 10,000.00.

According to NEDA (2011), despite increases in income and economic growth, poverty remained high in the region compared to its neighboring regions in Mindanao. The region remained to have the fourth highest incidence of poverty among families (and population) among the six Mindanao regions and sixth among the 17 regions in the Philippines. Based on trends, the region's target of having its poverty incidence among population by 2016, which is also among its MDGs, appears to be unattainable. Misamis Occidental had the highest poverty incidence (among population) at 45.7 percent among the five provinces of the region in 2009.

Women's Notions on Environment and Coastal Resources

In this part of the study, notions of the key informants are presented. These

notions pertain to environment, coastal resources and fishing in Plaridel, as well as folk beliefs or indigenous knowledge and practices related to coastal environment and resources.

CRM in Plaridel

Barangay Panalsalan is one of the three mangrove plantations by the DENR in the Municipality of Plaridel. It is part of the Coastal Resource Management Program (CRMP) under Iligan Bay Alliance of Misamis Occidental (IBAMO) in Northern Mindanao. It is Alliance-built partnerships provide a framework for collaboration between local governments, implementing strategies and supporting sustainable coastal resource development in Misamis Occidental Province. Local government unit is Municipal Environment and Natural Resources Office (MENRO).

This study discussed the role of women in Coastal Resource Management in Barangay Panalsalan, Plaridel Misamis Occidental, and the challenges they have encountered in managing the coastal resources and how have they addressed such challenges in order to implement it without the destruction of other environmental aspect of the community. Practices and beliefs of women in managing the coastal resource management were also included.

Informants' Views of the Environment

Key Informants	Answers	Themes Positive	Themes Negative
Virginia	Minus ang pagpanagat, tungod sa init. Apektado ang mga pangisda. (Decrease in volume of catch due to		Change in the volume of catch due to intense warm temperature.

	intense warm temperature. It has affected our fishing.)		
Pacita	Sauna hawan ang katunggan karon, pag-abot sa mga DENR nananom sila. Okay na hayahay. (Before, there were no mangroves. But when the DENR came, they planted. It is okay now and comfortable.)	There are a lot of mangroves.

Virgie	Makatabang ang environment. (The environment is helpful.)	The environment is helpful.	
Girle	Maayo na ug improve na ang environment. (The environment is good and improved.)	The environment is improved.	
Victoria	Maayo ra man ang environment, crisis lang ang pagpangita sa dagat. (The environment is good, but there is crisis in fishing.)		There is crisis in fishing.
Jovelyn	Okay raman sya nindot kaayo ang hangin. (It's okay, nice fresh air.)	Environment is okay with fresh air.	
Artemia	Naay kakulangan, tungod sa panginabuhin. (There is lack in terms of livelihood.)		Lack in terms of livelihood
Lourdes	Okay ra. Malinawon ra pud ug nakatabang kay dili polluted. (It's okay. Peaceful and helpful because it is not polluted.)	Peaceful, not polluted	

On Sample Group

This is a descriptive qualitative design research which employed individual

interviews. This research comprised twelve (12) women key informants, who have stayed in Brygy. Panalsalan for more than ten years and have lived in the area along the coastline and determined through the purposive sampling technique.

Participation and Challenges Encountered by the Women in CRM

Many women in the coastal community are involved in fishing, shell gleaning or gathering, planting mangroves and other coastal activities. These women exercise their roles in terms of planning, implementing, monitoring and evaluation. These roles were under PCRA, in planning mostly the officers were gathered together to make action plans for the advancement of the program and the coastal area itself. In the implementing process, it is where the laid plans are being put into action and all of the officers and members are required to join and participate the different activities under coastal resource management.

One of the projects being implemented by the association was the Mud Crab Fattening but it was a failure because of the absence of responsible people in guarding the mud crabs. But still they continue to find other areas where they can help maintain the beauty of the nature. They are moving on to planting mangroves and right now they are able to plant many mangroves in the seashore. In the monitoring process, they are assigning different people or a member from time to time to watch over the mangroves they have planted. At the end of the process they also have this evaluation during monthly meeting in their organization. This is how the women participated in their association. Actually the recent president and officers of PCRA nowadays are all females. They are the ones holding the

association and they have fishermen members in the association. For information, PCRA is a related association with CRM. PCRA association is not under LGU but NGO.

On the other hand, if they have participated and reformed well their roles as agents in the coastal resource management because of that good work they have expressed also their distinctive benefits they acquired while they involved themselves in the coastal resource management. Personally women have spoken about themselves that there is really a change deep inside them. Women who are involved in coastal resource management expressed their benefit on the enhancement of leadership skills, communication skills, knowledge about planting mangroves and how to preserve our coastal resources. Economically, women have spoken that CRM benefits the economic stability of Plaridel since this municipality is rich in agriculture and marine resources.

Conserving the natural resources of Plaridel, helps to sustain the economy ensuring that there will be a continuous supply of vegetables, fishes, seashells and other products in the market. In the community, the program really helped in the preservation of the environment. Socially, it enhances the socialization with other people, they feel united and equal with one another. These women have encouraged other women to participate in the said program, saying "the more, the merrier".

In an association conflicts and challenges among members are always present. The women are involved in the association faced some challenges in their lives. Most of them ----- faced with financial problems that they were not able to join

seminars which are important in their participation in the CRM. Also, there are conflicts in leadership and disorganized records of the association. These things always happen but according to the women involve in it, they were able to resolve the problem before leaving the meeting area. Women in the CRM are also asked about the views of men towards them who participated actively in the association. Most of the views of men are positive. Men's perception is that they view women very highly and equally, they supported the women, understand them and they perceived women as their sisters. This proves that men should also support the women like the women supporting them.

Awareness in Climate Change And Disaster Preparedness

Climate change occurs anywhere in the world. The coastal areas in Plaridel mostly in Barangay Panalsalan were affected. The manifestation of it was the seawater gets warmer this result to fish kill due to increasing temperature. There are tendencies sometimes that there are only small fish catch due to climate change. This affects the livelihood of the people living in the area. All of the women involved in this association were aware of the climate change and how does it affect people and the natural resources. In addition, it can also give impact on their livelihood, climate change can cause also calamities such typhoons, floods, landslides and other calamities. In connection with this, they were asked on disaster preparedness in their barangay most especially in their respective homes.

Most of them prepared a survival kit which includes; medicines, cash cards, clothing, foods, canned goods, flashlights and other necessities. So far, the key

informants have not experienced super typhoons only sometimes, strong winds and heavy rains however are common. Typhoon Sendong (Haiyan), the coastal community was affected for almost 3 months because there were dead bodies of animals and humans along the shoreline, and most of there were found in the coastline because there are mangroves that blocked the passages. Key informants thus suggested that everyone must be ready and watchful all the time.

Traditional Beliefs on CRM

Moreover, this women have also shared their traditional beliefs in relation to coastal resources management. Many of them believed in *tuob* which can help them in catching fish because as they are going to perform the ritual, fishes will be attracted to it. Some also consider the new moon as the time when it is low tide, a cat washing his face depicts of there are a lot of fish catch, when there is an eclipse it warns people that there will be a coming calamity or disaster in the place and lastly the lamp when there are a lot of flying insects gets close to it, it is a sign that there are a lot of fishes in the sea and lastly the belief of not shouting in the sea because it will disturb the spiritual beings who are residing in it. These traditional beliefs are indigenous knowledge from their early ancestors. They are passed to them and it became a tradition and a practice in order for them to believe more so they must do something. They always believe that nothing will be lost if they will try those practices.

Informants' Folk Knowledge

Key Informants	Folk Knowledge	Themes
Virginia	1. Kung dulom (Bulanon) minus ang isda sa dagat. 2. Palina, mga	*New Moon *Traditional rituals to dispel bad lucks.

	insenso, mga palihi na para mawala ang dimalas.(1. If it is New moon, there's only few fish in the sea. 2. Palina and incense those are for dispelling bad lucks.)	
Pacita	1. Isdaan ang dagat kung ang suga kay dugukon ug mananap nga maglupadlupad. 2. Palina pud para dili dimalason. (1. When insects circle around the lamp, it means that there's a lot of fish in the sea. 2. Palina to dispel bad luck.)	*Relationship between the lamp and the insects *Traditional rituals to dispel bad lucks.
Ana	1. Mutuo kog tu-ob2x or insenso, para abog na sa dili ingon nato. Ang insenso para to pang dani sa isda. (I believe in "tu-ob2x" or incense, to get rid of bad spirits. It is also to attract fish.)	*Traditional rituals
Evelyn	1. Basta bation nako na gamay ra ang kuha sa isda, magtuob ko. Kay walay makapildi sa tu-ob. Akong gamiton kamangyan. 2. <i>Eclipse</i> -Bakunawa na mokaon sa bulan basta naay in ani naay katalagman mo abot. Usa sa mga nasaksihan na ma katalagman kay katong sa	*Traditional rituals to dispel bad lucks. *New Moon symbolizes low tide

	bagyong Sendong. (1. Whenever I feel that there is a few catches of fish, I used "Tu-ob. Because nothing can defeat "Tu-ob". What I usually used is "Kamangyan". 2. Eclipse-Dragon that eats up the moon, it means that there's a catastrophe that will come. One of the catastrophe that I've witnessed was Typhoon Haiyan.)	
Analita	Dili dapat magsinggit singgit sa dagat. Dili magsaba saba. Kay dili ta tagiya sa dagat. Naay dili ingon nato. (We should not be noisy in the sea because we don't own it. There are spiritual beings.)	*Belief in the spirits in the sea which should not be disturbed
Lovely	Kung tibuok ang bulan, mahunas ang dagat. (if it is full moon, it's low tide.)	*New Moon symbolizes low tide
Virgie	Ug new moon gali, pasabot hunas ang dagat. (If it's new moon, it's low tide.)	*New Moon symbolizes low tide
Girlie	Wala koy mga tuo-tuo.	*None
Victoria	Tuob tuob ug mga sagbot, pahiuli na kahoy, kamangyan, kandila gikan sa simbahan. Para makaabay me, para makakuhag isda. Binsilon ka	*Traditional rituals to dispel bad lucks.

	kung dili ka musunod ani. Ang pasabot sa binsilon dili kakuhag isda. (I used "Tu-ob2x and grass, wood, incense, candle from the church. So that we can catch fish. If you'll not follow this, you'll get nothing.)	
Jovelyn	Magpaaso ra man me. (We just use incense.)	*Traditional rituals to dispel bad lucks.
Artemia	Kaanang Bulanon. Kanan pud manghilam-os ang iring, pasabot ana kay daghan makuha nga isda. (New moon means low tide. (When the cat clean its face, it means we can catch a lot of fish.)	*New Moon symbolizes low tide *Relationship of the cat the volume of fish.
Lourdes	Wala koy tinuuhan.	*None

If they have believed in the various traditional beliefs, how much more the real ordinances and laws being implemented by the coastal resource management. One of the most well-known ordinances is the ban period. This ordinance is all about the red flag displayed in the sea which symbolizes the no fishing ordinance in the coastal areas. It was implemented for the benefit of the other fishes to grow and lay their eggs. It is very important to follow this ordinance in order for them to have also the discipline in catching fish in the sea. It is also prohibited to use *tubli* or a poisonous plant, hypo chloride, dynamite and electric devices for catching fishes because this can greatly affect and poison the seawater or even ruin the coral reefs

and habitat of the fishes under the sea. These are the ordinances being observed by the women who are involved in the coastal resource and management.

Livelihood Program

Since Barangay Panalsalan is a coastal community, more of their livelihood and source of living is found in the marine resources. The women who are involved in coastal resource management have this non-government organization called PCRA which is Panalsalan Coastal Resource Association wherein women are the present officers with both men and women as members. Their main goal is to preserve the natural resources and improve one's life through livelihood projects. These women are aware of the movement and the process of the association to help improve and develop the beauty of Plaridel and its natural resources. In livelihood programs, the most common source of living is fishing and shell gleaning but they also have this alternative source of living since there is no consistent volume number of fish catch in the sea. Some of the women engage in sari-sari store, farming, poultry and coconut copra.

Women's Vision for CRM

So far as the future is concerned, women involved in CRM are still hopeful that the problems of the coastal area will be mitigated. Some visions in the future is that if the illegal practices of men will be continued then there will be no fishes left in the sea, there will be more fishes in the sea if we know how to save our marine resources. People just like the informants in this study wanted also to elevate their livelihood and way of living. CRM is looking forward to the implementation of the projects. There is no perfect

organization, CRM has its own story of successful days and also a share of failures. CRM gained success when the projects were implemented like the planting of mangroves and ordinances are being observed. It is already a success to the management. Failures happen when there are conflicts and misunderstanding in the group.

Overall, the involvement of women are highly seen in the context of participation because there are outputs seen in the coastal area. Until now, they are still into the development of the projects and looking forward for more to be contributed in the environment

CONCLUSION

Plain housewife that is how women who do not have any professional job only stay at home to taking care of the children and doing household chores. They are aware of involvement and participation in outdoor activities, like these women in the Coastal Resource Management. If we will define a woman, we will always say that they are vulnerable and weak but actually we just do not know some aspects of their lives on how they function well in their roles even in the roles of men.

The women's role as primary caretaker still intact within most segments of society (Ferree 1987; DeVault 1987), women have had to take on an additional role: that of caretaker of the nature. Looking at the women in CRM, they are commonly plain housewives and yet they have greatly contributed to the preservation and protection of the coastal environment and resources in their community. Their characteristics as a mother and a wife implies how they could take care of the environment around them. The theory of ecofeminism describes the

women's role in environmental protection, that women are the "natural careers" of the environment perpetuates traditional views on gendered division of labor (Klien, 1999).

The women involved in Coastal Resource Management adheres to superstitious beliefs that cause them to believe in the various forms of traditional practices from their ancestors. They also tell of how a people view the unknown and the means to appease the gods that control the future. (Estareja, et. al., 2009). This idea of belief symbolizes the connection of the human beings, plants, animals and the surroundings from the air beneath and ground below. Somehow these beliefs did not remain as it is but it was really proven by most of the women who lives there. Being sensitive is one of the best assets of women inside of them. A particular discussion about this matter will develop better concepts and ideas beneficial to both man and nature (Saway, 2007). Their awareness of the environment is not only for the prevention of disasters but also for dealing with them when they come.

The involvement of women in CRM is given much attention in this study. Somehow, the idea of only men can go fishing has been disprove because it is proven in this study that also women are engaged in going to the sea and catch fish. Another point of highlighting women are their participation on the coastal resource management activities which gives the notion of how do women helps preserve the environment most especially the means of coastal resources. Their involvement created an impact to the other people as they go on continually to do their roles and render service to the coastal community. Hence, women find their roles as an asset that what they do this for the betterment or for the cause of having a life

of importance through this endeavor. Symbolic interactionism theory also emphasizes that human being make conscious and meaningful adaptation to their environment (Blumer, 1969).

These women involve themselves in planning, implementing, monitoring and evaluation of the state of the coastal area. This association they have which is the PCRA or the Panalsalan Coastal Resource Association. It is where the officers and members are mostly women in partnership with the fishermen. Their resiliency as women was given attention also in time of calamities and disasters that might occur in the coastal community. Their preparation basically is that saving and keeping a survival kit and spiritual preparation which is pray to God because He is able and He can do all things. Only few of them have answered that they will just stay at home. This preparation will guide the women in being alert and watchful always in times of disasters. In Sheldon Stryker's view of symbolic interactionism, human social behavior is organized by symbolic designations of all aspects of the environment, both physical and social.

Finally, the observation of the study is that integrated coastal management means the collaboration of the government, community especially the women and the NGO partners. There is a great part of success in Coastal Resource Management in valuing the indigenous knowledge and practices in the coastal community. Women are responsible agents of environmental preservation.

RESETTLED WOMEN AND THEIR HOUSEHOLDS IN GAWAD KALINGA-SHELL, SITIO CALAANAN, CANITOAN, CAGAYAN DE ORO CITY: COMPARATIVE CONDITIONS AND ROLES TOWARD DESIRED RECOVERY CONDITIONS

Abstract

This study is about the resettled women and their households' comparative conditions in Gawad Kalinga- Shell, their roles and desired state towards recovery. It uses the qualitative research design and methodological triangulation with the application of in-depth interviews and probing questions.

This study provides information about the conditions, roles and desired state towards recovery of the respondents particularly in livelihood, health, house, social relations and adaptive capacity aspects. The study was conducted on June 2015 in the biggest Sendong resettlement site in the city of Cagayan de Oro. Among those interviewed were 60 mothers, the president of GK-Shell Homeowners Association and the member of Estate Management Division. Chosen because of their availability, the respondents are in the age bracket of 21-70 years old, mostly married and housewives. Furthermore, many of these informants previously resided in depressed communities along the river in Cagayan de Oro which were badly hit by Sendong in December 17, 2011 and are now declared as no-build zone by the local government.

In analyzing in the study, the researchers used descriptive design and thematic analysis. Furthermore, the conditions of the respondents were compared by two times frames: 2 years before and 2 years after resettlement. Overall, the interview themes revolved around women depicting the worse conditions in the resettlement site than in their previous communities of their household's livelihood, house, and community relations. On the other hand, family health and relations have shown better conditions in both before and after resettlement. Thus, they are still far from reaching the "built-back better" framework of the government because most of their current conditions have not improved relative to their previous conditions; these have even worsened. However, they have notions of being fully recovered from the onslaught of Sendong and being resilient to future disasters. In livelihood conditions, it includes having enough capital to put up their own business which enables them to have family income which is more than barely meeting the household needs. For house conditions, it means having extra space, better-designed comfort rooms, and drainage system and well-ventilated housing units. For their community, a better and closer relations with their neighbours, implemented BDRRMP, and an efficient local leadership.

Key words: women in disaster, community, equality

[Type here]

INTRODUCTION

After the tragedy of Typhoon Sendong, the Philippine Disaster Risk Reduction Management (PDRRM) played a crucial role in resettling the victims to safer and disaster-risk free areas. Strengthened disaster risk reduction and management plays an important role in realizing the government's promise of "building back better, faster, safer" communities after the storm. Along with this is the construction of drainage, sewage channels and other essential infrastructures such as roads and walkways to ensure the protection of both the people living on the land and the land itself. Furthermore, before families moved into their new homes, as part of the induction to the new settlements, they received an initial training induction on disaster preparedness which was coordinated with the local emergency management agency.¹

The Cagayan de Oro local government designated around 21 hectares for the permanent shelter and some transitional sites in Sitio Calaanan. Gawad Kalinga with the help of Shell Philippines started building houses and continues the housing project for the Sendong survivors while Shell further committed to build a Multi-purpose hall. Each shelter unit has a multiplepurpose room, an attached sanitaryunit (toilet and bath area) and a small kitchen area. The height of the buildings allowed a mezzanine level to be built by occupants to create a raised sleeping area. This could potentially increase the living space from 21m² to 36m².²

When it comes to the conditions of the women in the resettlement sites, they are overrepresented among those who end up unemployed because they have lower educational and literacy attainments.³ In the Philippines, some women in the resettlement

sites in Kadamay-Batangas consent to sex in exchange for two cups of rice because they cannot sustain their living. These women used to earn from selling native cakes in or near the port before they were resettled. But in resettlement the sites, they could hardly make a dollar out of a bilao (tray) of rice cakes. In Cagayan de Oro, most of those who have been officially resettled have found themselves far from livelihood opportunities in Cagayan de Oro central business districts and constrained by the cost of transport and the time needed to get to them. In Calaanan resettlement site, many women engage in informal employment through traditional laundry cleaning in the river bank due to lack of employment opportunities for them.⁴

When it comes to the roles of women in post-disaster stages, it is categorized into reproductive, community and productive roles. Reproductive roles include roles within household and the family such as inclusive of bearing, nurturing and rearing children, and caring for sick and elderly. These roles may also be expanded to include agricultural work in the home stock within household, rebuilding family and community spirit but do not give economic values. Women's community roles are done voluntarily and do not also provide economic returns include such as: maintaining kinship relations, religious activities, social interactions and ceremonies, communal sharing and caring activities, communal survival activities etc. Although these are usually related to reproductive function, there are instances where it includes work related to relief and reconstruction including the physical reconstruction of their homes.⁵ Lastly, productive roles give economic remuneration for manual labor, professional labor and subsistence activities.⁶

Findings of this thesis which caught the attention of the research team are the

similarities of their resettlement conditions and the lack of recognition to women's roles toward their desired recovery conditions. Thus, this paper focuses not just on the conditions of the resettled women and their households in GK-Shell, Cagayan de Oro but also on their roles and desired recovery conditions particularly in livelihood, health, house, social relations and adaptive capacity aspects. Furthermore, some of the specific objectives of this paper is to describe the Gawad Kalinga- Shell Resettlement site in terms of its location, access to basic services, facilities and utilities, determine the socio-demographic profile of the respondents, and identify the forms of services/assistance received by the respondents from LGUs and NGOs.

STATEMENT OF THE PROBLEM

This is a study on the conditions, and roles toward recovery of the resettled women and their households in Gawad-Kalinga-Shell, Sitio Calaanan, Canitoan, Cagayan de Oro City.

THEORETICAL FRAMEWORK

The main theoretical framework of this study is the Gender and Development (GAD) paradigm which examine not only women's labour force participation but issues such as women's health, reproductive rights, female-headed households, women and decision making, and women's collective action.⁷ Furthermore, it emphasizes on the participation of the state in promoting women's emancipation.⁸ In this study, labour force participation refers to the resettled women's engagement in informal sectors in order to supplement their husband's income. Health refers to their state of physical and psychological well-being as well as their households in the GK-Shell resettlement site. Moreover, their collective actions pertain to their roles in livelihood, health, house, social relations and adaptive capacity toward recovery thus raising women's emancipation.

Furthermore, gender roles are the product of the interactions between individuals and their environments, and they give individuals cues about what sort of behaviour is believed to be appropriate for what sex.⁹ In explaining gender roles, this study utilized the functionalist perspective. According to Parsons, three features are needed to group dynamics: interdependency, social values and stability and equilibrium. The latter part explains that certain social patterns or roles are needed to ensure a group's stability.¹⁰ In line with this study, gender roles denote to the functions of the resettled women in their family and social relations as well as disaster preparedness in their new environment which is the GK-Shell resettlement site.

This study also utilized Hyogo Framework. Part of its priorities for action is the integration of gender perspective into all disaster risk management policies, plans and decision-making processes, including those related to risk assessment, early warning, information management, and education and training and the need for proactive measures, bearing in mind that the phases of relief, rehabilitation and reconstruction following a disaster are windows of opportunity for the rebuilding of livelihoods and for the planning and reconstruction of physical and socio-economic structures, in a way that will build community resilience and reduce vulnerability to future disaster risks.¹¹

In relation to the framework, R.A. 9729 or the "Climate Change Act of 2009" amends "Gender Mainstreaming" which refers to the strategy for making the concerns and experiences of women as well as those of men an integral dimension of the design, implementation, monitoring, and evaluation of policies and programs in all political, economic, environmental or ecological and societal spheres so that women and men benefit equally and inequality is not perpetuated. It is the process of assessing the implications for women and men of any planned action,

including legislation, policies, or programs in all areas and at all levels.¹² It is in the context of gender mainstreaming that the socio-economic conditions, roles and desired state of situation toward recovery of the resettled women in GK-Shell are being examined.

Furthermore, R.A. 10121 or an act strengthening the “Philippine Disaster Risk Reduction and Management System” provides for the National Disaster Risk Reduction and Management framework and institutionalizing the National Disaster Risk Reduction and Management Plan which provided the legal basis for formulation of policies, plans and programs to deal with disasters in the country. NDRRMP covers Disaster Prevention and Mitigation, Disaster Preparedness, Disaster Response and Disaster Rehabilitation and Recovery. Under the recovery and priority area of NDRRMP is “build back better” which is the restoration and improvement of facilities, livelihood and living conditions of disaster-affected communities, including efforts to reduce disaster risk factors.¹³ In this study, “build back better” denotes to the housing units and facilities in GK-Shell resettlement site that would reduce disaster risk factors in the area and vulnerability of the resettled population to disasters.

CONCEPTUAL FRAMEWORK

The conceptual framework shows the flow of the research. The study focuses on the comparative conditions, roles and desired state of situation in the terms of the five aspects that resettled women in Gawad Kalinga- Shell want to achieve in order to fully recover from the tragedy.

The schematic diagram shows the socio-demographic profile of the mother respondents and the description of the Gawad Kalinga-Shell resettlement site including its access to basic services and the facilities/utilities provided by the LGUs and NGOs. Furthermore, it illustrates the comparative conditions before and after resettlement, roles and desired recovery conditions of the respondents in livelihood, health, house, social relations, and adaptive capacity aspects.

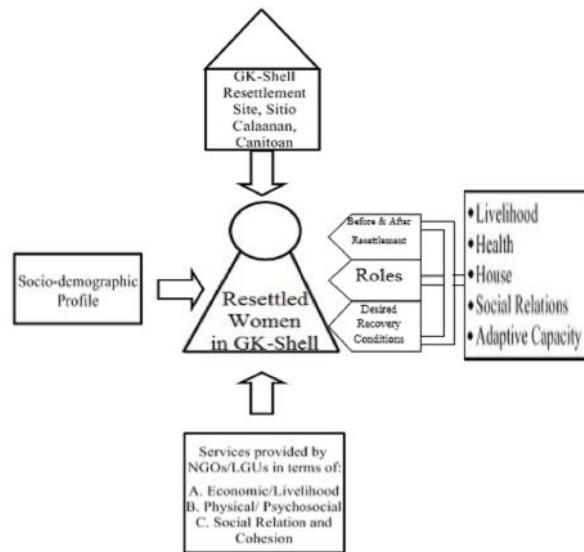

Figure 1. Schematic diagram of the study

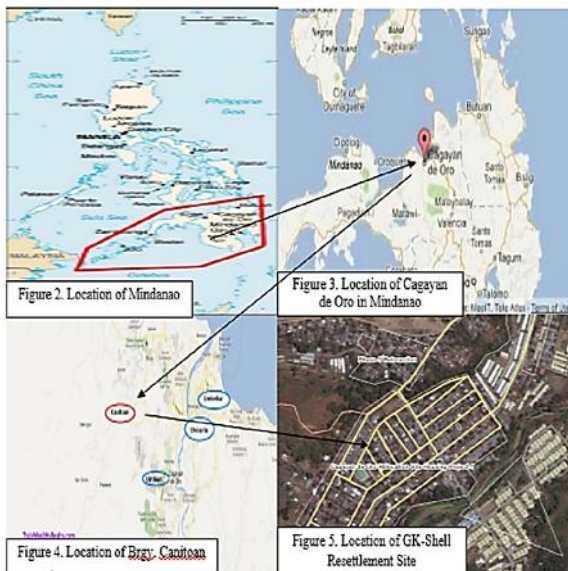

METHODOLOGY

As the study utilized the method of triangulation which involved the qualitative and quantitative method, the median distribution and the Wilcoxon test of difference have also been employed to determine the changes in their conditions in terms of their economic/livelihood condition, physical and psychological condition, living and housing condition, social relation and cohesion, and adaptive capacity/resilience condition before and after Typhoon Sendong on the quantitative part of the study. Fiduciary limit was also utilized to measure respondents’ level of living condition in GK-Shell. The thematic analysis on the other hand was used for the qualitative data. The study made use of purposive and stratified random sampling in selecting the respondents. The data gathering instrument used in gathering the qualitative and quantitative data was the interview guide.

The locale of the study, Sitio Calaanan, in Barangay Canitoan, Cagayan de Oro City was chosen to be the locale of the study because it is the biggest resettlement site in the city and also where Gawad Kalinga-Shell Housing Project is located. The figures below pinpoint to where the study was conducted.

¹²R.A. 9279, Climate Change Act of 2009

¹³R.A. 10121, National Disaster Risk Reduction and Management Act of 2010.

In this study, the researchers took one representative from each household as the informant of the study. A total of sixty (60) mother respondents who are currently residing in the area. There were also two (2) key informants: the president of the GK-Shell Homeowners Association and a member of the Estate Management Division (EMD). Furthermore, the research used non-probability sampling particularly the quota and convenience sampling.

In compliance with the research ethics, the first thing that the researchers did was to ask permission by writing a letter to the barangay chairperson of Canitoan if they could conduct an interview in Gawad Kalinga- Shell resettlement site. After getting the permit, the researchers then went to the GK-Shell president to also ask for permission to conduct an interview in the resettlement site. Once permitted, the researchers immediately started the interview process in the area. The researchers first introduced themselves to the respondents and asked them if they could be interviewed. The identities of the respondents were also confidentially assured as well as their views and answers were also respected. Permission to take pictures during the interview process was also asked from the respondents.

FINDINGS

Community Profile of GK-Shell

GK-Shell is one of the new resettlement sites in Cagayan De Oro City. Also known as GK City, it takes 15-20 minute jeepney ride to reach Sitio Calaanan, Barangay Canitoan, which is the largest resettlement site in Cagayan De Oro City and also where GK-Shell is located. The land where the GK-Shell resettlement site was built was granted by the City Government of Cagayan De Oro with the total land area of three (3) hectares. In partnership with Gawad-Kalinga Housing Project and Shell Philippines, housing units were built measuring 21 m² providing shelter to 270 families. GK-Shell has also internal rules and regulations that must be followed by the resettled grantees.

GK-Shell resettlement site is accessible to elementary and secondary schools where resettlers' children are attending and there is also a mini-market nearby. Furthermore, they have their own multi-purpose community center where meetings and any type of gatherings are usually held. A playground was also donated by UNILAB, which is now non-functional because it was burned down by unknown outsiders, and some materials were also stolen. In addition, there is project proposal regarding the establishment of their own health center.

Socio-demographic Profile of the Key Informants and Respondents

There were two (2) key informants who were interviewed by the researchers who are both female ages 52-55 years old. The first key informant is one of the resettled and the president chosen by the GK-Shell officials, while the other key informant is a member of Estate Management Division (EMD) which monitors the implementation of house rules. EMD also monitors the peacefulness and unity in the GK-Shell.

A total of sixty (60) female respondents in GK-Shell Resettlement Site served as the survey respondents in the study. Most of them are married, Roman Catholic,

high-school graduates, has an average family size of 6 members and previously lived in Barangay Carmen before Typhoon Sendong. In their present location in GK-Shell, most of the respondents have been living in the area for three (3) years, are housewives and depends mostly on their husband's income. Since most of them were only high school graduates, their job opportunities are limited to low-paying jobs such as cashier, doing laundry, and manicure/pedicure. Some of them also engaged in small scale businesses such as sari-sari stores and vulcanizing shops for additional income.

Some factors such as the respondents' low educational attainment and their dependence to their husband's income are seen as the causes of their daily struggle to provide for their daily needs. Family size is also one of the factors; however, it is not the sole cause of household poverty. According to Bauer et al. (1992), families whose household head lacks formal education have a high risk to poverty.¹⁴ Also, occupation [plays a role. Poverty rates are highest among household headed by laborers and agricultural workers.

Forms of Services/Assistance Received by Respondents

The respondents identified the types of assistance they received from various donors before and after they were relocated. As far as they could remember, the support came from LGUs, CSWD, DOLE, TESDA, Securities and Exchange Commissions, Church, UNICEF, Red Cross, GMA, ABS-CBN, Estate Management Division, HRC, SWISS-Batulong, UNILAB, KDRN, Mayor Ejercito Estrada, Congressman Rufus Rodriguez, and former Cagayan De Oro Mayor Vicente Y. Emano. These government, non-government organizations and politicians have extended their assistance to Sendong survivors resettled in GK-Shell, Sitio Calaanan, Barangay Canitoan. The assistance included food and non-food items, economic and livelihood assistance, physical and psychological assistance as well as seminars/lectures to improve family and community relation.

Furthermore, most of the respondents in the study claimed that the assistance provided by the LGUs, NGOs and some politicians was only a short-term one. Other than the ham and cheese that they received during Christmas, there are no more assistance from the LGUs and NGOs after they were resettled, that is why they engaged themselves in profitable activities in order to sustain the economic needs of their families.

On Livelihood Aspect

Respondents in this study had a bad economic condition as indicated in their blue collar and menial jobs with income lower than the minimum wage. Many of the respondents had work before they were resettled, but after they were resettled at GK-Shell, many of them became housewives, depending only on their husbands. One factor of this is that GK-Shell is located far from the city compared to their former address, so respondents cannot easily find jobs especially the ones that suits to their educational attainment. Another factor is extension of houses is strictly prohibited by the GK-Shell as part of the agreement. However, many of the respondents disobeyed this rule and extended their houses to build small sari-sari stores because according to them, they would rather break the rules than to starve.

The present condition of the resettled women in GK-Shell clearly indicate that they have not yet reached the "build-back better framework" of R.A. 10121 which is the restoration and improvement of facilities, livelihood and living conditions of disaster-affected communities, including efforts to reduce disaster risk factors. That is why most of them desired to put up their own business, hence the need for capital. Achieving this desired state is one step closer to recovery.

When it comes to their economic roles, their main notion is to supplement on their husband's income. The respondents engaged in part-term jobs particularly vending and laundering to earn extra money in order to meet the economic needs of their family since their husband's income was not enough to suffice their daily needs. Although most of

them were only high school graduates and has limited job opportunities in the resettlement site, it did not hinder them to be able to provide for their family. Instead, they strived to acquire jobs even if they were only low-paying just to earn a little extra income. Human Development Report published annually by the United Nations Development Programme (UNDP) also stated that although a woman might not hold a paid job, she earns income for the home from several different activities in the informal sector, whether from the “backyard economy” or from small home-based business.¹⁵

In view of the Gender and Development perspective, although the respondents’ labour force participation decreased after resettlement since many of them became housewives, they established certain collective roles in order provide for the needs of their families. They involved themselves in several activities from the informal sectors. With their participation, they contribute to promoting women’s emancipation in terms of the livelihood aspects.

On Health Aspect

In terms of the respondents and their households’ physical conditions, it showed no significant difference before and after resettlement because they maintained their well-being after the disaster. Also, no major diseases and sickness were not that rampant after the typhoon, because respondents were given enough medical assistance such as free medicines and vaccination by LGUs and NGOs in order to help them acquire a strong immune system. Despite there were some minor sicknesses like fever, cough, runny nose, and colds encountered by some respondents, they were immediately treated in a short period of time.

In the case of their psychological condition, the respondents had a bad psychological condition before the resettlement because they did not have a good sleep, peace of mind. Furthermore, they were also prone to stress and depression since their

previous community was near the river where flood was inevitable if it rains heavily. However, after the resettlement, the respondents have improved psychological condition. Though some of them were still traumatized after they were resettled, they have joined stress debriefing programs handled by LGUs and NGOs that helped them to recover from the traumatic event. That is why the respondents now have a good sleep and peace of mind, since they are now located in a safer area.

Women particularly mothers are the most hands-on when it comes to the health of their family. When it comes to desired state toward recovery, their ultimate desire is to have a healthy family free from diseases, sufficient supply of medicines in the health center, maintenance of health services for children such as free immunization and vitamins and availment of Philhealth to have a health insurance. Which is why they manifested the role taking care of their family. As mothers, they do everything in their capability to make sure that everyone in her family gets the proper healthcare. Despite of their poor livelihood conditions, respondents strived to maintain healthy and able-bodied family members.

Looking at these findings in terms of Baha’i International Community (1988) statement on the roles of women on health, women are the main agents of primary health care, play an essential role in maintaining family and community health. They are the ones who are most aware of the sickness and suffering in the community because of their social role as nurturers and care-takers of the young, the old, the sick and the handicapped, and they exert an important influence on health habits in the family.¹⁶

On House Aspect

Sendong survivors in this study have owned the houses they are occupying in GK-Shell City. They were chosen through the lottery method to ensure fair treatment. Their houses

¹⁵Human Development Report published annually by the United Nations Development Programme as cited in *The impacts of disasters*. Retrieved on January 10, 2015 from <http://www.cepal.org/dmaah/mdn/cd/manual/ing/women.pdf>

¹⁶Baha’i International Community. Retrieved on October 9, 2015 from <https://www.bic.org/statements/bahai-international-community-and-international-organizations>

in GK Shell are better than the tent city or transitory shelter that they occupied prior to resettlement. However, the respondents did not fully adapt to the changes of their housing and living, because there were already problems with regards to some parts of the house. Before they were resettled, their housing condition and accessibility was in good condition because it was spacious enough for all family members, had bedrooms which provided privacy, proper ventilation, their own water installation. After resettlement, the houses given to them have only one bedroom, the roof does not have “alkoba” and not spacious enough for all family members. Some respondents also do not have their own water supply and their comfort room got easily clogged because the septic tank was easily filled since it was just a barrel. Furthermore, their work, basic facilities and amenities are not accessible anymore thus making the process of adaptation slow and harder. In a study conducted in one of the resettlement sites in Sta. Elena, Iligan City house problems also existed in which there were also cracks on the walls with no proper ventilation as well.¹⁷

On the positive side, they now reside in a safer environment free from flood, landslides and storm surge since they are far away from the sea and GK-Shell is not a mountainous area. Furthermore, they now own the house they are now living in since it was given to them by the Gawad Kalinga and Shell Philippines. Also, they have their own comfort room and electricity was already installed even before they were resettled.

In this view, the “build back better” under the recovery and priority of National Disaster Risk and Reduction Management Plan (NDRRMP) according to R.A. 10121 to restore facilities with efforts to reduce disaster risk factors was effective since they were resettled in a flood and landslide- free area. However it did not fully adapt to the changes of their housing and living conditions because they already have some problems on their houses and they are resettled far from the city making it harder for them especially on their livelihood.

Since the respondents as well as their households felt that their house conditions fall short of full recovery standards, the respondents and their households desired to put up mezzanine for their houses to lessen the hotness of the house and also to make the house more spacious for all of their family members. Furthermore, they wanted to fortify by repairing some parts of the house such as walls, floor and roof since there were already cracks on the walls and floor and leaks on the roof. Some also desire to have their own water supply since they only buy from their neighbours and solve the issue about their septic tanks. With these notions, the respondents manifested efforts in saving for house improvement and repair. However, given their economic conditions, most of them cannot save for house repairs anymore since the family income is barely enough to provide their daily needs. That is why they find alternative efforts such as planting flowers and have ornaments to beautify their houses thus making it more pleasant for them to live in. They are also responsible for household tasks such as cooking meals, doing the laundry and cleaning their house.

On Social Relations Aspect

Family relations of the respondents are included in this study to find out if there are any changes in relations among families affected by Sendong. Having resettled in a new community, respondents and their households has some adjustments. The survey and interview results indicated that the respondents’ social relations conditions before resettlement was in good condition. They had regular time together, and at the same time had an open communication. They relied on each other for emotional support and strove to resolve internal conflicts/quarrels together. Aside from that, they also relied on each other in terms of financial and material support. Indeed, it revealed that the families had strong family ties. After they were resettled, they still maintained strong filial links in their families. However, they now spend less time with each other since most of them were busy finding source of income. Similar findings of a study conducted in Barangay, Sta. Elena resettlement site stated that most of the

¹⁷Canares, L. & Violanda, V. (2013). *Perceived adaptive capacity among Sendong relocatees in Brgy. Sta. Elena, Iligan City.*

respondents had a harmonious relationship with their spouses. It is very important to them to have this harmonious relationship since they play as role models to their children.¹⁷

When it comes to the community/neighbourhood solidarity, many of the respondents came from various barangays before Typhoon Sendong and have only been living in the resettlement site for only 2-5 years that is why harmonious social relations in the community takes time to achieve. Leadership problems also exist in the GK-Shell Resettlement Site because they have two (2) presidents: one which was chosen by GK officials and the other was chosen by the residents of the resettlement site. Furthermore, most of them have not established camaraderie with their neighbours since they chose to mind their own business and even stay at their homes because they don't want to be involved in the conflict and also to prevent future quarrels. However, there were some respondents who already established friendship with their neighbours because they share their goods with them.

As mothers, the respondents only want the good for their family. All of them desired to maintain and continue the good relationship that they have with their family to avoid problems and conflicts and to provide the needs of their family. Moreover, the respondents also desired to have a harmonious relationship with their neighbours that the existing leadership problem be solved so that their community can finally have unity.

With these perceptions toward recovery, the respondents manifested certain roles such as spending quality time with each other. Despite their economic hardship, they still managed to maintain strong family ties by spending time with each other although they don't have the luxury for extravagant activities. They just stay at home and watch television or have karaoke. Also, they also serve as mediators, role models in their family to teach their children good morals and right conduct and protect their children at all times and at all cost. Furthermore, they always bring their children whenever they go to church and teach them how to pray. Some respondents also join

Family Development Seminars (FDS) since they are members of the Pamilyang Pilipino Pantawid Program (4Ps). They also help their husbands by engaging in informal income-earning activities for additional earnings. Furthermore, most of them refrain from quarrelling with their husbands since it is not just unhealthy for their family but also for the sake of their children.

In line with the functionalist perspective approach in explaining gender roles, the resettled women serve as mediators and role models in their family to teach their children good morals and right conduct. Furthermore, they make sure to have an open line of communication which is an important factor in maintaining strong filial links. Since most of the respondents and their households do not have the luxury for extravagant activities, they still spend time with each at home and also have family counselling to avoid any conflict/quarrels. In this case, the respondents' social role as mothers is adhered thus sustaining strong family ties.

Moreover, viewing from the gender and development approach, the respondents involved themselves in decision making particularly on their household which signifies their empowerment.

When it comes to the social relation roles of the respondents to their community, most of the respondents abstained from backstabbing their neighbours. Instead, they just try to understand and adjust to each other. They also join meetings to stay informed about their community especially if there are upcoming events. These events particularly are community activities such as tree-planting, clean ups and fiestas. Most of them actively participate since it is an opportunity for them to interact with their neighbours. Furthermore, mostly women participate on these activities since their husbands are at work. In this manner, the respondents slowly establish a sense of camaraderie with their neighbours. These findings are similar to the study of Galigao et al. (2014) which stated that the relocatees in the Deus Caritas Village are still adjusting to their neighbours since they are still new to their community.

¹⁷Canares, L. & Violanda, V. (2013). *Perceived adaptive capacity among Sendong relocatees in Brgy. Sta. Elena, Iligan City.*

Furthermore, there are positive signs that the resettled women are striving towards making DCV a community with good social relation and cohesion.¹⁸

On Adaptive Capacity Aspect

The adaptive capacity of a community lies on how they cope up, stand firm, face and recuperate from disaster. Moreover, the communities' capacity can also be equated with resilience.¹⁹ At the GK-Shell level adaptive capacity, this study shows that they are not aware if their community has its own disaster risk reduction and management plan. Although there is a Barangay Based Disaster Risk Reduction Management (BBDRRM) in Barangay Canitoan where GK-Shell is located, the respondents are not knowledgeable about it being new in the community. GK-Shell also does not have seminars, and drills to strengthen people's disaster resilience.

For the barangay adaptive capacity before and after resettlement, the survey results showed that before they were resettled, they had good adaptive capacity conditions since they know about BBDRRM and there were also equipment and means of transportation available in times of disasters. After resettlement, it shifted to a bad condition since they are new to their community and their barangay officials lack efforts in disseminating information about Barangay Disaster Risk Reduction Management Plan (BDRRMP).

While on the family adaptive capacity, the respondents and their households had a bad adaptive capacity conditions because they do not have emergency/survival kit and they are not attentive to weather forecasts. After resettlement, the respondents are now more weather conscious and take heed to PAG-ASA warnings, and some of the respondents has now own their emergency/survival kit at home. This is similar to the study on the adaptive capacity of Sendong Survivors conducted by Arsoler et al., (2013) in GMA, Kapuso, ¹⁸Galigao, J., Gorgonio, J., & Saquilabon, L. (2014). *Conditions of Sendong relocatees in Deus Caritas Village, Luinab, Iligan City.*

Mandulog which stated that resettled women are now more weather conscious, monitors on both television and radio warnings and some of them have prepared safety kit.²⁰ This just means that after they were affected by the typhoon and relocated into a safer locality, there have been changes in their disaster preparedness.

As mothers, all the respondents want is to have a disaster resilient family that is why they desire to have preparations such as emergency kits and financial reserves in case of emergencies. Furthermore, they also wanted trainings/drills for their children so that they would also be knowledgeable on disaster preparedness and also to prevent/lessen any kind of trauma caused by disasters. Lastly, most of them wanted to have a better condition particularly in their livelihood since a change of their living condition is a head start towards recovery.

Turning to the roles of respondents toward recovery, the respondents became more cautious and vigilant when it comes to their ecological, social or economic systems. This was manifested through the application of what they learned in the seminars and drills conducted. Part of this application is to prepare emergency kit, clean their surroundings and educate their children and husbands so that they would also be aware of disaster preparedness. Furthermore, they alert themselves by watching news on the television particularly on weather reports and listening to radio. Despite of the existing conflicts in their neighbourhood, respondents still choose to help each other since after all, they are part of the GK-Shell community.

In view of the gender role theory, the respondents became more cautious and vigilant when it comes to their environment. This was shown through applying what they learned in the seminars and drills conducted by preparing emergency kit, clean their

¹⁹Republic of the Philippines, 2010. National Disaster Risk Reduction and Management Act of 2010. Republic Act 10121 – August 2015

http://www.ndrrmc.gov.ph/attachments/article/45/Republic_Act_10121.pdf

²⁰Arsoler, H., Navales, J. & Pagente, T. (2013). *Living conditions of Sendong survivors: The case of the GMA Kapuso foundation housing beneficiaries in Barangay Mandulog, Iligan City.*

surroundings and teach their children and husband so that they would also be aware of disaster preparedness. Hence, their ability to prepare their family for disasters indicates of their social role as a mother which is the behaviour appropriate for their sex.

Conclusion

After analyzing the findings, viewed within the framework of this study, the following conclusions are advanced:

That the respondents, although most were only high school graduates, initiated to find jobs in their new resettlement even if they were low-paying ones just to earn additional income to supplement their husbands' income and to provide for their family's needs. The respondents were also able to maintain healthy and able-bodied family members since they are the main agents of primary health care. They prioritize the health of their family by taking good care of them especially their children. The respondents are also mainly responsible for domestic tasks cleaning the house, doing the laundry and cooking meals. Despite their bad housing conditions, the respondents took charge in finding alternative efforts such as planting flowers and have ornaments to beautify their houses making it more pleasant to live.

Regardless of their tragic experience with Typhoon Sendong, the respondents still managed to maintain their strong family ties. They played multiple roles such as "Ilaw ng Tahanan", mediators, role models, teachers and protectors in ensuring healthy family relationship. Clearly, the resettled women take the lead responsibility when it comes to sustaining strong filial links in their family. However, the respondents are still adjusting to their community. They have not established good relationships with their neighbours most of them since they do not mingle with each other and they mind their own business. This is because there is an existing leadership problem in the GK-Shell community and they do not want to involved or take part of it. Regardless of their community problem, they attend to block meetings and participate on community activities such as clean-ups and

tree planting. With this, respondents make an effort to achieve a neighbourly relationship with their co-resettled. Moreover, the respondents showed vigilance especially on their environment. This was manifested through their knowledge on disaster preparedness, application of what they learned in the seminars and drills conducted and preparation of emergency kits.

Recommendations

In light of the findings of the study and limitations identified easily the following recommendations are offered:

For future research areas, it is recommended to conduct studies on other resettlement/relocation sites, use of other qualitative methods such as case studies, focus group discussion, life story methods be used by future researchers and the use of other theoretical perspectives like conflict perspective on their social relation condition. It is also encouraged to focus on other vulnerable groups like children, elderly and physically handicapped on their views of recovery and the use of quantitative method with a bigger sample size among the respondents of GK-Shell.

For policy implications, officials of Barangay Canitoan should conduct different seminars, forums, and drills to strengthen the resettlers' disaster resiliency as well as ways to augment their incomes and the local government should give extra effort in disseminating information about Barangay Disaster Risk Reduction Management Plan.

Assessment of the Needs and Capacities of Women's Organizations in Bukidnon, Philippines

by:

ALISA M. CABACUNGAN, M.A.

EVA N. MENDOZA, Ph.D.

alisa_mar@yahoo.com

evamendoza@cmu.edu.ph

College of Arts and Sciences

Central Mindanao University

University Town, Musuan, Bukidnon

Women empowerment in the Philippines is further strengthened with the enactment of Republic Act No. 9719, otherwise known as the Magna Carta of Women. Through its provisions, the Magna Carta of Women ensures equal opportunities for productive and economic activities for both men and women. Thus, several women organizations in the province of Bukidnon were established as well as in the country in general. Through a survey conducted to 240 women and interview to 15 key informants, this paper assesses the women's organizations in terms of (a) organizational management and leadership and (b) their programs, projects, and activities. It also examines the issues, concerns, and problems encountered by the women's organizations and their mechanisms in addressing such issues. Findings indicate that there is a relatively positive assessment of women's organizations particularly in terms of management/leadership and activities. Nevertheless, the lack of advocacy-related activities limits the opportunity for women's organizations to address gender and development issues and concerns. Thus, there is a need for strengthening these organizations through capacity building activities.

Key words: women's organizations, management and leadership activities

INTRODUCTION

Republic Act (RA) No. 9710, or known as the Magna Carta of Women, ensures the empowerment of Filipino women and recognizes their role in nation building. This act provides the opportunity for women to participate in and benefit from any development activities in each of their locality.

The women's movement in the Philippines may have its beginnings in 1970's during the martial law era, but "it was only the early 1980's that the self-identifying feminist groups were formed" (Sobritchea, 2004). Hence, women's movement in the country had an origin of political activism stance, or if not, a "leftist origin". Many of the members of first women's associations were from the nationalist movement against martial law

regime. There were those from the "underground" as well as from NGOs which were into development work. Thus, their efforts were addressed to "women's issues and concerns within the context of a nationalist agenda for genuine agrarian reforms, nationalist industrialization, and peace with justice." They are also involved in "campaigns against militarism in the countryside, the proliferation of anti-communist vigilante groups, and war-related sexual crimes" (Sobritchea, 2004).

Women's movement in the Philippines could be described as "militant, nationalist, and cross-cultural" thus, can be explained within the context of its history. Its "strength and militancy" have "roots in the pre-Spanish period when women in this Pacific archipelago were active in social, economic, and political decision making. The imposed

Spanish colonial culture (1578-1898) which stressed male superiority, turned the tide against women, and the American colonial presence after 1898 reinforced male control of both economic and religious life” (Friesen, 1989).

In 1980s, there was an increasing number of women advocates. They took time conducting gender sensitivity seminars among “community residents, students, government employees, and CGO workers” which somehow resulted in an increased awareness of the public on “women’s issues and rights”. Two major women’s groups were formed during this decade namely: the Lakas ng Kababaihan (Group of 10, G-10); and the Women’s Action for Development (WAND) (Sobritchea, 2004).

The formation of women’s organizations in Bukidnon is an opportunity for RA 9710 to be effected in the province. According to the concurrent president of the Provincial Federation of United Women of Bukidnon, Inc. (PFUWBI), there are now more than 500 women’s organizations in the province. Some of these organizations were established in early 2000.

When organized, women could have a collective effort to pursue development initiatives. They could have stronger bargaining power as well. Women’s organizations could be considered as “viable institutions to undertake a variety of development activities such as health and family planning programs, income-generating projects, and literacy and education activities” (Trager and Osinulu, 1991). Indeed, the United Nations Development Programme emphasizes gender equality and women empowerment not only as human rights but also as pathways to the attainment of Millennium Development Goals and sustainable development (<http://www.undp.org/content/undp/en/ho>

[me/ourwork/womenempowerment/overview.html](http://www.undp.org/content/undp/en/ho/me/ourwork/womenempowerment/overview.html)).

Women empowerment is essential to build stronger economies and improve the quality of life of men, women, families and communities. Its significance in development initiatives is therefore without questioned. To develop empowered women, it is imperative that they must possess the necessary capacities, especially in decision-making process. Empowering women also entail giving them more responsibility. According to Aamodt (2010), increased responsibility can result in higher skill levels.

Hence, this study aimed to describe the programs and activities of the women’s organizations in Bukidnon, Philippines. It also assesses the women’s organizations in terms of (a) organizational management and leadership, (b) programs, projects, and activities, (c) establishing linkages and lobbying. Lastly, it examined the issues, concerns, and problems encountered by the women’s organizations and their mechanisms in addressing such issues. It is important to explore the experiences of these organizations to come up with accurate basis for developing more responsive interventions.

Though data on women’s organizations at the national level could be accessible, its local counterpart particularly in the province of Bukidnon, are not available at present.

On the other hand, the University, particularly the University Center for Gender and Development (UCGAD), is expected to play its role in the development of the province. It could be noted that UCGAD aims to “develop and initiate programs to help the government implement its plans for a gender responsive development,” and to “serve as resource center for gender/women’s programs and studies”. Thus, assessing the women’s organizations in the province

provides UCGAD the opportunity to identify its entry points for helping the women's organizations in particular and the province in general. Generating data on the experiences of women's organizations provides UCGAD with the basis for coming up with more responsive extension projects or development initiatives.

METHODOLOGY

Research Design and Locale of the Study

As a descriptive and exploratory study, it described and explored on the experiences of the women's organizations in order to assess their needs and capacities. This study was conducted in the province of Bukidnon, Philippines which is composed of two cities and twenty municipalities. During the conduct of this study, the province still had three political districts (presently, it has four districts). As of 2010, Bukidnon has a total population of 1,299,192 (<https://psa.gov.ph/directory>).

Data Gathering Methods/Tools

This study utilized quantitative and qualitative methods of data collection. For quantitative, a survey was conducted using structured survey questionnaire. However, qualitative methods such as Focus Group Discussions (FGDs) and Key Informant Interviews (KIIs) were conducted prior to the construction of survey questionnaire in order to generate more accurate categories and measures for the latter.

Specifically, in the "assessment items" on the survey questionnaire, the respondents were asked to rate from 1 to 5 (where 5 as the highest and 1 as the lowest). The qualitative description was likewise explained to the respondents.

Moreover, FGDs and KIIs were conducted in order to probe or generate in-depth responses particularly on the experiences of women's organizations using a semi-structured interview schedule. Key informants and participants in the FGDs were purposely selected based on certain criteria such as number of years as members in the organizations, and position in the organizations. A review of secondary data (e.g. constitution- and by-laws, reports) was likewise conducted.

Sampling Procedure

This study employed a multi-stage purposive or non-probability sampling. Firstly, two municipalities were purposely selected from each of the three districts of the province. These municipalities include Sumilao and Pangantucan for the first district, Lantapan and Malaybalay for the second district, and Quezon and Maramag for the third district.

Consequently, two barangays (one "near" or "poblacion" and one "far" or a barangay that is relatively far from the "poblacion") were selected from each municipality. The selection of "near" and "far" barangays is based on the assumption that proximity or distance from the "center" (of social activities) affects social participation e.g. "near" barangay has more access to opportunities for social participation. In each barangay, twenty members were selected. Thus, 240 members were conveniently selected as a sample in the survey. Convenient sampling, and not random sampling, was used because of the absence of a complete list of members.

Thirteen Key Informants (KIs) were also selected based on identified criteria. There were also five Focus-Group Discussions that were conducted separately.

Data Analysis

A univariate analysis was employed in this study. Thus, basic descriptive statistical tools (e.g. frequency, percentage, range, and mean) were used in the analysis of quantitative data. Moreover, the data that were generated through qualitative methods were transcribed and subjected to thematic analysis where patterns and themes of the responses were determined and analyzed to form part of the discussion.

RESULTS AND DISCUSSION

Programs and Activities of Women's Organizations

Table 1 presents the programs and activities of the women's organizations in Bukidnon. Basically, these projects and programs were formulated to help women become more empowered (socially and economically). As indicated in their Constitution and By-laws, they are required to participate in regular meetings. To support their barangay's clean and green program, they also conduct "Bayanihan/Pahina" regularly.

The livelihood/financial program of the women's organizations is considered to be the backbone of their organizations. Without this program, few will be interested in becoming members. In fact, according to one respondent, "*naporma among grupo tungod sa among gusto nga makadawat og livelihood activities.*" (Our group was formed because of our desire to receive livelihood activities).

Another livelihood activity of women's organization is swine-raising. This activity was an initiative of the local government unit (LGU). The members were not consulted if they want to raise swine. Some members would opt for other livelihood activities but they were not consulted. They just received what was

offered to them.

Table 1: Programs and Activities of the Women Organizations in Bukidnon

Programs	Activities
Organizational/ Barangay Participation	Meetings (Regular and Special)
	Bayanihan/Pahina
Livelihood/ Financial	Lending
	Bigasan ng Bayan
	Botika sa Barangay
	Cattle/Chicken Dispersal
	Material Recovery Facility/Recycling
	Canteen
	Nursery
	Backyard Gardening (Vegetable)
	Swine-raising
Skills Training	Training on making Handicraft, bag, soap, candle, custom jewelry, mat, etc.
	Training on Food Processing, Baking, Cooking
Seminar	Gender and Violence Againsts Women and Children (VAWC) related topics
	Financial management
Recreational	Women's Day Celebration
	Christmas Party
	Lakbay Aral/Field Trip
	Municipality/City Foundation Day

Other livelihood activities (e.g. Bigasan ng Bayan, Botika sa Barangay, Nursery, Material Recovery Facility) were conceptualized by the organizations taking into consideration the resources (manpower, physical and financial) they have.

Some private organizations (companies and non-government organizations) organized skills training which targeted the women participants. Also, seminars on gender-related topics were conducted by government agencies

though the participation is limited to officers of the organizations.

The Women’s Day Celebration is a national activity thus, its conceptualization is at the national level. Other recreational activities (Christmas Party and Lakbay Aral) are planned by the organization (either by the officers only or with participation by the members). They also participate in the Municipality/City Foundation Day by joining the parade and showcasing their talents.

In a related study among 111 women’s groups in the country, Sobritchea (1999) described that the programs of these organizations include welfare services, gender training and education, health and medical service, livelihood and small business, advocacy, and research on women’s issues and concern.

Assessment on Women’s Organizations

The selected women’s organizations in the province are assessed in terms of some of their structural characteristics and experiences namely; status of membership, goals and objectives, organizational management and leadership, programs/projects and activities, and problems. The assessment is based on the responses of 240 respondents.

Status of Membership

Table 2: Respondents’ current position in women’s organizations (N=240)

Current Position	Frequency	Percentage
Officer	71	29.6
Member	169	70.4
TOTAL	240	100

Table 2 presents the member respondents’ current position in women’s organization. It can be observed that majority (70.4%) of the respondents are

members while only a few (29.6%) are officers. Their average number of years as part of women’s organizations is 7.4.

Certain characteristics of the leaders may guarantee excellent leadership however, it is not always the case. Aamodt (2010) described that effective leadership is an outcome of placing the right person in the right place at the right time.

The members are women of a diverse demographic profile. They are professionals and non-professionals of different levels of educational attainment. Some are employed in public or private sectors. Others are self-employed, and entrepreneurs, while there are also full-time housekeepers. Different ethnic tribes comprise the membership of the organization that includes the lumads of Bukidnon.

Table 3: Respondents’ status of membership in women’s organizations (N=240)

Status of Membership	Frequency	Percentage
Active	203	84.6
Inactive	27	11.3
Not sure	10	4.2
TOTAL	240	100

When asked about the status of their membership in the organization, many (84.6%) claimed that they are active members as shown in Table 3. Those women who considered themselves as inactive may have the desire to actively participate in organizational activities but they are just constrained with household and maternal responsibilities.

Membership in the local chapter is open to all willing and committed women residents of the barangay who are 18 years old and above (except for the Malaybalay City Federation of Local Council of Women, Incorporated whose qualification for membership is determined by its board). A member may be

considered as good standing by complying all the duties and responsibilities of the local organization.

The participation of the members is important for the success of the organization. With the contention of the Leader-Member Exchange Theory that the quality of the relationship between the leader and member will have a significant effect on the attainment of the organizational goals (Levy, 2010).

Goals and Objectives

Table 4: Respondents’ purposes/reasons for joining women’s organizations (Multiple response: N=240)

Reason/purpose for joining	Frequency	Percentage
Livelihood & skills training	186	77.5
Financial benefit	90	37.5
Participate in barangay activities	81	33.8
Awareness of social issues	72	30.0
Recreational activities	70	29.2
Others	38	15.8

Data in Table 4 show that many (77.5%) of the member respondents considered livelihood or skills training as their main reason for joining women’s organization. They mentioned that most of the women were enticed to join in women’s organizations because of the possibility of availing skills’ training and livelihood project that may augment their income. Consequently, majority (60%) of the respondents revealed that they have achieved their objective of benefitting livelihood and skills training as shown in Table 5.

Table 5: Achieved purposes for joining women’s organizations according to respondents (Multiple response: N=240)

Achieved purpose	Frequency	Percentage
Livelihood/skills training	144	60.0
Recreational activities	71	29.6
Participate in barangay activities	67	27.9
Financial benefit	57	23.8
Awareness of social issues	45	18.8
Others	15	6.3

McKee (1989) found that the sector- and function-focused strategies offer the most promise for helping women to make significant economic gains. Women’s organizations are established for various purposes.

In Nigeria, some of the women’s organizations are formed in order to generate savings and provide access to credit. They develop not only “village-level income generating projects or projects aimed at small and micro-enterprise development and skills training for rural women but also based on savings and credit programs” (Mc Cormack, Walsh, & Nelson, 1986 cited in Trager and Osimulu, 1991).

Table 6: Objectives of women’s organizations according to respondents (Multiple response: N=240)

Objective of women’s organization	Frequency	Percentage
To provide livelihood for women	195	81.3
To make women aware of their rights	95	39.6
To support barangay activities	79	32.9
Others	26	10.8

It can be noted in Table 6 that most (81.3%) of the member respondents considered providing livelihood to women as an objective of women’s organizations. In effect, it was also identified by majority

(67.5%) of the respondents as had been achieved by their organization as shown in Table 7. Evidently, it is the primary reason why most of women’s organizations in the province are established as mentioned above.

One of the reasons why women join women’s organization is to avail of livelihood programs/activities. Accordingly, the local chapters of Provincial Federation of United Women in Bukidnon, Inc. (PFUWBI) had been organized with some of their members originating from the Rural Improvement Club (RIC), a barangay-based nationwide non-government organization in the country which adopts comparable objectives. The latter, however, focuses only on uplifting the living conditions of women by building self-reliance and acquiring/learning the skills of livelihood operations.

Table 7: Achieved objectives of women’s organizations according to respondents (Multiple response: N=240)

Achieved Objective of the Organization	Frequency	Percentage
To provide livelihood for women	162	67.5
To support barangay activities	84	35
To make women aware of their rights	79	32.9
Others	3	1.3

McKee (1989) identified the measures of effectiveness of those programs that support poor women’s income earning and these include meaningful, sustainable increases in income levels for large numbers of participants; policy and regulatory changes that expand economic choices for the poor; increases in aggregate employment, economic growth, and diversification of the local economy; and “empowerment”—evidence that women mobilize and gain more control over their social, political, and economic lives.

Seminars and training had been done for the development of agricultural and entrepreneurial skills of the women in the barangays, and they were able to avail of livelihood projects such as “Bigasan” (Rice Retail Center) cooperative store, handicrafts, hog/swine-raising, goat-raising and money lending for small business or microenterprise. To avail of such livelihood projects had become the distinct if not the sole motivation of the women in the barangay in joining the local chapters of PFUWBI.

Table 8: Reasons for not achieving the objectives of women’s organizations according to respondents (Multiple response: N=240)

Reason for not achieving the objectives of the organization	Frequency	Percentage
Lack of support (financial, technical)	40	16.7
Inactive/non-participative members	17	7.1
Poor leadership	11	4.6
Others	8	3.3

Only a few mentioned of reasons for not achieving the objectives the organization. Of these few respondents, there are those who identified lack of financial and technical support (16.7%), inactive members (7.1%), and poor leadership (4.6%) as revealed in Table 8. McCusker (2002) revealed that change in livelihoods was found to be minimal largely due to lack of capital, lack of skills and labor, and gender bias.

Organizational Management and Leadership

Table 9 presents the assessment of respondents in the areas of organizational management and leadership. It can be gleaned from the results that all the areas have a very

satisfactory rating, except for establishing linkage with other organizations/institutions which have a rating of satisfactory. However, there were some members and even officers who revealed that there is still a need to enhance the organizational and management skills of the leaders.

Table 9: Assessment of respondents on areas of organizational management and leadership (N=240)

Criteria	Assessment/ Rating	Descriptive Rating
Selection of leaders	4.05	Very satisfactory
Fairness in dealing with members	4.05	Very satisfactory
Dedication, sincerity, and honesty of leaders	4.02	Very satisfactory
Effectiveness in meeting targets/objectives	3.98	Very satisfactory
Coordinating activities and disseminating information	3.93	Very satisfactory
Financial management	3.92	Very satisfactory
Motivating/ encouraging members	3.90	Very satisfactory
Settling conflicts	3.82	Very satisfactory
Lobbying	3.59	Very satisfactory
Establishing linkage with other organizations/institutions	3.48	Satisfactory

As reflected in Table 9, the respondents rated the selection of leaders positively because the officers of the women's organizations are directly elected by the members.

Most of the presidents were elected based on the qualities and skills that they possess. There are those who have served the organizations for a very long time and still continue to lead because of their leadership skills. Thus,

their dedication, sincerity, honesty, as well as their effectiveness in meeting their targets and objectives are rated very satisfactorily.

Most of their livelihood activities really help in improving the quality of life of the members and their families, and their relationship, in general, is harmonious thus, financial management and setting of conflicts are rated very satisfactory. In this way, they also help in motivating and encouraging the members to participate more.

Also, the Local Government Unit (LGU) in Bukidnon assigned an office to monitor the activities of these women organizations and serves as an overseer. Thus, they function well in coordinating and disseminating information their organization. In fact, they have regular meetings and annual provincial women's month celebration. Also, because of close coordination with the LGU, lobbying is rate very satisfactory. However, there is still a need to establish linkage with other organizations and institutions because this is the only area rated as satisfactory.

Programs, Projects, and Activities

Table 10: Activities of women's organizations according to the respondents (Multiple response: N=240)

Activities	Frequency	Percentage
Meetings	198	82.5
Livelihood projects	177	73.8
Recreational and civic activities	154	64.2
Trainings	132	55.0
Advocacy	23	9.6
Others	7	2.9

Many (82.5%) of the respondents mentioned of meetings as one of their activities, as shown in Table 10. More so, majority (73.8%) of them identified livelihood projects as their activity. As mentioned above, most of the women's organizations in the different barangays

and municipalities in the province were organized primarily because of a certain amount provided to them for a livelihood activity.

It can be noted that this finding is consistent with the results of studies on women's organizations in the Philippines as well as that in other countries, as mentioned above. However, livelihood activities are just one of a number of their initiatives and to name a few; education and training, advocacy campaigns, etc. These activities are less likely conducted by the women's organizations in the province. In fact, the same table shows that only a few (9.6%) of the member respondents identified advocacy as their activities. Thus, it may be implied that the said organizations in the province still have a low level of awareness of gender and development issues.

Table 11: Assessment of respondents on areas of organizational activities (N=240)

Criteria	Assessment of activities					
	Livelihood	Descriptive Rating	Trainings	Descriptive Rating	Recreation	Descriptive Rating
Participation of members	3.59	Very satisfactory	3.55	Very satisfactory	3.75	Very satisfactory
Efficiency in attaining objectives	3.62	Very satisfactory	3.48	Satisfactory	3.69	Very satisfactory
Relevance to women's needs	3.84	Very satisfactory	3.70	Very satisfactory	3.71	Very satisfactory
Wise use of resources	3.75	Very satisfactory	3.65	Very satisfactory	3.65	Very satisfactory
Overall assessment	3.88	Very satisfactory	3.69	Very satisfactory	3.76	Very satisfactory

Data in Tables 11 and 12 show that except for the efficiency of training in attaining the set objectives and the participation of members in advocacy-related activities (with satisfactory rating), all the areas on organizational activities are rated very satisfactory based on identified criteria. In fact, the overall assessment of areas related to organizational activities of the member respondents is very satisfactory. It could be noted that the activities referred here

are primarily meetings and livelihood project.

Table 12: Assessment of respondents on areas of organizational activities (N=240)

Criteria	Assessment of activities					
	Advocacy	Descriptive Rating	Meetings	Descriptive Rating	Others	Descriptive Rating
Participation of members	3.44	Satisfactory	3.82	Very satisfactory	3.25	Satisfactory
Efficiency in attaining objectives	3.55	Very satisfactory	3.75	Very satisfactory	3.00	Satisfactory
Relevance/responsiveness to women's needs	3.72	Very satisfactory	3.85	Very satisfactory	3.00	Satisfactory
Wise use of resources	3.75	Very satisfactory	3.88	Very satisfactory	3.75	Very satisfactory
Overall assessment	3.67	Very satisfactory	3.92	Very satisfactory	4.40	Very satisfactory

Majority of the respondents mentioned that they participate in meetings (66.3%) and livelihood projects (62.5%) as shown in Table 13. Only a few (19.2%) are participating in advocacy-related activities thus, consistent with the above data that women's organizations are just having meetings and livelihood projects.

Table 13: Participation of respondents in organizational activities (Multiple response: N=240)

Participation in activities	Frequency	Percentage
Meetings	159	66.3
Livelihood projects	150	62.5
Recreational and civic activities	124	51.7
Trainings	117	48.8
Advocacy	46	19.2
Others	5	2.1

Table 14 shows that the primary reason for not participating (or for less active participation) in organizational activities is being busy with household chores. This result is consistent with the above contention that certain factors particularly the traditionally associated domestic roles (childbearing and child rearing) and productive roles are hindering women to participate in social activities.

Table 14: Respondents' reasons for non-participation in organizational activities

(Multiple response: N=240)

Reason for non-participation	Frequency	Percentage
Busy with household chores	40	16.7
Disinterested	9	3.8
Not informed	8	3.3
Far from the house	3	1.3
Others	41	17.1

Problems of Women's Organizations

Table 15: Organizational problems/issues according to respondents (Multiple response: N=240)

Problems/issues	Frequency	Percentage
Inactive participation of members	111	46.3
Lack of support	101	42.1
Misunderstanding	61	25.4
Poor leadership	28	11.7
Others	26	10.8

Table 15 reveals that almost half (46.3%) of the respondents considered inactive participation of members as a problem of their organization. It can likewise be gleaned from the said table that few (11.7%) of them identified poor leadership as a problem.

However, it can be argued that encouraging members to participate in activities is a component of leadership. A good leader is expected to motivate her members to get involved in activities. It may also mean conceptualizing and implementing activities that are of interest to women.

Yudelman (1987) described the strengths and challenges facing women's development organizations are discussed in terms of policy impact, the role of leadership, the need for management

systems, the role of boards of directors and other protectors.

Table 16: Mechanisms to address organizational problems/issues according to member respondents (Multiple response: N=240)

Mechanisms to address problems/issues	F	%	Rating	Descriptive Rating
Confrontation/dialogue	128	53.3	3.5	Very satisfactory
"leave it as it is"	46	19.2	3.19	Satisfactory
Refer to federation officers	25	10.4	1.69	Fair
Others	24	10.0	3.29	Satisfactory

Confrontation or dialogue was identified as a mechanism to address organizational problems according to more than half (53.3%) of the respondents as shown in Table 16. It is also rated as "very satisfactory" mechanism in addressing the organizational problem.

The "confrontation technique" has been used successfully in complex organizations. Roberts (2002) demonstrated the advantage of dialogue in managing contradictory motives and forces in the organizations. It is specifically effective when traditional problem-solving methods have failed, thus preventing any one group from imposing its definition of the problem or its solutions on others.

Table 17: Respondents' recommendations to women's organization (Multiple response: N=240)

Suggestions/recommendations	Frequency	Percentage
Financial support	210	87.5
Technical support	109	45.4
More relevant activities	83	34.6
Improve participation	79	32.9
Improve leadership	48	20.0
Better dissemination of information	36	15.0

Table 17 shows that many (87.5%) of the respondents recommended for financial support to women's organizations. Almost half (45.4%) also mentioned of technical support.

On one hand, Yudelman (1987) emphasized the importance of donors in helping women's organization attain their goals and objectives as well as disseminate their experiences. Kabeer (2005) on the other hand, found that though financial aid can contribute to economic productivity but it is dependent on context, commitment and capacity of these women. Thus, improved participation and leadership are important factors for the success of women's organizations.

CONCLUSION

There is a relatively positive assessment of women's organizations particularly in terms of management/leadership and activities. Nevertheless, it could be contended that while conducting meetings is a necessity for organizations, having it as a major (if not an only) activity may indicate a less "mature" organization. Lack of advocacy-related activities where gender and development issues are learned and internalized limits the opportunity to address the concerns of women (e.g. multiple burden, domestic violence, subordination, and marginalization).

More so, the livelihood projects of the women are truly augmenting their meager income. There is, however, a need to widen the scope and evaluate these activities. The members have to participate from conceptualization to evaluation of such activities so that they could be more supportive thus, sustainability is ensured.

The low participation of women is affected by the traditional notion that women are expected to perform primarily

the domestic role. Hence, addressing it through shared domestic responsibilities may facilitate the participation of women to socio-civic activities.

RECOMMENDATIONS

The livelihood projects of the women are truly augmenting their meager income. Thus, there is a need for more livelihood programs of the women's organizations to be conceptualized and implemented. In addition, there is also a need to widen the scope of these activities. Also, it is important that the members have to participate from conceptualization to evaluation of such activities so that they could be more supportive thus, sustainability is ensured. To better serve the women and their concerns, there is a need for more activities directed towards Gender and Development (GAD) and Violence Against Women (VAWC) issues.

