

# Discourse of Communication During the Month of Ramadan in Sorong and Mentawai, Indonesia

Rita Erlinda<sup>a\*</sup>, Ismail Suardi Wekke<sup>b</sup>, Irwan Abdullah<sup>c</sup>, Hasse Jubba<sup>d</sup>, <sup>a</sup>Institut Agama Islam Negeri (IAIN) Batusangkar, West Sumatra, Indonesia, <sup>b</sup>Sekolah Tinggi Agama Islam Negeri (STAIN) Sorong, West Papua, Indonesia, <sup>c</sup>Universitas Gadjah Mada, Yogyakarta, Indonesia, <sup>d</sup>Universitas Muhammadiyah Yogyakarta, Email: <sup>a\*</sup>ritaerlinda@iainbatusangkar.ac.id

The word choice of the first-person pronoun 'we' shows the attitude of the speaker when positioning the speech partner. The pronoun is considered to involve the speech partner in the communication, so there is no longer an asymmetrical relationship between them. This paper will describe in detail, the syntactic patterns in the use of 'we' as the inclusive plural pronoun in directive speech acts. The data was obtained through the recording of Ramadan lectures that took place in two different regions; Sorong in Eastern Indonesia and Mentawai in Western Indonesia. The results showed that the use of pronouns is associated with complex relationships, both in the attitudes of the parties involved and in the community who are the speech partners in a communication framework. Thus, politeness in communication is disturbed in practice. This paper suggests the need for an understanding of personal pronouns in a cultural context and the need for the development of an equality model in society.

**Key words:** Personal Pronoun, Directive Speech Acts, Islamic Speech, Sorong, Mentawai.

#### Introduction

The asymmetrical relationship between the speaker and the speech partner begins to disappear using the word 'we', as an inclusive first-person plural pronoun in communication. In Ramadan lectures, preachers as speakers — who have higher status and authority than worshipers as speech partners — tend to use the word 'we'. The sentences that are often used in lectures include, "Let us together get good luck with various kinds of deeds" and "We must take care of, respect and love each other, because when we love God's creation, then

God will protect us", which show the engagement of the speech partners in communication. According to Scheibman, the use of inclusive plural pronouns is syntactically marked in two forms, namely using the modality and not using pre-stress in the past (Scheibman, 2004). The use of 'we' in communication, on the one hand, shows the closeness in the relationship (Inigo-Mora, 2004: 34) and, on the other hand, shows the existence of perception, attitude, and behaviour in communication (Packard, 2018).

Studying the use of personal pronouns in communication not only concerns the communication process between speakers and speech partners, that shows the relationship between the use of first, second, and third pronouns in the effectiveness of communication (Kitagawa & Lehrer, 1990; Fitzsimons & Kay, 2015; Packard 2018), but also the relationship between language and society and culture itself (Inigo-Mora, 2004; Kashima & Kashima, 1998). Fitzsimons and Kay said that the use of pronouns is related to the perceptions of relationships, interpersonal interactions, and communication functions (Fitzsimons & Kay, 2015). Speakers consciously position the speech partners or audiences in interaction by involving politeness in using the second-person pronoun and considering to distance in communication (Fortanet, 2003). Inigo-Mora said that the use of language also shows the problem of identity in a community, as a statement of the existence of applicable social categories. The importance of this study lies in the analysis of the use of 'we' as a personal pronoun, not only in the process of communication effectiveness, but also in the use of 'we' in a community context. In other words, the choice of using 'we', appears as a reflection of the society and culture in which the language is used.

This paper aims to analyse the attitude and choice of speakers (preachers) in Ramadan lectures through syntactic patterns of the use of the inclusive personal plural pronoun 'we' in directive speech acts. Syntactic patterns in the use of the inclusive plural pronoun 'we' were identified as markers of language politeness. However, variations in the use of 'we' were viewed dynamically in the practice of religious communication. In this way, three things distinguished this study from other existing studies. First, the use of the 'we' person pronoun does not depend on modality, because without any modality, the personal pronoun 'we' is already a statement of inclusiveness in the delivery of messages by preachers. Secondly, the use of the personal pronoun 'we' is not bound to the time category because, in communication, it can apply in different time units. Thirdly, the personal pronoun 'we', as a marker of politeness in treating speech partners, is very much bound to the socio-cultural context of a society. In other words, the use of the personal pronoun 'we' is a response to the values that apply in a society.

