ABSTRAC

UD. Sri Rahayu Meuble a furniture exporter company located in Bantul district. At the company UD. Sri Rahayu Meuble have difficulty in data processing both data buyer orders, inventory and order data. This is because in the process of data storage that is still stored in the form of a manual (paper records). The data collection process like this takes a long time, the data in the search sometimes less accurate, and the reporting process also sometimes data is incomplete and inaccurate, even notes that had long kept order has been damaged and lost. The objective of this application to be in the process of data input and data storage order is computerized orders can thus facilitate the data recap orders. Therefore in create a desktop based software application with specifications can process and store the data into the database server. Based on the results of the testing system can process and store the data into the database server and can create reports in the form of a table contained in Microsoft Excel.