To ensure sustainability of programs and activities of women's organization, these have to be regularly monitored and evaluated. Thus, there is a need for a standardized monitoring and evaluation tool to be used for the activities of women's organizations in the province.

The success of any organization is dependent on the people or the human resources. Thus, there is a need to enhance the capabilities of women and their organizations.

Abstract

The end of the World War 2 signalled the demise of European colonialism in Southeast Asia. The independent states that emerged over decades were committed to gender equality. These pave way to opportunities of giving equal treatment between men and women to participate and be involved in both societal and political activities of the region. The main goal of this research is to study and compare similar political struggles shared by each woman of the region, to review significant policies championing the role of women in the region's political sphere, to stressed noteworthy contributions of influential women who arise for the development of their governments and to conduct analysis on how all this factors affect the past, current and future condition of the Southeast Asian Countries. Emerging as empowered and influential women is never easy for every women of Southeast Asia since several barriers have come their way that led to serious struggles on their political participation on their respective countries. Significant struggles and barriers shared by the countries of the region include: First, the great influence of their respective traditional conservative norms which value women less than men; Second, the religious influences brought by their former colonizers which conveyed negative attitudes towards women; Third, the impacts attributed by state-society relations; Fourth, the struggle towards education, literacy and awareness about politics; Lastly, the time each woman could allocate to join the political sphere.

Despite all those, women have never stop striving thereby arise as influential women in modern day politics thus gave inspiration to every woman of Southeast Asia. Ranging from advocacies like independence, women empowerment, democracy, and crusades against corruption, these women made a very big impact to the world's ideology that "Men were born as leaders, and women as followers."

Key Words: Women Empowerment, Political Struggles, Democracy

INTRODUCTION

The 11 countries of Southeast Asia include over 550 million people. Despite great linguistic and cultural diversity, the region is characterized by the relatively favorable position of women in comparison with neighboring regions, East and South Asia. This has been explained by several factors: traditionally kinship was traced through both maternal and paternal lines; a daughter was not a financial burden because of the widespread practice of bride price; a married couple often lived with or near the wife's parents; women had prominent roles in indigenous ritual; their labor

was essential in agricultural field and they dominated local markets. Overtime, however, the rise of centralized states and the spread of imported philosophies and religions provided increasingly privileged males and stressed female subordination. Although such influences were not noticeable among the elite, the strength of local traditions was always a moderating force (Andaya, 2009).

In the nineteenth, century Southeast Asia's economic resources and strategic position between India and China lead to increasingly European involvement. By the 1890's the entire region except for Thailand was under European

Control. In some areas women were recruited as cheap wage labor on plantations and in processing factories. At the village level colonial regimes strengthened the male position as head of the household and reformed customary laws that had given women considerable autonomy. Similar trends can be found in Thailand, the only non-colonized country, where legal codification strengthened patrilineality. Those developments encourage a preference for sons rather than daughters. Nonetheless, women were still influential in community life, at times even leading anti-colonial rebellions. Increasing literacy for women and exposure to western feminism encouraged elite women to confront issues on gender inequality

(http://www.asianlink.com/org_egxryy, Retrieved February 23, 2016).

From the late nineteenth century nationalist movements developed across Southeast Asia. Male leaders focused on political independence but educated women were equally concerned with polygamy, divorce, domestic abuse and financial responsibilities of fathers. For the most parts, however, politicized women accepted the male argument that attention to female concerns should be delayed until after independence was attained, yet despite active involvement in anti-colonial movements, sometimes as fighters, but more often as strike organizers, journalist, couriers, and clandestine agents women were viewed as auxiliaries rather than partners. Such attitude was still evident in the independence movements that exploded after the surrender of the Japanese, who occupied most of the Southeast Asia between 1942 and 1945 (http://www.asianlink.com/org_egxryy, Retrieved: February 23, 2016).

The end of the World War 2 signaled the demise of European colonialism in Southeast Asia. The independent states that emerged over the next 15 years were committed to gender equality. Southeast Asian countries with the exception of Laos and Vietnam, signed the Convention on the Elimination of All Forms of Discrimination Against Women promoting gender equality that pave way to opportunities of giving equal treatment between men and women. Such opportunities for women include the right to participate in the societal activities as well as in the political involvement of women in the region (Andaya, 2009).

The end of the World War 2 signaled the demise of European colonialism in Southeast Asia. The independent states that emerged over the next 15 years were committed to gender equality. Southeast Asian countries with the exception of Laos and Vietnam, signed the Convention on the Elimination of All Forms of Discrimination Against Women promoting gender equality that pave way to opportunities of giving equal treatment between men and women. Such opportunities for women include the right to participate in the societal activities as well as in the political involvement of women in the region (Andaya, 2009).

BARRIERS AND STRUGGLES: OBSTRUCTING WOMEN IN SOUTHEAST ASIAN POLITICS

Emerging as empowered and influential women is quite hard and challenging for each woman in the Southeast Asian Region since a number of barriers have come their way that pave way to serious struggles on their political participation on their respective countries.

One significant barrier obstructing women in Southeast Asian politics can largely be attributed to the great influence of its traditional conservative norms which value women less than men. This cultural context sets discriminatory social and political rules for women which generally hinders social changes. This is very true in some countries of the region particularly in Cambodia where women represent 51 percent of the country's population, yet their ability to participate as equal partners in social, political, and economic life is severely constrained. Cambodian society is very traditional and moralistic and this hinders social changes and thus blocks women from effectively participation in Cambodian development. In elected and appointed positions, Cambodian women are significantly underrepresented in the political sphere. Men dominate all branches and levels of government, and paid more than women for the same work. Marginalization and limits on effective participation are what female politicians face in Cambodia. The Prime Minister started only to grant significance and to finance proposals for the promotion of gender equality in 2006. Though women's representation in political parties is required there are still no efforts in place to promote their active participation. On many

occasions, to keep their positions these women have to align themselves with men's decisions and they cannot defend their interests.

At all levels of government women are relegated to the sectors of childhood, women and social parties. This division is not only discriminatory in itself but it also has a negative impact since budgets for these sectors are minimal and the decision-making power is very limited. Thus, women do not acquire the competencies any political man develops and which are so necessary for internal promotion with government structures.

Similar to Cambodia, the traditional cultural attitude hindering women political participation continues in the case of Vietnam. The cultural context establishes limitations to women with regard to their political and social participation. Women are responsible for all family care and they must remain at home, they lack the support of their communities and families for being involved in politics. Moreover, there are no measures in place to implement public services to support family care and so far private services are very expensive, thus it makes economic sense for women to take on all responsibilities involving the family. However, the situation with regard to gender equality still lacks the necessary support for structural transformations; the traditional attitudes still contribute to maintaining a discriminatory society against women hindering them from having a voice and claiming their rights. Similarly, women in decision-making positions are mainly in charge of sectors considered as women's privilege, such as education, social issues, youth or ethnic minorities, and their presence in sectors such as the economy, budgets, security or defense is minimal. Women's participation at local level is limited, although less than that at national level. Women's positions in local government are not strategic and they are not given the same responsibilities as the ones provided to men in the same position. In the provinces, in the party buildings and in the people's committees there are no women, they can only be found in the Women's Union offices.

Moralistic traditional culture also brought negative attitude towards the political participation of women in Thailand. It is still common in Thailand to view women and politics as totally opposite entities. Since the traditional political culture in Thailand has been essentially

elitist and non-egalitarian, thus many traditional views on the role of women continue to prevail. The role of women has long been confined to that of wife, mother and housekeeper. It seems that the demands of domestic and parental obligations and the social separation of the sexes have prevented women from participating in the society of the same level as men. As a result, women have thereby not been able to obtain the experience required for a political career. One of the most important cultural factors in explaining women's underrepresentation in politics is sex-role socialization. According to theories of sex role socialization, women and men are socialized to accept gendered assignments to different kinds of roles in life. For instance, women's domestic roles are viewed as incompatible with the toughness and assertiveness that politics and political leadership require; thus politics is perceived as a male domain. As a consequence, such stereotypical attitudes influence whether women are prepared to run for office. What is discovered in many societies with traditional cultural values is that women may be reluctant to come forward as candidates for elected office. In a survey of nearly 200 female parliamentarians in 65 countries by the Inter-parliamentary Union (IPU), many respondents (76 percent) cited hostile attitudes toward women's political participation as an important obstacle to running for parliament (Inter-parliamentary Union 2000).

In Myanmar and Laos, leadership is almost exclusively associated with men, wherein men are described as natural leaders and women as followers. There is a belief that to be a leader demands a more masculine approach. Many women leaders were acutely aware of deeply rooted social stereotypes, norms, and gendered discrimination which act as barriers to women attempting to advance in their fields, as well as these barriers' impact on the views of men whose support for their work was needed. The prevalence of gendered stereotypes has a direct impact on women's confidence in their own abilities to lead and how women's capacities to perform their leadership roles were perceived. In the area of women's leadership abilities unease in the leadership role or with the title of leader was commonly felt at the community level. There was a sense of fear of not doing as well as they felt they should or would want to in their roles. This anxiety was linked to lack of technical skills and sense of duty and obligation to fulfil a role that

seemingly few other women wanted or were able to do. Whenever women felt burdened by their role, the role itself became disempowering. In the area of lacking confidence on women, all national level leaders were being confronted early on in their careers by the lack of confidence others had in their ability, specifically because they were women.

Women are restricted in the decision making process. Even in their homes, women are seen as housewives and mothers and men are seen as fathers and superiors. Superiority gives you the power to make decisions, same thing in the government, women are restricted from making decisions because they are seen as inferior over men. There are negative perceptions in women's essential capacities for leadership which had clear knock-on effects on the nature and extent of involvement women could have in public life. The views of men across diverse regions in Myanmar reflected strong gendered stereotypes of women's involvement in community affairs and engagement in leadership roles. East Timor, Singapore, Brunei, Indonesia meanwhile also shared the same struggles with that of the mainland Southeast Asia. The societal and cultural norms are patriarchal resulting in a strict division of female and male roles, being very restrictive for women by limiting their possibilities for holding decision-making positions in public life as well as economic and mobility independence. The political structures are made up mainly of men, the structures do not consider women's rights. Another factor obstructing women political participation is the religious influences by their former colonizers, foreigners, and traders. Malaysia and Indonesia for instance have low representation of women in politics due to the politicization of religion. The islamization, or perhaps more appropriately, the arabization of society, state and laws in this countries are leaned on Islamic teachings. Unfortunately, the perspective of Islam adopted by the state determines that women may not be leaders, and this affect how women are regarded and treated. Out of 30 positions in the ministerial cabinet of Malaysia, only one position is occupied by women, the Minister for Tourism. The same factor also affects the Philippines and East Timor; it's just that these two countries are predominantly Catholic. Its influence acts as a serious obstacle, both at political level, preventing the approval of legislation defending

women's right and at social level, causing restrictions and limitations in the roles women can take on. The role of the Muslim religion in the Autonomous Region of Mindanao is also discriminatory for women, since religion is used to argue politics is not the place for women and neither fits their role in society. Filipinos have proven that they are able to carry out their responsibilities and duties in the political domain alongside their male counterparts. However gender stereotypes based on the religious beliefs that have been ingrained from childhood might explain why their political representation has not been satisfying. Women who are able to participate in politics are seen to have burst through the masculine glass ceiling.

Third obstacle that barred women's participation in Southeast Asian politics is their state-society's relations. In Myanmar for instance, before it was democratize just recently it was first under an authoritarian regime with a military dominated bureaucracy. This causes fear to anyone most particularly the women to participate in any political aspects. Commemoratively, even Aung San Suu Kyi the woman who arise for the democratization of Myanmar had experience all coercions and penalties from the military dominated government. Same thing with Brunei, since it's an absolute monarchy who embraces an authoritarian regime, women only submit to what the men leader would command. Meanwhile in the Philippines the dynastic system of political connections limits the possibility of women to be elected, general Filipino women only earn their seats due to their fathers or husbands' political allies and popularity. The decentralization process initiated by Indonesia in 2004 on the other hand is far from being an opportunity for Indonesian women political participation and representation. It conveyed a revitalization of the traditional institutions and the adoption of laws and regulations based on religious doctrines, both Muslim and Christian. Laws governing personal status are directly motivated by a very conservative reading of Sharia and they establish the superiority of man versus woman. This situation implies a great deal of lack of protection and discrimination against women, under the auspices of the law.

Struggle towards education, literacy and awareness about politics is also seen as one of the barriers in women's participation in Southeast

Asian Politics, in Thailand for example, women's educational background is important in determining the eligibility of women for elective office. It has been said often that women lack the appropriate background to be a candidate. Despite the fact that women's educational level in Thailand has risen substantially in the recent decades, it still seem to be disadvantageous for women relative to men. Many women leaders at the local level were disqualified from running for the national level because they lack university degrees.

Lastly, one of the largest barriers to women participation in political activity is time. This is most significant in the case of Laos where the major pre-requisites for nomination to party membership and to leadership positions are active participation in state organized activities; and punctuality, good attendance and willingness to perform overtime duties in the workplace. Women who are burdened with domestic concerns are often prevented from meeting these qualifications. Those women who have attained high positions in politics are in most cases related to powerful men in the country and have the resources to hire other women to perform their domestic duties.

CHAMPIONING LAWS AND INITIATIVES FOR POLITICAL PARTICIPATION OF WOMEN IN SOUTHEAST ASIA

The Southeast Asian region is quite surprising, especially with regard to women's political participation and representation. Despite the strong local patriarchies reflected in various gender coercions varying from one country to the next, with a very clear separation of roles, stereotypes and prejudices regarding women's role in society, this region has an outstanding trajectory in women's political participation and representation: thus, the first women in the world to be elected through democratic processes and to gain the highest positions of political representation have done so in this region (Rise of Women Participation, 2014). Moreover some countries have equality measures in place in terms of political representation and there is a significant associative and activist feminist fabric while some other countries had also initiate programs and somehow made it as a part of their laws and policies to empower the political role of women. This part aims to discuss the initiatives

and laws promoting the role of women in politics of each countries of the region: Singapore, Philippines, Indonesia, Malaysia, Brunei, Timor-Leste, Thailand, Vietnam, Cambodia, Laos, and Myanmar.

After obtaining independence from the Federation of Malaya, Singapore has arise as a progressive country and thereby create policies promoting gender equality in its political sphere.

There is much room for development for women in Singapore's politics and especially in the Singapore Democrats Party (SDP.) The women leaders have also been active in the region participating in several women caucuses organized by the Council of Asian Liberals and Democrats (CALD) of which the SDP is a member. The Women Democrats (WD) also organizes workshops and seminars on various topics like women's health issues, leadership development and community organization. Currently, WD members are actively involved in the party's Policy Community Services, Fund-raising, and Training & Development Units. As the SDP continues to expand, WD plays a greater role in shaping the party's future.

In 2004, the Government, under the new Prime Minister Mr. Lee Hsien Loong, made a significant advancement for women in politics and policy-making when he appointed three women political office-holders as part of his team. They were the Senior Minister of State for Finance and Transport (two portfolios), the Senior Minister of State for National Development and Education, the Minister of State for Community Development, Youth and Sports, and the Mayor of Southwest Community Development Council. More than a decade later, recent cabinet appointments saw only one woman appointed full Minister, four women Senior Ministers of State and 2 Mayors.

Similar to Singapore, Philippine women advocates also strive to give voice to women participation in Southeast Asian politics. Filipino feminism revolved around the context of the fight against dictatorship. Within the social movements, women groups that participated in men's demands and started to suggest that gender differences and patriarchal power should be taken into account in the struggle. When the dictatorship came to an end, they created the feminist party KAIBA (meaning "different"), and their members were later involved in the

institutions and NGOs promoting policies defending women's rights.

At a later stage, KAIBA divided itself into two groups that are currently represented by Abansy Pinai!, Pilipina and GABRIELA. These groups are currently very active in the Philippine feminist movement (Iwanaga, 2005).

The constitution guarantees the fundamental equality of women and men before the law and recognized the role of women in nation building. Further, Section 11 of the Magna Carta of Movement (MCW) provides for the acceleration of women's participation and equitable representation in decision-making and policy-making processes in government and private entities to fully realize their roles as agents and beneficiaries of development, (Magna Carta of Women, 2011).

Women are faced with numerous obstacles to partake a bigger role in politics and decision making. These obstacles include gender stereotyping, multiple burdens and lack of political education and support from political parties. To address these concerns and make women's presence in the field of governance more apparent and cognizable, several measures need to be implemented. These measures include leadership and capability development programs for women, advocacy for shared responsibility at home, and the full implementation of the temporary measures of the MCW, as well as of their related laws and policies. It is deemed that through these undertakings, parity between males and females in political participation and representation shall be achieved (Philippine Periodic Report to CEDAW, 2004).

In Malaysia, political reform started after the economic crisis swept over Southeast Asia and was led by Anwar Ibrahim in 1998. In 1999, the Women's Candidacy Initiative (WCI) was established, formed by women activists as a channel to advocate for women's agendas. Women's participation in politics in Malaysia was, quite unexpectedly, driven by the women's wing in political parties rather than by civil society movements. Post World War II, the first women's wing of the Malay National Party (MNP), named Angkatan Wanita Sedar (AWS), was founded in 1946. The British government went on to dissolve MNP and the AWS. AWS activists joined various organizations, including Pergerakan Kaum Ibu. In 1947, Pergerakan Kaum Ibu supported male

domination in the United Malays National Organization (UMNO), and women's wing of UMNO, called for women's representation in political parties and parliament, however she was subsequently dismissed from the party. Eventually, Malay women entered state politics through the inter-ethnic consociational model (ensuring representation of the minority) and in 1963 the multi-ethnic National Council Women's Organization (NCWO) was established. However, women's participation became even more limited. In the mid-1980s, women organizations within civil society organizations emerged, focusing on the issue of violence against women.

Malaysia's 10th election on 5 May 2013 was an important moment. For the first time, a woman from a civil society organization put herself forward as a candidate. Zaitun Mohammed Kasim, popularly known as Toni Kasim, was one of the founders of the Women's Candidacy Initiative (WCI) in the 1998 election. She was the first female independent candidate who participated in the 1999 election for the Selayang area. She did not succeed in her candidacy but she garnered 30,000 votes. WCI then actively advocated for women candidates, especially those who fought for gender fairness.

In 2013, prior to the election, *Mama Bersih* founded by *Persatuan Kesedaran Komuniti Selangor* declared a manifesto. The manifesto contained eight demands regarding gender fairness, the election system, economic development, and privileges provided for candidates during the campaign period. Three demands were addressed at Federal and Government levels in regards to the legal assurance for a 30% women's quota. However, their demands received little attention from both the Government and the public. Cho Eng described that in general, Malaysian politics was still closed to women. To increase the number of women in Parliament, a compulsory quota proportionate system is implemented. This is a seat reserve method similar to Timor-Leste. Curiously, in 1999, when a political tsunami took place, votes for the opposition rose from 41 to 81 seats.

This may be one of the causes that slightly changed the women's composition in Parliament, as opposition parties selected more women candidates to represent the parties

(Political Participation of Women in Southeast Asia, 2014).

The collapse of Suharto's New Order, for the first time since 1950, the freedom of expression, freedom of the press and free elections were restored.

In this context, Indonesian women and feminist activism increased and was consolidated, as well as their participation in the various sectors of society integrating them into the country's political dynamics.

This new era also gave way to a climate of political violence and to the most fundamentalist tendencies of political Islamism, which even at present position themselves against women's presence in the political and public arenas basing themselves on the holy texts and in the Sharia. In 2001, Megawati Sukarnoputri, daughter of Sukarno, first president of Indonesia, became the first female president of the country, considered by Forbes Magazine as one of the 100 most powerful women in the world at that time. Her mandate lasted until 2004, when she lost the presidential elections in favour of Susilo Bambang Yudhoyono, the current representative of this position.

However, the fact of having a woman in the highest political power position in the country did not translate into the expected advances in terms of equality among men and women. At present, women constitute 16.61 per cent of the National Parliament representatives, with 21 per cent in the DPD (Senate) and 11.5 per cent in the DPR (Constitutional Assembly). Since the 1987-1992 parliamentary term, a period when women's representation in DPR reached their highest, that number has been in decline. It reached its lowest level during the 1999-2004 parliamentary term, with only 9 per cent. Out of the 33 provincial governors elected in the whole country, there is just one woman and only 1.5 per cent of the municipalities are held by women. The percentage of women in public administration is 7 per cent. In government, out of 49 positions, only 4 are held by women: Trade, Finances, Health, and Secretariat of State for the empowerment of women. There is only one female judge in the Supreme Court.

In 2004 the first direct elections took place with two rounds for electing the President of the Republic. In the Senate the rate of women in office is higher since candidates are directly elected through preferential vote system and not

through electoral lists. This system has favoured women's political representation since they can count on the direct votes of other women. In 2004, the new electoral law introduced two important changes that benefited women's political participation and representation. The first was the introduction of a limited open list system in which voters can vote for a party and at the same time for a candidate of the party. This person would therefore be elected if he or she received a certain number of votes, even if he or she is not at the top of the list.

The women's initiatives for political openness since the country's democratization has benefited women's activities: there are more women's organizations and two women's political groups have been formed: *Kaukus Perempuan Parlemen* (the legislative group of women) and *Kaukus Politik Perempuan Indonesia* (the political group of Indonesian women). In 2003 these associations developed a women's network involving parliament, political parties and mass organization leaders. This coalition of activist women and representatives from the political world has put pressure on the parliament to adopt two positive action measures: Firstly a law on quotas aimed at the political parties. The latter must ensure a 30 per cent women's representation in the electoral lists. This law will be accompanied by sanctions for those parties that do not observe this legal obligation. Secondly, the political parties must rotate male candidates with female candidates in the electoral lists, with a minimum of one woman per each three men. According to the "Public Opinion Survey" made by IRI, dated January 2009, 75 per cent of female voters are in favour of introducing positive actions into electoral legislation.

There is a women's movement with a long trajectory dating back to 1928, when the first "Women's Congress" took place. A group of organizations joined forces as feminist organizations working for the defense of women's rights.

An agenda was gradually defined and the organizations put pressure on the media and used campaigns to make a political impact. At present they are concentrating their efforts in the political campaign and their slogan is "We women vote women."

There are groups of Muslim feminists who are trying to oppose the arguments of the Islamist radical groups. To avoid being accused

of defending western values, they search inside the regulations of Islam the arguments to defend their presence in the public arena and to ask for changes for their social status. They offer new interpretations of the Koran and the Hadiths. One of the most prominent figures of Muslim feminism is Siti Musdah Mulia, researcher in the Department for Religious Affairs of the Republic of Indonesia. She was in charge of reformulating the Compilation of Islamic Laws (KHI). This researcher is known for her position against traditional and radical interpretation of the Islamic laws (Gender Analysis: Political Participation, 2005).

Similarly, women in Brunei, in accordance with Koranic precepts, women are denied equal status with men in a number of important areas such as divorce, inheritance, and custody of children.

It has been a great help that the Women Council of Brunei Darussalam has successfully organized several awareness programs through seminars, courses, talks and goodwill meetings, signifying their concern for progress and development. The participation of women in voluntary organizations are becoming more prominent, either at local, regional or international level (Eight National Development Plan 2001-2005, Government of Brunei Darussalam).

Married Women's Law- the rights of non-Muslim married women with respect to maintenance, property and domestic violence.

Though just an emerging country after it obtained its independence from Indonesia, Timor-Leste has find ways to promote equality before each of its citizens.

The Law against Domestic Violence aims to help women navigate legalities. The enforcement of the law is important and continuing problem which leads to empowerment of women. So, this structures and policies about women were supported by UN Women and they were strong advocate about this matter. This act by UN Women set global standards for achieving gender equality and works with governments and civil society to design laws, policies, programs, and services needed to implement these standards. It stands behind women's equal participation in all aspects of life. This aspect focus on five priority areas these are: ending violence against women, increasing women's leadership and participation, engaging women in

all aspects of peace and security processes, enhancing women empowerment and lastly making gender equality central to national development planning and budgeting ([www.wikipedia.org/Human Rights in Timor Leste](http://www.wikipedia.org/Human_Rights_in_Timor_Leste), Retrieved February 23, 2016).

In 1932, women acquired the rights to vote and stand for election in Thailand following the change from the absolute to constitutional monarchy. Although Thai women were among the first in Asia to the gain the franchise, their situation in the political arena did not substantially change after women obtained the right to vote.

In 1955, a law requiring candidates in parliamentary elections to belong to political parties was enacted. During the last 15 years, Thailand has undergone an extraordinary transformation. It has changed from an authoritarian regime to a multiparty democracy in which politicians are chosen in regular elections. In the late 1990s, a range of new institutions was established. The new constitution has been heralded as one of the most important events in the democratization of Thailand's political systems, which witnessed the transformation of parliament and significant changes in the electoral system. The new constitution of 1997 has provided a significant enabling framework for gender rights. Article 30 states that women and men shall enjoy equal rights, this is a first step towards giving women more opportunities to participate in the male dominated political arena. It was the women's movement that has continually emphasized the gender-based capsizing of political institutions. Nevertheless, Thai women's role in politics continues to be minimized to tokenism in their ascent to political power (Bratton, 2002).

In the first elections, the Secretary of State for Women's Affairs was founded, and then it became a Ministry. Since the 1990s work has been carried out in an effort to incorporate a gender approach with a view to dealing with gender discrimination, inequality and vulnerability of women.

Other initiatives created were the establishment of the Cambodian National Council of Women (CNCW) where the Queen is the President of Honor of this council and the Prime Minister's wife is the Vice-president of Honor. The CNCW President is the Minister of Women's Affairs (CEDAW, 2005).

The primary challenges to gender equality are enabling equal access for women and girls to opportunities and resources, particularly for rural and marginalized women, illiteracy, poor reproductive and basic health, food insecurity and economic disenfranchisement rank high among development priorities for women.

Lao Prime Minister Thongshing Thammamong approved the first ever national draft strategy on gender; a broad plan designed to increase the number of women in senior positions in the government. The strategy is not yet public, and is not clear whether this will become a law or a decree, but it is at the top levels of government in leadership positions.

In relation with gender equality, the convention on the elimination of all forms of discrimination against women was adopted by the UN General Assembly on December 19, 1979, coming into force as a treaty on December 3, 1981. It is one of the core international human right treaties systems and referred to as the women's bill of rights of the UN treaty system. However, it is currently confined mainly to senior government officials or to the Lao Women's Union, National Commission for the advancement of women, established in 2003, and serves as Lao PDR's national women's machinery. It is tasked with formulating and implementing national policy for the advancement of women.

The establishment of Lao Business Women's Association (LBWA) in 2004 provided a stronger network for women-owned businesses. It now claims a membership of approximately 300 women led businesses through Laos.

Women participate in all different levels of government and decision-making positions in mass organizations in Vietnam. The Vietnamese Women's Union mass organization presents a hierarchal organization self-described as representative of all women in the country. Women's Union has a structure that facilitates contacts with all levels of the administration and with women at all levels. Women's right to vote and right to be candidates is granted in article 54 of the Constitution of Vietnam (1992), electoral legislation of National Assembly, article 2 (1997) and People's Councils, article 2 (2003). There is also the existence of institutional and mechanism and an action plan for the advancement of women (politically) in Vietnam (2006-2010) to

improve the quality and efficiency of women's participation in political, economic, cultural and social spheres with the purpose of increasing women's numbers in leadership positions, women's proportion in parties and in the national assembly (one female per ministry). Civil law permits female citizens to pass their nationality on their children and to own property and other assets which includes business properties. With equal opportunities and incentives, women can similarly play an important role in socio-economic national development of Vietnam.

Despite the many challenges, women in Myanmar are overcoming barriers to take up leadership positions. There are several factors behind women's success in Myanmar. First, religion, Myanmar is a Buddhist country; this means as a country that embodies the teachings and principles of Buddha, it is a country that does not deny access upon women participation in society. Second, Myanmar's women have high literacy rate due to the wide spread of primary education throughout Asia. Third, the civilian men of Myanmar lack competent since many volunteered during the military regime. Lastly, because of Aung San Su Kyi - the role model for all women in Myanmar.

Many of the women were deeply affected by early exposure to politics and injustice, and the desire to struggle against prevailing inequalities. They viewed these phenomena as key influences on their decisions to take on leading roles in politics, business or development. The Government of Myanmar has recently approved its National Strategic Plan for the Advancement of Women (NSPAW 2013-2022) and is moving forward with the development of anti-violence against women law which will create new opportunities for work on women's rights and gender equality (Oxfam, CARE, Action Aid & Leadership, Retrieved: February 3, 2016).

INFLUENTIAL AND FAMOUS WOMEN IN SOUTHEAST ASIAN POLITICS

Influential women in modern day politics gave inspiration to every women of Southeast Asia, not only as an icon of respect and authority but also as a fresh air towards equality miles away from the so-called gender stereotyping. Throughout the regions development, women's participation kept on increasing. During these

times, several remarkable women emerged from the countries of the region.

Ranging from the advocacies like independence, women empowerment, democracy, and crusades against corruption, these women made a very big impact to the world's ideology that "Men were born as leaders, and women as followers."

Just how Marquita Soares of East Timor, Leavyi or Soma of Cambodia, SomdetPhra Sri Suriyothai, ThaoThepKasatri, and ThaoSuranari fought for independence of their country, Senator Pia Cayetano of the Philippines, Queen Indradevi of Cambodia, the Lao Dong Party of Vietnam, Josefa Kai-bate, The women's Democrat and Ms. Chee Siok Chen of Singapore, strived to fight for women's equal rights, educating and leading them towards unity and advocated for their welfare and health.

Politics opened to women as the years passed, like Wan Azizah Wan Ismaili of Malaysia, Grace Fu of Singapore, Trung My Hoa, Nguyen Thi Doan, Nguyen ThiBinh of Vietnam, Aung San Su Kyi of Myanmar, Senator Grace Poe-Llamanzares, Senator Miriam Santiago, Corazon Aquino of Philippines, who bravely helped fight against corruption, led the crusade for democracy, and also made remarkable things of how competitive women of Southeast Asia are. They proved that they can stand on the same level with that of men and they showed that women deserve to be heard.

Justice also prevails for women in Southeast Asia, at the same time they became the justice themselves. Like Justice Secretary Leila de Lima and Supreme Court justice Maria Lourdes Sereno of the Philippines and HayyateSalleh of Brunei who became the First Female High Court Judge.

Unlike other countries in the region where several women arise and became popular due to their worthwhile contributions, the situation of Laos differs. Women who emerged in Laos focused on the domestic and civil service rather than engaging in politics. Lao women general perspective was of the other aspects of initiating amenities.

But before emerging as empowered women who take part in the Southeast Asian Politics, several barriers have block their ways and a number of struggles have challenge their faith. For instance, in the case of the Aung San Suu kyi of Myanmar and Cory Aquino of the Philippines: these two

women showed their courage and passion in pushing through, though barred by an authoritarian dictatorship government.

CONCLUSION

Legislative advocacy, collective and stronghold campaign is an empowering process. Realizing that law-making is not the law-makers job alone and that women, when they are organized, can make their influence and impact felt. But this advocacy maybe a long term strategy and its aim is not only to change the law but also to make women's participation a permanent feature of the policy making process. As new players in the field, women's group realize that the political arena is wide and varied, and that engagement in this arena can help address women's concerns. Women can be involved in politics not just elected officials but also advocates of the women's cause as well. Ultimately, however, women have to actively seek positions of formal political authority through elections in order to better fulfil their agenda. The number of participants initiating pro-women legislation and blocking the contrary has to increase over time.

As strategy for change, women advocacy must combined with consciousness raising, community organizing, ground breaking empowerment programs for women. It will be an empty exercise if not rooted in the awareness and consciousness of women's oppression in patriarchy.

The transformation of women's lives requires a holistic approach that interrelates the socio-economic, cultural and political aspects of women's life situations.

In the modern day, countries of the region of Southeast Asia abide in the laws and policies of the international community, the United Nations and the ASEAN for instance, initiatives and laws have been initiated by some advocates and even by the government of every countries of the region to now ensure the equality before women and men and break the traditional culture of formerly discriminatory and prejudicial society. The presence of women participation and representation even in other faces of national development has simply showed that a gender-biased region is deteriorating.

Seeming through the life of Southeast Asian women gave us the idea of how difficult it is to live in a world dominated by men. But then at the same time, it showed us how competitive this *femme de monde* are. For the next years it is not difficult to foresee how women will dominate the world and how they will change their respective country's bended governments.

MERANAO WOMEN'S PARTICIPATION IN THE LOCAL GOVERNANCE OF MARAWI CITY

Raima Salic Dimaampao

raimadimaampao@gmail.com

Department of Community Development

Mindanao State University (MSU), Marawi City, Philippines

Abstract

The study was conducted for the purpose of examining the participation of Meranao women in local governance. Marawi City is the locale of the study. Marawi, officially known as the Islamic City of Marawi is the capital city of the province of Lanao del Sur in the island of Mindanao, Philippines. All Meranao women in local governance both at barangay and city level and occupying elective positions such as barangay chairpersons, barangay councilors, and appointive positions such as city head officer, barangay secretaries and treasurers served as the respondents. A structured questionnaire was used in gathering the data and analyzed using simple descriptive statistics. The following were the major findings of the study. Meranao women in local governance were young, in the ages of 40 years and below and were married with a number of one to six children and found out to be new in their position being there for three (3) years and less. The size of the household of the respondents, in general, was big with an average of number of nine (9). The level of literacy of was high since many of the respondents were college graduates. Majority of the respondents had a monthly income of P 15,999 pesos and less. Membership to socio-civic organization was common among the Meranao women in local governance. The socio-civic organizations to which the respondents were member include family clan, religious organizations and people's organizations. There were also significant numbers of respondents who were not affiliated to any organization. Almost all of the respondents have family members or kinship ties occupying positions in the local government. This validates that women leaders and women in politics have political connections. The data result show that the level of participation of women in local governance had been assessed as average level Generally, Meranao women in local governance claimed to be participating and leading in governance and community activities. Family, political and social connections plays a strong factor for giving women the space and opportunities in local governance. Meranao culture is one of the top most challenges in women's participation.

Key Words: Meranao, local governance, women's participation

INTRODUCTION

Meranao is a patriarchal society. In Meranao context, men are perceived as providers and accountable of decisions within the family and the society at large. (Tawano, 1979). This is one of the global challenges in women's participation and women's agency. How can gender disparities be addressed in a patriarchy society.

In the statistics of the United Nations, women perform sixty-seven per cent (67 %) of the world's working hours yet sixty-six per cent (66%) of women's work are unpaid and earning only ten per cent (10 %) of the world's income and having less than one per cent (1 %) of the properties in the world. (UN Report, 2013). In the same way, in the Philippines Local Government Unit, there were 18 (22.5%) women Provincial

Governors and 11 (13.8%) women Vice Governors as well as 332 (20.9%) women City/Municipal Mayors, 265 (16.7%) women Vice Mayors, 2,668 women councilors.(NSCB,2014). The data show the situation of women at the global and national level in the area of governance. The number of women is far lower than that of men.

The reality of women's situation is likewise experienced at local level. In one of the five provinces of the Autonomous Region of Muslim Mindanao which is also part of the core territories claimed for the Bangsamoro which is the Province of Lanao del Sur comprising thirty-nine (39) municipalities and one city, there are eight (8) mayors, eleven (11) vice mayors, fifty-two (52) councilors with a total of 71 women elected or with a percentage of twenty-one (21) (Lanao del Sur- DILG, 2014). While in its capital or centre which is Marawi City, at present the local government unit is male dominated. All of the elective positions are occupied by males. At the barangay level of the city, out of 96 barangays, there are only 30 elected women barangay chair persons. In the appointive positions there are only 6 heads out of 16 officers.(DILG Data,2014)

Meranao women have potentials in development. Women can be effective change agents in the government program and integrating the Muslims into the national body politic (Umpa,1972). This is one of the many studies testifying the potential role of Meranao women in development. But despite the potentials and opportunities for women to participate in local governance, lived realities of women's representation and participation in local governance is at a minority and secondary level. And so, this inspired the researcher to study the situation and factors affecting the women's participation in local governance. The researcher believes that the findings of the study will

find out the situation of Meranao women's participation. For in this way the situation of Meranao women can be better understood. This study is useful guide in enhancing and strengthening women's participation in development.

The study focuses on the analysis of the participation of women in local governance giving emphasis on the socio-demographic profile of the respondents and some identified factors affecting women's participation in local governance at barangay and city level. Specifically, the researcher aims to answer the following questions:

1. What is the socio-demographic profile of the respondents in terms of:
 - Age
 - Position/ Designation
 - Number of years in service
 - Household Income
 - Household Size
 - Civil Status
 - Number of Children (if presently married or had been married before)
 - Educational Attainment
 - Socio-Civic Organization Affiliation
 - Personal Advocacy/ies
 - Family's Political History
2. What is the perceived level of involvement of Meranao women in community activities of Marawi City?
3. What are the factors associated with participation of Meranao women in the local governance of Marawi City?
4. What are the issues and problems encountered by the respondents in their participation in local governance?
5. What are that actions that needed to be done to improve or increase participation of women in local governance in Marawi City?

Theoretical Framework

This study was anchored on theories that serve as theoretical foundations. This includes gender equality and women's empowerment and some of the Qur'anic (Islamic) verses on gender equity; First is the Longwe's Gender Equality and Women's Framework (GEWEF). This theory stated that the women's empowerment framework focuses first on women's special needs and the needs that women have due to their different sexual and reproductive roles. It explores gender issues and women's gender concerns. The framework speaks of five levels of gender equality and women's empowerment. The second was Islamic Principles stated in the Verses of the Holy Qur'an. Islam recognizes the fundamental equality and unity of all humanity: All Human Beings are considered equal because all are equally created by God. As stated in Holy Qur'an in Surah Al-Ahzab 33:35.

“For Muslim men and women and For believing men and women, for devout men and women, for true men and women, for men and women who are patient and constant, for men and women who humble themselves, for men and women who give in charity, for men and women who fast (and deny themselves), for men and women who guard their chastity, and for men and women who engage much in Allah's praise – For them has Allah prepared forgiveness and great reward. “
(Surah Al Ahzab [The Confederates], 33:35)

To be more particular in the Islam political aspect, both men and women are obliged to help one another in the performance of duties in governance: enjoining what is right, forbidding what is wrong, performance of prayer, and giving zakat.

The figure below shows the various variables such as the socio-demographic profile of the respondents and advocacy works, the level of participation as indicated by position held and self-assessment of the respondents of their level of participation and involvement in community projects and decision-making. Also were included are the issues and difficulties that are encountered by the respondents in local governance.

Analytical Model

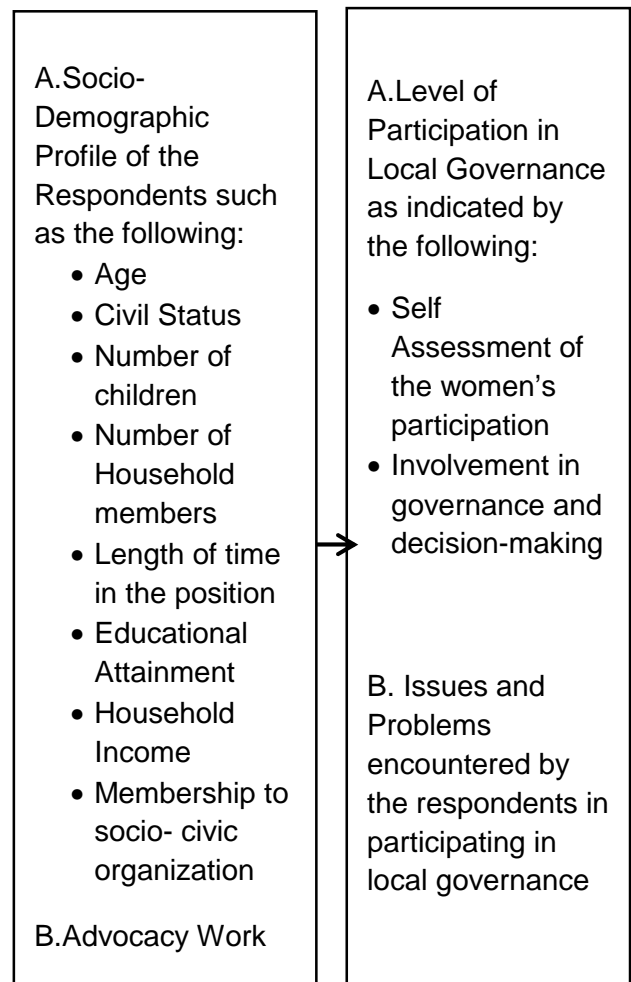

Figure 2. Schematic Diagram that shows the variables of the study and its relationship

RESEARCH METHODOLOGY

The locale of the study is Marawi, officially known as the Islamic City of Marawi and often referred to as Marawi City is the capital city of the province of Lanao del Sur on the island of Mindanao in the Philippines. There are 96 barangays in Marawi City divided into five districts which will be the research site of the study. Based on the 2010 NSO Census, Marawi City has 187,106 populations with 24,587 households and a total land area of 8,755 hectares.

The respondents of the study were the Meranao women who were holding elective and appointive positions at barangay and city level at the time of data collection. The positions held at the barangay level were barangay chairperson, barangay secretary, barangay treasurer and barangay councilors and also Sangguniang members. At the city level the three branches were considered such as the executive, legislative and judiciary branches in which women holding positions therein were chosen as respondents of the study. Out of four hundred twenty-two (422) women in positions whom the researcher requested to answer the questionnaire, there were only two hundred sixty-four (264) women in elective and appointive position who participated in the data gathering. The study aimed for a complete enumeration of the target respondents. There were one hundred ninety (190) women occupying elective position such as barangay chair and barangay councilors and there were fifty-nine (59) who are occupying appointive position such as head of office barangay secretary and treasurer. There were fifteen (15) respondents who chose not to identify their position.

The researcher used questionnaires as a tool in data gathering.

The results were organized and computed using the Statistical Package for the Social Sciences (SPSS) program. The data were analyzed using frequency counts and percentage to describe the demographic profile of the respondents and mean as a measure to determine the central tendency.

RESULTS AND FINDINGS

Part 1. Socio-Demographic Profile

Part I presents the socio-demographic characteristics of the respondents. The socio-demographic characteristics include age, civil status, position held, number of years in service, household income, household size, number of children, (if presently married or had been married before), educational attainment, socio-civic organization affiliation, personal advocacy/ies and families' political history.

A. Age of the Respondents

There were thirty two percent (32 %) of the respondents who belonged to the age bracket of 21 to 30 years of age while there were fifty nine (59) of the respondents or twenty two percent (22%) that belongs to aged 31 to 40 years old. Very few of the respondents belonged to the age bracket of 20 years of age or fifty to sixty years old. The youngest respondents aged 14 years old and the oldest respondents aged 66 years old. Majority of the respondents were found in ages 40 years and younger where one hundred fifty eight (158) or fifty nine per cent (59 %) of them belonged.

As depicted in the data that Meranao women can be elected or appointed on any position in local governance regardless of their ages. However majority of them were found serving the local government of Marawi

City in their most productive ages or years in life that is age 40 years old below.

Table I. Frequency and Percentage Distribution of Respondents' As of Age

Age Bracket (in years)	f	%
20 yrs. and below	14	5.30
21- 30 yrs	85	32.19
31-40 yrs	59	22.34
41-50 yrs	35	13.25
51-60 yrs	14	5.30
61 yrs and above	4	1.51
No Response	53	20.07
Total	264	100

B. Civil Status of the Respondents

Majority of the respondents were married with a percentage of sixty five percent (65 %). Others were single with fifty-seven (57) or twenty-two percent (22 %) of the respondents. Very few of the respondents were divorced and widowed with only four percent (4 %). Thirteen of the respondents had not responded at all as to their status in life.

The data implied that in both appointed and elected position, there is a greater tendency to be married. Being married means that you are more responsible and people expect you to be matured in carrying yourself and in handling your duties and responsibilities.

Table II. Frequency and Percentage Distribution of the Respondents' As to Civil Status

Civil Status	f	%
Single	57	21.6
Married	171	64.8
Divorced	12	4.5

Widowed	11	4.2
No response	13	4.9
<i>Total</i>	<i>264</i>	<i>100.0</i>

C .Number of children of married and formerly married respondents

Majority of the respondents had one up to six children with a percentage of fifty-nine (59%). Some of the respondents had no child at all with a percentage of eight percent (8 %). Others had seven and more with a percentage of twenty percent (20.76%). The average number of children is four (4) among the respondents.

This implied that the respondents tried to limit their children contrary to the old practice of having more than one dozen children. The findings may be attributed to the fact that people now days were conscious of how expensive to maintain a big household.

Table III. Frequency and Percentage Distribution of Respondents' as Number of children for married respondents

Number of Children	f	%
No Child	16	7.72
1-6	123	59.42
7 -18	43	20.76
19 above	1	0.483
No response	24	11.59
Total	207	100

D. Household Size of the Respondents

Majority one hundred seventy-seven (100) or thirty-seven per cent (37 %) of the respondents had seven and twelve household members which is considered as large household size . Others have one to six household members with fifty five or twenty percent (20%). Few, thirty (30) or eleven point thirty-six per cent (11.36 %) of the respondents have no household

members with only of them. There were even seven percent (7 %) that have household of nineteen and above. The average number of household members is nine (9).The average number of male is 4 and 5 for females.

Large household sizes were found out among the respondents due to extended families .The members of the household includes cousins, nieces and nephews and relatives who are working or studying in Marawi since it is centre and city of the province of Lanao del Sur. Extended families is a common practice among Meranaos because it is part of the hospitable culture they have. The data further indicated that most of the respondents can be classified as big household due to extended families which can be hardly refused as part of their culture.

Table IV. Frequency and Percentage Distribution of Respondents' Number of Household Members

Number of Household Members	f	%
None	30	11.36
1-6	55	20.83
7 -12	100	37.87
13-18	77	29.16
19 and more	18	6.81
No Response	27	10.22
Total	264	100

E. Position-Held in the local Government Unit or Office

The table below depicted that target respondents of the study were all appointed and elected women officials/ personnel at city and barangay level. The majority consisting of one hundred

seventy-one (171) or sixty eight percent (68.4 %) of the respondents were found to have been elected as barangay councilors. Some that is thirty (30) or eleven point four percent (11.4 %) were those occupying appointed positions like Barangay Treasurers while twenty seven (27) or ten point eight (10.8 %) were Barangay Secretaries. Only nineteen (19) or seven percent (7.6 %) of them were elected Barangay Chairpersons and two respondents were head of offices.

The data indicated that there were significant numbers of Meranao women in local governance. At city level there was no women elected but there were women appointed as head of offices. Most of the women were occupying elected position at barangay level. Like, out of the ninety-six (96) barangays in Marawi City, there were thirty one (31%) percent were women as chairpersons and forty-one percent were barangay councilors (41%). At barangay level women were represented more than the aim of the gender index of 30% women's representation and participation in local governance , however, at the city level, women are still minority and of second level position.

Table V. Frequency and Percentage Distribution of Respondents' as to Position in the local Government Unit

Positions Held	f	%
Barangay Councilor	171	68.4
Barangay Treasurer	30	11.4
Barangay Secretary	27	10.8
Barangay Chair	19	7.6
Head of Office	2	0.8
Others	1	0.4
<i>No Response</i>	14	5.4
<i>Total</i>	264	100

F. Number of years in the position currently held

Majority that is, one hundred forty three or fifty seven percent (57%) of the respondents were first term in their current position. Some percentage of about nineteen (19%) were on its second term. Others, thirty (30) or twelve per cent (12 %) were on their third term while few, twenty seven (27) or ten point eight per cent (10.8 %) of the respondents were occupying their current positions for only less than one year. But, there were at the time of the survey very few that is four (4) or five percent (5%) of the respondents who were re-elected about three terms (3) times. Thus, majority of the respondents had been found out to be new to their position being there for one years or first term in their positions.

The data implied that they are still starting to take part in the local governance and that at present they still are learning the art of governing. As elected with less experience it is expected that they are very conscious of rendering services to their constituents as they are building their political career.

Table VI. Frequency and Percentage Distribution of Respondents' As to the Number of years in the position currently held.

Number of Years	f	%
Less than 1 yr	27	10.8
1 st term (1 year to 3 years)	143	57.0
2 nd term (4 years to 6 years)	47	18.7
3 rd term (7 years to 9 years)	30	12.0
Reelected after 3 terms	4	1.6
No Response	13	4.9
Total	264	100

G. Educational Attainment of the Respondents

Most that is one hundred six (106) or forty percent (40%) of the respondents were college graduates. While, some that is sixty-six (66) or a twenty-five percent (25 %) of the respondents were college level. Only few only ten (10) or (1%) were high school graduates.

The data has depicted that the highest level of educational attainment achieved was a doctoral degree and the lowest educational attainment is elementary level with four respondents claimed to belong to this. Generally, the data implied that respondents had high educational attainment.

Table VII. Frequency and Percentage Distribution of Respondents' as to Educational Attainment

Educational Levels	f	%
Elementary level	4	1.5
Elementary graduates	10	3.8
High school level	25	9.5
High school graduates	26	9.8
College level	66	25.0
College graduates	106	40.2
Vocational	3	1.1
Masteral level	4	1.5
Masteral graduates	4	1.5
Ph.D Graduate	3	1.1
No response	13	4.9
<i>Total</i>	<i>264</i>	<i>100.0</i>

H. Monthly Income of the Respondents

Almost one third (1/3) or thirty point three (30.3 %) of the respondents were earning less than five thousand pesos per month while fifty nine or twenty-two percent (22 %) were earning a monthly income of five thousand to ten thousand

nine hundred ninety-nine pesos. Some that is forty (40) or fifteen (15%) of them were earning eleven thousand to fifteen thousand nine hundred ninety-nine. There were only fifty-three (53) or twenty point two percent (20.2 %) of the respondents who were earning sixteen thousand and above. Majority that is, one hundred thirty nine (139) or fifty two point six percent (52.6 %)of the respondents had household income of less than eleven thousand pesos (11,000 Php) and most of them were on this income bracket.

The data show that majority of the respondents had only an average income and considering the cost of living at present a household that is big(seven to ten members earning only P11,000.00 may be having a decent living but could not enjoy a good life.

Table VIII.Frequency and Percentage Distribution of Respondents' as to Income per Month

Amount of Monthly Income (in pesos)	f	%
Less than 5,000	80	30.3
5,000 to 10,999	59	22.3
11,000 to 15,999	40	15.2
16,000 to 20,999	21	8.0
21,000 to 25,999	7	2.7
26,000 and above	25	9.5
No response	32	12.1
<i>Total</i>	<i>264</i>	<i>100.0</i>

I.Respondents' Responses whether or not they have membership in any socio-civic organizations

Majority that is one hundred forty six (146) or fifty five point three percent (55.3%) of the respondents were members of socio-civic organizations. The data implied that Meranao women were now participating as members of organizations. However, there were almost a half that is,

one hundred eighteen respondents who were not members of any socio-civic organization which can also be considered large in number.

Table IX A.Frequency and Percentage Distribution of Respondents' Responses on their membership in socio-civic organization

Responses	f	%
Yes	146	55.3
No	118	44.7
<i>Total</i>	<i>264</i>	<i>100.0</i>

J.Kind/Type of Socio-Civic Organization where the respondents belong as members

The table below show that respondents membership in civic organization. This organization are socio-civic organization where they sought membership, family clan, religious organization and people's organizations that ranked as top three socio-civic organization. As seen from the table that the type of organization mostly joined by meranao women were family clan, religious and people's organization. The data implied that women type of organization membership affirmed that principle that the Meranao were very clannish in mentality and of course side by side with religious and community orientation.

Table IX B.Frequency and Percentage Distribution of Kind/Type of Socio-Civic Organization joined by respondents

Type of Organization	f	%
Family clan	99	37.5
Religious organization	48	18.2
People's organization	29	11.0

School organization	13	4.9
Fraternities and sororities	8	3.0
Cultural organizations	7	2.7

*multiple response

K.Promoted Advocacies of the Respondents

The table below show that, all the respondents have an advocacies they believe and work on. Their advocacy is not limited to only one advocacy but some of them had two or more. The average number of advocacy is two (2). Basic Human Rights is on the top as the most advocated advocacy by the respondents. Majority of them advocated the protection of basic human rights regardless of the socio-economic status in life. Other advocacies were good governance, peace building, solid waste management, gender equality and disaster risk and reduction management.

Table X.Frequency and Percentage Distribution of Respondents' Advocacies

Advocacies	f	%	Rank
Basic human rights	143	54.2	1
Good governance	111	42.0	2
Peace building	102	38.6	3
Solid waste management	79	29.9	4
Gender equality	55	20.8	5
Disaster risk and reduction management	46	17.4	6

*multiple response

L.Family members or kinship ties occupying positions in local gover or currently occupying positions in Marawi City or outside Marawi City

Almost all that is, two hundred fifty-four (254) or more than ninety-six 96.9 percent of the respondents have family members or kinship ties occupying positions in the local government of Marawi City or outside Marawi City. There were fifty five (55) or twenty one percent of the respondents who have cousins occupying position in the local government. Some 25 percent of the respondents have aunts and uncles who were occupying position. Other respondents have grandparents and grandchildren, brothers and sisters, immediate family members such as spouses, sons or daughters occupying such positions. The position held were barangay chairman with a percentage of thirty two (32 %) and others such as head of office with a percentage of thirty six percent (36%).The average number of family members who have occupied position in the local government is at least one. This validates that all women leaders and women in politics have political connections. According to the Philippine country report on the State of Women in Urban Local Government, family connection is a major factor in political involvement The top three family members occupying position are cousins ,uncles and spouses and all of them are male.

Part II. Perceived Level of Participation of Meranao Women to Local Government of Marawi City

This section presents the level of participation of the respondents specifically in the local governance. The first part is the frequency of participation in governance and community involvement where there are ten (10) statements that served as indicators to be answered by

the respondents using always, usually, seldom, never and undecided as the assessment or rating tool. The second part is the level of participation in local governance where there are ten (10) statement indicators answered by the respondents using the high, average and low as an assessment rate. The third part is the list of factors associated by the level of participation where the respondents had to rank from one to eight where eight (8) is the highest and one (1) is the lowest.

A. Participation in Governance and Community Involvement

The data obtained on the respondents' responses to the statements provided to determine their level of participation in governance and community involvement showed that there were two hundred forty three (243) respondents or ninety-two point four percent (92.04 %) of the total respondents who answered this portion.

On the first statement, "there is no hindrance to women being elected or appointed in any governments' position", more than one third (1/3) of the respondents about thirty seven percent (37 %) responded usually and seventy-eight (78) or thirty two percent (32 %) of them said always; thirty-three (33) or twelve point five (12.5%) said seldom but less than ten percent (10%) said never. This means that majority of women were not hindered to seek elected or appointed positions on government.

On the second statement, "women in our community got elected or appointed because of social and political connections", almost one-half of the respondents answered usually with a percentage of forty-nine point four percent (49.4 %) and one-fourth (1/4) of them said seldom. Only fifty-two (52) or twenty-one point four percent (21.4%) said always.

This implied that respondents agree that socio-political connections had a big role in getting elected or appointed. This is so, since Meranao are very good in tracing or accounting members of the clan who are in key positions.

On the third statement, "women in our community got elected as a successor of their male family members", two-fifth (2/5) of the respondents ninety-eight or forty percent (40.3 %) replied seldom while eighty-seven (87) or thirty-five point eight (35.8%) said usually.

On the fourth statement, "women in our community got their position and promotion thru merit and fitness", many, consisting of one hundred three (103) or forty-two percent (42 %) of the respondents replied usually.

On the fifth statement "Women in our community were consulted on critical decisions or action on community endeavor or undertakings", many of the respondents replied usually with more than one-fourth(1/4) of them.

On the sixth statement, "women can make important family or community decisions without consulting the male in our community", many of the respondents replied usually with ninety-three(93) or a percentage of thirty-eight percent (38.3 %) of the respondents but never a little over one-third (1/3) of them or thirty-three point seven percent (33.7%) said seldom it happened. There were forty-four (44) or eighteen percent (18%) of them who said never and less than ten percent (10%) who said always.

On the sixth statement, majority of respondents' responses is towards seldom and never. But, on the seventh statement, "women initiate community organizing and convening other women to access resources for their development", many of the respondents replied always followed

by greater than one-third (1/3) of them or thirty four percent (34.2%) saying usually.

Thus, their response indicated positive answer to this statement implying that it is the role of Meranao women to initiate organizing of women to have access to resources for their development.

On the eighth statement “Women make essential decision or action for the development of their community” many of the respondents replied usually followed by eighty-one (81) or thirty-three percent (33 %) said always while fifty-three (53) or twenty-one percent (21%) said seldom.

On the ninth statement “Women help other women be placed in any government position many of the respondents replied usually with a percentage of forty-two (42.3).While one-third (1/3) of them said always and one-fifth (1/5) of the respondents said seldom. The tenth statement, women can access and own properties in their community without male interference, many of the respondents replied usually with a percentage of thirty-five (35). And a little less than one-third (1/3) of them said always it happened. However, about one fourth (1/4) of them replied seldom it happened.

On the basis of mean, the women level of participation in governance and community involvement is considered high with one hundred fifty-four (154) or sixty three point six (63.6 %) of them in this category. Rating it as average were eighty-eight (88) or thirty-six point four (33.6%) of the respondents. No one rated it as low. Generally, Meranao women in local governance assessed themselves participating and leading in governance and community activities.

Data implied that respondents perceived themselves as having high participation and were leader when it

comes to governance and very much involved in community services.

Table XII.Frequency, Percentage and Mean Distribution of the Respondents’ Participation in Governance

Statement of Indicators	Mean (x)
1. There is no hindrance to women being elected or appointed in any government position.	2.90
2. Women in our community got elected or appointed because of social and political connection or alliances.	2.88
3. Women in our community got elected as a successor of their male family members or relative.	2.64
4. Women in our community got their position and promotion thru merit and fitness.	3.03
5. Women in our community were consulted on critical decisions or action on community endeavor or undertakings.	2.89
6. Women can make important family or community decision without consulting the male in our community.	2.38
7. Women initiate community organizing and convening other women to access resources for their development.	3.14
8. Women make essential decision or action for the development of their community.	3.07
9. Women help other women be placed in any government position.	2.90
10. Women can access and own properties in their community without male interference.	2.92

B.Level of Participation of Women in Local Governance as Perceived by the Respondents

Table 13 shows the level of participation of women in local governance. There were ten statement indicators formulated rated by the respondents based on their experience and perceptions to local governance. There were two hundred forty (240) respondents who completely answered this portion out of two hundred sixty-four respondents. This constitutes ninety point nine percent (90.9 %) of the respondents.

On the first statement, involvement of Maranao women in community activities, majority of the respondents rated it as average level of participation. Only less than one fourth (1/4) of them rated it as high and less than twenty percent (20%) said participation is low. Only four indicated no participation.

On the second statement, willingness to initiate community planning, programs and activities, majority that is thirty point four percent (30.4%) of the respondents also rated it as average.

On the third statement, assistance in convening community meetings and assembly, half that is eighty-six (86) or thirty-five point eight percent (35.8%) of the respondents considered it as average; eleven percent (11.3%) only said low.

On the fourth statement, availability for community services and delivery, many that is one hundred eleven (111) or forty-six percent (46.4%) of the respondents replied average. There were ninety-nine (99) or forty-one percent (41.4%) of them who considered the participation of Maranao women in making them available community services and delivery as high. Only three of them said no participation of women in this aspect.

On the fifth statement, facilitation and supervision of community development, majority of the respondents replied average level of participation of

women. There were almost one-third (1/3) of them who said it is high with few rating it as low.

On the sixth statement, assistance provided in deciding the launching of community programs and projects, majority also of the respondents answered average but greater than one-third (1/3) of them said it is high.

On the seventh statement, conducting information education campaign (IEC) in the community, again majority of the respondents rated it as average level of participation with eighty-three (83) or thirty five percent (35.3%) of them saying it is high. Only ten percent (10.6%) of them considered it as low level of participation.

On the eight statement, organizing women in community for projects. Almost half of the respondents forty-nine (49.6%) replied average with eight-eight (88) or thirty seven (37 %) said high. On the ninth statement, coaching and mentoring other women in the community for leadership, majority of the respondents or one hundred thirty three (133) or fifty-five percent (55.6%) answered average with sixty-seven (67) or twenty-eight percent (28%) rating it as high and only thirty-six (36) or fifteen percent (15%) as low.

On the tenth statement, promoting accountable and transparent governance in the community, many of the respondents answered average with ninety-eight (98) or forty-one (41%) of them rating it as high level of women's participation in this aspect. Only less than ten percent (10%) of them assessed it as low participation level.

On the basis of mean, the level of participation of women in local governance had been assessed as average with a mean of 21.77. This implied that respondents were in a consensus that the

level of participation of women in local governance was categorized as average only. This further implied that the struggle of women for participation in governance is very much alive.

Table XIII.Frequency, Percentage and Mean Respondents' Level of Participation in Local Governance

Statement Indicators	Mean (X)
1. Involvement in community activities	2.03
2. Willingness to initiate community planning, programs and activities.	2.15
3. Assistance in convening community meetings and assembly	2.23
4. Availability for community services and delivery.	2.28
5. Facilitation and supervision of community development.	2.18
6. Assistance provided in deciding the launching of community programs and projects.	2.20
7. Conducting information education campaign (IEC) in the community.	2.21
8. Organizing women in the community for projects.	2.22
9. Coaching and mentoring other women in the community for leadership.	2.10
10. Promoting accountable and transparent governance in the community.	2.29

Part III. Perceived Factors that Influence the Level of Participation

The table below shows the results of the factors associated with the level of participation of Meranao women in the governance of Marawi City .There were six factors identified that were associated with the level of participation of Meranao women such as education which plays

important role in qualifying and equipping women to take responsibility in holding position in local governance. Education includes experience and training. Second factors were family and social networks also showed in the study that Meranao women in local governance have political connection or from a political family. Likewise, religious beliefs and practices may also affect the women's participation in local governance. There are hadiths and verses in the Holy Qur'an that supports women's participation although there are also interpretation and opinions of many scholars against women's political participation. Lastly, the economic status affected the women's participation in politics the financial capacity is necessary for anybody who want to run for politics. Politics is expensive in reality since one needed to buy votes in order to win certain or desired position.

The data implied that there are factors that influence or associated with Meranao women participation in governance and community involvement. As glimpsed from the table that six of the statement indicators have the same scores except for two statement indicators such as;Religious belief is a hindrance in women' s participation in local governance and Education, experience and training were not important in women's participation in local governance that got the same score which is high. This implied that education and religious affiliation had an influence in the participation of Meranao women in governance and community services.

Table XIV.Score and Mean Distribution of the Factors Influencing Women's level of participation

Perceived Factors that Influence the Level of Participation	Total	Mean

1. Family is a hindrance in women's participation in local governance.	232	3.43
2. Religious beliefs facilitate women's participation in local governance.	233	3.49
3. Education enhances women participation in local governance.	232	3.01
4. Experience and training help promote women's participation in local governance.	232	3.03
5. Money will strengthen the possibility of women's participation in local governance.	232	3.73
6. Family, friends and alliance connection support in women local governance participation.	232	3.18
7. Religious belief is a hindrance in women's participation in local governance.	232	4.64
8. Education, experience and training were not important in women's participation in local governance.	232	4.71

Part IV. Problems encountered and Actions needed

A. Issues and Problems encountered

The table shows the issues and problems encountered by the respondents being considered as women leaders in the community. Among the two hundred sixty four respondents, there were only two hundred forty respondents who answered

the question on the issues and problems encountered. Others did not to respond to this query. There were nine percent 9% who did not respond to this question. Respondents have multiple responses but the average number of issues identified is two. There were 94 of the respondents or thirty nine percent (39 %) who encountered the issues of limitations set by culture to the mobility of women. In Meranao culture, women were usually prohibited to travel or for cannot travel alone without mahram (Arabic word for escort/company) for those more conservatives This practices is still observed among Meranaos. While, there were seventy-nine (79) or thirty-three percent (33 %) of them who had the issue of burdensome household chores.

This is a common scenario in Philippine setting in which domestic works and reproductive roles are mostly and often given to women. This is a result of gender stereotyping and biases brought by socialization and cultural beliefs. When men are unable to meet all of their family's financial needs and have trouble fulfilling their productive role, the women has to take bread winner role, and do farm works as well, especially during conflict (Hilsdon,2009). Women engaged in productive role but the reproductive and domestic works remained as duties and responsibilities of women.

Others identified the lack of confidence and lack of technical skills as a challenge for being women leader. In the study it has found out that women in local governance were young and new to their position thus, they still need the technical assistance to hone their capability and skill and need to undergo personality development to become a good leader. There were also sixty five (65) respondents or twenty seven percent (27%) of the respondents who have encountered family feuds as an issue.

This is so because Rido has been closely linked to Maratabat which is defined as pride and attached to Meranao rank and prestige.

Table XV. Frequency and Percentage Distribution of Respondents' Issues and Problems Encountered

Issues	f	%
Limitations set by culture to the mobility of women	94	39.2
Burdensome of household chores	79	32.92
Lack of confidence	71	29.58
Lack of technical skills	71	29.58
Family feud	65	27.08
Lack of support from spouses and family members	38	15.8

*multiple responses

B. Actions needed to increase and improve women's participation in the local governance

The needed actions to increase and improve women's participation in local governance include the following: Out of the two hundred sixty four (264) respondents, there were only two hundred forty (240) respondents who answered the question. There were nine percent 9% who did not respond to the question.

Respondent have multiple responses on actions needed but the average number of actions is 2.51 which show that respondents were advocating 2 to 3 actions needed to increase and improve the women's participation in local governance. Majority of the respondents identified education of women on leadership and participation as the action needed to improve and increase participation of women. However, there

were one hundred twenty three (123) or fifty one percent of the respondents who identified the need for organizing women as appropriate to take actions in improving women's participation. Some of the respondents about forty six (46%) percent identified coaching and mentoring. Also there were forty five percent (45%) who identified the actions of more facilities for women such as women center to improve and increase their participation. On the other hand, forty five percent (45%) of the respondents identified the actions on more gender responsive budget and programs.

The data implied that there are recommended solution or action that can be taken to improve the Meranao women leader so that their capabilities be improved and thus also increasing their participation in both governance and community services.

Table XVI. Frequency and Percentage Distribution of Respondents' Responses on the Actions needed to be able to improve and increase the women's participation

Actions Needed	f	%
Education for women on leadership and participation	147	61.3
Organizing women	123	51.3
Coaching and mentoring women leaders	111	46.3
More facilities for women such as women center	109	45.4
More gender-responsive program or budget	102	42.5

*multiple response

SUMMARY OF FINDINGS

The study was conducted for the purpose of examining the level of participation of Meranao women in local governance. It specifically investigates the socio-demographic profile of the Meranao women in local governance, their level of participation and factors affecting their participation. It also looked into the issues and problems they encountered in local governance and explore on the actions needed to increase and improve their participation in local governance. Marawi City is the locale of the study. Marawi, officially known as the Islamic City of Marawi and is the capital city of the province of Lanao del Sur on the island of Mindanao in the Philippines.

A total of 264 Meranao women in local governance both at barangay and city level of Marawi City served as respondents of the study. All were occupying elective positions such as barangay chairpersons, barangay councilors, and appointive positions such as city head officer, barangay secretaries and treasurers. The three branches of the government were considered such as executive, legislative and judiciary department.

A structured questionnaire was used in gathering the data from the respondent. The questionnaire consist of questions answering the statement of the problem. The data gathered were analyzed using simple descriptive statistics such as frequency counts, means and percentages. The computation involved in the analysis of data was done using the Statistical Package for Social Sciences Program (SPSS)

The respondents were young, in the ages of 40 years and below. The distribution was more skewed towards the younger respondents. Majority of the respondents were married with a number

of one to six children. The size of the household of the respondents, in general, was big with an average of number of nine (9). The respondents identified their positions in the local government such as barangay chairpersons, barangay councilors, barangay secretaries and treasurers and heads of offices. Very few of the respondents chose not to identify their positions.

Majority of the respondents was found out to be new in their position being there for three (3) years and less. The level of literacy of the respondents was high since many of the respondents were college graduates and while some of them were on college level. Majority of the respondents had a monthly income of P 15,999 pesos and less.

Membership to socio-civic organization was common among the Meranao women in local governance. The socio-civic organizations to which the respondents were member includes family clan, religious organizations and people's organizations. The clannish culture of Meranao has now structure and women implied participation and representation. But there were very few respondents who were members of sororities and fraternities, school and cultural organizations. There were also significant numbers of respondents who were not affiliated to any organization.

All of the respondents have advocacies they believe and that they are promoting. The average number of advocacies per respondents was at least two. Basic Human rights is the top most advocacy. The least of advocacy are disaster risk and reduction management and gender equality. This findings has major implication in our current development situation where the world's people are affected by climate change and gender being an integral part of development.

Almost all of the respondents have family members or kinship ties occupying positions in the local government in Marawi City and outside Marawi City. The average number of family member who have occupied positions in the local government is one (1). This validates that women leaders and women in politics have political connections.

To determine the women's level of participation in governance and community involvement, there were ten (10) statements provided for the respondents to identify their level of participation by responding their frequency of participation using always, usually, seldom, never and undecided. The data obtained shows that there were two hundred forty three (243) respondents or ninety-two point four percent (92.04 %) of the total respondents who answered. The result states that the Meranao women's level of participation in governance and community involvement is considered "high" with one hundred fifty-four (154) or sixty three point six (63.6 %). Rating it as average were eighty-eight (88) or thirty-six point four (33.6%) of the respondents. No one rated it as low .

To assess the women's experience in local governance, there were ten statement indicators formulated for the respondents to rate based on their experience and perceptions of local governance. There were two hundred forty (240) respondents who completely answered this portion out of two hundred sixty-four respondents. This constitutes ninety point nine percent (90.9 %) of the respondents. As a result, the level of participation of women in local governance had been assessed as average level with a mean of 21.77. Generally, Meranao women in local governance claimed to be participating and leading in governance and community activities. The most relevant factors associated with the level

of participation in LGU were as education, family, friends and alliances, religious beliefs, experiences, trainings, money and religious beliefs.

The issues and problems encountered by the respondents being considered as leader in the community (in rank order) were as follows; (1) limitations set by culture to the mobility of women, (2) burdensome of the household chores, (3) lack of technical skills, (4) lack of confidence, (5) family feuds, (6) lack of support from spouses and family members.

The identified needed actions to increase and improve the women's participation in local governance were as follows ; in rank (1) education for women on leadership and participation, (2) organizing women, (3) coaching and mentoring women leader, (4) more facilities for women such as women center, and (5) more gender responsive program.

Abstract

On September 2013, the Moro National Liberation Front (MNLF) troops marched in Zamboanga City to raise their so-called Bangsamoro Republic because wanted to include Zamboanga in the Bangsamoro. This resulted into a siege since the city government was against it. Many died and thousands were displaced into different evacuation centers in the city including Joaquin F. Enriquez Memorial Sports Complex, which was considered as the biggest evacuation center. The conflict, however, affected many Muslim (Tausug, Badjao, Samal, and Bangingi) and Christian people. These people lost their homes, livelihoods, and loved ones as well. Today, some of these victims are still staying in JFE evacuation center while others were already relocated to transitory sites. In this paper, the researchers identified the experiences which include the conditions of the internally displaced mothers before, during, and after the siege. Mothers were chosen since they are more vulnerable in times of disaster.

The researchers used a triangulation research method and applied purposive sampling to comprise the sample of the study. Case stories were conducted to 6 mothers, survey on 60 mother respondents, focus group discussions on camp peacekeepers and key informant interviews were administered to some government officials. Findings identified how struggling the experiences of the mothers during the conflict and upon their stay in the evacuation center were. It was seen that even after a year after the attack, they were still inside the evacuation center and their situation got even worse. Deaths were doubled because there were no more aids coming from different organizations since Typhoon Haiyan, which caused too much destruction, happened after the Zamboanga Conflict. Thus, these internally displaced people were left in poor conditions. Further, mothers have provided their aspirations for their children, family, and community.

Key Words: Zamboanga Conflict, Women's Vulnerability, and Mothers in Armed Conflict

Introduction

Women experience armed conflict in the same way men do. They are also killed, injured, disabled, and tortured during times of war. Violence against women arises particularly during armed conflicts. And as violence increases, women become more vulnerable. The claim supports the study of Mazurana (2012) in which women victims are targeted and suffer social and economic dislocations.

The Zamboanga siege started when Nur Misuari proclaimed the independence of the Bangsamoro Republik on August 12, 2013 at Talipao, Sulu. The MNLF then went to Zamboanga City to proclaim their independence for Muslim-dominated areas in Southern Philippines by marching through the city and undertaking the siege. On September 9, 2013, which was Friday the 13th, Moro National Liberation Front (MNLF) protested what they considered was government's failure to fulfill the provisions of the peace agreement that the MNLF signed with the Ramos Administration in 1996. Government troops fought back and it was said to be the Philippine Military's biggest operation in history. The battle stretched for three (3) weeks, killed 19 government forces and 208 rebels, and also dislocated 24,000 families (Fonbuena, 2014).