This article will begin by demonstrating the extent to which the literature responded to the use of the personal pronoun 'we' in various contexts and its meanings in the process of delivering messages. The next section will describe the methods that have been used, as well

as the results of the study of the use of these methods. An explanation of the speech-language of the preaching lectures will be analysed in the discussion section, followed by a conclusion at the end of the paper.

#### Method Research Sites

This study was conducted in two regions, namely Sorong Kota sub-district (West Papua) and Sipora Selatan sub-district (Sumatra Barat). These two locations were chosen based on the consideration that they are both Muslim communities in non-Muslim areas. These Muslims are a minority in a country where the majority of the population is Muslim (85 per cent of the population is Muslim). In this regard, this research is expected to analyse how non-Muslim contexts provide a framework for religious life in both research locations, which places Muslim communities as a minority.

Sorong City, Papua Barat, has an area of land and water of 1,105 km², most of which is hilly areas and divided into 10 districts. The population densities in the 10 districts are quite diverse, with the highest and lowest population densities being in Sorong and Sorong Kepulauan Districts, namely 420.14 people/km² and 59.27 people/km², respectively. The number of the Non-Papuan population in Sorong City is 133,988 people, which is more than that of Papuan, which is 56,637 people. The total labour force of Sorong City in 2015 was 98,263 people, consisting of 63,720 men and 34,543 women. Of these, 17.26 per cent were unemployed. Meanwhile, the population of the non-workforce was 61,318 people, consisting of people who are still in school, take care of the household and, others. So, the labour force participation rate of Sorong City is 82.74 per cent.

Based on the age and type of employment of the labour force employed, most of the population are aged 35–44 years and work in large trade, retail, households, and hotels. Workers in Sorong City, according to their main employment status, consist of 44,254 labourers/employees, 19,526 are self-employed, 6,983 are trying to be assisted by unpaid workers, and the smallest number of them, are free workers. The largest number of registered job seekers, according to the highest level of education, are high school graduates, totalling 8,109, followed by vocational graduates, with as many as 4,858. Assessing this data, more SMK graduates have already worked because they have been trained to be ready to work after graduation.

In the field of education, Sorong City has schools from kindergarten to senior high school, including 52 kindergartens, 81 elementary schools, 37 junior high schools, 24 high schools, and 13 vocational schools. There are 11 universities in Sorong City, including the Universitas Muhammadiyah Sorong, STAK Sorong, STAIN Sorong, University Victory, Poltekes

Kemenkes Sorong, Sekolah Tinggi Theologi GKII Sorong, STIKES, UKIP Sorong Poltekes Saint Paul, STIE Bukit Zaitun and Politeknik Kelautan dan Perikanan.

In general, in 2014, the percentage of religious adherents in Sorong City consisted of Protestants at 55.31 per cent, Catholics at 8.22 per cent, Islam at 35.48 per cent, Hindus at 0.28 per cent and Buddhists at 0.78 per cent. Religious adherents by district are presented in the following table:

Table 1: Religious Adherents by District

No	District	Musli	Protestan	Catholi	Hindu	Budhi
		ms	ts	cs	S	sts
(1)	(2)	(3)	(4)	(5)	(6)	(7)

Source: BPS Kota Sorong dalam Angka 2017

The number of places of worship in Sorong City continued to increase from 2012 to 2016, as noted in the following table:

Table 2: Total Number of Places of worship

No	Year	Mosque	Protestant	Post	Catholic	Temple	Vihara
			Church	PI	Church		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)

Source: BPS Kota Sorong dalam Angka 2017

If Sorong is situated in eastern Indonesia, then Sipora Island is in western Indonesia, which is of the Kepulauan Mentawai Regency. Sipora Island consists of two districts: Sipora Utara and Sipora Selatan. The Sipora Utara District consists of six villages, namely Betumongga, Goissoinan, Bukit Pamewa, Sipora Jaya, Sido Makmur and Tuapejat. In 2016, the projected population of the North Sipora District was 12,294, consisting of 6,390 men and 5,904 women.