Armed conflict and its adversities have a particular effect on women given conventional cultural expectations: the burden they bear is not just their own but also that of the whole family. There were over 180,000 affected people living in the villages of Rio Hondo, Sta. Catalina, Sta. Barbara, Talon-Talon, Kasanyangan, Lustre, and Mariki Residents that were forced to flee to the Joaquin F. Enriquez Memorial Sports Complex in Baliwasan. Other evacuation centers for the Internally

Displaced Persons (IDPs) were also established along the Cawa-Cawa shoreline, and at the various public schools in the city (mb.com.ph). Several months after the attack, which saw government forces searching house to house for the MNLF men, Zamboanga City businessmen appealed to the national government to speed up the restoration of basic services in the areas razed by the fighting. It was said that their appeal was made as national attention shifted to devastation wreaked by the powerful earthquake that rocked Cebu, Bohol and other parts of the Visayas, followed by the horrific destruction unleashed by Super Typhoon Yolanda (<http://www.philstar.com/>). Because of the destruction caused by the aforementioned natural disasters in Visayas, which later occurred months after Zamboanga siege, the focus of the government and the people were shifted towards the family affected by such. That is why today, the families affected by the 2013 siege were still struggling in the evacuation centers in Zamboanga City. A year after the start of the Zamboanga siege, reconstruction is moving slowly, and the victims can fall under the United Nations definition of internally displaced people. Shortly after the siege, aid workers had warned of a humanitarian crisis in the affected city districts. Government officials say residents still staying in makeshift shelters may have to wait until the end of the year for decent temporary housing (<http://www.philstar.com/>).

In this study, the researchers identified if the mothers tend to have been more burdened after the conflict rather than before and during through looking into their experiences. Moreover, the researchers also tried to know whether how much the different government and non-government organizations have given aids and interventions for the affected

people, specifically mothers who are staying in JFE Memorial Sports Complex evacuation center. Also, this study determined the possible efforts done by the mothers towards themselves, their family and their community and so as their aspirations in rebuilding everything they have that were destroyed.

This research tried to investigate the effects of siege to the affected mothers and their conditions in the Joaquin Enriquez Memorial Sports Complex evacuation center after the MNLF siege happened in Zamboanga City. Thus, this study intended to answer the following objectives:

1. To identify the experience of the temporary relocated mothers in Zamboanga city with regards to:

1.1A. Before the MNLF attack

1.1B. During the MNLF attack

1.1C. After the MNLF attack

Including the threats to their:

1.2A Threats to their Health Conditions

1.2B Threats to their Economic Conditions

1.2C Threats to their Religious and Cultural Conditions

1.2D Threats to their Peace and Security Conditions

2. To describe the capacities and efforts of mothers in dealing with the adverse effects of the MNLF siege.

3. To elaborate the aspirations of the mother respondents for their community with regards to:

3.1 The future of their children

3.2 Health of the people affected

3.3 Peace and Security of the people affected

4. To identify forms of support received from the following sectors:

a. LGU

b. NGOs

c. Private Institutions

On the other hand, this study was limited on the experiences and conditions of the mothers before, during and after (until June 2015) the alleged Moro National Liberation Front siege in Zamboanga City. The study was limited only to the mothers in JFE Memorial Sports Complex evacuation center. The researchers conducted a survey to 60 mother respondents who came from different ethnic groups namely: Tausug, Badjau, Samal, and Chavacano/Bisaya; that came from different affected barangays in Zamboanga City. The researchers also interviewed 6 mother informants who narrated their stories before the conflict, during the conflict, and their stay in the evacuation center after the siege.

This study, however, is relevant to the understanding of the society towards the condition of women in the aftermath of the conflict in Zamboanga City and to every area of the Philippines. This study may emphasize the situation of the women in the context of conflict. The vulnerability of women is already conspicuous to every situation such as disasters and others and the conflict that occurred in Zamboanga City proved the need of assistance for women.

Theoretical Framework

Conflict is a very serious issue and its effects ripple through the experiences of the affected innocents. This topic discusses the effects of the affected

refugees in the Zamboanga conflict and their capabilities of coping to the after effects.

This study is anchored on Social Vulnerability Approach. Vulnerability generally denotes a susceptibility to harm. The notion of social vulnerability as opposed to the vulnerability of built structures refers to the potential harm to people. However, there are vulnerable groups named in this approach, mainly: women, children, the elderly, etc., but this paper is only limited to women, specifically mothers.

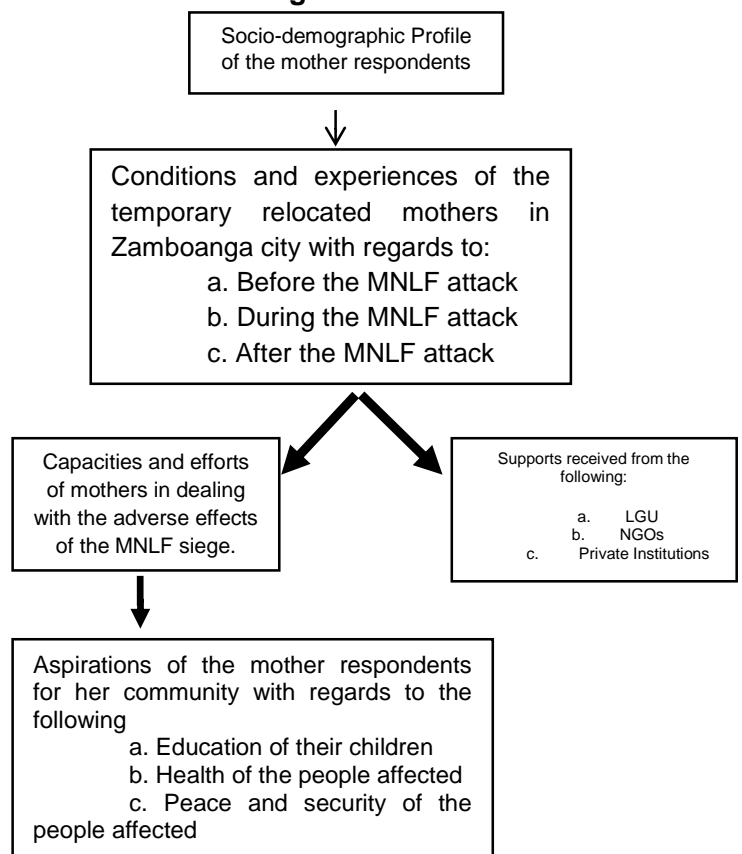

On the other hand, Social Vulnerability refers to the “characteristics of a person or group in terms of their capacity to anticipate, cope with, resist and recover from the impact of a hazard. It involves a combination of factors that determine the degree to which someone’s life and livelihood are put at risk by a discrete and identifiable event in nature and society.” Lastly, Social Vulnerability includes capacity, recognizing that everyone has some capacity to anticipate, cope, resist, and recover (Bara, 2010).

Furthermore, in Social Vulnerability to disasters, it acknowledges that not only life itself, but livelihoods are at risk, thus shifting the focus from “fatalities” as the single dominant measure of disaster impact. Progression of vulnerability from economic, political, cultural, and other root causes to the unsafe conditions that are eventually responsible for death and destruction in a disaster were presented in the approach. A number of dynamic pressures on the local, national, and global levels- such as population expansion or lacks of good governance- mediate between root causes and unsafe conditions.

In application of this concept to the study, Social Vulnerability Approach will

show if there is really a capacity of women, especially mothers, to cope with the trauma they have encountered during the MNLF attack. In this study, the researchers tried to determine how destructive the conflict was that made it difficult for the internally displaced mothers to cope and recover easily with its adverse effects. Further, this paper also identify how being vulnerable in many factors led into having fatalities. Lastly, this concept was used to determine the efforts done by mothers in reconstruction of their selves, families and community as well as their capacities in dealing with the adverse effects of the MNLF siege.

Schematic Diagram

METHODOLOGY

This study made use of Triangulation Research Method, which is a mix of qualitative and quantitative data, in

gathering and discussing the data. The researchers employed in-depth interview as their data gathering instruments for the six (6) selected mother informants. Further, for the 60 respondents, the researchers used survey method. The researchers also administered Focus Group Discussion to the evacuation camp peacekeepers and Key Informants were interviewed too.

On the other hand, this study was conducted at Joaquin F. Enriquez Memorial Sports Complex evacuation center, also known as JFE Sports Complex. This complex until now serves as one of the evacuation centers of displaced people after the alleged attack of MNLF in the selected areas in the city. According to DSWD, the JFE Sports Complex remained the biggest evacuation center sheltering 5,350 families or 25,304 persons. This gave a huge advantage for the researchers since there are number of families present in the center which was easy for the researchers to gather the estimated respondents and key informants of the study. The JFE Memorial Sports Complex evacuation center, however, was divided into four (4) Zones, namely Zone A, Zone B, Zone C, and Zone D, in which mostly Badjao IDPs stayed in the grounds (Zone A and D) while Tausug IDPs predominantly stayed in the bleachers (Zone B and C). Hence, inequality can be seen.

The following tables below were records as of June 20, 2015. These were the total demographic population of the remaining evacuees in the JFE Memorial Sports Complex evacuation camp. The families that are still present there were to be relocated to the different transitory sites in Zamboanga City. However, families who do not wish to be relocated needs to find a place for them to live temporarily due to the immediate rehabilitation of the sports complex.

Zones	Total number of Families	Total number of Individuals	Total number of Males	Total number of Females
Zone A	49	279	135	144
Zone B	96	555	293	262
Zone C	65	449	199	250
Zone D	202	1,194	574	620
Total	412	2,477	1,201	1,276

On the other hand, the researchers employed a Judgment or Purposive Sampling technique in this study. The researchers selected mothers who were affected by the siege as the respondents of this study together with the selected key informants and FGD respondents. The key informants were the mothers who narrated their experiences during the siege. In selecting the Case Informants, we chose those who have a contact with the perpetrators and those who were greatly affected by the siege even after a year after the attack. The way of choosing them was through the help of the evacuees. Also, another set of key informants were interviewed, namely: Evacuation center camp managers, City Social Welfare and Development Officer, and Philippine Red Cross officer. Also, the peacekeepers were the ones chosen as respondents for the Focus Group Discussion to know anything about what has been happening inside the camp during the conflict and even after it since they were the ones who are responsible for the peace and order of the camp.

The researchers administered an interview guide for the experiences of mothers and a researcher-made scale to further discuss the impacts of the conflict to them before, during and after it. In this study, a research-made scale was used to 60 respondents which contains the following: Socio-demographic profile of the respondents and statements that captured

their conditions before, during and after the siege. This researcher-made scale is based on Likert Scaling that determined the extent of effects it brought to the respondents. The participants or respondents were selected through the help of the peacekeepers who are familiar with the zones to where the mothers are located.

For the key informant interview, the researchers employed a Life Story approach. In this case, six (6) mother informants were gathered to share their life stories which captured the 3 phases: before, during and after the siege. The informants were selected through the help of the IDPs in the evacuation center. They pinpointed some mothers who have not yet recovered from the siege. This study also identified the traumatic experiences of the mothers during the attack and their coping process, so as their condition upon their transfer in the evacuation center. Furthermore, this study also determined the aspirations of the mother respondents for their selves, children, family, and community with regards to the education of their children, better living condition of their families, health of the people affected, peace and security of the people involved and the community as well, and the future lives of the evacuees.

Since the study was quantitative and qualitative methods, the researchers needed several techniques to analyze the data. In analyzing quantitative data, the researchers used the IBM-SPSS. This is a computer software designed for analysis of research data in the social, behavioral and educational sciences; it allows the researcher to make sophisticated and complex statistical operations for an almost unlimited amount of data (Nachmias and Nachmias, 1996; Seigel and Castellan, 1998). Also, the researchers used Likert Scale to identify the levels of condition of the respondents

before, during, and after the attack. The mean is interpreted through fiduciary limits: 1.0-1.9 = worse condition; 1.91-2.61 = bad condition; 2.62-3.32 = good condition, and; 3.33-4.0= better condition, for positive statements. However, for negative statements, the limits are to be reversed: 1.0-1.9 = better condition; 1.91-2.61 = good condition; 2.62-3.32 = bad condition; 3.33-4.0 = worse condition.

Lastly, the researchers also used probing questions. Probing is asking follow-up questions when we do not fully understand a response, when answers are vague or ambiguous or when we want to obtain more specific or in-depth information.

FINDINGS

There were a total of 60 mother respondents in which majority of them lived in Rio Hondo before the siege. Others came from Mariki, Sta. Barbara, Sta. Catalina, Kasanyangan, and Zone 4. The age bracket of the respondents is 15-80. 11 out of 60 respondents ages 15-25. 18 of them ages from 26 years old to 36 years old; 16 of them ages from 37-47, seven (7) ages from 48-58, six (6) ahrs from 59-69, and 2 of them ages from 70-80. 50 out of 60 mother respondents follow the teachings of Islam. In terms of marital status, 44 of them are married. In the educational attainment aspect, however, 40 out of 60 of them never went to school. Lastly, majority of the mother respondents are Tausug and Bajau with a total number of 20. Thus, the respondents of this study were subdivided into 4 ethnic affiliations, specifically: 20 Tausugs, 20 Bajaus, 10 Samals, and 10 Bisaya/Chavacano.

Internally Displaced mothers in JFE Memorial Sports Complex had different experiences before, during, and after the attack. In this study, there were

only six (6) mothers that were interviewed to narrate their experiences, namely: Riza, Imang, Sophia, Amsaya, Nursia, and Mariam.

Informant	Age	Address	No. of children	Educational attainment	Religious affiliation	Ethnic affiliation	Livelihood before the conflict	Livelihood after the conflict
Riza	32	Rio Hondo	5	Never obtained education	Islam	Bajau	None	Fish ball vendor
Imang	37	Rio Hondo	2	Only finished Grade 1	Islam	Tausug	Helper	Junk foods and cigarettes vendor
Sophia	39	Rio Hondo	10	Never obtained education	Islam	Bajau	Seaweed vendor	None
Amsaya	75	Rio Hondo	6	Only finished Grade 1	Islam	Samal	Sari-sari store owner	Fish vendor
Nursia	42	Mariki	6	Only finished Grade 3	Islam	Samal	Sari-sari store owner	None
Mariam	39	Sta. Barbara	3	Only finished 2 nd year high school	Roman Catholic	Bisaya	None	Sales Lady

Before the conflict, informants were plain housewives who were left in their respective houses to take care of their children. However, others build a sari-sari store so that they could support their husband in earning money. One respondent was a helper and the other one was a seaweed vendor. Some of the mothers said that they did not have a stable economic condition because their husbands, who were fishermen, could not earn enough money for the family every day. Some have said that they could only eat once a day. However, others have said that they have a stable economic condition because their husbands were employed in an office. On the other hand, despite their problems economically, they believed that they were living peacefully and healthily in their communities.

When the conflict erupted, the mothers were in great shock because they thought that the MNLF troops were just going to march on the streets of Zamboanga. One informant was able to

evacuate before the conflict started. However, others were still staying in their houses when the conflict started. According to them, they were all sleeping when their neighbors knocked on their houses to evacuate because the war has already started. Due to panic, they were not able to bring anything. Their children were all scared and were crying because they have seen many houses being burned and they have heard continuous gun fires. The mothers were panicking as they were protecting their children to evacuate. One mother forgot that she's running barefooted on their way to the evacuation center. Others were crying and didn't know where to go. One informant shared that they were about to ride their boat but the some MNLF combatants fired their boat. They were all afraid to be hit by stray bullets. Most of them were able to get into the evacuation center while others have gone to their relatives. Moreover, one informant cried because she could still remember a gun pointed at her face and that they were held up in their barangay hall by government forces for 2 days without anything to drink and/or eat. Also, one informant shared her anger to the MNLF troops because they were actually her *suki* customers in her *carenderia* yet they were the ones who burned their houses.

Upon their entry to the evacuation center, all of them were hesitant because it was overcrowded and unsanitary. Many were still crying and there are those who were wounded. Mother informants were still protecting their children because according to one informant, there were already many children who went missing inside the evacuation center. They have not eaten and slept properly for how many days inside because they could always hear gunshots and they could see the evidences of fires. Mothers, together with their families, were forced to sleep on bare

and dirty floors. Lastly, during the month-long siege, people in the evacuation center got doubled. And as people doubled, number of deaths also increases. In the distribution of food packs, the mothers were the ones lining instead of their husbands.

Inside the evacuation center, a lot happened to the mothers- physically and mentally. Due to trauma, the behaviors of the mothers toward their children changed. Imang, on the other hand, who is one of the respondents said that her sister delivered her third baby inside the evacuation center. However, according to her:

“Naiinis ako diyan sa kapatid ko. Hindi naman niya pinapalo yung anak niya noon. Pero pagdating dito, palagi na niyang pinapalo yung mga anak niya (I get angry at my sister everytime she spansks her children. She’s not like that before, it just happened the moment we got here),” cried Imang.

On the other hand, when the government declared ceasefire, their husbands and even the mothers themselves went to fishing while they were left in their houses to take care of their children. One mother informant said that she’s suffering for an illness but she has no choice but to take care of her child first who was also sick that time. Mothers also complained about the food that sometimes they receive spoiled, burnt, or raw foods. Some informants exclaimed that everything got worse when Typhoon Yolanda, which hit some parts of Visayas, happened- it led to the discontinuity of distribution of food packs. Even though people staying in the evacuation center decreased because they were already transferred to transitional sites, organizations also transferred their aids to the transitory sites.

Even after a year, the informants have not yet recovered from the conflict. They are still struggling to forget what has happened that even the voice of a moving jeepney scares them. Also, most of the informants shared that there were police posts inside and outside the grandstand but they were not monitored properly. They have stated how thankful they are to the peacekeepers who monitored them everyday. They did not feel secured because anyone could enter in the grandstand. They still cannot sleep peacefully at night because there are always thieves inside the evacuation center. Sometimes, misunderstandings arise between mothers and their husbands because of money. Furthermore, mothers have no choice but to send their children to work for the family such as to sell cigarettes or candies in the streets. However, even though they are still suffering from these, driven by the difficult situation, they started to find a job or something that they could earn, while taking care of their children as well. They do not care as to how they look like now because their families are their priority.

Lastly, despite their situation and their experiences, they always aspire to give their families, especially their children, a better future. According to Mariam, she could not stand to see her children wearing ripped and ragged clothes, playing innocently in muddy grounds. She wished to give them better education even though they have no enough money to send them. However, not just Mariam, but all of the informants aspired to give their family a better future. Mothers continued to teach their children good lessons even though they not all of them were able to study. They do not want their family to experience this kind of situation again. That is why mothers do not want to be live in transitory sites because the situation is still the same and it is far the city proper in

which they could not have a good life there. Thus, mothers wish that the government authorities will assist them to transfer in a better place.

On the other hand, mothers struggled in terms of their health, economic, religious and cultural, and peace and security conditions inside the evacuation center. They suffer from taking care of their family such as what food they should serve them or what clothes they should let their children wear.

With regards to the conditions of mothers before the siege, there was a better health condition of mothers even though others have said that they have experienced hunger and fatigue before. Thus, this is significant with what they answered in terms of their economic conditions. Respondents believed that businesses were operating very well, but respondents also believed that their limited sources of income was a contributing factor to their incapability to have better economic conditions. Hence, good condition was felt. However, in terms of religious and cultural conditions, it clearly showed how strong and harmonious the relationship of the respondents was to others despite their religious and cultural differences. Thus, it was depicted that they have a better religious and cultural conditions. Lastly, respondents could say that they have somehow a better peace and security conditions because they had freedom in terms of going around the area, unafraid of anything to happen. Although there were cases of drunkenness and some other violent acts that worried the respondents, it was still concluded that they have a good and almost better peace and security condition.

During the attack, it was attested that the respondents had a worse health and economic conditions. With regards to

the mothers' health, they could not eat and sleep properly. Because of this, majority of the respondents lost weight and got sick during the month-long siege. Moreover, the situation got even worse because they lost their sources of living and they were forced to live in an overcrowded and unsanitary evacuation center where there were no enough food supplies present. According to the City Health Office of Zamboanga, there were recorded cases of deaths and pneumonia was said to be the leading cause with 26 recorded cases.

According to an article written by Cecilia Gonzales (2013), The United Nations declared the Zamboanga situation as a humanitarian crisis. Almost 70,000 people stayed in JFEMSC who are struggling to survive, in desperately overcrowded conditions and insufficient sanitation facilities. Thus, the UN said that there is a real risk of a disease outbreak.

Food, drinking water, health services, cooking utensils, tents and other necessities were urgently required.

As to the respondents, they had a worse condition because there is a great food demand in the evacuation center, yet there was no enough supply. Nevertheless of their situation, the respondents were still able to maintain a good relationship with others. Also, their faith became even stronger and they have not reached into the extent of blaming others to what has happened. Furthermore, they believe that everyone was working together despite the differences in order to survive inside the evacuation center. However, their peace and security conditions were undeniably worse. Others who have not yet evacuated were afraid to go out of their tent-houses because they were worried that they might be hit by stray bullets. Others also have seen the evidences of the attack that made them more scared. They have seen houses being burned and

they could hear continuous exchange of gun fires. Nevertheless, others believed that they were escorted by military forces on their way to the evacuation center that is why they somehow felt secured during the attack.

With regards to the conditions of mothers after the attack, mothers are looking forward to go back to their places due to their situation inside the evacuation center. Their health condition was still the same and other respondents would say that it got even worse because they have not yet forgotten about the attack and their weight continued to drop due to fatigue in taking care of their families especially their children. Further, they got sick as well as their children because their temporary shelters were not well-built. According to one of the case informants, they were given home materials but it all seems to be old stocks, which were useless for them. According to the City Health Office of Zamboanga, there were a total of 139 recorded mortalities in the evacuation center from September 2013 to June 2014. This clearly depicts that they are in a state of humanitarian crisis, which was proved by the United Nations. Also, in terms of their economic condition, the respondents believed that the government's provision of sources of income is ineffective. When businesses in the area started to operate and have a good condition, respondents concluded that the supply of food is still in a bad condition and that their earnings can still not provide the things they need and that they are not well-assured that they can now eat good foods. Thus, they have a bad economic condition. Moreover, respondents said that they have a better religious and cultural condition because they became a family in the evacuation center. Also, they believed that they got closer to the people and that the conflict never lessened their faith. They also had a

good condition in terms of their company with other IDPs. Lastly, in terms of their peace and security condition, they believe that their condition became even worse because the place is still not peaceful and that the authorities are not giving aids anymore. The peacekeepers, who were the participants in the focus group discussion, shared that the most reported case inside the evacuation camp was stealing of tents and appliances. The Tausug were the usual cause of conflict while the Badjau is the group in which they had a hard time dealing with due to the lack of education they have been experiencing.

On the other hand, the mother respondents are also scared that anything might happen to their families due to the existence of violent acts in the evacuation center. In general, respondents have a bad and almost worse condition even after the attack.

According to the mothers, their children were the ones willing to help them to survive everyday. Sofia, one of the informants, said that her children decided to look for plastics around so that they could sell it to junkshops and earn money. *"Hindi ko naman sila pinigilan. Alam ko namang gusto lang nila makatulong. Hindi naman kasi habambuhay kami nandito eh kaya mas mabuti nalang siguro na humanap na kami ng mapagkikitaan ng pera habang nandito pa kami (I didn't stop them. I knew they just wanted to help. We're not going to stay here anyway that's why they engaged into any means of acquiring money while we're here)."*

Sophia, furthermore, shared how their lives in the evacuation center became worst. Even though there are lots of food packs given to them, she somehow felt disappointed with the people who prepared it because it sometimes looked

like a dog food. But since they had no money to buy food, they had no choice but to eat what's given to them.

“Yung mga anak ko nagkakasakit na. Hindi ko na alam ang gagawin ko dahil kahit ako nagkakasakit na rin. Inaalagaan ko pa yung mga anak ko habang nag-aalala sa kondisyon namin dito (My children are getting sick. I don't know what to do because I myself is getting sick. I am taking care of my children while taking care of myself),” cried Sophia. She was so worried about her children because they got sick. *“Yung isa kong anak nagtatae, yung isa naman nagkalagnat, habang yung isa din nagka ubo (One of my children had a diarrhea, the other one had a fever, while the other one had a cough).”* She could not take care of them because she too had flu that time. It was her husband and their other children who brought them to the health station present inside the evacuation center. She blamed the people inside for the poor sanitation in the center. She added that the people were not responsible for their own wastes. There were comfort rooms but others prefer to pee or poop anywhere. Also, she had noticed that although they had unlimited supply of water, she didn't know if that was potable.

Mothers, however, shared that despite the difficulty they are facing in dealing with the impacts of the attack, they somehow became braver today in facing problems because of their children.

“Mas gusto kong magpaka-ina sa mga anak ko para di nila makitang naapektuhan pa rin ako sa nangyaring giyera. Gusto kong ipakita na malakas ako para makita naman ng mga anak ko at ng iba pang mga nanay na kagaya ko na lumalaban pa rin ako sa gitna ng hirap at takot (I want to be a mother to my children so that they will not think that I am still

affected by the war. I want to show to them and to other mothers like me that I am strong and I am fighting despite the hardships),” Imang cried.

Interventions of Local Government Unit (LGU) in the Evacuation Center

Abner Mundoc, camp manager in JFE Evacuation Camp, was one of this study's Key Informants; and was also the one who provided the researchers with the following interventions of the Local Government Unit of Zamboanga. According to him, the Department of Social Welfare and Development or DSWD provided cash assistance per family worth 5,000 pesos. Also, the City Government also distributed housing materials worth 10,000 pesos which included plywoods, nails, and roofs (*tulda*). Furthermore, The City Health Office in partnership with Red Cross Zamboanga conducted Medical Missions inside the evacuation center. However, the medical mission only lasted for five (5) months. After that, the families were given free consultations in the City Health. All they had to do was present their IDs certifying that they are IDPs. Moreover, Local Police of Zamboanga also provided 24-hour security in Grandstand but the problem is that anyone could enter the evacuation center that's why the number of police officers per shifting is not enough to monitor the security of the IDPs inside, especially the security of women and children. Lastly, there were also housing project interventions of the City Government but the money was funded by the national government and private institutions.

With regards to the organizations and agencies present during the siege, Philippine Red Cross (PRC) funded by International Committee of the Red Cross (ICRC), The City Health Office of

Zamboanga (CHOZ), Department of Social Welfare and Development (DSWD) together with the City Social Welfare and Development (CSWD), National Housing Authority (NHA), UNICEF, United Nations High Commissioner for Refugees (UNHCR), International Organization for Migration (IOM), and Administration for Children and Families (ACF) were actively giving aids to the IDPs, but later transferred their aids to the transitory sites, although they are still monitoring the conditions of the IDPs that remained in JFEMSC evacuation center.

Conclusion

A total of 60 respondents with different ethnic affiliations, specifically: 20 Tausug, 20 Bajau, 10 Samal, and 10 Bisaya/Chavacano mothers were gathered. The researchers provided them with a research-made scale type of questionnaire in which they have answered the questions with a scale of 1-4; 1 as strongly disagrees, and 4 as strongly agree. Fiduciary limits were able to identify the conditions of the mothers before, during, and after the siege given that: 1-1.09- Worse Condition; 1.91-2.61- Bad Condition; 2.62-3.32- Good Condition, and; 3.33-4.0- Better Condition. The limits are reversed if statements were negative. However, with regards to the case stories, six (6) mother informants were gathered to narrate their experiences during the conflict as to the time and day of attack, and to their contact with the perpetrators; as well as their experiences in the evacuation center. Findings show that these respondents were having the same condition even though they have different ethnicity. However, Bisaya/Chavacano has the least number of families living in the evacuation center because others were granted with houses for rent, and were privileged to have been helped by one of

the priests in Zamboanga, whom they did not make known.

In the data, it is evident that the respondents are in deep distraught and were greatly affected by the siege. They are still struggling for proper living in the area and they could not have a better living condition due to numerous factors.

On the other hand, all of them had a low economic status during the siege and even months after the siege. Health status was also alarming because there was an outbreak of diseases inside the evacuation center, which pneumonia, recorded as the number one (1) causes of death.

With regards to the Peace and Security inside the center, the Focus Group Discussion that was conducted with the camp peacekeepers, who were also IDPs, mentioned that there were a lot of crimes that happened inside the camp. Stealing of *tulda* or tents is the most common among all. According to them, having a tent was more important than having food, that time. Domestic violence was also seen. Drugs, on the other hand, were also prevalent inside the camp. As to the peacekeepers, there were about 20% of the total population are into drugs. On one hand, they have also mentioned that Badjaos are the ones who are hard to reach because they many of them have not acquired education. Also, Tausugs were the people who were always involved in conflicts inside the camp.

In terms of the mothers' conditions before, during, and after the siege, it was seen that they have a better health, economic, religious and cultural, peace and security conditions before the attack. However, during the attack, it became worse and it was worst after. By this, it can be depicted how armed conflicts really affect the lives of people, especially

mothers, who have greater responsibilities, in terms of coping up or recovering from such disaster. A year after the siege, mothers got more vulnerable with regards to health, economic, and peace and security factors, though they have a better religious and cultural condition despite the siege. However, the living conditions of mothers inside the evacuation center were worse because they have a difficulty in coping up with the trauma and destructions encountered. Social Vulnerability, therefore, is applicable and true.

Based on the findings of the study, even after a year also, when other IDPs were gradually transferred to transitory sites, the situations of mothers that are still staying inside the evacuation center did not seem to be different at all. The situation got even difficult because there were no more aids coming from different authorities. Moreover, these IDPs will then be transferred to transitory sites. However, mostly do not want to be transferred to any transitory site due to some factors-accessibility, health, economic, and peace and security. Transitory sites are far from the city proper which could, according to the respondents, isolate them from job opportunities. Health, on one hand, is at risk because their shelters in the evacuation camp are still the same in the transitory sites. They still have to stay in bunk houses. They prefer to just stay in the grandstand because there is free water and electricity. Economically, they are afraid that they could not make anything for a living. They are also afraid about their peace and security because transitory sites have been culturally diversified. Thus, mothers, thinking for the good of their families, are hesitant to be transferred in transitory sites because their life will be just the same.

Nevertheless, the mothers became braver to face the problems. They

now tend to find means for them to earn money to sustain their daily needs and to send their children again to school. Thus, today, mothers still say that they are still afraid and they have not yet fully recovered from the trauma they have encountered. But for their families, especially to their children, they have to be strong enough for their betterment.

Overall, these IDPs are still living in the JFEMSC evacuation center for over two (2) years now. As of June 15-22, 2015, there were a total of 323 families left in the evacuation center or a total of 1,907 individuals. These IDPs will soon be transferred to the 11 different transitory sites in the city. As of June, transitory sites houses 16,990 IDPs. The concerned government and non-government organizations present in the evacuation centers before have now transferred their aids to people in transitional sites. On the other hand, key informants have stated that in armed conflicts, especially to what had happened in Zamboanga, people have no idea on how to prepare and respond to such kind of disaster. Women or mothers, specifically, easily get scared when it comes to guns, bombs, and mortars, which they have encountered. Thus, mothers in the study were seen to still feel affected and devastated because of the Zamboanga Conflict.

Recommendations

The research that has been undertaken has highlighted a number of topics on which further research might benefit.

1. A study on the conditions of families living in Mampang I, II, and III transitory sites is highly recommended.
2. A study on Households' Perception on Solid Waste

Management in Joaquin F. Enriquez Jr. Memorial Sports Complex Bunkhouses.

3. The researchers would recommend future researchers to conduct a study on the Role of LGU in the Reconstruction and Rehabilitation of Joaquin F. Enriquez Jr. Memorial Sports Complex Evacuation Center.
4. A Comparative Study between the Lives of the Families in the largest Evacuation Center and in the largest Transitory Site which is Mampang I is recommended.
5. The researchers would recommend future researchers to have a study regarding the mental condition of children affected during Zamboanga siege.
6. Conduct a study regarding the perceptions of people in Zamboanga towards Bangsamoro Basic Law.
7. The researchers recommend that the government should have a Armed Conflict Mitigation and Preparedness for the people to be informed as to what they should do in times of armed conflicts.

Towards Recovery or Subsistence: Effects of USAID Rebuild Reconstruction Projects on Haiyan Survivors in Tacloban Communities

**Danah Dee Quilo, Jennifer Lacaza, Ferlie Vinche Ulboc,*
Myrma Jean Mendoza**
danahdee8@gmail.com
Mindanao State University- Iligan Institute of Technology**

Abstract

This paper is an excerpt of the thesis of the student-researchers whose study highlights on the initial effects of three reconstruction projects (economic, education and health) of USAID Rebuild, a multi-component program funded by USAID designed to help the victims in Haiyan-affected communities in Tacloban City. The data were gathered from the interview findings of 60 survivor-beneficiaries in Barangay 94-A Basper and a key informant in Barangay 25, in Tacloban City.

Survivor-beneficiaries were asked to compare their livelihood, health and school conditions before Yolanda and after Yolanda, and they provided varying results. For those in agriculture and aquaculture, they had good livelihood condition before Yolanda struck them. With the recovery projects provided by the USAID, their livelihood condition is as good as before. In contrast, beneficiaries of sari-sari stores already had bad economic condition before Yolanda and have gone worse after Yolanda despite of the cash assistance they received. For the school beneficiaries, the students and the Principal of Tacloban National Agricultural School agreed that the school was in good condition before Yolanda but during Yolanda the school building and all its facilities were destroyed. But when USAID Rebuild constructed a flood-resilient educational building, their school and its facilities were back in good condition. The third project is on TB Dots in which only the doctor was interviewed for health security of the researchers. According to the doctor, all the facilities and equipment (such as TB apparatus, microscope, etc.) were given by the USAID.

Overall, the initial findings suggest of varying levels of recovery. After all, the three reconstruction projects were turned over by the USAID Rebuild to the local government units and enjoyed by beneficiaries barely a year and a half only when this study was conducted.

Key words: reconstruction project, recovery, Haiyan survivors in Tacloban, pre & post Haiyan livelihood condition, pre & post Haiyan school condition

INTRODUCTION

Natural calamities nowadays have been a normal occurrence due to climate change. It can be in forms of storms, typhoons, earthquakes, flashfloods, and landslides. These calamities caused a lot of damage to properties and caused death to thousands of people: men, women, and children. According to Deutsche Welle (October 2013), the Philippines has suffered from an inexhaustible number of deadly typhoons, earthquakes, volcano eruptions and other natural disasters. This is due to its location along the Pacific Ring of Fire, or the Typhoon Belt of the Pacific. The Philippines is a large island group consisting of 7,107 islands. According to Philippine Islands (2010), Visayas is one of the three principal geographical divisions of the Philippines, along with Luzon and Mindanao and is located at the center of the Philippines. Visayas has been known to be prone to typhoons especially the Eastern Visayas region in which cities, towns and municipalities are said to be always affected by natural calamities. Particularly in Tacloban, Leyte which was greatly devastated by super typhoon Yolanda (Haiyan) leaving the city with millions worth of damaged properties and livelihoods, traumatic experience to men, women and children and death to thousands of casualties.

Last November 6, 2013, a typhoon with an international name Haiyan entered the Philippine Area of Responsibility (PAR) in the East of Mindanao and was named Yolanda. The following day, super typhoon Yolanda intensified and moved West Northwest towards Eastern Visayas. According to the situation report of National Disaster Risk Reduction and Management Council (NDRRMC) (April 2014) out of 9 regions (IVA, IVB, V, VI, VII, VIII, X, XI and CARAGA) a total of 16, 078, 181 individuals or 3, 424, 593 families were affected by super typhoon Yolanda. Aside from the casualties involved, there was a long disruption of power and water supply, and damaged properties, livelihood and agriculture, business establishments and infrastructures because of super typhoon Yolanda. Months after super typhoon Yolanda (Haiyan) struck Tacloban City and its neighboring communities, national and international humanitarian and non-government came to their rescue in terms of responding, recovering and rehabilitating Tacloban City.

This study was an attempt to describe the recovery attempts in Tacloban City specifically of the USAID through USAID Rebuild an international humanitarian agency, and how these recovery attempts affected the lives of the beneficiaries. The study focuses on the USAID Rebuild Projects in Tacloban City.

Conceptual/Theoretical Framework

The theoretical framework of this study is a combination of R.A 10121 or the Philippine Disaster Risk Reduction and Management Act of 2012 and Symbolic Interaction Theory. Republic Act 10121 or the “Philippine Disaster Risk Reduction and Management Act of 2010” provides for the development of policies and plans and the implementation of actions and measures pertaining to all aspects of disaster risk reduction and management, including good governance, risk assessment and early warning, knowledge building and awareness raising, reducing underlying risk factors, and preparedness for effective response and early recovery. Republic Act 10121 solidifies one of the four pillars of DRRM which is the Disaster Rehabilitation and Recovery which states that the restoration and improvement of facilities, livelihood and living conditions of disaster-affected communities, including efforts to reduce disaster risk factors, in accordance with the principles of "build back better". The “Build Back Better” principle serves as the guiding framework in the development and implementation of rehabilitation and recovery interventions. The principle focuses on long term, sustainable efforts to reduce vulnerabilities and strengthen capacities to cope with future hazard events. This approach takes into consideration the need for urgency

while ensuring safety in implementing programs and projects (OPARR, 2014).

Symbolic interactionism’s principle of “meaning” contends that people act towards objects (people and things) based upon the meanings that they have given to those objects. Second is the principle of “language”. Language provides the tools (symbols) to negotiate meaning. The last principle is that of “thought”. The idea here is that we interpret symbols in different ways. In our own minds, we take on the roles of others and try to assume different points of view. (G. MacKinnon, 2005). According to the Thomas Theorem, “definition of situation”, “if people define situations as real, they are real in their consequences” suggests that the meanings of human actions are not inherent merely in their actions. Rather people attribute meanings to those actions, and the meanings have consequences for future actions. (Ritzer, G. and Ryan, J.M 2011:531).

Research Site

Tacloban City is the largest city and regional center of the Eastern Visayas region of the Philippines. The city has an actual total population count of 217, 199 with an average annual population growth rate of 2.73 percent. It is also the capital city of Leyte. According to the City Government

of Tacloban, the city's populace is predominantly Waray-Waray as it is spoken dialect in the city. Cebuano, kana, visayan are among the dialects spoken in Tacloban City. Aside from the Waray-Waray there are other ethnic groups that reside in Tacloban such as Tagalog, Ilocano and Kapampangan. It is the center of commerce, tourism, education, culture, and government in the region.

Tacloban City is located in the northeastern part of the Island of Leyte, one of the islands in Eastern Visayas or Region 8. Tacloban is located on Cancabato Bay, in the San Juanico Strait which divides the islands of Leyte and Samar. (<http://tacloban.gov.ph/about/city-profile/>).

This research was conducted in Tacloban City particularly in Brgy. 94-A Basper and Brgy. 25. These sites were selected due to easy accessibility to the USAID Rebuild program, which is the focus of the research. Barangay 94-A Basper and Barangay 25 are barangays of the Philippine highly urbanized city in Tacloban City in the province of Leyte, Eastern Visayas which is part of the Visayas group of islands.

The researchers chose Brgy. 94-A Basper for the reason that the projects in livelihood and education is accessible in the area also the projects are used by the beneficiaries longer than the other projects in Tacloban City.

- – Barangay 25
 - – Barangay 94-ABasper

Research Methods

This study mainly used both quantitative and qualitative approach, but much concentrated to quantitative approach, survey research in particular. Generally used for descriptive, exploratory, or explanatory purposes with individual people, groups or interaction as units of analysis, a survey research requires some individual persons to serve as respondents or informants. This is to facilitate responses to questions that are intended to attain information on the respondents and describe the role of USAID to the reconstruction efforts in Tacloban, Leyte.

The survey design, however, is triangulated with qualitative method by incorporating a few open-ended questions in order to enrich the data derived from closed-ended questions. Purposive sampling was the method used in selecting the informants and some of the respondents needed in the study. It is a method in which researchers pick cases that are judged to be typical of the population in which one is interested, assuming that errors of judgment in the selection will tend to counterbalance each other (Selltiz, et al. 3rd edition). The respondents of the study consisted of a total of sixty (60) beneficiaries, thirty of whom are students of Tacloban National Agricultural School (TNAS) and are beneficiaries in education and the other thirty (30) who were

divided into three: The agriculture, aquaculture and the sari-sari store. Four (4) key informants were interviewed, two (2) key informants are USAID Rebuild employees, who are knowledgeable of the services the project provides, one (1) principal of TNAS and one (1) head doctor of TB Dots Clinic. Purposive and simple random samplings were used in selecting the key informants and respondents.

The researchers used interview guide. Interviewing according to Kvale (1996) as cited by M. Sewell (n.d.), is a method of qualitative research in which the researchers attempt to understand the world from the subjects' point of view, to unfold the meaning of peoples' experiences, to uncover their lived world prior to scientific explanations. The interview guide was mainly made up of open-ended questions. The researchers also focused on surveying the respondents where the researchers gave survey questionnaires to the respondents which they filled. The survey questionnaire is composed of close-ended questions to which respondents were encouraged to answer shortly or in short-word only. Yet, they are more rigid than the open-ended questions which are common in interview guide.

Research ethics were observed. The researcher observed proper protocol in interviewing the employees of USAID

rebuild, the principal of TNAS, the head doctor TB Dots clinic and their beneficiaries. The researchers went to USAID Rebuild to ask for permission to conduct a study on the projects they gave to Brgy. 94-A and Brgy. 25. On the next day, letters were sent to the informants and subjects requesting them to be interviewed and surveyed during their most convenient time. When the protocol was done, the consent process ensures that the individuals will voluntarily participate in the research with full knowledge about the said research. The researchers first coordinated the head of USAID Rebuild program before conducting an interview with the USAID Rebuild employees, and the beneficiaries. With the consent of the USAID Rebuild head and together with the consent of the interviewees, and the researchers started conducting the interviews and surveys.

After the interviews and surveys were done, the data were encoded and tabulated, and the record interviews were transcribed. Table matrices were utilized for easier management of data. The analyses of the data gathered were preceded from clustering information of common ideas into categories or patterns based on the specific objectives of the study. In analyzing the data gathered in the survey, the researchers used Statistical Package for the Social Sciences (or SPSS). In this study the

researchers used Wilcoxon Signed Rank, a nonparametric test that compares two paired groups. It was used to analyze the data and to determine the significant difference of the before and after conditions among the USAID Rebuild beneficiaries. Transcribing is a straightforward technical task that involves judgments about what detail to choose, data interpretation and data representation (Bailey, 2008). On the other hand, transcribed interview results were analyzed using a thematic approach. Thematic analysis has been defined as a method for identifying, analysing and reporting patterns (themes) within data (Braun & Clarke, 2006:79 cited in Williamson & Whittaker, 2011:78).

FINDINGS

A. Background Information of USAID and USAID Rebuild

Humanitarian assistance comes with many agencies and organizations and one of it is USAID which is the focus of the study. The United States Agency for International Development (USAID) is an independent federal agency of the United States that provides aid to citizens of foreign countries. USAID provides disaster relief, technical assistance, poverty alleviation and economic development. The agency creates country-specific programs that provide

tailored solutions based on individual needs (Investopedia 2015).

According to USAID (1999-2001) the agency was established in 1961 by President John F. Kennedy and is a federally funded development agency of the United States. USAID focuses on the concept of participatory development, actively engaging in partners and customers in sharing ideas, committing time and resources, making decisions, and taking action to bring about a desired development objective.

The agency aims to advance the political and economic interests of the United States through its programs, and U.S. products and services are used to this end. USAID works worldwide to democratize the development process by involving people in the decisions made about their countries and communities for greater sustainability. Through the assistance programs, USAID plays an active and critical role. The assistance of the agency goes as far as Asia especially in Afghanistan and Pakistan, Africa, Latin America and the Caribbean, Middle East, Europe and Eurasia. USAID extends help from the American people to achieve results for the poorest and most vulnerable around the world and assistance does not represent a democratic value or a republican value,

but an American value (USAID, January 2015). The bureau focuses on the four objectives in assisting the needs of each country. Prevention to countries vulnerable to disasters and political instability, and an increased human rights abuse or violent conflict, the bureau strengthens the resiliency of every individual of a community to prepare for a coming disaster and mitigate the impacts of disasters; consolidate new, effective democratic institutions; and address underlying grievances that cause instability and conflict. Response to every emergency and provides life-saving humanitarian assistance and, response to large-scale disasters. They also promote a rapid and durable recovery by supporting livelihoods, markets, and the sustainable provision of basic services. The bureau promotes a peaceful political transition by strengthening civil society and respect for human rights, facilitating reconciliation, supporting effective democratic governance, and fostering the resumption of basic economic activity.

Furthermore, according to USAID the agency's idea is to improve the lives of men, women and children by investing in agricultural productivity so countries can feed their people and can sustain its basic need such as food. Combating maternal and child mortality and deadly diseases like HIV, malaria and tuberculosis and provide life-

saving assistance in the wake of disaster. It also promotes the democracy, human rights and good governance, support private sector development and sustainable economic growth, elevates the role of women and girls around the world and accommodates the educational needs of the children.

Moreover, according to the history of USAID in the Philippines, the United States has been providing assistance in the Philippines since 1946, the agency helps the country in developing the infrastructures, providing training and technical assistance, increasing the agricultural productivity and economic growth. It promotes a sustainable environmental management, improves the health and nutrition and foster democracy and decentralization. USAID's current strategy in the Philippines is to accelerate and make economic growth more inclusive through improved competitiveness and increased infrastructure services. It also improves the fiscal management and revenue administration and strengthen the governance, rule of law, anti-corruption efforts and electoral processes. Lastly it seeks to improve human rights protection and anti-trafficking efforts; improved family health, reduced geographic disparities in health services and increased access to water and sanitation; increased access to quality basic education; improved

environmental management; and increased effectiveness of disaster preparedness and relief programs.

USAID Rebuild is a program under USAID and is funded by the U.S Government. The program is designed for the victims of the typhoon Yolanda which occurred last November 2013. USAID Rebuild was launched by June 2014, with its components such as assistance in Education, Health, Livelihood which was determined on the same month, but before the components of assistance was formulated, USAID's key personnel, which is based in Makati City, went to Tacloban City together with the selected employees of GEM Program in Mindanao which is also an agency under USAID to make an assessment of the situation in Tacloban City. And by the last week of January 2014, an assessment meeting with the governor, DepEd Division Office and the USAID Personnel happened. PNP and the military were coordinated by USAID and all other agencies to make the assistance in recovery efforts possible. It is also part of the commitment of U.S to help in the Yolanda affected areas not just in the relief effort but in line with the components of assistance.

B. Socio-Demographic Profile of Respondent-Beneficiaries of Livelihood Project

There are 30 survey-respondents representing livelihood recovery project of USAID Rebuild. The female constitutes majority eighty six point seven percent (86.7%) compared to males because these women are housewives who engage themselves more in livelihood projects like for example the sari-sari store in which they are the ones who manage the business since it is built near their houses or in their houses. In terms of age, respondents varied widely, the most number are 15 years of age accounting twenty three point three (23.3%) who received projects in agriculture.

Most of the respondent's educational attainment is high school level, comprising more than half of their number. This is followed by college school level and lastly elementary school level. Half of the respondent's number is married and then forty three percent (43.3%) are respectively single and the least six point seven percent (6.7%) are separated. Many of the survey respondent's families had between 6-10 members comprise of thirty six point seven percent (36.7%), thirty three point three (33.3%) had between 11 to 15 members, and those with 0 to 5 members accounted for twenty six point seven percent (26.7%).

In terms of the occupation of the respondents before the recovery project of USAID Rebuild, majority of them are students, followed by housewives,

manicurist, security guard, farmer, pre-school teacher and bakery owner, then public school (High school) teacher and lastly dry goods dealers and vegetable vendors. After the recovery project given by the USAID Rebuild, most of the respondents are students, followed by 66 sari-sari store owners, public school (High School) teachers then, housewives, dry goods dealers and bakery owners and lastly manicurists.

The income of the respondents which has the highest number is in bracket 1-10,000 which is thirty six point seven percent (36.7%), then Not Applicable (for Students) thirty three point three percent (33.3%), next is in bracket 10,001-20,000 twenty three point three percent (23.3%), and finally in brackets 20,001-30,000 and no response thirty three point three (3.3%).

In comparison of the occupations of respondents in livelihood before and after recovery project of the USAID Rebuild is that the students, public school (High School) teachers, manicurist and dry goods dealers before and after are the same in percentage of thirty three point three (33.3%). The housewives before and after differ from twenty per cent (20.0%) to six point seven percent (6.7%) and bakery owners from three point three percent 3.3% to 6.7%. Other occupations of the respondents before the Typhoon Yolanda

are security guards, farmers, pre-school teachers and vegetable vendors.

After the devastation, though most of the respondents became sari-sari store owners. The occupations before of most respondents were good because they earn more than after typhoon. There are also other respondents who earn the same such as public teachers. But overall, most of the respondents revealed that their incomes before is way better than after Yolanda and the subsequent assistance of USAID.

USAID Rebuild Reconstruction and Recovery Projects in Tacloban City

Implemented in close partnership with the Government of the Philippines and local communities, USAID Rebuild focuses on restoring access to education, health services and promoting livelihood activities. Livelihood is divided into three components; the sari-sari store, agriculture and aquaculture.

Sari-sari store

Sari-sari store business is another means of livelihood in Brgy. 94-A Basper. It is also one of the greatly devastated businesses during the catastrophe. Selected residents in the said barangay were given sari-sari stores by USAID through USAID Rebuild. Twelve (12) of the finished sari-sari stores are present and was constructed for almost a week. A total of 5000 worth of

products as an initial inventory for them to start again their business is provided by their partners Coca-cola and Procter and Gamble (P&G).

Problems Encountered and Solutions among Sari-sari Store Recipients

Quantitative findings are supplemented with qualitative data gathered through interview.

After the reconstruction and turn-over of the sari-sari store, respondents have shared their common problems with the given project. These problems are when the rain pours the water enters easily their stores due to weak construction. During that during typhoon Ruby, the store's roof was damaged. All of these problems were being solved according to them by either repairing the store by themselves or approaching the USAID to repair the said damage.

Furthermore, another problem in which many of them were borrowing money from creditors or what they call Bombay. They borrowed money for their stores and their daily needs as well and they offered the store as collateral. Moreover, with regards to the store, the barangay were not happy about the said project and angry with the USAID because they did not ask permission before the reconstruction of the sari-sari stores. And the last problem as yielded by most recipients, their common problem is how to sell their goods/stocks

because the stores given are almost close to each other, which make it more difficult for them to vend.

Aquaculture

USAID Rebuild helped the PTA of TNAS in restoring the fishpond in the vacant lot which is owned by TNAS and was not used for 8 years. The restoration of the fishpond last for almost 2 months and it benefited the Parents-Teachers Association (PTA) and the school of TNAS. They also provided 3000 fingerlings of milk fish or “Bangus” to the PTA of TNAS last September 2014 in which they need to safeguard in order for the fingerlings to grow.

Problems Encountered and Solutions among Aquaculture Beneficiaries

The qualitative data through interview are gathered to support quantitative findings of the study. Interviewees shared their common problems regarding the restoration of the fishpond under the aquaculture project given by the USAID Rebuild. These common problems they encountered are many anglers and thieves are present at night time because of some reasons like the fence around the fishpond; it was easily destroyed by the cows placed near it because it was not strong enough, and there were no lights as well as care takers that monitors the

fishpond. The first harvest of the fishpond last February 2015 was affected these anglers and thieves because 3000 fingerlings were given by the USAID Rebuild and only 500 fingerlings were harvested.

Furthermore, one of the reasons why such problems happened is the officer's inactive involvement on the maintenance of the fishpond. Another issue is the problem in paying the care taker. Since there is no budget for that, the PTA officers decided to divide the duties in monitoring the fishpond to be done during weekends and with regards to the proliferation of grass along the path through the fishpond; the students of TNAS are enjoined to clean the area. Other problems were addressed by putting a sturdy fence, providing lights, giving notice to the residents that placing cows near the fishpond is strictly prohibited, and to have a close monitoring of the fishpond

Agriculture

Agriculture which is one of the types of assistance in livelihood which USAID Rebuild gave was given to the students of Tacloban National Agricultural School (TNAS). They were given seedlings such as cabbage, sweet corn and other varieties of seedlings. They were also taught the new technology on how to plant climate resistant seedlings.

Problems Encountered and Solutions among Agriculture Beneficiaries

Through interview, qualitative data were gathered to supplement the quantitative findings.

Respondent No.	Common Responses	Themes
1,2,3,4,5,6,7,8,9,10	<i>Expired ang mga seeds at hindi tumubo.</i> (The seeds were expired and did not grow).	Prevention/Solution: *Students bought new seeds.
1,2,3,4,5,6,7,8,9,10	<i>During summer, mga baka ang</i>	Lack of Notice to the Public

	<i>kumakain sa mga pananim</i> <i>(During summer, the cows eat the crops).</i>	
--	---	--

According to the students, the seeds were given by the USAID Rebuild during the turn over last October 2014. The seeds given were expired, so the students bought new ones.

The program conducted seminars and trainings among selected ten (10) crop production students, each of the three sections in Grade 9. The said activities helped improve the performance of the students especially in their major subjects.

The Livelihood Conditions of Respondents-Beneficiaries

Category	1 year Before the Recovery Project		1 year After the Recovery Project		P.Value	Level of Significance	Interpretation
	Median	Interpretation	Median	Interpretation			
Agriculture	2.3	Good Condition	2	Good Condition	.000	>0.05	Not Significant
Aquaculture	2.3	Good Condition	2.1	Good Condition	.000	>0.05	Not Significant
Sari-sari store	3	Bad Condition	3.23	Bad Condition	.000	>0.05	Not Significant
Grand Median	2.5	Good Condition	2.44	Good Condition	.000	>0.05	Not Significant

Fiduciary Limit: 1.00-1.75 = Better Condition; 1.76-2.5 = Good Condition; 2.6-3.25 = Bad Condition; 3.26-4.00 = Worse Condition

Comparing the medians of livelihood conditions of the respondents 1 year before and 1 year after the recovery projects, the result shows that out of the three (3) livelihood, two (2) yielded a good conditions from before and after the recovery projects namely; Agriculture and Aqua-culture. While the other one (1) which is the sari-sari store livelihood conditions, the result shows that even before, the economic/livelihood conditions of the respondents in sari-sari store are not good and is in bad conditions.

Socio-Demographic Profile of Respondent-Beneficiaries of Education Project

There were a total of 30 respondents who served as survey respondents in

education. Most of them are females. The survey-respondents were divided into two. Fifteen (15) of them are from grade 9 while the other fifteen (15) are from grade 10. Almost half of them were fifteen (15) years old with the highest percentage of thirty six point seven percent (36.7%). Most of them were from Brgy. Palanog followed by Brgy. Salvacion, Brgy. Basper, Brgy. Tigbao and lastly two respondents did not indicate their address.

Education Project: TNAS School

Tacloban National Agricultural School (TNAS) as one of the top schools that has been damaged during the typhoon Yolanda was one of the schools that were being assisted by the USAID through USAID Rebuild. They were given a two classroom buildings with a total of 10 classrooms.

Furnished arm chairs, bookshelves and teaching kits for teacher were also given.

USAID Reuild is ensured that in case the same intensity of typhoon (like typhoon Yolanda) might hit Tacloban City, disaster resilient type of school buildings can withstand any circumstances such as teachers and students trapped in the classrooms are guaranteed safe.

Problems Encountered in School

Interviewees shared their common problems and solution perceived regarding the recovery project after the typhoon Yolanda and the assistance of USAID Rebuild. The school area is prone to soil erosion, because the area or place is not actually plain which is very dangerous for them especially during rainy season. Also another problem of the school is the lack of teachers teaching specialized courses. Field of Specialization allows every student to experience depth in some subject area, for potential inter-disciplinary approaches within the subject of concentration, and for the creation of smaller communities of learners dedicated to a particular discipline in which in their school they have four, namely: Horti-Culture, Crop Production, Food Processing, and Animal Production. Many teachers have transferred for reasons, such as economic, health, and etc. In fact most of the teachers are just new to the school.

The Education Condition of Respondent-Beneficiaries

The respondents education situation before and after the typhoon Yolanda and after the turnover of the recovery projects assisted by the USAID through the USAID Rebuild program were just the same and is in good condition. This does not mean that there was no damages done in school but it means before Typhoon Yolanda, their school building was in good condition and after USAID Rebuild constructed the damaged school, it is now again in good condition. Although based on the interview results, it is even in better condition because of its resilient structure. Thus, it is in educational recovery project where USAID Rebuild has fulfilled the build-back-better objective of the recovery framework cited in R.A 10121. The focus of the assistance however is on the logistics of the school. It does not include the effects of the academic performance of the Yolanda survivor-students. The quantitative result was contradicted by the qualitative interview result which considered the USAID Rebuild reconstruction building as better than the previous buildings.

Other assistance extended to TNAS is also a great factor that quantitative data shows a good condition in both one year before and one year after the reconstruction project of USAID through USAID Rebuild. A

Chinese organization gave a Temporary Learning Space (TLS) designed to cater the needs of the students, to avoid suspensions of classes and resume classes after the devastation of Typhoon Yolanda also Habitat for Humanity Philippines where they gave two-classroom building and a computer laboratory.

In view of the Build Back Better of RA 10121 schools were built and constructed to reduce disaster risk. Furthermore high materials were used to fortify the foundation thus increasing the school's resiliency to disasters.

Health Project: TB Dots

The USAID Rebuild program constructed a clinic as well as its facilities exclusive for Tuberculosis (TB) patient in the selected 8 location sites in Tacloban City. TB Dots is chosen as assistance for health because the Ambassador of US Government wants to help the Philippines ranked 7 out of 20 countries with the highest tuberculosis cases in the world in controlling this disease as it gets to be of high proportion. The focused is on the TB Dots building located in Barangay 25 because during the research it was the first finished building constructed out of 12 climate-resilient health facilities. Free medicines from the Department of Health (DOH) and free examinations are given to the enrolled patients. The equipment used is provided by

the USAID Rebuild. The treatment is an outpatient process in which the patients are not required to stay in the hospital for isolation.

The problem before the construction of the TB Dots building was the lack of space but then after the Typhoon Yolanda this was given attention and solution by the USAID Rebuild. Another problem is the lack of doctors and health workers in which until now, they are giving effort on finding and hiring such. The assistance to health aspect improves the health conditions of the survivors especially to the TB patients. The project provides an assurance of safety for any upcoming natural disasters that may hit Tacloban City. In this regard, the TB Dots project of USAID Rebuild is consonance to the build-back better framework of R.A 10121 because it has provided separate health facilities for the TB patients.

CONCLUSION

Based on the trends in the findings of the study, certain conclusions have been drawn.

USAID is an international non-government organization (iNGO) that aims to help and provide assistance to any affected communities. Last November 2013, a typhoon Haiyan, locally known as Yolanda, hit intensely both Leyte and Samar which makes the USAID to launch a program called USAID Rebuild; a multi-component program funded by the U.S. Government to support reconstruction and rehabilitation actions in Typhoon Yolanda-

affected areas. The USAID Rebuild program provides assistance to livelihood, education and health. In the livelihood sector it is divided into three (3) types: Agriculture, Aquaculture and Sari-sari stores.

The damage brought by the typhoon Yolanda gave a remarkable scar on the lives of the residents within the area affected but when these assistance came from the USAID Rebuild, improvement in their lives begin. There is an assurance of safety in

case another typhoon as strong as or stronger than typhoon Yolanda will come to the structural foundation of the infrastructures given by the program because it is typhoon-resilient. Generally, the recovery projects given by the USAID Rebuild has a good effect to its beneficiaries. But in Livelihood, especially in sari-sari store the effect was frustrating, such that the project given was near to each other and that it is difficult for them to sell their products.

Abstract

Tacub, a barangay of Kauswagan, Lanao del Norte is 18 kilometers away from Iligan City. The barangay is home to fisher folks, farmers, cattle herders, and a few land owners. Among other barangays, this is mostly populated with Christians while the closest Maranao barangay is Inudaran. Most of the landowners of Tacub raise animals and produce coconuts. In 2000 and 2008, these two neighboring barangays became the sites-of-conflict between the MILF, government soldiers and Ilaga. Ilaga is the focal point of this study and is interested on their activities in and around Tacub. The interviews undertaken validate hearsays of its presence although the respondents denied their involvements for fear of apprehensions. As to their activities and mode of operation, recently some are bodyguards of politicians while others are for-hired

individuals. On the other hand, others are passive for they are much concern about their daily living. Some landowners in Tacub have resorted in selling their properties to the Maranaos at Inudaran while others opted to reduce their time in the mountain habitat.

Keywords: ILAGA, MILF, Maranao, Landowners, Christians

Introduction

Historical Background

Kauswagan is a fifth class municipality in the province of Lanao del Norte, Philippines. According to the latest 2010 census, it has a population of 24,006 people.¹ Kauswagan is politically subdivided into thirteen (13) barangays namely; Bagumbayan (Pob.), Bara-ason, Cayontor, Delabayan, Inudaran, Kawit Occidental, Kawit Oriental, Libertad, Paiton, Poblacion, Tacub, Tingintingin and Tugar.

Among the thirteen (13) barangays, Bara-ason, Cayontor, Delabayan, Inudaran, Paiton and Tingintingin are living and dominated by Moro (Maranao Tribe). Cebuano and Maranao are the major languages in the town. The rest speak Tagalog. The majority of the population can speak and understand Cebuano and Tagalog. Kauswagan is known as the Coconut Industry of the interior areas. It also produces fish, rice, corns and basic vegetable. It was the one of the

¹ *Total Population by Province, City, Municipality and Barangay: as of May 1, 2010" (PDF)*. 2010 Census of Population and Housing. National Statistics Office. Retrieved 23 May 2016.

municipalities suffered in Lanao del Norte during Martial Law and ILAGA war against Moro.

The *Ilaga*, which literally means “rat” in Hiligaynon, was organized in 1971, mainly by Christian settlers from the Visayas, and was used by the government to help fight the fledgling Moro National Liberation Front. Some perceptions show that it was a "tool" used in the 1970s by the Marcos regime to quell what was then a fledgling Moro uprising.

The original *Ilaga* movements of Christian settlers in what was then Cotabato Empire Province became notoriously popular after President Ferdinand Marcos declared martial law in 1972. The group was born after the activation of the Mindanao Independence Movement (MIM) by the revolting, firebrand Cotabato Gov. Datu Udtog Matalam, who got agitated with the death of dozens of young Moro military recruits in the Jabidah Massacre on March 18, 1968.

From the MIM came the Moro National Liberation Front (MNLF) and, subsequently, the Moro Islamic Liberation Front (MILF), where the Bangsamoro Islamic Freedom Fighters had splintered from.

The *Ilaga* group was founded sometime in September of 1970, or thereabouts, during a gathering in a restaurant in Cotabato City, by the older Dequiña and his political peers, then Mayors Wenceslao Dela Cerna of Alamada, Pacifico Dela Cerna of Libungan, Bonifacio Tejada of Mlang, Conrado Lemana of Tulunan, Jose Escribano of Tacurong, and Esteban Doruelo of Pigcawayan.

The hometowns of the *Ilaga* founders belonged to the Cotabato

province, but eventually got grouped together under what is now North Cotabato, after having been split into smaller provinces, to include Maguindanao, South Cotabato, and Sultan Kudarat, through a declaration by President Marcos in 1974. Tacurong, which was to become a component town of Sultan Kudarat, is now a chartered city.

The founders of the *Ilaga* accordingly had two anti-Moro benefactors, then Capt. Manuel Tronco and Col. Carlos Cajelo, who both belonged to the now defunct PC. Cajelo, also an Ilonggo, was to become governor of North Cotabato and deputy defense minister for civil relations of Mr. Marcos.

It was widely construed that Cajelo was, if not the real brain behind the *Ilaga*, the director of the bloody show the group had put up, him being the provincial PC commander then of the empire province. The atrocities done on Moro people by the *Ilaga*, however, only escalated the Moro secessionist activities in the area, bolstering anti-government sentiments immensely.

The *Ilaga* rampage and slaughter of Moro people started March 22, 1970, in what is now North Upi town in Maguindanao, through an amulet-wearing commander, Toothpick, whose real name was Feliciano Luces, also of Ilonggo descent.²

Luces and his men, armed with World War II vintage firearms and machetes, attacked an isolated Moro village, killed and mutilated six Moro villagers.

Call it coincidence, or a twist of fate, the incumbent mayor of North Upi, Ramon Piang, an ethnic Teduray chieftain, and whose family was among thousands that

² Unson, John. Anti-Moro group resurfaces in NCotabato.2013.

became internal refugees during the height of the MNLF uprising in the 1970s, is a key member of the government's peace panel presently negotiating with the MILF.

The ILAGA was a terror gang backed by Philippine government officials, both civilian and military. Its members, composed mainly of Ilongos, a tribe in the Visayas Island, were notorious in sowing terror among the Moro populace in Mindanao particularly in the early 70's. They massacred innocent Moro civilians and looted their properties. Their signature was the severing of the ears of their victims. It is a Visayan vernacular that means rat. Some documents would reveal later, however, that ILAGA was actually an acronym for Ilongo Land Grabbers' Association.

Some members of the Teduray ethnic group also joined the ILAGA terror gang. Their leader was Feliciano Luces (a. k. a. Kumander Toothpick), an Ilongo protégé of Philippine Constabulary (PC) Captain Tronco who was then a mayoralty candidate in Upi running against Michael "Datu Puti" Sinsuat.

Both in Cotabato and Lanao Provinces, the terror sowed by the ILAGA was at its peak in 1971. In June 19 that year, in what came to have been known later as the Manili Massacre, some seventy Moro – men, women and children – were mercilessly killed by the notorious gangsters, with the backing of the PC, inside a mosque in Manili village in Carmen, Cotabato. In early August, a battle between constabulary troops and Blackshirts occurred at Buldon, and later that month there was an Ilaga attack on Ampatuan-both towns in North Cotabao. And so it went on and on. The Moros by and large were outgunned and suffered the greater number of casualties. Cries of "genocide" began

being heard and caught the attention of the Muslim World.

Tacub Kauswagan, is the flashpoint in 2000 it remains so to this day. It was in Kauswagan where the Tacub Massacre happened in 1971 when a convoy of Muslim voters was waylaid in an Army checkpoint in Tacub, a big barangay of Kauswagan by suspected Ilagas, a Visayan paramilitary group. The number of dead is estimated to number as high as 60 and most were women and children, a crime that remains unsolved until today. As a consequence no Tacub resident will ever admit that he lives or he grew up in that place if Muslims are in the vicinity

It was forty-five years have passed since the infamous Tacub Massacre on November 22, 1971. Yet, the memory of the barbarous killing of sixty Moro Maranaos that day still remain fresh in the minds of the Bangsamoro people.

When MILF-BIAF forces occupied Kauswagan in 2000 in response to the AFP attack on their base camp (which the government subsequently edited so that it won't show that it started the fighting) the homes of the Christians and government properties were left untouched except that they ransacked the police HQ. But when government forces retook the town after the MILF withdrew Christians burned some houses that belonged to the Muslims.

The military will claim that Muslim fighters occupied Muslim villages like what happened in Aleosan, (North Cotabato). But before we grit our teeth a word of caution first. We do not really know if those lands were Muslim land before Ilagas drove them out in the '60s or when Muslims left their land during the war of the '70s to find in the '80s that their farms no longer belong to them and this is the usual sad story of

Cotabato. Herein lies the reason why violence and fighting never really cease in Cotabato like what the singing group lamented in the '70s.

Christians in Mindanao will say that they will arm their own militias as if Christian militias didn't exist before in the guise of the Ilagas, the CAFGUs and the CVOs. But most Christian militias are of platoon-size only and bearing light machine guns at the most while most Muslim clan armies fight at company- and batallion-level and heavy machine guns, mortars, recoilless rifles and rocket launchers are common in their inventory. In Mindanao it is known that Muslim clan armies can make mincemeat of Christian militias save for a few. In fighting between the two the AFP in all cases have to intervene in favor of the Christian militias. And if this happens it is natural that regular Moro forces will join the fray because after all they have relatives in the clan armies and Muslim clan armies are their force multipliers. And so the level of violence escalates.

Sometime early March in 2000 the commander of a newly-arrived Army batallion near Kauswagan, Lanao del Norte sent a letter to Commander Bravo, commander of the MILF-BIAF's then-2nd Division, demanding the return of an abandoned schoolhouse which Bravo was occupying. Reportedly a man of few words and having a short fuse, Bravo refused.

Soon a full-scale Army assault ensued. Unable to hold on to his camp, Bravo launched an attack on Kauswagan, Lanao del Norte. He was able to occupy the town for 12 hours on March 17, 2000. This is the part of the war which the government highlighted as the "start" of the 2000 Mindanao war.

The MILF ransacked the police headquarters but they spared the municipal

hall. Bravo withdrew from Kauswagan before the Army came (but medals were handed out for the "liberation" of the town). A handful of Muslim homes were set on fire by Christians in the aftermath.

The military assault spread throughout Mindanao. The famed Camp Abubakar and the Buliok complex (the MILF's biggest camp) fell to government soldiers. President Estrada claimed victory when he was able to raise the Philippine flag in Camp Abubakar, the MILF's central base.

And the Filipino people believed the war started with the MILF's attack in Kauswagan. In the same way the people believe now that the recent war started with the MILF's attack (again) in Kauswagan.³

Methodology

The researchers conducted library research and for secondary source materials supplemented by oral history methodology through personal interviews. Aside from this, the researchers conducted personal interviews of key informants who witnessed the specific events since 2000.

The key informants were purposely selected, namely; the local officials of Kauswagan, old residents of the place; the farmers; the ILAGA members and the migrants. A map is also provided. Second source data were taken from published documents and other books which the researcher used as references. The researchers presented here have been undertaken with the objective of exploring various approaches in search for a lasting peace in Mindanao. It examines the evolution of ilaga in the quest for peace, starting from the North Cotabato until it reaches to Tacub, Kauswagan, Lanao del Norte. This research revisits how the ilaga

³ 2000. Mindanao War.

movement evolved in Tacub, Kauswagan and its role to the community. The researchers employed a document-based study and a historical-analytical method because the conflict is very much anchored in its history. Without this, readers could not understand the root causes of the problem and the historical development of Tacub, Kauswagan, Lanao del Norte. The data for this study are collected from both primary and secondary sources such as books, articles, journals, newspapers, government reports, non-governmental organisations' reports and press releases.

Significance of the Study

The researcher chose this topic to give information and awareness to the readers about the role of Ilaga in Tacub Kauswagan towards peace. Therefore, the researcher wished that through this study, the community of Tacub, Kauswagan would be properly informed and it can minimize the conflict between Muslim and Christian in the said place. May this study help to solve issues and conflict between Muslim and Christians community and draw some lessons and insights to the communities. The study also will help our nation to avoid the past mistakes by focusing in adhering peace and order in oneself. Through this study I believe that the city and the academe can profoundly inform public understanding on the roots of conflict between Muslim and Christian community and the evolution of Ilaga to minimize the conflict by placing this issue in a broader historical context.

Moreover, the study will be useful to the researchers whose studies will be related to the topic. They may use this as a point of reference for their own researches.

Review of Related Literature

The secondary source materials below had contributed insights and similarities to the study;

“The Impact of Militancy on Liberation Movements: The Case of Mindanao” written by Marjanie Salic Macasalong. (IAIS Malaysia, 2014). The Mindanao conflict in the Southern Philippines has been regarded as one of the longest internal conflicts in the world. It examines the impact of militancy in the quest for peace, starting from the Spanish era until the current administration. This research revisits how the Moros resisted the Spaniards and Americans during the colonial era, and the Philippine forces after independence. Although there were efforts by previous administrations to solve the conflict, they did not achieve lasting peace because the root causes of the conflict were not properly addressed.

On page 227 of this book paragraph four, it stated that;

“ILAGA-related massacres were another hostile incidents that led to the death of hundreds of Muslims. Ilonggo Land Grabbing Association, or popularly known as ILAGA, was a militant group primarily concerned with taking land from the Muslims through force and killings. It also enjoyed the support of Christian investors, logging magnates and the military constabulary in the Philippines. For just two years, the group had perpetrated more than 20 massacres all over Mindanao that led to the death of hundreds of Muslim civilians and destruction of houses and mosques. Not only that, the group also mutilated bodies of victims, such as carving out ears, slashing nipples, plucking out eyes, and marking bodies with a cross. Further, despite the fact

that the Philippine government assigned 80% of its military strength to Mindanao, the Muslim rebels managed to kill as many as 10,000 Philippine soldiers.”

This was likewise similar to what happened to Tacub, Kauswagan, Lanao del Norte. The mediating efforts of President Marcos and the intervention of the military were of no avail. In late October, 17 men of a 22-man Constabulary patrol were killed in an ambush by Barracudas in the town of Magsaysay. This was followed by the next day by the revenged slaughter of 66 Muslims in a skirmish, also in Magsaysay. The full story is not known to this day, but a group of armed Moro voters, returning after dark in several trucks from the special election in Magsaysay, were fired upon by the government troops in Barrio Tacub in the municipality of Kauswagan. There were 40 moros were killed, with no fatality of the government side. Their bodies were then reportedly mutilated by Christian civilian bystanders. This was the infamous “Tacub Massacre.”

In his *Revolt in Mindanao: The Rise of Islam in Philippine Politics*, T. J. S. George quoted a confidential 1973 study by a Muslim activist on behalf of a government department, saying that the Ilaga was founded in Cotabato City in September 1970 by Wenceslao de la Serna of Alamada; Esteban Doruelo of Pigkawayan, who was then running for Governor in Cotabato Province; Pacifico de la Serna of Libungan; Nicholas Dequi a, a former officer of the Philippine Constabulary (PC); Bonifacio Tejada of Mlang; Conrado Lemana of Tulunan and Mayor Jose Escribano of Tacurong.

Peter Gordon Gowing (articulating the Moro perspective of its Philippine or Christian problem) – the restructuring of the

political relationship between the Moro people and the Philippine republic so as to:

- mitigate threats of cultural assimilation by the Christian majority,
- assure the patrimony of their homeland and resources for their descendants, and
- exercise control over those aspects of their political and social lives which most impinge on their selfhood as Muslims.

According to Dr. Sukarno D. Tanggol: Two concepts constitute the core of the Moro grievances; First is the principle of self-determination calls for an appropriate and substantial degree of self-rule in terms of powers and area where the Moro people will have the opportunity and capability to effectively address their marginalization. Second, the principle of social justice calls for the correction of the neglect of and injustices against the Moro people in the past.

The Birth of the ILAGA Movement

In human affairs a “crisis” is an unstable or crucial time when a bad situation will take a turn for the better-or for the worse. The state of affairs in Moroland had become very bad by the late 1960s, and by the early 1970s had reached crisis proportions. (Peter Gordon Gowing, 1977).

On March 17, 1968 the Jabidah Massacre-Sen. Benigno "Ninoy" Aquino made an expose' about the massacre of at least 28 Muslim army recruits (called the Jabidah commandos) who were secretly undergoing commando training at Corregidor Island. According to accounts, the training was part of a plot by President Marcos to infiltrate Sabah, agitate the people there to turn against their government, and demand annexation to the Philippines. When the trainees refused, they

were summarily shot. Many Moros were appalled and incensed at the inhuman treatment of the Moro Trainees, which the Corregidor incident was known as the “Jabidah Massacre.”

In May 1 in the same year, The Mindanao Independence Movement (MIM)-Amidst the backdrop of crystallizing Muslim discontent due to the Jabidah massacre, former governor of the empire province of (undivided) Cotabato, Datu Udtog Matalam spearheaded the issuance of a manifesto under the MIM banner declaring independence from the Republic of the Philippines. The MIM itself did not have a long history and was never more than a local movement in Cotabato, but the desire for independence from the Philippine Republic was rekindled in the minds and hearts of many Moros. (Noble, 1977).

Moreover, a small group of Muslim intellectuals and students in Manila, angered by the “Jabidah Massacre,” began conspiring and preparing for anti-government activities, including guerilla warfare, with the secession of Moroland as a the goal. The seeds for what blossomed into the Moro National Liberation Front (MNLF) were sown by the group and cultivated by the prominent Congressman. Its leaders were to include Nur Misuari of Sulu (then an instructor at the University of the Philippines) and Abulkhayr Alonto of Lanao del Sur (then a law student at San Beda College).

From mid-1970 and on into 1971, violence erupted in the two areas most affected by the Christians migration: Cotabato and Lanao del Norte. In both those areas Christians had long since become the majority population, but for a

time they found it expedient to effect political alliances with Muslims. Thus, they supported the election of some Muslims to the public office on the local, provincial and national levels. By the early 1970s, however, the Muslim and Christian relations had worsened to the point where Christian had no longer saw any gain in political cooperation with Muslims and the two populations became radically popularized especially as the November 8, 1971, elections drew near. (McAmis, 1974:46).

The Ilaga movement was created in 1969 in response to the threatening declarations of the MIM, as well as its rumored secret military camps, and to protect their election bids in 1971, certain diehard anti-Muslim politicians (known as the Magic 7) in the Central Mindanao area came together in September to formally organize the Ilaga movement.

The 1971 “Mindanao Crisis” Violent conflicts erupted among Muslim and Christian civilians, and among politicians. This was highlighted by several massacres such as the Manili massacre in Carmen, Cotabato and the Tacub massacre in Kauswagan, Lanao del Norte.

Who Are The Ilaga?

One man, Anong Doruelo, was on the forefront of defense. Together with other men in uniform who were in Central Mindanao to neutralize the secession movement, on the instigation of Doruelo, they gathered some civilians to combat the rebel group. One of them is Feliciano Luces. He was chosen to lead a small group, because of his already noted fierceness, and also because they see him as dispensable. Thus the ilaga movement was born. As the group grew in number, they however became not only a defense force,

but an attacking force. They have no qualms in killing and burning homes of perceived enemies. So not to be outdone, the moro group organized the Black Shirt in Central Mindanao and the Barracudas in Lanao to counter the Ilagas. Many encounters followed with stories of how they would cut the ears of every muslim caught, of how they would burn houses of every muslims in the community.

The government supplied them with guns and bullets, which the enterprising man who is always seen with a toothpick between his lips, would also sell to interested buyers. He is also knows to sell that amulet inside the bottle of a perfume with a brand of X7. People during that time believe in the powers of those amulets as long as it is worn properly and the mantra recited during the military encounters or what we now term as tactical engagement.

According to Mr. Pepe, Ilagas became the defender of the civilians because they are always in the forefront of every encounters. They and the BHDU (Barangay Home Defense Unit) renamed later as CHDF (Civilian Home Defense Force) formed the first line of defense. Every town, every barangay in Cotabato have their own CHDF, and the Ilagas are always there when needed. They are the roving rangers of the civilian defense. The Ilagas fortunately died of natural death. However when the people feel insecure, they would naturally revert to the tried and tested formula of survival. And this is happening again.

Rat Strike

In July 1972, the Associated Press, an American wire service, reported that the Ilaga organization was the brainchild of

seven Christian leaders of Cotabato. Later, in 1973, a group of students commissioned by the government reported that the Ilaga was founded in Cotabato City in September 1970 by Mayors Wenceslao de la Cerna of Alamada, Nicolas Dequina of Midsayap, Pacifico de la Cerna of Libungan, Bonifacio Tejada of Mlang, Conrado Lemana of Tulunan, Jose Escribano of Tacurong, Esteban Doruelo of Pigkawayan and PC Capt. Manuel Tronco of Upi, the overall commander. Being seven in all, they were thus called the "Magnificent Seven." Though a later recruit, Lt. Col. Carlos B. Cajelo, also an Ilonggo, who became Governor of Cotabato and later the Deputy Defense Minister for Civil Relations, was popularly believed as the real leader. He was perceived to have taken over the command discreetly from Manuel Tronco, a candidate for Mayor of Upi in 1971, when the latter was slain in an ambush in 1972 in Upi, Cotabato. Ex-Mayor Esteban Doruelo, then an assemblyman of LTP-12., was also assassinated on February 4, 1984 in Cotabato City for reasons believed linked to the founding of the Ilagas.

"Attacking Moro people with shotguns, Carbine and Garand rifles supplied by the Philippine Constabulary then was a great adventure for us. The situation has changed. We have realized that co-existence and respect for each other's religions and cultures are the better means of achieving peace in our communities," said Alberto, who is of pure Ilonggo descent -

Anti-Moro group resurfaces in North Cotabato.

The Ilaga rampage started in the middle of 1970 barely a year-and-a-half before Pres. Ferdinand Marcos plunged the country into Martial law on September 23, 1972. The first killing field was Upi,

Cotabato the new home of Commander Feliciano Luces, alias "Toothpick." There he led a band of Tiruray tribesmen, who readily responded allegedly to settle an old score with the Maguindanaon Moros. 12 On March 22, 1970, Commander Toothpick and his band of so-called "fanatics," initiated, as their baptism of fire, an attack on an isolated Moro village, killing six people and burning several houses. They left behind their horrifying trademarks on the victims: cut ears, slashed nipples, plucked out eyes, and cross markings on the body. Members of the gang, mostly teenagers, were subjected to rigid initiation rituals and were required to wear amulets and other charms believed to have magical powers to ward off evil and harm. In the beginning, the Tirurays dominated the gang but, later on as other Ilaga units sprouted in other areas of Cotabato, Bukidnon, Lanao del Norte, Zamboanga del Sur and elsewhere, the movement was dominated by Ilonggos. Later, the Ilaga gangs acted as "storm troopers" for government troops when the Moros succeeded in putting up an effective defense.

The paramilitary groups were countered by the formation of "Ilagas" (rats) linked to the Lanao del Norte governor Arsenio A. Guibranza, Dimaporo's political rival. The collusion of Ilonggo-led Ilagas and the Philippines Constabulary exacerbated the armed conflicts (Jubair 1999:35-50).

There have been irreversible socio-economic, historical and political evolutions that changed the security landscape of Tacub, Kauswagan, Lanao del Norte and surrounding areas over time that a resurgence of the Ilaga, in just a snap of fingers, cannot be possible.

Not only are the pioneers of the Ilaga are now so old, if not dead, but their present non-Moro elected leaders and

community elders have either openly been supporting the Mindanao peace process, or are engaged in livelihood activities, such as farming and other entrepreneurial ventures needing peace and calm in the surroundings.

Brad was one of the 6 Ilaga who escaped and survived in the encounter in barangay Inudaran. That was year 2000 when 26 Ilaga were hired by the Oliverios to the 24 hectare farm to harvest their coconuts. And for the first two weeks at Inudaran harvesting, nothing happened to them. It was then decided that half of them have to go down to barangay Bagumbayan to buy some supplies needed for their continued stay while the half opted to stay. That was then they were attacked by the MILF, which started in the morning and ended up late in the evening. That was a close encounter, just about some few feet away. As recalled, it was a fight more on survival for the 13 Ilagas left to face around 150 MILF fully armed men throughout the duration of the conflict. With a handful of arms and ammunitions, he survived firing single, sure shots against an enemy with automatic, rapid fire and continued flow of reinforcements because once an MILF died or wounded a fresh comrade replaces him. He sometimes resorted to hand to hand battle just to be alive. With little ammunition left, the unfading strength of the enemy and through the cover of darkness, he escaped from the encounter by crawling head-on through the enemy line. He survived owing to his 'anting-anting' and the will to survive. Half of the 13 were killed in the encounter not because of the bullets but enemy stab wounds. He was 18 years old at the time of the encounter. He now works as a jeepney driver and a family man.

Boy was a former CHDF volunteer and helped patrolling areas on the mountains with the military. He guided them on terrain unfamiliar to the military. He identifies a friend from foe. He is 58 years old and resident of Tacub. After they took barangay Lapayan early morning, the MILF proceeded to Tacub. Through the hills adjacent to the highway, that morning some 300 MILF wearing black shirts move-in to take a fight against the locals. Since his house was situated where the MILF traaveled, he was captured and tied-up. He did not resist. Owing to the number of enemies with high power firearms who forced themselves at his doorstep and with only a .45caliber pistol kept thoroughly, he stayed low and focus. Since he speaks the Maranao dialect, he begged and begged for his life. His hands were tied-up together with his right foot and hopped towards the santol tree close to the highway. He was a hostage and to be beheaded but they suddenly left him alive. His house and those around it were burned to the ground by the MIL F as the residents were fleeing to the beach just across the highway.

While checking the movement of the MILF along the hills, Kaloy met them as they travel towards the road that lead to where Boy's house. He ran back frantically for safety. He decided to cross the highway where some of the young Ilaga were waiting. They were five of them. He was armed with a shot gun while his companions have a pistol and an improvised hunting gun with telescope. Their location served them well because they were on the left side of the enemies' firing position. There were Ilagas too at the front. As the MILF incurred casualties on their attack, they pretended to shoot on the air then stopped for a while and listened to responses. That was when

they learned their position and start shooting at them. His brother was shot dead by a sniper fire.

Days prior to the attack, Rick, was informed that the attack of Tacub was imminent. Alarmed, a meeting and a decision was made, that the residents must guard round the clock around their area and reported any unusual movements. It was not until the twin bombing in Iligan which served as signal for the MILF to get ready for attack of barangays Lapayan and Tacub. Unfortunately, Lapayan fell with not much of a fight for the residents were sleeping through the night with the MILF. And when the early morning came, they were caught unaware and became hostages. While the residents of Tacub, as part of their preparation, created 3 groups to counter the advance. One family-group on the hill while the two family-groups along the highway, creating a triangle defense. Each family should arm themselves whatever they can provide to hold off the attack and to prevent them from crossing the highway. Since most of the residents on the hills have fled to the beach, it was necessary for them to stand whatever the cost of it. With the number and strength of the MILF, the first defense fell and they fled to the highway. The second defense was stronger, and cause casualties among the enemies and because of these, the movement shifted to Recla defense where they were waiting. It was a weak defense but it did not break. They were armed with small hand guns. Some lighted firecrackers just to make noise. These resistances, may it be weak or strong, hinders a swift attack of Tacub and allows military reinforcements to come (It took the tank to aide them after an hour and a half travel for a distance of 2km).

Joe was one of the first Ilagas from Cotabato to respond from a call of help from Gov. Quibranza. About 60 of them came and were dispatched to various places in Lanao del Norte and he was placed in the municipality of Tubod. He is now a personal body guard of a businessman and was one of the 26 Ilagas who were at the 24 hectares land of the Oliverios and one of the half went to buy food in Bagumbayan. They did not respond to help the remaining 13 fearing they might kill each other. He was one who led the counter offensive against the MILF attack of the municipality of Kolambugan. If it was not for this, Kolambugan would have been fallen.

Mayor Arnado now serves his last term as mayor of Kauswagan, Lanao del Norte. During his campaign for the position as mayor on 2004, he hired Ilagas to serve as bodyguards and to provide him safety in and around Tacub against the MILF or political enemies. Some believe that the election was a do or die. Many feared that the election of another Maranao would mean life or death for the Christians. In fact, some locals had moved away for fear of the Maranaos. Vehicles that passed through the streets especially at night evaded to stay or rest. Some had to speed-up or there may be harm that may fall on them. The election was a choice between life or death. He won as mayor. As a return, he hired them as CSU. They are around 50 men who do the collection of road tax, income tax, etc. They also serve now as his bodyguards. One CSU named Brat boasted that he was shot by a Garan rifle at close range but was not hit. In retaliation, he threw a stone and hit the assailant. It happened on January 9. Just recently, during the heated campaign period, these men were on the look-out and no one is

allowed to go near the mayor without their scrutiny and permission. The mayor is also believed to be an Ilaga, as mentioned by Rick, who heads a department and is the right hand of the mayor Arnado.

Findings and Conclusion

Based on analysis, these are the following conclusions;

1. It is true that the Ilaga still do exist in Tacub and have potions or 'anging-anging' similar to the Ilaga in the 1970s. And that their source came from the same individual who supplied Commader Toothpick and other Ilagas in Cotabato. It was because of this 'anging-anging' from Arsing that brought Toothpick and the locals like Poldo and Lito to fame. He has an 'abyan', a supernatural being that goes with him and guides him where to get the roots of a tree to be used as potion.
2. In spite the presence of the Ilaga in Tacub, their activities were far more different from their predecessor. Notoriously known for eating the ears of their enemies, they do not follow the same tradition of acceptance of bravery. Also to consider that their attributes are used to defend themselves or even to the extent kept them aware from the perils. They still follow the same rules in order for the potion to remain usable and effective.
3. The Ilagas now do not have an established political hierarchy or even a recognized leader. Not like before that the Ilaga in Tacub was led by Commader Ligaya, now it is a loose group. Though others may claim being the leader, some do not

recognize them. But when the situation might be too much to take and that the local's livelihood on the mountains are in danger, then one may be brave enough to take the responsibility.

4. Most Ilagas now are involved in various occupations and prevent from being idle and become easily provoke once an offer is made. Given this instance, they align themselves to their work in order to have their necessities meet. Just like the case of Brad, he was 18 years old and nothing to do. So, when the offer came and money he can get, he took the step even if his life was in danger.
5. Even though the Ilaga is a loose group, it is still a group to reckon with. It is a moniker in Marawi that if a Maranao boast for his braveness, he might have to test it in Tacub. As believed, the MILF attack has to do with revenge for their keen during the 1970s that died there. A revenge for the Ilaga.

Upon analysis of these interviews, we were able to conclude these;

1. It is an established fact that the Ilaga now in Tacub have potions or 'anting-anting' similar to the Ilaga in the 1970s and their source came from the same individual that supplies or provides it.
2. In spite the presence of the Ilaga in Tacub, Lanao del Norte, their activities were far more different from the early Ilagas or their predecessors.
3. The Ilagas now do not have an established political organization and

acted or responded upon based on the urgency of the situation

4. Most of the Ilaga are employed to various endeavors which prevents them from being idle and get easily provoke as influence by other people
5. The Ilaga as a group inspite it is loose, continue to be a force in and around Tacub.

Policy Recommendations

1. Recognition for its identity is very important. Claims for the recognition of difference now figure prominently in struggles over multiculturalism within poly-ethnic and multi-religious country. Finally, claims for recognition are central to newly energized movements for international human rights, which seek to promote both universal respect for shared humanity and difference-regarding esteem of distinct "cultures."

2. Empowerment. This is a tool in order to increase the degree of autonomy and self-determination in both Christians and Muslim communities in order to enable them to represent their interests in a responsible and self-determined way, acting on their own authority. It could be both to the process of self-empowerment and to professional support of people. It could be in social, political and economic aspects which enable them to overcome their sense of powerlessness and lack of influence.

3. Cultural Existence. We have to realized the co-existence and respect for each other's' religions and cultures are the better means of achieving peace in our communities.

4. Representation to the voice of the local and national units. And restructuring of the political relationship between the Moro people and the Philippine republic so as to:

mitigate threats of cultural assimilation by the Christian majority, assure the patrimony of their homeland and resources for their descendants, and exercise control over those aspects of their political and social lives.

PEACE AND DEVELOPMENT INTERVENTIONS FOR CONFLICTED AFFECTED COMMUNITIES IN THE PROVINCE OF LANAOS DEL NORTE

Aisah Gaus Minukon
agminukon@gmail.com
Mindanao State University, Philippines

Abstract

The study investigated the extent of agreement among former combatants of Moro National Liberation Front (MNLFF) and their communities on the peace and development interventions introduced in transforming their communities into a Peace Development Communities (PDC) in the Province of Lanao del Norte. PDC is a peacebuilding strategy in cementing the foundation of lasting peace and development in Southern Philippines. It further investigated the factors that contributed to the promotion, stagnation and retrogression of PDCs. The study is an evaluative descriptive research method. It used triangulation methods in the data collection to have in depth–investigation and analysis of the study. Purposive sampling is use in the identification of the respondents that included all the MNLFF peace and development advocates (PDAs), Punong Barangay, active service provider, and sector representatives in the established PDC. The findings of the study revealed that *strongly agreed* on the development interventions introduced under the confidence and sustainability building phases of PDC development. With respect to the capacity and institutional building phase interventions, respondents only *agreed* on the interventions introduced. The findings further showed on the one hand that the top three items that contributed in the promotion of PDCs were 1) unity and strong relationship of Muslims and Christians, 2) establishment of people’s organizations and 3) presence of development projects. On the other hand, the top five in ranked order that contributed in the stagnation and retrogression of PDCs were 1) armed conflict, 2) passive and fatalistic behaviour of people, 3) family feud, 4) corruption and 5) ineffective leadership.

Key Words: Peace and Development Community (PDC), Peace and Development Intervention, MNLFF- Peace and Development Advocates

INTRODUCTION

Peace and development interventions have been seriously desired to address the unceasing tribulations suffered by the marginalized and war-affected communities in Mindanao specifically in Lanao del Norte. So much effort has been spent by peace advocates in the search for genuine peace which for several decades remained elusive. But the search for genuine and lasting peace was a continuous struggle shared among residents, institutions, and various government and non-government agencies realizable only through the introduction of peace and development interventions. Lanao del Norte was affected

not only armed struggle and insurgency but also by unemployment, poor agricultural harvests, and inaccessible basic services. This somehow caught the attention of development agencies where initial interventions were then introduced.

As championed for peace and development, United Nations system initiated its assistance to the Moro National Liberation Front (MNLFF) in April 1997 through the Southern Philippines Council for Peace and Development (SPCPD) after 1996 peace agreement. Since then, many other donors have come forward to provide additional support through the Government of the Philippines-United Nations Multi Donor Programme (GPh-UNMDP). It is a

multilateral programme intervention from various agencies of United Nations and vast contributions from other international agencies and developed countries.

The development model intervention of the third phase of GPh-UNMDP is the peace and development community (PDC). PDC is a peacebuilding strategy in cementing the foundation of lasting peace and development in Southern Philippines. The PDCs are marginalized and conflict-affected MNLF communities actively engaged in transformation process with the help of development partners.

However, in 2000 and 2008, war between MILF¹ and military exploded in the municipalities of Lanao del Norte that affects not only the province, but the entire region as well. Many families were displaced, left their abode and abandoned their livelihoods. The DSWD report of 2008 says that in one incident, 30,808 people in 108 barangays were affected by conflict in Lanao del Norte. In another report, majority of the displaced, about 62,000 were from the province of Maguindanao. Further, about 3,800 families were reported displaced in Cotabato and Sultan Kudarat provinces while Lanao del Norte's share of displaced families was 260 (NDCC IDP Taskforce, 2009). The conflict blocked the development interventions in the establishment of PDC.

Documenting the gains of peace initiatives was imperative along with aggression. Francisco (2001) wrote a remarkable story of Mr. Baharin in Davao del Sur, a former MNLF combatant now peace and development advocate (PDA). The MNLF now identified as PDA is waging a different kind of war, a war against poverty through development initiatives. Mr. Baharin and other members of his community established the Aplaya Hagonoy Muslim-Christian-Highlander Multipurpose Cooperative and operated it with external assistance agencies and institutions towards building a model MNLF peace and development community in the area.

In an address to PDAs that included representatives from Lanao del Norte, Fr.

Eliseo Mercado (1999) described the road to peace is more difficult than the road to war. For him, when the dust of war has settled down, the smoke of armed conflict cleared up in Lanao del Norte. The PDAs moved on and underwent rigorous training towards a paradigm shift from guerrilla warfare into dialogue, peaceful, and developmental facilitation.

Hence, an objective look on the extent of agreement among members of the PDCs and PDAs on the peace and development interventions in the province of Lanao del Norte was the objective of this study. It also investigated the factors that contributed to the promotion, stagnation and retrogression of PDCs.

This paper has presented generally into five parts that started with the Introduction, the methodology used in this study, conceptual framework, findings and analysis and last part is the concluding statements.

METHODOLOGY

The study is an evaluative descriptive research. It used triangulation methods in the data collection to have in depth-investigation and analysis of the study. Both quantitative and qualitative on data collection and analyses are applied in the study. It used purposive sampling in the identification of the respondents and key informants for the survey questionnaire and for the interview, with a total of 100 key respondents and informants were involved. The respondents and informants consisted of all the Barangay Chairmen in the PDC, MNLF PDAs, and the head of service providers and people's organization in the PDC community.

A structured questionnaire and interview schedule were prepared, adopted, and modified from the assessment tool of GPh-UNMDP on the PDC. The questionnaire underwent validity test and assessment from the experts. For the data collection, the researcher sought the help and support of two research assistants in the administration of the questionnaire and the conduct of key informant interviews. Prior to the actual conduct of gathering data, the researcher contacted all the key respondents through the PDA league president, after which the questionnaire was

¹ MILF is a faction on MNLF revolutionary group in Mindanao

personally distributed. The retrieval made after the interview. The researches collected photos and copies of project reports from the PDAs as evidence and enrich the study.

The analysis of Problem 1 on the extent of agreement on the peace and development interventions used simple computation of standard (SD) deviation and mean. The scoring and qualitative descriptions (QD) of the extent of agreement are 5-strongly agree (SA), 4-agree (A), 3-neutral (N), 2-disagree (D), and 1-strongly disagree (SD). No statistical tool in the analysis of the data gathered for Problem 2 because it involved simple tallying and ranking of the different responses.

The location of study held at the province of Lanao del Norte. It is a small growing province in terms of its population. The province has a total land area of 309,200 hectares or 3,092 sq. meters and comprised of 21 Municipalities. Cebuano is the most widely used dialect in the area. Municipality of Tubod is the seat of the provincial government. In figure 1 below showing the map of the province of Lanao del Norte and location of PDCs. Reaching the PDCs entailed traversing both coastal and far-flung barangays usually by renting a single motor.

Figure 1. Map of Lanao del Norte and location of PDCs. The black arrow pointed to numbers colored blue are the location of PDCs.

CONCEPTUAL FRAMEWORK

This study is anchored on the third phase of the Government of the Philippines –United Nations Multi Donor Development Programme (GPh-UNMDP) from 2001-2005 that laid down the birth of peace and development communities. The Program builds upon the achievement of Phase I and II of the multilateral peace and development programme named the SPCPD-NEDA-UN Multi Donor Programme². Moreover, the fourth phase of development program called Action for Conflict Transformation (ACT) for Peace from 2006 to 2013 is the last and final phase of the peace and development program in Southern Philippines. The level up program signifies the continuing commitment of the Government and the UN in peace building and development efforts in Southern Philippines that is still consistent with the 1996 Peace Agreement.

The PDC was conceptualized as a strategy for realizing the vision of genuine peace and development in conflict-affected communities in Lanao del Norte. The criteria in selecting PDC were as follows: a PDC may consist of a cluster of adjacent barangays, or a barangay and adjacent sitios where a large majority of combatants and their families reside. The target community must be reasonably accessible and through its leadership must show willingness and initiative to transform itself into PDC through active mobilization and voluntary contribution of time and resources. Further, the community has access to productive resources, which represent the state's dominant bio-ecological zone. The MNLF as main partners of peace building programme who are committed to support their development as fully functional PDCs selected the PDCs.

The conceptual framework of the study is shown in figure 2 below is describing the relationship of the key

²The Phase I and II of the multilateral peace building interventions is composed of the tripartite representation, the Southern Philippines for Peace and Development representing MNLF, National Economic Development Authority (NEDA) from the government supervision and United Nations Multi Donor Programme representing UN agencies UNDP, FAO, ILO and among others.

variables of the study focusing of development phases and interventions in the establishment of PDC.

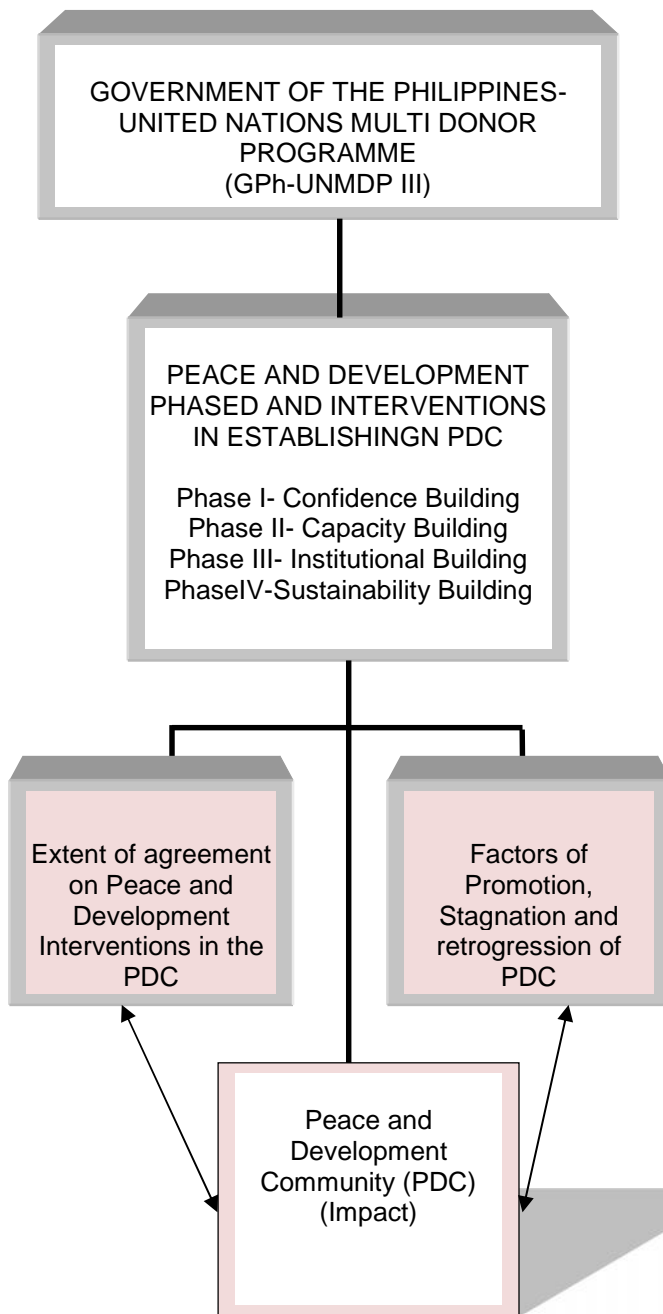

Figure II. Conceptual Diagram of the study

Phase I is the Confidence Building Phase (CBP1). It is the entry phase of the program, a 5-month period of implementation. This is the period when community development facilitators/organizers (from the programme assistance) enters the MNLF community to make the initial contact and provides relief and emergency assistance. It is also the time the community first experiences

mobilization to deliberate their common concerns, issues or felt needs. The development facilitators came to analyze, among others, the development of livelihood opportunities. This phase helped the community in identifying its resources, collective strengths and weaknesses. This is also the phase where the community is given ample time and opportunity to identify qualified community development managers and potential peace and development advocates (PDA).

Phase II. Capacity Building Phase (CBP2) is the second phase. This is the planning and implementation phase where peace and development advocates and development managers and members underwent series of capability activities to enhance the capabilities of the organization to undertake collective action and responses to the challenges faced by the community. The Adhoc structure moved toward the formation of a permanent community organization like a coop or association. Leaders and member 'learn by doing'. These interventions lasted from six to twelve months.

Phase III is the Institutional Building Phase (IBP) or the strengthening and consolidation phase. This is the period where the community assessed and learned from its experiences and consolidated their learning. It is on this phase where they realized their own power in controlling and redirecting their lives, and in enhancing their indigenous knowledge and values and moved forward towards ensuring that organization developed the means and capabilities to sustain its organization and operations.

Phase IV. The Sustainability Building Phase (SBP) is the last development phase. The so-called the Phase-out stage. This is now the phase where the organization can now advance its cause with minimal organizing and technical assistance from an external development facilitator. The sustenance and expansion of the organizing and development process must be by this time taken over by the organization. It is also the phase that organizations was already capably of extending support to neighbouring PDCs in the area. By the end of this Phase, the

organization itself defined the role of external development facilitator.

FINDINGS AND ANALYSIS

I. Extent of Agreement on the Peace and Development Interventions

As mentioned earlier in the conceptual framework, there were four development phases introduced in establishing a PDC. Each development phase corresponded with various projects/activities were presented and identified as interventions. In an interview with Hon. Abdulaziz Batingolo a.k.a Dante, a former MNLF chairperson and elected Municipal Mayor said that, “we are committed to show our sincerity on the implementation of the 1996 peace agreement with the Government by establishing peaceful and developed community with the help of government and the other funding institutions (key informant, 2010).

The extent of agreement on the peace and development interventions (PDIs) under the development phases of PDC rated follows:

A. Phase 1- Confidence Building Phase

The study revealed that the interventions under this phase were highly recognized and rated as *strongly agree* on the PDIs introduced. A farmer informant said, “There is an improvement in our access to farming facilities and other economic services, we hope a more positive change” and a health worker informant supported this statement, “we are united and more project is coming for the development of our community”. The satisfactions on the development interventions introduced in the community were the reasons why all the interventions were highly perceived. This indicates also that the community would have an access to the next phase of PDC development interventions. This also implies that the confidence build for peace opens its opportunity for a more improved way of life in the community. Table I shows the extent of PDI under confidence building phase. The average means of all the considered interventions is 4.30 qualitatively described as *strongly agree*.

Table I. Peace and development interventions under confidence building phase (CBP1)

<i>Phase 1- CBP1 Peace and Development Interventions</i>	<i>Mean</i>	<i>SD</i>	<i>QD</i>
1. The community identified potential peace and development advocates.	4.42	0.63	SA
2. The PDA ³ underwent KSA enhancement.	4.42	0.5	SA
3. The community underwent knowledge, skill and attitudinal enhancement.	4.30	0.54	SA
4. Peoples' organizational (POs) were initially established and organized in the community.	4.28	0.6	SA
5. The community identified needs, problems, and consensus on priority needs.	4.26	0.6	SA
6. The community conducted participatory profiling and barangay planning.	4.17	0.7	SA
7. The MNLF communities were identified and declared as PDC.	4.36	0.62	SA
8. The PDC programs are recognized and supported by LGU.	4.31	0.6	SA
9. The PDC conducted peace information, education campaign vis-à-vis the peace agreement/process.	4.35	0.7	SA
10. The community participated in peace dialogues and forums.	4.20	0.8	SA
Average	4.30	0.42	SA

The interventions under this phase pave the way in building trust and gain confidence with the MNLF, their community and the funding institution to a more

³PDAs are former MNLF members. They are identified based on the interest and commitment in the establishment of PDC. They underwent series of enhancement training and support as part of peacebuilding strategy program.

tangible outcome of peace. It may be true that development must be woven around people, not people around development (Human Development Report, 1993). In working with the MNLF PDA and the community, it is important to create a friendly affirming climate in the community so that even the shyest persons will gain sufficient self-confidence to contribute his/her experience and insights to the common search for solutions to the enormous problems that the community are facing (Hope and Timmel, 1986:4).

The highest mean of 4.42 with qualitative description of *strongly agree* went to intervention 1 and 2. This means that the interventions on the *identification of PDAs and the knowledge, skills and attitude enhancement underwent by the PDAs* may indicate strong commitment and dedication of PDAs in establishing PDC. One of the PDAs informant said, “*we are somewhat empowered. We develop self-confidence and mainstream in the larger community, before we are just a participant in training, now, we are facilitating and re-echo the training attended in our community*”. This is the reasons why these interventions were rated *strongly agree*. One of the strategies in sustaining the peace building intervention is the support efforts of the MNLF combatants and transforms their military structures into self-reliant organization (SPCPD-NEDA-UNMDP, 2000). As to the MNLF PDA as key informants, 57% of them were actively assisted in the facilitation and organization of the PDCs while 43% were engaged in actual peace organizing, mediation, negotiation, project coordination and management.

The overwhelming response implied success with an indicator of unity and transparency among the PDAs. It indicates that PDA has a great role not only in the founding but also in sustaining PDCs. One of the PDAs wished *for a continued support for a strong PDC*. In contrary from another respondent had said that, “*the projects are solely for the MNLF members and their families. There are PDAs that are inactive*”. This implies that some PDAs are not yet empowered and convinced on the development interventions or some were still in a ‘wait and see’ feeling of support.

This also indicates that PDAs may help in the promotion and stagnation of PDC.

The lowest average mean of 4.17 but still qualitatively described as *strongly agree* is *the community profiling and barangay planning*. For a reason maybe, that PDC profile is now available and accessible in the barangay and the needs of the community integrated in the Barangay Development Plan (BDP) for action. Once integrated in BDP, a possible action and implementation is expected. Community profiling and barangay planning are important. They serve as a blue print of what the community is all about and what directions the community would take. The community profile describes the community issues, problems and potentials and the same are integrated to barangay development plan. With the profile and plans, a funding can easily supports the needs of the community. Planning is a mandate from Local Government Code (RA 7160). Integrated Development Planning is an approach to planning that involves the entire municipality and its citizens in finding the best solutions to achieve long-term development goals. This mean that the basis for project intervention is easy to determine and that demand driven and right based interventions are important.

The middle mean of 4.26 is on *community-identified needs, problems and consensus on priority needs*. One of the steps in profiling and BDP is participation where everybody is required to participate in the identification and solution of the problems. The consensus building during the development planning in the PDC did help in identifying the best solution to the problems in the development of the community. Furthermore, the ACT for peace programme emphasized the principle on participation, which involves deliberate efforts, and meaningful participation of all stakeholders to identify right based interventions while demand driven principle helps the service provider identify, design, respond to and serve the expressed needs of the community.

B. Phase II- Capacity Building Phase

Table II reveals that the overall mean of 3.52 with qualitative description *agree*. The overall mean entails that despite

of agree response on some development interventions, the roots of the problems in the community has not yet targeted with right interventions. This is the reason why a satisfactory rate or *agree* to almost all of the interventions. This may be due to the difficulty and not given priority on barangay development programs. As expressed by one of the PDAs that, “*Barangay development programs were not given priority and still many community residents have difficulty in the access of potable drinking water*”.

In addition, a qualitative description *strongly disagree, disagree* and *neutral* response on some interventions under this phase specifically on accrediting agencies. However, the agree interventions under this phase helped and capacitated the PDA in managing community projects. They started building partnership with service providers (local and international funding agency) and implemented tangible projects.

The highest average mean of 4.63 with qualitative description *strongly agree* went to *the accessibility on health and sanitation*. This shows that health projects in the community was visible, accessible and felt by the people in the community. The UN agency that provided this intervention is the UNFPA and UNICEF. This implies that establishment of health centre, provision of health facilities and seminar on health and sanitation are highly imperatives in the community. All the PDAs also attended health and sanitation related seminars.

Table II. Peace and development interventions under capability building phase (CBP1)

Phase II- CBP2 Peace and Development Interventions	Mean	SD	Q.D
1. The PDC has formal and functional people's organization	4.39	0.5	SA
2. The established people's organization has functional officers	4.33	0.6	SA
3. The established PO is registered and affiliated with a. Securities and Exchange Commission	2.36	2.1	D
b. Cooperative Development Authority (CDA)	2.51	2.2	D

c. Department of Labor and Employment	1.26	1.9	SD
4. The community was involved in project planning and implementation.	4.32	0.6	SA
5. The community was involved in project proposal development.	4.24	0.7	SA
6. The sectoral plans were integrated to barangay development plans	3.72	0.8	A
7. The community initially organized peace and development task force.	4.17	0.7	SA
8. All sectors were consulted and participated in the projects implemented in the community.	4.17	0.8	SA
9. All sectors in the PDC were actively involved in community development program.	4.16	0.8	SA
10. The PDC established linkages with service providers.	4.23	0.8	A
11. The PDAs attended series of Culture of Peace training.	4.29	0.9	SA
12. The PDC has availed projects basic services like a. Health and sanitation	4.63.	1.23	SA
b. Water services	4.46	1.5	SA
c. Agricultural programs	3.11	1.5	N
d. Education facilities	3.36	1.3	A
e. livelihood programs	3.13	1.8	A
13. The community through the PDA actively participates and conducts Culture of Peace related activities.	4.24	0.9	SA
Average	3.52	0.45	A

The lowest average mean of 1.26 with qualitative description of *strongly disagree* has something to do with *registration of PO to the Department of Labor and Employment (DOLE)*. This entails that DOLE may not be accessible or the respondents were not familiar with the agency. This further implies that registration of their organization with DOLE was not among the priorities of respondents.

This is similar with the middle mean of 2.36 qualitatively described as *disagree* which went to *security and exchange*

commission (SEC) and closely followed by cooperative development agency (CDA) with rating *disagree* also, although majority of the established POs were registered in the said office. According to Ms. Josephine Penduma (Provincial Cooperative Officer, Lanao del Sur) during the inception stage of development interventions, they were mandated to register all MNLF POs into cooperative to avail of the development programs. This indicates that some requirements on registration were bent to accommodate development support. All the established organizations were encouraged to register so that they could obtain legal personality to access to development funds. However, there is difficulty on acquiring legal personality. This implies that all the accrediting agencies were not accessible to people. There was therefore a need for strengthening the information dissemination and education of the agencies services.

C. Phase III- Institutional Building Phase

Table III below shows an average mean of 3.82 with qualitative description agree. This indicates that the community would access to the next level of intervention. The response can be described as satisfactory due to the clamour of one of the PDC respondents, said *“the barangay though it was able to access various projects, I cannot consider it a PDC due to the rido, political greed and pressure of military even if the conflict only occurred in the nearby town”*. They suggested a continuous dialogue between the PDAs and the military. Another respondent expressed that *“development projects is nothing without trust. Projects cannot be sustained without this”* (PDA, key informant).

Table III. Peace and development interventions under Phase III-IBP

Phase III- IBP Peace & Development Interventions	Mean	SD	QD
1.The established POs underwent organizational planning and formulated its VMG statement	4.19	0.8	SA
2. The established POs were trained to manage projects.	4.12	0.9	SA
3. The established PO	3.84	0.92	A

increases savings and capital from the availed projects.

4. The PO is affiliated to civil society formation outside the PDC.	4.04	0.8	A
5. The POs within the PDC made to represent in the barangay development council and other existing barangay structures.	4.03	0.8	A
6. The community integrated development program is formulated.	3.84	1.1	A
7. The basic services projects were established in the PDC, such as:			
a. health and sanitation services	3.61	1.2	A
b. Water system is installed	3.52	1.3	A
c. agriculture programs are established	3.22	1.5	A
d. education is accessible to women and children	3.43	1.4	A
e. available livelihood programs	2.61	1.8	N
8. The livelihood opportunity expanded nearby PDC.	4.08	0.6	A
9. Institutionalization of the peace and development task force (PDTF) in PDC.	4.13	0.6	SA
10. The PDC has the ability to provide counterpart contribution to community development projects.	4.14	0.7	SA
11. The peace advocacy plan in the PDC was established like peace dialogues, info. caravan	4.12	0.8	SA
12. The PDC initiated self-help projects and increases its community income.	4.13	0.76	SA
Average	3.82	0.46	A

The overall response *agree* under this phase may indicates that the introduced interventions was not only the basis of success of a development programme. Development according to Garcia (1985) is not mere increase in per capita but changes in socio-cultural structure of a given society, and development interventions must anchor

within the framework of sustainable development, so it last and continuing. In addition, Baldemor (2003) classified development projects interventions into three, first, the stand-alone projects or single shot projects, second, integrated area development projects or shotgun projects and third, strategic projects or warhead projects.

The highest mean of 4.19 with qualitative description *strongly agree* went to the *established PO that underwent organizational of the permanent development structure*. This entails that respondents have internalized the organizations' VMG statements. Planning and VMG means that organization has taken an important step towards creating a shared and coherent idea of what the organization would like to do, how and where to go. A *vision* is a guiding image of success formed in terms of a contribution to society. *Mission* is the overall purpose of the organization and the *goals* simplified the vision and mission in how to accomplish in a right time in right logistics and in a right place.

The lowest mean of 2.61 with qualitative description *neutral* went to item 7.e., *the availability of livelihood programs*. This indicates that there still is a need on livelihood support in the community.

In relation thereto, the researcher asked the respondents on how they perceived the project implemented in the PDC. It reveals that great majority recognized on the agricultural programs spearheaded by the UN-FAO; one-third of the respondents recognized access to water services from UNICEF and vocational training from ILO; and only one fourth of the respondents perceived access to health and sanitation from UNFPA. In contrast, table IV above reveals that the intervention on basic services was rated *agree* by all except on livelihood programs, which got the lowest mean of 2.61 and qualitatively described as *neutral*. This implies that except for livelihood, demand driven projects were highly recognized by respondents as interventions. On the other hand, the 50% of the respondents recognized livelihood projects as dole-outs while the other 50% considered the project as interventions. This implies further that livelihood interventions

lacked the characteristic of being a dole-out. It could also be true that livelihood projects were not really the kind of project that community needed and sustained. A woman respondent positively recognized the interventions she said that, *"we already have health center with facilities and livelihood project in our community"*. A PDA also give more tangible projects, *"we have a bakery, planted fruit bearing trees and seedlings and agriculture study tour...our living conditions improved"*. This implies that whatever intervention provided in the community would definitely help the community.

D. Phase IV- Sustainability Building Phase

Table IV shows that average mean for all interventions under the sustainability building phase is 4.28 which is qualitatively described as *strongly agree*. This rating indicates that a nearly well developed and improved community recognized the importance of POs, proactive role of LGUs, transformed and empowered PDAs and POs, established social services in the community and concept of helping other communities grow. This further means that a sustained community is one that all its areas are working and operating for the good of the whole organization.

The highest mean of 4.5 with *strongly agree* rating went to item 8 in the table. It is the *Local government units (LGU) adopted the experience and gain of peace efforts and passed resolution adopting peace advocacy plan of PDC*. The LGU refers to the governance at the community level from barangay up to provincial level. The barangay is the smallest political unit. It serves as the primary planning and implementation unit of government policies, plans, programs, projects, and activities in the community and as forum wherein the collective views of the people may heard, express, crystallize and consider, and where disputes maybe amicably settled (Tabunda & Galang (1991). It implies that LGU has a great role in the strengthening, institutionalization and sustaining peace and development efforts of local communities, especially the PDCs in this context.

Table IV. Peace and development interventions under sustainability building phase (SBP)

<i>Phase IV SBP Peace & Development Interventions</i>	<i>Mean</i>	<i>SD</i>	<i>QD</i>
1. The vision, mission and goal statements of the POs were pronouncedly undertaken and recognized in the PDC.	4.31	0.6	SA
2. The PDC through the PDA assisted other communities and advocate own experience for replication.	4.30	0.5	SA
3. The PDC success stories are documented, published and circulated.	4.11	0.8	A
4. The PDAs were actively involved and are engaged in local governance.	4.35	0.7	SA
5. The number of PDA and groups in PD programs are increasing.	4.42	0.6	SA
6. The PDAs engaged and employed in volunteer work.	4.18	0.6	SA
7. The PDC established strong linkage and access to other stakeholders.	4.33	0.5	SA
8. The local government units adopted the experience and gains of peace efforts and passed resolution adopting peace advocacy plan of PDC.	4.50	0.5	SA
Average	4.28	0.42	SA

The lowest mean of 4.11 went to the item on the *publication, documentation and circulation of PDC success stories*. The rating of *agree* suggests that all the development gains that communities that achieved were disseminated and shared with others. The publication of the same not only served as benchmarks for other communities but also for replication and institutionalization of best practices in peace and development. It indicates that the best and effective strategy in the promotion of these interventions is the public awareness and wide dissemination of the programs to show the real situation of the community and to show further that peace and development is always possible.

E. Summary on the Extent of Agreement on the Peace and Development Interventions

Table V is the summary of the extent of agreement among respondents on the different stages of peace and development interventions in the PDCs. It can be gleaned from the table that confidence building and sustainability building both were rated by respondents as *strongly agree* while an *agree* rating went to capacity building and institutional building phases.

Table V. Summary on the extent of peace and development interventions of building PDC

<i>PDC Development Phases</i>	<i>Mean</i>	<i>SD</i>	<i>QD</i>
1. Confidence Building Phase	4.30	0.42	Strongly agree
2. Capability Building Phase	3.52	0.45	Agree
3. Institutional Building Phase	3.82	0.46	Agree
4. Sustainability Building Phase	4.28	0.42	Strongly agree
Average	3.98	.42	Agree

Apparently, from the interview conducted, 94% of the respondents considered their community as PDC due to unity, cooperation, established peace and order council and accessible projects while only meager six percent (6%) did not agree or contradicted naming their barangay PDC due to volatile situation of the communities. In 2000, when former President Estrada declared all-out war against MILF, majority of the MNLF also suspected. All PDCs in the interior barangay were affected due to the close semblance of MILF and MNLF. Insurgency and militarization spilled over the whole province. The MNLF laid down their arms in the 1996 peace agreement, while the MILF continues its own struggle for autonomy. The spillover of armed conflict affects the PDC development interventions. This may be explained that peace and development interventions needed to be flexible and should consider its socio, economic and political milieu. The

principle of flexibility should apply to program implementation that should take off from concrete and current conditions.

The agree rating particularly on capacity building and institutional building phases indicates satisfactory agreement. This entails that there were interventions that needed further improvements and this specially pointed to livelihood and other basic service interventions.

II. Factors that contributed to the promotion, stagnation and retrogression of the PDCs.

A. Factors contributed in the promotion of PDCs

The table VI shows that *unity and strong relationship of Muslim and Christian* was first ranked. It means that harmony in diversity and intercultural understanding is feasible and visible in the PDCs. One of the PDAs shared that *“a sports festival among the youth Muslims and Christians should regularly be conducted to help build good relationship among them and a council of elders should also organized to settle conflict between the two groups”*. The good relationship of Muslim and Christian is really an ingredient in the promotion and establishment of PDCs. The community will easily climb to the highest development interventions if two parties in opposite views will work together. This relationship is a concrete example of co-existence where compassion where respect, reconciliation and solidarity are regularly observed.

The study of Mendoza (2009) strengthens the above results. It revealed that peaceful community involves harmonious relationship among neighbors. It may indicate that intercultural and interfaith intervention like interfaith dialogue will be adopted to sustain these gains. A PDA said, *we have a “peaceful barangay, cooperative constituents and we have an active organization’*. This indicates that a peaceful barangay involves cooperation of people and support of POs. It further implies

the harmonious relationship of people in the PDC.

Table VI. Factors on the promotion of PDCs

Promotion of PDCs	Frequency	Rank
a. Unity and strong relationship of Muslims & Christians	74	1
b. Establishment of People’s Organizations	38	2
c. Presence of development projects like a) availability of basic services b) infrastructure facilities c) livelihood emphasis on agriculture	37	3
d. Good leadership	31	4
e. Strong partnership and access support from LGUs and NGOs	21	5
f. Peace and order in the barangay	8	6
g. Adherence of good values and deeds	8	6
h. Proper planning, implementation and evaluation of the projects implemented	4	7
i. Increase number of MNLF as PDA	2	8

The lowest rank factor is the *increase number of MNLF as PDAs*. The PDAs came simultaneous with the selection of PDCs to be an agent of peace. The PDAs were trained and capacitated through the HRD on Leadership and Governance of the GPH-UNMDP. It is expected, therefore, that PDA would actively involve in the peace and development advocacy. However the PDAs also need to be guided and assisted as they were the former combatants although they have been trained in the framework of development paradigm, from arms to farms, and from conflict to peace. This implies that PDAs need a continuous guidance and support. A coop member expresses that, *“the active participation of PDAs campaign on peace and development and the strong partnership of organization and LGU did*

help in the promotion of PDCs". This implies that all who can affect and can be affected of development is integral in implementing peace and development change. Also a PDA said, "we experienced a fair, equal, and inclusive development approach". This indicates that equal distribution and inclusive development approach is imperatives in the promotion of PDCs. Other remarks ran this way, "there is agricultural development for people, we are united in combatting illegal activities, we are law abiding citizens and committed for peace and development". This perceived development impact to the good relationship of people in the community may lead to attracting investors to locater their business in the community.

B. Factors contributed in the Stagnation of PDCs

Table VII reveals that the attitude of *passivity and fatalistic behavior of people like hopelessness* ranked first in the stagnation of PDCs. This passivity is observed in the no cooperation and lack of belief in God (Allah). These are the reasons why a certain community like PDC could stagnate. The 41 respondents who gave this information would indicate that about 50% entertain this passivity or have this fatalistic behavior or even feel the apathy and hopelessness. This attitude can disempower community and therefore can lead to unproductively and poverty. This indicates a culture of poverty affects the community. It implies that peace and development interventions must given consideration to address hopelessness, and a strategy of patience, compassion and understanding must be employed. Both the confidence building and capacity building interventions are helpful in this type of people.

The lowest rank factor that stagnated the PDC is the *exclusiveness or the projects focused to only one group the MNLF and/or the established POs*. There was an

exclusiveness of the beneficiaries during the inception peace and development programme and the same embedded in peace agreement of developing MNLF communities. However, inclusiveness of the programme was also adopted. The MDP3 focuses not only to MNLF families but on their communities, either MNLF or non-MNLF. An inclusive process means that people who have a stake in the work of your organization participate in the planning process in an appropriate way. This does not mean that every client, funder, volunteer and staff member must come to a joint consensus about what to do. It does mean that these interested individuals have a chance to be heard by the decision makers. This implies that a need for shift of development interventions from being exclusive to inclusiveness of beneficiaries is required not all for the PDC development but inclusive of the poor sectors in the community.

Table VII. Factors on the stagnation of PDCs

Stagnation of PDCs	Frequency	Rank
Passive and fatalistic behavior towards change e.g. loss of hope, no cooperation, lack of belief in Allah	41	1
Family feud	39	2
Corruption	29	3
Ineffective and no competency of leaders and PDAs	16	4
Political/personal interest	9	5
No support from agencies	7	6
Environmental problems	5	7
Inadequate projects and funds	2	8
Involvement in illegal activities	1	9
Developments projects are focused on certain groups only- MNLF and their community	1	10

C. Factors that contributed in the retrogression of PDCs

The factors that retrogresses that PDC as shown in table VIII first ranked is *armed conflict*. In 2008 insurgency in Lanao del Norte, the PDC in the coastal become a safe haven of the displaced families while the PDCs in the interior barangay became a ghost barangay due to the forced flight of residents to safer placer because of the armed conflict between the military and the MILF. In the case of Barangay Pendulunan and the communities in the Municipality of Tangkal, were forced to evacuate in the height of insurgency in kolambugan, Lanaodel Norte due to the military occupation. All the residents were suspected as MILF. There was a blocking of food entering the place and very limited resources were allowed to be purchased from the market.

Table VIII. Factors on the retrogression of PDCs

<i>Retrogression of PDCs</i>	<i>Frequency</i>	<i>Rank</i>
Armed conflict	49	1
Family feud	26	2
Corruption	26	3
Non-participation and non-cooperation of people	14	4
Inactive leaders	11	5
Service delivery or dole-out projects	2	6

Attention from media and contacts outside the municipality was sought and mobilized to respond the difficulties. Luckily, it does not take long. A farmer PDAexpressed his awful experienced during the insurgency in 2000 and 2008 where they are forcedly to leave their community. This implies a drastic downfall of the community. Hence, displacement families and trauma affect the people in the community. This may imply of the volatile situation in some PDCs despite of the peace and development efforts. This indicates that the gains of peace need to be

nurtured and the gained development changes spread throughout.

The second ranked factor is *family feud* and *corruption*. A feud can be nurtured through activities of vendetta. It may be long-running argument or fight between parties—often, through association fallacy, groups of people, especially families or clans. Feuds begin because one party (correctly or incorrectly) perceives itself to have been attacked, insulted or wronged by another. Intense feelings of resentment trigger the initial retribution, which causes the other party to feel equally aggrieved and vengeful. Apparently, corruption, armed conflict and political violence can be related to family feud. This may imply that culture of violence is rooted in social, economic and political strata of society.

CONCLUSION

Theoretically, the peace and development interventions introduced dramatically change the social development landscape in the community. However, the findings may indicate vulnerability and threat of discontinuity of the establishment of PDC.

The peace and development interventions introduced to the identified PDCs were successful programs that brought about peace and development of the GPh-UNMDP. It is necessary to consider the factors that promotes in sustaining peace and developments gained by the community. While, there are factors that need careful attention, if not given attention it may be the cause of the total downfall of the communities or the obliteration of the hard-earned development gains.

The researcher concludes the key factors in sustaining the gains of peace and development interventions are the partnership development between and among stakeholders of development and the responsiveness on the socio-cultural and political concerns.

For the researches, it is recommended to conduct similar study in wider scope and revisit program interventions specifically the significance,

difference and association of GPH-UNMDP Program and the like for lasting and sustainable peacebuilding interventions.

Abstract

This study discusses the community pastoral work of the Rural Missionaries of the Philippines (RMP) Northern Mindanao chapter (NMR) extended to the highland tribes of Northern Mindanao. The objective interpretation of Christ teachings brought the sisters out of the confines of the convent and actively engaged themselves in community work serving the poor and the needy in the rural areas which are isolated from government services.

The principles of the RMP can be viewed as an extension of the radical transformation of the Catholic Church in Latin America through its philosophy of Liberation Theology. Convinced that they are not only preaching but doing theology, the RMP founded the Literacy-Numeracy program in the IP communities in the hinterlands of Bukidnon and Agusan del Sur in 2008. These communities are conflict-ridden with its people constantly harassed by forces which are supposed to protect them.

This study is descriptive-narrative in nature and focuses on the nature of the apostolate work of the RMP; it explains why the rural missionaries chose to help the indigenous peoples and highlights the problems and difficulties they encountered. This study attempts to answer the following questions: 1. Why did the RMP-NMR choose the indigenous people for their apostolate mission? 2. What measures are adopted and implemented by the rural missionaries to help the indigenous people? 3. What obstacles did the RMP encounter in their apostolate mission in the indigenous communities?

Keywords: Rural Missionaries of the Philippines, Liberation Theology, Indigenous Peoples, Community Apostolate Work, Literacy-Numeracy Program

Introduction

Historically, the church is viewed as the upholder of the status quo and a silent institution as far as social inquiries is concerned. Just like other institutions, it has become susceptible to change in the late 20th century. Nairn (2007) referred to the change as a reinvention of the catholic church which centers on the needs of the poor and the oppressed. This change was inspired by Pope John XXIII who introduced the Vatican II to the Catholic World.

The Vatican II further facilitated a radical change in the Latin American churches in the 1960s that became known as *Liberation Theology*. The movement follows and pronounce the desire of the progressive members of the Catholic Church to make the church responsive to the needs of the society highlighting the casualties of the so-called “structural injustice.”

The Catholic Bishops in the United States declared in 1997 that the church has a special call to be a servant of the poor, the sick and the marginalized, the true sign of the church mission since charity alone is not corrective to all social ills. Liberation Theology seeks to interpret the true meanings of the teachings of Christ Jesus from the eyes of the poor and the oppressed. It claims that the *poor* are poor because of oppression and injustice. Being poor identifies no religion, sex, race or ethnicity (L. Boff as cited by Fawcett, 1994) and anyone can fall into this category, hence the movement calls for the church to take a stand and be an ally of the poor who are in the state of oppression.

The Philippine society today is confronted with many problems. One of these concerns the indigenous peoples who are residing in the remotest areas of the archipelago (particularly in Mindanao). They continue to live in the margin. Geographically, they are mostly located in the periphery away from the bustling urban city of the mainstream population that also results to their economic deprivation, and the almost void access to social services. Their state of condition remains unchanged despite the continuing advancements to uplift human convenience as forwarded by science and technology. In a century where democracy is proclaimed as the foundation of the government, the situation of the IPs remains to alienate the practice of *real* democracy in the country. Aside from elusive social services in their communities, it is also under sporadic disturbance caused by militarization that is conspired with big business interest in these communities such as mining and plantations, which makes the concept of democracy irretraceable. Their communities are vulnerable to the insatiable appetite of the multinational/transnational corporations (MNCs/TNCs).

To ensure the continued and successful operation of these companies and to discourage opposition from the people, militarization is “allowed” in these communities. Dismal may their situation be, they have continue to uplift their traditional culture and values which make up the basic and vital element in their being but militarization stands as threat to their lives, culture and ancestral lands.

In reflecting on their mission as servants of God, the Rural Missionaries of the Philippines (RMP) decided to help the indigenous peoples. The RMP believe that by doing so, they will be able to protect these peoples, uplift their condition and help preserve their culture. The RMP is composed of nuns, priests from different religious congregations and lay persons. Their principle is to go out and immerse with the people in the community, helping the poor in every possible way (personal communication with Sr. Famita Somogod, regional director of RMP-NMR, December 6, 2013). Extending help to the needy is a commitment that stems from the belief that the RMP are fulfilling the teachings of Christ. This belief is what encouraged them to commit their apostolate mission to help the indigenous peoples.

Methodology

As descriptive-narrative research this study describes the nature of the apostolate work of the rural missionaries of the Philippines. It explains how and why their mission and work influenced by Liberation Theology; and how the missionaries interpret and use the teachings in the Holy Gospel to justify their commitment to help the indigenous peoples.

Data are collected through interviews and from the secondary sources some of which were provided by the RMP. Interviews employed both structured and unstructured type and has undergone the process of corroboration. Respondents were purposively chosen among the tribes who attended the annual gathering of the members of the *Kalumbay* Organization held in Cagayan de Oro City, Philippines.

The rural missionaries involved in this study are those who are in the Northern Mindanao region. The indigenous peoples in the study are limited to the *higaonons, matigsalug, talaandig, banwaon, manobo* who are members of the *Kalumbay* Organization.

FINDINGS OF THE STUDY

Brief History of the Rural Missionaries of the Philippines

The founding of the Rural Missionaries of the Philippines follows closely after the birth of the Liberation Theology in the 1960s in Latin America. The political climate under Martial Law (1972-1981) was a significant factor why Liberation Theology influenced some theologians in the Philippines. Youngblood (1993) characterized the dictatorship in two terms: economic depression and political repression. This condition made the theologians reflect on their role in society and Liberation Theology, which advocates "*preferential option for the poor*" motivated the theologians to change their passive stand and assumed a more active role in society.

The theologians also heightened their more active role in the new framework under Vatican II, which endorses the principle of empowering not only priests, but also missionaries and the laity to make the "church more felt in society" (Mirus, 2010). This innovation under Vatican II inspired religious servants across the globe to abandon their passive state and actively involved in societal concerns. This transformation draws a similar pattern in the Philippines. According to Harris (2006) this new empowerment provided by the Vatican II created a new constructed identity and promoted a revolutionary spirit among the members of the Church in the Philippines.

The deterioration in the political, social and economic conditions of the people was not only felt in the urban centers but also in the rural areas. The countryside, as the rural areas is also known, were perceived as a social volcano in which will erupt if not given considerable attention. In these areas, farmers were protesting against agrarian problems, illegal detention and human rights violations committed during Martial Law years. In response to these problems, the Association of Major Religious Superiors Women in the Philippines (AMRSWP) founded the Rural Missionaries of the Philippines on August 15, 1969. The AMRSWP envisions working with the rural poor farmers and agricultural workers for genuine agrarian reform, the fisher folk for genuine aquatic reform and the indigenous peoples for land and self-determination towards the attainment of the fullness of life, justice, freedom and integrity of creation.

The Rural Missionaries of the Philippines (RMP) is originally composed of 19 sisters from different congregations. The organization grew when it allowed male religious and clergy as members in 1982. The RMP started the principle of immersing and integrating with the peasants that is working living and serving amongst them. As missionaries, they chose to live out to Jesus' *preferential option for the poor*, interpreting the bible from the standpoint of the materially poor. From the inhuman conditions and

unjust structure of society, the RMP developed their central function and that is to liberate the poor from these shackles.

The RMP provided different services to the rural areas that were hardly reached by any government agencies and NGOs. It is in the rural areas that the majority of the poor can be found and the poorest of the poor are the indigenous peoples. The hallmark of the RMP apostolate service in the rural communities was the establishment of the *Community Based Health Program* which was an overwhelming success that eventually became an organization itself.

RMP is composed of the following Catholic sisters' congregations: Religious of the Good Shepherd (RGS), Missionary Sisters of Mary (MSM), Order of St. Benedict (OSB), Medical Mission Sisters (MMS), Handmaids of the Christ the King (HCK), Sisters of St. John the Baptist (SSJB), Order of the Carmelites (O Carm), Redemptorist Fathers (Csr), Religious Sisters of Mercy (RSM-Irish), Missionary of Assumption (M.A.). After its mark in Luzon, the RMP had grown and expanded and its chapters reached the remotest areas in the Visayas and Mindanao. The RMP-Northern Mindanao Sub-region works closely with the CARAGA Chapter in helping the Indigenous Peoples in the hinterlands of Northern Mindanao and Agusan areas against the structured injustices perpetrated in the communities of the IPs.

Why did the RMP choose to help the IPs of Northern Mindanao? Well, the situation of the IPs will provide the answer

Lumad(s), a cebuano term which means indigenous were known to be the original settlers in Mindanao even before Islam and Christianity came to the Philippines in the 14th and 16th centuries respectively. In Mindanao there are 21 classified IPs settlers in the fringes of the island region mostly living in poverty and isolation. Due to the colossal changes that transpired in the country from the time of colonization up to the present, they are now reduced as minority and have become a marginalized group in contrast to the Christian mainstream population who are the recipients and beneficiaries of economic development.

Fr. Edward Dinter classified two basic problems faced by the IPs: *first*, land which is taken and stolen from them; *second*, loss of human dignity since they have been treated as second and even third class citizens (Personal Communication, Former Executive Secretary of the Episcopal Commission on Indigenous Peoples of the Catholic Bishops' Conference of the Philippines (CBCP), March 15, 2014)

But the IP situation has gone from bad to worse, since economic marginalization is not the only problem to counter but they have now become victims of militarization.

Their lands are prey to development aggression. These did not only lead to the loss of their rights but this also results to the killings of some IP leaders who are viewed as dissidents (personal communication with Sr. Famita Somogod, regional director of RMP-NMR, December 6, 2013)

These problems confront the IPs despite the provision in the Philippine Constitution and the United Nations Declaration on the Rights of the Indigenous Peoples. Article XIV, section 17 of 1987 Philippine Constitution cites that,

“The State shall recognize, respect, and protect the rights of indigenous cultural communities to preserve and develop their cultures, traditions, and institutions. It shall consider these rights in the formulation of national plans and policies.”

The legal texts are so eloquently designed to promote respect for the indigenous people’s culture, rights and traditions, but these texts are only good on paper. Due to the lack of effective protection, it has become easy for the greedy companies to infiltrate the *lumad* lands. These companies have engaged the IPs in the most threatening encounters. These peoples are also subjected to the draconian interests of the mainstream population who have total disrespect of the IP rights. The concept of justice has been infringed in this situation as Rawls (1999) argued, “justice does not mean that the loss of freedom by some is denied by a greater good shared by others”. This relevant conclusion of Rawls only proves that the indigenous peoples’ situation is a clear case of injustice since the word unarguably suggests holism.

To understand why the RMP decided to help the IPs in Northern Mindanao it is important to identify the issues and problems that confront these people.

(1) Loss of Land

The concept of land of the IPs differs from the concept of land of the mainstream population. Land to the IPs is more than just a material possession for it also underpins their culture and tradition since reciprocally their culture speaks of their identity and history. One must be able to understand that culture is deeply rooted in every indigenous community, a valuable wealth that can be passed on to generations. Therefore taking away their land also means cutting the veins of their culture that supplies the whole meaning to their existence.

In the pre-colonial days, land was a communal property. But during the Spanish colonization, the *Jura Regalia* of Spain justified the partition of Philippine lands that effectively undermined the IP concept of land rights. The American period aggravated the displacement of these peoples from their lands. The signing of the Treaty of Paris on

December 10, 1898 sealed private ownership especially the friar land holdings (McDiarmid, 2012). To make matters worse, the Americans opened Philippine lands to American corporations and ensured the protection of American business interests through the Bell Trade Act. This paved the way for the entry of Philippine Packing Corporation (now Del Monte Philippines) a subsidiary of the California Packing Corporation. The said company entrenched a huge plantation of about 43, 240,000 sq.meters in Bukidnon (Milan, 2006). At present Del Monte operates a huge pineapple plantation creating an agricultural colony in the province and displacing the indigenous peoples from their lands, prompting the RMP-NMR to disdainfully comment that in Bukidnon “*pineapples are more important than people*”. In addition, palm oil and banana plantations and mining corporations are also positioning in the virgin lands mostly occupied by the indigenous peoples.

(2) Militarization and Exploitation of the Indigenous Communities

The interests of the big companies in the IP territories create an interrelationship of exploitation and militarization, which always results to human rights violations against the IPs. Their ancestral domains are attractive to big businesses due to soil fertility and abundance of mineral resources. These companies promise development in exchange for their services, which usually results to IPs killing each other. This age-old technique of divide and rule has been so far effective. The killing of Jimmy Liguyon in 2012 is an example. He was from the *Matigsalug* tribe of Dao, San Fernando, Bukidnon. Liguyon campaigned against the possible entry of a multinational mining company in the *Matigsalug* territory but instead he was accused of supporting the New People’s Army (NPA). A week later a group of armed men intruded into his house, shot Liguyon at close range, and walked simply in full view of the entire community. Liguyon’s death is a case in point for he was killed by Aldy “butsoy” Salusod, leader of the New Indigenous Peoples Army Reform and believed to be hired by the *San Fernando Matigsalug Tribal Datus* (SANMATRIDA), a *Matigsalug* tribe faction that pushes for the entry of the Xstrata’s Australian mining partner-Indophil Resources. Also, “Butsoy” was the son of the head of the Civilian Armed Forces Geographic Unit (CAFGU), a paramilitary group allegedly taking orders from the 4th Infantry Division of the Philippine Army (Silverio, 2012; personal communication with Sr. Famita Somogod, regional director of RMP-NMR)

Another considered case is the *Higaonon* tribal community’s fight against a big investment of palm oil plantation and large-scale mining in the forest areas of *Esperanza, Agusan del Sur*. The entry of these companies started a fiasco among the Higaonons that led to the killing of an anti-mining advocate. The paramilitary group called Bungkatol Liberation Front (BULIF) perpetrated this killing. This group is ironically part of the government’s effort to create a “zone of peace” under the *Oplan Lambag*

Bitag in 1992. The same group experienced harassment from a paramilitary group known as “wild dogs” under the leadership of a self-proclaimed *Higaonon* tribal chieftain, Labe Manpatilan (“Red is the Color of River Pulangi”, 2012)

The entry of these big corporations in ancestral territories facilitates “warlordism” among the IPs, out of killing their own kind they gain profit. This created internal conflict in a once peaceful community. No considerable response has been made by the government forces to help the IPs. In fact, the government only becomes reactive if the interests of companies are threatened such as the incident in 2011 after the NPA attacked the mining companies of Taganito Mining Corp., Taganito HPAL Nickel Corp., and Platinum Metals Corp., where President Ninoy Aquino immediately reinforced the Executive Order 546, of the previous administration, which deployed the Armed Forces of the Philippines and approved the proposal of the mining firms to hire militias known as Special Civilian Active Auxiliary (SCAA). A Karapatan yearend report revealed that from 2010-2013, 37 indigenous peoples were victims of extrajudicial killings and 17 out of 37 killings took place in Northern Mindanao and CARAGA region. Sr. Somogod of the RMP revealed that the militarization of only disguised to cover up the counter-insurgency efforts of the Armed Forces of the Philippines. She discloses that both the AFP and CAFGU are responsible for framing and accusing IP students attending the RMP’s Literacy and Numeracy Program as members of the subversive group. She recalled the experience of their student, Jimboy, a 10-year old B’laan pupil who was forced by the military to carry an M-16 rifle loaded with bullets. Soldiers took a photo of the boy and reported him as “NPA child warrior going to school in Dlumay”. Another incident involved a boy named Arnel Mansinugdan, who was scrupulously interrogated by the military insisting that the child knows the whereabouts of the NPA (personal communication with Sr. Somogod)

For these incidents, the military’s lame excuse has always been peace and order and put the blame on the New People’s Army instead. Roger Plana, a Higaonon from Kalumbay Organization fervently declares that the NPA’s presence in the area is a fabrication by the military to cover up what they have been doing. Bukidnon, in particular, has become the locus of the human rights violations due to land grabbing by international corporate plantations. Plana complained that they have been deceived many times, from land grabbing and now disallowing them to enter their forests and mountains without securing government passes (personal communication, general-secretary of Kalumbay Organization, Cagayan de Oro, Misamis Oriental, December 10, 2013).

(3) Illiteracy and Economic Deprivation

Illiteracy and Economic Deprivation are closely linked together. Freire (as cited by Gadoti, 1994) relates that poverty and hunger affects someone's ability to learn. Indeed, the economic condition of a person dictates its capacity to learn. In the rural communities, getting an education has been an exemption rather than the rule. The same is true with the indigenous peoples. The reason behind their ignorance is their lack of education. Poverty breeds ignorance and being ignorant and poor means to be easily trampled upon by the rich and powerful. From human rights perspective, non-fulfillment of person's basic rights can already be inferred as a violation. Now since right to education is man's basic right, hence, the non-access to education by the IPs meant that the Philippine government violated the rights of these people.

In the Philippines, it was found out that poverty is much higher in the regions mainly populated by the IPs. Carino (2005) added that in the case of the IPs, poverty also meant a result of the dispossession of their ancestral lands, loss of control of their natural resources and indigenous knowledge.

The Apostolate Mission that Knows No Boundaries

In following the "true message of the Gospel, RMP veers away from being purely spiritual and through its programs and projects acceded to the "signs of times" by serving the least of God's brothers, that is, the poor and the oppressed. Facing a dire situation the Rural Missionaries of the Philippines (RMP) came to help the IPs. When the RMP was established they committed themselves to help the poor farmers and fisherfolks, however upon learning the struggle of the indigenous peoples they came to realize that helping knows no bounds and therefore has no limitations.

For the RMP the basis of their missionary work in the indigenous communities goes beyond charity. It is in interpreting John's teaching in the gospel that the RMP outlines their missionary work:

"our love is not just to be words or mere talk, but something real and active"
(1 John 3:18)

Sr. Somogod verbalized that the task of the Catholic Church is to build God's Kingdom here on earth, with emphasis on justice and love. This belief further translates into fully committing themselves in helping the poor and the needy. This principle visibly reflects the ideals of the Liberation Theology that urges churchmen to immerse with the people particularly the poor, the RMP's principle and conviction explains why they have chosen the indigenous peoples for their apostolate work.

Religious differences did not deter the RMP from pursuing their mission, which is guided by their Catholic belief. On the other hand, the IPs adheres to their religious practices. The RMP did not impose the Catholic religion on the IPs in contrast to what the Spanish missionaries did during the colonial period. Coming from different backgrounds it maybe hard to imagine how their “framework” became possible. Sr. Cupin explained that understanding the culture of the people they were dealing with was important to make their solidarity possible and effective. The RMP considers it a “rare” chance to be embraced by these people as one of their own despite the “cultural differences”, concluding that it is “both a gift and a blessing for the RMP” (personal communication, RMP member, March 1, 2014)

Realizing the importance of education, the RMP introduced the Literacy and Numeracy Program to the indigenous peoples. The RMP’s goal in providing education to the IPs is supported by the three directive institutions: the ILO Convention No. 169 that emphasizes equal opportunity to education; the UNDRIP which mandates that the IPs especially the children must have equal opportunity to education in all levels and forms. The UNDRIP also provides that the IPs have the right to establish an educational system in a manner appropriate to their cultural language and methods; and the IPRA or the Indigenous Peoples Rights Act (Republic Act of 1997) which provides that the State must grant equal access to various cultural opportunities to the ICCs/IPs through the educational system-private or public cultural entities, scholarships, grants and other incentives without prejudice to their right to establish and control their educational systems and institutions by providing education in their own language, in a manner appropriate to their cultural methods of teaching and learning (Candelaria, 2012).