The Sipora Selatan Subdistrict covers an area of 26,847ha and consists of seven villages, namely Bosua, Nemnemleleu, Beriulou, Mara, Sioban, Matobe, and Saureinu. In 2016, the projected population of the South Sipora Subdistrict amounted to 9,204, consisting of 4,767 men and 4,437 women. In 2010, the percentage of religious followers in the Mentawai Islands District consisted of Muslims at 19.55 per cent, Protestants at 48.99 per cent, Catholics at 30.90 per cent, Hindus at 3 per cent, Buddhists at 0 per cent, and Khiong Hu Chu at 0.0078 per cent. The houses of worship in Sipora consist of 17 mosques, 47 Protestant churches, and 14 Catholic churches.

#### Research Data

The materials used as data sources were recordings of speeches of preachers, totalling 15 recordings, taken from the Al-Akbar Grand Mosque in Sorong City and 17 recorded lectures at the Nurul Iman Mosque in Sioban Sipora. The data collection was completed by recording lectures delivered by the preachers using audio recording devices. Subsequently, the recordings were transcribed.

The categorisation of materials was based on the directive speech act theory proposed by Huang (2007). This theory defined directive speech acts using parameters that the speaker, through his speech, asks the speech partner to take action. The positive politeness strategy data uses the politeness theory of Brown and Levinson (1987) which parameters that speakers, in interacting, must maintain the positive face of the speech partner.

#### **Data Analysis**

Data analysis was carried out in two stages. Firstly, knowing the frequency of the appearance of the first-person plural pronouns 'we' using NVivo software version 11. Secondly, finding the type of speech act and politeness strategy that was carried out by following the three stages of qualitative data analysis initiated by Miles and Hubberman. Namely, data reduction, data presentation, and verification and conclusion drawing. Data reduction refers to the process when researchers mark preaching speeches that contain data to answer the research questions. Data presentation is the stage when tagged data is collected and grouped based on certain classifications, following the theory used. Data verification and conclusion drawing are the stages when the research findings are described as research findings or results.

#### **Findings**

This research showed the tendency of the use of the first-person plural pronoun 'we' in Ramadan lectures in two research sites. Both in Sorong Kota (Papua) and Sipora (Mentawai, Sumatra Barat), the first-person pronoun 'we' became the main trend. The word 'we' appears as the dominant word used in every lecture. The findings also described the context in which the use of the personal pronoun 'we' is used.

#### The frequency of the appearance of the first-person plural pronoun 'we'

The application of the NVivo Software Version 11 to the discourse of preaching found that the frequency of the use of the first-person plural pronoun 'we' occurred 715 times in Sorong City and 1,508 times in Sipora.

**Figure 1.** Intensity of the use of the personal pronoun 'we' in the two regions Sorong Kota District

Sipora District of Mentawai

In addition to the word 'us', the words 'Allah' and 'prayer' are important words with a relatively high occurrence intensity. This tendency is reasonable given the context in which the appearance of these words is related to the ongoing Ramadan, so that the terms related to religion appear automatically.

#### The syntactic pattern of the use of the inclusive first-person plural pronoun 'we'

From the recordings, two syntactic patterns of the use of the first-person plural pronoun 'we' were found. Namely, modality as the left constituent of the pronoun 'we' and modality as the right constituent of the pronoun 'we'. Both of these patterns show that the pronoun 'we' is distributed freely — not bound by location. The use of modality is intended to extend the meaning of the clause it occupies, not to the pronoun 'we'.

Modality as the left constituent of the personal pronoun 'we' includes extra clausal modalities such as 'should', 'hopefully', and 'must'.