The RMP advances the idea that there is no better way to improve the indigenous people’s situation and to uplift their condition than to nourish their minds. It is the lack of education of the IPs that allows injustice to happen. This transformative process starts in the Literacy Numeracy Program. Mandela (2008) stress that “education opens the doors of change” in which can be a necessary instrument that can alleviate the dire situation of the IPs.

According to Plana, it was in 2008 that the RMP started supporting and assisting the education of the IPs (personal communication, 10 December 2014). The community schools were established with the consent of the indigenous people. As Plana clarifies:

“Actually the intervention of the RMP is requested by the lumad people in order to help us in our plight. Because we are confident they will help us, What we asked first from them is education for our children. Not just education, the RMP also helped us in further enriching our culture and many more”...

The RMP also conducted community immersion through their program, Rural Integration Solidarity Work (RISW). This scheme of integration and immersion with the IPs is in line with the precept from Matthew 25:35-36,

“for I was hungry and you gave me something to eat, I was thirsty and you gave me something to drink, I was a stranger and you invited me in, I needed clothes and you clothed me, I was sick and you looked after me, I was in prison and you came to visit me”

The RISW is both an educational and transformative tool. The activity allows the RMP to identify the necessary intervention to be done in the perished communities. Hence, the RISW facilitated the establishments of the schools in the IP communities and community organizing among the lumad groups.

Lobbying for support networks and agencies for financial resources is also done by the RMP in order to strengthen and continue the community school effort. The teacher force is composed of the RMP members themselves, volunteer professional teachers, para-teachers (these are IPs who have basic knowledge of human rights) and education graduate volunteers (personal communication with Sr. Famita Somogod, regional director of RMP-NMR, December 6, 2013). These teachers receive a meagre allowance only. There are times when these teachers became subject to harassments but they never give up. This only showed how strong is their commitment to help and educate the indigenous peoples.

The community schools of the RMP have been engaging dialogues with the Department of Education for the official recognition of these schools since 2010. The curriculum used in the IP community schools differ from the standard curriculum used in mainstream educational system. The IP curriculum is more reflective on their experiences and focuses on the enrichment of the indigenous people’s culture. One example is the introduction of Lumad instruments under the lesson title *“Mga Lumadnong Instrumento sa Musika”* (Indigenous Peoples’ Musical Instruments). Music subject includes *“Mga Awit Nga Napadaya sa Kahimtang sa Tribu ug Katawhang Pilipino; Basi sa Kasamtangang Kahimtang”* (Songs that expressed the current situations of the tribe and the Filipino People). Other lessons include:

Lesson 1- Mga Awit Na Makinasudnon (Nationalistic Songs)

Lesson 2- Bayang Minamahal (My Beloved Nation)

Lesson 3- Bayan ko (My Nation)

Lesson 4- Pagbabalik (The Comeback)

Lesson 5- Kinaiyahan (Nature)

Lesson 6- Mga Awit Nga Nagahulagway sa Pakigbisog (Songs That Depict the Struggle of the People)

Lesson 7- Mga Awit Nga Nagahulagway sa Panginabuhang Pagkigbisog sa mga Sektor (Songs that depict the struggle of the Labour Sector)

Lesson 8- Mga Awit Nga Nagahulagway sa Kahimtang sa Ginikanan ug Kabataan (Songs that depict the situation of forebears and youth)

For *Sibika and Kultura* and Character Education the curriculum include the teaching of basic human rights and letting the IPs reflect on their situation.

Character Education

Chapter 1-Ang Imong Pagkatawo (Knowing Yourself)

Lesson 1- Kinsa Ako (Who Am I)

Lesson 2- Pagpasigarbo sa Akong Kaugalingon (Be Proud of Thyself)

Lesson 3- Mga Kahanas ug Kakayahang Ang Matag Bata (Skills and Capability of Every Child)

Lesson 4- Pagkamatitud-anon ug Pagka-manngihatagon (Honesty and Generosity)

Chapter 2- Panaghiusa (Solidarity)

Lesson 1- Gimbuhaton:Pagtinabangayug Kolektibonga Paglihok (Functions: Cooperation and Collective Action)

Lesson 2- Hihniusang Paglihok dihasa Pamilya ug Katilingban (Collective Action in the Family and Society)

Lesson 3- Pagrespeto Sa Uban (Respecting Others)

Sibika and Kultura (Civics and Culture)

Chapter 1- Ang Pilipinas, Ang Atong Nasud (The Philippines, Our Country)

Lesson 1- Ang Kapuluan sa Pilipinas (The Philippine Archipelago)

Lesson 2- Mga Kinaiyanhong Bahandi sa Pilipinas (The Natural Riches of the Philippines)

Lesson 3- Ang Mga Tawo sa Pilipinas (The People in the Philippines)

Chapter II- Ang Katawhang Pilipino (The Filipino People)

Lesson 1- Mga Nasud nga Gigikanan sa Kaliwatan (The Roots of Philippine Ancestry)

Lesson 2- Mga Grupong Etnikong Nasudnong Minorya (Ethnic Groups and the National Minority)

Lesson 3- Ang Nasudnong Minorya (The National Minority)

Lesson 4- Ang Katawhang Lumad sa Agusan-Surigao (The Indigenous Peoples of Agusan and Surigao)

Lesson 5- Mga Simbolo sa Pilipinas (The Philippine Symbol)

Chapter III- Ang Katilingban ug ang Katawhan (Society and People)

Lesson 1- Mga Katilibang sa Atong Nasud (The Philippine Society)

Lesson 2- Ang Panginahanglan sa Mga Tawo sa Katilingban (The Needs of the People in the Society)

Lesson 3- Ang Mapaangang Katilingban (The Philippine Map and the Society)

Chapter IV- Mga Katungod ug Katungdanan sa Katawhang Pilipino (The Rights and Obligations of the Filipino People)

Lesson 1- Mga Katungod ug Katungdanan (Rights and Obligation)

The education provided by the RMP is designed for the IPs to reflect on their situation most especially on the injustices perpetrated against them. Values integration is also an important subject in the Literacy-Numeracy Program. This is done in the subject Character Education which is taught using real life situations. Sr. Famita Somogod explains that children are made to reflect on their experiences. For example, if cases/ incidents such as military harassments in the school occur, questions are raised to let the children assess the incident like doing harm to others is a decent action or not (personal communication, December 6, 2013)

Sister Somogod shows that despite the presence of schools in the IP communities there are times when students are unable to continue their studies. Some students are forced to abandon schooling at an early age since they have to work for a living. The continued harassments and militarization of the school community is also seen as a factor for the dropout rates.

The community schools of the RMP has been considered by the IPs as a big help in improving their condition. They are now aware of their rights as a people hence the gradual unlocking from their bondage of the culture of silence (Freire, 1984). Dolping of the *Kalumaran* Organization speaking in behalf of the Indigenous Peoples appreciates the efforts of the RMP.

... "We saw how the the RMP helped the Lumads in Northern Mindanao in Bukidnon and in Southern Mindanao, most especially in the pre-school. We Luamds, one of our interests is to let the lumads know how to read and write, we are now on the road to learning our rights, that is why we are very grateful and thankful to the RMP for helping us..." (personal communication with Dolping Ogan, Secretary General of the Kalumaran Organization, December 10, 2013)

This statement from an IP clearly indicates how hope is created through the establishment of the Literacy Numeracy Community School- a hope that tomorrow will

be better and free from ignorance and illiteracy. A school for the IPs gives hope for a better life ahead.

Walking With the IPs: Challenge and Difficulties

The missionary work of the RMP is not without challenges and difficulties. One problem faced by the group is the financial capacity to sustain schools is made possible thru donations from agencies and groups that believed in the cause of the RMP. Despite the meagre funding, the schools manage to survive. This can also be attributed to volunteer teachers who willingly serve despite the very small honorarium.

Militarization and harassment also poses as a problem to the RMP. The Literacy-Numeracy schools are regarded by the military as a training ground for future rebels accusing the sister-missionaries of indoctrinating the IPs with revolutionary ideas.

The sisters are worried over the reaction of the military towards their schools especially since they resort to harassing children and volunteer teachers. What shatters the hearts of the RMP missionaries is the terror and fear in the eyes of the IP children. Sister Famita Somogod admits this problem is far serious than inadequate funding for their schools. For the counterinsurgency efforts of the military is not only aimed against the New People's Army (NPA) but also against the community schools of the RMP in which the military view as a cultivating ground of future NPAs. In Northern Mindanao specifically some IP Literacy Schools have been closed down due to the recurring militarization and human rights violations against the host communities (Somogod, 2012).

The IP community school in *Kinamaybay, Esperanza in Agusan del Sur* had been heavily affected by militarization. About 151 children were forced to evacuate after the 30th Infantry Battalion of the Philippine Army (IBPA) occupied their community. In *Agsabo*, the primary school founded by the RMP had to shut down on July 19, 2009 after the families including approximately 185 children were forced to leave their community when the elements of the 26th IBPA camped in their barangay center (Somogod, 2012).

In March 2014, the IP students of *Tabangan Learning Center* evacuated their communities after their graduation ceremony was disrupted by the arrivals of the 26th IBPA in Sition Tabangan, Binicalan, San Luis, Agusan del Sur. The children scampered for safety upon hearing gunshots in the area where the military was stationed just 100 meters away from school. The presence of the military has been suspiciously associated with their interests in rubber and cocoa plantations in the ancestral territories

of the Banwaon tribe in the area (Somogod, 2012). These are the realities witnessed and experienced by young IP children. Their life is far from being normal.

The counterinsurgency efforts by the AFP robbed the IP children of their rights to enjoy their childhood. Every child regardless of ethnic affiliation has the right to education and a right to life. This is explicit in the United Nations Declaration of the Rights of the Child in 1990. However, this too is not respected in the indigenous communities where a child's rights is continued to be violated.

CONCLUSION

A love that is real and active, is the core of RMP's apostolate work. In doing such, they received in return the genuine smiles and appreciation from the poor people whom they have showed their love with. But these are also engulfed with the prowling hatred and suspicions of others who failed to understand their purpose. The RMP find strength in 2 *Timothy* 3:12 which says,

"Indeed, all who desire to live a godly life in Christ Jesus will be persecuted".

This biblical teaching translates to a genuine commitment that knows no boundaries. Even in the face of hard encounters they remain still to be fully committed since they always find strength in the teachings of Christ and hence the more they face hard challenges, the more they have become persuaded to continue their community apostolate work.

It is inevitable that "others" view their apostolate mission with suspicion. The RMP's solidarity with the Indigenous Peoples is challenged by the continued militarization in their community schools. Their teachers are harassed and they are branded as NPAs or accused of indoctrinating the indigenous children. But the RMP find strength in the belief that following the teachings of Christ will find its place in the Kingdom of God. The RMP also find strength in the sincerity of friendship and appreciation given to them by the Indigenous Peoples. Their solidarity with the Indigenous Peoples has given them new friends despite the religious differences. Though the RMP are religious missionaries, conversion among the natives was never part of their work. The RMP in helping the Indigenous Peoples respect their culture and traditions. They did not in any attempt to convert the natives into the religion. They are helping the Indigenous Peoples because they constitute the poor and the oppressed. The RMP do not just limit their theological work to the Christian poor but even to the non-Christians. The sincerity of the RMP is best measured on how the Indigenous Peoples positively regard them. The IPs, just like the RMP never saw the religious differences as an obstacle in establishing solidarity. The IPs affirmed that the RMP was

one of the instruments why they are advancing their struggle against destructive elements that attempts to threaten their communities. Their encounter with the RMP facilitated the awareness of the Indigenous Peoples in their basic rights. Also, the establishment of *Lumad* groups further advanced their struggle as they are now in the forefront in fighting for their rights.

RECOMMENDATIONS

It is also interesting for the future researches to consider the livelihood projects taught by the RMP to the Indigenous Peoples. The *weaving for hope project* spearheaded by the RMP encouraged the indigenous women to continue their indigenous craft, the *hinabol*. This indigenous product is market by the RMP locally, nationally and internationally; third, is to consider conducting a study on the psychological effects of the militarization on the indigenous children attending the community schools of the RMP. The study should dwell on the psychological effects such as damage inflicted by militarization in the young minds of the indigenous children.

THE EFFECTIVENESS LOCAL GOVERNMENT FOR USING E-GOVERNMENT TO PROVIDE CITIZEN PARTICIPATION IN YOGYAKARTA CITY

(Case Study : Local Government in Yogyakarta City, Indonesia)

Aulia Nur Kasiwi

Email : aulianurkasiwi@gmail.com phone : +62 8574 2146 528

Governmental Science of Department, Faculty of Social and Politic Science,
Universitas Muhammadiyah Yogyakarta, Yogyakarta, Indonesia

Abstract

E-Government is part of the Communication and Information Technology to provide a wide variety of benefits to government, business and citizen. This is have a benefits since it's a new innovation of government to integrated local government data, increased transparency and responsibilities to the public for giving the good service. Some countries being joined with United States applied that E-government has been need that should be owned, one of them is Indonesia. The aims of this research is to analyze the effectiveness for using E-government if Yogyakarta city used e-government to provide citizen participation. The method that used in this research is qualitative analysis with auxiliary of literature review. Then, the technique of analysis data which applied in this research are literature review, data attachment and conclusion. This paper concluded that e-government is the tools that can make easily citizen to get more information about government, society ets that connected with internet. For the first is e-government can provide a wide variety of benefits including more efficiently to citizen to get an information and get the good public service. The second is e-government more easily and lower cost to citizen. And the last, e-government is the part of public service delivery to the citizen with developing of Information and Communication Technology.

Keywords : *E-government, Public Service, Citizen Participation, Lower Costs Public Service, IC*

INTRODUCTION

E-Government is the part of transformation technology information and communication to make a citizen easily to get and correct about information or data from Government, which is central government and local government. Citizen can involve to get a participation to government. With e-government, government operation can be more efficient, effective, transparent, democratic and also accountable. E-government can also give's some benefit for the public, for the example is if there are want to delivered it can do by online, not just come at the office with short in time. Participation means more than if it's can get community involvement in elections. There are two strategies to encourage participating in local governance:

1. Establish a legal framework and a new policy framework to ensure community involvement in governance mechanisms, and
2. Facilitate public participation (Hetifah Sj, Sumarto, 2005).

Related with participation, the government have to facilitate the public for get interact directly with government agencies with regard to all policy level and all levels of government. The development of e-government which rapidly led to a revolution in the way people interact with government.

E-government begin with the transformation of technology that because it's a complex problem to which no universal approach exists and for which different types of models can be used. It's a new tools that this model of e-government can help the efforts to provide electronic services. It's make a new transformation that can be integrated with all institution in local Government in particularly Yogyakarta City. For used e-government for local government in Indonesia is a new habit for supporting good governance (Afriani & Wahid, 2009). Although Indonesia Government has implemented an e-government policy since 2003 through the presidential Decree (INPRES) No. 3/2003, and also it's the performance of e-government services is urgent to be improved to better service quality. Its mean the quality is can be provide the citizen, included with participation, transparent and can promoting the democracy (Vassilaks & Leuporas (2007).

The government was consider that development is an effort to develop the government through the use media electronic and improve the quality of public service. With the development e-government we need to understand the system and process of utilization of information technology. Utilization of

information technology this includes 2 activity or activity related (inpres no. 3 2003) :

- a. Data processing, information management, management system and process of working in electronic.
- b. The use of the advancement of information technology to make the services public can be accessed easily a cheap by the community across the nation.

For the implementing e-government its can be perfectly if the tools can be implemented with citizen, since the tools can be delivered because the funding of the e-government can be delivered the public service to citizen. Citizen participation is very important to ensure that there is collective bargaining done to avoid arguments, besides supporting the government. Currently, all government and citizen efforts are geared towards improving social conditions through citizen participation. The provision of local government service to the citizen today has been influenced by citizen participation. Approximately in 60 percent of e-government when was implemented is fail or cannot reach expected outcomes (pujiyanto, 2009). It will be observed and analyzed more

than 20 e-government projects were totally failing, while 50 percent partially failed and there is only 15 percent were successful. The regulation in Indonesia will be delivered to citizen, but it was not implemented because citizen not aware with the value of the tools.

Most e-government projects in development the countries often fail because of their complexity and awareness human resources with digital divides.

In Yogyakarta have many culture with the people and also surrounding, it will be a new tools for citizen that the government now can provide citizen with e-government. With the new transformation government that provide with e-government its mean internet users

RESEARCH OBJECTIVE

The aims of this research is to analyze the effectiveness for using E-government if Yogyakarta city used e-government to provide citizen participation. Citizen participation. And also how to get effective the community can use the internet as a means of to help the government in the form or give participation, because one of supporting in using e-government namely by that the facility sufficient. E-

government its can be deliver citizen participation and if its can be run, so its tools can be effective to make citizen give the participation to government.

RESEARCH METHOD

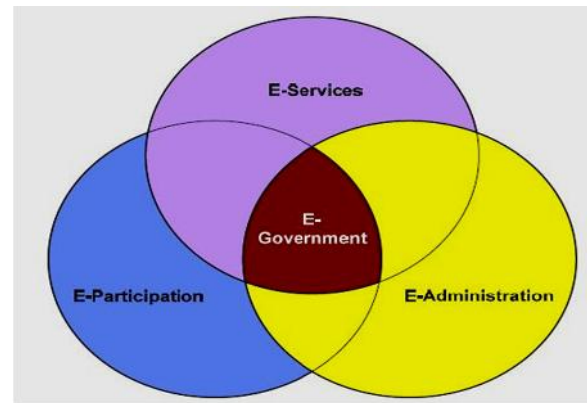

The method that used in this research is qualitative analysis with auxiliary of literature review. Then, the technique of analysis data which applied in this research are literature review, combine the data of the problem

and conclusion.

THEORYTICAL FRAMEWORK

1. E-government

E-government in line with the rapid developing of Information and Communication Technology (ICT). In the term, e-government can be defined as government operation through ICT. E-government as is presented in United State, as is presented E-government, as is report on UN Global e-Readiness Reports is utilization of ICT.

This tools refers to the continuous innovation in the delivery of services, citizen participation, and governance through the transformation of external and internal relationship by the use of information technology, especially with the internet (Jeffry, 2008). With the process, government stated transforming public administrations internet and external relations through network-based activities, information and communication technologies, in order to (maio, 2001) :

- a. Optimize service delivery
- b. Increase citizen and business participation, and
- c. Enhance government capability.

In the domain international by World Bank (The World Bank Group, 2001) is E-government refers to the use by government agencies of information technologies (such as Wide Area Network, the Internet, and mobile computing) that have the ability to

transform relations with citizens, businesses, and other arms of government.

Nowadays, government was not other to give a strengthen service to the public, that would give benefits reciprocal between the government and citizenship (Kumar et.al 2007:65) its included with :

- a. Allowing the participated in decision making.
- b. Lower cost saving that significant
- c. Improve transparency in many aspects including the cost of obtaining a service.
- d. Reduce the level of activity of corruption in awarding the public service, because with it, it will be transparency. This benefit may be a consequence of the point.
- e. The internet has enabled e-Government to provide a special service individually will culminate to the satisfaction of the individual.
- f. The existence of an ongoing service it will availability, time savings in providing responses to the public and a reduction in the error rate.

For making the e-government can be implemented, we will know first the stage model to improve service delivery by e-government to citizen, higher levels of customer orientation require higher levels of flexibility. Designing and executing joint processes and services become very difficult when several organization are involved because organization have to give up some autonomy. We were able to identify following stages that make e-government can be deliver to citizen, :

1. Stovepipes, few applications, service or products are interconnected and information is not shared
2. Integrated organizations. Service delivery and IT within organizations level.
3. Nationwide portal, a nationwide portal is introduced to provide access to existing products, including a digital safe. The digital safe can be used to provide government organizations.
4. Inter-organizational integration. Clearly defined and standardized cross agency services are bundled

and integrated, and can be requested as virtually one service via the portal.

5. Demand-driven, joined up government. Instead of citizens or businesses having to find and request services, the portal will search for the relevant services and make recommendations.

The objective of e-government is to provide governmental information management that is more efficient, to provide better services, and empowerment of people through access to information and participation in public decision making (Curtin, 2006). But, states that e-government allows greater public participation in politics and decision makings, something that is not possible to conduct in the past. Participation has increased the mutual trust between government and society and also among to the public.

2. Citizen Participation

Citizen is the part of social agent that have more care about society through of strength and action (Soelaeman, 1998). Based on necessity, rural citizen tend to administrated to primer and seconder, meanwhile city of citizen haven't focus to needed of primer,

seconder and also tarsiers (Soekanto, 1999). Urban citizen is described as a group of very complex, both in terms of activities, in patterns of thought, habits and the problems that have arisen. Citizen in local government is the object for give the participation in government to start governance. The participation is a concept that have varied application and more definitions. The way of participation is defined also depends on the context of what happened. Nothing defines the participation associated with the principles, practices, or even participation itself (World Bank, 1995). The utilization of information technology and communications made by the government to facilitate the public of the information, participation, and also public service called it with e-government.

The development of a city is strongly influenced by two factors, namely the growing population of urban, and also the technology development (daldjoeni 1992). According to rachmawati (2005) of development of information technologies and communication in urban have prepared various facilities that are needed in the life, good economic facilities, education, government will gradually continue, slowly but sure it's have an impact on

physical from urban, which concentrated on the city center, with the connection one place with other places, so activity on citizen appeared not only to the city center. The developments make the community of the citizen changed social as a way to adapt the environment. But, people not always enjoy for the results of technological progress and development of urban, many of them was marginable by the presence of development of information technologies and communication. This is was due to they don't have equal excess to resources.

3. Local government

The government in the local level have more value for the good service. The local government is one of the element in government to have a large role in community development in terms of increasing the role of community participation in operating and give his voice in any policy and the life of government with citizen.

Local government is a tools for public to get public administration, which is in a majority of contexts, exists and the lowest tier of administration within a given state. The term to used contrast office at state level, which are refers to as the central government. Local

government automatically act within powers delegated to them by legislation or directives of the higher level of government.

The good system of government had a good participation, that claims of all institution of governance have a voice in decision making, this is the legitimacy of a democratic system that is good governance that the framework is run completely to prosper people, of the people, by the people and to the people. Democratic of government will give priority to the benefit of the people that government democracy provided community needs and service public was the main in good governance (Madjid Abdullah, 2010).

DISCUSSION

Many countries has developed government that it's the result of transformation bureaucracy with citizen has friendly in this era. Usually it's the system to use the ITC and it's not just with internet or stovepipes, but this tools can be deliver with media social or SMS, website, and also multimedia. These issues are important because as ICTs transform our society, future interactions with governments will increasingly take place online, they predict that by 2020 one third of

transactions will be done online (M. Carasco, 2014).

The good things of e-government concept in theoretical understood as efforts to build a good relationship between the government, public and also private sector to becoming more efficient, effective and transparent to all this could be achieved by bureaucratic reform good institutional improvement, human resources and the system. To use ICT is to simplify the community to access the information and improve the transparency and accountability in government agencies, also extending public participation. Utilization e-government intended to support the formation of good government (Ade gunawan, budi yuwono 2007).

ICT can induce moving forward about paradigm of a system in bureaucracy to e-government. Its change of paradigm in public sector organization cause the presence of flexibility, organization networking, innovation of entrepreneurship, organization learning, speed up strategy paradigm bureaucracy traditional characterized by modernization public sector organizations, improve the coordination and communication by application of technology e-government, efficiency productive internal rationally functional,

departmentalization, hierarchy of control, and also rules of management based. This paradigm push the e-government give the networking of coordination development, external collaboration, and service deliver to citizen (Tapscott amd Caston 2012).

The form of application e-government who has generalized and regulated implementation technique is making website of local government that it's one of strategy in implement e-government development system through stages as reakusruc and measurable. Website on the regional government also is the first degree in the development of e-government, especially in Indonesia haven't been target for the community can be easily gain access to inform and give service of local government, and to participate in the development of democracy in Indonesia by using internet media (a guidebook communication information, 2002:3).

From this application can detect that development of e-government in Indonesia can be done with 4 stage, is :

1. The first is the preparation website site as a media information and communication.

2. The second is the preparation for making website site public information that is an interactive making interface connectedness by other agency.
3. The third is monitor of containing making site websites is a public service and making interoperabilitas application and data to other institutions.
4. The last is utilization rates that contains making and application for intergovernmental services and the government, the government and business, the government and citizen that is aspect to achieve in the E-Government.

E –government also as commutation with bureaucracy paradigm that have a new orientation, it production cost efficiency to control and flexibility. If we know that in paradigm of e-government the process organization used horizontal hierarchy, network organization, and also with information sharing. The all of their process can be manage with flexible management, interdepartmental teamwork, with central coordination too. E-government implementation become an important vehicle of the efforts of the bureaucratic reform acceleration program in Indonesia. E- Government will improve

efficiency and effectiveness of government implementation through the application of electronic systems in government institutions.

A leadership to be supported to make some innovation and the style leadership of e-government is facilitation and coordination, innovative entrepreneurship. Nowadays, the style of the leader can be influence of the organization or for the program to get interest to other people especially to get citizen participation. Participation have more defined and have a more value, among government to citizen, government to business, government to government and its have a connection or communication, it's will be mention with participation.

The implementation of develop e-government program directed to reach 4 the main objective, (*INPRES No.3/2003*) :

- a. The formation of a network of information and the transaction of public service that has the quality of and scope that can satisfy the public at large as well as affordable in the entire territory of Indonesia at any time is not limited by the bulkhead of

time and with the money that the passengers.

- b. The formation of interactive relations with the world their efforts to increase the development of national economy and to strengthen the capacity to face the change of competition and international trade.
- c. The formation of the mechanisms and a channel of communication with state institutions results and the provision of public dialogue facility for citizens to can participate in the formulation of policy regarding the state
- d. The formulation will be a system of management and the process of working transparent and efficient as well as facilitate transactions
- e. Services between agencies the government and regional government autonomous of working transparent and more efficient.

This regulation can help the function of government and give a new tools to get more easily the government to ensure there are performance especially to get a good value in the society because this

is a tools to connect the performance of employee for giving deliver service. E-government can also contribute of governance to make a local government in other country a smart, sustainable and inclusive economy. Public sector can use ICT to reduce expenses related to paper-based collection, filling, processing, storage and retrieval of information to push a high cost of printing and distributing of information, to streamline internal processes and improve the data sharing and also to improve the efficiency of public administration in local government (UN Survey, 2014).

Public Service of E-government

The main reasons for government to give service is when the service can deliver to public with a good system. This paradigm about public service bureaucracy can moving forward to public service of e-government. It's reputed that e-government can make all of needed easily, like as can press the cost to get a good public service. This is the result change about bureaucracy of public service move to e-government public service.

The change of paradigm from bureaucracy to e-government.

	Bureau cratic Paradigm	E-Government Para	Principle s of Service Delivery	Standar dization ,imparti ality, Equity.	User customization, Personalization

government become plywood with the framework, the pattern of this government interaction is (in the paper by Isnaini Muallidin, 2013) :

1. G2C (Government to Citizen)

The main focus in this charter is connection among government and citizen. The mission of e-government is to provide support to citizen in everywhere and anywhere with doing the service online like as do jobseeking in online, for searching the details from the institution or departmen to give an easily information to citizen or its can make the citizen will participated with making decion maker, like as general election or join the party.

2. G2B (Government to Business)

The first poin is to all election transaction between government and enterprise organization or its will call with business. Business like as the citizen doing transaction with government, which is pay the tax and all of the activity about the government or administration.

3. G2G (Government to Government)

This category focus in the conection between internal government, or between governemnt and government agency or its will make a facilitated of communication between government to other government in sense of office. In

this articulated that its can we call with one door office can provide all equipment in the region.

4. G2E (Government to Employee)

The main focus of this categori is the productiveness from government and staff of office to can arrange the better future of the interaction. Its included the information on government regulation, decision and the authority.

Public service of e-government can be increase with interaction approachment. The approachment have been the priority politic to superintend specific challenge in user or something like it (OECD 2009). In addition, e-government is the good transformation technology because can bring a citizen for knowing it with transparance. the focus poin to spread the service to citizen is procurement, participation, service learning it was suspected to as in one form in the application of e-government.

Public Organisation in indonesia, especially about e-government had differense. Besides due to the difference in infrastructure and human resources, the difference also occurred because of their geographical location and economic development each region is very diversity concept. Therefore, some areas that are not have been a website or are still left

behind in terms of the use of information technology. But on the other hand already have been able to support like as e-procurement, or effectuate transactions public as contained in models e-commerce or e-banking old held by the private sector. Like as Indonesia especially in Yogyakarta city still not understand will use a system of e-government program because indeed supported with a legal framework that it less. But the element in e-government was included with among regulation, its means it not be integrated. Although the citizen has already been facilitated by there was a policy that drive the information technology, but its new developing slow as one of the smooth government programs based technology to increase the competitiveness of the government. Fill the application of e-government in the Yogyakarta city is the application of e-government in the Yogyakarta city have been long been practiced is long before the issuance of majority in Yogyakarta have the regulation number of 78 on 2007 about e-government. But, it make a problem too by at the initial stage of the application of e-government is sometimes not realized that by the executioner, because the term of e-government itself often do not understand employees operate in

general type they are more understand as discharging a computer connected with the internet, no more than that.

In this era, e-government still understood with passive making website by of government. The resident still not understand widely that hence the development of utilization of information technology in the public organization it could be different follow demands the society necessity which is progressively in general, developmental stage it will be divided into three point. For the first is Informative, the second is interactive that means the user of the internet technology allow contact between the government and the citizen website can be carried out and the last stage is transitive phase than informative means that the opening website by of government to used as means in the delivery system of information about the activities. Beside of it, phase transitive is the role of use the internet technology that allows (Wahyudi Kumoroto in Junaidi, 2008).

System of Information and Communication in Yogyakarta City

Yogyakarta have been the innovation about application in e-government namely UPIK (*Sistem Informasi dalam Unit Pelayanan Informasi dan Keluhan*

) this tool can provide all and to manage the every institution or agency in Yogyakarta City be integrated to give information who was going on and information and also breaking news from These region areas which may look at and accessed in same window its mean like website. The birth to make this System on 2003, on the regulation number 86/2003. The tasks and functions this tools is as a recipient of the complaints of the community for services provided, administrative or policy taken by the government.

Yogyakarta city is the provincial capital of regional Jogjakarta which includes a limited number of areas because it only consisted of four regional. Vast city of jogja is 32.5 square kilometers that is divided into 14 rural and 45 urban village. Its inhabitants in 2007 recorded 527.095 soul. Through the area relatively small, Jogja city keep many as the city students, city struggle, city culture and fours city tourism. Therefore the citizen demands in the city Jogjakarta are varied because delivered against social who is critical. So facilities through which communication between resident with a local government is very important for the city. To establishment of UPIK which is under office as breakthrough

that is driven by community demands areas in the Jogjakarta city.

UPIK is an efforts to develop e-government who has been admitted category interactive. Information from electronic media haven't only unilateral, from the government to the citizen, but this based the reciprocal of by prioritizing information from the citizen to the government. The development is it not easy for complaining regional government officials to more responsive and sensitive to all complaints from the citizen. Surely that if the response ideal of government officials is not just the immediately but also the act of real in the interests the citizen. But it certainly bring great rewards for the performance of government agencies (Junaidi, 2011). UPIK formed by applied three issues, it's namely because not all people in the society knew complaint channels which can be used easily. Sometime meet among the people with officials or rules, and also the fear and reluctant to make complaints between this tools. So UPIK is expected to can accommodate a number of aspirations, complaints, advice, criticism or just information can be immediately respond in accordance input from residents as user public services.

After eight years operate, UPIK bring the positive impact for changing the positive development in jogja city (Menpan, 2014:11)

- a. The residents can to provide information and complaint every day
- b. Regional government office to determine the need priority of society and each the community in to provide information,
- c. Complaints, questions and advice to local government
- d. The responsibility for citizen get the services, because each will be respond to and follow up on the information and the complaints of the community in 24 hours
- e. The commitment in serving the public officials, and the community are easy to bring the participation in over regional government office, so that is performance also rose. The success of the program UPIK service is the result of coordination and cooperation in organization.

Resource : www.upik.go.id

This is the data from UPIK that show the participation of citizen in Yogyakarta city have a more effective that citizen used among 2010 until 2016. Based on the results of that appears, it can be said that it have been the positive impact for citizen as well as their can uses well. Although it indeed still not fully used by the society. Citizen in Yogyakarta have been a good facilities with the e-government since support by the internet access and social media which has been used by a citizen.

CONCLUTION

E-Government increase important it means, because besides are deemed capable of increase the intensity interaction and access to information at between those who are involved, e-government also allows improving the transparency and accountability public resources management. E-government

is also able to increase the effectiveness, efficiency and productivity the government and organizers of the state.

This tools has become an instrument of used can be to public communicate for get interest with the government. It is have a part for used on the services. The fact of this benefit of this tool is when Government city of Yogyakarta get achievement for the best website(junaidi, 2011). It can increase the public participation and make a growing up value of transparency for the government and the society. From this tool it can detected since the e-government have a benefit to all of element, is

1. allows citizen to participate in decisionmaking
2. the cost savings on the government and citizen
3. increase transparency of a lot things including the cost of obtaining a service.
4. To reduce the level of activity corruption for the delivery of services. These benefits can be a consequence of point.
5. The internet enable e-government to give special service individually who will lead to satisfaction these individuals

6. The provision of services sustainable, the saving of time is respond to the public and reduction in the level of errors.

Its could be indicated of the public services that its be expressed and can do run well, since municipality jogjakarta has been managing the aspiration and get showed the participation of citizen through 1 door, where in one door or its call with one window on this application by all forms of community activities to the government and the government to the community can be seen in all prespective. This case will support once the level of success of an area in the construction of infrastructure development and also community development. The positive effects of these are on the application since this is can give affection impact on both in the administration system in jogjakarta, because the city made an area as a servant of citizen is one in which the community will be a watch do the government to could do their duty well and correctly.

UPIK as the system of information in jogjakarta city give responsible receiving complaints and the complaints of the community, and to provide information and this complaint to each division or institution of

government which is concerned. UPIK can also provided information related to a response or a follow up complain and input of this information.

In addition, the indicates of this system is public services administration in jogjakarta has run well. Thus tools in program of information and the complaints of the citizen through UPIK is one of innovation in local government, its can be example for many city.because this tools very innovation in local government who succeeded. This program has been running for eight years and also its have been success, this program was continue until 2016 and its proven service program into the midterm reginal development (*RPJMD jogjakarta city on 2012-2016* as the priority of program communicatin, information and also for mass media.

Abstract

As one of the strategic cities, Bandung has many social and economic problems to be solved such as traffic jam, health, education, law and order, etc. In this regard, ICT implementation would likely one of the effective ways to overcome those problems. The objective of this study are: (1) to describe and to analyze how the municipality make the three main dimensions, technology, community, organization, have the same perspective in establishing smart city: infrastructure integration and technology service mediation, social learning for human infrastructure strengthening, as well as management of organizational improvement and community involvement. (2) To describe their roles and their commitment in realizing “Bandung Juara” program with the goal Bandung as a comfort and modern city. In this study, the authors use descriptive qualitative method. There are 5 cooperated aspects of urban development such as tourism and transportation, public service and business, education, health, as well as governmental management. The local government applies three strategies to build the city of Bandung, namely innovation, decentralization and collaboration.

Key words: Smart City, Cooperation, Municipality, Private Sector, ICT, Infrastructure.

A. Introduction

Urbanization continues to occur in the city led to the declining performance of the city. Various problems arise along with the city’s rapid urbanization. Urbanization is characterized by a growing population density making the city must be prepared to face the other problems due to it such as scarcity of resources, the emergence of slum settlements, waste and pollution, traffic congestion, environmental degradation, are some of the physical problems.

Not only physical aspect but also the low quality of the city to improve the conditions will create distrust of the society to the government that will lead to social

problems. These social problems associated with various stakeholders, it cannot be solved by the government itself but the role of the various parties, and the more complicated to be resolved. Those problems have made the city even more uncomfortable to live in.

In solving those problems and maintain its performance, the various concepts of development and management of city are being developed by academics and practitioners. Various emerging concepts are being developed in order to obtain a precise formulation of the concept to provide a sustainable comfort for the residents. They could be a development concept of the city as a whole, as well as based on certain priority issues such as the concept of green city prioritizing to provide of green open space that is closely related to environmental degradation

Along with the change of the world, the rapid technological innovation is also be a new breakthrough that is used by the city to provide the best services for the society, then it appears the concept of Intelligent City, Ubiquitous City, Digital City, Wired City, City Information, and Smart City. Those concepts are developed based on the application of information and communication technologies in managing the city. From the literature, it is known that the concept of Smart City is the end of urban development and management of information and communication technology-based development concept (Deakin and Allwinkle, 2007). In the definition of Nijkamp, et al in Chaffers (2010), Smart City is defined as a city which capable of using human resources, social capital, and modern telecommunications infrastructures (Information and Communication Technology) to achieve sustainable economic growth and high quality of life with the wise management of resources through a community-based governance.

The concept of Smart City is a concept that has been through a perfection of the concepts that have first evolved to patch flaws that exist and consider aspects that may not exist on Information and Communication Technology-based concept has appeared previously, The concept is ultimately based on not only the development and management of the city in the technological dimension but also the human and institutional dimensions (Nam & Pardo, 2012).

Regarding the growth of the smart city concept, an understanding of the concept is not clear and consistent yet. Cities called Smart City initially have a new breakthrough in the problem settlements which later successfully increase the performance of the city. In general, the development of city towards Smart City begins with the use of information and communication technologies that usually partial, on priority issues. For example, Amsterdam which use ICT to reduce pollution, or Tallim as the capital of Estonia which started managing smart city in terms of administration with e-government and the use of smart ID card in service for the residents, and the city of Songdo in South Korea use ICT for urban development to develop Songdo as an international business center.

Currently, smart city is a trend of developing concept of development in most countries around the world. This concept then triggered tight competition to establish smart city with a variety of services supporting open information for society. Giffinger

et al. (2007) highlight the performance of the smart city on related aspects, economy, people, governance, mobility environment, and living, some definitions emphasize the technology aspects. The key part of the definition of R. Hall [2000] is the "city that monitors and integrates the condition of all critical infrastructure." One of the core mechanism in smart city is a system of self-monitoring and self-response. Smart cities represent three major characteristics: instrumented, interconnected, and intelligent [Harrison et al, 2010]. Instrumentation means the source of real-time real-world data from both physical and virtual sensors. Such data may be interconnected in some of the processes, systems, organization, industry, or value chain. The combination of instrumented and interconnected system to connect the physical world effectively to the virtual world. Another definition highlights different aspects. Rios approaches [2008] is based on the architecture of the lens. He see a smart city as a city that is inspiring, sharing culture, knowledge, and life, and motivate people to create and develop in their own lives.

Technology is not the goal of Smart City, but as a tool only to improve a better life. City residents should be raised and applied in providing a variety of positive feedback in the development of Smart City. One of them can be through social media are now widely accessible to citizens, such as twitter and website. Development of good infrastructure, such as adequate road condition will encourage economic activity of citizens and the use of natural resources which are environmentally friendly, such as solar and wind power can impact better. There are four important things in establishing a Smart City, including the participation of the citizens, the quality of life in cities, ecosystems for economic activities, and protection of natural resources that are environmentally friendly (Purwadi, 2015).

The real conditions of development in Indonesia that unlikely equal in trust as the value of supporting the realization of the concept of Smart City is often still a constraint. Bandung as a city in West Java province is also planned and is being sought to implement the concept of Smart City development. To achieve a smart city, the first thing that must be addressed is the urban community itself, from their behavior to their lifestyle should have been sighted smart.

One city in Indonesia that have implemented smart city is Bandung. Bandung, the capital city of West Java Province, is the only capital city in Indonesia that is located on a highland, about 700m above sea level. Therefore the climate of Bandung is generally pleasant, with the temperature between 19°C to 23°C.. The natural beauty of Bandung has become known since the beginning of the 19th century, therefore, the city, which was established 203 years ago.

Bandung economic growth rate is also quite high. It is above the average of economic growth in Java and Indonesia. Bandung economic growth rate in the years of 2008-2012 was reached the average of 8, 53%, while the national economic growth average was only 5.8% and West Java economic growth average was only 5.86%. The high growth rate indicates that the Bandung city is the one of important sources of economic growth in West Java and Indonesia

Efforts to reorganize the urban community has been done by the government of Bandung, it can be seen from the incessant work program of the special campaign day in which the mayor is demanding work program of the Bandung for smart-sighted both in language, culture, health and energy use. Special Campaign Day consists of Senin Gratis that is free public transportation for students, Selasa tanpa Rokok that ask citizen for stopping from smoking, Rebo nyunda is the use of Sundanese language as the language of the area in all activities on Wednesday, Kamis English use English as the communication language on the day, and the last is Jumat bersepeda is using bicycle a mode of transportation to work in order to reduce energy emissions in Bandung.

The local Government of Bandung City has done a lot of cooperation with foreign and local investors in developing smart infrastructure in Bandung, so in the procurement of the infrastructure tend to save the budget. Planned infrastructure development over the long term when one is completed then the use of private vehicles is expected to be reduced significantly, in line with the fuel consumption and emissions are also reduced significantly. It creates smart energy and smart mobility in the city of Bandung.

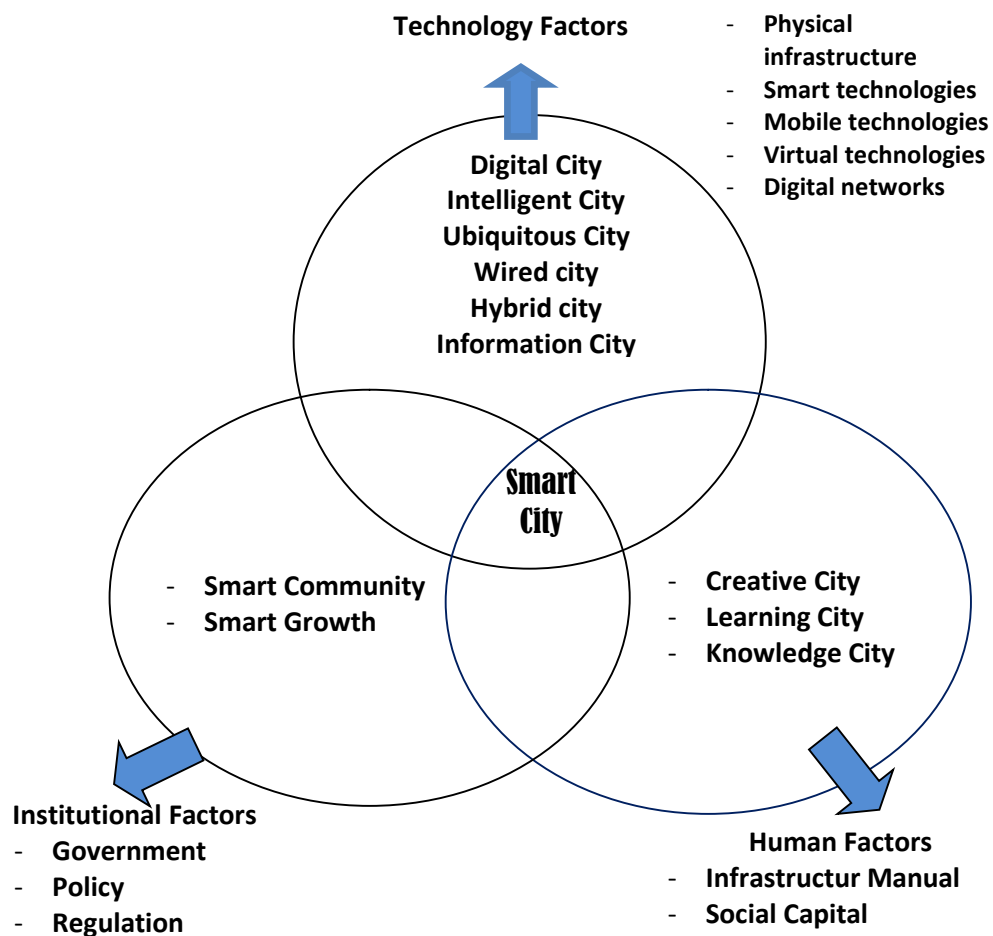

Figure 1. Fundamental Component of Smart City [Caragliu et al, 2009].

Fundamental factors which make a city smart according to the literature. The conceptual variants of smart city in the preceding section, key conceptual components of smart city, and re-categorize and simplify them into three categories of core factors: technology (infrastructures of hardware and software), people (creativity, diversity, and education), and institution (governance and policy). Given the connection between the factors, a city is smart when investments in human/social capital and IT infrastructure fuel sustainable growth and enhance a quality of life, through participatory governance [Caragliu et al, 2009]. A description of the linkage to the three aspects can be seen in Figure 1 above .

This study aims to describe and analyze how the city government to align the three main dimensions (technology, people, and institutions) on the establishment of smart cities: infrastructure integration and mediation of technology services, as well as social learning for strengthening human infrastructure, and governance for institutional improvement and involvement residents. How does the city government managing cooperation between city government, private sector and communities to make Bandung Champion, as a comfortable and superior city.

B. Methodology

In this study, we use qualitative research method with descriptive approach from objective reality and other theoretical Assumptions (empirical). The informants are (1) key informants, Head of Bappeda and his staffs who has made planning and Smart City road map program in Bandung as well as the head of ICT Department and his staff and (2) the main informant such as Head of Work Unit and his staffs who became part of the implementation of the smart city such as the Department of Health, Education and other relevant agencies. Additional informants, those who know and understand the issues in this study, they were employees who has main function as the manager and operator of smart city in the command center, stakeholder providers (partners) and users of smart city programs and services.

The informants are determined by using purposive technique i.e. the specific objective that have correlation with the research problems. Data collection method in this study is conducted by interview, documentation and observation. The primary source of data is obtained through selected information from interviews with related parties who become sources and informants in this study. The secondary data are documents such as legislation, The Regulation of Bandung City, The regulation of The Mayor of Bandung, The Decision of The Mayor of Bandung, books, information from print and electronic media.

C. Result and Discussion

Improved public services undertaken by the Government of Bandung was further enhanced in line with the implementation of the concept of smart city, which covers the following several areas of priority:

- Government (smart government)
- Education (smart education)
- Transportation (smart transportation, smart parking)
- Health (smart Health)
- Energy (smart Grid/smart Energy)
- Security (smart surveillance)
- Environment (smart Environment)
- Community / Social (Smart Society, Smart Reporting, Bandung Passport)
- Finance (Smart Payment)
- Trading (Smart Commerce)

To be able to achieve the purpose of implementing the concept of smart city in increasing service and effective decision-making, it needs to align the following three main dimensions of the formation of smart cities, technology, people, and institutions.

1. Alignment of those three main dimensions, technology, people, and institutions on the formation of smart cities in Bandung

Technology is the key for a smart city in the use of ICT to transform lives and works with a significant and fundamental way. A well-functioning infrastructure is absolutely necessary but it is still not enough to become a smart city. Utilization of information and communication technology (ICT) to connecting, to monitoring and to controlling a variety of resources that exist within the Bandung city effectively and efficiently in order to maximize service to the citizens are implementation of smart city concept in Bandung Municipality.

Technology and infrastructure prepared by the Government of Bandung to support the implementation of smart city is setting up a command center. Bandung policies Comand Center is one form of public service innovations implemented by the government of Bandung. The main function of the command center at the first stage of the three stages in its development are (1) to enhance external public services and (2) facilitating internal service, it is the faster management of making decision. In this first stage, Bandung Command Centre is the use of information technology to find out the problems and making decision faster regarding traffic and emergency problems. The second stage, requiring local government work unit to use a smart city, then the third is a refinement (Diskominfo, 2015). Bandung Command Center, which began construction in 2014, called Bandung Command Center 1.0. Furthermore, at the end of 2015 become 2.0, and in 2016, it will be refined into Command Center Bandung 3.0. Indeed, it takes time to develop, because the low of funds.

The existence of the command center may take a wide variety of data and information in every corner of the city, which was obtained through a sensor attached. Sensors are manifold which can be a camera sensor or sensors of social media such as Facebook and Twitter. All that could provide benefits for governments, businesses and communities in the development of services and public safety, business, education, healthcare and others.

From the stage, currently, BCC is still in the second phase over 1 year run. So it can be said that this program is still in the process of testing and internalization. In the Command Center, there are many applications that can monitor the state of Bandung. In 2015, there were already 150 of 1000 applications planned. There are weather data, maps, video feeds, special vehicles location, video analysis on them. 100 points in Bandung is already installed CCTV from 4000 point planned and 50 vehicles such as fire engines, ambulances and buses (public transportation) mounted GPS. The CCTV recordings will be analyzed in more detail in resulting notifications as needed

Specifically, utilization of the command centers are for carrying out ID Card, checking licence, and congestion or flooding which its process monitoring and dissemination of information can be done in realtime. In the near future, it will be the data center information from all agencies in Bandung municipal government.

The Government of Bandung City consisting of 30 work units and 30 sub-districts must have a data set which increase day by day. Obviously, it need a media to collect and to process the data to be a useful information as a reference for leaders in making decision. It can also be useful for the community and stakeholders.

Monitoring the condition of the city through a sophisticated CCTV in BCC is supported by a system called Intelligent Operations Center (IOC), which allows an operator to monitor the condition of the city. IOC is a system that will automatically see notifications automatically in case of violation. For example there are street vendors (hawkers) in restricted areas could be raised notifications automatically, to be known by the operator without seeing CCTV continuously. So there is an inscription on the screen in red 'There are street vendors'. So there alertisasi own that could be designed to facilitate monitoring. After emerging notifications, related local government agencies will follow to solve problems that occur. The system was also supported by GPSTracking installed in the cars operational Bandung City Government. So it can be seen here, whether they have been moved to the location, when they move, whether of the report was too long or not. There could be seen on their track record for dealing with problems. So the effect of treatment can be faster for people with this command center.

GPS Tracking Software has been designed so that it can be accessed by school children and the community. With the software, people can determine the movement of the bus from stop to stop. So it can be known bus will arrive more minutes so the public can decide whether anticipated or replace other vehicles. BCC is managed by 15 operators are selected through the selection. Employees in the

related local government offices also participate in monitoring the condition of the city such as police officers, firefighters and transportation agencies. Software has been developed to provide information and services to the public at the end of 2015 as many as 150 software than 1000 applications planned by the end of 2016. But the software can only be accessed via smartphones based on android and iphone only. To activate the software, the community must install and register stating the data itself including emergency phone number to call

Operator monitor the situation and conditions in the city of Bandung, not only through CCTV but also social media. People are already used to report any events experienced or encountered every day through social media such as twitter and facebook. With mention to twitter, the operator can know what events and complaints of the citizens. Operators and employees of related SKPD can also see what the most complaints in every sub-district

Monitoring function of the existence of BCC has been executed according to the functions and the purposes, but in the early stages of this strategy and its management have not led to the settlement of the problem directly and realtime. As Ella, S and Rosita N.A (2015) argued, Diskominfo stated that BCC does not contribute directly to cope with congestion, but at least it help in data collection. BCC has a system to count the number of vehicles at points where CCTV installed. If it is an accumulation of vehicles at one point, then the Transportation Department and the Police determine whether it is a congestion or not. For illegal parking, BCC has intelligent video analytics systems to detect parking area. Those data will be submitted to the Transportation Department for further action. It can be said that BCC have no authority to take action, it provide data only to the Transportation Department and the Police. Coordinating with relevant agencies is still through email, telephone and official letter. Although the city government stated that inter-agency coordination has been running well, it has no legal basis yet due to no SOP to adjust coordination among them.

In order to optimize, synergy and synchronization of electronic data management in the government of Bandung City, then they decide that BCC is a work unit under communication and information departement (Diskominfo). The decision provides clarity of the position and the authority of BCC to support the achievement of the objectives.

The perception of technology in smart city initiatives stresses integration of systems, infrastructures and services mediated through enabling technologies. Technological innovation is a means to smart city, not an ends. IT is just a facilitator for creating a new type of innovative environment, which requires the comprehensive and balanced development of creative skills, innovation-oriented institutions, broadband networks, and virtual collaborative spaces (Komninos, 2009).

In an effort to create smart people, the government of Bandung has explicitly approached through technology to its citizens because in the campaigns, it is not only conducted by the government but also through social media with interesting

posters that have appeal in particular to the young in Bandung. Bandung has a population of 2.5 million, and 60 percent of them are below 40 years of age. Therefore, technology has been considered to play a significant role in the future development of the city. The concept of smart cities can be distinguished from other similar ideas such as digital city in this case focuses on factors, human capital and education as the main driver of urban growth, it is not merely the role of ICT infrastructure (Giffinger and Gudrun, 2010).

The local government then provided internet access service in various corners of the city to facilitate interaction with the urban, especially in public spaces such as city parks. They will attract people to visit the park. Thus, the function of the park as a public space would be back by itself. Characteristics of healthy city can be seen from citizens who freely interact in parks, and other public spaces. A similar facilities built in places of worship, such as mosques, churches and others. This way will allow people to access the Internet while worshipping.

In order to support the concept of smart city, the mayor requested to village heads in Bandung for technological literacy. Village heads are also required to have a tablet in order to facilitate communication with the municipal government and the community. Sub-district and village offices must also be connected to the Internet. If it is not, sub-district and village heads are asked to report immediately so that the authorities can directly perform the installation of internet facilities. Village heads should also have email, Twitter, and WhatsApp.

The initial breakthrough by requiring all Local Government Unit, subdistrict and village heads in Bandung to have a Twitter account. This is a mayor issue revolutionizing the way communication between government and citizens that there is a direct communication channel open at any time. then train line apparatus is more smart and tech-oriented and open government initiative started.

In addition, the government of Bandung has planned e-governance that will be done gradually. At the present, government of Bandung will be carrying out an online information service to the village level. In addition, to create smart citizen, the government of Bandung has planned infrastructure supporting the creation of smart mobility by establishing a monorail in the city, cable car, Bandung skywalk, school bus, bike sharing, and BRT.

What has been conceived and developed by the Government of Bandung in the preparation of infrastructure construction of smart city at this early stage in line with what was raised by some of the literature. While the wireless infrastructure is a key element of digital city infrastructure, it is only a first step (Al-Hader et al 2009). A set of technological requisites for smart city comprises network equipments (fiber optic channels and wi-fi networks), public access points (wireless hotpots, kiosks), and serviceoriented information systems (Anthopoulos and Fitsilis, 2010). A ubiquitous/pervasive computing infrastructure is a key technological component in the build out of a digital city (Yovanof and Hazapis, 2009). A smart city provides interoperable, Internet-based government services that enable ubiquitous

connectivity to transform key government processes, both internally across departments and employees and externally to citizens and businesses.

In the next phase of BCC development is ideally equipped with a master plan and SOP document should be prepared to Bandung Command Center that includes procedures for implementing the duties and coordination among relevant agencies. Bandung Command Center more active role in following up on field data and solid research agreement between relevant agencies; and the need to set out the division of labor, authority, rights and obligations among relevant agencies.

The legal basis for an overarching development process to be unveiled BCC consists of three policy are as follows:

- a. Bandung Regional Regulation No 1/2014 on the Revenue and Expenditure Budget in 2014
- b. Bandung Mayor Regulation No. 085 of the Translation of the Revenue and Expenditure Budget in 2014
- c. Bandung Mayor Instruction No. 002/2013 About the Action Plan Towards Bandung Champion.

Two policies on the budget are above a milestone in the successful development of the BCC. Through this policy, the budget to build the BCC can be issued. Taking into account the time urgenitas and leadership of a mayor are limited, it was decided to immediately enter into a BCC development program which will be implemented in 2014. The acceptable reason because the required budget can be guaranteed availability. So it is not surprising that the government of Bandung only takes a year to realize that this advanced command room. Moreover, the decision to include the development of BCC's program of duty of communication and information agency also the right decision is closely related to information and communication technology that has become the core business of the agency (Ella, S and Rosita N.A; 2015).

The perception of technology in smart city initiatives stresses integration of systems, infrastructures and services mediated through enabling technologies. Technological innovation is a means to smart city, not an ends. IT is just a facilitator for creating a new type of innovative environment, which requires the comprehensive and balanced development of creative skills, innovation-oriented institutions, broadband networks, and virtual collaborative spaces (Komninos, 2009)

A successful smart cities can be built from the top down or bottom up approach, but the active involvement of every sector of society is very important. A united effort to create synergy, which allows each project to build one another to progress more quickly, so that a critical mass involved, the information and training required for the transformation of how the entire community perform their duties

The local government applies three strategies to build the city of Bandung, namely innovation, decentralization and collaboration, as can be seen in Table 1 below.

Table 1. Strategy Implemented By The Local Government In Overcoming The Problems Of Bandung City Through A Smart City Approach.

The Strategy	Program Description
Inovation	<ul style="list-style-type: none"> - Make new breakthroughs in providing municipal facilities. Integrating through interconnectivity facilities for monitoring and controlling problems of the city in order to solve complex problems of the city - The initial breakthrough by requiring all Local Government Agncies, subdistrict and village heads in Bandung to have a Twitter account. This is a mayor issue revolutionizing the way communication between government and citizens that there is a direct communication channel open at any time. then train line apparatus is more smart and tech-oriented and open government initiative started - Innovation of public service and some of which has received recognition and awards, among others the Social Aid Online (community could keep nad control on the proposal, work procedures to who the recipient of social aid is transparent), Prolanis (the health care system with proactive approach, poor people who have chronic illnesses can hospitalized at the health center, so no need to go to Hospital) and Katresna Sadaya (this program facilitates pregnant women in every way. If there are pregnant women, the forum Rukun Warga shall be responsible entirely until the baby was born safely).
Desentralization	<ul style="list-style-type: none"> - Build a command center in the sub-district. Sub-district heads can monitor through the screen provided, minimum of 4-6 units, and then will connect to the existing CCTV on its territory so that each district head can make decisions faster. - Sub-district and village heads on a regular basis and take turns dinner together in homes and the Friday prayers around the village so that officials know so much problems facing its citizens. The assumption is that if leaders understand the difficulties of its citizens, can find a solution well.
Colaboration	<ul style="list-style-type: none"> - Collaborating with third parties (private sector) to prepare good infrastructure-related hardware, software and humanware. - Collaborating with the community through existing communities and drive for the establishment of a new community that will help the city authorities resolve the problem of the city include traffic congestion, street vendors, waste management, and transportation infrastructure, especially the number of damaged roads and streets.

2. The Developed Cooperation to Achieve Bandung Juara, as a Comfort and Supreme City

As revealed by Lindskog (2004) IT infrastructure and applications are prerequisite, but without any real engagement and willingness to cooperate between public institutions, the private sector, voluntary organizations, schools and citizens, there is no intelligent city. This means that the smart city can be realized by both when the relevant stakeholders, the government and the community can work together and support each other.

Bandung is one of the strategic town, but it still face a lot of problems in the form of social, economic and others. By cooperation with various parties, the municipal government has to use ICT to obtain an effective solution to overcome these problems.

The government of Bandung City will have integrated connections in various fields from transportation, public services, even to places of worship, to give practical effect and efficient in the management of the city. In this cooperation, there are five aspects of the target include tourism and transport, public services and businesses, education and health, as well as government management. Those program covering education, and public areas. Telecommunication Corporation (PT Telkom) has built 10,000 hot spot spread in any area of the city. Each point has about 3-4 connection. In addition to providing access Internet access in public spaces, Bandung municipal government also plans to issue smart cards in 2016 which can later be used to pay the fare public transportation such as public transportation, buses, and more. More broadly Cooperation with Telecommunication Corporate (PT Telkom) include:

- Urban CCTV Surveillance (180 titik/150 +30 titik)
- Bandung Digital Valley for Business Incubator
- Social Media Analytics
- Public Portal
- Machine to Machine for payment tracking and household energy management
- “Hi Bandung” and “Trans City” application

The Government of Bandung City using the cooperation directly and indirectly held by the leading universities in the city of Bandung, ITB and BlackBerry. Innovation in technology area continues to meet the needs of society. BlackBerry has invested in Bandung Institute of Technology (ITB) which brings BlackBerry Innovation Center (BBIC) since 2015. The main purpose is to deliver a variety of solutions called ‘Smart City’ needed by the people. Bandung is the location of the development and adoption of innovations conceived by BBIC by launching Smart City BDG. Researchers at BBIC made several research groups in order to more focus to work on the appropriate area of competence. BBIC research focus on transportation, education, smart homes and health through innovation, mobile applications and digital versatile.

LAPI ITB and Telkomsel corporation make cooperation to form smart system platform (SSP) to produce intelligent city management (smart city) in Indonesia including those later applied in Bandung. There are three innovations in Smart

System Platform (SSP) that has been generated, ie sensing, understanding and acting. Sensing a concept to know and observe the condition of the city with the help of sensors to collect data. Understanding the concepts to understand the city better through data that has been processed. One function of the SSP is to process, integrate and perform analysis of data has been collected. While the acting is a concept to quickly perform actions from the analysis that has been done. Product innovation to help the process of acting which this is with the command center that utilizes technology SSP

D. Conclusion and Recommendation

Conclusion

1. A successful smart cities can be built from the top down or bottom up approach, but the active involvement of every sector of society is very important. As the key how the municipality make the three main dimensions, technology, community, organization, have the same perspective in establishing smart city: infrastructure integration and technology service mediation, social learning for human infrastructure strengthening, as well as management of organizational improvement and community involvement
2. There are five aspects of urban development that are cooperated with the various parties such as tourism and transportation, public service and business, education, health, as well as governmental management.
3. The local government applies three strategies to build the city of Bandung, namely innovation, decentralization and collaboration.

Recommendation

1. In the next phase of BCC development is ideally equipped with a master plan development and SOP document should be prepared to Bandung Command Center that includes procedures for implementing the duties and coordination among relevant agencies. Bandung Command Center more active role in following up on field data and solid research agreement between relevant agencies; and the need to set out the division of labor, authority, rights and obligations among relevant agencies.
2. A united effort is needed to create synergy, which allows each project have progress more quickly, so that a critical mass involved, the information and training required for the transformation of how the entire community perform their duties

Socio-Cultural and Economic Conditions of the Indigenous People's in South-Central Mindanao: Focus on Government Ancestral Domain Claims Program

Adora M. Alvarez, Ph.D
adoraalvares@gmail.com
College of Public Affairs
Department of Public Administration
Mindanao State University, Marawi City, Philippines

Abstract

The travails of the Indigenous People's (IPs) seem insurmountable. Displacement from their ancestral domains, abject poverty and State repression characterize the life of the indigenous people in the region. They numbered in millions yet their existence and aspirations are largely ignored and trampled upon. The assaults in their communities do not only come from corporate investors but, as well from the government in the pursuit of "Development", which marginalizes the indigenous peoples, small peasants and the poor.

The Indigenous People's Right Act (IPRA) of 1997 or R.A 8371 which crafted to shorter the indigenous peoples in the their immemorial rights over their ancestral lands was hailed as a landmark legislation by government, civil society and the international community. It is on this context that this study was conducted to assess and evaluate the effects of ancestral of ancestral domains claims program, as implemented among the indigenous cultural groups in South-Central

Mindanao. The study involved the indigenous cultural groups belonging to the different ethnic of South-Central Mindanao Regions (Region XII). It also dealt with the South-Economic Profile of the Indigenous, People's their cultural practices, work attitudes and the changes in their socio-economic conditions and their ancestral lands.

The results of the study implied that, the current public laws having considerable impact on the IP's for their claims on ancestral domain is greatly influenced by colonial laws which are very oppressive in nature. This facilitates economic exploitation made by foreign investors on the ancestral domains of the IP's. The religious sector as well as the civil society organizations played an important role on the quest of the IP's to regain their ancestral lands. For them, their ancestral land is their life in itself, without it their tribe will vanish.

Keywords: Republic Act 8371 (IPRA Law), Indigenous People, Ancestral Domain Claims Programs

INTRODUCTION

Background of the Study

The agony of being treated as minority peoples in the Philippines collectively known as the Indigenous People's or various other names including the Indigenous Cultural Communities (ICC's) "Katutubo or Lumad in the local dialect. Minorities and Tribal Filipinos meant stigmatization, disfranchisement and marginalization in various forms. The miserable flight of the indigenous peoples of the Philippines has not only caught to local but global attention as well.

In 1997, there was a most celebrated agrarian domain case where, the natives the Higaonons of Sumilao, Bukidnon in Mindanao started a 1,700 kilometers walk for justice, which took the natives to walk for sixty 60) days covered by media just to reached the Central Government in Manila and deliver their message to President Ramos, that they vehemently opposed for the sell out of their ancestral to a private corporation The San Miguel Corporation. This forced the leadership

to award the farmers 100 hectares out of 144 are to pressures made by the religious sector and the civil society organizations. Many cases to the scenario presented above had been in occurrence the Philippine Government had to support a constitutional mandate for the recognition of the IP's towards their ancestral land thus; Republic No. 8371 in 1997 becomes a law otherwise known as an "Act to Recognize, Protect and Promote the Rights of the Indigenous Peoples, thus an office for the Indigenous Peoples was created, known to be the National Commission on Indigenous Peoples (NCIP) establishing mechanisms and appropriating funds for these purpose.

In view in the foregoing situations of the Indigenous Peoples in South-Central Mindanao therefore, this study was conducted with an objective of evaluating the Socio-Cultural Conditions of the IP's focusing on the granting of ancestral domain ownership to the indigenous peoples in the region.

Statement of the Problem

This study is an attempt to assess and evaluate the effects of ancestral domain program of the indigenous cultural groups in South-Central Mindanao, specifically, it sought to answer the following questions:

1. What is the IP's concept of ancestral domain?
2. How did they lose their ancestral domain?
3. What role did the government and non-government organizations play in the IP's struggle for ancestral domain? To what extent have the programs of government and non-government organizations helped the IP's in reclaiming their ancestral domain?
4. How did the IP's succeed in their quest for their ancestral domain?
5. What problems they encountered in their struggle?
6. In what manner, the government and NGO's interventions changed the Socio-Economic and cultural life of the IP's?
7. To what extents are the IP's were satisfied of the government's ancestral domain claim program?

Theoretical Framework

The IP's remained passive for several decades. Many opted to stay in the lowland to work with the new masters, just like landless peasants in the place. Others went to the hinterlands, as their gestures of maintaining harmony and peaceful co-existence with other natives. The struggles of the IP's to promote their and defend their homelands from external intrusion are not a new development. It can be safety inferred from other studies that, IP's struggles began, as soon as the colonizers and migrant settlers landed in their territories many years ago. (Rodil, 1994)

The struggle had been waged primarily as a local reaction within the tribal areas, arising in response to migrants, threats and immediate aggression. It was only when popular opposition to the Kalinga dam and other development projects in the Cordillera gained intensity and forced itself upon consciousness of the public that the issue began to be articulated as a national agenda (Deles, 1994)

According to Horfilla and Lozano, 1997, the B'laans ethnic group found in Columbio, Sultan Kudarat, Mindanao put up an organization called the La Bugal Tribal Organization with the support and encouragement of the Tribal Filipino Program of the Diocese of the Kidapawan in Cotabato Province, a non-government organization. The two critical issues brought to the organization of La Bugal are the loss of the B'laans of their ancestral lands and the accelerating cultural extinction looming large for the tribe members.

The IP's have been forcibly driven out of their lands because of threats to their lives; the groups or corporations that encroach on their territories have the power, influence and force needed to sustain protracted warfare. The entry of big companies such as loggers, miners and ranchers is often accompanied militarization. Armed insurgency, which happened in many parts of the country during the Martial Law regime, also led to the displacement of thousands of IP's (Hontiveros 1988, Rodil in 1993).

The government adhered to the sentiments of the IP's that, they only benefit from the process of development, if they broke out of their isolation and participated in national life and institution. This course of action is clearly in opposition to Whorfianism of the third kind that, ethno linguistic diversity is a worldwide societal asset. The great creative

force that inspire humanity, do not emerge out of universal civilization, but out of the individuality of separate ethnic collectiveness—most particularly, out of their authentic languages, formulated by Benjamin Lee Whorf (Fishman, 1978; 1980).

Conceptual Framework

The Schematic Diagram of the Conceptual Model serves as framework for the study. Documenting an indigenous peoples struggle to regain their ancestral domains necessitates delivering into the factors that led to the loss of their territories.

It is indeed sad to know that, they who among the natives of their country have been rendered as landless and pushed to the peripheries of national life that is, minoritized and marginalized and, in most cases compared to non- IP's, are culturally impoverished as well. (Horfilla and Lozano, 1997).

As illustrated in the schematic diagram, the study took for its point of departure from the factors underlying the loss of ancestral domain, which is the focal point of this inquiry.

Attendant to the difficulties or obstacles for the P's to regain their ancestral lands, state laws inimical to IP's interest, the IP's ignorance of rights and passive resignation to their fate and the greed of some company or corporations. For instance the Philippine Constitution upholds the protection of their rights. But specifies that, all lands of public domains and other mineral resources are owned by the state. And, most IP's reside on what are classified as public lands therefore, they are considered squatters in their own land.

Likewise, another problem in the clear and definite and legal provisions on the ancestral domain is the exploitation and marginalization imposed on the IP's by business people and the corporations. There is lack of understanding of the indigenous peoples culture which resulted in the plunder of their resources.

The lack of knowledge or simplicity made the easy preys to subtle machinations of some groups that, try to destroy unity which they had built for a long time.

Conceptual Framework

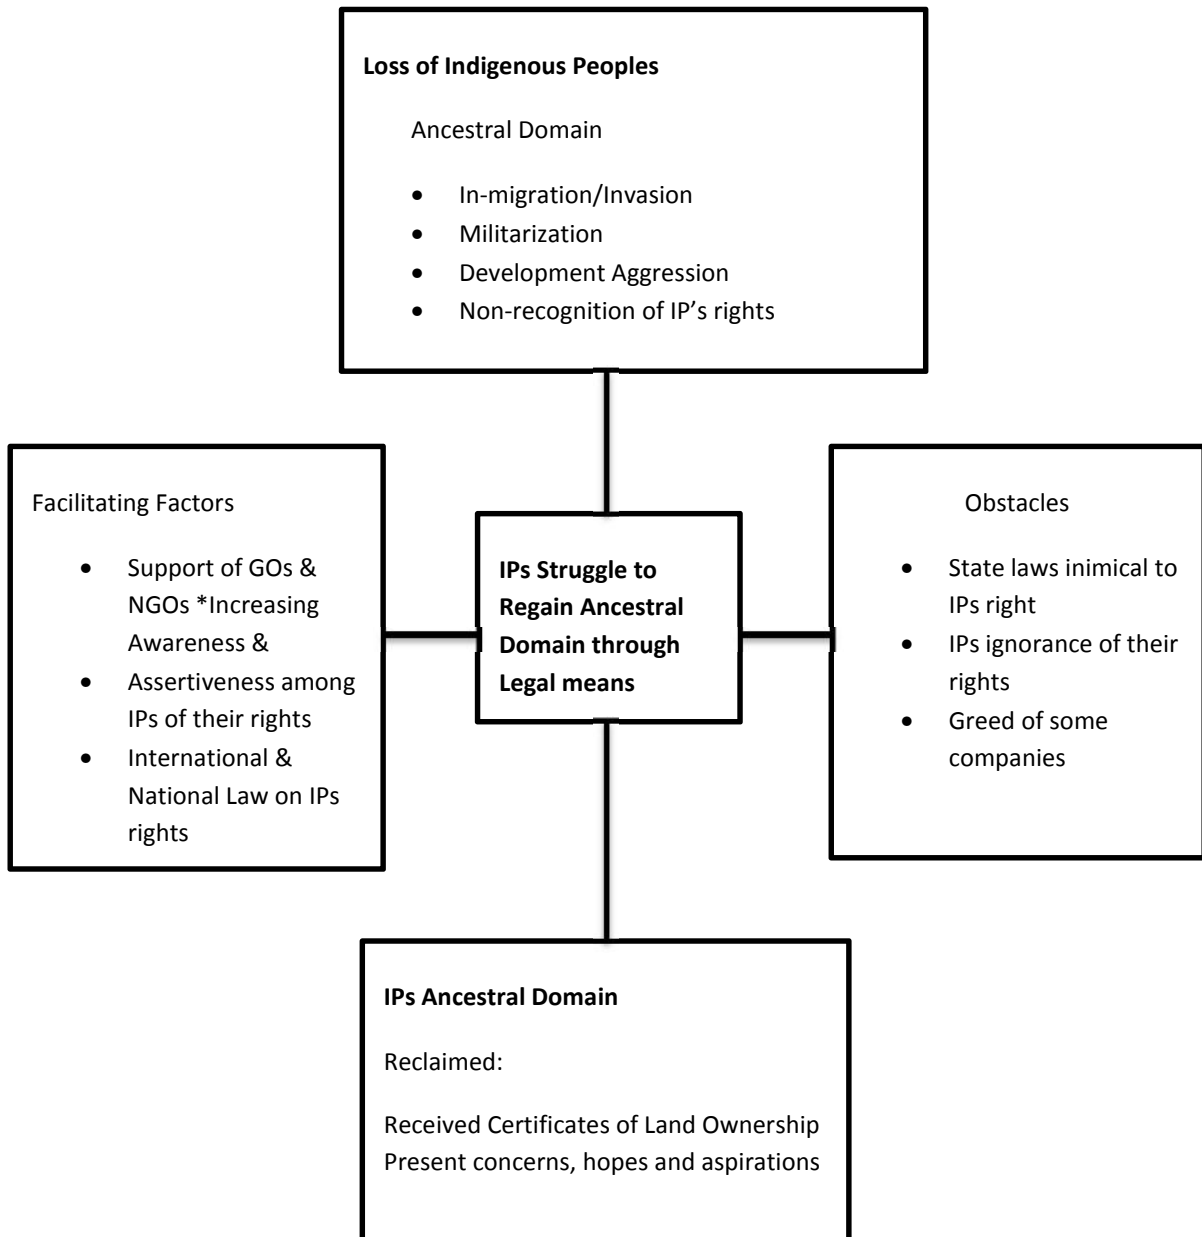

Figure 1. Schematic Diagram of the Conceptual Framework of the Study

Methodology

This qualitative study goes beyond the merely descriptive purpose to conduct an analytical investigation of the processes and strategies employed by the government and non-government organizations to help the various indigenous peoples of South – Central Mindanao regain their ancestral domain. Primarily a descriptive qualitative research, the study used the different approaches in obtaining the needed data from the field. These were the unstructured questionnaire for the IP's, personal interviews with key informants, ocular survey, observation and immersion in the community covered in this inquiry and documentation. These data collection method and the strategies afforded the researcher opportunity to observe up close and document the actual realities in the community, its people and their beliefs, fears, hopes and aspirations and the help from government organizations and the private sectors to aid them in their continuing struggle to regain their lost ancestral lands.

Locale of the Study

This study was conducted in the four (4) provinces of South-Central Mindanao (Region XII) composed of South Cotabato,

Cotabato Province, Sultan Kudarat Province and Sarangani.

Central Mindanao is situated in the Central and Southwestern part of Mindanao. It is bounded on the North by the provinces of Lanao del Sur and Bukidnon, on the Northwest by Maguindanao, on the Southwest by Mindanao Sea; and on the east by the Davao del Sur and Davao City.

Respondents of the Study

The population was composed of the beneficiaries of Ancestral Domain Program: Sixty- five from Cotabato Province, fifty-two (52) from Sarangani Province and fifty (50) from the Province and thirty (30) key informants.

Table I, shows the Frequency and Percentage Distribution Key Informants in Focus Groups Discussions.

Key Informants / FGD Participants	Frequency	Percentage
Elders	17	29.3
Housewife	8	13.8
Employees and Barangay Officials	20	34.5
Students and Out-of-School Youths	13	22.4
TOTAL	58	100%

On document analysis was also done. Legal documents available from the Office of Cultural Minorities were critically reviewed and analyzed. One of the documents gathered from

the said office contained essential data on ancestral domain claims of the Indigenous Peoples, as reflected in Table 2.

Table 2
Ancestral Domain Claims

Estimated Total Area of Ancestral Domain	4.83 million hectares
Percentage to Total Philippine Land Area	17%
Area Covered by a Certificate of Ancestral Domain Claim (CADC) Issued by the DENR	2.532 million hectares
No. of CADC Areas	181
Area Covered by new Intents submitted To NCIP Central Office for Survey and Delineation	2.298 million hectares
No. of Intents for Survey and Delineation	100

Source: NCIP

The data in Tables 3 and 4 have been from the survey questionnaires administered by a group of college students personally supervised by the researcher herself. The study revealed that, these people are generally young in their middle age, having a mean of 19.8. This means that, more than one half (1/2) of the total sample belonged to the age bracket of 19 years old-64 years old. The male (95) respondents outnumbered by the female which 125. Eight respondents to provide information

about their demographic profile or characteristics.

There are more members who could write than read. For them writing means are able to write their names. More than one half are able to write and read. The older members of the indigenous peoples learned the rudiments of writing and reading through literacy classes conducted by the non-government organizations.

Table 5 summarizes the key informant's views on why they lost their ancestral domains. The responses of the respondents revealed that, the clan leaders and key informants, compared to the women and students have a more comprehensive and profound understanding why they lost their ancestral domain. Clan

leaders destruction of their forest was brought about by the extensive logging operations in their area is in 1960's to 1970's. Some of the old IP leaders blame themselves because they serve these companies as hired workers. In other words, the destruction of the forest happened with their complicity.

Table 5

Factors That Led to the Loss of Ancestral Domains of the IPs By Type of Respondents

Clan Leaders	Women Respondents	Students
<ol style="list-style-type: none"> 1. Militarization: The Japanese occupation, then The Ilaga/Black-Shirts Conflict in the early 70's; Harassment by armed goons in the 1970s) 2. Land settlement Programs of government 3. Development aggression ushered in by the coming of loggers and of Dolefil and mining corp. 4. Ignorance of their fellow IPs and greed of some settlers, poverty 	<ol style="list-style-type: none"> 1. Fear of the settlers made the, abandon their homes 2. Wars (WWW II and the Muslim – Christian conflict of settlers/companies 	<ol style="list-style-type: none"> 1. Fear of Christians 2. Land mortgage to Christians but were eventually titled to their (Christians') name

As found in Table 6, during the group interviews with the various groups of clan leaders, they mentioned that their most pressing problem had to do with the other groups who did not join the struggle but would want to be among the beneficiaries of the compromise agreement between the clans and the Department of Agrarian Reform beneficiaries (DARB).

The other problem they raised was the scarcity of water in the area and the non-availability of food and construction materials for the houses when they moved to their own place. Once they get back to their lands, they will need farm inputs such as corn seeds, farm animals and tools like plows and harrows.

The students went beyond their physical needs. They said their major problem at present is their lack of education. Since most of them were unable to go to school, they could not find good jobs because majority of them have not even finished high school. It was very evident from their responses that just like the majority groups in Philippine society; they also see education as a way out of poverty. They see employment with the government and private companies to be the only means to earn money to improve their present situation. Although they see self-employment as an alternative, their lack of capital and other forms of needed support prevented them from venturing into entrepreneurship.

Table 6
Present Concerns and Problems of the IPs

Clan Leaders and Women	Students
1. Other IP groups who did not join the struggle but would want to move to their places with the awardees of the Program	1. Inadequate food and water
2. Lack of farm inputs like corn seed, farm animals and farm tools	2. Lack of access to education leading to unemployment
3. Lack of food and water	
4. Lack of agricultural/vocational skills	
5. No money to buy construction materials for houses	

Problems Encountered

Majority of the problems cited by the respondents were directly related to the repressive state laws regarding land ownership of the IP's in the Philippines. The attitudes of the implementers of the program towards the IP beneficiaries, that, they favored the establishment of giant foreign and local corporations in the IP's ancestral lands. The Land Settlement Programs of the government affecting the ancestral lands of the IPs in the entire regions. And the ignorance of the IP's on documentary evidences like land titles on their ancestral domain. Finally, poverty that, hinders the Indigenous People for the payment of real property tax and enormous expenditures related to land tilting processes.

Findings of the Study

The following are major findings of the study:

1. The IP's of South-Central Mindanao understand "ancestral domain" as "yuta sa katigulangan" or "yutang kabilin" which means land handed to them by forefathers. They knew it was their ancestral domain because their ancestors had lived in the area long before the settlers came.
2. Although reservation area by virtue of Presidential Proclamation 762 was provided by the government, the IP's gradually lost their ancestral domains through government land ownership and development policies, militarization, and the greed of some moneyed and armed groups and corporations which took advantage of the ignorance and poverty of the native inhabitants. Being peaceful and generous people, the early IP's fled to

the hinterlands rather than fight new comers.

3. Inspired by the increasing awareness of IPs and supporters of IPs rights all over the world, the IPs started to make themselves heard by the concerned government agencies, especially the Department of Agrarian Reform, and the Office of the Southern Cultural Communities. They adopted an active nonviolent campaign to regain their ancestral domain. They were able to act on strategies that made their struggle a success.
4. Despite the difficulties and problems encountered during their struggle, the IPs did not give up. Through the help of the Justice and Peace Desk of Marbel, the Religious Missionaries and other NGOs, they were able to secure food received educational benefits, livelihood projects and other assistance.
5. Some of the IPs could not give the government any credit for the success of their plight. According to them, they have not received any assistance from the government during the times of crisis and struggles.
6. Getting back their land is not the end but just the beginning of another phase of their struggle. Other clan leaders worry about their fellow IPs who did not join the struggle and did not apply to regain their lands but wanted only to go with those who have received their certificates of the land title. The women and students of the community concern themselves with their day to day problems: food and water, and their lack of capital so necessary in making their land productive and their lack of skills for livelihood programs.

7. As a people, the IPs would like to be recognized as human beings with dignity and rights similar to others belonging to the larger society. Through the IPRA Law (1997), they were given the recognition for their rights to their ancestral domains, to their rights as persons with dignity. However, at present, not all have been awarded their Certificate of Land Ownership.

Implications

The results of the study implied that the current public land laws that have considerable impact on IPs are in fact colonial laws aimed at facilitating the economic exploitation of the country by the foreign investors.

Most of the development in the lives of the IPs of Central Mindanao came mostly from religious sectors and missionaries and Non-government organizations with little government support. Also without their aspirations and hopes, the IPs would not make the efforts and take the risks to regain their ancestral domains and stand with dignity and preservation of their culture and traditions.

Recommendations

Based on the findings of this study these recommendations are hereby offered:

1. Much of the suffering inflicted by both public and private entities upon the IPs is their apparent lack of knowledge and understanding of IPs world views and belief system. There is a need for these sectors to understand the historical roots of the "national minority" question through seminars and exposures. For the academe, this can be done through curricular and co-curricular programs that can enlighten all members of the academic community as well as those of the wider perspective on the plight of the IPs.
2. The government should implement fully the laws, administrative orders, and memoranda of agreement such as the Department of Environment and Natural Resources (DENR) and the

IPRA Law of 1997 which aim to recognize, protect, and promote the rights of cultural communities/indigenous peoples.

3. The programs and projects of the government for the ancestral domain titled lands must be geared towards the development of the said lands with the IPs as beneficiaries.
4. There must be participation of the Indigenous Peoples in the planning stage for the development of their titled ancestral lands. This is to address the real needs of the tribes in terms of the improvement. Thus, in this context, to have authentic development it must be culture based.
5. The National Commission on Indigenous Peoples (NCIP), as an Office created to oversee the Indigenous Peoples throughout the country must be allocated more funds by the national government in terms of the development of the ancestral lands of the tribes.
6. Since, this present study is exploratory in nature, it would be very helpful to do a follow-up documentation on the socio-economic and cultural status of the Indigenous People, given the ancestral domain titles several years from now.
7. Another study is recommended that will delve into the role of IP women in the socio-economic and political activities in the indigenous communities.
8. A study on the role of the civil societies in alleviating the plight of the indigenous peoples in some dominated IP areas in the entire Mindanao regions and the entire country. It may reveal helpful insights on how the IP's can be best assisted in their quest for peace and development.
9. A triplicate study to include other regions in the entire country be made. This is to ascertain, varied information, data and responses of the respondents on how to regain their ancestral lands.
10. Provide scholarship grants to IP's children who are beneficiaries of the ancestral domain grants in the Mindanao regions.

THE STRATEGY OF HEAD SUB-DISTRICT FOR PEOPLE EMPOWERMENT ON COMMUNITY LED TOTAL SANITATION (CLTS)

By:

Elvira Mulya Nalien, S.IP, M.Si

Staff at Governance Institute of Home
Affairs (IPDN), Indonesia.

e-mail: elviralien@gmail.com,

Hp 081210835828

ABSTRACT

The Teluk Naga society, Serang Regency, Banten Province in general does not have a bathroom or latrines in their house so all activities such as bathing, urinating, defecating, washing and even drinking water use big river which are located right in front of the house. There is no bathroom in the house, it was not caused have not money but because the mind set of people who think that if a toilet means storing dirt in the house, making the narrow house and assumed that water always flowing so that the water is always changed and clean. This situation cannot be allowed to linger due to the increasing population causing of the increasing number of community activities at these times so that became polluted and dirty. The community will affected by the disease. Thus the Head of Teluk Naga Sub-district need to formulate a strategy for driving the people in his Sub-district in the Community Led Total Sanitation (CLTS), by mobilizing the community to latrines building in the house and use the taps. This program is basically an effort to empower the community itself which, if done well, it can trigger a local action led by the community to completely stop defecating in the open, and without sanitation program external to provide subsidies or the instructions for the latrines model. To formulate a strategy the authors used a SWOT analysis with regard both enabling and inhibiting factors internal and

externally. This research is a qualitative which use descriptive method and inductive approach.

Keywords: Strategy, People Empowerment, Community Led Total Sanitation (CLTS)

INTRODUCTION

The issue in bowel habits (BAB) in any place that still occurs in almost all area of Indonesia, especially in rural areas is a blurred portrait of sanitary condition. A study of Indonesian Sanitation Sector Development Program (ISSDP) in 2006, showed 47% of Indonesian are still behaving defecating into rivers, fields, ponds, gardens, and other open places. In the Province of Banten alone, based on the Data of Coverage Water Supply Sanitation throughout Banten Province in 2006 (the agreement workshop on Water Supply and Environmental Sanitation / WSS, September 20, 2006), the rate of coverage of sanitation (province's coverage) remains quite low at 51, 93%. Even, in one district in Banten alone, 2,000 families do not have latrines.

Such conditions contribute to the high rate of diarrhea in Indonesia. This is evident from the national incidence of diarrhea in 2006 amounted to 423 per thousand of the population in all age and 16 provinces experienced Extraordinary Events (KLB) diarrhea. (National Strategy for Community-Led Total Sanitation, Ministry of Health, 2008). Still on the results of the study of Indonesian Sanitation Sector Development Program (ISSDP) year 2006, stated that as a result of poor sanitation, Indonesia must lose more than Rp. 58 trillion or equivalent to Rp. 265,000 per person per year. There were an estimated 121,100 cases of diarrhea

which claimed more than 50,000 lives each year. Annual medical costs due to poor sanitation reached Rp. 139,000 per person or Rp. 31 trillion nationwide. 60% of the rural population does not have access to adequate sanitation facilities; face the risk of higher health and welfare losses. Sanitation coverage in rural areas has not improved in three decades, with a still widespread habit of defecation in water or soil directly.

These alarmed findings have a great impact on the nation's health and quality of water for domestic and commercial users. In addition, poor sanitation has a negative impact on fisheries and tourism, and other impacts on the welfare, such as the reduction of number of student attendance at school (due to the ills caused by the impact of poor sanitation), the environment is uncomfortable, time is wasted and the lack of privacy and security for women and girls. To solve the above problems, the government made an effort that approaches the Community Led Total Sanitation (CLTS) which is an approach that is applied to facilitate the people to be more aware on the issues and the prospects to increase sanitation facilities in their communities. Considering the importance of CLTS approaches, then the Head of Sub District, especially in Teluk Naga, should have the right strategies in empowering communities to gain the most from this CLTS program. The strategies are developed using SWOT analysis.

RESEARCH OBJECTIVES

This research in order to answer problems by knowing and understanding about head sub-district strategy for people empowerment on

Community Led Total Sanitation (CLTS) in Banten.

SIGNIFICANCE OF THE STUDY

A. Strategy

Henry Mintzberg, in his 1994 book, *The Rise and Fall of Strategic Planning* points out that people use "strategy" in several different ways, the most common being these four (pp.23-27):

1. Strategy is a *plan*, a "how," a means of getting from here to there.
2. Strategy is a *pattern* in actions over time; for example, a company that regularly markets very expensive products is using a "high end" strategy.
3. Strategy is *position*; that is, it reflects decisions to offer particular products or services in particular markets.
4. Strategy is *perspective*, that is, vision and direction.

Mintzberg argues that strategy emerges over time as intentions collide with and accommodate a changing reality. Thus, one might start with a *perspective* and conclude that it calls for a certain *position*, which is to be achieved by way of a carefully crafted *plan*, with the eventual outcome and strategy reflected in a *pattern* evident in decisions and actions over time. This pattern in decisions and actions defines what Mintzberg called "realized" or emergent strategy.

In the 1980 edition of his book, *The Concept of Corporate Strategy* Andrews presents this lengthy definition of strategy: "Corporate strategy is the *pattern* [italics added] of decisions in a company that determines and reveals its objectives, purposes, or goals, produces the

principal policies and plans for achieving those goals, and defines the range of business the company is to pursue, the kind of economic and human organization it is or in-tends to be, and the nature of the economic and non-economic contribution it intends to make to its shareholders, employees, customers, and communities.

In *Top Management Strategy*, Benjamin Tregoe and John Zimmerman, of Kepner-Tregoe, Inc., define strategy as "*the framework which guides those choices that determine the nature and direction of an organization* (p.17)." Ultimately, this boils down to selecting products (or services) to offer and the markets in which to offer them. In a 1996 *Harvard Business Review* article [5] and in his 1986 book, *Competitive Strategy* Porter argues that competitive strategy is "about being different." He adds, "It means deliberately choosing a different set of activities to deliver a unique mix of value (p.64)." In short, Porter argues that strategy is about competitive *position*, about differentiating yourself in the eyes of the customer, about adding value through a mix of activities different from those used by competitors.

Strategy is all these—it is perspective, position, plan, and pattern. Strategy is the bridge between policy or high-order goals on the one hand and tactics or concrete actions on the other. Strategy and tactics together straddle the gap between ends and means. In short, strategy is a term that refers to a complex web of thoughts, ideas, insights, experiences, goals, expertise, memories, perceptions, and expectations that provides general guidance for specific actions in pursuit of particular ends. Strategy is at once the course we

chart, the journey we imagine and, at the same time, it is the course we steer, the trip we actually make. Even when we are embarking on a voyage of discovery, with no particular destination in mind, the voyage has a purpose, an outcome, and an end to be kept in view.

Strategy, then, has no existence apart from the ends sought. It is a gen-eral framework that provides guidance for actions to be taken and, at the same time, is shaped by the actions taken. This means that the necessary precondition for formulating strategy is a clear understanding of the ends to be obtained. Without these ends in view, action is purely tactical and can quickly degenerate into nothing more than a flailing about.

SWOT Analysis

SWOT is a useful technique for understanding your Strengths and Weaknesses, and for identifying both the Opportunities open to you and the Threats you face. What makes SWOT particularly powerful is that, with a little thought, it can help you uncover opportunities that you are well placed to exploit. And by understanding the weaknesses of your business, you can manage and eliminate threats that would otherwise catch you unawares.

1. Strengths:

- a. Identify skills and capabilities that you have.
- b. What can you do particularly well, relative to rivals?
- c. What do analysts consider to be your strengths?
- d. What resources do you have?
- e. Is your reputation strong?

2. *Weaknesses:*
 - a. What do rivals do better than you?
 - f. What do you do poorly?
 - g. What generates the most customer dissatisfaction and complaints?
 - h. What generates the most employee dissatisfaction and complaints?
 - i. What processes and activities can you improve?
3. *Opportunities:*
 - a. Where can you apply your strengths?
 - b. How are your customers and their needs changing?
 - c. How is technology changing your business?
 - d. Are there new markets for your strengths? (e.g. foreign)
 - e. Are there new ways of producing your products?
 - f. Are your rivals' customers dissatisfied?
4. *Threats:*
 - a. External factors, beyond an organization's control, which could place the organization mission or operation at risk.
 - b. The organization may benefit by having contingency plans to address them if they should occur.
 - c. Classify them by their "seriousness" and "probability of occurrence".

Strengths and Opportunities included into internal factors while Weakness and Threats are part of the external factors. After formulating the respective S, W, O and T, then the next

step is to incorporate these factors into the SWOT matrix as shown below:

Table 1.
SWOT Matrix

	Strengths	Weaknesses
Opportunities	S-O Strategies	W-O Strategies
Threat	S-T Strategies	W-T Strategies

Source: Adapted by Author (2016)

The SWOT matrix will produce a strategy SO, WO, ST and WT and then user will determine which strategy will be implemented first.

B. People Empowerment

Empowerment are the elements that allow people to survive and in a dynamic terms is being able to develop themselves to achieve its goals. Empowering people is an effort to increase the capacity and the independence of people. Correspondingly, according to Roesmidi, people empowerment can be interpreted as an effort to increase the ability of people to participate accountably for their betterment of life. The personality structure, as we know, is significantly influenced by environmental conditions. A person is not formed only by heredity and conditions of growth and care, but also by opportunities and experiences in the world around him. Among these, especially important to us is the

ability to make decisions and to act in order to attain goals. According to Pinderhughes that this ability (or its absence) shapes the person's character and influences the degree to which she will be the effective actor in her life.

Empowerment is an interactive process which occurs between the individual and his environment, in the course of which the sense of the self as worthless changes into an acceptance of the self as an assertive citizen with sociopolitical ability. In the opinion of Kieffer that the outcome of the process is skills, based on insights and abilities, the essential features of which are a critical political consciousness, an ability to participate with others, a capacity to cope with frustrations and to struggle for influence over the environment. The process of empowerment is an active process. Its form is determined by the circumstances and the events, but its essence is human activity in the direction of change from a passive state to an active one. The process brings about an integration of self-acceptance and self-confidence, social and political understanding, and a personal ability to take a significant part in decision-making and in control over resources in the environment. According to Zimmerman & Rappaport that the sense of personal ability connects with civic commitment. Individual empowerment is an expression on the individual level of a multi-leveled process which may be applied to organizations, communities, and social policy. Empowerment is a process of internal and external change. The

internal process is the person's sense or belief in her ability to make decisions and to solve her own problems. In the opinion of Parson that the external change finds expression in the ability to act and to implement the practical knowledge, the information, the skills, the capabilities and the other new resources acquired in the course of the process.

C. Community-Led Total Sanitation (CLTS)

Community Led Total Sanitation (CLTS) is an approach which helps rural communities to understand and realise the negative effects of poor sanitation and empowers them to collectively find solutions to their inadequate sanitation situation. Community Led Total Sanitation (CLTS) is focused on igniting a change in sanitation behaviour rather than constructing toilets. This is done by a process of social awakening that is stimulated by facilitators from within or outside the community. This approach concentrates on the entire community rather than on individual behaviours. The first significant step of Community Led Total Sanitation (CLTS) is to end open defecation as an entry point while changing sanitation behaviour. It starts by enabling people to do their own sanitation profile through appraisal, observation and analysis of their practices of open defecation and the effects these have.

Community Led Total Sanitation (CLTS) is an approach which is based on the principle of triggering collective behaviour change. In this approach, rural communities are facilitated to take collective action to adopt safe and hygienic sanitation behaviour and guarantee that all

households have access to safe sanitation facilities. Community Led Total Sanitation (CLTS) focuses on instigating a change in sanitation behaviour rather than constructing sanitation infrastructure. This change in sanitation behaviours is accomplished through a process of social awakening that is stimulated by facilitators from within or outside the community (see also awareness raising). The Community Led Total Sanitation (CLTS) approach concentrates on the whole community rather than on individual behaviours. Collective benefit from stopping open defecation can encourage a more cooperative approach. People decide together how they will generate a clean and hygienic environment that benefits everyone (see also planning with the community). It is essential that Community Led Total Sanitation (CLTS) involves no individual household hardware subsidy and does not prescribe latrine models.

The Community Led Total Sanitation (CLTS) approach concentrates on ending open defecation as a first significant step and entry point to changing behaviour. It starts by enabling people to do their own sanitation profile through appraisal, observation and analysis of their practices of open defecation and the effects these have. In its fullest sense, total sanitation includes a range of behaviours such as: stopping all open defecation; ensuring that everyone uses a hygienic toilet; washing hands with soap before preparing food and eating, after using the toilet, and after contact with babies' faeces, or birds and animals; handling food and water in a hygienic manner; and safe disposal of animal and domestic waste to create a clean

and safe environment (see also health and hygiene issues).

The principles of Community Led Total Sanitation (CLTS) in the implementation of this program has several key principles, namely:

1. Absence of subsidies provided to the public, is no exception to the poor for the provision of basic sanitation facilities.
2. Increasing the availability of sanitation facilities in accordance with the capabilities and needs of the target communities.
3. Creating public attitudes hygienic and sanitary ware to support the creation of total sanitation.
4. Society as a leader and the entire community is involved in the problem analysis, planning, implementation and use, and maintenance.
5. Involve the community in monitoring and evaluation activities.

Participation levels in Community Led Total Sanitation (CLTS)

The level of community participation is very different, starting with participation rates lowest to highest:

1. People only receive information; community involvement is only to be informed (eg through announcements) and how that information is given is determined by the giver of information (specific parties).
2. The community began to be invited to negotiate; At this level the existing 2-way communication, where people began to be invited

to the discussion or negotiations. In this stage despite being involved in a negotiation, decision makers are outsiders or particular people.

3. Make a decision jointly between the community and outsiders, at this stage the community has been invited to make decisions together for activities implemented.
4. People are starting to gain authority over the control of resources and decision, at this stage people are not only making a decision, but has participated in the activities of the control program. Of the four levels of participation, which are required in Community Led Total Sanitation (CLTS) is the highest participation rate in which people are not only informed, not only consulted but has been involved in the decision making process and even gain authority over the control of resources of the community itself as well as to the decision that they created. In principle Community Led Total Sanitation (CLTS) have mentioned that a joint decision and joint action of the community itself is the main key.

Methods of Implementation Community Led Total Sanitation (CLTS)

Community Led Total Sanitation (CLTS) in society at its core is triggered after the previous

participatory analysis by the community itself. To facilitate the community in analyzing the condition, there are several methods that can be applied in Community Led Total Sanitation (CLTS) activities, such as:

1. Mapping
Aiming to know / see a map of BAB community as well as a monitoring tool (post-triggering, after community mobilization).
2. Transect Walk
Aiming to see and know where it is most often used as a bowel movement. By inviting people to walk and talk at the site, the community is expected to be felt disgusted and for ordinary people to defecate in places is expected to be triggered his embarrassment.
3. Flow Contamination (Oral Fecal)
Aims to encourage the public to see how the human waste can be eaten by other human beings.
4. Simulation contaminated water
Aims to determine the extent to which the public perception to water that they use everyday.
5. Focus Group Discussion (FGD)
Together with the public view and analyze the existing conditions so hopefully the community itself can define what should be done or not done.

NORMATIVE

Community Led Total Sanitation (CLTS) related regulations can be seen below Presidential Decree No. 2 of 2015 on RPJMN 2015-2019, RPJMN 2015-2019, Presidential Instruction No. 3 of 2010 on Equitable Development Program, Ministry of Health Regulation No. 3 of 2014 on Community-Led Total Sanitation, revoke the Ministry of Health Decree No. 852 of 2008 on the National Strategy STBM, Regulation of the Minister of Health No. 60 of 2010 on the Ministry of Health Strategic Plan 2010-2014, Circular of the Minister of Health No. 132 of 2013 on the Implementation of Community Led Total Sanitation (CLTS) and Advocacy Letter Minister of Health No. PK - 02-01 / Menkes / 323/2015 on Community-Led Total Sanitation to the Village Head Around Indonesia.

Regulation in the form of Government Regulation (PP) No. 19 Year 2008 about the District, in Article 1, paragraph 5 described " the District or other designation is the working area of the device sub-district as a district / city " and in paragraph 9 " sub-district or other designation is the leader and coordinator of governance in the region employment districts in the execution of their duties that obtain delegation of governmental authority of the Regent / Mayor to handle most affairs of regional autonomy, and hold general governance. Camat carry out general administration duties which are attributive authority as stipulated in Law No. 32 of 2004 Section 126 subsection (3) and Regulation No. 19 Year 2008 on the District in Article 15 paragraph (1) , the letter a is coordinate the community development.

METHODOLOGY

This research used qualitative through descriptive and inductive method. The scope of the science discussed were strategy, people empowerment and Community Led Total Sanitation (CLTS). Data collection technique used moderate observation, structure interview and documentation study. Moreover, the instruments of this research are the interview orientation, observation orientation and literature investigation. Researcher use snowballs sampling in interviewing the informant.

CONCLUSION/IMPLEMENTATION

Officers Profram UNICEF Wash, Wildfire Setiabudi, said of the results of the World Bank survey in 2008 known to have poor sanitation costs Indonesia Rp56 trillion, or about 2.3 percent of Indonesia's per capita income. He said the loss of material and nonmateril it happened because they still lack the awareness to use clean water and good sanitation in everyday life. As an illustration, to data reported that there are 51 million population of about 200 million people in Indonesia who defecation Gratuitous (Babs). As a result of that condition, he added, every hour there are 15-22 people who died from diarrhea and pneumonia were the trigger for poor sanitation. In addition, every year there are 136000-190000 Indonesian children die before the age of liam years with the same trigger. Regarding sanitation following categories of data serving sanitation in Indonesia:

**Table 2
Scale of Rural Sanitation Challenge**

Category	Rural sanitation coverage		
	Percent	Households	Population
Open defecation	36%	12,028,900	48,115,400
Unimproved sanitation facilities	12%	4,343,600	17,375,000
Shared sanitation facilities	13%	4,009,600	16,038,500
Total without improved sanitation	61%	20,382,100	81,528,900

Source: 2012 JMP estimate; UN population forecast.

The high percentage of causes need some updates such as the implementation of Community Led Total Sanitation (CLTS). The 2008 National Strategy for Community Led Total Sanitation, (CLTS strategy) in Indonesia provided a definition for an improved latrine – an effective sanitary facility to break the transmission of disease – and stated that subsidies should not be provided for household sanitary facilities. Indonesia was the first government in the region to adopt a Community Led Total Sanitation (CLTS)-friendly policy and, while the explicit “no hardware subsidy” statement in the Community Led Total Sanitation (CLTS) strategy has not prevented the provision of latrine hardware subsidies by some projects and programmes, it has demonstrated government commitment to demand creation and behaviour-change interventions ahead of hardware subsidies, and has encouraged the harmonization of programme approaches and policies. Consider the following picture:

**Table 3.
Community Led Total Sanitation (CLTS) Summary**

CLTS Summary		Regional Ranking (14 countries)	
Status	CLTS date of introduction	2008	2-
	CLTS introduced: % of country	97%	2
	CLTS coverage: major organizations	8	5
Scale	CLTS population (P.M. millions)	49.1%	14
	Communities triggered (number)	7,345	1
	ODF communities (number)	1,279	1
	Capacity developed (trained facilitators)	6,99	7
Enabling	CLTS in government policy	Yes	1-
	CLTS targets in government plans	Yes	1-

Because of People Teluk Naga own paradigms not to build a latrine in the house and use the great river, the

custom to bathe, defecate, urinate, washing, fetching water and so on, then Head needs to formulate a strategy for people empowerment on Community Led Total Sanitation (CLTS). Before formulating a strategy then needs to be analyzed using SWOT consisting of strenght, weakness, oppourtunities and threat as follows Strengths, Weakness, Opportunities and Threats with explanation:

1. Strengths

- a. The Head of Subdistrict has a strong commitment to realizing the empowerment of communities through CLTS program;
- b. The Head of Subdistrict has good communication and coordination with related institutions;
- c. The Head of Subdistrict always encourages employees to contribute in the implementation of people empowerment through CLTS;
- d. The Head of Subdistrict does “blusukan” or down directly to its area of responsibility and monitor the implementation of CLTS.

2. Weakness

- a. The Subdistrict of Teluk Naga does not have adequate knowledge and considerable experience on CLTS;
- b. Not all of the employees of Subdistrict Office actively participating to

encourage communities to implement CLTS;

- c. Teluk Naga does not have sufficient funds to support the implementation of CLTS;
- d. Teluk Naga does not have sufficient facilities and basic facilities in terms of quality and quantity.

3. Opportunities

- a. The high number of volunteers and student interns who contribute to help the implementation of CLTS in accordance with the right principles and methods;
- b. Have enough land in the district Teluk Naga to built public toilet;
- c. Community of Teluk Naga assessed financially able to build a latrine in his house;
- d. There are considerable assistances from the Local Health Department and Community Health Center;
- e. Support from local elites to urge society in the implementation of CLTS Teluk Naga.

4. Threats

- a. Private parties has not keen to assist the implementation of community development in the Teluk Naga through CLTS program;
- b. The absence of the local regulations stating the CLTS in Banten;

- c. The paradigm of the society to not want to switch their conventional latrine to the new ones in their house;
- d. People does not want to build latrines if the local government can not provided or subsidized the costs;
- e. The reservoir in front of the house is used as a source of daily activities such as to bathe,

urinate, defecate, wash, take for drinking water and so on.

Strengths, Weakness, Opportunities and Threats will be entered into a SWOT matrix that can then be formulated strategy for the sub-district head to empower society to the Community Led Total Sanitation (CLTS) program. The SWOT matrix is as follows:

Table 5.

RECOMMENDATION

1. Improve Community Led Total Sanitation (CLTS) enabling environments
Scaling up Community Led Total Sanitation (CLTS) progress and improving Community Led Total Sanitation (CLTS) effectiveness and sustainability will be dependent on the further strengthening of enabling environments for rural sanitation in Teluk Naga Subdistrict.
2. Strengthen Community Led Total Sanitation (CLTS) monitoring systems with subdistrict staff
The review recommends more detailed monitoring and evaluation of Community Led Total Sanitation (CLTS) progress and effectiveness. The main problem seems to be the lack of mechanisms that encourage the regular collection, analysis and reporting of Community Led Total Sanitation (CLTS) or

other sanitation performance data. Annual strategic reviews, ideally linked to the monitoring of Community Led Total Sanitation (CLTS) progress against strategic sanitation targets are useful mechanisms for pulling monitoring data and reports up through government and programme systems.

3. Community Led Total Sanitation (CLTS) quality
The review recommends more detailed monitoring and assessment of Community Led Total Sanitation (CLTS) implementation quality and capacity development. More effort needs to be made to track the number of trained facilitators that become active, and assess the relative effectiveness of active facilitators and support staff. Analysis of the factors that lead to higher ODF success rates and more sustainable outcomes – for instance, why outcomes are better in one programme area than another – should be an essential part of

any Community Led Total Sanitation (CLTS) intervention.

4. Latrine quality

One of the core tenets of the Community Led Total Sanitation (CLTS) approach is that communities and households should solve their own sanitation problems, and that the exercise of solving these problems through building simple latrines with local materials will encourage ownership, commitment and innovation. Other stakeholders suggest that a lack of technical advice during the latrine construction phase often results in badly constructed latrines, use of non-durable materials and designs, unhygienic facilities, and risk of contamination (from badly contained excreta), pit collapse and latrine abandonment. The Head of subdistrict and the facilitators had to repeatedly convey it to the public so that people do not just wait for subsidies, but to build a latrine with awareness.

ABSTRACT

This study highlights the history of the Communist Guerilla Movement in Initao, Misamis Oriental. The movement was established in the said municipality in the 80's during the time of Marcos dictatorship. The movement gained many adherents in the town particularly among young people due to the abuses and political repression brought about by the Marcos regime. It started out among young students who affiliated themselves with Kabataang Makabayaan which later paved way for the establishment of the armed front of the Communist Party of the Philippines – the Guerilla army. Farmer's support, effective leadership and formidable terrain of Initao were basically the reasons why the movement sprouted in town among other towns in Misamis Oriental province. This paper will also tackle the reasons for the movement's eventual decline on the 90's.

This study was conducted by utilizing primary and secondary document available in different libraries particularly those of MSU in Marawi City, MSU-IIT and Xavier University in Cagayan de Oro city in the form of books, manuscripts and news reports. The author also supplemented data gathered by using police reports from the Initao Police Station. Apart from documentary research, the author also conducted interviews with key personalities particularly with the very important people who were involve in the movement in order to strengthen or support the result of the documentary research.

Key Words: Communist Party, New People's Army, *Operasyon Ahos*, Guerilla

INTRODUCTION

People have different personalities, different experiences to share and distinct ideologies to follow. Thus, some of them choose to fight for what they believe is against their enemies. They are struggling for their independence to reach their goals and to achieve unity and equality to all individuals. Equality in a sense that, all people must share the same status in the society, no more poor nor rich within a

community; all is fair and identical in nature. These are the main reasons why some people decided to enlist and established a guerilla movement. According to Miriam Webster Dictionary, Guerrilla is derived from "Guerra: the Spanish word means "small war".

Our country is very rich in guerilla activities since it has undergone a long period of colonialism, imperialism and so forth. These guerilla activities were led by the

guerilla themselves that known as New People's Army. They followed the leadership of Communist Party of the Philippines/Mao Tse Tung thought since it is also the armed wing of the Communist Party of the Philippines (Yap, 1971). According to Alfred Saulo on his book entitled Communism in the Philippines: An Introduction, it stated that the Communist Party of the Philippines is the political party of the Filipino working classes based on the principles of scientific Communism and Marxism-Leninism. It fights for the immediate and basic wants of the workers, peasants and all elements exploited by capitalists.

The History of the guerilla movement in Initao, only few people know about its historical value, the struggles that they faced during the encounters and only few of them were able to appreciate. New People's Army give a bad image for the Initao but they don't know the reasons behind the movement; its power struggles, its doctrine and their ideologies. Hence, this paper presents about the historical development of the movement of the guerillas in Initao Misamis Oriental.

Statement of the Problem

The study aims to present the History of the Communist Guerilla Movement in Initao Misamis Oriental during 1980-1990.

The study aims to answer the following questions:

1. When and why was the Communist Guerilla Movement organized in Initao Misamis Oriental?
2. Who were the people responsible in organizing the Guerilla Movement in Initao Misamis Oriental?
3. What were the reasons why some residents of the municipality joined the movement?

4. What are the factors that led to the decline of the movement?
5. What are the important activities experienced by the guerillas?
6. What was the impact of the movement in the municipality of Initao and to Initaoans?

Objectives

1. To trace the rise and decline of the Communist Guerilla Movement in Initao Misamis Oriental.
2. To identify the leading personalities that organized the movement.
3. To determine the purpose of the movement.
4. To examine the aims and motives of the residents of the locality in joining the movement.
5. To elaborate the important activities experienced by the guerillas.
6. To determine the impact brought by the movement to the municipality of Initao and to Initaoans as well.

Significance of the Study

The study presents the communist guerilla movement occurred during the years 1980-1990 in Initao, Misamis Oriental. It serves of great importance to the following:

- To The Country (General) – The study provides enough information about the struggles, activities and especially the story of the communist guerilla movement to the country as a whole.
- To The Region – The study serves as a guide to help the civilians in Region Ten understand exactly the history of guerilla movement in Initao, Misamis Oriental.

- To The Municipality – It is also important to know the experienced of these guerillas and even civilians that were affected since they can provide enough information and because it serves as an eye opener to the Initaons to learn about the side of the NPA's and the people during the movement.

Methodology

The study made use of a descriptive quality study and analyzed both primary and secondary data. In order to construct the history of the movement in Initao, Misamis Oriental in 1980-1990, the researcher relied much on oral history through personal interviews. The researcher used a set of written questionnaire and followed the structured way of interviewing respondents. The interviews were conducted at the respondents residents using Cebuano dialect as a means of communication. While conducting the interview, the researcher used pen, paper, video recorder and camera as her tools to document the event.

The guerillas that were interviewed were not randomly selected but rather explicitly specified for the credibility and accuracy of data. Most of them were present during the movement and were leading the personalities that shaped the movement. The researcher also interviewed civilians who lived through those years in Initao for the reliability and objectivity of the study. Thus, the researcher conducted interviews on eight barangays out of sixteen namely Oguis, Apas, Kanitoan, Jampason, Poblacion, Camelon, Kalakapan and Sinalac because those barangays were considered as a hotspots of guerilla activity. Those Barangays were known to be the hideouts of the members of New People's Army because of its mountainous terrain where they can easily hide and

served as a training ground for them. It is also an agricultural area where most farmers lived and they were the target of influence during that time.

Some written documents of the movement were not retrieved because they were burned, lost and never found again due to its confidentiality. The researcher made use of Police reports and records found in Initao Police Station to ensure the objectivity of the data. The researcher also made use of the intelligence reports found in the internet 1983-1985. The thesis information found in AB History undergraduate thesis of Galgo and Escalona found in CASS Library was also used. Books, News clippings, articles journals were also used by the researcher as a guide to guarantee the credibility of the study. Municipal documents, maps and figures were also used by the researcher.

Locale of the Study

Initao as locale of the study was formerly the mother town places of such places like Libertad, Naawan, Manticao and Lugait. It is considered as the oldest municipality in the Western part of the province of Misamis Oriental (Socio-economic Profile, 1998)

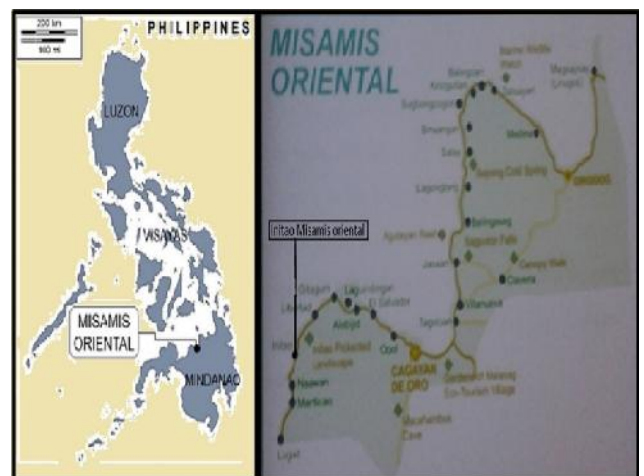

Figure 1. Map of the Philippines and Initao Misamis Oriental. Source: (Socio-economic Profile, 1998)

Location

Initao is situated fifty-two kilometers west of Cagayan de Oro City, the capital city of Misamis Oriental and thirty-six kilometers, south of Iligan City part of Lanao del Norte. It is bounded on the north by the municipality of Libertad, on the west by the municipality of Alubijid, on the south by the municipality of Naawan and on the east by the Iligan Bay (Socio-economic Profile,1998)

Land Area

It has a total land area of 11,560 hectares which accounts for 3.17% of the total 367,360 hectares of Misamis Oriental. It is composed of sixteen barangays. The urbanized barangays cover 15.70% of the total land area while the rural covers 84.30%.(Socio-Economic Profile, 1998)

Presentation and Discussion of Data

The Story of the Guerilla Movement in Initao

The birth of student activism from different secondary schools led to the revolutionary movement of these young intellectuals in Initao, Misamis Oriental. It was somehow become one of the important factors that led to the development of the movement. Initao has two common institutions during that time. One school the Xavier Highschool was managed by the priests. It was believed that even the members of the religious sectors in the church in the municipality either it was a priest or nun, supported these demonstration and they also spoke out about their outlook against the government.

During those times, the movement was not yet fully established since it was only a matter of organizing the people. These student activists were discussing about military of Marcos regime. From the

protest of these student activists and the forming of different group organizations in the municipality gave birth to the fully developed power and armed struggle in the area.

It all started in 1980, at the small sitio of Kamaka, Andales, Initao Misamis Oriental when an educated man named a.k.a. Q.A., together with the group of young men, founded the communist guerilla movement in the municipality. These educated men were affected by the issues and news in their municipality and the country and influenced by the books of Marx, Lenin and Mao Tse Tung of Communism and Socialism. They were inspired by the principles of the Part and discussed about the situation of the farmers in their municipality, tackled also about agrarian reform and the military regime of President Marcos. Respondent B and the rest of the respondents also supported and verified that it was Q.A. who established the movement in the municipality.

Not until, the following years of 1981to 1983, the movement was greatly expanding from the farthest town of Sinalac up to Poblacion, Initao. All of the sixteen barangays of the Municipality were already involved in the movement.

According to Respondent G, there was a massive recruitment of the masses in the movement. Almost all people, the numbers cannot be identified since the documents were already burned and surrendered to the authority during that time. But the most important thing was they got the civilian support. The biggest concentrations were the barangays Andales, Kanitoan, Oguis and Sinalac. These mountainous parts of the municipality was thickly forested thus it was a great place for the rebels to concentrate. It also served as their training ground.

Respondent H also added that the years from 1981-1983 marked the expanding and developing of the movement, from its leaders down to its members. This time there were already armaments involved like a few numbers of armalites

One civilian recalled that the presence of the guerillas in the municipality had also a positive outcome. During that time, there were no incidents of animal rustling and even the selling of drugs. It was a better situation then amidst the encounters. The New People's Army (euphemistically called Nice People Around) employed mixed tactics. Its units engaged in party building, promoting revolution among rural masses and armed struggle. They have sought to gain acceptance of peasants by helping introduce simple irrigation works, crop-rotation programs and basic health precautions. These require NPA members to show self-discipline, pay fairly for what they buy, speak politely to those they are seeking to liberate and treat women with respect and captives with consideration. (Southeast Asia Report, 1985)

The peak of the movement was between 1984-1986 when there were numerous encounters against the military which occurred in the different sitios and barangays of Initao. This time, the authorities found out about the underground bunkers and even the commanders in the movement, thus the military started raiding civilian houses if they were involved with the movement. Many civilians were affected and the great exodus happened in the area. Civilians evacuated to the nearby places like some parts of Poblacion which was not affected during the battle. Kalakapan, Oguis, Kanitoan and Andales were considered as "no mans land" during those times because the military saw these barangays

as their biggest threat on fighting against the guerillas. They forced the civilians to leave their respective houses, so that they will not be involved in the encounters between the guerillas and the soldiers. They abandoned their properties for the sake of their lives. (Respondent G, 2014)

These events were followed by the death of the municipal Mayor Ceasar Magno and the infamous ambush incident took place on September 9,1985. This created a sense of fear to civilians because they were very concerned about their safety and security, especially during the following encounters of military and the guerillas. It was not until the year 1987, when Corazon Aquino took place as the new president of the republic, when most of the guerillas surrendered and they were given amnesty by the government.

Figure 2. Present Day Kalakapan, Initao Misamis Oriental

Reasons why the Guerilla Movement established in Initao

The communist movement was able to hasten its establishment during the years 1980-1990 because there was an increase of participation from various sectors like farmers, students, workers who were all wanted to be liberated from the shackles of imperialism, feudalism and capitalism. It was then that the movement was established because of the call of the national leadership in 1973 that bases and fronts will be established throughout the Philippines and the mass be consolidated

to hasten the revolution. At that time, the communist party have successfully educated them particularly on Marxism-Leninism-Mao Tse Tung thought. (Dayata, 2007)

Other reasons for the establishment of the guerilla movement in Initao were the following:

- **Formidable Terrain – Topography** of Initao mainly composed of valleys, plateaus and mountains. It has a forested area in the mountains of Mt. Kitanglay and others. The rugged terrain and thick jungle was ideal for guerilla warfare. This great landscape is an ideal place for the guerillas to establish the movement against the government.
- **Support of the Masses/Farmers –** Like the movement in Lugait, Misamis Oriental, it had the same objective why it was established in the municipality. As, farmers were the target of influence during that time, they wanted to call out for equality among all individuals. They fought for high wages, they wanted to own the land they tilled. They also demanded for the government to lessen the increasing high prices of basic commodities and requested to increase agricultural production brought about by the monopoly of the lands by few landlords.

Figure 3. Mountainous Part of Barangay Oguis, Initao Misamis Oriental (Photo taken by the researcher last September 13,2014)

Reasons for Enlistment in the Movement

There are different reasons why people joined the said movement. The recruitment of the members was through of the *Sangay sa Partido or SP*. They were the ones who visit to civilian houses and do lectures about the condition of the Philippine economy and society. These members of *Sangay sa Partido* were called “lektyurers”. The following were the factors or reasons why most of them enlisted:

Poverty

Initao being an agricultural area where most of its citizens are farmers, the people were greatly affected during Marcos regime. Farmers were greatly suffered from poverty, they joined the said movement. It was the only way to voice out their sentiments against the government. According to Respondent B, the increasing prices of goods, the farmers can no longer afford because of low wages. Their wages were not enough, thus oppression was very glaring at that time.

Since the farmers were the main victims of poverty so, they were very interested in attending “agrarian reform” lectures because of the injustices experienced throughout their life. (Respondent B, 2014)

Fear

As defined by Miriam Webster Dictionary, fear is the feeling of anxiety. It is an unpleasant feeling of apprehension caused by the presence or anticipation of danger. Fearing the guerillas might do something harm for them. Many citizens of Initao were forced to join the movement. Five out of fifteen guerillas that the researcher interviewed admitted that it was fear that forced them to join the movement.

As Respondent C once stated that he had no choice but to join the said movement, for he was afraid of them. If he didn't join, he might end up dead.

Even though during those times, the guerillas never forced the civilians to join the movement but few civilians perceived that the movement is not good for the people for it will only bring chaos to their barangay, as well as to the municipality. Some of the civilians admitted that the movement brought sense of worry and fear to the people in Initao. They were not just afraid but at the same time they were very concerned of their safety as well with their family because anytime, their lives might just get affected. (Liling Buhian, 2014)

While recruiting the people although the guerillas never forced them to join and they had the freedom to speak, they had no right to say no. Some members of the masa, however, confessed to the researcher that:

Fear towards the guerillas led them to join the movement. They were scared

them if they will not join or if they will not agree to the rules of the movement, their lives were at stake. They admit that joining the movement was the only way to live, sacrificing themselves so that their families will be safe.

Personal Grievances

Some sources interviewed and testified that their reason in enlisting was to take revenge on what military did to their families. One example was the case of a.k.a Malou. Her father was killed by a “military personnel” which until now, the case unresolved. She did not know why her father was shot when she was still 4th year high school. When she found out about the movement she immediately joined. For two weeks she trained at Talakogon, Lugait, Misamis Oriental until she became the team leader of the unit. She wanted that the military or the government to pay for what they had done to her father. (Respondent E, 2014)

Important Struggles and Activities Experienced by the Guerillas

When the movement began in Initao, it was inevitable that there were lives that were affected. This includes those on the military personnel, police, guerillas and civilians. When it came to fatalities during the encounters and ambushes no one was exempted. The lives of Initaoans were at risk during those times. Those who were affected during the movement said that the rebels didn't include innocent civilians on their target list and at the same time, they didn't want them to be involved since it is their rule. (Liling Buhian, 2014)

But during the years 1984-1986 when the movement was on its peak, that's the time when fatalities were incurred, many civilians were wounded and killed. The insurgents liquidated drug sellers,

thieves, informants (those who gave secret information about the movement to the Police) traitors and people who were against of their movement. The rebels gave them warning at first but on the second time around, they were constrained to punish them.

Table 1. List of fatalities and Death in Initao Misamis Oriental in 1980s.

MONTH/YEAR	EVENT
July 1983	One Maarcelo Jabicn was shot to death by unidentified persons at said place.
October 1983	One Martin Quitariano (a Kagawad of Brgy. Andales and a resident of Camaca) was shot to death by three unidentified persons at Camaca Andales.
March 1984	One Eddie Dagapioso was shot to death by unknown suspect at Malapoy-on, Camelon.
May 1984	One Canoto Jalagat was shot to death by unknown suspect at Malapoy-on, Camelon.
June 1984	Etadio Catiil and Vicente Fabregas was shot to death by the used F 12 gauge shotgun and Grand 3019.
August 1984	One Edelberto Ragmac of Camelon this municipality was shot to death by three unidentified persons.
April 1985	Alfonso Pacanut Y Ratunil victim of encounter at Andales was escort to Provincial Hospital.
May 1986	Former Mayor Cesar magno was shot to

	death by 6 unidentified persons using a 45 caliber pistol.
June 1985	One Roger Ligaspe and one unidentified person was found dead at Initao Central School with revolver Cal. 38 with three rounds ammos and BA with assorted clothes and medicines.
July 1985	One Eduardi ladua was shot to death by four unidentified persons using M16 rifle.
August 1985	One Ramon Jagos of Talagosok, Andales was allegedly shot to death by four unidentified persons using M16 rifle.
January 1986	One Antonio Tagupa, a resident of bandera Oguis was shot to death by two unidentified armed men.
January 1986	One body Juany Bagares Y Pangon was found at Camanikahan, Camelon this town already dead.
February 1986	Felicisimo Quejano was shot to death at Beraneo Oguis.
March 1986	Maria Ubagan Y Oquimas was found dead at Sitio, Mamiguiz, Camelon.
April 1986	Two dead bodies with gunshot sounds in the persons of Rene Boy Poblete and Bernaldo Quitariano, a resident of Brgy. Andale sans Sitio Camaca.
April 1986	Gonzalo Poblete Fabroa was shot to death by six unidentified armed men

	at Sitio Camaca, Brgy. Andales.
--	---------------------------------

(Source: Initao Philippine National Police Reports, Initao Misamis Oriental)

As stated by Pat Verdades, the armed conflict of the Communist front was the longest running-Maoist insurgency in the world led by the New People’s Army – the armed forces of the Communist Party of the Philippines. It is considered as a people’s war waged together with the National Democratic Front of the Philippines. There were three major stages in this protracted people war: the strategic defensive, the strategic offensive and the strategic stalemate. The protracted people war had been in the strategic defensive stage beginning the late 1960s. Though it waged people’s war, its primary tasks was land reform. Its strategy to set up barangay and organized barangay revolutionary committees primarily in the rural areas.

The National Democratic Movement expanded through massive organization, intensification of guerilla warfare in the countryside, international work and alliance-building of individuals who opposed the dictatorship. During that time, the strategic offensive was used by the New People’s army in targeting military and police outposts. The tactics of New People’s Army had been effective in their armaments build up because many high-powered firearms of the government forces were lost after fighting against the New People’s army. The New People’s Army in Initao was the first one to attack their enemy through raids, ambushes and others. (Santos, 2007)

In 1983, the encounter between insurgents and military occurred at Kalakapan (one of the barangays in Initao) the guerillas lost their medical team which consist of three women and two men, In 1984, series of encounters at Tawan-

Tawan, Sinalac and Kitanglay took place. In Kitanglay, there were twenty-seven guerillas who fought against seven military men. (Respondent B, 2014)

Respondent B also added that the peak of the movement was in 1985 when a.k.a Mario died, thus, triggered the members of the organization to launch a massive rally protest at Poblacion. The said respondent was shot by an unknown soldier that January. Due to his death, the member of New People’s Army planned a funeral march from barangay Oguis to Poblacion.

Figure 4. Present Day Abandoned Clinic where the emergency hospital was raided by New People’s Army happened on April 1985. (Photo taken by researcher last September 13, 2014)

On September 08, 1984, nine army soldiers were killed and nine others wounded in ambush by heavily armed men in Initao, Misamis Oriental. The armed men believed to be members of New People’s Army, attacked a military convoy in Tubigan, Initao, Misamis Oriental. The fatalities were identified as Captain Magbanga, Sergeants Perfecto Ubongen, Guillermo Falcunit and Pedro Dela Rosa. Private 1st Class Nesto Sabunod, Felipe Bendigo, Vicente Olivo, Alberto Entera and Diocoson Nolasco. They were all members of the army’s 542nd Engineering Combat Battalion in Pala-o, Iligan City. Among the wounded was identified as Major Antonio Santos Officer in Command of the 55th Charlie Company. The soldiers were on their way to Lumbia airport in Cagayan de Oro City when they were ambushed. The

soldiers were ordered to proceed to Cebu City to assist in Typhoon Rehabilitation. (Foreign Broadcast Information Service, SEA Report, 1984)

Figure 5. Present Day Abandoned Lasang Clinic where the emergency hospital raid of New People's Army on April 1985. (Photo taken by researcher last September 13,2014)

On May 5, 1985 Mayor Ceasar Magno of Initao Misamis Oriental was assassinated while attending the mass on Sunday. Some assumed that the reason he was killed because he did not support the movement especially in finances. But others believed that it was all about politics. (Respondent C, 2014)

After that incident, the guerilla raid Initao Emergency Hospital in Barangay Tubigan on April 7, 1985. At about 7 p.m. on that same day, some Thirty Heavily armed New People's Army ransacked the place. The New People's Army took all the hospital supplies, assorted medicines and a still undetermined amount of money with them. They also took office supplies like typewriters, pens and others that will be used in the movement. (Foreign Broadcast Information Service, SEA Report, 1984)

Figure 6. Jampason-Tubigan Borer where the ambush happened between New People's Army and 542nd Brigade. (Photo taken by the researcher last September 13,2014)

Decline of the Movement

When the movement was its peak, chaos started. The years 1983-1985 marked the infiltration of deep penetration agents sent by the government. The presence of deep penetration agents who disguised themselves as member of the New People's Army in Initao led to the decline of the movement. These military spies killed those they suspected as members of the movement. Hundreds of cadres and fighters were killed by the investigation teams and many of them dispersed from the movement. (Weekley, 2001)

As a counterattack, the Kampanyang Ahos or Operation Zombie was launched by the Mindanao Commission in 1985. It swept out the Deep Penetration Agents, who have infiltrated the Communist Party of the Philippines- New People's Army ranks. The confusion and lack of coordination of those who stayed in the movement was so extreme especially in Initao. (Weekley, 2001)

These events led to the decline of members, most of its leaders were either killed during the encounters. Most of the masses were already surrendered in the fear that they would be the next victim of

Kampanyan Ahos. An estimated 606 cadres and activists were tortured and killed. The campaign forces over 6,000 cadres and activists to resign from the party and its mass organizations surrendered to military authorities or simply abandon their work. The masses already stopped supporting the movement because they would either surrender to the authorities or captured by the military. Hence, the masses were considered as the lifeblood of the movement itself. Since the masses were their source of food and information. Without massive civilian support, the movement eventually declined.

Present Status of the Movement

The movement has since waned in Initao. It doesn't exist anymore especially in the mountainous part of the municipality. This is because of military presence in Camelon. The Initaoons themselves don't want to experience the same horror again. They are already vigilant of the actions of their co-Initaoons. The terrain was also one of the factors. Due to illegal logging, there are no longer thick forests in Initao today that can be used as hideouts for insurgents. (Respondent A, 2014)

Impacts brought by the Movement to the Municipality and to Initaoons

The Communist Guerilla Movement in Initao Misamis Oriental was a significant and a life changing event in the municipality and its people. This became a turning point for some members of the group consisting of farmers, peasant organizations and even student activists who started questioning and going against the government during that time. Though it, the Initaoons particularly the farmers were able to voice out their grievances.

Impact to the Municipality

It had a great impact to the municipality. It did not only help stop animal rustling but it also helped mostly petty crimes such as drug pushing and theft but it brought peace to the municipality despite the skirmishes then.

Impact to Initaoons

During those years, many Initaoons were forced to transfer from one place to another to ensure their safety. They suffered heavy losses especially with the properties they left behind, It caused a great loss of lives. It also affected the Initaoons since their lives were affected may they be a member of New People's Army, military or not, because of the ambushes, raids and encounters that took place on the mountainous part of the town. Even those people who did not enlist in the movement were affected because they were suspected as a member of guerillas in Initao, Misamis Oriental.

Conclusion

Initao being the oldest municipality in the western section of Misamis Oriental is historical due to the founding of the Guerilla Movement in 1980-1986. It was thickly forested and the terrain was a great place for these guerillas to settle which why Initao was considered as the "melting pot" of the movement. Massive farmers support and the problems of local government were among the reasons why the movement gained adherents. It was started about the student protest in the "white area" or the schools on 1980, when the movement was fully established Kamaka, Andales by a group of young intellectuals. Then the movement expanded until it reached its highest peak when encounters, ambushes and raids took place. The following year was the turning point of the movement because of the death of Mayor Magno, the raid of Emergency Hospital and the Jampason-

Tubigan Border ambush incident occurred. The infiltration of the Deep Penetration Agents in the movement however, was the cause of the decline of the movement. These Deep Penetration Agents started killing those people they suspected as members of the movement, there were a great loss of cadres and members of organization. To counterattack, the Communist Party of the Philippines launched “Kampanyang Ahas” to flush out the Deep Penetration Agents they believed had infiltrated the Communist Party of the Philippines-New People’s Army ranks especially in Initao. This led to the decline of the movement since many of the leaders were killed and some members of the masa either surrendered or were captured by the authorities. The movement brought a big impact to the lives of Initao and to the municipality which led to the decline of petty crimes. It also helped shape how the people in Initao view the New People’s Army at present. The story of the movement in Initao was one of a kind. These insurgents were very brave to fight for what their beliefs and indeed, it only proved the adage that “to fight is to live”.

Recommendations:

- There should be a quantitative study regarding about the perspective of Initao towards the present day militants.
- Same study should be conducted in other municipalities of Misamis Oriental where Guerilla Movement was also active.
- Another study may conducted on the struggles experienced by the guerillas in the municipality.

DEPOK SUB DISTRICT SLEMAN REGENCY FEASIBILITY ANALYSIS DIVISION INTO CITY BASED ON PP NO. 78 TAHUN 2007 ON PROCEDURES FOR THE ESTABLISHMENT , ABOLITION , AND REGIONAL UNIFICATION

Pangky Febriantanto

pangky_f@yahoo.co.id

Magister Ilmu Pemerintahan – Universitas
Muhammadiyah Yogyakarta

ABSTRACT

Depok sub district is a sub district belonging to Sleman Regency, Province of Yogyakarta Special Region. Landmass of Depok sub district is more extensive than Yogyakarta City area. Its facilities and infrastructures is more advance and developed than other sub districts in Province of Yogyakarta Special Region.

Considering more existing discussion about regional enlargement as one implementation of regional autonomy, this research will discuss it descriptively concerning feasibility analysis of Depok sub district, Sleman Regency which will be enlarged into new autonomous regional or city. That feasibility analysis is based on factors and indicators included in PP No.78/2007 on Procedures for The Establishment, Abolition, and Regional Unification. The research objective is to find out enlargement feasibility of Depok Sub district, Sleman Regency into new autonomous regional or city.

The research is focused on factors and factorss assessment and indicator of Depok sub district which it will be compared with 3 comparator cities. There are 35 indicators divided into 11 assessed factors or factorss and then it is weighted and scored. Those result of weight and score determine enlargement feasibility of Depok sub district,

Sleman Regency into new autonomous regional or city.

The result indicated that the total feasibility score of regional enlargement of Depok sub district, Sleman Regency is 308, while the minimum standard score is 320. The factor or factors score of demography is 60, while the minimum standard score is 80. The factor or factors score of economic capability is 50, while the minimum standard score is 60. The factor or factors score of regional potential is 65, while the minimum standard score is 60. And the factor or factors score of financial capability is 15, while the minimum standard score is 60.

Therefore, it can be concluded that Depok sub district, Sleman Regency is less capable and impolitic to be enlarged into new autonomous regional or city. In long term, Depok sub district, Sleman Regency is possible to submit enlargement if capable to pursuit minimum standard score, or it can be submitted transformation towards enlargement regulation. In other word, it submits transformation PP No.78/2007 into new regulation.

Introduction

Since the reform era in Indonesia, to celebrate the spirit of democracy with improved governance system flowed with the surge. Starting from the freedom to establish political parties, direct presidential elections, and even direct election of governors. And more interesting is the euphoria of regional autonomy.

UU No.32/2004 which stipulated in article 1, paragraph 5, is a regional autonomy rights, authorities, and obligations of autonomous regions to set up and manage their own affairs and interests of local communities in accordance with the legislation. And the autonomous region or area in question as stipulated in UU No.32/2004 paragraph 4 is a unit of community boundaries have authorized organize and administer governmental affairs and public interests own initiative based on the aspirations of the people within the Unitary State Republic of Indonesia.

In principle, the decentralization policy conducted by decentralizing the powers that have been centralized in the hands of the central government. In the process of decentralization, the central government powers are transferred from the center to the Regional Government as it should, to realize a shift of power from central to local districts and cities across Indonesia. If the original condition of governmental power flows move from local to central level, the idealized that since the implementation of the regional autonomy policy, the current dynamics of power will move the opposite, current from the central to the regions¹.

And one regional autonomy is reflected among others in the desire for the region to split themselves or commonly

known as regional expansion. This regional expansion based on UU No.22/1999 which was later revised to UU No.32/2004. In UU No.32/2004 regarding the expansion area regulated by Article 46 paragraph 3 and Article 46 paragraph 4. The sound in paragraph 3 are: "The establishment of the area may be merging some areas or parts of areas bersandingan or division of a region into two area or more ". And in paragraph 4 states that the division of the region into two regions or more referred to in paragraph 3 do after reaching the maximum age limit of governance. Furthermore, the division policy governed by PP 129/2000, which followed the changes and revised by PP No.78/2007 on Procedures for the Establishment, Removal and Merger of Regions. In PP No.78/2007 regulates the formation process based on the area of 3 three requirements, namely administrative, technical, and physical territoriality.

With these requirements it is expected that the newly formed area can grow, develop, and is able to organize regional autonomy in order to improve public services in order to accelerate the realization of optimal well-being of society and in strengthening the integrity of the Unitary Republic of Indonesia. Then, criteria or conditions set out in the regional expansion PP 129/2000 is replaced by PP No.78/2007 on Procedures for the Establishment, Abolition, and Merging

¹ Asshiddiqie, Jymli. 2012. *Otonomi Daerah dan Parlemen Di Daerah*.
www.mahkamahkonstitusi.go.id.

Regions. The indicators contained in PP No.78/2007 are:

1. Population
2. Ability Economy
3. Potential Areas
4. Financial Capabilities
5. Social and Culture
6. Social and Political
7. Local Area
8. Defense
9. Security
10. People's Welfare
11. Full Range

Regional enlargement or creation of new autonomous regions such as the province is increasingly widespread since the enactment of UU No. 22/1999 on Regional Autonomy, which was later revised by UU No. 32/ 2004, making the area the second level in the form of district and city also rife. Up to December 2008 have been formed 173 regency and 35 cities result of regional expansion and become the new autonomous region. Thus, in Indonesia has recorded 398 regency and 93 cities. When viewed closely, the period or periods after the reform is a period that is growing rapidly or it could be said that the future is very much pemekarannya. Not only the regional division in the form of a new province, but also the district and a new city.

When talking about the regional enlargement, of course there are many factors that drives, one of which is an area or geographical conditions that are too

broad. In Yogyakarta itself, there is a sub-district in Sleman interesting enough to be discussed, namely Depok. If viewed in terms of area, Depok itself wider area than the area of Yogyakarta which incidentally is the capital of the province of Yogyakarta. In the official website of the City Government of Yogyakarta that www.jogjakota.go.id mentioned that the area of Yogyakarta city is 32.5 km². While broad Depok Sleman districts themselves are written in the official website of the Government of Depok Sleman is 2687.6485 hectares which when converted to square kilometers is 35.55 km². So, if you see the driving factor of regional expansion, the reason the conditions geographical area Depok Sleman district has become one of the right reasons.

In infrastructure, Depok looks more advanced than in other sub-districts in the district of Sleman. In fact, with the other sub-districts in the Special Province of Yogyakarta. In terms of education, for example, once stout universities both public and private that are in Depok. In addition the District of Depok is quite spacious also had 3 police sectors, the police Depok West Sector, East Depok Police Sector, and the Police Bulaksumur Sector. Depok even has the only airport in Yogyakarta Commercial, namely Adisucipto Airport, even side by side with the Military Air Platform. From the economic side, Depok also has a shopping center like Ambarrukma Plaza.

In terms of sports facilities, Depok has Maguwoharjo International Stadium is an international stadium and the largest in Yogyakarta, even one of the largest in Indonesia.

From these two in terms of facilities or infrastructure Depok is quite advanced compared to the Subdistrict of Sleman Other Territory as well as other districts in Yogyakarta. The potential to stand alone into a new autonomous region is very large. In other words, look at the facilities and infrastructure that is more developed, then Depok Sleman could potentially become an independent new autonomous region or a new city. Although, there are many other criteria that must be owned Depok if it can be said it deserves to be and was expanded into a new city.

Logically, of course a discourse expansion will cause the pros and cons. How not, when an expanded area, it will result in the holding area. Especially if Depok Sleman subdistrict where a lot of economic resources was expanded then it will have an impact on the revenue lost parent regions, namely Sleman. Their Ambarrukma Plaza, for example, the auto-generated tax will not land to Sleman. Surely the local officials and local officials in the area logically parent does not want his area reduced income. On the other hand, there is also logically approve the expansion because of certain interests. The most viscous is the benefit politically. Political interests with the intention of

creating a position of power both in the executive and legislative branches.

Enlargement of the current area to materialize is always to be followed by the establishment of local government power structure, whose outline is composed of the executive and legislative branches of power. The formation of the new areas will inevitably give rise to opportunities recruitment of head and deputy as well as a minimum of a dozen heads of departments, agencies and local technical institute. Not counting the positions of other government bureaucracy within the scope of the district / city enlargement. Hundreds of thousands of people will be recruited and worked in various positions and formation of a new regional government is formed².

Being in the legislative branch, must be done filling personnel councils. In order to fill it is also expected to do the formation of structures in the area mekaran party. Especially the potential parties have seats in Parliament mekaran area. Therefore, obviously a lot of people will be tempted by the power of recruitment opportunities. Now, the region expansion is driven as a power opportunities together in the future³.

Seeing the economic potential possessed not impossible Depok Depok division will be the political arena-for pie. The inception of a new autonomous region

² Makagansa, H.R. 2008. *Tantangan Pemekaran Daerah*. FusPad: Sleman

³ Ibid

will automatically form a new government positions. And it will be delicious cakes. Moreover, it also would be an economic benefit. Moreover, the new area will also receive intensive funds from the Central Government.

However, regardless of the pros and cons of discourse Redistricting Depok Sleman, there is no harm if assessing the feasibility of the discourse. Especially, assess the academic side based on the existing rules. That is, there is no harm if the judge whether Depok Sleman eligible to bloomed. Rate based on a basic law on the division of the area, namely PP No.78/2007. Moreover, in these Rules are criteria that must be met for an area to be expanded and equipped with a means of assessment.

Regional autonomy

According to UU No.32/2004 which stipulated in article 1, paragraph 5, is a regional autonomy rights, authorities, and obligations of autonomous regions to set up and manage their own affairs and interests of local communities in accordance with the legislation. And the autonomous region or area in question as stipulated in UU No.32/2004 paragraph 4 is a unit of community boundaries have authorized organize and administer governmental affairs and public interests own initiative based on the aspirations of the people within the Unitary State Republic of Indonesia.

Regional Enlargement

Regional Enlargement is a breakdown of the provincial, regency government, and Cities to more than one Region. This regional enlargement based on UU No.22/1999 which was later revised to UU No.32/2004. In UU No.32/2004 regarding the expansion area regulated by Article 46 paragraph 3 and Article 46 paragraph 4. The sound in paragraph 3 are: "The establishment of the area may be merging some areas or parts of areas bersandingan or division of a region into two area or more ". And in paragraph 4 states that the division of the region into two regions or more referred to in paragraph 3 do after reaching the maximum age limit of governance.

Regional Enlargement Incentives

A clear legal basis and regulations on the establishment of new autonomous regions, commonly called the regional division certainly has underlying reasons why it should matter to the regional enlargement. In other words, there are factors that encourage the implementation of regional expansion. If the view of academic studies written by Pratikno in 2007, then the driving factors, among others :

1. The need for regional economic equality
2. Geographical conditions are too broad

3. Basis Difference Identity
4. Failure of communal conflict management
5. The existence of fiscal incentives granted by the Act to new areas of the division through Alok ation Fund (DAU), the results of Natural Resources and Local Revenue⁴.

Regional Enlargement and Criteria for Assessment

In PP No.78/2007 has to load any criteria that must be met by potential new autonomous region. There are 35 indicators divided into 11 factors and weighting. As for the definition and calculation method through weighted indicators have also been written in the regulations. In addition there are also methods in the assessment to determine whether a potential new autonomous region's feasible or not recommended before established.

Factors, Indicators and Weighting

In PP No.78/2007 There are 35 indicators divided into 11 factors with a total weight of 100. Here is a table of each factor as the indicators and weighting.

Tabel 1: Table of Factors, Indicators and weighting

Factor	Indicator	Weight
Population	Total Population	15
	Population Density	5
Economic capabilities	The GDP per capita non-oil	5
	Economic growth	5
	GDP contributions of non-oil	5
Regional Potentialy	The ratio of bank and non-bank financial ratio per 10,000 population	2
	Shops ratio per 10,000 population	1
	Market ratio per 10,000 population	1
	The ratio of primary school of primary school age population	1
	The ratio of junior high school per junior high school age population	1
	The ratio of senior high school per senior secondary school age population	1
	The ratio of health facilities per 10,000 population	1
	The ratio of medical staff per 10,000 population	1
	Percentage of households with motor vehicles or boats or motor boats	1
	Percentage of electricity customers on the number of households	1
	The ratio of the length of roads to motor vehicles	1
	Percentage least	1

How to Determine Indicator Calculation

Indicator is a parameter or a value derived from factors that provide information about the state of a phenomenon/environment/area, the significance of these indicators directly related to the value of the parameter. The indicator is calculated for the preparation of a composite index of establishment / deletion and incorporation of autonomous regions must meet the following requirements: (1) data is available, (2) is easily calculated, (3) relevant, (4) a measurable and reliable. How to determine the calculation of the indicators is where, each - each indicator has a value of its own calculation. Also, the weighting that differ between the indicator that one with the other indicators. The way to determine this is as follows:

1. Population All the people who live in an area for 6 months or longer, and those who live less than six months but aims to settle.

2. Population density: The population is divided effective area.

3. The non-oil the GDP per capita: The value of GDP of non-oil current prices divided by the population.

4. Economic growth: The value of non-oil amount of GDP at constant prices year-on-1 non-oil minus the value of GDP at constant prices year-on-1 non-oil divided by the value of GDP at constant prices year-on-1 multiplied by 100.

5. The non-oil GNP contributions: For the province is a provincial non-oil value of GDP at current prices the GDP of a region divided national non-oil current prices multiplied by 100. For regency / cities is the value of GDP of non-oil districts based on current prices of an area divided by the GDP of non-oil provinces on the basis of current prices multiplied by 100.