Table 3: Modality as the Left Constituent of the Personal Pronoun 'We'

Data No.	Modality as the left constituent of the personal pronoun 'we'
01R-SIO-	All who attend or who have not been present tonight, we should take
SYFR	advantage of this holy month of Ramadan.
05-SOR-	As Muslims, men and women who believe in Allah SWT should always be
MN	grateful for the blessings of Allah that have been given to us, namely the
	favours of health, faith, devotion, sustenance, happiness and many other
	pleasures.
07-SOR-	We, who used to pray in congregation only Maghrib, hopefully, there will
Alam	be an increase in the quality of our faith, the quality of our worship.
	Inshaallah, in this month of Ramadan, Allah gives guidance. Later, we try
	to examine how to improve quality in worshipping Allah, as what we want:
	the quantity. Those used to give alms, hopefully, in this Ramadan will
	always keep giving alms. Those had never been recited the Quran in the
	previous Ramadan, hopefully, can read it completely in this Ramadhan.
	Let us intend, after this Ramadan until the next Ramadan, to never leave
	the Quran even if reading just a little of it, for just five to ten minutes. This
	is our introduction on this occasion.
09-SOR-	In everyday life, we must practice caring, helping each other, always
Dir-d	remembering God whenever and wherever and must not be arrogant nor
	insulting each other. All of these things must be practised in everyday life.

The quotation in Table 3 shows that the modality as a left constituent of the pronoun 'we' is categorised as an extra-clausal adverb, which gives additional meaning to the clause attached. Thus, the existence of the modality does not affect the inclusive meaning of the pronoun 'we'. In the sentence "We should always be grateful for the blessings of God that has been given to us", the modality 'should' was distributed before the personal pronoun 'we' and used by preachers to strengthen the meaning of the invitation, not to expand the meaning of the personal pronoun 'we'. In the sentence "We must practice caring", the modality 'must' reinforce the meaning of the verb 'practice' and not affect the meaning of the pronoun 'we'.

#### The use of the pronoun 'we' as a marker of politeness

The inclusive pronoun 'we', in directive speech acts, that serves as a marker of the politeness of the preachers in the Ramadan lectures, includes sub-types of *inviting*, *advising*, *praying*, *ordering*, and *prohibiting*.

The inclusive pronoun 'we' as a marker of politeness in 'inviting'

The inclusive pronoun 'we' as a politeness marker in inviting speech acts include the verbs 'invite' and 'appeal' and lexical markers of invitations such as 'let's' and 'come on', as in Table 4.

Table 4: 'Inviting' Speech

Data No.	'Inviting' Speech
02-SOR-	Through this moment of Ramadan we affirm: let us together achieve good
Dir-c	fortune with various kinds of deeds.
02-SOR-	Let me invite myself and all of us. In this Ramadan, we must improve,
Dir-g	mainly, our prayers, then we evaluate our Quran recitation, and we
	evaluate these last ten.
04-SOR-	Let us study the Quran together with people who understand. In terms of
Dir-d	reading, we must be with people who understand, let alone if we want to
	translate and interpret it. Otherwise, we might mislead others if we have
	never studied with people who understand the Quran.
09-SOR-	Let us together improve the quality of our prayers with the intention to
Dir-j	offer the best of our prayers to Allah Subhanahu Wata'ala.
04-SOR-	Come on, if our prayers are good, then let's maintain, we take care of our
Syam	istiqomah as well as possible. If our prayers are not good, then let's learn
	more, we will improve our prayers to get to the perfection of prayers.
08-SOR-	We also invite all of us to always send Salam and Taslim to our prophet,
	namely the Prophet Muhammad salallahu'alaihi wasalam, the apostle who
	became the path of guidance to us all, directed us, was able to direct us to
	know what is good and what is true, and showed us which paths are
	straight and which are not allowed or that violate the provisions of Allah's
	laws.
02R-SIO-	We appeal to the Muslims who have carried out fasting during the day,
BR	praise to God, for three days, let us be present to carry out qiyamullail
	worship. Don't just be in our own homes, ladies and gentlemen.
08R-SIO	Let us often remember Allah. Let's carry out our obligations and let us
	often read the Quran so that Allah Ta'ala opens our hearts and gives His
	guidance.
11R-SIO	<u>Let us</u> multiply good deeds with our bodies or with our property.
16R-SIO	Let us try to instil courage in our lives, dare to tell the truth, dare to prevent
	evil. Moreover, in a short time, we will choose a leader, choose a brave
	leader. Dare to run the rules, dare to oppose all forms of injustice, dare to
	do justice for the people.
16R-SIO	We have the right to uphold the truth, but not in dirty ways. Let's follow
	the procedure. When there is someone defames a religion, let's report him
1	and don't hit or kill him reactively and carelessly. There could be people