6. Ratio of Banks and Non-Bank Financial Institutions per 10,000 population: Number of Banks and Non-Bank divided by the population multiplied by 10,000.

7. The ratio of the group of shops / stores per 10,000 population: The number of groups of shops / stores divided by the population multiplied by 10,000.

8. Market Ratio per 10,000 population: Total market divided by the population multiplied by 10,000.

9. The ratio of primary school age population per SD: The number of elementary school divided by the population aged 7-12 years.

10. The ratio of junior high school per junior secondary school age population:

The number of junior high school divided by the population aged 13-15 years.

11. The ratio of senior secondary school per high school-age population: Number of senior high school divided by the population aged 16-18 years.

12. The ratio of health facilities per 10,000 population: The number of hospitals, maternity hospitals, both public and private polyclinics divided by the population multiplied by 10,000.

13. The ratio of medical staff per 10,000 population: The number of doctors, nurses, and health minister divided by the population multiplied by 10,000.

14. Percentage of households that had a motor vehicle or a boat or a motor boat or a motor boat: The number of households that had a motor vehicle or a boat or a motor boat or motor boats divided by the number of households multiplied by 100.

15. Percentage of electricity customers on the number of households: The number of households that use electricity and Non PLN. PLN divided by the number of households multiplied by 100.

16. The ratio of the length of roads to motor vehicles: Total road length divided by the number of motor vehicles.

17. Percentage of at least high school educated workers to the population aged 18 years and over: The number of workers who had high school education divided by the population aged 18 years and multiplied by 100.

18. The percentage of educated workers the minimum S-1 against the population aged 25 years and over: The number of educated workers S-1 divided by the population aged 25 years and multiplied by 100.

19. The ratio of the Civil Service of the 10,000 inhabitants: Number of Goals government employees I/II/III/IV divided by the population multiplied by 10,000.

20. Total Regional Revenue Alone (PDS): The entire reception area comes from local revenue, tax revenue sharing, profit sharing of natural resources and the acceptance of the results of the province (for creation of districts / cities).

21. The total income of the PDS to Total Population: Total revenue PDS divided by the population.

22. The total income to the GDP of non-oil PDS: Total revenue PDS divided by the number of non-oil GRDP.

23. The ratio of the means of Worship per 10,000 population: The number of mosques, churches, temples, monasteries divided by the population multiplied by 10,000.

24. Ratio sports field facilities per 10,000 population: Number badminton courts, soccer, volleyball, and swimming pool divided by the population multiplied by 10,000.

25. Number of Meeting Hall: Number of buildings used for community meetings do various activities of social interaction.

26. The ratio of the population who participated legislative election against a resident who has the right to vote: The population of voting age when legislative elections divided by the population aged 17 years and older or married.

27. Number of Community Organizations: The number of registered social organizations.

28. The area of the whole: Total land area plus extensive oceans.

29. The total area that can be utilized effectively: The vast number of areas that could be used for housing and industrial.

30. The ratio of the number of defense forces personnel to an area: Defense forces personnel compared with the area.

31. Regional Characteristics: Feature region from the viewpoint of the defense, the provision of value depending on the physical expanse and position candidates autonomous regions. Rankings assessment of candidates autonomous regions starting from the highest value in the following order:

a. Borders with other countries, the physical expanse of territory in the form of islands.

b. Borders with other countries, the physical expanse of territory in the form of land and beaches.

c. Borders with other countries, the physical expanse of territory in the form of land.

d. No borders with other countries, the physical expanse of territory in the form of islands, the mainland and the beach, or the mainland.

32. The ratio of security forces personnel to population: The number of security forces personnel divided by the population multiplied by 10,000,

33. Human Development Index: By looking at three factors of human life, namely: age of life (longevity), knowledge (knowledge) and decent living standards (decent living). Age is measured by AHH life (life expectancy) which is technically calculated using the indirect method based on the average of Children Ever Born (ALH) and the average number of children who are still hidup. Pengetahuan measured by literacy rate (AMH) and RLS (the average length of school) of the population aged 15 years and above. AMII calculated from the ability to read and write, while RLS was calculated using two variables simultaneously the highest education level that were / are being occupied at levels / classes that were / are being occupied. A decent standard of living measured by

indicators of average consumption riel has been adjusted.

34. The average distance of the regency/city or sub-district to the center of government (provincial central or regency central): Total distance from regency/cities or districts to the center of government (provincial capital or regency capital) divided by the number of regency/cities or subdistricts.

35. The average travel time from regency/cities or subdistricts to the central government: Total travel time from regency/cities or subdistricts to the center of government (provincial or regency/city) divided by the number of regency/cities or subdistricts.

Assessment methods

Valuation method here is a valuation method has previously been calculated indicators and weighting values.

1. Assessment scoring system used is, for the establishment of new autonomous regions consists of two kinds of methods: (1) Method of average, and (2) Method of quotas.

2. The method of average is a method that compares the magnitude / value of each candidate region to stem the magnitude / value overall average in the surrounding area.

3. Method Quota is a method that uses specific figures as well scoring quota determination of candidate regions and parent regions. Quotas for the formation of the provincial population is five times the

provincial average population of districts / cities in the surrounding provinces. The quota of the district population for the creation of districts is five times the average population of all districts in the province districts concerned. Quota population of the city to the formation of the city is 4 times the average population of the sub-district towns in the province and the surrounding areas. The larger the scale acquisition / value candidate region to parent (if expanded) the establishment of regional quotas, the greater the score.

4. In the event that there are several factors that has its own characteristics, the technical assessment is equipped with qualitative assessment.

5. Scoring for the establishment of the province using Comparative Province, creation of districts using Comparative Regency and the establishment of the city using the Comparative City.

6. Comparative province are the provinces in accordance with the geography, namely:

- a. Java and Bali;
- b. Sumatra;
- c. Sulawesi;
- d. Kalimantan;
- e. Nusa Tenggara;
- f. Maluku; and
- g. Papua.

7. Comparative District are districts in the province concerned.

8. Comparative Cities are cities of similar (excluding the city became the

capital of the province) in the relevant province or provinces in the vicinity of at least three (3) cities.

9. In terms of determining the comparative provincial, district and comparators comparators are provincial cities, counties and cities that have a magnitude / value of the indicator is very different (over 5 times of the amount / lowest value), then the amount / value is not taken into account.

10. Each indicator has a score to a 1-5 scale, where a score of 5 in the category of highly capable, able to score four categories, three categories of underprivileged score, score two categories of inadequacy and a score of 1 category of severely incapacitated.

11. The size / average value comparison and magnitude of quotas as a basis for the scoring. Scoring 5 when the amount / value of the indicator is greater than or equal to 80% of the amount / value of the average, scoring 4 when the amount / value of the indicator is greater than or equal to 60% of the amount / value on average, giving a score of 3, if the magnitude / the indicator value is greater than or equal to 40% of the amount / value on average, giving a score of 2 when the amount / value of the indicator is greater than or equal to 20% of the amount / value on average, giving a score of 1 if the amount / value of the indicator is less than 20% quantity / average values.

Calculation of indicators and weights

Calculation of weighted indicators and a calculation in which the results of the assessment indicators of the cities comparator (average ratings of indicators Surakarta City, Magelang City, and Salatiga City) to be compared with the value of the indicator Depok. This calculation is grouped in Table 2 Comparison Table Depok Indicator Indicator Average towns comparison. Comparison table as follows:

Tabel 2 : Table of Comparative Indicators Depok with average City Comparison

Factor	Indicator	Number	
		Depok	Average city comparator
Population	Total Population	128.100 people	300.213,33 people
	Population Density	3.603 life/km ²	7.781,33 life/km ²
Economic capabilities	The GDP per capita non-oil	1.135.368 (thousand)	9.300.035 (thousand)
	Economic growth	3,26 %	5,29 %
	GDP contributions of non-oil	100 %	99,33 %
Regional Potentialy	The ratio of bank and non-bank	10,22	5,95

financial ratio per 10,000 population		
Shops ratio per 10,000 population	50,90	32,103
Market ratio per 10,000 population	0,62	0,79
The ratio of primary school of primary school age population	0,0033609	0,0066
The ratio of junior high school per junior high school age population	0,0028575	0,0013
The ratio of senior high school per senior secondary school age population	0,0012206	0,00274
The ratio of	1,10	1,86

	health facilities per 10,000 population		
	The ratio of medical staff per 10,000 population	21,94	25,85
	Percent age of households with motor vehicles or boats or motor boats	90,00 %	94,67 %
	Percent age of electricity customers on the number of households	89,47 %	97,67 %
	The ratio of the length of roads to motor vehicles	0,02	0,034
	Percent age least high school educated workers to the population aged 18 years	38 %	58,304 %

	and over		
	Percent age of workers who educated minimal S1 of the population aged 25 years and over	6,5 %	13,27 %
	Civil Servants ratio to population	372,68	264,281
Financial capabilities	Total PDS	2.602.759 (thousand)	410.681.350 (thousand)
	PDS to Population Ratio	203,6128	2.218,598
	PDS to the GDP ratio of non-oil	2,292	25,75867
Socio-cultural	The ratio of places of worship to 10,000 residents	26,93	33,19
	Sports pitch ratio per 10,000 population	12,26	13,50
	Total of Meeting	284	141,33

	Hall		
Social politics	The ratio of people who participated in the legislative elections that residents have the right to vote	0,36	0,768
	Total of community organizations	33	44,67
spacious Regions	Size overall Territory	35,55 km	39,63 km
	Vast region that can be utilized effectively	27,60 km	37,42 km
Defense	The ratio of the number of personnel to the area of defense forces	29,66	99,68
	Characteristics of the region from the standpoint of defense	1	1
Security	The ratio total of personnel	33,49	195,38

	Level of the security forces against the total of population		
Level of Public Welfare	Human Development Index	79,30	77,28
Full range	Average distance of the district or sub-district administrative center to the provinces or districts	10,00 km	81,9 km
	Average travel time from the district or sub-district administrative center to the provinces or regency	0,5 hours	2 hours

Source: Indicator Calculation Depok, Surakarta, Magelang, and Salatiga

Scoring for the indicator in PP No.78 / 2007 states that the amount or value of the average benchmark amount and timing of quotas as a basis for the scoring. Scoring 5 if the amount or value of the indicator is greater than or equal to 80% of the amount or value of the

average, scoring 4 if the amount or value of the indicator is greater than or equal to 60% of the amount or value of the average, scoring 3, when the magnitude or the indicator value is greater than or equal to 40% of the amount or value of the average, scoring 2 if the amount or value of the indicator is greater than or equal to 20% of the amount or value of the average, giving a score of 1 if the amount or value of the indicator is less than 20% the amount or value of the average.

For more details, then scoring each of the indicators are grouped as follows:

1. Score 5 if the amount of the value of the indicator Depok greater than or equal to 80% of the amount of the average indicator value comparison city.

2. Score 4 if the amount of the value of the indicator Depok greater than or equal to 60% of the amount of the average indicator value comparison city.

3. Score 3 if the amount of the value of the indicator Depok greater than or equal to 40% of the amount of the average indicator value comparison city.

4. Score 2 if the amount of the value of the indicator Depok greater than or equal to 20% the amount of the average indicator value comparison city.

5. Score 1 if the amount of the value of the indicator Depok less than 20% the amount of the average indicator value comparison city.

So, from that obtained table multiplied by the weighting assessment scores as follows:

Table 3: Table Ratings Weight x Score

Factor	Indicator	Weight	Score	Weight x Score
Population	Total Population	15	3	45
	Population Density	5	3	15
Economic capabilities	The GDP per capita non-oil	5	1	5
	Economic growth	5	4	20
	GDP contributions of non-oil	5	5	25
Regional Potentialy	The ratio of bank and non-bank financial ratio per 10,000 population	2	5	10
	Shops ratio per 10,000 population	1	5	5
	Market ratio per 10,000 population	1	4	4
	The ratio of primary school	1	1	1

	of primary school age population			
	The ratio of junior high school per junior high school age population	1	1	1
	The ratio of senior high school per senior secondary school age population	1	1	1
	The ratio of health facilities per 10,000 population	1	4	4
	The ratio of medical staff per 10,000 population	1	5	5
	Percent age of households with motor vehicles or	1	5	5

	boats or motor boats			
	Percent age of electricity customers on the number of households	1	5	5

	Average distance of the district or sub-district administrative center to the provinces or districts	2	1	2
Full range	Average travel time from the district or sub-district administrative center to the provinces or regency	3	2	6

Source: Calculating the Amount of Indicators

From the results of multiplication of each total weight of the score, then generate the numbers 305 with the following details:

1. The population factor of 60
2. The economic capacity factor of 50
3. Areas of potential areas for 65
4. The financial capability factor of 15
5. The socio-cultural factors of 25
6. The social and political factors at 17

7. Factor the area by 22
8. The defense factor of 16
9. The safety factor of 5
10. The level of welfare Factor of 25
11. Factors control range of 8

Feasibility Assessment Results

The results obtained value of the indicator is the result of the multiplication of the score and the weight of each indicator to get a total of 308. From these results, Depok Sleman in the category of disadvantaged when viewing the following table:

Table 4: Table Graduation Indicator Depok

Category	Total Value of Entire Indicators	Information
Very Capable	420 - 500	recommendation
Capable	340 - 419	recommendation
Less Capable	260 - 339	Rejected
Uncapable	180 - 259	Rejected
Very Uncapable	100 - 179	Rejected

Source: PP No.78/2007

Seeing the results of Depok Sleman got underprivileged categories with a total of 308, then it deserves to be rejected, or in other words, is not feasible. This is also coupled with a total acquisition value of population factors (number 1) totaled 60, the capability of the economy (number 2) totaled 50. In addition, regional potential factor (number 3) totaled 65 and the financial ability factor (number 4)

totaled 15. Of the results are only potential factor in the area are able to obtain the minimum standard. For more details, the following table will clarify the comparison of the value of the calculation results obtained with the value of the minimum standards:

Table 5: Comparison Table 4 Factors Value with Values Minimum Standards

No	Factor	Result	minimum standards
1	Population	60	80
2	Economics Capabilities	50	60
3	Regional Potentialy	65	60
4	Financial Capabilities	15	60

Source: Count Results Score x Weight 4 Factors & PP No.78 / 2007

It is based on PP No.78/2007 that a new prospective area ototnom rejected if the overall result totaled less than 340, or factors such as population factors totaling less than 80, or a factor of economic capacity totaling less than 60, less total combined area of potential factors 60, or the financial ability factor totaled less than 60. from this it can be said that the Depok in the category of underprivileged and rejected because besides categorized as poor, and 3 of the 4 factors totaling less than a minimum value. It can be seen that the population factors, factors of financial capability, and the capability of the economy totaled below the minimum value, and only 1 factor is factor regional potential value exceeds the value of the minimum standards.

Opportunities and Follow-up

Seeing these results, the Depok Sleman can be said to be less capable and refused to be expanded into a new autonomous region barupa city. Automatic, opportunities for expanded automatically closed in the near term. However, in the long term possibility of Depok Sleman to split off as a new autonomous region in the form of the city will remain. This recall that although the results of the overall total in the category less capable but yet the difference of 32 points. And three (3) factors do not meet the minimum standard value can also be pursued. These factors are not the only factors in financial capabilities, but also other factors do not meet the standards kinimal. Other factors that do not meet the minimum standards are demographic factors and factors of economic capability. Only the capability of any area that meet the minimum standards. For those who would counter the expansion Depok Sleman, can breathe a sigh of relief. This is because the desire to Depok in order not to be separated from Sleman district in the near future will be realized. With a sense, can still see Depok as a part or a district under the auspices of Sleman. But for those who would pro division Depok Sleman, this result is a picture of the fact that the Depok has not been feasible to split the Sleman district. That is, a fact which is based on PP No.78/2007 that Depok in the near future to remain in the shade of Sleman in the shade as a district.

Nevertheless, if the pro or who still want the division Depok Sleman there are likely to be realized in the long term. Provided, however, willing to pursue graduation is a minimum value of 320. And also three (3) factors that do not meet the minimum value to be pursued. Such as financial factors, demographic factors, and factors of economic means to achieve a minimum grade standat.

Broadly speaking, the pro can still pursue so that a minimum value of graduation and pursue percentage score of factors owned Depok Sleman such as financial factors, population factors and factors of economic capacity can approach a score owned the cities comparators such as Surakarta, Magelang city, and the city of Salatiga. Thus, will be able to meet the minimal value. Obviously, the minimum value stipulated in Government Regulation No.78/2007.

But technically course to pursue a minimum value is not easy. Not only in terms of the pursuit of a minimum value of graduation, but also be seen from the technical 3 (three) factors. Population factors, for example, to increase the number of population and population density in order to approach the cities comparator would need time and effort is not small. Not to mention if you see the other factors. On the economic capacity factor, certainly not easy to raise the GDP per capita and the non-oil economic growth. Not to mention if you see the financial ability factor, of course, also not

easy to pursue regional revenue figures Alone or PDS.

Nonetheless, the parties will pro division Depok Sleman can also use the more extreme and lighter. The pro can apply for aspiration to replace PP No.78/2007 with the new regulations younger to the government to the executive, the president and the minister of law and human rights, as well as the legislature, namely the House of Representatives and the DPD. Because, although it was signed by the executive but a bit much legislature also had a hand in hammering out a legal product. It also remembers one possessed legislative functions are functions legislature.

If the pro-division Depok Sleman filed aspiration to replace PP No.78/2007, it will also meet the various challenges. Asking aspiration aspirations especially with regard to products legally required depth academic studies. It takes effort and thought other parties such as academics.

One concrete example of the challenges that will be encountered them in the academic study is a comparison of the towns and weighting. Although already available academic expert, certainly will not be easy to change the rules on comparative towns and score weighting. This is because in determining the cities comparator need basic and logical reason as well as quality. Not to mention the score weighting. Score weighting in PP No.78/2007 is raw. It took a lot of theory and a logical reason to change the score

weighting.

And if academic studies has been obtained, there is still another challenge. When in the hands of the government, filing aspirations deliberated and discussed will require substantial time. The results of the discussion of the government are not certain to be approved.

From this it can be said that although there are two roads that can be taken by the pro-division Depok Sleman, but still not easy and still takes a long time. In addition, it also takes energy costs as well as outside biasa. Jalan the first is to improve and enhance the value of factors such as demographic factors, factors of financial capability, the capability of the economy, as well as potential factor in the region. The second path is to ask the aspiration to replace PP No.78/2007 with the new regulations easier.

Critical Notes on PP No.78/2007

Look carefully about the content indicated on PP No.78/2007, so no critical notes eligible to be appointed. Note that the method of assessment in the comparison city. In PP No.78/2007 in writing that the comparison cities are cities of similar (excluding the city became the capital of the province) in the relevant province or provinces in the vicinity of at least three (3) cities.

Of the sentence needs are fairly substantive question is about the number of cities of at least 3 (three) taken from the

surrounding towns. There needs to be an explanation whether the appropriate minimum number of academic studies or not. This is because the amount of at least 3 (three) according to the authors make the candidate of the autonomous regions that could potentially be a new autonomous region under challenge. For example, if there is a candidate of the autonomous region in culture and customs very different from the parent regions, then it is included in the factors driving regional expansion in the form of a difference identity basis. Thus, the new autonomous region candidates can apply to bloomed. However, the prospective new autonomous region may be constrained if it does not meet the standard of minimal value as compared with the calculation of average indicators of three (3) cities for comparison. So, if in the short term as well as long there will be new regulations to replace PP No.78/2007, should pay attention to the rules regarding the comparison city.

Conclusion

From the results and discussion, it can be concluded that the Depok Sleman got less able to bloomed category with a total of 308, and was rejected because it is not feasible. This is also due to the acquisition of the total value of the indicator only factor value potential of the region are able to obtain the value of 65. While the value of population factors totaled 60, and the value of the capability

of the economy totaled 50. In addition, the financial ability factor totaled 15 of the standard of at least 60.

Based on Government Regulation (PP) No.78/2007 that a new prospective area otonom rejected if the overall result totaled less than 340, or population factors totaling less than 80, or a factor of economic capacity totaling less than 60, the factors potential areas totaling less than 60, or factor financial capability totaling less than 60. from this it can be said that the Depok in the category of disadvantaged with a total combined value of 308, and was rejected by several factors totaled less than a minimum value. Judging from the financial ability factor totals below the minimum value, and there are other factors which also totals below the minimum value. These factors are population factors and factors of economic capability.

Mindanao State University-Iligan Institute of Technology

ABSTRACT

This is a descriptive and qualitative study of the indigenous agricultural knowledge and practices of the Subanens in Dumingag, Zamboanga del Sur and their implications to climate change adaptation and sustainable farming. It focuses on six specific tasks in agriculture that include soil preparation, planting, pest management, harvesting, livestock raising, and soil- fertility management.

Data were gathered through interviews and observations. Fifteen participants from three barangays were selected as participants through purposive sampling. Secondary data were taken from published works.

Data showed that the indigenous agricultural knowledge and practices of Subanens in Dumingag, Zamboanga del Sur are based from combination of both mystical and factual information derived from tradition and observations. The participants observed changes in climatic patterns but they are not aware of the phenomenon of climate change and they are not consciously engaged on efforts directed towards climate change adaptation.

Based on profitability as indicator of sustainability, the Subanens are not engaged in sustainable agriculture since majority of them do not generate profit from their agricultural activities, thus they are unable to provide their families with a better standard of living. However, in terms of environmental stewardship and quality of life, their agricultural practices are highly supportive to sustainable agriculture.

The local government of Dumingag has some programs that support the agricultural practices of the Subanens; however, they are not familiar with them due to weak implementation and insufficient dissemination. It is recommended that the government should support the adoption of the best practices of the Subanens in agriculture and disseminated them to practitioners of sustainable and organic farming in the Philippines.

Keywords: indigenous knowledge, climate change adaptation, and sustainable agriculture

INTRODUCTION

Indigenous or local knowledge refers to a complete body of knowledge, know-how and practices developed and maintained by people, generally in rural areas, who have extended histories of interaction with the natural environment (Sia, 2001).

One of the 110 indigenous communities and more than 170 ethno linguistic groups in the Philippines are the Subanens of the Zamboanga Peninsula. They form part of the Lumad Group of Mindanao (Hapalla, 2002). Their indigenous knowledge and practices provide the basis for local-level decision-making about many fundamental aspects of day-to-day life that include hunting, fishing, gathering, agriculture and husbandry, food production, water; health, and adaptation to environmental or social change (Nakashima, 2000).

Historical data show that the first settlers in Dumingag, Zamboanga del Sur are the Subanens. The term "Subanen" is derived from the word "*suba*" meaning "river," "mouth of the river," or "upstream" (Hapalla, 2002). Subanens are people who originally dwell near the river.

Dumingag is famous for its strict implementation of organic agriculture as the centerpiece program of its current mayor, Hon. Nacienceno Pacalioga. Dumingag is among the five winners of the **One World Award** given by the International Federation of Organic Agriculture Movements (IFOAM) for its organic farming program. IFOAM is a leading world grouping on sustainable agriculture, mainly composed of civil society organizations and social movements. Dumingag is its only local government member (Tagupa, 2010).

This is an exploratory study that focuses on the indigenous knowledge and practices in agriculture by the Subanens in Dumingag, Zamboanga del Sur and their implications to climate change adaptation and sustainable agriculture. It was conducted to find out the implications of the indigenous knowledge and practices in agriculture by the Subanens in Dumingag, Zamboanga del Sur to sustainable agriculture. It looked also into the implications of these indigenous practices to climate change. This is important because the integration of indigenous knowledge into climate change policies can lead to the development of effective adaptation strategies that are cost-effective, participatory, and sustainable since indigenous knowledge is transferable and it provides relationships that connect people directly to the environment and the changes that occur within it, including climate change (Hagdu, 2013). The potential of providing a sustainable approach in dealing with climate change makes it interesting to know the role of the indigenous knowledge and practices in agriculture by the Subanens.

Statement of the Problem

The study aimed to identify the indigenous knowledge and practices in agriculture by the Subanens in Dumingag, Zamboanga del Sur in order to determine their implications to sustainable agriculture and to find out if they are supportive to climate change adaptation. This study sought to answer the following questions:

1. What are the Indigenous knowledge and practices in agriculture by the Subanen in Dumingag, Zamboanga del Sur, specifically in:

- 1.1 Soil preparation;

- 1.2 Planting Crops;
- 1.3 Harvesting crops;
- 1.4 Livestock raising;
- 1.5 Pest management; and,
- 1.6 Soil fertility management;
2. Are the indigenous knowledge and practices in agriculture by the Subanens supportive to climate change adaptation?
3. What are the implications of these indigenous knowledge and practices to sustainable agriculture?
4. Does the Local Government of Dumingag encourage the preservation of the indigenous knowledge and practices of the Subanen in Agriculture?

Significance of the Study

This is a study on the indigenous knowledge and practices in agriculture by the Subanens in Dumingag, Zamboanga del Sur. It examined if these indigenous knowledge and practices are supportive to Climate Change adaptation. It also looked into their implications to sustainable agriculture.

The Philippines is one of the most disaster prone countries in the world. Climate change brings new patterns of weather disturbances that adversely affect agriculture. These developments make the search for indigenous coping mechanisms imperative. Thus, a study on the indigenous knowledge and practices in agriculture by the Subanens in Dumingag, Zamboanga del Sur is beneficial to their community because it could heighten their consciousness on various environmental issues such as climate change and the need to find alternative

sustainable system of farming that could lessen the intensive use of agrochemicals such as fertilizers and pesticides which are known to be contributory to pollution and to green-house gases.

This study could provoke thoughtful reflection on the history and culture of people whose knowledge and practices could enrich our capabilities towards climate change adaptation and it may help us in our efforts to develop sustainable agriculture.

Conceptual Framework

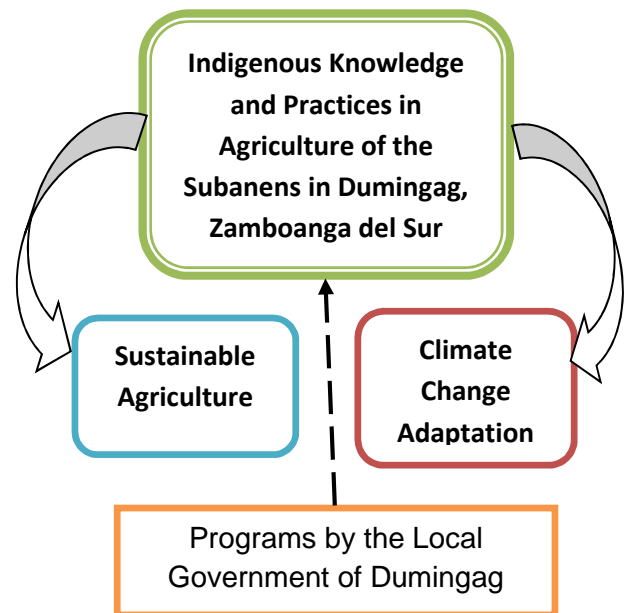

Figure 1: Schematic diagram showing the relationships of the Indigenous knowledge and practices in agriculture of the Subanens in Dumingag to Climate Change adaptation and its implication to sustainable agriculture and the programs and actions that the Local Government of Dumingag undertook to encourage or support indigenous beliefs and practices in agriculture.

The schematic diagram shows that indigenous knowledge and practices of the Subanens which have implications to Climate Change adaptation and are supportive to sustainable agriculture. The analysis is focused on the indigenous knowledge and practices of the Subanens in planting crops, harvesting, soil preparation, livestock raising, pest management, and soil- fertility management in order to find out whether there is indeed a relationship of said indigenous knowledge and practices to climate change adaptation and sustainable agriculture.

The diagram also shows the connection of the Local Government Unit of Dumingag, Zamboanga del Sur on its efforts to encourage or support the indigenous beliefs and practices in agriculture by the Subanens.

METHODOLOGY

Research Design

This was a descriptive study on the Indigenous Knowledge and Practices in Agriculture of the Subanen in Dumingag, Zamboanga del Sur. A descriptive study “attempts to provide an accurate description of a particular situation to identify the variables that exist in a situation to describe the relationships existing between variables” (Christensen, n.d).

This research utilized the qualitative research design using ethnographic techniques to capture accurately the perspectives of the Subanens in Dumingag and to understand their knowledge and practices particularly in agriculture.

This study described, analyzed, and evaluated the data taken from the key informant interviews and observation guide

about the indigenous knowledge and practices in agriculture of the Subanen in Dumingag, Zamboanga del Sur to be able to know if these are supportive to Climate Change adaptation and to know its implications to Sustainable Agriculture.

Locale of the Study

Dumingag is a municipality of Zamboanga del Sur located in the heartlands of the Zamboanga peninsula. It is northwest of the fertile Salug Valley and it is bounded by the municipality of Sergio Osmeña, Sr. of Zamboanga del Norte in the north, the municipality of Mahayag in the east, the municipalities of Sominot and Midsalip in the south, and the municipality of Siayan in the west.

The municipality is composed of forty-four barangays spread over a land area of 29, 775 hectares; it has a population of more than 46,039 people (based on 2007 CBMS). Dumingag is classified as a 2nd class municipality and partially urban. It is located in the Zamboanga del Sur province and within Region IX.

The study focused on two barangays in Dumingag namely, Dapiwak and Dulop, which are dominated by Subanen people who are into agriculture

Dulop is one of the barangays, which is in the outlying area of the Municipality of Dumingag. It is the last barangay in the southern part of the municipality, which is next to Zamboanga del Norte. It has a land area of 2,400 hectares with a total population of 2,142 as of 2014; it is composed of 503 households. More than half of the population is Subanen with an estimate of 1,200 individuals.

Dapiwak is a barangay of Dumingag, which is located in the western part of the municipality. It has a land area of 800 hectares and a total population of 1,145. The barangay has 232 households. More than half of its population is also Subanen which is estimated at 600 individuals.

Participants of the Study

There were 15 key informants in this study, and the participants in the interviews were: two Timuay or tribal leaders who are into agriculture. Tribal leaders or Timuay are knowledgeable of the indigenous practices of their tribe since they retain most of the indigenous knowledge in the tribe; in other words they could be considered “authorities” in their own right. Each one is also a head of the community with the same level as the Barangay Chairman.

Two of the participants are Balyan or Suruhano. The Balyan or Suruhano is believed to have communication or access to the spirit-world. They heal sick people and have access to knowledge.

Eleven participants are Subanen farmers who are not less than 60 years old and were recommended by the Barangay Chairman and tribal leaders; they are heads of households and natives of Dumingag. They were the best sources of information or data that are needed by the study.

FINDINGS ANALYSIS

This study determined the indigenous knowledge and practices in agriculture of the Subanens in Dumingag, Zamboanga del Sur and its implication to climate change adaptation and sustainable agriculture. The study determined the indigenous knowledge and practices in agriculture of the Subanens

in six specific areas of agriculture, which are soil preparation, planting crops, harvesting, livestock raising, soil- fertility management, and pest management.

Indigenous knowledge and practices in agriculture

All of the participants still practice their indigenous knowledge and practices in agriculture. The crops that are usually planted by the Subanen are corn, rice, cassava, vegetables, and fruit trees.

During soil preparation, the Subanens would pray to the spirits asking for permission to plant and for bountiful harvest. They practice the traditional slash and burn where they fell trees and burn them when they have dried. They cultivate the soil with bolo and they bury a handful of soil with chicken’s blood in the area which they have chosen to plant.

Prior to planting crops, the Subanens will pray again in seeking blessings for the crops to grow healthy. They time their planting activities during full moon and high tide. This practice of going with the maximum size of the moon and the highest reach of the water is an act of blending with the rhythm of nature which is believed to result into an optimum harvest. In planting coconut, it should be at midday with a child carried by the planter on his/her back. Again, this would ensure bountiful harvest. The child being carried at the back of the planter during planting, mimics a condition of a coconut tree full of fruits. Planters should do their planting without talking so as not to disturb and displease spirits who can do harm when disturbed. They practice spacing method which means that after harvest, they leave the area undisturbed to allow it to regenerate. There is a season for planting for every plant

grown in the area. The season for each kind of crop depends on its water and sunlight requirement which in turn is dependent on climatic pattern.

Before harvesting, Subanens utter prayers again. After harvesting, they perform the 'buklog' or harvest festival. This is their venue for expressing their gratitude to the spirits for the blessings they received. Traditionally, they don't sell their harvest but they keep them for their year round consumption in a granary built for the purpose.

Subanen usually raise chicken and pigs and feed them with corn and sweet potato (camote). They do not have chicken coops or pig pens, they just let their chicken and pigs wander around their houses. This practice allows their chicken to catch insects that usually destroy their plants. Moreover, range chicken and pigs help organically fertilize the field with their manure while trying to control some pests and the growth of weeds.

Moreover, they manage to drive pests away by using magical words, offering eggs, and chicken to the unseen spirits. They also put ginamos (fermented salted fish) into plants' leaves. Sometimes they request a pregnant woman to tour around the farm. This practice is believed to gain the support of the spirits in driving away pests so that the farm will be productive. They also use extracts from plants known to produce poisons that kill insects. They smoke the farm by burning dried leaves. This practice is also applied to fruit trees to free them from pests.

To keep the soils fertile, they practice slash and burn. They also perform rituals like

offering chicken and eggs to the unseen spirits to keep the soil fertile. Lastly, they practice composting. Leaves, fruit peelings, rice hulls, corn cobs and stalks are allowed to decay in their surroundings.

Implication to Climate Change Adaptation

Majority of the participants do not know or they have not heard about climate change. However, majority of them noticed many changes in the climate pattern today. The changes that the participants noticed are heavy rains, excessive heat, and frequent typhoons. These phenomena were not experienced before. Majority also of the participants noticed the adverse effects of the changing climate pattern to the plants. Warmer environment causes faster water evaporation from the soil causing it to dry easily thus depriving the plants with much needed water which results to stunted growth and lesser harvest.

Faced by the problems posed by changes due to climate change, majority of the participants know the need for adjustments in their current practices in relation to water supply management.

They are aware that even planting seasons have to be adjusted but since changes appear to be erratic, some are confused and they are not certain of what adjustments to make. Too much rain, late or early onset of the rainy season cause disorientations in the old practices they have in crop and livestock production, the practice of alternating fallow and tillage system, and in their traditional irrigation practices.

However, majority of the 15 participants also do not believe that there is a need to develop new crop varieties. They are dependent on traditional weather

forecasting. By observation and tradition, they predict the onset of the alternating dry and wet seasons; by observing the cloud patterns and phases of the moon they can foretell the weather. However, with climate change, these knowledge base they have are getting unreliable. Dependence on traditional knowledge and the absence of early warning devices that provide daily weather predictions and seasonal forecasts made the Subanens vulnerable. This vulnerability is made more pronounced by the fact that majority of the participants are not aware of the need to change land topography to address moisture deficiency and most of them are not aware of existing farm-level resource management innovations. And lastly, majority of the participants are not aware of the need to diversify their crops and livestock in order to reduce their vulnerability.

Implication to Sustainable Agriculture

In terms of the indicator of profitability, majority of the participants do not engage in agriculture where they generate profit in the long run. Most of them produce just enough for the consumption of their families; like their forebears, they do not produce surplus for the market. This makes them very dependent to their farms as the source of their sustenance because they lack the cash to buy their needs. Their level of productivity is incapable of supporting a better standard of living for their families.

In terms of the indicators of environmental stewardship, majority of the participants engaged in sustainable agriculture where efforts were made to maintain soil fertility by the use of organic fertilizer. Their farming activities do not involve the use of pollutants that contaminate the soil and water. Their beliefs and practices in agriculture does not disturb land

topography which in effect prevents erosion. Agricultural practices that include prayers, offerings and thanksgiving feasts are indicative of the desire for tranquility and non-disturbance of natural order.

Pollution is minimized with the use of organic fertilizers and plant-based pesticides. The alternation of fallow and tillage allows the soil to regenerate.

In terms of the indicator of quality of life, the Subanens are engaged in sustainable agriculture. According to majority of the participants their agricultural activities allow them sufficient time for their families and for their community engagements. Their organically produced products provide safe foods for their family. This is also true with their livestock which are safe for consumption because they are grown under natural conditions. The Subanens may be poor but they are contented with what they are; their lives are free from stresses caused by modern life and they are not exposed to the threats brought by modern agriculture with the excessive use of antibiotics in livestock and chemical fertilizers for plants.

Programs that Supports Indigenous Knowledge and Practices of the Subanen

Majority of the participants indicated that there are programs that support their indigenous knowledge and practices in agriculture. These programs are under the Genuine People Agenda (GPA) of Mayor Jun Pacalioga. GPA programs include a program for the dispersal of animals, Day Care Center Program, Feeding Program, and Education for Indigenous People (IP).

Mayor Pacalioga is an advocate of organic farming. The growing health awareness among people today is creating a

high demand for organically grown crops and organically raised livestock. With this trend, Mayor Pacalioga is leading his municipality towards organic farming. However, this is not known by many of the participants, perhaps due to insufficient dissemination or maybe they do not see anything new since most of what is called as organic practices are already practiced by the Subanens for generations. Maybe, the only difference is that the Subanens do it as a part of tradition whereas modern practitioners understand the scientific basis of what they are doing. Nevertheless, there is a need of integrating the best practices from both sides.

CONCLUSIONS

In view of the findings of the study the following conclusions are drawn:

Subanen from Dumingag, Zamboanga del Sur still practice their indigenous knowledge and practices in agriculture. Their primary product for consumption is corn. Their indigenous knowledge and practices in agriculture are combination of magical and factual procedures. Their belief in the existence and power of unseen spirits whose beneficence, compassion, and permission they beseech through rituals and prayers manifests their closeness to and reverence for the sacredness of creation.

However, majority of the elder Subanen are not aware about climate change and climate change adaptation. It shows that their indigenous knowledge and practices in agriculture should be internalized and be incorporated into government policies.

The Subanen community in Dumingag is still dependent on traditional approaches in their agriculture. Conscious

efforts to enhance productivity through modern technological approaches are inadequate.

Sustainability rests on the principle that we must meet the needs of the present without compromising the ability of future generations to meet their own needs. Therefore, *stewardship of both natural and human resources* is of prime importance. In terms of environmental stewardship and quality of life of the farmers and the community, the indigenous knowledge and practices of the Subanen in Dumingag are supportive to sustainable agriculture.

There are also some programs from the Local Government of Dumingag that support their agricultural practices; however, some of the elder Subanen do not know about it due to weak implementation and insufficient dissemination.

RECOMMENDATIONS

Given the findings of the study, the following are recommended to optimize the utility of the indigenous knowledge and practices in agriculture of the Subanen in Dumingag, Zamboanga del Sur:

- 1) The government should establish an Indigenous Knowledge center where all documented information on indigenous knowledge can be kept. These information should be disseminated through the school system.
- 2) Workshop should be conducted among the Subanens to draw awareness on their indigenous knowledge and agricultural practices and revisiting them with the guidance of scientific knowledge in order to relate them with climate change adaption and other related issues. Revisiting the scientific bases of current agricultural practices of the

Subanens makes them more resilient and more adaptive to climate change. This will also enhance their resilience towards adverse impacts of weather disturbances.

Abstract

This is a study of **husay**, the traditional conflict resolution practiced by the Higaonons, the indigenous inhabitants or the *lumads* of Barangay Rogongon Iligan City. It looked into the types and causes of their conflict, those involved in the conflict, those who conduct the conflict resolution, and the process of resolving conflict.

The study was conducted through personal interviews and actual observations of conflict resolution process. The study revealed that there are six types of conflict among the Higaonons which include land conflict, lido/rido, marriage conflict, relationship conflicts, livelihood conflict, business conflict and illicit relationship.

Higaonons employ negotiation, mediation and arbitration as means of resolving conflict. During conflict resolution processes, rituals like the *lugbak*, *agsiwa* or the *tampuda ho balagon* are performed.

The persons who conduct the conflict resolution process are the Datus, the Baes and the Sultans who have performed the ritual **Dang-ol**. To signify the end of the dispute a *palayungan* is performed by either both parties or the offending party after which a handshake is then performed to signify that the end of the conflict.

The study found that using the indigenous means of conflict resolution is effective in resolving conflicts among the indigenous people of Barangay Rogongon. It is recommended that the local government shall integrate the indigenous conflict resolution process into the barangay justice system particularly in barangays with sizeable Lumad population like Barangay Rogongon. This is to relieve the dockets of courts of many cases that can be resolved amicably rather than resorting to the more expensive litigation process.

Keywords: lumad, indigenous conflict resolution, negotiation, mediation, arbitration

INTRODUCTION

Republic Act No. 8371, otherwise known as The Indigenous Peoples Rights Act of 1997 is one of the most significant legislation during the administration of President Ramos. This act has played a great role in helping the indigenous people in the Philippines in preserving their identity. It advanced their rights and facilitated the preservation of their culture and their ancestral domains. It also recognized the rights of the indigenous people in the Philippines to self-governance in accordance with their customs.

Indigenous system includes self-governance among indigenous people. This system is very important among tribal societies in the Philippines since it denotes good governance and it covers the traditional justice system of tribal groups born from experience and experimentations in the context of their existing environment (NCIP Lanao, 2011)

Section 15 of R.A. 8371 encompasses institutions on conflict resolution that are traditional and are anchored on customary laws. This section was strengthened by the passage of R.A. 9285, the so called "Alternative Dispute Resolution Act of 2004." This act institutionalized alternative dispute resolution into the Philippine justice system. It gave power to traditional leaders like the Datus and Sultans in the case of the Higaonons who are recognized by their tribes to conduct the process of conflict resolution. This is important in achieving the speedy resolution of conflicts without resorting into the heavily docketed courts (DOJ Philippines, 2004).

Among the Higaonons, there is no clear distinction between major and minor conflicts. Over time there are some minor changes with their laws in order to accommodate the demands of time. According to Burton, et al. (2014) Datu

Pinaluay of Minalwang introduced changes into their customary law. Traditional accounts told that if a *tampuda* is performed and the vine is not severed, the conflict would continue but Datu Pinaluay decided to cut the vine of the other party to resolve their conflict and for thirty years hence, the tribe did not put anyone to death and has not experienced major conflicts.

The Higaonons of Bukidnon has their indigenous ways of trial during conflict called "*bala*". *Bala* is performed in four ways: first is the *Bangkaw* where the accused hand is measured twice by the use of a spear and if the second measurement falls short from the first he is then found guilty. Another form of *Bala* is *sayog* where a thread with a weight at the other end is given to the accused and if the weight moves the accused is considered guilty. The third type of *bala* is the *tunglo* which means curse. In this case a datu would recite his *tunglo* if the offender is unknown. For example a datu would curse that an unknown offender would fall from a tree and if one did fall from a tree then that person is found guilty. The last form of *bala* is *tagna* or divination where a baylan performs a ritual to find the culprit. This is usually done on conflicts that involves witchcraft (Burton, et al. 2014).

Among the indigenous people in Mindanao are the Higaonons in Rogongon, Iligan. They are among the least studied and very few accounts are known about their practices in conflict resolution. Higaonons like other Lumads are known as pacifists. They wanted to resolve their conflicts as much as possible so that they can move on with their daily activities without being bothered by enemies. This study tried to find out the customs, traditions and processes that are related to the traditional or indigenous ways in conflict resolution among Higaonons.

Statement of the Problem

This study is focused on the indigenous conflict resolution among the Higaonons in Barangay Rogongon of Iligan City and it seeks to answer the following questions.

1. What are the different conflicts that arise among the Higaonons of Barangay Rogongon?
 - 1.1 What are the causes of conflict?
 - 1.2 Who are involved in the conflicts?
2. How do Higaonons resolve their conflict in terms of:
 - 2.1. Types of conflict?
 - 2.2. Process involved in conflict resolution.
 - 2.3 The factors accounting for successful and unsuccessful conflict resolution.
3. Who are the persons who are authorized to resolve conflicts?

Scope and Limitations of the Study

The study is focused on the indigenous conflict resolution among the Higaonons of Brgy. Rogongon, Iligan City. This includes the different conflicts that arise in the said locale, the indigenous conflict resolution process, the authorities that conduct the process of conflict resolution specifically the Datus, Baes, Sultans and the Baylans. The traditional practices such as rituals and the people involved on the conflict regardless of age, gender and civil and society status. The participants includes those of Higaonons and Kolibugans that are residing in Barangay Rogongon.

The cases included in this study are those that occurred from January of 2014 to January of 2015. The case studies included in this study are two resolved conflicts and one on going conflict. There were no unresolved conflicts dealt in the study since there are no unresolved conflict among the Higaonons of Rogongon during the period covered. The council of datos ensures that all conflicts are resolved.

CONCEPTUAL FRAMEWORK

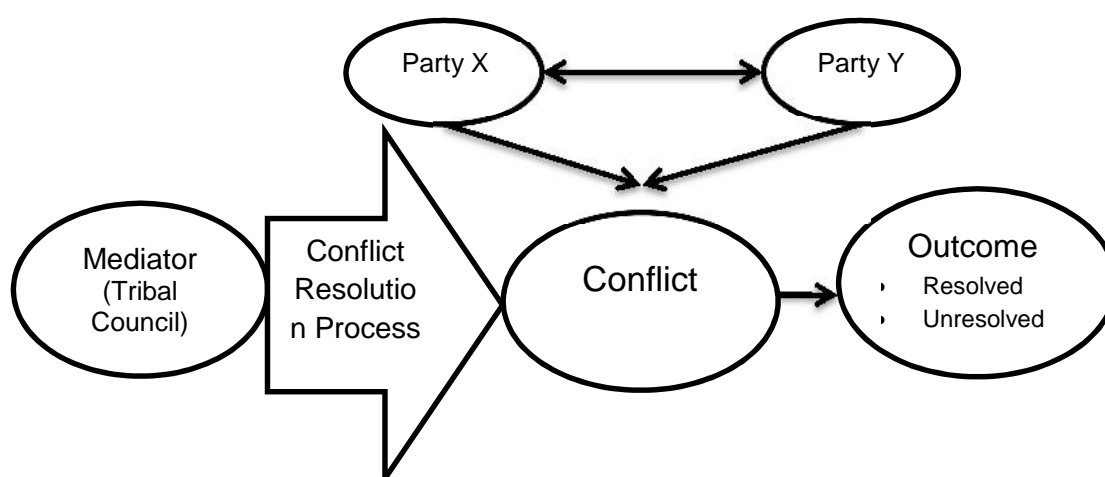

Figure 1: A schematic Diagram of how conflict arises between two conflicting parties and how it is resolved in mediation

The interaction of party x and party y may result into a conflict. There are several types of conflicts that could arise depending on the nature of interaction between the parties. As conflict arises, it becomes an irritant in the relationship between the parties involved which could prevent them from doing their daily activities. To avoid escalation into a destructive level, it is in the interest of one or both parties to submit into the process of conflict resolution. The process of conflict resolution which among the Higaonons is usually through mediation is managed by those who has authority to conduct the process. For the Higaonons conflict resolution process involves indigenous practices that include appropriate rituals for each type of conflict. The completion of the conflict resolution process determines whether the conflict has been resolved or not. Resolved indigenous conflict, leads to the healing of relationships between clans and individuals. On the other hand if such conflicts are not resolved they could escalate and take a more destructive form. But in the case of the Higaonons in Rogongon, cases of failed mediation could be referred into arbitration where it will be finally decided.

METHODOLOGY

This is a qualitative and descriptive study of the process of conflict resolution among the Higaonons of Barangay Rogongon. It combined interviews, observations and case study in data gathering. The key informants, particularly those directly involved in conflict resolution in Rogongon were interviewed. With the consent of the key informants, observation was conducted during mediation process.

The study was conducted in Barangay Rogongon, Iligan City. The barangay is about 355 square kilometers in area, thus it comprises 44% of the

whole of Iligan. In 2010 Rogongon has 4,870 population which is considered small for its area. Rogongon's population is growing at a rate of 1.25% (Iligan City Planning and Development Office). About 51% of the population are Higaonon in ethnicity.

The area is difficult to access and due to the absence of reliable transportation and good roads, the development of the barangay is very slow. It is only during the administration of President Benigno Aquino that concreting of the Iligan-Bukidnon road that passes by Rogongon was consistently pursued. But as of June 2015, said road is not yet complete. Some puroks are so remote that it takes three days to reach from the Barangay Hall. Mining and logging activities are going on in some areas and these uncontrolled activities expose the residents to the hazards of landslides and flashfloods. Owing to its high elevation, the climate is cooler than in any other parts of Iligan City. Rain showers are common throughout the year (ECOWEB, 2012).

The 15 key informants of this study are six Datus, three Sultans, three Baes, a Baylan, a Higaonon resident of Rogongon who is a former Datu and a Kolibugan resident of the Barangay who is a former Bae. They datu, sultans and the baes are members of the *Lupong Tagapamayapa*, the committee that takes care of peace and order in the barangay and as such, they perform mediation and arbitration in the indigenous way in cases of conflict. While the traditional way of settling dispute is not mandatory in cases of other groups like the Christian settlers, most Higaonon inhabitants subscribe to it. This study focused only on cases where both parties are Higaonons.

The case study dealt with three cases. Of these, two cases were resolved

conflicts and the third is an ongoing conflict. The purpose of the case study is to find out the pattern of resolving conflicts in Rogongon.

RESULTS AND DISCUSSION

The key informants identified six types of conflict among the Higaonons. These are land conflict, lido or rido, marriage conflict, relationship conflict, livelihood conflict, business conflict and illicit relationship. What are identified as types actually refer to causes of conflict. Land conflict pertains to conflicts that are related to land like land grabbing, boundary contests (*duluna*), and unauthorized selling of land. Lido arises from murder, attempted murder (*angol*) and rape (*gehigad*). Marriage related conflicts include wife grabbing (*agawa*), pride (*garbo*), and jealousy. Good relationship can be disturbed by past unresolved conflicts when some family members decided to even scores with another family which they think had offended them in the past and such offense is thought to have not yet been settled. Elopement is considered a serious offense among the Higaonons. Oftentimes, the family of the girl feels that their family honor is violated by the man and his family; if the community leaders are not alert enough to settle it promptly, the situation can degenerate into family feud commonly known as lido. Other causes of conflict are oral defamation (*pagpanampalas*), gossip (*pagpanglibak*), fist fight (*sumbagay*), stealing (*pagpangawat*), debt (*utang*) and illicit relationship.

It was found out that Higaonons used negotiation, mediation and arbitration as a means of resolving their conflict. As a part of the conflict resolution process, the Higaonons perform various rituals. These include the *lugbak*, *agsiwa*, *bakus ho balukan* (to tie one's arm), *agaw balaw* (to steal one's courage/fierceness), *paling*

ngumata (to cover one's eye) and *Padumol*. Considered the highest form of ritual performed in conflict resolution is the *tampuda ho balagon* (cutting of the green vine).

For some offenses that do not involve bloodshed, a *lugbak* of a *gantang* of rice, one live chicken and any amount of money as requested by the offended party is paid. If the tribal council thought that a committed offense is an offense against the community, the offender should pay a *sala* whose amount depends on the decision of the tribal council.

During a husay (conflict resolution process), a prayer is offered first followed by the opening statements of the Tribal Chieftain and other Datus. The offender and the offended would then make a speech, followed by the suggestions and recommendations of the council. During the husay a *gugud* is also performed by a datu who is an expert of the families' genealogy. A *palayungan* is performed by either parties or the offending party, a handshake is then performed and this signifies the end of dispute.

a) Types of conflict, causes of conflict, persons involved in conflict, and means of resolving conflict

There were forty two conflict cases recorded in Barangay Rogongon from January 2014 to January 2015; twenty of these are related to land, seventeen are due to bad relationship, ten are business related, two are due to stormy marriage, one due to competition in livelihood and one is caused by illicit relationship. In reality, the aforesaid conflicts are more complicated as they appear in cursory investigation. Some have history and their causes are complex. Some are long existing but were suppressed. The immediate reasons mentioned may be viewed as mere triggers. The history of

these conflicts however, are beyond the scope of this study.

The data show that the most common type of conflict in the barangay is land related. Most of the land of Rogongon are claimed as ancestral lands by the Higaonons. These vast lands are already allocated to different families who takes care in the assigning of particular space to every family member. Most of the land conflicts are among family members. Majority of the conflicts were resolved through mediation. Regardless of the means of resolving conflict used, the Higaonons call the process "husay," an indigenous term which refers to "resolve," "smoothen," or "sort out." From January 2014 to January 2015 there are no recorded cases wherein *tampuda ho balagon* is performed as a ritual for a certain husay.

From the 42 cases covered by this study we can deduce that because of conflict in resources, conflicting goals personal values, styles and perceptions conflict occurs (Bell and Hart 2002). As already presented this study deals with land conflict, *lido/rido* (family feud) marriage conflict, relationship conflicts, *garbo/ maratabat* and misunderstanding.

Garbo/Maratabat is a primary cause of conflicts because the Higaonons are highly sensitive people, they protect their dignity as a person at all cost. According to Datu Matilak it is also the main cause of delayed conflict resolution. Misunderstandings in the case of the Higaonons usually happen because of land.

In Rogongon, due to the presence of multi-ethnicity and intermarriages *husay* is not exclusive to Higaonons but it transcends the different cultures present in the barangay, thus the conflict resolution of the Higaonons are not limited only to

them because it is also accepted in cases where disputants are not Higaonons. This is supported by the statement of a Dumagat who requested for a *husay* last December 22, 2014 due to business conflict.

"Ni ari ko diari sa barangay kay kitang tanan ma Kristiyano man o Muslim adunay dugong lumad, og ako naga respeto sa balaodnong Lumad ug nagatoo ako nga pamilya ra tang tanan, mao nang mi ari ko diri para magpahusay kabahin sa akong negosyo sa troso"

(I came here because I believed that we may be a Christian or a Muslim yet we have a blood of a Lumad and I respected the laws of the Lumads and I believed that all of us is part of one family and that is the reason why I asked for a husay with regards to my logging business.)

In terms of those who are involved in conflict, family is usually included during conflicts because Higaonons are very particular and has strong family ties. For them the family should be highly respected and protected, that means if a certain family member is in distress the other family members are ready to support. No matter what type of conflict it is, it is inevitable that the family has to be included.

Land conflict according to the key informants is the most common type of conflict in Rogongon, as stated by Datu Ayudante:

Daghan man ang klase sa mga panagbangi diri pero ang kasagaran nga problema kay kaning maong land conflict.

(There are many types of conflict here, but the most common problem is land conflict.)

Duluna (boundary conflict) usually happen when there is a misunderstanding between those that share the same boundary caused by the effort of one party to expand his land beyond the established perimeter. Selling of land can also cause a conflict in two ways. First is by the *bawiy* (to take back), of some lands sold by the parents or by the land owners sometimes wants to take back the land they sold causing conflict; the second is the selling of land without the consent of the owner.

Marriage conflict, according to key informants is a type of conflict that is different from relationship conflicts even though it involves the relationship of a husband and a wife because some causes of marriage conflict is exclusive to it. *Agawa* is elopement between a married man and a married woman. This can cause a conflict that may escalate into *lido*.

Relationship conflicts involve the relationships between lovers, neighbors, friends, family and the like. The causes are mainly misunderstanding and jealousy. Jealousy towards a neighbor could drive him/her to an act of gossiping. Usually jealousy leads to a fist fights or to an oral defamation. Oral defamation gives the conflict another dimension that worsen it.

Livelihood and business conflict is also different type of conflict according to key informants. Livelihood conflict involves possessions like livestock and other resources while business conflict involves negotiations and purchases.

Livelihood conflict can be due to *pagpangawat* (stealing). Bae Kalalagan and Datu Ayunan pointed that most of the time, fruits and livestock are usually stolen such as chicken, *saging* (banana), *badak* (jackfruit), duck and chicken eggs, pigs, cows and carabaos. Unable to pay debt

not necessarily in terms of money, but on goods can lead to conflicts. When a certain individual prospers in his/her livelihood, jealousy may arise from some neighbors which can also cause conflict.

Business conflicts usually involves *troso* (log) that is sold to buyers; *garbo* can cause a conflict when owners disagrees on who should be the buyer of such logged trees; misunderstanding may also happens when a buyer does not continue to buy. The absence of a buyer gives problem to the logger when he cannot pay his debt from the capitalist who financed his logging operations.

Lido is caused usually by *angol*, murder, *taban*, and *agawa*. *Angol* and murder involves lives of people; some may escalate if the other party retaliates. According to key informants *taban* and *agawa* could escalate to *lido* if conflict is not managed.

b) The processes and rituals in conflict resolution

The key informants identified two modes of conflict resolution which they commonly use in resolving conflicts. These are negotiation and mediation. Negotiation and mediation usually goes hand in hand specially in resolving *lido*.

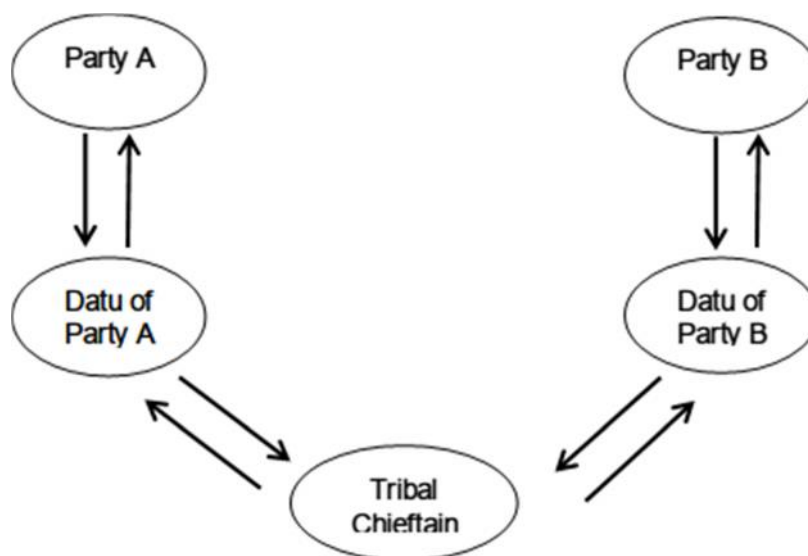

The first step is for the Datus and the Sultans to directly take action on a certain conflict; they call this as *pakang* (to break off). This includes seeking the help of other Datu or Sultan in cases where one party involved belongs to another tribe like the Maranaos.

Each party would then choose a Datu or a Sultan to whom they are comfortable in communicating with and is trusted by the family; these traditional leaders would then become their negotiators. The second step is for the party who caused the conflict to be

enjoined to pay the *lugbak*, an amount of 1,000 pesos for each process stated in the *Batasan Adansil* except for *padumol*, these processes are the *Bakus ho Balukan* (to tie one's arm) so that one will not be able to carry a weapon for vengeance, *Agaw Balaw* (To steal one's courage/fierceness) for the purpose of losing courage to seek vengeance, *Paling ngumata* (to cover one's eye) for the

purpose of not seeing your enemy and *Padumol* as payment for the tears and sadness, which is only used when someone has died. *Padumol* is usually given to women and is paid in an amount of 50,000 pesos, carabaos and 10 sacks of rice depending on the request of aggrieved party. This is usually given to wives and mothers. After all these, the negotiation process begins.

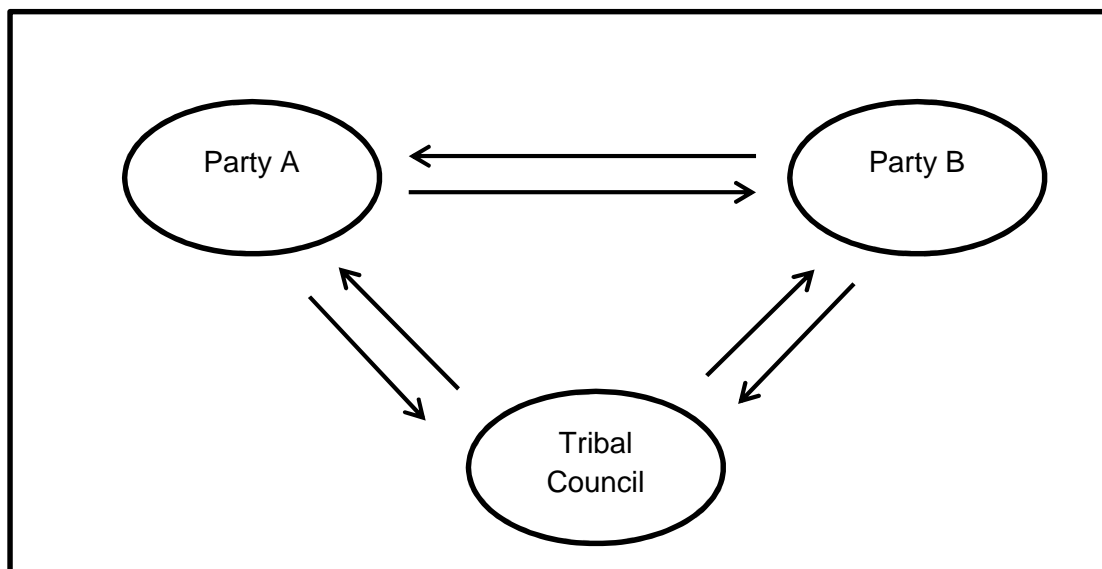

Figure 2. The Negotiation Process of the Higaonons of Barangay Rogongon

The negotiations are conducted between a party and its trusted Datu/Sultan; the process is confidential and no information should be leaked outside. The negotiators of both would then meet the

tribal chieftain about what the aggrieved party is demanding and what the offending party is suggesting. If both parties would agree to meet each other, the *Husay* (mediation) would then begin.

Figure 3. The Mediation Process of the Higaonons of Barangay Rogongon

The mediation process of the Higaonons involves both parties and the tribal council which consists of 15 members; 12 Datus and Sultans and 3 Baes but according to the key informants, during a husay it is not necessary that only 15 people would perform it, but it may include all the Datus, Sultans and Baes, if possible and if they would like to participate. Datu Matilak and Bae Kaamulan stated that it is more reliable and better if many of them were there to perform the husay.

These are the following steps performed during the husay:

b.1) Prayer

Before the Husay would officially begin, a traditional prayer is offered by a Datu, in cases wherein a Dumagat and a Maranao are involved, a Christian prayer and a Muslim prayer is also offered by a Sultan for the Maranaos and any person for the Dumagats.

An example of a traditional prayer performed by Datu Masirikampo on December 20, 2014:

“Amay day Magbabaya makakagahum ho alan, tiini kay iman (tagtigumtigum) tag – amol – amol. Ilahi kay imo ho gagaw ha matunan day ko inohon pagsul hae sa mga problema, Amay ha Magbabaya buligi kay imo sa yanka nasayod ho alan sa yankada tagsaligan day, huda day ug kahimo ko hadi kay imo ug buligoan sa yankada nasayod ho alan, Ilawi kay imo ho mapawa ho dalan daw maayad, alan ha ug ula-ulahon day na ig-saligday imo alan amay day ha Magbabaya.”

(Our Magbabaya (God) who is great and powerful, we that have gathered here to ask for your grace and wisdom to know, on how to solve these problems. Father, Magbabaya, help us for you know all things, You are the only one to who, we put our trust into and we will not achieve anything if You will not help us, Enlighten us and lead us to the good and lighted path and all of these we entrust into You, our Father Almighty, Magbabaya.)

b.2) Preliminary Speech

After the prayer the presiding officer (usually the tribal chieftain) gives his preliminary speech and could be reinforced by other Datus other than the Chieftain. The speech covers the purpose of the husay, the rules while in the husay and the different

traditional laws including the *Batasan Adansil*.

Preliminary Speeches as performed by Datu Ayudante, Datu Sumilao and Datu Masirikampo on a husay:

Datu Ayudante: *"Iman na ugsugdan ta ko inohon pagsulbad ho problema daw palima sa komento o opinyo ho uman datu."*

(Now we will start the conflict resolution to find solution to this problem and we also need your comments and opinion)

Datu Sumilao: *"Yanta ug sunudan sa customary law –kukuman ho kagbatataa. Daduwa hae ha hisgutan Balaod ho panggobyerno daw so kokuman ho kagbatataa."*

(The customary law will be used in this husay, two laws would be used the government and the customary law)

Datu Masirikampo: *"Sa kaghusay, kana alan ug kasunod sa customary law sa diri ki manta Lupon, pakaapil ghapon sa balaod ho gobyerno, sabuwa dah ha datu sa ug interview ho complainant, daw respondent . Pangisaan sa uman sabuwa kanda koh inoh gayod sa sinogdanan ho problema ha imba man impasaka dan hae ho mga lupon"*

(In husay, we will follow the customary law because we are in the Lupon, the government law will also be used. Now we will ask the complainant of what is your concerns and of why you asked for a husay. Next would be the respondent.)

Datu Ayudante: *"Maayad ha Sasasulom alan, ug pinon-an tad-un sa kanitaw ha batasan pamaagi daw kultura. Na iman ug pangginsan-an sa complainant koh inoh man gayod sa sinogdanan ho problema noh koh imba man meg-ubay kaynay ha mga Tribal Lupon si maamaha. Palimanon day sa Tultol uman sabuwa."*

(Good morning, today we will witness the husay by using the customary law. We will look into where this problem has begun and of why we called the respondent of this husay in the Tribal Council. We will ask the complainant to speak followed by the respondent.)

b.3) Presentation of Gugud, History and opinions

After the preliminary speeches both parties were then given a chance to speak, first to speak would be the complainant followed by the respondent. The families, if possible are not allowed to be witnesses in the council but they could give comments and additional information.

The Datus, the Sultans and the Baes would then give each of their opinion about the conflict. Usually a Gugud (genealogy) or Salsila for Maranaos will be given in the conflict resolution process, then words of advises and food for thoughts will be given. If such were not enough a historical background would be given specially on land conflicts.

In times of heated arguments between the parties it is the role of the Baes to calm them down and give them advises. Usually during Husay, the Baes sits near to the parties, either beside them or at their backs.

b.4) End of Husay

Mediation usually ends with a hand shake; according to Bae Dalumangcob. Both parties are also asked to perform palayungan (pledge) that they will not have any grudges with one another and not to repeat such act to the community and to themselves for a curse will be after them and to further strengthen their promises the Lupon Secretary will write a document wherein both parties will sign, together with the Lupon members present and the Brgy. Council present to serve as witnesses.

Tampuda ho Balagon (cutting of the green vine) is a form of ritual in conflict resolution especially on cases of intensified conflicts that involves bloodshed. During Tampuda, the tribal council would prepare a gantangan (measuring instrument for rice and corn) , an egg, a lamp or a solu (torch) and an uway (green vine/rattan) these materials corresponds to certain tunglo (curse) if such act or conflict would be repeated again. The ritual is presided by either a Datu or a High Baylan (high priest).

The gantangan represents one's life in this world that if you break your promise just like an excess rice in the gantangan you will be wiped away in the face of the earth, the egg also represents life and the life of your relatives and the future generation of your family, that just like an egg you will break and life in your family would be in turmoil, the lamp/solu fire represents also life, that if one still holds a grudge to the other just like the light of the lamp it would vanish, and lastly is the uway, which represents the dispute of both parties. Each party would hold on to the end of the uway, it will then be cut at the center, this signifies the end of the conflict between the two parties, a hug and a handshake will be performed by both parties right after.

In very common conflicts such as land conflict, when filed, no party should approach any Datu or Bae within a span of a week for they may ask for sympathy that may cause biases in decision making during the husay. Such rule is only applicable if the complainant filed the complaint directly to the barangay but if the complainant went to a certain Datu or Bae for assistance these Datus and Baes will be the only member of the Lupon that they should communicate with during the given time period.

In terms of marriage conflicts the council will decide to give a week to the married couple for them to think about their relationship and they should live under the same roof, during this span of time, no one will ever approach a Datu or a Bae or a Sultan, after this they will again be called for another husay. In cases wherein a woman has offended her husband and they decided for separation the woman is obliged to return the dowry to her husband's family.

In cases such as fist fight, gossiping and pagpanampalas (oral defamation), disputants will undergo a process of tinoon (investigation); after the investigation the party who is found guilty of performing such deed will be demanded to pay a certain amount based from the Batasan Adansil. Usually one would pay an alumo (payment) in the form of one chicken and a gantang of rice. In some cases the aggrieved party may demand for payment in a form of money, the amount would depend of how much damage is caused which ranges from 15,000 to 40,000 pesos.

Such conflicts according to the respondents when they have started a husay usually only lasts for a day, petty theft can last for an hour and the longest time would be two months particularly on cases such as, murder, angol, wife grabbing and lido, depending on the parties in conflict.

c. Characteristics of persons authorized to resolve conflicts

The Datus, Baes and the Sultans who are authorized to perform the husay could not perform such duties if they do not possess the following characteristics as presented in table 1.

Table 1. Characteristics of People Authorized to Conduct the Conflict Resolution According to Key Informants

Characteristics	Responses	Percentage
Respected head	15	100
A Datu/Bae/Sultan	15	100
Bloodline	15	100
Honest	15	100
knowledgeable	15	100
Knows the culture fully	15	100
Konolan (Batasan Adansil expert)	15	100
Neutral	15	100
Patient	15	100
Performed the ritual called <i>dang-ol</i>	15	100
Possess power	15	100
Religious	15	100
Trustworthy	15	100
Wise	15	100
With dignity	15	100
Brave	10	67
Has no vices	3	20
Moneyed	3	20

According to Datu Ayudante the tribal Chieftain of the Higaonons in Rogongon, being a Datu, a Bae and a Sultan and must have performed the ritual *Dang-ol* during the *Kaamulan* festival, entitle them to perform conflict resolution. If one has performed the ritual according to the respondents *Magbabaya* (Supreme God) will give them blessings so that they may be able to perform their duties as a Datu, Bae and a Sultan but with these blessing given to them they are also cursed that if they will not perform their duties, such as being fair and trustworthy a Datu, a Bae and a Sultan may die.

Other than being a Datu, or a Sultan or a Bae, Datu Masirikampo emphasized that one must be good in history, *gugud* or *sarsila* and *Konolan* (an expert of the *Batasan Adansil*). Datu Ayunan and Sultan sa Limonsodan said that in order to perform conflict resolution one must be an expert of the three types of laws for the three classification of culture in Rogongon (Christians, Muslims and Lumads), one must be familiar of the *Batasan Adansil* for

the Higaonons, *Layi* for Christians and *Kitab* for the Maranaos; one must also be familiar with national laws.

Bae Kaamulan and Sultan sa Tagoloan stated that bloodline is very important in becoming a Datu, Bae and Sultan for such title is passed down from generation to generation, a person without any blood of a Higaonon is not permitted to join the husay of the Higaonons. Bae Kalalagan also emphasized that the *Kolibugans* or the half-bloods if given the title of a Bae or a Datu may perform their duties in a husay equal with the pure bloods.

A Datu, Bae and Sultan may not be necessarily moneyed. According to the Datu Ayudante, the wealth of the Datusis not only reckoned in terms of money but in wisdom given by *Magbabaya*.

For the Baes, it is very important that a leader should not have *Avices*. However, the tribal chieftain confided that everyone has a vices but they are allowed to participate in conflict resolution as long

as it does not cloud one's judgment of what is good or bad, Datu Matilak supplemented that it is inevitable that a leader has no vices, but if such vices have gone to the extreme level a Datu, a Bae and a Sultan may be stripped of of his/her title.

d. Factors Accounting for successful and delayed conflict resolution

In the indigenous conflict resolution process among the Higaonons of Barangay Rogongon, the Datus and Baes claimed that there is no such thing as unresolved conflicts, just ongoing conflicts and forgotten conflicts. According to the Higaonons, if ever a certain conflict cannot be resolved due to non-compliance, not listening and no respect to the council, the council of Datus and Baes would then perform the ritual of *buwang* wherein the Council will not accept the conflicting parties anymore. When this happens, the parties would lose protection from the Council. According to Datu Matilak:

"We do not care anymore if all of them would die because they are no longer the responsibility of the council of the datu, they have been dismissed. That would happen if you will not listen to the Council."

Ongoing conflicts, usually happen if the parties misunderstood each other while in *Husay* or unable to pay the alumo and sala because of the lack of resources, and a decision is not reached for the moment due to lack of information and pride.

On the case of being unable to pay for the alumo and sala the tribal council would give their share of resources to meet the quota for payment thus conflict could be resolved; on cases wherein information is lacking, an investigation will be made by the Lupon. They will call witnesses of the event and talk to people and the elderly in the

barangay; they will also ask the complainant and the respondent to give their statements, information, and evidences during the next *husay* and when it comes to pride the council usually gives the *gugud* or *salsila* and food for thoughts to move the heart of the listeners and to soften their pride.

e. Case Studies

e.1) Resolved Cases

Case 1: Conflict on Ligi Hill

Inay Mama a former Bae complained that Pepeng Enluran has squatted her land. She went to the barangay to ask for help but the barangay has ignored her. Her son Arson Ema was angered by such actions and because of this she went to the tribal council of Datus and Baes for help about this certain issue and filed for a *husay*.

During the *husay* the tribal chieftain asked both parties about the conflict. According to Inay, she had been living in Ligi since childhood and remembered the day wherein she was pushed by an *amo* (monkey) and fell from a tree and her father brought her to Ligi Hill. When her parent's died her family planted *falcatta* trees, bananas and some other plants. Then Pepeng Enluran came and cut all the trees and farmed the land.

Pepeng Enluran stated that his apo (grandfather) Mangpintahan was buried in Ligi hill and his father told him that if he was interested in farming he can use the land in Ligi. He has grown old farming on such area and no one has complained about such. Pepeng also said that he and Inay are relatives but he could not understand why they wanted him out of the land when such land was given to him by his grandparents. Inay did not know about Pepeng's grandfather being buried in the area and said that her ancestors are also buried there.

After knowing the stories from both sides, the Datus and Baes verified this by the use of gugud (genealogy) and it was indeed then proven that both of them are relatives and has found out through the use of oral historical accounts through Datu Ayunan and Ayudante that Ligi Hill was an area for bakwits (evacuees) during the olden times and the ancestors have agreed that these lands should be shared by all of their descendants, thus it is a kawali (common land). The Datus and the Baes gave their opinions and suggestions about the conflict. They also gave advises to both parties, Datu Matilak told them that: *“Our ancestors have said that it is not the money, treasures and golds, it is brotherhood that is important.”* Datu Ayunan suggested that both parties should divide the land and the parties agreed to the suggestion. A date was set to survey the land prior to division. The resolution was concluded through a hand shake and friendship was restored.

Case 2: Need for a respect

Don Timbanagan is a CAFGU (a paramilitary unit) in barangay Rogongon. He was mauled by Jhon jhon Carpez with the help of his friends Andot Rabuyo and Junior Tingcong. Kagawad (barangay councilor) Termosa asked to bring this problem to the barangay council to prevent escalation.

During the husay Don stated that while partying at the disco in Sta. Cruz, he accidentally elbowed Jhonjhon and was alleged to have touched Jhon’s girlfriend. Don asked for forgiveness about such act but Jhon did not accept his apologies. Brgy kagawad Ruben took action so that there would be no fist fight inside the disco. Later that night Jhon and his friends ganged up on him. When asked why they ganged upon Don, Andot replied that it was a form of self-defense against the CAFGU.

An investigation in Sta. Cruz was done to know who really started the conflict. A witness of the said incident confirmed that Don really asked for forgiveness for elbowing Jhon and it was Jhon and his gang who started the ruckus. Then Datu Ayunan suggested that if someone has sinned over someone, violence is not an option and a uniform does not define a person. He also added that respect to one another is a vital thing. The Datus and Baes had identified who really is at fault. Datu Sumilao then cited the *kokoman ho kagbata-bataa* (Customary law) which according to Datu Ayunan, should be the one used as basis for resolving the conflict. Datu Adap gave parting words to the parties in conflict by saying, *“If a person asked for forgiveness from the bottom of his/her heart, it is worth more than a million.”*

The conflict was resolved by paying *sala* (payment for the mistakes made) worth 15,000 pesos by Jhon and his gang on the 13th day of November 2014, they also promised to the Lupon (tribal council) and to the barangay officials that such act will never be repeated again.

e.2) On going Cases

Case 1: I have my rights

Jun and Pepeng were brothers who disputed over their land in Salingsing, Jun filed for a husay in the barangay in order for him and his brother to have a good relationship again. During the husay Jun, retelling the history of their land, stated that in 1994 a *Dumagat* (Christian settler) showed a land title to their family claiming that the land is theirs. Their uncle, Rudy, talked with the Dumagats saying that the land is not for the Dumagats since the Dumagats are recent settlers in the area while their family has been in the area for years; they claimed that the area was given to them by their ancestors. In 2000, the Dumagats understanding the plea of the

family, shared the land with them and during this time, life was quite hard. Their uncle Rudy then divided the land, five hectares each for both for Jun and his brother Pepeng. However Pepeng sold his share to the Dumagats in the 2014. When Pepeng asked for his share of land again from Jun clamming that he has right to it as his brother, Jun was annoyed by such notion. For him; it was Pepeng's fault for not taking care of his share of land and selling it. Pepeng on the other hand still insisted that he has a right on the land that Jun is tilling.

During the settlement when asked, Pepeng boasted that he could provide title for the land and even getting a copy directly from Manila, Datu Ayudante requested Pepeng to state the facts directly so that the council could weigh the situation but Pepeng had shown no trust in the council, this moved the ego of the Datus and Baes including the Sultans and explained that they had undergone the process of *Dang-ol*

that gave them the wisdom and also a *tunglo* (curse) upon their heads that could kill them if they perform dishonesty and make unfair acts.

The Datus, Baes and the Sultans then gave their opinion about the problem; did a historical background of the land and explained the term *Kawali* (common land) to the brothers based on the *kokoman* (law). They also explained that a *yutang kabilin* (ancestral domain) should not be sold, for it is against the national law.

Based on the information given by the brothers, the council found out that they still lack information, like how big is the land and where is it situated exactly in Salingsing which might lead to a wrong decision. Still Pepeng insisted that the land should be shared between him and his brother of which, his brother denied. The council decided that Pepeng should cool his head and that the brothers talk about this problem together. This leads to the postponement of their *husay*.

Table 2. Table Showing the Types of Conflict, Causes of Conflict Person Involved in Conflict and Means of Resolving Conflict and its Results from the Case Studies

Case	Type of Conflict	Causes	Persons involved	Relationship	Means of resolving	Result
1	Land Conflict	<ul style="list-style-type: none"> •Duluna •Misunderstanding 	<ul style="list-style-type: none"> • Imay Mama • Pepeng Enluran • Arson Ema 	<ul style="list-style-type: none"> • Relatives • Neighbors 	<ul style="list-style-type: none"> • Mediation 	Resolved through sharing of land
2	Relationship conflict	<ul style="list-style-type: none"> • Pride • Misunderstanding • Fist fight 	<ul style="list-style-type: none"> • Donald Timbanagan • Jhon jhon Carpez • Andot Rabuyo • Junior Tingcong 	<ul style="list-style-type: none"> • Acquainted • Friends 	<ul style="list-style-type: none"> • Mediation • Arbitration 	Resolved by asking of forgiveness and paying Alumo
3	Land conflict	<ul style="list-style-type: none"> • Selling of land • Pride 	<ul style="list-style-type: none"> • Jun • Pepeng 	<ul style="list-style-type: none"> • Brothers 	<ul style="list-style-type: none"> • Mediation 	On-Going because of pride

The case studies presented in this study revealed that in the three different types of conflicts the common causes are

misunderstanding and pride. In the first case Imay and Pepeng has a misunderstanding of who really owned Ligi

hill that caused Imay to ask for a Husay. In case 2 because of a certain misunderstanding between Donald and Jhon; Jhon and his friends ganged up on Donald.

Case 1 and 2 presented that conflicts happens between relatives or family members and on resolving these conflicts it is noticeable that history and *gugud* is presented. The presentation of history and *gugud* made the resolution of case 1 easier while on the other hand on case two even if the disputants are brothers, it is an ongoing case because of their pride.

CONCLUSIONS

The most common type of conflict among the Higaonons in Barangay Rogongon is land conflict which is caused mainly by land grabbing and misunderstandings, followed by Lido which usually occur because of wife grabbing and murder. Looking into the conflict theory such occurrences of conflicts in the barangay proves that conflict is inevitable because of human relationships and interactions. It also supports Borg's (1971) statement that conflict accompanies change in the community and on the relationship between those in conflict.

In terms of resolving conflict the Higaonons are pacifists wherein they would want to solve the conflicts right away than prolonging it. This is the reason why there is no such thing as unresolved conflict in the barangay. In conflict resolution the Higaonons wanted to transform the conflict, they focus on the healing of the relationships of those who are in conflict. They developed a system of giving tunglo to those who are in conflict so that they would really reach a conflict resolution. On intense types of conflicts the Higaonons has the Tampuda ho Balagon to solve the problem which also emphasized the restoration of

relationships between the conflicting parties.

The Higaonons of Barangay Rogongon are not particularly patriarchal in approach in resolving their conflicts. The Baes play a very vital role on maintaining peace and order while conducting the husay they serve as the pacifiers during heated conversations.

The tribal leaders of Rogongon applied the Fisher and Ury's principles in conflict resolution wherein they look into the needs and interest of the parties in conflict.

Practices of conflict transformation is shown in the case studies specifically the solved ones wherein parties once again lived on a normal life in which they are friends once more with those they are in conflict with.

The tribal leaders who are allowed to perform conflict resolution do not necessarily have an exact or a particular characteristics but as long as a tribal leader has performed the ritual *dang-ol*, all of the qualities of a good negotiator, mediator and arbitrator will be given by the Magbabaya.

RECOMMENDATIONS

The local government should look into the traditional conflict resolutions styles of the different ethnic groups; it is also recommended to institutionalize the traditional conflict management in the local government, particularly in barangays where there is sizeable population of Lumads.

To the researchers who are interested in the indigenous ways of conflict resolution they may look inter-ethnic conflict resolutions and their ways of resolving such conflicts. A comparative study between the conflict resolution processes of Higaonons and other Lumads in Mindanao maybe conducted. This is to determine their

common features so that a general conflict resolution in manual maybe written for the Lumads in Mindanao for the use of local governments in the effort to institutionalize into the mainstream justice system.

EMPOWERMENT OF TRADITIONAL ART COMMUNITIES IN TOLITOLI REGENCY, PROVINCE OF CENTRAL SULAWESI, INDONESIA

Dr. Eko Budi Santoso, MT

(Institut Pemerintahan Dalam Negeri or Institute of Home Affair Administration under Ministry of Home Affair of Government of Indonesia, ekobs1@gmail.com)

Ekayatri, S.STP

(Public Relation and Protocol Bureau under Secretariate of Province Government of Central Sulawesi, Indonesia, ekayatri7@gmail.com)

Abstract

To preserve and to develop the culture in various art forms that exist in Indonesia, the role of the artists and the art communities are very important. But the reality of artist's life, especially the life of traditional artist is powerless. This research sought to describe the empowerment of traditional arts communities in Toli-Toli Regency, Province of Central Sulawesi, conducted by the Tourism Office under Government of Tolitoli Regency.

Methods used was qualitative descriptive approach. Data collecting used was interview to informan from traditional art communities and from actor of empowerment (Tourism office), observation of daily activities of the traditional art communities, and documentation of any legal documents, programs, official notes, report, and other documents regarding to empowerment for traditional art communities that had been done.

It is concluded that empowerment conducted by tourism office of Local Government of Toli-toli on all of the third aspects of empowerment, had not conducted quite well yet. The third aspects of the empowerment include: 1) the creation of a conducive environment to the development of the community; 2) Strengthening internal powerness of arts community; and 3) concern to the weak. Based on this conclusion, it is recommended to local governments to do: 1) to increase in the creation of a conducive environment through the development of art building or gallery that is more representative, increase frequency of tourist events that are routine, and the dissemination of information on planned performing arts; 2) to strengthen the internal power by improving education and training for the arts community in order to raise the quality of his artistic creativity as well as earn additional income either related or unrelated artwork to improve their welfare; 3) to increase the concern to the weak through guiding and facilitating of the arts community to be able to prepare a pre-legal form of basic constitution of organization, and giving the legality as 'registered organization' after they complete its basic Constitution.

Keywords: Empowerment, traditional art community, Tolitoli Regency

A. INTRODUCTION

Learning the art of Indonesia means that we study the Indonesian culture to determine how the Indonesian people view the world and how the history of the nation of Indonesia itself. Art and culture are the two sides of a coin that are inseparable. Art is part of the totality of people's lives, that covered in cultural environment. In fact, now the cultural identity of Indonesia has begun

to decline fade to the global situation, so that these conditions of art in Indonesia need to be improved.

To preserve and to develop the culture in various art forms that exist in Indonesia, the role of the artists and the art communities are very important. But the reality of artist's life, especially the life of traditional artist is powerless (Yusuf Efendi dalam Melayu Online 3 juni 2010, dan

Tempo.co.id 4 Juli 2012). So is the life of artists who are members of the arts community in art studios in Tolitoli regency (in province of Central Sulawesi) that can be categorized under powerless conditions even though they had been high role in preservation of culture in Tolitoli.

Empowerment efforts undertaken by the Government of Tolitoli in the form of local budget support to art community in art studio also has not shown any clear criteria and sustainability. This is reinforced by the statement of the Head of Art Department of Tourism Tolitoli that some problems related to the studio is the lack of guidance that is sustainable for the studio, as evidence that many of the works from the studio have not accommodated properly.

Art studios that there be difficult to work in both the arts and activities in celebration of the birthday of the area, as reported in the daily newspapers www.radarsulteng.com accessed electronically on Friday, 31 November 2014. Though the local government in this case the Tourism Office of Tolitoli has a function to perform the art community empowerment. In connection with the issues discussed above, then how the empowerment undertaken by the Government of Toli-Toli to the arts community in art studios, was important to investigate.

This research sought to describe the empowerment of traditional arts communities in Toli-Toli Regency, Province of Central Sulawesi, conducted by the Tourism Office under Government of Tolitoli Regency.

B. METHODS

The study design used in this research was descriptive qualitative research design. This study was a qualitative study for examining the condition of natural objects, data collection, and triangulation (combined) and data analysis is inductive (Sugiyono, 2012). And this research was included in a descriptive research because it was based

on the basic questions that contain the word 'how' that seek to describe what occurs naturally (Gulo, 2002: 19). While the method or strategy of qualitative research conducted was a descriptive case study method. The case study method was selected for this type of question research contain a question of 'how' and does not allow any control at all of the researchers to the system being studied (Yin, 2002: 8).

Data collection techniques used were a combination of observation, interviews, and documentation. The observations were made by direct observation in the field of the condition of art studios and the lives of the artists covered. Interviews were conducted semi-structured interviews using the interview, conducted on several informants selected by purposive sampling, which include: 1) Head of Tourism Office; 2) Division Head of Art Studio at Tourism Office, 3) Three head of the art gallery of both have received the aid from from the budget of Central Sulawesi province, local budget of Tolitoli, or who have not received the aid yet from any budget; and 4) artists who are members of the art gallery. Documentation techniques conducted on all rules, official records, reports, and other documents related to the role of the Tourism Office related to the empowerment of the arts community in Tolitoli.

Operational concept of empowerment of art community undertaket by the Tourism Office in Tolitoli, conducted by using the concept of empowerment as stated by Ginanjar in Roesmidi (2008: 13). The concept of empowerment as stated Ginanjar in Roesmidi (2008), conceptualizes empowerment in three fundamental aspects: 1) increase conducive situation or climate that allows the development of community power (enabling); 2) strengthen the potential or the power possessed by the people (capacity building); 3) provide protection or make prioritization to the weak (protecting policy).

Teknik analisis data yang digunakan mengadopsi dari pemikiran Miles dan Huberman (1984) dalam Sugiyono (2012:246) yang mencakup reduksi data, display data, dan penarikan kesimpulan, dimana dalam penarikan kesimpulan dilakukan dengan cara melakukan analisis triangulasi antara data dari berbagai teknik pengumpulan data dan kemudian menarik kesimpulan atas data yang paling mungkin menggambarkan fakta yang ada sebagaimana adanya.

Data analysis techniques used was a adopting from the thought of Miles and Huberman (1984) in Sugiyono (2012: 246) that includes data reduction, display data, and drawing conclusions, which in the conclusion done by triangulation analysis of the data from the various collection techniques data and then make conclusions from the data most likely describe the facts as they were.

C. FACT AND ANALYSIS

Empowerment to the art community covered in art studio in Tolitoli in this study, is described as the operational concept based on the opinion of the Roesmidi in Ginanjar (2008), which stated that the so-called empowerment effort includes 3 following efforts :

1. Creating conducive situation of climate that allows the development of community potential or power (External Factor Intervention)
2. Strengthening the potential of power or the communities (capacity building)
3. Provide protection or make prioritization to the weak (protecting policy)

Overview of each of these three aspects or efforts of empowerment, as described below.

C1. Empowerment Effort in the Form of Creating the Conducive Situation for The Art Community

Empowerment conducted by local government in the form of external factors

intervention which can provide a favorable climate for the development of the arts community in art studios in Tolitoli, which have been done are as follows:

1. Annual Cultural festival at Province level or Local Level

So far the festival of cultural activities have been carried out every year along with the activities of the anniversary of Indonesian independence day and the anniversary of Tolitoli's birthday. There were still no definite plan regarding the annual cultural festival activities in Tolitoli besides welcoming the independence day and the birthday of the Tolitoli Regency.

2. Show in collaboration with art studio from other regencies

3. So far it has been implemented the collaborative show with other art studi from Buol Regency facilitated by the Tourism Office of Tolitoli Regency with Tolitoly Local budget. Art studio "Bija Opungta" established on July 13, 2013 has done collaboration show with the art studio from Buol Regency, but the art studio "Bija Opungta" admits that it has not been facilitated by Tourism Office of Tolitoli Regency, in any form of facilities and infrastructure needed for development. But unfortunately the show like this is also not sustain because there is not a routine event and amenities facilitated by the Tourism Office of Tolitoli Regency.

Conducive climate can actually be stimulated through giving awards for art community which have high achievement or raise the pride regency. But the awards and certificates for their achievements of art studio in Tolitoli, have not ever undertaken by the Tourism Office in Tolitoli Regency. Based on the interview with the Chairman of the Art Studios "Piso Lipuu" expressed by Mr. Hudri, as the Head of the art studio which stated that "... during this Lipuu Piso art gallery stands, this art studio has never been given a certificate and other award

from the local government". The same thing was also stated by Mr. Yandi Helmi, as a member of the art studio "Binja Opungta", that "... this studio has never been awarded certificates and other awards, even the studio has often performed on behalf of the name of Tolitoli Regency"

Preparation of conducive climate or situation theoretically can also be done by providing a representative theaters eligible for traditional art performances, as well as efforts to provide information to msyarakat about traditional art performances held in Tolitoli Regency. However, the providing of a representative building for regular performances has not been done by the Tourism Office of Tolitoli Regency. And also were the providing of widespread informations about the performances of traditional art community.

Based on the description above, it can be stated that the arts community empowerment by the Department of Tourism through providing of conducive climate for the growth of the arts community in art studio, has not been implemented properly. Many aspects are theoretically possible, but practically nothing in practice.

C2. Empowerment in the Form of Strengthening Internal Aspect of Art Community in Art Studio

The strengthening of internal aspect of art community in art studios theoretically should be done by improving education and training, health, and welfare of the actors of art community in art studios, as well as in the form of infrastructure in the art gallery that will be used in the development of self or internal strength in the arts community in the studio-art grim. But the fact that there is not necessarily as the theoretical possibility. Here is a real picture related to the strengthening of internal undertaken by the

Government (Department of Tourism) against the arts community at the art galleries in Tolitoli

Strengthening of internal power in the form of education and training associated with traditional art Tolitoli have not been unertook used by the Tourism Office of Tolitole Regency. Improving of health in the form of health insurance for the member of arts community in art studio has not been done. Related with the providing of facilities and infrastructure at the art studio, the efforts have not undertaken yet by the Tourism Office in Tolitoli Regency. It is characterized by still lack of facilities and infrastructure aid provided by the Tourism Office of Tolitoli Regency. Tourism Office has just given only one aid instrument, and then only on one of the art studio "Maradhika" located in District of Baolan. Whereas the providing of facilities and infrastructures should not only in the for of musical instrument, but in many other facilities and infrastructures that should be met for instance the training ground, secretariat, or warehouse storage space. Art studio "Bija Opungta" which has ever held show in collaboration with art studios from other Regencies, has not received any aid in the form of arts facilities or infrastructures from the local government especially the Tourism Office in Tolitoli Regency.

Based on the overview and discussion above, it can be stated that the empowerment of the art community undertaken by the local government (Tourism Office) of Tolitoli Regency in the form of strengthening the internal power for the art community in art studio, has still not implemented widely. In fact, the various possibilities for empowerment in the form of strengthening the internal power for the arts community in art studios, has been executed poorly.

Figure 1 The Condition of Art Studio where art community conduct the activity

Figure 2: The art festival that has run annually, but not in definite plan and sustain

C3. Empowerment in the Form of Protection For Weak of Art Community

Empowerment through the providing of protection for the weak of arts community, was also not undertaken by the Tourism Office in Tolitoli Regency. Requirements to get aid from the Tourism Office in Tolitoli which requires the legal form of the notarial Note of the organization, less show their alignments to the weak of art community. Although the art studio has been standing in a very long time, when it has not supported by the legality, so the arts community that could not receive aid from the Tourism Office. One example is the "Sibituolu" art studio that was founded in 1992, because it does not have the legality of the notarial deed of establishment of the art studio, it has never received the aid from local government (Tourism Office), especially aid in the form of funds for self-development. Art

studio "Duta Nusantara" which is located in the urban Village of Pamasakan, District of Baolan, with conditions that are still very modest, it has never get aid from the local budget of Tolitoli Regency, but ever get aid fund from the Government of Central Sulawesi Province. But its condition until the research done, is still very modest.

The overview above show that empowerment efforts undertaken by Tourism Office, for the arts community in the form of giving protection for the weak of art community, has not done well by the Tourism Office in Tolitoli Regency.

D. CONCLUSION

From the above discussion, the following conclusions can be taken:

1. Of the three forms of empowerment efforts that includes: 1) creating conducive climate or situation to development; 2) strengthening the internal power; 3) protecting to the weak of art community, has not been implemented well by the local government (Department of Tourism) in Tolitoli.
2. Efforts to improve the conducive climate done just a commemoration event of Indonesian independence and anniversaries of Tolitoli birthdays. Development of infrastructure building and event for cultural performances relative rather routine and certainly, has never been realized by the Tourism Office of Tolitoli Regency.
3. Efforts to increase internal capacity in terms of training and the providing of facilities and infrastructures as well as training exercises associated with the economic and physical abilities are also has given by the local government (Tourism Office) in Tolitoli poorly.
4. Some of the aid given to the arts community in art studio still not giving protection to the weak of art community, or more put the formal aspects and legality rather than the protection to the weak.

E. REKOMENDATION

Based on the conclusion taken above, it is recommended as follows:

1. Tourism Office of Tolitoli Regency needs to improve its efforts in empowering the arts community in art studios that covers the whole or the three forms / aspects include the creating conducive climate or situation for the self development of the arts community in art studios, the strengthening of internal power for the arts community, and giving protection to the weak of the art community

2. To provide conducive climate for art community, the Tourism Office of Tolitoli Regency need to improve through the efforts of: 1) the development of a representative art building for the staging of the production of the arts community in art studios; 2) increase the regular or routine events; 3) dissemination of information on planned performance / staging of art from the art community in art studios; 4) provides awards for achievements achieved by the arts community by giving an award in the form of funds or issuing a certificate of their achievement; 5) provide a certificate of participation in any cultural event for the art community involved.
3. Strengthening internal power in the arts community in art studio that still needs to be done is to improve education and training for the arts community in art studios in order to raise the quality of his artistic creativity and be able to earn extra income from the main work as an artics or unrelated to work their art, so they are able to improve their welfare
4. Improved weak alignments (protection) can be done by providing guidance and facilitation to art community to be able to prepare pre legal form of the standing in the form of Statutes and Bylaws of the art community that has not ever had a legal notarization, and then giving legal form of information registered by the Tourism Office.

ABSTRACT

This paper argues that the Indonesian state's labels are key challenges for Indonesia as a nation-state. In response to questions on whether Indonesia should be categorized as a successful or a failed nation-state, this article provides an explanation of how Indonesia experienced the transition from colonial to independent state, transition to peace after the dual 'revolutions' of 1965 and 1998, and transition from centralized 'to decentralized 'sovereignty' and from authoritarian regime to democratic state. In this essay, therefore, I have decided to use historical evidence to address on going public and scholarly debates about the form of the Indonesian state in the democracy era which is confrontation between islamic-conservatism and secular-liberalism. To understand Indonesia as a contemporary state, I make reference to Benedict Anderson's concepts of imagined community, power and responsibility in the post-9/11 era of international threats. Finally, of a number of challenges to Indonesian nation-state building, the most pressing is the emergence of ethnic and religious conflicts, and separatism caused by domestic factors in the failure of economic development and the lack of democratic governance. Thus, the label of Indonesia as a multicultural state is questionable.

Keywords: Pancasila, Islamic law, international threat, nation-building, democratic governance, sovereignty.

Introduction

The two terms "nation" and "state" are largely discussed in contemporary political theories. The broader discourse is about development state theories. To maintain order, states need to build their power and sovereignty. Fukuyama (2004) introduces several concepts in this regard: the strong and weak state, failed and successful state, and the scope and the capacity of state. Of course, the notion of Indonesia as a "nation" is itself debatable. Benedict Anderson (1983) contributes to answering this question by defining the nation as "an imagined political community"—imagined as both inherently 'limited' and 'sovereign.' There are three things we need to understand in connection with this idea: the specific definitions of imagined, limited, and sovereign.

The nation as an imagined entity is a valid concept, because the members of the community never know or meet most of their fellow citizens, yet in the mind of each one lives the image of their communities. The nation is, moreover, limited because the community is limited territorially by other nations we call sovereign. This explanation is helpful to understand a contemporary nation like Indonesia. Meanwhile, Max Weber defines a nation as "a community of sentiment which would adequately manifest itself in a state of its own; hence a nation as a community which normally tends to produce a state of its own" (Roeder, 2007:3).

Historically, from 1602 to 1945, Indonesia was colonized by European nations. Beginning with the coming of *Verenigde Oost-Indische Compagnie* (VOC) to the lands now called Indonesia, the kingdoms of these islands were conquered in various ways. At that time, the emotional binding or "imagined community" did not exist, so there was no solidarity when facing foreign occupation or wars in neighbor kingdoms against the Dutch. In short, people did not recognize a local sense of nationalism as a political ideology. The name 'Indonesia' itself did not exist until 1850, before which this area was called 'Dwipantara', 'Nan-hai', 'Hindia Belanda' (Netherlandsch-indie), and 'Insulende.' In 1849, a British expert in ethnology, George Samuel Windsor Earl (1813-1865), wrote an article that proposed two options for naming this land: Indunesia or Malayunesia ("Nesos" in Greek means "island"). Finally, Indonesia was chosen as the official name of the state.

Indonesia experienced colonial occupation for a long time. At least three nations exploited its natural resources: the Netherlands, Portugal, and Japan. Consciousness of the need to escape from colonialism spread after contact with other cultures and especially developed countries. This was a logical consequence when Indonesian students studied in western countries. They adopted radicalized positions because of their recognizance of the contradictory reality. On one hand, they experienced and enjoyed freedom abroad, and on the other hand, they saw their own state as colonized by another; local people were not able to enjoy freedom and equality as human beings. In addition, the Declaration of Human Rights was proclaimed in other parts of the world including in the United States. Nationalism then spread widely in many places as a form of local resistance to foreign powers. In this bloody revolution millions died, a very high cost for the birth of modern Indonesia as a republican nation-state and for popular sovereignty. Finally, Indonesians obtained their own 'free state' or 'independent state' on August 17, 1945, *de facto*, followed by *de jure* status in 1949.

The country is endowed with rich natural resources: petroleum, natural gas, coal, timber and a number of minerals such as bauxite, tin, copper, gold and silver. These resources helped Indonesia to achieve strong economic growth for some 30 years before it was hit by the Asian financial crisis in 1997-98, followed by political and social unrest. Indonesia is now emerging from its political and economic crisis and has undergone tremendous changes due to ongoing structural and political reforms since 1997. These include major political liberalization, democratization, and the 'Big Bang' decentralization system imposed by government Law No. 22/1999 and Law No. 25/1999.

The Republic of Indonesia is the largest archipelago in the world, having over 17,500 islands of which 6,000 are inhabited. It has a total area of approximately 1.9 million square kilometers and, in 2010, the estimated population was approximately 238 million. That is why Indonesia has become a G-16 member (Jones at all, 2009). In accordance with the concept of decentralization of the unitary state, power and authority is divided among local governments. Indonesia has achieved success in transforming power from the national to the local level. Administratively, following the reforms of 1998, Indonesia has divided its territory into 33 provinces, about 400 districts, 93 municipalities, 5,263 sub-districts, 7,113 'kelurahan' (villages within cities), and 62,806 villages (BPS, 2010).

The central government has designated four provinces as having 'special' status, including Nangroe Aceh Darussalam, because its people want to implement Islamic law; Papua province, because its people want to separate from Indonesia; DKI Jakarta, because it is the capital of

Indonesia; and Yogyakarta due to its role in supporting Indonesia as a free state. Yogyakarta province was also the historical capital of Indonesia. Of the four specialty designated areas, only three are supported on a statutory basis by means of Law No. 44/1999 Concerning Privileges of the Special Province of Aceh, Law No. 21/2001 on Special Autonomy for Papua Province (special members of parliament), and Law No. 29/2007 on the Capital Region of Jakarta as the Capital of the Republic of Indonesia.

While the Special Province of Yogyakarta has not received legal legitimacy in the post-reform era, it does have legitimacy under the declaration of two kingdoms of Yogyakarta on 5 September 1945. Traditionally, the Sultan as regional ruler holds all power in Yogyakarta province, including both traditional and legal-formal authority (Weber, 1947). The special province of Yogyakarta was also legitimated in Article 18 UUD 1945 of Indonesia's Constitution, which mentions that the national government pays respect to areas having special status. In addition, before the independence of Indonesia, the Dutch had recognized the Yogyakarta Sultanate as a kingdom with the power to govern its own households. Politically, Yogyakarta province received its special status due to the importance of the Yogyakarta Sultanate in supporting Indonesia to become an independent state. Officially, in 1950, Yogyakarta became part of the unitary state of the Republic of Indonesia inherent to its special rights, with the sultan automatically recognized as also the governor.

Thus, the special status has implications for the narrowing of central authority in certain aspects of politics, economics and culture, causing tensions between the central government and local interests to appear through political policies. In fact, the national government continues a strict form of government by exercising military power both directly and indirectly.

Indonesia, as a new nation-state, was from the very beginning given a variety of names or labels, either by its own people or by foreign observers. Some labels were pinned on Indonesia such as "Post-Colonial State," "Bureaucratic State," "Pancasila State," "Secular State, Multicultural State," "Authoritarian State," "Religious State" and, finally, "failed state." I am not going to discuss all of these labels but this paper, but rather focus on several of them. Therefore, the following discussion is intended as an attempt to rediscover a national identity of Indonesia in response to the question of whether it has succeeded or failed in building itself as a nation-state, and whether it is a weak or strong state.

The Labels as the Challenges

In Indonesia, a 'name' or 'label' is believed to be a mirror of behavior stemming from philosophical values. Certainly, Indonesia's culture has been strongly influenced by Islamic values from the Middle East and Central Asia, so that Indonesians believe that a name can carry spiritual power. Unsurprisingly, they also generally hold a view whereby state ideology should be a way of life, and the only ideology is Islam, giving them a spiritual grounding both in the world and hereafter. They argue that the symbol of a nation is important but not to 'Pancasila' because it is man-made. In the modern era, many states have made their own slogans, such as "Indonesia Ultimate Diversity," "Amazing Thailand," "Malaysia Truly Asia," "Incredible India," "Cambodia The Kingdom of Wonder," and so forth. In short, the state's label a challenge unto itself in recent politics in Indonesia.

This label concerns not only economic issues but also inherently ideological problems such as the fights between groups that embrace the ideology of the west versus that of the east, socialism versus capitalism, religious views versus secular views, and democratic versus non-democratic ideals. The emergence of Indonesia's various labels, such as "bureaucratic state," "post-colonial state," "authoritarian state," and "failed state," following Richard Robison (1990), has been strongly influenced by the globalization of educational and democratic ideologies. Not only do foreign scholars label Indonesia; labels are also assigned by Indonesians who have experienced higher education and even by ordinary people with local perspectives and values, who categorize the types and styles of political leadership.

Moreover, Indonesia has many types of leadership, particularly at the national level. To name a few, Herbert Feith (2006) divides the Indonesian leaders in the post-revolutionary era into two types of leadership. The first type is 'solidarity-makers' and the second 'administrators.' Sukarno was a solidarity-maker, and Muhammad Hatta was an administrator. In the Suharto regime, the dichotomy between civilians and the military was very strong. Meanwhile, ordinary people give the president a unique label, such as President Sukarno as father of the revolutionaries and the founding father, President Suharto as the father of development, and President Abdurrahman Wahid as the father of pluralism, and so forth.

Indonesia as the Post-Colonial State

As a colonial state, the Dutch colonial holdings in the archipelago led to absolute poverty in Indonesia, as was the case for other colonies in general. Nationalism became the most powerful political weapon of that period (Breuilly, 1993) in dealing with the revolution spirit of the time. The presence of the Japanese in Indonesia (1942-1945) further strengthened the local resolve to break away from colonial rule with a semi-military force. In that period, President Sukarno united the people by using the magic word of Nationalism. Jhone Roosa (2007) writes that Soekarno used charismatic power to maintain unity in Indonesia. I myself strongly believe that Soekarno as a political leader created his power via the notion of nationalism to influence his people to struggle against the Dutch on behalf of the freedom and sovereignty of Indonesians.

In this section we will discuss how the nationalist movement led Indonesia to be a 'free state' separated from the Dutch and the challenges after gaining this independence. Perhaps Indonesia is the only nation-state in the world that was built up from a collective declaration of young people from various ethnics and cultures. It was a long-term process of national consciousness among Indonesian people. This is a great movement of consciousness in Indonesian history as an impact of colonialism. They agreed to make this dream come true via the "Sumpah Pemuda" (Youth Oath), which contained the following contents as of October 28, 1928:

Bertanah air satu—Tanah air Indonesia (One nation—the Indonesian nation)

Berbahasa satu—Bahasa Indonesia (One land—the Indonesian land)

Berbangsa satu—Bangsa Indonesia (One language—the Indonesian language)

Without any doubt, one of the keys for unification was the Youth Oath, which brought together youths of various ethnic and cultural backgrounds (including Sumatran, Javanese, Batakese, Ambonese and Chinese) who gathered and vowed to eliminate the great divide of their racial barriers, and declared themselves Indonesians. This oath became a keystone in uniting Indonesia, and proved to be pivotal in the struggle to break the shackles of colonial rule. Indonesia's political history can also be viewed as a process to fulfill the promise of nationality. With the project of nation and character building, Sukarno highlighted how to be proud of being Indonesian. In fact, Sukarno also created ideological enemies to consolidate and strengthen the bonds that the Indonesian national identity formed, as it established a concept of a strong nation, equitable, that should be respected by other nations. Unfortunately, by governing as a commander, Sukarno did however fail to deliver economic prosperity, which is an essential human need.

Actually, long before 1928, an exclusive organization of indigenous people—Budi Utomo, existed, yet this organization was too close to the Dutch, and therefore they were less powerful in influencing people, since it only recruited educated and noble people. Thus, the Youth Oath had the very best chance to establish an independent state by the nationalism movement. The establishment of an 'Indonesian Language' was an important tool to unify the people in the face of diversity. People turned diversity into a reason to unify in order to fight against colonialism, either with cooperation or confrontation. Awareness of nationalism in the independence movement in Indonesia is strongly supported by Anderson's theory (1983:44-45) that argues for the role of print capitalism. In this view, print capitalism becomes the most fundamental aspect of nationalism. Anderson further argues that print capitalism influences nationalism movements in three ways. First, print languages create unified fields of exchange, which allow dialectically disparate populations to imagine themselves as part of a community through the shared print language. Second, print capitalism then gave a new fixity to language. In this way, people can read the language of past centuries and, thus, they can imagine a previous national community. Finally, print capitalism creates new languages of power that are elevated to new politico-cultural eminence.

The new name, 'Indonesian,' was adopted by students in the Netherlands as term for what was then called the Netherland Indies, as they claimed a right of independence through student movements (Lane, 2008). In 1922, the spirit of nationalism among Indonesian students in the Netherlands grew and thrived as the idea of Indonesia as an independent state caught on. This is evidenced by the birth of the organization "Perhimpunan Indonesia," as well as "Indonesia Merdeka" magazine. Audry Kahin (1999) states that the development of nationalism also emerged in West Sumatra, where a movement was spearheaded by Indonesian students who had returned from the Middle East. There, they built a national consciousness through Islamic education in the villages.

As we have seen, Indonesia was born through a bloody struggle in 1945, and the Netherlands admitted its sovereignty and independence in 1949. It consists of a collection of 17,504 islands (Depdagri, 2004), 490 ethnic groups (Wanandi, 2002) with 238 million people (Census 2010 from BPS), and another source shows that in 2010 Indonesia the population had already reached 242,968,342 (US Census Bureau 2010). Indonesia has over two hundred and fifty distinct languages that are spoken in the archipelago (Lane, 2008:1). In addition, Indonesia has 6 formal religions and

many other belief systems. People have different regional backgrounds, another from a small kingdom, a kingdom on the basis of religion, and so forth.

Of course, it was not easy to combine all of these cultures into one state, one language, one land and water in the frame of "Bhineka Tunggal Eka," a slogan of the State of Indonesia which means "Unity in Diversity," or which may also be translated as "Many, Yet One." Many people are optimistic that diversity is a source of strength for the nation-state, and now many are starting to ask, in contrast, whether many riots in Indonesia were caused by the mismanagement of diversity. They are convinced that diversity in Indonesia does not provide a benefit at all for the advancement of democracy and prosperity. In addition, Indonesia now has a wonderful new national slogan: "Ultimate Diversity," highlighting that we are different and united because we are not only unique but also different. However, Indonesia also experienced government as a federal state (the RIS or Republic of United Indonesia) under Dutch colonial that included Madura, Sumatra, Pasundan, and Java. Unfortunately, most Indonesians, with nationalism, fought against this form of the state, and they succeeded. This confirmed what Kohr (1986) argues, namely, that nationalism is a political movement that aims to grab power or regain sovereignty and legitimacy.

Soekarno as the first president declared that the Indonesian nation should not be "a nation of coolies and a coolie among nations" (Lane 2008:277). Before 1945 was the hardest time for Indonesia as a nation-state, because it was still controlled under colonialism by the Netherlands. The founding fathers of Indonesia worried continuously about the possibility of failure in building a new nation-state. They wanted Indonesia to be a powerful nation, independent, and sovereign. The sovereign state, according to Hobbes (1651), means that the state must control civil, military, judicial and ecclesiastical powers. However, other philosophers such as Kant (1795) or Arendt (1951) have also drawn attention to the need for freedom and equality. In Indonesia's case, freedom is not identical to equality.

The first president, Sukarno, was a solidarity maker in the nation state project in Indonesia who tried to keep an equal distance from all interest groups, including nationalist organizations, religions, and the communist party. He strongly argued for nationalism via the so-called 'Nasakom' (Nationalism, Religion, and Communism) movement, which combined all of these in the governmental body. He was then deposed in 1965 by General Suharto who supported anti-communist propaganda at that time. Social and political unrest happened throughout the nation, and military power and Islamic organizations cooperated to fight against those who are suspected PKI members, resulting in an estimated 500,000 deaths. With military power, Suharto formally became president in 1968 and stepped down in 1998 due to the "people power" movement, marking Indonesia's so-called reform era.

Suharto's regime created a strong political machine, Golkar, a pro-government party based on bureaucratic and military interests. He embarked on a development program that focused on economic growth, and he banned the involvement of civil society in political issues. In doing so, the central government limited political parties to only three recognized ones, with activities at the provincial and district levels. By the 1990s, Suharto's family and cronies were the major beneficiaries of state privatization schemes and in many cases ran business monopolies (Robison, 1978). Soaring

inflation and unemployment following the Asian financial crisis of 1997 prompted urban riots in 1998, and Suharto was forced to resign. His successor, President B. J. Habibie, imposed several laws and policies in order to give the press and people freedom to express, freedom to speak and opportunities to build political parties. Hundreds of political parties rose after this reform. The Habibie administration gave the option to the East Timorese people to choose whether they intended to join with Indonesia or to become a free state (Huang & Gunn, 2004). As the result of this referendum, the East Timorese choose to form an independent state.

Shortly after independence came a few debates between the leaders of the State. First, the discussed the importance of the "Jakarta Charter," which proposed Saria Law (Islamic Law) as the highest constitution of the state. But this proposal ultimately failed due to the strength of groups who promoted a respect for all religious communities in all parts of Indonesia. Nonetheless, theoretically, Indonesia has still been heavily influenced by the ideas of theocracy or acknowledgement of the state as divine (Hobbes 1651), in which the state recognizes only six religions in Indonesia. The highest constitution of Indonesia states that the nation's independence is only because of God's will. At that time, Indonesian leaders tried to look for a viable form of government, whether unitary or federal state, republic or monarchy, presidential or parliamentary. Finally, the 'national' leaders decided that the proper form of government is a unitary state, a republic, with a president.

Indonesia's vision to promote world peace was written in the preamble of the 1945 Indonesia constitution in order to protect the people, to promote prosperity for every person without discrimination, to provide education for all, and to actively participate in making world peace (Preamble, UUD 1945).

In addition, the developments of post-independence 1945 and post-reform 1997-8 are still stained by ethnic wars, power struggles between regions, as well as national and local conflict, which together justify Max Lane's findings (2008) that Indonesia as a nation-state has not finished yet, also proving that because of nationalism, consciousness is nothing but an "imagined community" in the modern state theorist view, with an artificial nature, as Hobbes (1561) pictures in his Leviathan. On the other hand, there is a strong feeling that nationalism must be maintained to keep 'popular sovereignty' and the principled existence of the State, as Hegel and Arendt argue, whereby freedom and absolute equality among nations are correlated with other nations. This is consistent with Indonesia's constitution, which was ratified in June of 1946.

The militaristic regime of Suharto in Indonesia has provided enough lessons for Indonesians that a negative peace is not real long-term peace. Suharto was too confident that military power could be a 'guarantor' of nation-state building (Roosa, 2007). In fact, the worsening of relationships among citizens in Indonesia after his fall is proof that a threat from the military was not an effective tool to maintain peace. In Aceh, for instance, military operations were chosen to maintain "peace" and "order" by combating "the rebellion," but this only maintained peace for a short time (Jemadu, 2004; Huang & Gunn, 2004). The distrust of the Aceh people toward the Javanese, for example, has increased based on fact that most of the military personnel sent there were Javanese. A general bias was created whereby the Indonesian Javanese were seen as colonizing Aceh for years and, for that reason, GAM was seen as having a legitimate right to drive out the Javanese from Aceh, regardless of their

individual status as civilians or military personnel. Meanwhile, the government in the Suharto era tended to believe that military operations were the best option. In my opinion, negotiation was impossible at that time, because the government set other groups as enemy organizations.

This is precisely in line with Breuilly (1993), who argues that nationalism in Indonesia was often used as a tool to conquer political opponents. In practice, nationalism is nothing but politics, insofar as it has been applied since the Sukarno era under the so-called Old Order, which was a strain of nationalism more closely aligned with socialism and communism. This political tool was then used by Suharto to drown out various social upheavals in the military, as the military was considered the only means of legitimating the state's monopoly on physical violence on behalf of the integrity of the nation and the State. The intent was, on behalf of nationalism, to force different groups and movements to obey the law at the risk of being banned.

As we have seen, the context of the emergence of nationalism is closely connected with the phenomenon of competition among nations in the world. The emergence of nationalism is inseparable from the emergence of racial theories that have been put forward hundreds or thousands of years ago about superior and inferior races that could threaten each other. Hitler was one of the genuine nationalists who were influenced strongly by social Darwinism. In the context of the period of revolution in Indonesia, nationalism was a tool of propaganda against the colonial Dutch, though it caused millions of ordinary people to die. Mohammad Hatta, as vice president of Indonesia, rejected this form of nationalism, one that only leads to go to war rather than contributing to the world order. Yet many people recognize that nationalism as an ideology is essential to free all mankind from slavery, because every human being was born inherent with his/her right.

Bureaucratic State

Generally speaking, the post-colonial state tends to be a 'bureaucratic state' with a complicated administration and followed by many practices of corrupt behavior (Rondinelli 1983; Chema 2010). It has been influenced by the role of the revolution in bureaucratizing France (Pfaf, 2004), but Skocpol argues that the revolution eliminated the "medieval rubbish" of parochialism and privilege that hampered the creation of "modern bureaucratic state." Moreover, Anderson (1983) labeled Indonesia, under Suharto, as a "military state" with complicated bureaucratic agencies. Meanwhile, Hadiz and Robison named Indonesia as an "authoritarian-capitalist state." This means that Indonesia is governed by a capitalist class, with even the politicians and state both engaging in business.

Bureaucracy is also seen as the elites' interest to gain and defend their power in society via rationality and authority. To Max Weber, this is a characteristic of the modern state, which governs society by imposing legal tools. In Indonesia's case, the strongest and most powerful bureaucracy was implemented along with the dictatorship from 1965 to 1998. As for Indonesia, according to Vedi R Hadiz (2000:4,10) and Robison (1990), in a period of more than 32 years, a bureaucratic-authoritarian state that lead to state capitalism was characterized by the proliferation of activities of the government and authorities in the capital and accumulation of efforts to manipulate the law in order to maintain power. In this situation, Diamond (2008) refers to a "predatory state," that is, the behavior of elites as

cynical and opportunistic. In such a system, as Robert Putnam wrote in his classic *Making Democracy Work*, "corruption is widely regarded as the norm," while political participation is mobilized from above, civic engagement is meager, compromise is scarce, and "nearly everyone feels powerless, exploited, and unhappy." Predatory states cannot sustain democracy, for sustainable democracy requires constitutionalism, compromise, and a respect for law. This phenomenon commonly occurs in countries that are in transition from post-colonialism.

The bureaucracy in Indonesia has been powerful in keeping the political and social order. This, then, has contributed to a deep gap between state and society, and it has concentrated economic power in certain groups of power holders and owners of capital (Robison, 1978; Hadiz, 2005, 2007). Theoretically, such a regime is similar to that described by Barbara Geddes (1999), who states that there are three types of regimes: military juntas, one-party states, and personalized regimes. Each is subject to different pressures and tends to end in different ways. Most people do not want power in the hands of the military, but they want the military to become the unifying symbol of the nation-state, to provide public order, and to protect the people as a whole. The relationship and the role of military vis-à-vis nation-state building are explained by various scholars, including Hashim (2008), Kim (2010), Alexander M. Golts and Tonya L. Putnam (2004), Zeo Scoot (2007), and Bernazzoli and Flint (2009).

As a result, the state bureaucracy has been a military-dictatorship with absolute power, leading to the abuse of power in the form of corruption, collusion and nepotism (Lord Acton, 1949). The authoritarian state, as a label for Indonesia, is valid actually not only for the Suharto era (1965-1998) but also for the Sukarno era of so-called guided democracy (1959-1966). However, Suharto was the most authoritarian president in Indonesia. He, through military power, murdered 3 million people on behalf of the anti-communist cause (Anderson, 2008). Under this regime, democracy was used as an instrument of legitimacy, and the government thought that the economy was more important than freedom in establishing democracy. Studies have labeled this period as that of an authoritarian state, when the State was stronger than society and it dominated to preserve their power and authority. As a consequence, the bureaucracy became powerful and strict; corruption was acute due to patron-client relationships at the center of government. I can say that general elections were held only to gain legitimacy from the public and build an image of the state as firmly democratic, hiding the 'state of terror' from its own society and people. This era was called as 'quasi democracy' or what Schumpeter has labeled 'procedural democracy' (Dahl, 1963).

President Suharto led a regime that was supported by the military with a strict bureaucracy. Unlike Sukarno, who maintained unity in Indonesia by nationalism, Suharto resorted to military force and coercion during his regime, killing 3 million people who were considered members of dangerous groups, on the pretext of combating communism (Anderson, 2008). Another sources mention that these actions were sponsored by the US Central Intelligence Agency and by Britain. Both the US and Britain wanted the army to act against the communists (Curtis, 2002). In this period, the state agency used the military as a tool of legitimacy to control the people and, at the same time, monopolized economic resources rather than freeing them up for the cause of freedom and welfare. Moreover, the New Order regime was a "Leviathan" in Indonesia with full sovereignty. As a result of a strong

bureaucracy, then there is the proliferation of patron-client relationships in the central government as well as corrupt practices. I can say that, in this period, the general election is only to declare to the world that Indonesia was a democratic state. There is no doubt that Indonesia held general elections by a schedule as provided in the concept of "procedural democracy" or "electoral democracy" (Dahl, 1963). However, these elections only produced a 'predatory state' in which "there are elections, but they are contests between corrupt, clientelistic parties. Elections are only democratic if they are truly free and fair. There are parliaments and local governments, but they do not represent broad constituencies. There are constitutions, but not constitutionalism." (Diamond, 2008)

Actually, in the orientation of power, politics in Indonesia before and after the reforms did not change significantly. Actually the struggle for power can only be justified if it can be shown that, in practice, we could use these powers in a way that brings benefit to the people. The emergence of Leviathan, extraordinary powers that could impose the submission of all parties, can only be justified if it can avoid a war between all men against all men. Without proposing and realizing the intended use of that power, it is rationally justifiable, then, that the power struggle is none other than the realization of a lawless society that will only result in a match between forces that will not guarantee social order, because it only won for capitalists and rulers, who only think about their own interests rather than those of the people (Diamond, 2008). In order to unify the people's imagination, like Anderson (1991:243) writes, President Suharto needed to build the three strong institutions: the census, the map, and the museum, continuing what the Dutch colonial state had already built in Indonesia for the same purposes.

After the 1998 reform, there was a shift in political society, which was originally seen as more governmental activity in the interests of the state, but oriented to the interests of society. Civil society groups succeeded in forcing President Suharto to step down from his throne. However, the old elite is still too powerful to defeat. They have tended to restore a political party that is dependent on state funding (Imawan, 2004). This is partly because of the financing of political parties, which basically do not rely on the power of the party itself through the contributions of the members, but instead rely heavily on state funding.

To sum up, the strongest national issue for post-Suharto Indonesia is territorial integrity (Roosa, 2007). This has brought strong military power back into the realm of politics, for instance, concerning the battle between the Indonesian army and GAM (Free Aceh Movement) in Aceh and the military violence to the OPM (Papuan Freedom Movement) in Papua.

"Pancasila" State, Secular State vs. Religious State

Pancasila, the state ideology of Indonesia, means Indonesia as a "Multicultural State" or "Pluralist State" because of its cultural diversity across the nation. This part of paper uses the theory of a "multicultural state" to build an understanding of Indonesia as a nation. The republic of Indonesia carries a national philosophy, 'Unity in Diversity,' with five principles of the state, namely, In one God we trust, humanitarianism, unity of nation, representation of the people and social justice (Indonesia's Constitution; Lanti 2006). However, the hardliner and extremist Islamic groups have tried to force Islamic law as the national law as part of the "Jakarta Charter" movement. These groups are strongly

against the secular and 'pancasila' state as the final form of Indonesia state (Maarif, 2008; Wahid, 2009). In conservative Islamic groups, pancasila is viewed as a secular and a liberal state by connecting them into the Western concept of state. For example, the Acehnese asked the national government to implement its own Islamic law in Aceh province (Jemadu, 2004).

To date, the biggest question, which does not have an exact answer, is whether Pancasila should be the final State Ideology of Indonesia. The groups on either side of this question argue for Indonesia as either a religious (Islamic) state or a "Pancasila" (multicultural state). The "Pancasila" state is often understood as a secular state by many Islamic fundamentalists. However, both sides actually agree that Indonesia is neither secular nor liberal. Unfortunately, the discourse about the type of state is still unresolved. Hill and Weidemann (1989) argue that Indonesia is one of the most diverse and heterogeneous countries in the world. This country was born in a bloody struggle in 1945 and recognized by the Dutch as sovereign in 1949. Muhammad Hatta (2008), the first vice president of Indonesia, said that independence was not given by others, but rather it was because of the serious efforts of Indonesians and because of God ("theocracy"), whereby God blesses Indonesians. This means that Indonesians strongly believe in what Hobbes said about "divine power." This statement is echoed in the preamble of the Indonesian constitution (UUD 1945).

Pancasila as the ideology of the state does respect diversity. In other words, Indonesia promotes pluralism among its citizens. As stated above, multicultural roots built the nation-state. Indonesia is often associated with the 'magic and political' slogan, 'Unity in Diversity,' which means that Indonesia is built from many different aspects that are different kingdoms, languages, ethnicities, races, etc., all of which mix together in the form of a 'unitary state' rather than a federal form. We can see this from the "Youth Oath" (1928), which calls for a united Indonesia regardless of racial background, religion, and class. However, challenges and resistance against the 'multicultural state' later resurfaced due to the presence of fundamentalist Islamic groups and Islamic radical groups, who want to uphold Islamic law in Indonesia. Their argument is in favor of a Muslim majority state.

Indonesia's government officially recognizes Islam, Protestantism, Catholicism, Hinduism, Buddhism, and Confucianism as the formal religion. Every single man and woman must choose one of these as his or her religion. Members of unrecognized religions are banned, and atheism is not accepted. The national government has often failed to respond to religious intolerance in recent years. For example, the discrimination and violence against Ahmadiyah—a heterodox Islamic sect with 400,000 Indonesian followers—increased in 2008 after the Religious Affairs Department recommended that the group be banned. Seeking a compromise, the government banned Ahmadists from proselytizing, but the sect has been banned outright in several districts and in the province of South Sumatra. Some 130 Ahmadis remained in shelters in 2009, after sectarian violence in 2006 had forced them from their homes in Mataram, Lombok. Separately, violence between Christians and Muslims in Poso continued to decrease in 2009, although underlying grievances and low public confidence in government remain unaddressed. The Wahid Institute reported 232 incidents of religious intolerance in 2009 (Wahid Institute Report, 2009).

Competition between interest groups in forming the future state of Indonesia has always existed, and they not only compete in making laws at the national level, but also in local governments,

in order to force the national level to adopt changes already in place in local states. This will lead to the “multicultural state” becoming an “interest group state,” with contestation between the religion (Islam) and the state as observed by Hefner (1999) before and after the fall of Suharto regime in May 1998. He notes:

20 years of Islamic resurgence have not have not created a Muslim political community consensus. Nor have those years united Muslims around a common leader. But it is important to recognize this much in Muslim Indonesia politics; years of struggle against Suharto dictatorship deepened mainstream commitment to democracy, constitutional law, civil independence, and peaceful reformation. (Azra, 2001:67)

As stated by Mohammad Hatta (2008), Indonesia is facing two major ideologies, capitalism and socialism, and Indonesia needs to take ‘the third way’ because neither ideology fits with the culture of Indonesia. In 2010, the parliament and the media re-enlivened the discourse on whether or not Indonesia should become a religious state or remain secular and liberal (Kompas, 11/26/2010).

Many Islamic groups denounce Pancasila as a state ideology. They charge that the state is not happy if Islamic groups run the government. Under The New Order, the state killed many Islamic group members, and their leaders, for example in Aceh, Priok, and Sulawesi. Unsurprisingly, the debate has emerged in an era during which democracy as a political and governmental system is widely accepted. Democracy can survive because it provides another mechanism of control, and is reluctant to be controlled. The check and balance mechanisms between state institutions and its citizens uphold the ideology of state laws that protect the diversity of society. In their understanding of the law, people do not exist above it. At any given moment, the law is needed to achieve public order. That is the main reason why the state has the authority and power to use coercion when maintaining the state constitution (Weberian; Skocpol, 1985), or to enforce the law in terms of making people obey the law (Thomas Hobbes). While the Indonesian constitution has clearly embraced the multicultural state, in this case, it also means the state has the right to prevent those who oppose the idea of Indonesia as a Pancasila state.

But this fact is not easy to understand, because pro-Jakarta charter groups call for a return to the “original” Constitution in accordance with the Jakarta charter, implementing Islamic law for its believers. These groups are categorized as Islamic “hardliners” who are members of various Islamic organizations in cities or in villages. They are loudly hostile to pluralism. These views are likely influenced by Islamic views from the Middle East, where Islam is considered a universal religion that will not harm non-Islamic groups, because Islamic law is only applicable to Muslims. Thus, if Indonesia imposed Islamic law, they strongly believe, this reform would not disturb minority groups.

Some community leaders have said that Indonesia does not need to be a state of extremes, whether religious or secular. For many nationalists and moderate Islamic communities, they adhere to a view in which it is necessary to stimulate further progress by arranging the power for diverse groups in Indonesia to effectively control each other. In addition, in their opinion, the current constitutional form of the state should be final.

To sum up, the consequence of the democratic state, in my opinion, has led hardliner Islamist believes to argue forcibly for the implementation of Islamic Law. They argue that in a ‘democratic state’ the biggest community has the majority rule to run the society. Nevertheless, the “Pancasila

state” is a choice that can avoid chaos in debating whether Indonesia should be labeled as a secular or “Religious State,” and it is reasonable to foster a multicultural society in Indonesia. I also argue that cultural diversity and multi-religious society is faced with a dilemma: on one hand, multiculturalism strengthens the Indonesian nation as a united state, and on the other hand, it also has the potential to weaken state power. The national government, as the executor of sovereignty given full mandate by the people under the democratic state, should perform the main function as Weber’s ideas to materialize social and politic order, even by coercion. In developing countries like Indonesia, the state’s role is central, and the country will succeed if it can enforce rules that are able to meet the diverse interests of the people while appreciating differences and protecting them as much as possible.

Indonesia: a Failed State?

The building of states and the strengthening of institutions is one of the most important issues for the world community (Fukuyama, 2004). The rise and fall of nation-states is not new. Today, there may be as many as six to eight hundred active nation-state projects, and another seven to eight thousand potential projects (Ibid, p. 3). 190 nation-states have achieved sovereign status (Roeder, 2007:3). But, according to Rotberg (2004), in a modern era when national states constitute the building blocks of world order, the violent disintegration and palpable weakness of many states in Africa and Asia threaten other states as well as their own systems. It is simply understood that less development, or failure, by a government in one place can pose a threat to others in different parts of the world.

Although the term ‘failed state’ has no established definition, there are many criteria and characteristics that can define a failed or failing state. Thus, the criteria one chooses will distinguish a failed state from successful state. For example, a failed state can be described as a decision making center of government that is paralyzed and inoperative, where laws are not made, order is not preserved and societal cohesion is not enhanced (Sorensen, 2003). As a territory, it is no longer assured security by the central sovereign organization. It has lost its legitimacy as an authoritative political institution. To Jackson (1998), a failed state is a state that cannot safeguard the basic needs of its citizens such as peace, order and security. So, a failed state seems to be a political failure in governing important sectors such as security, basic needs, and education. This argument is also supported by Susan Rice (2003), who defines a failed state as one that has ineffective control over its people.

Following Robert I. Rotberg (2004), finding the best ways to strengthen weak states and prevent state failures are among the most urgent questions of the twenty-century. Yusuf Wanandi (2002) in his article questions why and why not Indonesia should be considered as a failed state. According to his view, Indonesia is already close to becoming a failing state, and will probably become one. Yet we need to examine his view by identifying the characteristics of state power in Indonesia. The characteristics of strong or weak state alone depend heavily on how the states can ‘feed itself, govern itself, and defend itself.’ If they do this well, it means there is a strong state with total sovereignty.

However, the main indicator in measuring whether a state should be categorized as a failed state or a success, weak or strong, is largely determined by its sovereignty. Sovereignty in terms of international threats means responsible sovereignty to provide international security or world order (Jones et al, 2007:8-9). Francis Deng (1990) defines responsible sovereignty as a situation in which "national governments are duty bound to ensure minimum standards of security and social welfare for their citizens and be accountable both to the national body public and the international community." Such a standard concerns military power and technology. National security will be determined by development and economic growth, particularly in the agricultural sector (Smith, 1776). Security, according to the United Nations, is defined as freedom from want and freedom from fear (Dahal, 2009). International security or responsible sovereignty, according to Bruce Jones (2007), can only be given from capable, strong states. Failing states cannot serve even their citizens' basic needs. It is simply understood that this will pose a threat to other states in different parts of the world.

Indonesia was apparently a failed state when reformation took place in 1998, following Indonesia's monetary crisis, as well as social and political unrest (Klinken, 2007). When crisis happens, as in wartime, people do not obey the law, and they reject government institutions directly or indirectly. As a result, conflicts happened every single day at that time. Thus, the nation-state failed inasmuch as it was consumed by internal violence and ceased delivering positive political value to its inhabitants. Governments lose credibility if a particular nation-state itself becomes questionable and illegitimate in the hearts and minds of its citizens (Rotberg, 2004:1). To date, the religion and ethnic conflicts have continued, the number of citizens in poverty has increased to 39 million (Indonesia National Statistic, 2010). It seems that the crisis, then, is still going on. In this case, the government has failed to feed its citizens. In other words, the national government has lost its food sovereignty.

Nevertheless, if electoral democracy indicators are to be used in assessing the failure or success of the state, on the one hand, Indonesia should be classified as a success, because it conducted general elections peacefully from 1999 to 2009. On the other hand, although Freedom House in 2010 reported progress in law enforcement in Indonesia, we should also note that press freedom is still hampered by violence, either physical or non physical, and the rule of law is still enforced in a discriminatory fashion. But somehow, the implementation of democracy in Indonesia is better than elsewhere, as compared to the practice of democracy in other Southeast Asian countries such as Singapore and Malaysia— although these two countries are stronger in terms of economy and defense.

National security essentially means the state of the health of the nation, within which citizens enjoy life, liberty, property and participation in the productive life of society. Political stability, economic well-being and equitable distribution of resources are essential preconditions. If any society has a high incidence of death, violence, crime, murder, or kidnapping, whatever the causes, the citizens living there will never feel safe. Ordinary citizens measure the standard of national security through the ability of national leaders "to rise above narrow and special economic interests of parts of the nation," and "focus their attention on the more inclusive interests of the whole" (Wolfers, 1968:148). The peacefulness of the national environment stems from sound civil defense, a modicum of trust among citizens themselves, and national institutions of

governance. The sources of international threat can be extra-systemic (such as inter-state tension, cross-border terrorism, climate change, fuel and financial crises, and refugees) or intra-systemic (e.g., civil war; poverty traps; inequality; and exclusion of citizens from ecological, social, economic and political resources). One source of threat reinforces the other systemically, and they are likewise linked with macro and micro issues. The comparative and competitive strengths of any nation in material possessions, such as hydropower, ecological diversity, tourism, manpower and productive potential, as well as the proper utilization of these resources, can contribute to its viability.

Indonesia itself tries to create national security in dealing with political conflicts between the national and local levels as well as conflicts within societies. In so doing, Indonesia followed the system of decentralization called 'Otonomi Daerah.' According to Law No. 22/1999 and Law No. 25/1999, each region has its own autonomy to manage natural resources and tackle its own problems. It is clearly understood that Indonesia is trying to democratize government by local and civil engagement as much as possible. International funding has come to Indonesia to help its government make democracy work by implementing concepts like clean governance. Meanwhile, Nordholt (2003) has argued that 'a shift from a centralized to a decentralized government is not synonymous imply a shift from authoritarian to a democratic rule.' Therefore, the state and society should work together to address this issue in order to avoid the return of old powerful elites who could bring dictatorship back in the new 'democratic society.'

In addition, some people argue that, because Indonesia has a larger and more diverse territory, this has led to difficulties in dealing with local problems and local identities, such that many conflicts of interest arise. People have different views concerning what democracy is. Indonesia, as a new democratic state in South east Asia, has succeeded in holding general elections without serious problem, but as we knew the its Human Development Index (HDI) is very low, ranking 182 out of 187 countries in the world in 2009 (World Bank, 2009), though it is listed as 108 out of 189 countries in 2010 (UNDP, 2010). Freedom House in 2010 published a report on the development of democracy and the rule of law related to terrorism and corruption in Indonesia, which stated:

“Security forces in September killed terrorism suspect Noordin Mohammad Top, the alleged mastermind of twin suicide bombings that had struck hotels in the capital in July. Separately, the chief of Indonesia’s anticorruption commission went on trial for murder during the year, and two of his deputies were accused of extortion, but their case led to the exposure of an apparent conspiracy by police and prosecutors to undermine the commission. The parliament passed legislation in September that would weaken the authority of the commission and a related anticorruption court. In addition, the parliament began investigating a controversial bailout of Bank Century in November, which pitted the House of Representatives against the Yudhoyono administration and shrunk his ruling coalition.”

Given these facts, Indonesia has faced challenged to contribute to the world order. To some degree, Indonesia has succeeded in combating terrorism both domestically and trans-nationally. The American and Australian governments support the eradication of terrorism in Indonesia. In line with

this, the Indonesian government established Detachment 88 and, in a short time, Indonesian government agencies managed to arrest a group linked with international terrorism. At least a dozen terrorists were caught, and 3 people have been put to death. In this context, we can refer to the opening of the 1945 constitution, which says that Indonesia should contribute to the orderliness of the world in various ways. This has so far been carried out via rehabilitated and reconstructed forms of Indonesian foreign policy. It is clear that the philosophy Indonesians adhere to is a state constitution in line with that initiated by Kant (1795), promoting a liberal peace, based on three factors: (1) states must be republics; (2) they will gradually establish peace among themselves by expansion of a "pacific union;" and (3) all states must respect a "cosmopolitan law" about how they treat foreigners in their midst.

The Contemporary Challenges of Nation-State Building

Considering recent events of mass violence in Indonesia, it seems essential to rethink how to bring a sovereign state that can uphold the sovereignty of the people. Indonesia clearly needs to bring the 'Leviathan' back into the society. I borrow this term from Skockpol's essay, 'Bringing the State Back In,' only in order to argue for a strengthened state and its sovereignty to bring wealth for the nation as a whole.

There are at least two main challenges for Indonesia today. The first is the unfinished debate about whether "Pancasila" (secular state) or a religious state (in favor of Islamic group interests) should be the guiding aim for the national regime. Diversity, in addition to being a reason for unity, is also a trigger device for conflict. Ethnic and religious conflicts are widely believed to be driven by economic gaps between the haves and the have-nots and between the state and society. The campaign to combine democracy, pluralism and multiculturalism are rejected by militant groups that resist anything exported from the West. Because the West consists of liberal states, they add that Western culture does not respect Islamic society. They then counter pluralist efforts by creating new terms such as anti-liberal, anti-pluralism, and so forth. In addition, they engage in political and economic policy-making where, for example in the arena of economics, they have begun to practice Islamic law. This confirms that Islamic groups in Indonesia have experienced a remarkable proliferation in the post-reform period, including in expressions of belief, propaganda, and forms of organization (Wardana, 2010; Hamayotsu, 2006; Tanuwidjaya, 2010; Kolig, 2005).

Franz M. Suseno (2010) has stated that Indonesia as a nation state that is in danger. He argues that a sense of nationhood is the only force that unites the hundreds of ethnicities, tribes and communities, as well as religious adherents into one Indonesian nationality (Kompas 10/17/2010). This is related to recent facts about the emergence of violence, which may pose hidden dangers like an iceberg, or even like a time bomb that could explode at any time and spread to various places. This proves that traditional nationalism has not been able to answer the challenges of the times. Sukarno's nationalism is a concept that emphasizes the similar fate as a nation, colonized, as a tool of unity of people, but this no longer works. If this concept was successful during the era of revolution and independence, as written Breuilly (1993), this does not change the fact that nationalism may be less effective as a current political tool of propaganda.

The threat to Pancasila as a state ideology in the process of nation and state building is due to the worsening domestic economy. As is often mentioned by political scientists, the central government is weak and unstable, and a fragile economy results in serious problems of regional insurrection and communal violence (Legge 1961; Mackie 1980). Indeed, conflicts based on ethnicity and religion can threaten the existence of the nation-state. From 1997 to 2010, 'wars' between ethnic and religious groups occurred as many as a dozen times, with casualties of more than 10,000 people (Klinken, 2007:4-5). This can be roughly broken down as including (among others) the conflicts in East Timor, Aceh, as well as the conflict between Islam vs. Christianity, etc. Those conflicts have caused thousands people to suffer. From 2008 to 2010, more than 400 cases of religion violence occurred (Tempo, 2009), and hundreds of people died because of both ethnic and religious conflict in Indonesia. Gerry Van Klinken (2007) wrote that the main causes of conflict are the distribution of income, political gaps between central and local entities, and economic inequality. When the state was weakened by certain interest groups it was as Barbara Harris-White has pointed out trapped in a 'black economy.'

The failure of the central government to deliver public and political goods to its citizens as whole is another issue. Under the Suharto regime, by military force, Indonesia failed to keep the unity of Indonesia in East Timor, Papua and Aceh. East Timor obtained its own independent state, while the Acehnese and Papuans continue to struggle for their own states. The national government is still looking for a way to address these problems. Many studies assume that the main problem might be how to reduce poverty. For a long time, natural resources have been monopolized by the government and by capitalist groups (Robison 1986, 1992), who do not pay much attention to the development outside of Java, causing many rebellions among local people in other areas (Klinken, 2007). Decentralization, as Klinken said, does not mean democratization and prosperity for all fellow citizens. Decentralizing reforms in the period of 1999-2001 were associated in some places with communal warfare, which was both religious and ethnic. The connection can be better understood by considering the dynamics of resource mobilization instead of looking for the stated ideologies of the grievances (Klinken, 2007:ii).

Since 1999, Indonesia has followed a system of decentralization in governance. According to the government Law No. 22/1999 and Law No. 25/1999, each region has its own autonomy to resolve legal issues. This decentralized government is trying to democratize itself via civic involvement as much as possible. In addition, international funding has come to Indonesia to help the government make democracy work by applying the concept of good governance. Meanwhile, Nordholt (2003) is of the opinion that 'the shift from centralized to decentralized government is not the same means a shift from authoritarian rule to democracy.' Therefore, the state and society must work harder together to solve this problem to avoid a resurgence of militarism or the rise of a harsh regime against the people that would allow violations of human rights.

There are four kinds of freedom as declared by the US President F.D. Roosevelt in 1941, namely, freedom from poverty, freedom from fear, and freedom of opinion and freedom to serve in accordance with the conviction. In Indonesia, reforms have brought significant changes and improvements in the freedom of speech and expression and freedom from fear, but they have not yet

contributed meaningfully to freedom from want. The economic crisis of 1998 still impacts the high level of poverty, now 40 million people (Indonesia's Statistics, 2009). In one sense, this shows that the 1998 reform is more socio-political and socio-cultural, and not economic reforms. Similarly, freedom to worship still often leads to social conflict. Violence between ethnic and religious has become the most dangerous threat to the unitary state that declares itself as having a background of cultural diversity.

Political reforms in 1998 opened Indonesian to a number of changes. The media, for instance, has gained the freedom to disseminate news to the public. This freedom also helps most Indonesians to understand what is really going on in their country. But the problem remains that there are only a few media channels that are able to enlighten the society about how to understand conflict resolution in more peaceful ways. Most of the news stories only stop at the fact that violence appears in the entire society. These incomplete stories actually tend to make people easily unsettled by the current conditions.

Even though the government under Susilo Bambang Yudhoyono has granted better economic and political access through special autonomy, distrust toward the government is still apparent. The Indonesian government has made mistakes in the past, which has added fuel to distrust among certain group in Indonesia. The Papuans, for example, feel that the central government has been unfair. Fund allocated to the local governments haven't fulfilled the needs of Papuan. Having tremendous natural resources, and one of the biggest mining company in the world, has not granted real prosperity for Papuan, since it is controlled by Freeport, a multinational corporation. So far, Papua is still struggling to gain their rights by promoting the idea of a independent state beyond its current special status. At the very same time, Yogyakarta as a special province fights back against the national government because the national state wants to erase the special status of Yogyakarta. In short, in the decentralization era, local governments tend to be stronger and play more important roles in society. This has led the national state to lose power and authority. The definition of sovereignty is no longer as an undivided power (Thomas Hobbes, 1651).

Max Lane (2008) has said that Indonesia is 'unfinished nation,' meaning that Indonesia is an open possibility as to whether it will become a strong or weak state, secular or religion state, centralized power or decentralized state, and an authoritarian or democratic state. Now, racial and religious conflicts threaten Indonesia as a multiethnic community, and thousands have died. The state, to some degree, is failing to feed its self, govern independently, and build the security of its territory and its citizens. If the national government continues to fail to manage this issue, I can predict that sooner or later this unitary state will be separated in to another form of state.

To conclude, Indonesia's current problems are not only about political sovereignty, but also about economy and cultural sovereignty. In dealing with these, Indonesia needs to bring military, civil society, religious leaders, and the government together to discuss and examine solutions and face the future of the nation. In other words, every single part of the nation is a guarantor of national unity.

Some political scientists argue that the weakness of Indonesia's sovereignty stems from its vast territory, and that it is not supported by an inability to manage conflict and abundant natural resources. As a result, local areas have argued for separation from the unitary state, as has already happened in Timor Leste, and which is ongoing in Papua and separatist Aceh. The idea of federalism

for Indonesia has again risen to the forefront, and I think probably that way is still a viable option. Consider the historical fact that Indonesia, under Dutch rule, already experienced a federal system, albeit under certain limitations that reduced nationalism and regional rebellions at that time. In the present era of democracy, Indonesia is using a system of decentralization, but the central government has severely limited the authority of local governments, so that local areas are still dependent on the center, though the center is also dependent on natural resources in local areas. The issue of poverty in many regions has intensified, so there should be a change of the political system. In my opinion, the most rational model would be to impose a federal system. However, the local government actually can build economic independence and sovereignty in their own way. Doing so could bring the state as an institution closer to its people as owners.

Conclusion

The Republic of Indonesia carries a national philosophy “Bhineka Tunggal Ika” (Unity in Diversity), with five principles of the state, i.e., in one god we trust, humanitarianism, unity of the nation, representation of the people, and social justice. Although I strongly argue that Indonesia as a post-colonial state has many challenges to be called as a strong state in the near future, how Indonesia looks today is not too far from its labels that have been given in the scholarly literature. To sum up, Sukarno succeeded in uniting the people of Indonesia with the spirit of nationalism, and Suharto failed to maintain unity through military force. The biggest challenge now is how to maintain the integrity of the Unitary Republic of Indonesia to build the economy in accordance with the 1945 constitution, creating prosperity for all Indonesians without exception. If the problem is still unequal economic distribution, the government has to mobilize its power; using authority in other ways contrary to this would run the risk of failure to unite the nation, which would indeed repeat past failures. Moreover, a federal form of government could be a rational choice in the near future.