	who might deliberately blaspheme Islam by deliberately insulting the
	prophet Muhammad SAW.
23R-SIO	Let us, especially mothers and fathers who may be old, always ask Allah
	for forgiveness.
04-SOR-	Let us study the Quran together with people who understand. In terms of
Syam	reading, we must be with people who understand, let alone if we want to
	translate and interpret it. Otherwise, we might mislead others if we have
	never studied with people who understand the Quran.
10-SOR-	Let us again not only memorise the Quran but do taddabur on it, in this
Dir-b	case it is al-Fatihah because it becomes the pillar of the validity of prayer.
10R-SIO	While we are in the holy month of Ramadan a month full of forgiveness,
	let us always ask forgiveness from Allah SWT.
10-SOR-	Let us again not only memorise the Quran but do taddabur on it, in this
MFiq	case it is al-Fatihah because it becomes the pillar of the validity of prayer.
09-SOR-	Let us together improve the quality of our prayers with the intention to
Nam	offer the best of our prayers to Allah Subhanahu Wata'ala.

The act of inviting in Table 4 is characterised in two ways. Namely, performative verbs such as 'inviting' and 'appealing', and lexical verbs such as 'let's' and 'come on'. The inclusive pronoun 'we' was used by preachers to soften coercion due to differences in authority between the preachers and worshipers. In the speech, "We invite all of us ...," the verb 'invite' becomes a parameter showing that this speech is a sub-category of inviting directive speech, where the preacher politely asks the partner worshipers to take action in the invitation. In the statement "Let us together improve the quality of our prayers," the marker 'let's' indicates that the clause occupied is an invitation. The use of the personal pronoun 'we' clarifies the scope of the preacher in the invitation.

#### The inclusive pronoun 'we' as a marker of politeness in "advising"

The use of the pronoun 'we' as a marker of politeness in the act of directive 'advising', is marked by the verb 'recommended' and 'encouraged' and lexically categorised as modalities including 'should' and 'necessary' as in Table 5

**Table 5:** 'Advising' Speech

Data No.	'Advising' Speech
07-SOR-	Before the month of Ramadan comes, we are encouraged to increase
Dir-b	silaturrahim, to forgive one another.
01R-SIO-	All who attend or who have not been present tonight, we should take
SYFR	advantage of this holy month of Ramadan.
05-SOR-	As Muslims, men and women who believe in Allah SWT should always be
MN	grateful for the blessings of Allah that have been given to us, namely the
	favours of health, faith, devotion, sustenance, happiness and many other
	pleasures.
10-SOR-	We are recommended to pray in a congregation because the obligation is
Dir-a	delegated to the priest who reads it if we have not memorized the letter.

The 'advising' directive action in Table 5 is marked by the verbs 'recommended' and 'encouraged' and, lexically, 'should' and 'need'. The inclusive pronoun 'we' is used by preachers in advising worshipers to reduce the distance between speakers and speech acts by involving themselves in their advice. In the speech, "We are advised to pray in a congregation", the pronoun 'we' means the preacher and, simultaneously, the individuals covered by his speech.

# The inclusive pronoun 'we' as a marker of politeness in "praying for both the speaker and the speech partners"

The use of the pronoun 'we' as a marker of politeness in the directive speech act of 'praying' is centred on the 'hopefully' modality as shown in Table 6.

Table 6: 'Praying' Speech

Data No.	'Praying' Speech
01-SOR	Therefore, we need to turn on the month of Ramadan, hopefully we can get
	Laylat al-Qadr.
07-SOR	We, who used to pray in congregation only Maghrib, hopefully, there will
	be an increase in the quality of our faith, the quality of our worship.
	Inshaallah, in this month of Ramadan, Allah gives guidance. Later, we try
	to examine how to improve quality in worshipping Allah, as what we want:
	the quantity. Those used to give alms, hopefully, in this Ramadan will
	always keep giving alms. Those had never been recited the Quran in the
	previous Ramadan, hopefully, can read it completely in this Ramadhan. Let
	us intend, after this Ramadan until the next Ramadan, to never leave the
	Quran even if reading just a little of it.

The directive action praying in Table 6 is marked with an extra-clausal adverb, 'hopefully'. The inclusive pronoun 'we' is used by preachers to involve themselves in prayer or the hope of worshipers to reduce the power gap between the speaker and the speech act. In the sentence, "Hopefully we can get *Laylat al-Qadr*", implies that getting the night of Laylat al-Qadr is a prayer and hope for both preachers and worshipers.

#### Politeness markers in "ordering"

The use of the pronoun 'we' as a marker of politeness in the directive speech act 'ordering' is marked by three categories. Namely, the verbs in the form of imperative, modal, and the politeness marker 'please', as in Table 7.

Table 7: 'Ordering' Speech

No Data	'Ordering' Speech
	<u> </u>
08-SOR	Once listening to the call to prayer, then we should immediately leave
	worldly activities and immediately to carry out worship in congregation.
05-SOR	Keep order, because there is not a single verse in the Qur'an that says we
	are enemies with each other.
01R-SIO-	<u>Please</u> convey to our family and to our neighbours, that tomorrow we will
SYFR	start the first fasting.
01R-SIO-	Please keep our good relations with our families, to our neighbours
SYFR	because we will carry out, all Muslims should feel called.
04R-SIO-	Let us be here to listen to studies like this, as spiritual food
08R-SIO	Let us increase our good deeds for Allah SWT. Carry out Allah's
	commands so that our remaining age becomes a blessing on His side and
	we can return to Him by what is called Husnul Khotimah.
11-SOR-	Take advantage of our days, our nights. For example, before we go to
Sint	sleep, we can mention Allah SWT, read the Qur'an, and perform witr
	prayers.
10R-SIO	Asking forgiveness from Allah swt not only makes our sins forgiven, but
	also gives us a way out of every problem in this world.
06-SOR-	How to make our practice truly in accordance with Islamic teachings is, of
Dir-c	course, by being patient and learning a lot.
05-SOR-	We must be sure, because indeed Allah has said that we must spend part of
MN	our property that He has given us, for those who are entitled to receive it.
05-SOR-	Let us keep order, because there is not a single verse in the Qur'an that says
MN	we are enemies with each other.
09-SOR-	In everyday life, we must practice caring, helping each other, always
Nam	remembering God whenever and wherever and must not be arrogant nor
	insulting each other. All of these things must be practised in everyday life.

05-SOR-	We must take care of each other, respect and love one another, because
Dir-j	when we love the rights and creations of God, He will protect us and give
	goodness to us and guarantee our safety, in this world and the hereafter.

The act 'ordering' in Table 7, is characterised by three forms. Namely, the imperative form such as 'let us be here', 'take advantage of our days', 'we should immediately'; the modal 'must' like 'we must take care of each other' and 'we must practice'; and the politeness marker 'please' like 'please, let us keep'. In conducting speech acts, the difference in power between the speaker and the speech partner appears clearly. Therefore, the inclusive pronoun 'we' is used by preachers to soften coercion due to the differences in power between the speaker and the speech partners.

#### **Discussion**

The data above shows some important findings that can be presented as follows:

Preachers tend to use the personal pronoun 'we' in preaching because they are inclusive and non-prototypical. Inclusive means that, inherently, 'we' is referring to 'I' and 'you', while non-prototypical means that the first-person plural pronoun 'we' experiences deviations from the original meaning, depending on the context of the interaction. The main purpose of preaching is to invite Muslims to practice their religious teachings, so speech acts that are more widely used by preachers are in the form of directive speech acts and include inviting, advising, praying, ordering and prohibiting. Preachers as speakers, who have a higher authority (power) than congregations, use the pronoun 'we' to respect the positive face of pilgrims so that pilgrims feel liked and respected.

This can occur for two reasons. First, preachers face worshipers who are from very heterogeneous societies in terms of ethnicity, language, education level, socioeconomic status, and so forth. This heterogeneity of worshipers requires preachers to use communication strategies that can accommodate the differences that exist so that the messages can be understood and practised by the congregation. Secondly, although preachers have a higher authority or power compared to the congregation, preachers do not have social ties that can bind them with certain rules to curb their freedom, as does the relationship between teachers and students. This condition requires the preachers to consider the use of language, so that the congregation does not feel assaulted.

The use of the personal pronoun 'we' apparently does not depend on modality, because without modality, it is already a statement of inclusiveness in the delivery of messages by preachers. The use of modalities in construction using the pronoun 'we', is only used to expand the meaning of the clause it occupies. However, it does not affect the inclusiveness of

the meaning of the pronoun 'we'. This proves that the meaning of the pronoun 'we' in Indonesian is not grammatically understood.

The preacher uses modalities to add to his sense of subjectivity in knocking on the hearts of the congregation, in addition to the function of familiarising himself with the congregation so as to narrow differences and build togetherness, and ensure religious messages conveyed can be understood by the congregation. The meaning of the pronoun 'we' in Indonesian is not grammatically understood, because the first-person pronouns are clearly distinguished by using different lexises - inclusive 'we' (me and you) and exclusive 'we' (me and the individual/group other).

The use of the pronoun "we" is not bound to the time category because the word "we" in communication can apply in different time units. The pronouns 'we' in Indonesian are not attached to verbs, so they are not influenced by other elements in the construction they occupy. Furthermore, this is shown by the absence of the influence of time adverbs on the expansion or narrowing of the meaning of the personal pronoun 'we'.

The personal pronoun as a marker of politeness in treating speech partners, is very bound to the socio-cultural context of a society. In eastern Indonesia, the use of the word 'we', in communication using Bahasa Indonesia among Buginese and Makassarese people, is intended as a polite greeting to speech partners. A polite greeting can be because the interlocutor is considered a respected person, because of his higher position (power relation). It could also be because the speech partner is an unknown person, even though younger than the speaker, it is considered polite to say hello to the speaker, to the speech partner. In the context of the Bugis and Makassarese languages, the pronoun 'we' in greetings using Bahasa Indonesian are equivalent (but intended to replace) to the words 'Idi' (Bugis) and 'ikatte' (Makassar). Only because, used in Bahasa Indonesian, the pronoun 'we' is used with a nuance of ethics of the Buginese and Makassar languages. Therefore, these two greeting words not only show ethics in language, but also the existence of structure or stratification in the Bugis and Makassar languages.

#### **Conclusions**

The use of the first-person plural pronoun in directive speech actions in religious lectures in the Sorong District of Papua and Mentawai in Sumatra Barat, shows that there is a preacher's statement about their inclusive attitude in delivering messages that are not grammatically marked, but lexically. However, the pronoun 'we', in both Sorong and Mentawai, does not have differences in lexical categories. Although, in da'wah/preaching, they are influenced by their respective local languages. What is shown by the pronoun "we" in the preaching, in addition to ethical values and politeness, is the seriousness and the persuasive style of

preachers to influence and invite the speech partners (the ummah) to do and follow something according to their expectations.

There are two reasons for why the preachers use the pronoun 'we'. Firstly, preachers face congregations who are very heterogeneous in terms of ethnicity, language, education level, socioeconomic status, and so forth. Secondly, although preachers have a higher authority or power compared to the congregation, preachers do not have social ties that can bind them, as does the relationship between patrons and clients. Preachers do not have legitimacy in the Muslim community in Sorong and Mentawai, so they need an approach in the communication process aimed at broadcasting Islam.

The use of the personal pronoun 'we', thus, shows the preachers' response to social situations on the one hand, and pays attention to the effectiveness of communication on the other. The use of 'we', in addition to being a statement of attitudes and morality of the preachers, has the power to force community acceptance of the religious messages being delivered. To reconcile with a situation is not necessarily a defeatist attitude, but rather a political communication in persuading the speech partner to receive the messages conveyed.
